The Municipal Stakes of 300 sovs. each, 200 ft., for two-yr-old colts, 8st 7lbs; and fillies, 8st 4lbs. Red House in. (7 Subs.)—Lord Glasgow's b. c. by Velocipedo, out of Amulet, beat Lord Chesterfield's f. by Touchstone, out of Rowton, and Col. Anson's Joe Lovell, by Velocipedo.

The Great Yorkshire Handicap of 25 sovs. each, 15 ft. and 5ft only if declared, with 200 sovs. added; the second receives 100l., and the third saves his stake. St. Leger Course. (76 Subs.; 45 declared.)—Lord Eglington's Pompey, 3 yrs, 7st 7lbs beat Mr. Forth's Venus, 3 yrs, 6st; Duke of Richmond's Lothario, 3 yrs, 6st, and 13 others who were not placed. With the three first the struggle was maintained to the close, Pompey winning the best handicap of the season by a head, Venus beating Lothario for the second money by a neck, and Priscilla Tomboy finishing an excellent fourth. Semiseria, Eboracum, Portrait, and the Silkworm filly were next, but all beaten off.

THURSDAY.—The Doncaster Cup, valued at 300 gs.—Mr. Plummer's Alice Hawthorn beat Mr. Johnstone's Charles XII., and Colonel Anson's Armado. Wee Pet, Venus, Semiseria, Biddy, Dumpling, Peter the Hermit, and Gorbambury, also ran. Won by twenty lengths.—The cup this year was a novel subject for racing match. It was not an imaginative illustration of racing or field-sport, but a miniature equestrian statue—and an admirable likeness, moreover—of the Duke of Wellington. It had been moulded in silver from a model originally designed by Mr. Baily, R.A., but afterwards so much altered by Col. Gurwood, that the present composition belongs solely to that gentleman.

Sweepstakes of 200 sovs. each.—Mr. Bowes's Cotherstone beat Col. Anson's Napier and Lord Eglington's Aristides, in a center. Two-year-old Stakes.—Colonel Anson's The Princess beat Lord G. Benlueck's All round my Hat and Mr. Williamson's The Curé. Nine ran. Won easy.

The Innkeeper's Plate.—Won by The Bishop of Romford cob, beating ten others by twenty lengths.

MARK LANE, FRIDAY, SEPTEMBER 15.—We had a few arrivals of Wheat from Essex to-day, the dry parcels realised Monday's prices, but that which was not in perfect condition, was very unsaleable, and lower; there is a fair demand for free Foreign at an advance of 1s. to 2s. per qr. Barley, Peas, and Beans remain as last quoted, and the Oat trade is still declining.

Hawtrey, Fellow of Eton College.—On the 8th inst., in Park-street, Banere, 1st son, infant daughter of Lord and Lady Robert Grosvenor.—On the 11th inst., at 10, Blenheim House, Hants, Caroline, wife of G. Carr, Esq., and daughter of the late Sir M. Seymour, Esq.—On the 12th inst., at Great Malvern, Hon. Mary Jane, wife of Sir B. C. Hartopp, Bart., and daughter of the first Lord Henley, aged 47.

FAMILIAR ASTRONOMY. By GEORGE DARLEY, A.B., Author of A System of Popular Geometry.—Companion to the Popular Geometry, a System of Popular Algebra, and a System of Popular Trigonometry. 12mo, with Engravings, 5s. cloth lettered.

There is a vast deal of astronomical information conveyed in a most winning and unassuming manner in this delightful little volume, which, not less for the novelty of its plan than the extent of its intelligence, reflects infinite credit on the taste and talents of its projector and editor, Mr. Darley.—*Sun.*

TAYLOR and WALTON, Booksellers and Publishers to University College, 28, Upper Gower-street.

FLORIST'S JOURNAL, No. xlvii. for September, Price 6d., contains Articles on Stanhopea, with a coloured Engraving; Cultivation of the Neapolitan Violet; Agency and Functions of Leaves; Gardeners' Benevolent Association; List of Orchidaceae; List of New Plants; Calendar for September; Letter Box; Floral Intelligence, &c.

London: ALFRED ADLARD, Wardrobe-place, Doctor's-commons; and all Booksellers.

PUBLISHING MONTHLY.
LARGE, 1s. 6d.; SMALL, 1s.; GARDENERS' EDITION, 6d. THE **BOTANIC GARDEN; OR, MAGAZINE OF FLOWERING PLANTS.**

WITH MANY IMPORTANT AND USEFUL ADDITIONS.
By B. MAUND, F.L.S.

Each Number contains BEAUTIFULLY-COLOURED FIGURES OF ORNAMENTAL PLANTS, both herbaceous and shrubby; suitable for the Flower Garden or Pleasure Ground. With the derivations of names; classes; orders; height of the plants; time of flowering; native country; history; qualities; most approved modes of propagation and culture; and other information, interesting to every lover of a Garden. Annexed to each Number, is the

FLORAL REGISTER,
With Wood-cuts of admired Flowering Plants, mostly such as have been newly imported into this country; with the necessary information respecting them. Also,

THE AUCTARIUM,
In which are given, improved methods of cultivation and preservation of vegetables, fruits, and flowers; new discoveries connected with gardening; and miscellaneous information. Also, in each Number, till complete, commencing with the new volume, on the 1st of January, 1843, a portion of Professor Henslow's

BOTANICAL DICTIONARY,
Written expressly for the Author, there being so great a want of such a Work: thus, the BOTANIC GARDEN contains four distinct Works, proceeding together, at a trifling cost, once a month.

The Volumes already completed of this Standard Botanical Work, can be had at the following Prices: LARGE. SMALL.

Hf.-bd., green mor. backs, gilt edges, each	2	2	0	1	0	0
Cloth gilt, beautifully embellished	2	0	0	0	0	0
Drab boards	1	1	7	0	1	5

The Gardeners' Edition at 6d., with partially coloured plates, commenced in January, 1843, with No. I.

The portions of the FLORAL REGISTER and AUCTARIUM, already published, contain nearly Twelve Hundred Engravings, forming one handsome volume, which will be delivered GRATIS to the purchaser of four volumes of the BOTANIC GARDEN.

GROENBRIDGE, Paternoster-row.

IMPORTANT INFORMATION.

DR. ROBERTS'S CELEBRATED OINTMENT,
called the POOR MAN'S FRIEND, is confidently recommended to the public as an unfailing remedy for wounds of every description, a certain cure for ulcerated sore legs, if of 20 years' standing, cuts, burns, scalds, bruises, chilblains, scorbutic eruptions and pimples in the face, sore and inflamed eyes, sore heads, cancerous humours, &c., and is a specific for those afflicting eruptions that sometimes follow vaccination. Sold in pots, at 1s. 1d. and 2s. 9d. each. Also his

PILULÆ ANTISCORPHULÆ,
confirmed by more than 40 years' experience to be, without exception, one of the best alternative medicines ever compounded for purifying the blood and assisting nature in all her operations; hence they are useful in scrofula, scorbutic complaints, glandular swellings, particularly those of the neck, &c. They are efficacious also in rheumatism, and form a mild and superior family aperient, that may be taken at all times without confinement or change of diet. Sold in boxes, at 1s. 1d., 2s. 9d., 4s. 6d., 11s., and 22s. each.

To those who cannot take pills, the proprietors would strongly recommend Dr. Roberts's

ANTISCORBUTIC DROPS,
for the cure of the scurvy, scrofula, leprosy, and all scorbutic complaints; they strengthen the constitution, purify the blood, and promote a circulation of the fluids; are gentle in their operation, and do not require cessation from business. In bottles at 2s. 9d. each. By the late Dr. Roberts's will Messrs. BRACH & BARNICOTT (who have been confidently entrusted with the preparation of his medicine for many years past), are left joint proprietors of the "Poor Man's Friend," "Pilulæ Antiscrophulæ," "Larwell's Pills," "Medicated Gingerbread Nuts," and "Antiscorbutic Drops," with the exclusive right, power, and authority to prepare and vend the same.

The still increasing demand for the above medicines, from all ranks, is the best and most substantial proof of their utility.

Observe.—No medicine sold under the above names can possibly be genuine, unless "Beach and Barnicott, late Dr. Roberts, Bridport," is engraved and printed on the stamp affixed to each package.

BUTTER MADE IN TEN MINUTES
BY THE NEWLY-INVENTED CHURN.

REGISTERED ACCORDING TO ACT OF PARLIAMENT.
ATTWOOD, WIMBLE, & WARNER, MANUFACTURERS, LEWES, SUSSEX.

This CHURN being made entirely of Block Tin, the necessary degree of temperature can be given to the cream, by placing it in a pan of cold or hot water, which ensures the butter coming in 10 or 12 minutes. The simplicity of its construction, and the facility with which it may be cleaned, are no inconsiderable advantages over those now in common use.

Sizes	No. 1	2	and 3
Churn from	7 to 8 lbs.	13 to 15 lbs.	26 to 28 lbs.
Price, carriage paid to London.	25s.	35s.	42s.

Metal Pans for Churns to stand in, 4s. 6d., 6s., and 7s. Larger sizes made to order. N.B.—Thermometers and Butter Prints supplied. May be obtained through any respectable ironmonger in town or country, and from the Manufacturers, Lewes.

To be seen in London, at Wright's Range Warehouse, No. 3, Arthur-street, near the Monument; Rieby's Brush Warehouse, No. 80, Gracechurch street; LIVERMORE and SON, Ironmongers, No. 30, Oxford-street; BENHAM, 19, Wigmore-street, Cavendish-square. Export Agents, BARNES & CO., 109, Fenchurch-street.

DRESS COATS, Superfine cloth, 30s. to 40s.; extra quality, 50s.; Frock-coats, silk facings, 35s. to 45s.; ditto, silk velvet collar and silk facings, 50s.; Waterproof Wrappers, 10s. 6d. to 21s.; fashionable York and Chesterfield ditto, 16s. to 25s.; Waistcoats, 6s. to 8s. 6d.; Silk, Satin, and Kerseymere, 10s. to 14s.; Trousers, 8s. 6d. to 12s. 6d.; stout Doeskin and Kerseymere, 16s. to 25s.; Shooting Jackets, 10s. 6d.; Boys' and Youths' Tunic and Hussar Suits, 30s.; a Suit of Superfine Black Cloth, 34. 3s.; best quality, 51.—At FISHER and Co.'s, 31, King William-street, City, 10 doors from London-bridge.

BRITISH SHEET-GLASS FOR HORTICULTURAL PURPOSES.

DRAKE & BROMLEY have received Mr. Paxton's kind permission to publish the following extract from his Letter, dated Chatsworth, July 18, 1843.

"The terrific hailstorm which visited this locality did not injure a square in the Great Conservatory, but in the Sheffield Botanical Gardens about 5,000 squares were broken, and the houses of a gentleman near Sheffield were completely riddled, and the plants in them much injured, but at Queen's Tower, the residence of a gentleman whose houses were glazed with the Sheet Glass, and where the storm raged in its utmost fury, only two squares were broken, and even these were not in the roof, but at the end, where the hailstones struck them obliquely; this is a most gratifying proof of the strength and superiority of the Sheet Glass."

The glazing of the large Conservatory at Chatsworth was begun by J. DRAKE in June, 1839, and finished in July, 1840; during the subsequent period no casualty has happened to render necessary the slightest repair for breakage; and of the superiority of the Sheet Glass in resisting Hail, no proof more conclusive or satisfactory could be given than the above extract affords.

A return to Parliament of the duties and drawbacks on Glass, from the 5th Jan. 1813 to the 5th Jan. 1843, exhibits the consumption in Great Britain of British Sheet Glass since 1838, in which year J. DRAKE had the honour to receive the following Letter of Thanks for its introduction to the notice of the Horticultural Society of London.

"March 20, 1838.
"Sir,—I have the honour to return you the thanks of the Horticultural Society of London, for your exhibition of specimens of New Sheet Glass, which have been duly received, and exhibited to the Members who have met this day.

"I am, Sir, your very obedient Servant,
(Signed) GEORGE BENTHAM, Secretary."

By this return, it appears that the quantity of British Sheet Glass retained for home use was—

In the year ending Jan. 7, 1838	707 cwt.
" " " 1839	2262 "
" " " 1840	5170 "
" " " 1841	7914 "
" " " 1842	11,298 "
" " " 1843	17,117 "

An increase so rapid, as sufficiently to manifest that it is fast superseding, for all purposes to which it is suitable, every other kind of Glass.

DRAKE and BROMLEY beg respectfully to add that they shall be always happy to furnish Lists of Prices of the Glass, or any other particulars which it may be desirable to obtain, upon application by letter, addressed to them at their Warehouse, No. 315, Oxford-street, London.

RE-OPEN TO THE PUBLIC.

ROYAL POLYTECHNIC INSTITUTION; FIRST

PUBLIC EXHIBITION of Two important Discoveries in Science, viz.—ARMSTRONG'S HYDRO-ELECTRIC MACHINE, which will be exhibited Daily at Three o'clock, and at Eight in the Evenings; and LONGBOTTOM'S OPAQUE MICROSCOPE, showing Objects in NATURAL HISTORY in all their varied Colours. LECTURES Daily on CHEMISTRY and NATURAL PHILOSOPHY, by Dr. RYAN and Professor Bachhoffner.—The arrangement of the OPTICAL DEPARTMENT is under the management of Mr. Goddard. DISSOLVING VIEWS and COSMORAMIC PICTURES, MODELS of all kinds of MACHINERY in MOTION, DIVER and DIVING BELL, &c.

Leader of the Band, T. WALLIS, Mus. Doc.

Open Mornings and Evenings, except Saturday Evenings.

Admission 1s.—Schools Half-price.

SUN-BURNS, FRECKLES, TAN, and other disfigurements of the Skin, are pleasingly eradicated by that unique preparation ROWLAND'S KALYDOR, a balmy odiferous liquid, and now universally admired for its sovereign virtues in completely removing all cutaneous eruptions, and in rendering the complexion delicately clear and fair. It is invaluable as a renovating and refreshing wash during travelling, or exposure to the sun, dust, or harsh winds, and after the heated atmosphere of crowded assemblies. Gentlemen will find it peculiarly grateful after shaving, in allaying the smarting pain.

CAUTION.—Much pernicious trash is now offered for sale as "KALYDOR";—it is therefore imperative on Purchasers to see that the words "ROWLAND'S KALYDOR" are printed on the wrapper, and "A. ROWLAND & SON, 20, HATTON-GARDEN," engraved on the Government stamp affixed to each bottle. Price 4s. 6d. and 8s. 6d. per bottle, duty included.

Ask for ROWLAND'S KALYDOR.—Sold by them, and by Chemists and Perfumers.

WANTED, at Michaelmas, a steady, respectable Man, as GROOM and GARDENER, who perfectly understands his business.—Apply personally, or by letter, post-paid, to A. B., Post-office, Gosford Kidlington, Oxford.

TO SEEDSMEN'S ASSISTANTS.

WANTED, in the County Town of one of the Midland Counties, a SHOPMAN in the Seed trade. It is necessary that he should have had experience in the business, be of very steady habits and pleasant address.—Direct to B. S. G., Post-office, Birmingham, stating full particulars of former employment, and salary required.

WANT PLACES.—All Letters to be post-paid.

AS FOREMAN or PROPAGATOR in a Nursery.

A respectable young Man, who thoroughly understands his business, having passed the greater part of his life in its various departments. The most satisfactory references can be given as to character and ability.—Direct to A. B., at Messrs. LOCKHART and Co.'s, Seed-men, Cheapside, London.

AS GARDENER.—A single Man, 26 years of age, who can be well recommended from his two last Situations, where he has lived six years; he perfectly understands his business in every department of Forcing and Kitchen Gardening, with the Management of Plants. No objection to a single-handed place, or as Under-Gardener in a first-rate Establishment.—Letters addressed to S. GRILING, Nurseryman, Stowmarket, will be forwarded to the Advertiser and duly attended to.

AS GARDENER.—In a single or double-handed place, a married Man, aged 38, who has a thorough knowledge of practical Gardening; could take the management of a small Farm, with Stock and Poultry; his Wife is capable of managing a Dairy. Has just left a Situation filled by him 17 years, owing to his late employer leaving for the Continent. Can have a good sound recommendation for ability and integrity. Apply to GEORGE ADAMS, Send, by Ripley, Surrey.

AS GARDENER, or to take charge of a Horse and Chaise.—A married Man, aged 35, who can milk a Cow and make himself generally useful.—Direct to R. T., at No. 2, Strong's Cottages, Brook Green, Hammersmith.

TO NOBLEMEN and GENTLEMEN.

THE ADVERTISER, being well acquainted with Design, Architecture, and every variety of External Improvements on Estates and Pleasure Grounds, is desirous of Engaging a himself where there are extensive improvements required. A comfortable residence for himself and a small family in the country is more the object, than extent of pecuniary emolument. Direct to G. L., No. 1, St. Vincent-place, City-road.

Printed by Messrs. BRADBURY and EVANS, Lombard-street, Fleet-street, in the Precinct of Whitechapel, in the City of London, and Published by them at the Office, 3, CHARLES STREET, COVENT GARDEN, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, September 16, 1843.

THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.

THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.

No. 38—1843.

SATURDAY, SEPTEMBER 23.

PRICE 6d.

Guano, Porter's, effect of, on Grass land. 645 b	Vines, remarks on management of. 649 a
— quantity to apply to an acre. 648 c	— query respecting a subscriber's system of pruning. 646 b
Heating, bad effects of using open tanks described. 643 a	Wasps, numerous about Bristol, &c. 645 b
— porous material best for covering tanks with. 643 b	Weeds, to prepare as a manure. 649 a
— remarks on. 649 a	Wheat, tillering of, remarks on Windsor, Royal Gardens at Frogmore, noticed. 647 b
Hooker, Dr. Joseph, his return to England announced. 647 b	Wine, Grape, to make. 645 c
Holly, to sow the seed of. 649 a	— receipt for making. 647 b
Hops, to cultivate in Wales, remarks on. 649 a	Woodlice, to destroy. 649 b
— improvement in cultivation of. 647 b	
Hydrangea, effect of ferruginous peat bog on colour of. 646 a	
Insects, remarks on. 649 b	

FLORICULTURAL SOCIETY OF LONDON.

The DAHLIA SHOW will take place on TUESDAY, the 26th inst., at the Crown and Anchor Tavern, Strand, at 3 o'clock, when 48 Prizes will be awarded for single blooms in all the classes, besides 1st and 2d class Prizes for Seedlings, six blooms of those of 1842 being required. The flowers may be sent on the day of show, carriage paid, to the Secretary. The admission is gratuitous, on introduction by a Member.

CLAPTON, STAMFORD-HILL, AND STOKE-NEWINGTON GARDENERS' ASSOCIATION FOR MUTUAL INSTRUCTION.—Gardeners and Persons engaged in Horticultural pursuits, who are desirous of taking part in the formation of the above Institution, are requested to meet in the Lancasterian School Room, Stoke Newington, on MONDAY evening, Oct. 2, 1843, at 7 o'clock, to adopt measures in connection with that object.

TWO NEW SEEDLING PICOTEES.—"LADY ALICE PEEL," 10s. 6d., and "Mrs. BENYON," 10s. 6d., per pair.—These two splendid Picotees were raised by the Rev. J. Burroughes, of Lingwood Lodge, Norfolk, and kindly presented by that gentleman to Messrs. YOEUELL and Co., for Particulars of which see their Advertisement in this Paper of the 16th inst. Catalogues of their extensive collection may be had on application, and will be found to contain upwards of 800 of the very best varieties in cultivation, and which are sent out upon the following terms:—

	s.	d.
12 pairs of good show varieties, 1 pair of each.	1	4 0
12 " fine ditto ditto	1	10 0
25 " ditto ditto ditto	3	0 0
12 " Extra fine and very superior ditto	2	10 0
25 " ditto ditto ditto	5	0 0
12 " ditto Pinks ditto	0	12 0
25 " ditto ditto ditto	1	0 0

The selection being left to YOEUELL and Co.

Great Yarmouth Nursery, Sept. 21, 1843.

ARRIVAL OF DUTCH HYACINTHS AND OTHER BULBS. YOEUELL and Co. beg respectfully to announce they have received from Haarlem their annual importation of the above in most excellent condition, adapted either for Glasses, Forcing, or open-border culture. Prices as follows:—

Fine Single or Double Show Hyacinths	6s. per doz.
Red, Blue, White, or Yellow	
Extra fine Ditto	9s. to 12s. "
Extra fine, and very superior Ditto	18s. "

The selection being left to YOEUELL and Co.

Catalogues may be had on application.

FASTOLEFF RASPBERRY.—For particulars of which see their Advertisement in this Paper of the 2d inst.

ARAUCARIA IMBRICATA, fine 4-year old plants, 8 to 10 inches, 10s. per 100, or 30s. per dozen.

Great Yarmouth Nursery, Sept. 21, 1843.

PELARGONIUMS.—Amateurs are informed that they can now, on application to JAS. PAMPLIN, be supplied with 12 splendid first-rate varieties of this beautiful flower, selected from the following List, for Six Guineas. As the undermentioned have been duly announced, and the merits of them are justly appreciated, any encomium is needless.

Achilles	Count D'Orsay	Laura
Acis	Countess of Wilton	Prince Albert
Ada	Cecile	Princess Royal
Adelaide Kemble	Dk. of Devonshire	Queen of the East
Aurora	Dk. of Wellington	Sir Robt. Peel
Beauty of Essex	Fair Maid of Leyton	Sir Walter Scott
British Queen	Galatea	Venus
	Hesperus	

From unknown correspondents it is requested that a post-office order be forwarded on receipt of the plants.

J. P. takes this opportunity of mentioning his fine healthy assortment of Fruit and Forest-trees, Shrubs, Evergreens, &c., also his very extensive stock of Quick. Gentlemen intending to plant in the ensuing season, will find this worth notice.—Nurseries, Lea-road, Leyton; and Whip's Cross, Walthamstow, Essex.

CHOICE PANSIES.

J. FRYER begs to inform his numerous Customers and Friends that he can now supply strong, healthy Plants of most of the leading varieties of PANSIES, priced Catalogues of which, and of DUTCH BULBS, are now ready, and may be had separately, on application, containing a postage-stamp. Fine PANSY-SEED, from best varieties, 2s. 6d., 6s., to 10s. per packet; from good do., 6d. to 1s.

J. F. can likewise now supply strong Plants of his much-admired new THUNBERGIA FRYERII, at 5s. each (allowance to the Trade).—Clarendon Nursery, Camberwell, Sept. 22, 1843.

NEW AND DESIRABLE PANSIES.

YOEUELL and Co. beg respectfully to inform Growers of the above that they have succeeded in raising Four New and highly-beautiful Seedlings, possessing first-rate properties, both in size, form, and substance, forming quite a novelty. They will prove a valuable acquisition to those who compete at any Horticultural Exhibition in the Kingdom. Description, as follows:—"Eclipse," a large, flat, and well-formed flower, of fine yellow, and intense eye. "Duke of Norfolk," large, well-formed flower, with a fine eye, primrose ground, with a pencilled edging of delicate blue round the petals. "Lady Alice Peel," white ground, is a large round flower of extraordinary substance, the petals are well formed, and in fine proportion, the quantity of yellow shown in the purple eye increases the beauty of the flower; top petals and margin of a dark purple. "Ann" is also a flower of good form and substance, white ground, slightly tinged with purple, with fine brown and purple eye.

Y. and Co. can most confidently recommend the above, which are now ready to be forwarded to any part of the Kingdom, per post free, at 21s. the four varieties. They also beg to draw attention to their healthy stock of this tribe, which they are offering upon the following terms:—

12 Extra fine and very superior show varieties	18s.
12 Very fine ditto	12s.
12 Fine ditto	9s.

Great Yarmouth Nursery, Sept. 20, 1843.

SPLENDID SEEDLING PELARGONIUMS, AT GREATLY REDUCED PRICES.

LUCOMBE, PINCE, & Co., beg leave to inform the Public, that they have obtained the entire stock of the following very Splendid PELARGONIUMS, raised by Capt. THURTELL, R.N., which possess those qualities now indispensably requisite in a first-rate flower—good habit, round shape, and firm petal; and they feel convinced that such novelties cannot fail to please those who purchase them, and will greatly improve all select collections.

Pluto (Thurtell's)	21s.	Princess Royal (Thurtell's)	21s.
Horatio Nelson	do.	Fairy Queen	do.
Phosphorus	do.	21s. Ceres	do.

The whole collection of six distinct varieties for 5l., package included.

A description of "Pluto" is given in the *Gardeners' Chronicle* of June 17, 1843. "Horatio Nelson" was exhibited at the Chiswick Show, in June last, and was greatly admired. A full descriptive character of all these is contained in L. P. & Co.'s Catalogue of Pelargoniums, which may be had of application. Strong plants will be ready for delivery on the 20th October next.

L. P. & Co. beg leave further to say, that, having in this, as in the case of Mr. Beck's Seedlings, determined upon making a great reduction of the prices which Seedling Pelargoniums of the highest character are usually let out at, they hope in consequence to meet with an extensive sale.—Exeter Nursery, Sept. 8, 1843.

PELARGONIUMS.

JAMES PAMPLIN announces, that having now a sufficient stock of those splendid varieties raised by Mr. J. Wilson, which have hitherto been the admiration of the Floricultural world, he is enabled to offer the following List, any 12 selected from which, will, on receipt of a post-office order for 1l. 11s. 6d., be immediately forwarded.

Alice	Fulgens	Princess Sophia
Alice Gray	Gem of the West	Priory King
Anna	Hon. Miss Black	Sir R. Peel
Assassin	Meikle Wonder	Superb
Camilla	Lord Allington	Van Amburgh
Enchantress	Prince Ernest	Vesta

Nurseries, Lea-road, Leyton; and Whip's Cross, Walthamstow, Essex.

NEW PICOTEES.

HEADLY'S NANETTE; purple edge, rather heavy, thick petal, rose edge, good white, and edging well defined, 10s. per pair. Bond's Countess of Winterton, after the style of "Trip to Cambridge," although distinct, 7s. 6d. the pair, and all the others that are coming out. John Dickson's Catalogues for 1843 are now ready, comprising all the best flowers in cultivation. Applications for Catalogues may be made at the Nursery, Acre Lane, Brixton, and WARNER and WARNER's, Cornhill, London.

JAMES PIPER begs leave to offer the following

Articles, at very moderate prices:—	1s. 0d.	Fuchsia	Eclipse, Smith's	3s. 6d.
Achimenes longiflora	1 0	"	Eppsi	3 6
rosea	1 0	"	Gem, Ivory's	2 6
Manettia bicolor	2 0	"	Majestica, Smith's	3 6
Maurandia alba	1 0	"	pulchella	2 6
Fuchsia Brockmanii	3 6	"	Paragon, Smith's	2 6
" Britannia, Smith's	2 6	"	robusta, Smith's	2 6
" Champion, Do.	2 6	"	St. Clare	1 6
" Cormackii	3 6	"	Rogersiana	3 6
" Defiance, Smith's	3 6	"	Toddiana	3 6
" Deansia	3 6	"		
" Exoniensis	7 6	"		

Nursery Stock and Bulbs of all descriptions, at very reduced prices.—Parkstone Nursery, near Poole, Dorset.

TO LOVERS OF ROSES.

A. PAUL AND SON, NURSERYMEN, Cheshunt, Herts, have the pleasure of announcing that their Descriptive CATALOGUE OF ROSES will be ready early in Oct., and will be forwarded, as usual, to their annual customers. It can also be had from the Nurseries by post, free, on enclosing two postage stamps. To those only who have not seen their stock during the present season, it is necessary to say it is in the finest possible condition. They would also invite especial attention to their unrivalled Collection of Autumnal ROSES, which are now in splendid bloom. The facilities afforded by the Northern and Eastern Railway, of reaching the Waltham Cross Station (near to which the Nurseries are situated) from London in 30 minutes, every admirer of Roses should avail themselves of, to make a personal inspection.

J. T. WILLMER and SON, King's Road, Chelsea, by APPOINTMENT FLORISTS to HER MAJESTY, beg to inform their Friends and the Public that their stock of CARNATIONS and PICOTEES are now ready for delivery, and which they offer at the following low prices, viz.:—

25 Pairs of Carnations or Picotees, Fine Show Varieties	2 2
12 Pairs Do.	1 1
25 Pairs of Pinks	1 1

A remittance or reference from unknown Correspondents required.

WARNER and WARNER, SEED MERCHANTS, 28, Cornhill, opposite the Royal Exchange, London, beg respectfully to inform the Nobility and Gentry, their importation of DUTCH BULBS have arrived in excellent condition. The HYACINTHS are large and handsome, consisting of several New and Splendid Varieties. Catalogues are now ready, and will be forwarded post free.

SPLENDID SEEDLING PELARGONIUMS, AT GREATLY REDUCED PRICES.

LUCOMBE, PINCE, & Co., beg leave to inform the Public that they have obtained the entire stock of those distinct and beautiful SEEDLING PELARGONIUMS raised by Mr. E. Beck, of Isleworth, and exhibited by him with such very great success at the Chiswick and Regent's Park Exhibitions. They gained the Gold Banksian Medal (the highest prize awarded to Pelargoniums) twice this summer at Chiswick, and the highest prize at the Royal Botanic Society of London, in June last. Several of them have also gained Silver Medals, Certificates, and other prizes, as Seedlings. These facts will convince the public that a more distinguished lot of Flowers has never before been offered for sale; and L. P. & Co. hope that their having determined upon letting them out at prices reduced greatly below those which Seedling Pelargoniums, of the highest character, have hitherto been let out at, will insure for them an extensive sale. Strong, healthy plants will be ready for delivery on the 20th October next, at the following prices, viz.:—

	s.	d.		s.	d.
*Leonora	Beck's	21 0	*Martha	Beck's	10 6
*British Queen	do.	21 0	*Lucy	do.	10 6
*Susanna	do.	21 0	*Geraldine	do.	7 6
*Meteor	do.	21 0	*Evening Star	do.	7 6
*Cleopatra	do.	21 0	*Black Prince	do.	7 6
*Admiral	do.	10 6	Bride	do.	5 0
Stella	do.	10 6	The Purple	do.	5 0

The whole Collection of 14 distinct sorts, package included, for 8l. Those marked thus * all gained prizes at the London Horticultural Society, and the Royal Botanical Society of London.

Exeter Nursery, Sept. 21, 1843.

TULIPS, RANUNCULUSES, HYACINTHS, &c.

H. GROOM, Clapham Rise, near London (removed from Walworth) by APPOINTMENT FLORIST to HER MAJESTY, respectfully informs the Nobility and Gentry, that his Bulb Catalogue for this autumn is ready, and will be forwarded by post on application. He begs to state that he has a large stock of the beautiful New Lily (Lilium lancifolium) and a fine collection of Auriculas, which he can supply at very moderate prices.

DUTCH BULBS.

MESSRS. SUTTON & SONS respectfully announce the arrival of their choice and extensive collections of HYACINTHS, IRISES, ANEMONES, TULIPS, &c.; and from the attention they devote to the selecting the best sorts in Holland, while in bloom, they feel confident their Collection this year surpasses any yet introduced into this country. The prices are at the same time considerably reduced, owing to the annually increasing quantities which J. S. and Sons import, and the present facilities of communication with Haarlem.

A priced descriptive Catalogue is just published, and may be had gratis. N.B.—Flower-seeds for Autumn sowing just harvested, 20 showy hardy sorts for 5s.—Reading Nursery, Reading, Berkshire.

ROSES IN POTS.

A. PAUL AND SON, NURSERYMEN, &c., Cheshunt, Herts, beg to intimate that the present is the most advantageous time to remove ROSES from the open ground to grow in Pots. They have paid particular attention to Roses for this purpose, and have now some thousands, both in Pots and worked on short stems, expressly for the purpose, ready for sale. When left to their selection, they will furnish 100 fine Plants for 7l. 10s., free of carriage to London.

SEEDLING CARNATION, PICOTEES, TULIPS, &c.

ORSON'S CANDIDATE, Scarlet Bizarre, in character and colour of Walmesley's William the IVth, with a better white and fuller in the centre; it obtained the Prize for the best S. B., at the Surrey Floral Society, beating all the old flowers in the class; and also obtained a Seedling Prize at the Floricultural Society of London, the only times of its being shown this season. A bloom was also sent to the Editor of the *Gardeners' Chronicle*, upon which a very favourable opinion was given in that Paper on the 29th of July. Strong plants are now ready at 10s. 6d. per pair. Also most of the best and choicest sorts of Carnations and Picotees in cultivation at very reasonable prices, as well as some fine new Picotees not yet out. Fine named Carnations and Picotees 18s. per dozen pair.

R. O. has likewise a small but well-selected collection of Tulips for sale, of 30 rows, amongst which are Polyphemus, Milo, Shake-speare, Waterloo, Leonatus Posthumus, Platoff, Surpass-Catafalque, Carlo Dolci, La Mère Brunne, Franciscus Primus, Rosalcius, Acapulco, Princess Charlotte, Cenotaph, Violet Imperial, Lawrence's Friend, and La Joie, Alexander Magnus, Aglaja, Athalia, Claudiana, Diana, Camuse, Premier, &c. Together with a new and handsome Cabinet, with sliding doors, open work in front and sides, made for ten draws, six of which are complete and par-titioned off for ten rows each. Price 9l. Apply to R. ORSON, Florist, 12, Hall-place, Kennington-lane, Surrey.

DUTCH, CAPE, AND OTHER BULBOUS FLOWER-ROOTS.

HURST and McMULLEN, SEEDSMEN, &c., 6, Leadenhall-street, respectfully solicit attention to their BULBOUS-ROOT CATALOGUE, which will be found to contain many new and beautiful varieties of HYACINTHS, AMARYLLIS, LILIES, &c., all of which are of first-rate quality. Since 1841, &c., &c., all of which are of first-rate quality. Since they had the pleasure of transmitting their Catalogue to their friends (the prices of which are about the same as other respectable Houses), another list has been circulated with several leading articles offered under theirs. HURST & McMULLEN beg to state that their prices shall be reduced in conformity with any other Catalogue. The list will be forwarded by post on application.—HURST and McMULLEN, 6, Leadenhall-street.

GROWTH OF PLANTS.

HUMPHREYS'S COMPOUND to Promote the Beauty and Preservation of Plants, may be used either in the Drawing-room or in the Conservatory, and from its concentrated fertilizing power a few grains dissolved in water at intervals is effective. Applicable to all Greenhouse plants, to Hyacinths, and other bulbs; and to promote the growth of cuttings and the germination of seeds. Sold in bottles 1s. 9d. each, by FLANAGAN & SON, Mansion-house-street; HURST & McMULLEN, Leadenhall-street; W. CLARK, Bishopsgate-Within; THOMAS WATKINSON, No. 6, Market-place, Manchester; and other leading Seedsmen, &c. in town and country. Wholesale Agents, DAVY, MACKMURDO, & Co., 100, Upper-Thames-street, London.

FERNS.

W. PAMPLIN has lately considerably increased his stock of FERNS, and respectfully invites the attention of cultivators of these elegant plants to the same.

W. P. will furnish his new priced Catalogue of the sorts he grows, on being supplied with six penny postage stamps. The Prices of established plants in Pots range from 9d. upwards. Lavender Hill Nursery, Wandsworth, near London.

ACHIMENES HIRSUTA.—Plants of this New Species of Achimenes, which was exhibited at the Meeting of the Horticultural Society of London, in Regent-street, on Tuesday, the 5th inst., for which a Silver Knight Medal was awarded—may be had of the Messrs. HENDERSON, Nurserymen, Pine-Apple Place, at 21s. each. Pine-Apple Place, Sept. 23, 1843.

S. GIRLING, of Danecroft Nursery, near Stowmarket, begs to refer the readers of the *Gardeners' Chronicle* to his Advertisement of SEEDLING VERBENAS, &c. of the 16th inst.

NORLAND NURSERY, NOTTING HILL, LONDON.
BLACK AND GOWER, having this day dissolved partnership by mutual consent, the business will now be carried on by R. E. GOWER, who will settle all bills against the late firm, and to whom all debts due to the firm are to be paid.
R. E. GOWER, trusts by attention and fair prices, to receive a share of public favour; he also begs to state that he has just received from Holland an assortment of FLOWER-ROOTS, which are particularly fine and in excellent condition; he has also a good collection of Garden and Flower seeds, Hothouse and Greenhouse Plants, Trained Fruit-trees, and Vines of the best sorts. Buck's true Intermediate forcing Stock, at 3s. 6d. p. oz. September 19, 1843.

CARNATIONS, PICOTEES, AND PINKS.
MESSRS. N. AND B. NORMAN'S CATALOGUE of Show varieties, with which they have gained 23 Prizes this season, can be had on pre-paid application.—Bull-fields, Woolwich.

NEW IRISES.—This being the best season for planting IRISES, Messrs. SUTTON and SONS respectfully intimate that they have for many years possessed one of the very best Collections of these beautiful Flowers to be seen in England, adding annually thereto the most distinct varieties from Holland, and sell them at very moderate prices. The Collection now contains 72 varieties, 30 of which are each a contrast to all others, and may be had by name, 15s. for the best 30, or any number at 7d. each. Messrs. SUTTON have imported largely of HYACINTHS, ANEMONES, TULIPS, &c., particulars of which will be given in due time; but the above are particularly recommended to be planted early, to insure a fine bloom. The New Catalogue may be had gratis, at the Seed-shop, 7 and 8, Market-place, Reading, Berks. N.B.—All goods delivered free to any part of London.

J. HENCHMAN begs to offer the following fine GREENHOUSE PLANTS, which are peculiarly suitable to be grown as Specimen Plants for Exhibition:—*Brachysema villosa*, 21s.; fine foliage and splendid scarlet flowers, one of the finest plants yet introduced. *Chorozema oppositifolia*, 21s.; a new and beautiful species, of free growth, and perfectly distinct in habit from any previously introduced.
Hovea illicifolia, 15s. 6d. | *Hovea pungens*, 5s. 6d.
Ditto do. major 15 0 | Ditto do. major 7 6
Dryandra Fraserii, beautiful foliage, 21s.
The above may be obtained of Mr. WATKINSON, Florist, Market-place, Manchester.
J. HENCHMAN also begs to inform cultivators of the Pansy, that his collection of nine superior seedling varieties is now ready for delivery, price 30s.—Edmonton, Sept. 7, 1843.

PINE PLANTS.—200 or 300 good Fruiters to be Sold, or Exchanged for Orange and Lemon Trees, from 6 to 10 feet in height. To save trouble, the price of the Plants is 4s. each.—Apply to JOHN STOVKLD, Esq., Stedham House, near Midhurst, Sussex.

TO GARDENERS or AMATEURS.—A Lady wishes to EXCHANGE a Case containing 101 packets of EAST INDIAN FLOWER-SEEDS, direct from the Botanic Gardens, Calcutta, for plants of CAMELLIA JAPONICA. Any persons wishing to treat for the same may address a letter, post-paid, to C. D., Post-office, Corsham, Wilts.

MYATT'S NEW SEEDLING STRAWBERRIES.
J. AND W. MYATT are now ready to send out their NEW STRAWBERRY, the DEPTFORD PINE, the fruit of which has been exhibited at the London Horticultural Society, and a Banksian Medal awarded. It has also been submitted to Professor LINDLEY, for whose opinion see *Gardeners' Chronicle*, No. 26, p. 447. It is a most prolific bearer, exhibiting at the same time a profusion of fine fruit and bloom on the same truss. Price, Deptford Pine, 2l. 10s.; British Queen, 1l., and Eliza, 10s. per 100.—Manor Farm, Deptford, Sept. 21, 1843.

THE BRITISH QUEEN AND PRINCE ALBERT PEAS.
W. J. CORMACK & CO., beg to announce to their Friends and the Public that they have harvested the above two New Varieties, and will be obliged by early orders, as the stock is limited. They will be sent out, as last spring, in packages, bearing the name of the firm, price 3s. 6d. per quart. The usual allowance to the trade.
N.B.—"CORMACK'S Early Kent Pea," 14s. per bushel. Newcross, Sept. 21, 1843.

EASTERN MELON SEED.
R. WHITE AND CO., NURSERYMEN, POOLE, have to offer a few remaining packets of the HORSEANA PERSIAN MELON SEED, from the Fruit exhibited by Mr. FLEMING, and which the Editor of the *Gard. Chron.* considers infinitely superior to all other kinds. It has an exceedingly thin rind, a most exquisitely delicious flavour, and is extraordinarily large. Packets of 5 seeds, 5s.
R. W. and CO. beg to inform the public, that they have just received their annual supply of BULBS, and as they employ an Agent in Haarlem to select for them, they are able to offer every variety at very moderate prices; and can safely assure all who favour them with orders, that nothing but the very best of goods will be sent them. Fine Hyacinths, 6s. a dozen; superior, 9s. to 12s.; very finest kinds, 15s. to 18s. a dozen.
Our Autumnal Catalogue of Bulbs and Geraniums, Picotees, Carnations, Roses, &c. &c., is now ready, and will be sent free, on application. Orders amounting to 5l. sent out free of charge; if less than 5l., Bulbs will be sent over to compensate for the cost of carriage.

EGYPTIAN WHEAT.—Three years ago, a Mummy was unrolled in London, and in its hand was a small bag of Wheat. Some grains of it were sown and vegetated. Its produce has again been sown, in Norfolk, and has produced an average of 38 ears or spikes for each grain sown. To be sold in packets of 10 grains each, at 1l. per packet, at STANTON and SONS', 9, Strand, London. The time for sowing is from the 1st to 25th Oct.

IMPORTANT SALE OF GREENHOUSE PLANTS.
MESSRS. PROTHEROE AND MORRIS are instructed to submit to public competition, at the Auction Mart, Bartholomew-lane, on THURSDAY, 3rd Oct., 1843, at 12 o'clock, a COLLECTION of GREENHOUSE PLANTS, consisting of the newest varieties of Camellias, Azalea Indica, Fuchsias, Geraniums, Chrysanthemums, and about 100 other varieties of Choice Greenhouse Plants.—May be viewed the morning of sale. Catalogues may be had at the Mart, and of the Auctioneers, Leytonstone.

ALBION ROAD NURSERY, STOKE NEWINGTON.
MESSRS. PROTHEROE AND MORRIS respectfully announce they are instructed by the Executrix of the late Mr. JOHN MILNE to offer for public competition about the middle of October the valuable NURSERY STOCK, consisting of fine Evergreens, Ornamental Trees, American Plants, Deciduous Shrubs, and other Plants, of which Catalogues will be duly published.—American Nursery, Leytonstone.

TO NURSERYMEN, GARDENERS, AND OTHERS.
TO BE LET or SOLD, with immediate possession, all that well-known NURSERY-GROUND and GARDEN, situated at Battersea and Elizabeth-street, South Pimlico, with the Stock and Houses and the valuable Business and connexions attached to the same, belonging to the late Mr. JOHN ROGERS, recently deceased. For particulars apply to Mr. JONES, Baker, 6, Eccleston-street, or PROTHEROE and MORRIS, American Nursery, Leytonstone.

TO NURSERYMEN, FLORISTS, AND OTHERS.
TO BE LET ON LEASE OF 21 Years, a Small Compact NURSERY, situate at Tunbridge Wells, with Seedshop, and Two Newly-erected Greenhouses. For further Particulars, inquire of Messrs. PROTHEROE and MORRIS, American Nursery, Leytonstone.

VALUABLE ORCHIDACEOUS & OTHER HOTHOUSE PLANTS.
MESSRS. THOMAS WINSTANLEY AND SONS beg to announce to the admirers of Curious and Rare Plants, that they are instructed to SELL BY AUCTION, on THURSDAY, the 3d October next, at 12 o'clock precisely, on the Premises, Parkfield, Aigburth, (without reservation), a Choice and Valuable Collection of ORCHIDACEOUS and other HOTHOUSE PLANTS, the property of CHARLES TATLEUR, Esq., who is declining the pursuit.

In the Collection will be found Choice and Rare specimens of Cattleyas, including Labiata (very fine), Crispa (very large), Mossi (a flowering plant), Loddigesii, Citrina, and Epidendrum, all fine; several rare Maxillarias, Oncidiums, Dendrobiums, Aerides Brookii, (a fine plant), Odontoglossum grande, &c., with other varieties of Parasitical plants, including Gongora, Liptotes, Cyrtopodium punctatum, (a fine plant), Cypripedium, Catasetum, Cymbidium, Neottia, Brassavola, Vanda, Rodriguezia, Myathus, Brassia, Bifrenaria, Stanhopea, &c. *Laelia autumnalis*, the plant figured by Mr. Bateman; together with a fine assortment of Cactuses from Mexico, and other highly interesting Hothouse plants. The Plants are in excellent condition, and have been carefully attended to by the present gardener.

The whole may be viewed two days previous to the Sale, and Catalogues had at the office of the *Gardeners' Chronicle*; of Messrs. WINSTANLEY, Paternoster-row, London; at the place of Sale; and of Messrs. THOMAS WINSTANLEY and SONS, Church-street, Liverpool.

SUBSCRIPTION SALE OF FINE TULIPS, &c.
A COLLECTION OF TULIPS, consisting of 1000 roots, in nearly 600 varieties, comprising most of the approved sorts in cultivation, with some exquisitely fine new broke flowers; also several lots of fine RANUNCULUSES, ANEMONES, &c., will be disposed of, within the Arcade Saloon, at Glasgow, on 4th October next, at two o'clock, P.M. Particulars in Catalogues, prepaid, applications for which, addressed JOHN WATERSTON, Florist, 45, High-street, Paisley, will be promptly attended to. The Catalogues may be seen at the Office of this Paper. Tickets 10s. 6d. each.—Paisley, 15th September.

ST. COLUMB MAJOR, CORNWALL.
TO BE LET, and entered on in November, the NURSERY GROUND & FRUIT-GARDENS situate at TREWAN, near ST. COLUMB, containing Two Greenhouses with Vines in full bearing, Pasture Land sufficient for keeping a Horse and a Cow, a Cottage, and also the Good Will of the Nursery and Seed Business, for many years past carried on by THOMAS BENNETT, who retires in consequence of ill health. The Stock to be taken at a valuation.
For Particulars, apply to THOMAS BENNETT, Nurseryman, St. Columb, Cornwall.

TO FRUIT-GROWERS AND OTHERS.
TO BE LET, the GARDENS at HAWKHURST FARM, near Petworth, Sussex, with two Vineries, about 50 feet by 16 each, well stocked, and one Pine Pit, 45 feet by 12. The Walls and Gardens are full of thriving young trees. A good House and Land may be had with it. Rendle's Tank System may be easily applied to one of the Vineries and Pine pit, they being heated by hot water. The Proprietor would have no objection to stock the same with Pine Plants for fruiting.—Apply to JOHN STOVKLD, Esq., Stedham House, near Midhurst, Sussex.

WIRE-WORK, HOT-WATER APPARATUS, GREEN-HOUSES, &c.
ST. THOMAS BAKER, MANOR-HOUSE, MANOR-PLACE, KING'S-ROAD, CHELSEA, Manufacturer of INVISIBLE WIRE-FENCE, to resist Grazing Stock, and rendered Rabbit-proof. WIRE-WORK in Trainers, Arches for Walks, Bordering, Flower-stands, Pheasantries, &c. HORTICULTURAL BUILDINGS, Green and Hothouses, Conservatories, &c. The same heated by HOT-WATER APPARATUS, on improved and economical principles.
Parties waited on in Town or Country, and Drawings and Estimates free. Work for the Trade as usual.
Ward's Cases, or Domestic Greenhouses.

HOT-WATER APPARATUS FOR HEATING
HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.
D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.
D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.
D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.
D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals required, and which may be seen at their Manufactory.

COTTAM AND HALLEN, ENGINEERS, IRON-FOUNDERS, &c. &c., No. 2, WINSLEY STREET, OXFORD STREET, LONDON, and at CORNWALL ROAD, LAMBETH.

GARDEN ROLLERS 18 inches long, 34s.; 20, 44s.; 22, 50s.; 24 inches, 60s.; 26, 75s.; 28, 84s.; 30, 105s. each.
CAST-IRON RICKSTANDS, 2 feet 6 inches high, 5s. 9d. each.
Garden Engines, Mowing Machines, Garden Chairs, Superior Garden Tools of all kinds, Garden Vases and Pedestals in great variety, and every description of Horticultural Articles, Agricultural Implements, and Furnishing Ironmongery; Dr. Arnott's Stoves, Anglo-Belgian Cooking Stoves; Broiling Stoves. The above low prices being on account of the depression in the Iron Trade, are subject to future alterations.

HOATHOUSES, CONSERVATORIES, &c., made upon the most improved principle, either of iron or of iron and wood combined, which can be fixed complete in any part of the Kingdom, at very low prices, in consequence of the present depressed state of the Iron Trade.
HOT-WATER APPARATUS for heating Hothouses, Conservatories, and Greenhouses; Churches, Public, or Private Buildings, &c., with COTTAM'S PATENT, or ROGERS' BOILERS. After 15 years' experience, and having fixed upwards of 1500 Apparatuses for the above-mentioned purposes, and by various improvements which they have made during that time, C. and H. can with confidence undertake the erection of similar Apparatus upon the most extensive scale. For the convenience of those who wish to fix their own Apparatus, they have affixed the following low prices:—

Cottam's Patent Boiler, 24 inch . . . 27 0s. 0d.
(Larger Sizes in proportion.)
Rogers' Boiler, small size . . . 3 15 0
Do. do. large do. . . 4 10 0

Hot-water Pipe, 4 inch diameter, 1s. 3d. per Foot.
STRONG IRON HURDLES, 3 ft. high, out of the ground, 6 ft. long, with five horizontal bars, weighing about 36 lbs., 3s. 6d. each.
Light Cattle Hurdles, 3 ft. 6 in. high, weighing 42 lbs. at 4s. 0d. each.
Strong do. do. do. 45 lbs. at 4 4
Ox Hurdles, 4 feet high, do. 60 lbs. at 5 6

BEST WIRE FOR STRAINED WIRE FENCING at 8s. per bundle of 150 yards each. Uprights for ditto, 7d. each. The Improved continued, and every other kind of Fencing, Fancy Wire-work, &c.;
HAND-GLASS FRAMES for Cucumbers, &c., 18 inches square, 3s. 6d.; 20 inches, 4s. 6d.; 22 inches, 5s. 6d. each.
CAST-IRON FLOWER-STAKES 4 feet long out of the ground, 7s.; 4 feet 6, 9s.; 5 feet, 11s.; 6 feet, 15s.; 7 feet, 20s. per dozen.
Show-Rooms at the Manufactory, No. 2, WINSLEY STREET, where every information may be obtained.

RENDLE'S TANK SYSTEM OF HEATING.
STEPHENSON AND CO., 61, Gracechurch-street, London, Inventors of the IMPROVED CONICAL and DOUBLE CYLINDRICAL BOILERS, having been much engaged in heating buildings upon the above system with Tanks of various materials, solicit the attention of scientific Horticulturists to an Iron Tank now fitting up on their premises, which offers most decided advantages over every other article hitherto employed for the same purpose. These tanks which are ornamental in appearance can be made from 10 to 100 feet long and of any width and depth, and can be connected or disconnected by any working Gardener without the slightest difficulty, thus affording the opportunity to persons in remote districts of employing this much approved method of heating without the assistance of Engineers. The Tanks can be applied to Boilers and Pipes already fixed, and from the present low price of Iron will be found cheaper than of any other material. Mr. RENDLE, of Plymouth, has kindly undertaken to receive orders and furnish information to any persons in his neighbourhood, and prices for any size will be forwarded upon application to S. and Co.

GUANO ON SALE,
BY THE IMPORTERS,
ANTHONY GIBBS & SONS, LONDON;
GIBBS, BRIGHT, & CO., LIVERPOOL AND BRISTOL.

WHEAT SOWING.
POTTER'S GUANO.—The superiority of this powerful MANURE being now completely established, it is only necessary to inform the public that a material reduction has been made in the price, and that it may be obtained either at the Works or of Mr. POTTER'S Agents, who have testimonials of its efficacy.—23, Upper Fife-street, Lambeth, London.
Mr. MARK POTTER, 40, Upper Thames-street, Sole London Agent.
** Nurserymen required as Agents in all the principal towns.

J. B. LAWES'S PATENT MANURES, composed of Super Phosphate of Lime, Phosphate of Ammonia, Silicate of Potash, &c., are now for sale at his Factory, Deptford-creek, London, price 4s. 6d. per bushel. These substances can be had separately; the Super Phosphate of Lime alone is recommended for fixing the Ammonia of Dung-heaps, Cesspools, Gas Liquor, &c. Price 4s. 6d. per bushel.

GUANO ON SALE.—Any quantity of this valuable Manure can be had from the bonded stores of the Importer either in London or Liverpool, on application to COTESWORTH, POWELL, and PRYOR, St. Helen's Place, London; EDWARDS, DANSON, and Co., Liverpool; and WILLIAM J. MYERS and Co., Importers, Liverpool.

No. VIII. was published on the 1st of August, and will be continued, at Sixpence a Month, of the
GARDENERS' EDITION OF THE BOTANIC GARDEN, with numerous Additions and Engravings of Plants. By B. MAUND, F.L.S. It contains Coloured Engravings of the most Ornamental Plants, suited to the open Garden, with Descriptions, Cultivation, &c., for the assistance of Gardeners and Amateurs. Also, a FLORAL REGISTER, with Woodcuts and Descriptions of handsome Plants, newly introduced from Foreign Countries. Also, AN AUCTIONEER, containing Miscellaneous Information on Gardening Affairs. Also, a portion of PROFESSOR HENSLOW'S BOTANICAL DICTIONARY of 5,000 Words, and 200 Cuts, descriptive of the Vegetable World; a complete Book of Reference on Subjects connected with the description of Plants.
Thus, it will be seen, that this Work, although sold at so very moderate a price, comprehends a greater variety of Botanical and Gardening Information than any Publication extant.
London: R. GROOMBRIDGE, Paternoster-row.

Just Published, price 6s. cloth,
THE HAND-BOOK OF CHEMISTRY; with a complete Index of Reference. By G. H. CAUNTER, Esq.
London: W. S. ORR & Co.; and W. & R. CHAMBERS, Edinburgh.

Just published, in One Volume 8vo., price 3s. 6d. to Fellows of the Society, and 5s. to others, (or postage free, upon receipt of a Post-office order, price 5s. to Fellows of the Society, or 6s. 6d. to others.)

A CATALOGUE OF THE FRUITS CULTIVATED in the GARDEN of the HORTICULTURAL SOCIETY OF LONDON. (Third Edition.) Containing the Names, Synonyms, Colour, Size, Form, Quality, Use, Time of Ripening, and many other particulars concerning all the most important varieties of hardy Fruit cultivated in this country.

Sold at the House of the Society, 21, Regent-street, and also by LONGMAN and Co., Paternoster-row; J. HATCHARD, Piccadilly; RIDGWAY, Piccadilly; RIVINGTONS, Waterloo-place; and by the principal Booksellers in all parts of the Empire. A few Copies of the Second Edition of this Catalogue may be had at the reduced price of 1s. 6d. each.

The Gardeners' Chronicle.

SATURDAY, SEPTEMBER 23, 1843.

MEETINGS FOR THE TWO FOLLOWING WEEKS.

Tuesday, September 26 . . . Horticultural . . . 7 P.M.
Tuesday, October 3 . . . Horticultural . . . 8 P.M.
Friday, — 6 . . . Botanical . . . 8 P.M.

THE newspapers have lately contained an incomplete account of an interesting experiment on the propagation of Wheat by division of its roots, from which it appears that a field may be cropped with Wheat without employing more than the 2,400th of the usual quantity of seed-corn. By the kindness of Mr. Archdale Palmer we are now enabled to state the exact facts, which are explained in the following letter from that gentleman:—

"As my friend Mr. Pownall has anticipated my intention to make the following experiment public, which I have no doubt has attracted your attention, I cannot longer delay transmitting it to you for the readers of the *Gardeners' Chronicle*, agreeably to my original view, as soon as I had ascertained the actual result; and that could not be before the Corn was threshed, which has been done this week.

"1842:—July. One grain of Wheat sown in a pot—August. The same divided into 4 plants, which three weeks after were again separated and made 12 plants—September. The same 12 plants were again separated, and made 32 plants—November. The same 32 plants were again separated into 48 plants which were then planted in the open ground, not particularly prepared for them, 18 inches from each other, occupying a space of 11 yards by 1 yard, being the 440th part of an acre; consequently 440 grains would be found sufficient for one acre, which I find weigh $\frac{3}{4}$ of an ounce.

"1843:—August. Ten of the 48 plants died, and the remaining 38 plants were cut down, unfortunately, before the Corn was ripe, as the birds had already taken one-fourth away. 1972 stems were counted. It was threshed this week, and the weight is 2½ lbs., which, according to the preceding calculation, consists of 22,000 grains. The Wheat sown is known by the name of Eclipse. I have thus stated the simple facts, but there are many observations which will naturally arise in an inquiring mind, when it is known that the cultivators of the soil in this country do not reap, upon the average, above 30 bushels for 3 bushels sown. I am aware that a remark will be made of the trouble and some little expense for the garden-pots, which were 48s., if the experiment is carried on to a larger extent. But let every person interested in this account try themselves—they will, as well as myself, be astonished at the result.—*Archdale Palmer, Cheam.*"

It appears from this experiment that by a new application of manual labour, three quarters of an ounce of seed-wheat will plant an acre of land. The quantity now used may be averaged at two bushels and a half, weighing about a hundred and fifty pounds. Sixty shillings a quarter will not be too high a price to take as the average value of seed-wheat, and therefore the saving in corn will be about eighteen and sixpence per acre.

Of course the practical question is whether this eighteen and sixpence will cover the cost of manual labour required for the operation of setting Wheat instead of sowing it. If it does cover the expense it would be an enormous gain to the country, because it would immediately afford a large amount of employment to those labourers who not being able-bodied are most in want of it. We doubt whether eighteen and sixpence an acre could be possibly expended in the operation, if judiciously conducted on a large scale; but that is a question which any intelligent farmer can answer better than we can.

We would only observe that if, as we are told, 3,800,000 acres are annually planted in Wheat in England and Wales, the application of so large a sum as 3,500,000l.,—which would be the amount of saving by Mr. Palmer's operation at the prices above assumed,—to the relief of the poor, is something which demands a very different notice from that of a passing comment in a newspaper.

We shall take an early opportunity of returning to this matter.

WITH a compact subsoil within 18 inches or less of the surface, and which lies nearly parallel to it, there is very little difficulty in contriving artificial channels of various dimensions, so as to carry off the superfluous moisture, or, more properly, to prevent its stagnating

and accumulating between the soil and subsoil. But the case is very different when the subsoil varies continually, and is never parallel to the upper surface, but undulates, or has various dips, quite unconnected with the declivities of the surface. This is very frequently the case where there is a change in the geological position of different strata. To take a familiar example, which may be met with within a short distance of the Metropolis: the London clay—one of the most uniform—lies in a basin of chalk, which crops out all around it; in some places the clay is 300 feet deep, or more; and in others, at no great depth, the spade can turn up solid lumps of chalk. The pure chalk is always pervious to water, and if it lies within reach, so that pits may be dug into it, these will often carry off all the water which may be conducted to them by drains or ditches. It is possible that, in some cases, the chalk may be saturated with moisture which has no outlet; but this case is uncommon, except where the chalk itself lies in an impervious basin. We only wish to point out the situation of those lands which border on the transition from one stratum to another.

In most cases, especially when the chalk and clay meet, the circumstance is pointed out by numerous springs coming out of the chalk. It requires good practice and some science to drain land which lies in such a situation, but by adopting correct principles founded on experience, the difficulty is easily overcome. General rules and directions, however, are not applicable to cases which vary without end. Where the London clay has another soil superimposed on it, which is generally of a poor gravelly nature, abounding in round pebbles and loam impregnated with iron, or, as in Suffolk, with a marine crag, there the meeting of the light soil and clay subsoil is accompanied with endless variations. One would imagine that the upper soil had been carried by currents and whirlpools, which had mixed it in the greatest confusion; here producing a bed of gravel of great thickness, and there scooping out the clay into holes, which were immediately filled with this chaotic mixture of every kind of earth and stones. In another place, a complete bed of fine sand has evidently been deposited over the clay, and this again washed away by subsequent currents, leaving the clay bare in the valleys. These soils generally require draining, wherever the sand meets with the clay. If the clay were level, or had any regular inclination, the task would be easy; the springs being cut off at a certain depth by deep-lying drains, the wet ground below would immediately become dry and sound: the upper soil, being porous, would require no other drains than the ditches. But this is scarcely ever the case, and the loam, which is formed by a mixture of clay and sand, usually called brick-earth, is as impervious to water as the clay itself. In good brick-earth, drains may be laid as we described before, but where there are continual variations in the subsoil, from loose running sand to loamy gravel and stiff clay, these pipes alone will act effectually, and they must be so made as to fit into each other, to prevent their shifting. Where the sand is loose and running, a foundation of brick-earth or clay must be made first, or of concrete, if that can be done sufficiently cheap, as we are assured it can; the pipes may have holes, or what is better, merely a slit to let in the water, without letting in the sand, which must be kept out by a layer of straw, or furze or heath, as can be most easily procured. Pipes are now made by a machine, which every brick-maker can have constructed for a very few pounds. It is merely an imitation of that by which macaroni is made in Italy. A quantity of well-tempered clay is put into a wooden or iron cylinder, in the bottom of which is an iron plate or disk, in which the exact section of the pipe is cut out; a strong piston forced down by any simple machinery drives out the pipe, which is received on a wooden mould, set perpendicularly, of the size of the bore of the pipe, having a shoulder and handle at the bottom. When the pipe is thirteen inches long, it is cut off with a wire, a boy seizes the handle of the mould with the pipe on it, and places the pipe on a barrow with a flat stage on it, which, when full, is wheeled away. At the moment the first boy removes the mould, another boy places another vertically, to receive the next pipe. One cylinder when filled will squeeze out 12 pipes, or more; it is then removed to be filled again, while it is replaced by a full one. With a little practice the operations go on most rapidly, and the greatest portion of the labour of moulding pipes and bending them is saved. We have no doubt, that, with fair competition, pipes 2 or 3 inches in interior diameter may be thus made and burned, where fuel is moderately cheap, for less than 20s. a thousand, and larger in proportion. In the machine we saw at work there was no contrivance for making one end of the pipes wider to receive the smaller end of another; but it is obvious that a slight enlargement near to the handle of the mould which receives the pipe, as it is formed, would effect the purpose completely. With such pipes any soil may be cheaply drained; and we hope that the very simple machine which makes them may be so generally adopted, that the expense of thorough-

draining with tiles will never be urged as an objection. If the draining costs 4l. per acre, which it seldom will come to, we will venture to affirm, that the first Corn crop of any kind, grown on the land after it has been drained, when the winter and spring have been wet, will amply repay the whole outlay; and every succeeding crop will give a considerable increase of the former average of crops on the same land.—*M.*

ONE reason why the obtaining heat by hot water circulating in earthen flues or gutters has met with so favourable a reception is its cheapness. Although iron pipes and evaporating-pans may be the best materials where durability is important, and there is much work to perform, yet there are thousands interested in gardens who cannot afford their expense, and who therefore have been obliged to dispense with heating apparatus altogether until the tank system was again brought forward, and means were pointed out of applying it economically. There is, however, still a difficulty with almost everybody in knowing how the apparatus can be best constructed; and, therefore, we think it desirable, without waiting for perfection, to state the general result up to the present time of experiments on the subject in the garden of the Horticultural Society, where it is at this moment either used or about to be used in several different places.

The gutters there were originally constructed of old flue-tiles and bricks set in cement, rendered inside with the same material, so as to be water-tight, and covered with flue-tiles, having moreover common chimney-pots adapted to them here and there, so as to allow steam to rise out of the gutters into the houses upon occasion. An attempt was afterwards made to substitute gutters of Stourbridge clay, a very hard material, but it was found impossible to prevent the fracture of their joints, in consequence of the expansion and contraction of these gutters; the attempt was therefore discontinued, and the materials of construction first employed are still in use.

It was also supposed that leaden pipes for the flow and return of the water from the boiler to the water-gutters could be secured by being passed through bricks well coated in cement. This however failed, in consequence of the expansion of the metal when heated, the joints again breaking and allowing the water to run out. This difficulty is now completely overcome, by building into the end of the water-gutters next the boiler a piece of stone, pierced with two holes, to which union screws are secured. To these union screws the flow and return-pipes are afterwards adjusted.

As the porous nature of the materials purposely employed for gutters, and the unsound joints, caused a perpetual leakage to some extent, it was found necessary to be able to examine the height of the water in the gutters at all times; and this was effected by continuing them into a cistern, built in the wall of the stoke-hole, and always uncovered. By this means, too, the water can be always replenished, as it wastes by evaporation, leakage, or otherwise.

In Mr. Rendle's plan, the whole under-surface of propagating or other beds has been made to rest on a tank of heated water, whence the name of the "Tank system." But this seems to be a superfluous expense. As far as can be at present judged, quite heat enough is obtained from a gutter running all round a pit, near the external wall without touching it, and by allowing the cavity next the outer wall to communicate with the air of the pit, both bottom and top heat are furnished conveniently, and, as it seems, effectually.

These preliminary remarks will enable the reader to understand the reasons which led to the construction of the pit, 54 feet long and 6 feet wide, of which the following are the plans and description:—

Fig. 1 represents a section of the water-gutters, &c., at the stoke-hole. The boiler is one of Stephenson's, which requires no setting, connected with the gutters by means of inch-and-quarter leaden pipes, and the cistern A. This cistern is formed by a vertical stone, tapped with two holes and fitted with union screws, and resting on a horizontal stone. The flow-pipe is

adapted to one of these screws, the return-pipe to the other. The bottom of the cistern is kept about three inches deeper than the bottom of the gutters, so as to permit sediment to fall into it, as has already been stated.

Fig. 2.

Fig. 3.

Fig. 2 is a section of the pit, showing the hot-water gutters, which are made by placing a 14-inch tile on hollow brickwork, as indicated more particularly at Fig. 3. A brick on edge forms the sides; the inside is then cemented, as shown by the shaded part, and the whole is finished with a 14-inch tile on the top. A space of about two inches is left between the gutter and the front wall, and allows the air from the under side of the gutter as it becomes heated to ascend and pass over the partition marked B, to be made available for top-heat.

ON THE VARIETIES OF CYCLAMEN.

In enumerating the following species, I have divided them into two sections. The first are those with orbicular or reniform leaves; the second are those with angular or hastate leaves.

SECTION I.—(Round or kidney-shaped leaves).

No. 1. *Cyclamen coum* (the round-leaved spring-flowering Sowbread).—This species has entire round leaves, heart-shaped at the base, of a dark green on the upper surface, and reddish purple on the under. It is destitute of that white marbled appearance on the upper surface so common to most of the other species. The flowers are rather small, scentless, of a bright reddish purple, and produced from January to March. The roots are also rather small, flat, and quite hardy. It is to be found in some collections under the name of *C. orbiculare*.

No. 2. *Cyclamen Europæum* (the round-leaved summer-flowering Sowbread).—This species has small leaves, which are slightly denticulated, and roundly heart-shaped, strongly marked on the upper surface with an irregular white band. The flowers are rather small, bright-reddish purple, and very like those of the preceding both in size and colour. They are produced from July to September, and are sweet-scented. The roots are small and quite hardy. It bears the following names in collections:—*C. Clusii*, *C. æstivum*, *C. littorale*, *C. officinale*, *C. retroflexum*, *C. Hungaricum*.

No. 3. *Cyclamen vernalum* (the round-leaved winter-flowering Sowbread).—This species has leaves double the size of those of *C. coum*, and nearly four times those of *C. Europæum*; they are quite round and entire, with the lobes at the base overlapping the stalk, and marked on the upper surface with an irregular band of white, which is not the case with the leaves of *C. coum*. The flowers are like those of the two preceding kinds in form and colour, but a little larger and produced from November to January. The roots are rather larger than those of the two preceding kinds, and the plant is frequently confounded with *C. coum* in collections. The name *hyemale* (winter) would be far more appropriate for this very distinct species, for it has done flowering before spring commences; this may account in a great measure for its always being confounded with *C. coum*, (the spring-flowering kind,) but it may be distinguished at first sight by its larger leaves having a very conspicuous white band on their upper surface. I have raised this species from seed, and the plants have always retained this character, and that of flowering during the winter, if protected from the wet. It has the leaves of *C. persicum* and the flowers of *C. coum*.

No. 4. *Cyclamen Persicum* (the reniform-leaved spring-flowering Sowbread).—This species has rather large kidney-shaped toothed leaves, marbled with white on the upper surface and deep purple on the under side. The flowers are white, but there are several varieties raised from seeds, some with white flowers having a pink eye, others all pink or pale lilac, some with jagged petals, others with double flowers, others with sweet-scented flowers, and others quite inodorous or with dotted flowers. It blooms from February to May, according to the treat-

ment it receives, and is an excellent plant for moderate forcing. The roots are rather large and flattish; they are tender and soon destroyed by frost. It bears the following names in collections:—*C. pyrolæfolium*, *C. odoratum*.

SECTION II.—(The angular or hastate leaved.)

No. 5. *Cyclamen Neapolitanum* (the angular-leaved autumn-flowering Sowbread).—This is the largest, most robust, and hardiest of all the *Cyclamens*; with large various shaped leaves, mostly five angled, but sometimes triangular or hastate. They are, however, always the same shape on the same plant, and very much resemble the leaves of the common Ivy, but are distinctly marked on the upper surface, and have an irregular broad band of white and purple on the under surface. The flowers are rosy, purple, scentless, rather large, and produced from August to September. There is a white variety, differing in nothing except the colour of the flowers. The roots are very large, rough, flat, and quite hardy. It bears the following names in collections:—*C. autumnale*, *C. purpurascens*, *C. subhastatum*, *C. Poli*, and *C. hederæfolium purpureum*. It is to be found in nearly all collections under the name of *C. hederæfolium*, a very appropriate appellation.

No. 6. *Cyclamen hederæfolium* (the angular-leaved spring-flowering Sowbread).—This is a very desirable species, with broad, denticulate, marbled, dark-green, angular leaves, marked on the upper surface with white, and purple on the under. The flowers at first are white, but as they advance and get fully expanded, they change to a deep flesh-colour. The petals are particularly twisted and narrow. It flowers from March to May, and is very sweet scented. The bulbs are round, rather small, and tender. It bears the following names in collections:—*C. repandum*, *C. latifolium*, *C. ficariæfolium*, and *C. fragrans*.—George Gordon.

COTTAGE GARDENS IN SCOTLAND.

THE letter, some months ago, of a Stirling correspondent, who wishes the subject to be taken up in the columns of the *Gardeners' Chronicle* for the benefit of the cottagers in Scotland, are worthy of particular attention. But before pointing out to the cottager those articles which he ought to grow in his garden, and how he ought to crop with regard to succession, something else must be done, otherwise the generality of such persons will look on the suggestions as merely to be read, but not to be put into practice. Amateur gardeners, such as this correspondent seems to be, and the aristocracy of Scotland, who have means and influence, must take up the subject, and hold out some inducements to the cottager to cultivate his garden well, and to keep his cottage and all connected with it neat and clean. In England this system is now pursued with the best results; and although there are some societies in Scotland for the same purpose, they are far from being so general as they ought to be. These objects should be carried out, in the first place, by purchasing kitchen-garden and flower-seeds for distribution amongst the cottagers; and in the next, by holding out rewards to those who make the best use of the seeds given to them. The prizes should not be confined to the first, second, or third best, but a large number should be rewarded in some way; in fact, all who have shown anxiety about the matter should be stimulated and encouraged. This has a much better effect than when the best only receive the prize, because in this case the great mass are apt to be discouraged.

The cottagers of Scotland are a sharp-sighted and intelligent class of persons; and, in order to better their condition, we must first of all convince them that what we propose to do is really for their benefit. Every one knows that, until a few years back, they were notorious for the manner in which ashes and filth were allowed to accumulate in front of their doors and round the walls of their houses. The nobility and other landed proprietors in the country attempted to make them a little cleaner and more tasteful in this respect, and they have certainly succeeded, for heaps of ashes or dunghills in front of cottages are now almost unknown. But it was curious to witness the manner in which the change was brought round. The lord's commands went forth, directing the dunghills to be removed; the gardener from the Hall was sent to make gardens in front of the doors, and to plant them with shrubs and flowers. The walls of the cottages too were covered with the choicest creepers; and when all was done, it was of course expected that the cottagers would attend to them and keep them clean and neat; but many of them felt much too grand to be comfortable, and took it into their heads that it was not for their benefit that all these changes were wrought. The gardener who planted these gardens was obliged to attend to them himself; and in one place, which I had an opportunity of seeing a few weeks ago, the pales in front of the doors (which were placed for a protection to the plants) were down, and everything destroyed, excepting a few strong-growing trees.

The system of changing masters too frequently operates strongly against the improvement of cottage-gardens: this is particularly the case in the agricultural districts in the south of Scotland. The cottagers here are of two classes—either "hinds," that is, farm-servants, engaged to work horses; or "cottars," who merely rent houses and work day or piece-work either on the farm or elsewhere: the former are engaged by the year, and are paid chiefly in the produce of the farm, that is, a certain quantity of Corn, and so much ground in the fields, which they can plant with Potatoes, food for a Cow, Grass, &c. The latter engage their houses for the same period, which commences and ends at Whitsunday. Many of both classes change houses and masters every year or two, and of course it would be

difficult to make such persons feel much interest in the gardens which are always attached to their houses.

Taking these things into consideration, and having mingled in the society of the cottagers of Scotland for nearly 30 years, and having consequently become intimately acquainted with their habits and failings, I would advise all those who are anxious to improve their condition to begin by making their homes comfortable. Having done this, try to make them feel an interest in their gardens by those means which I have already pointed out, and it will soon be found that they will not be behind their English neighbours in their love for vegetables and for flowers. I have often heard many of the higher classes of society, who are in the habit of visiting England, regret the difference between the two countries in this respect. The English cottager has his house covered with Roses and other creepers; his Pelargoniums in the windows are attended with anxious care, and he has generally a little plot of flowers and neat walks in front of his window. His vegetable garden contains, besides the more common things, French Beans, an arbour of Scarlet Runners, Celery, Cauliflowers, Cucumbers, and various other articles which are rarely or never seen in the cottage-gardens of Scotland. He is just in the state to profit by Mr. Paxton's Cottage Calendar, or by the articles on Cottage Gardening published weekly in the first volume of this Paper. The higher classes in Scotland, therefore, have the power in their hands to raise the character and enjoyments of their cottagers; and in making this appeal to them in behalf of our countrymen, I would at the same time remind them that they will thus contribute greatly to their own enjoyment. What can afford higher gratification than to see the cottages converted from a kind of stable or cow-house into a comfortable dwelling-place, the inside neat and clean, the walls covered with Roses, Clematis, and Honeysuckle, and the cottager and his family taking an interest in his garden.—R. F.

AMATEUR'S GARDEN.—No. XXXVIII.

THE time has now arrived when the Amateur who thinks of having a show of flowers through the winter and early in spring, should have his plants prepared for that purpose. If my former instructions have been attended to, a great number of plants will have been prepared, potted off, and will now be strong healthy plants, well established to brave the winter's dulness, and cheer us with their flowers. Among these should be a general collection of Californian and other North American annuals, a nice stock of Chinese, Tea-scented, and Bourbon Roses, with abundance of Cinerarias, Violets, and Mignonette in several different stages of growth. If these things have not been prepared, there is not a day to be lost, as, though the weather is fine and promising at the present time, it is not to be expected that it will long continue so; and if the plants are not well established, at the latest, by the end of October, no after management will induce them to bloom with anything like freedom before the spring.

Of Cinerarias, the smallest of the plants now potted will be those to bloom next May, and though to get unusually large specimens it is recommended to put four or five plants into a pot, it will be as well for those persons who intend to compete for prizes at the Horticultural Shows, to consider whether such specimens will be permitted to compete under the head of "the best 12 plants." I throw out these hints, because I hear that some persons are preparing plants in the above manner, which will most certainly disqualify them for exhibition. Cinerarias do not like to be too much exposed to currents of cold air in the winter, as I have frequently seen them much injured by being set out some distance apart after they had become crowded in the frame. The proper way is to set them so that the leaves just touch, but never to allow them to be crowded. If the runners have been regularly taken from the Neapolitan and Russian Violets, they will now be showing bloom abundantly. It is also quite time that the best of the plants were potted, and the remainder planted in a frame or on a warm south border, as recommended in my former article on this subject.

Some importance is attached by some cultivators to the potting of Hyacinths and other bulbs early in September, but, in my estimation, quite as much depends upon the after treatment of the bulbs as upon the time of potting. For bulbs to bloom at Christmas, the most hardy of the single varieties should be used, and after they are established in their pots, they should be placed in a brisk bottom-heat, and be kept covered with inverted pots, and in the dark, until the leaves and flower-stems are at least four inches long. One of the London nurserymen, in the instructions sent out with his bulb catalogue, highly recommends filling the pots with soil, and placing the bulb on the top, level with the rim of the pot, and cover it in a conical form very lightly with soil. This plan I tried several years back, and though it answered very well, there is one objection to it, viz., the roots frequently protrude themselves over the sides of the pots, and therefore get broken off in removing the plants from the plunging material. The old system of potting with the apex of the bulb level with the top of the pot is, in my estimation, preferable. It is a matter of little importance what soil the bulbs are planted in, so long as it is light and sandy, as the sap necessary for the production of the flower is already stored in the bulb, and only requires proper treatment to develop it, whether it be planted in moss or soil, or placed over water. I am a great advocate for planting a number of Van Thol Tulips in small 60 sized pots, and also the different kinds of Squills, such as *Scilla amœna*, *bifolia*, &c. These, with a few Hyacinths and Chinese Primroses, make admirable little groups for the drawing-room table when neatly arranged in flat baskets or trays, and the surface of the pots covered with moss.

I do not consider it necessary to give the names of the various kinds of Bulbs, as, if the amateur purchases at a respectable house, he may depend upon getting proper kinds—that is, if he applies in time.—*W. P. Ayres, Brooklands.*

HOME CORRESPONDENCE.

Bottom Heat.—I am sure that the Editor of the *Gardeners' Chronicle* will give me credit for maintaining an opinion formed from my own practice until I am satisfied that it is untenable. At first, I intended to hear all that could be said on both sides of the question before I made a reply; but now I see that the *Gardeners' Chronicle* and myself are in a position like unto the travellers with the camelion, and that some explanation is necessary. The *Chronicle* defends a totally different arrangement from that which I wished to alter. Without a section, or a more detailed account, I cannot say how I should like the plan it defends; but here it is:—"As far as we (*Gard. Chron.*) are at present aware, it will be found that if the spaces between the gutters are filled with rough materials, such as fragments of bricks and pottery, any quantity of water may be communicated to the beds by the ordinary modes of watering where excessive moisture is desirable." Now these observations cannot refer to Mr. Rendle's system, for he occupies the whole bottom of his bed with the two gutters, or the flow and return channels, with a division down the middle, for the purpose of separating the two currents, and for resting the edges of the covers on. These covers are "slate-stone, 1½ inch thick, cut square at the edges, and fastened to each other by Roman cement." A bed thus finished is as close as an iron chest, and, of course, cannot have "spaces between the gutters" to allow of drainage, so that we are arguing two very different things under one name. Then, with regard to Melon growing, I was not writing an article on their culture; nor do I advocate mud beds for them; I merely alluded to such mud as is supposed to be produced by the admission of vapour (not steam) from below, and I endeavoured to show that such mud is not produced at all; and now, to simplify the question, I say distinctly that neither mud nor anything like it is in reality produced in twelve months, which is enough for a course of Melon culture. The effect produced is simply this—for I have proved it before the subject even originated in the mind of Mr. Rendle:—open spaces, say one-eighth of an inch, were left at certain intervals between the edges of the slate coverings, with a contrivance to shut them up when you want dry bottom-heat, then a layer of an inch or two in thickness, of rough coal ashes, clinkers, or what is better, of charcoal, in pieces not larger than a school-boy's marble; then cover this layer closely with thin turf, with the grassy side downwards—then the soil: the vapour never passes through this layer of turf; it merely fills the turf like a sponge, and whatever moisture or "wet" that passes further up, is carried by capillary attraction, and when the roots of Melons get within the influence of this moisture, they will grow with extraordinary vigour, and no red spider will ever come near a vigorous-growing Melon plant. When plants have grown large enough to bear, and seem shy to "set," just stop the vapour openings, and their roots will suck the sponge dry; by degrees, the "circulating medium" thus cut off, will soon tell on the branches above, and a great deal more fruit will be set in consequence than the plants can bear. You may then thin them, leaving about double the quantity for a crop, and let in the vapour again to swell them off, &c. &c. Touching Mr. Knight's Melon growing, I deny *in toto* that he was either a first or a second rate grower; he only knew them physiologically better than his neighbours. I lived ten years with one of his most intimate friends, and not far from Downton Castle, and what was going on there at that time I was not a stranger to; but I owe it to the memory of that great and good man to say, that, whatever attainments I have made in the true principles of gardening, I learned them from his lips. His Melons were always a source of annoyance to him; he never could grow them without red spider, through a defective apparatus,—and that defect, too, which I wish in these papers to obviate. I must modify my assertion, however, so far as to say, that if Mr. Knight had had a properly-constructed apparatus, I saw no reason why his plants should not look as well, and bear as good crops, as those of a first-rate gardener. In conclusion, let it be clearly proved that I am wrong, and that dry bottom-heat, such as is now in use in Mr. Rendle's propagating-house, is sufficient for all the purposes to which bottom-heat is applied, and I shall immediately explain another apparatus, which will supersede the tank-system altogether, and only cost one half the expense.—*D. Beaton.* [Since it appears that we have been speaking of one thing, and Mr. B. of another, there is no use in pursuing this argument. We must, however, persist in stating that Mr. Knight's Persian Melons have never been excelled, and very rarely equalled; and that as a Melon-grower he was unrivalled. That in the course of his experiments he often failed is very likely; indeed, how could it be otherwise? The final result is what should be looked at, and that was perfect.]

Rendle's System of Tank-heating.—As I think that when an individual introduces to the notice of the public any subject that may have claims for novelty, it is his duty to assist in carrying it out to its full extent, I again come before your readers with a few remarks on the observations that have recently appeared in the *Chronicle* relative to the "Tank system of heating," and, in the first place, on Mr. Sherwood's letter that appeared a few weeks since. This writer, for whom I entertain great respect, does not seem to have considered the matter well, or he would not have asserted "that there is one thing

which should not be overlooked, namely, it does not admit of the pipes being fixed one inch higher in the house than the tank, be that where it may." Let Mr. Sherwood refer to *London's Magazine* as far back as the year 1829, and he will find an article therein published relative to the syphon principle of heating; by the same means nothing can be easier than to conduct water six inches, or even six feet above the level of the tank, care of course being taken that the flow-pipe be situated at least two inches higher in the water than the return, and that provision be made at the highest point with an air-cock or pump, to draw off the air which will be replaced with water. Thus easily, and I trust satisfactorily, have I explained to Mr. Sherwood how this presumed impossibility is possible, and if there are any other queries which the readers of the *Chronicle* are disposed to put, I am willing to answer them through that medium; for I should be sorry to hear of an apparatus being put up in an imperfect or incomplete manner. This offer will, I trust, be acceptable. Mr. Beaton, lately, in the "Calendar of Operations," has a long article on the "Tank system," in which he states that he agrees (or rather agrees with me) that "surface of tank is of much importance," and upon this rests what is considered my great improvement over the pipe or gutter system, and what I have ever studiously recommended and have always advised. The most economical plan will be "to make the tank as wide as the bottom of the bed, or nearly so." This is just the plan that must be universally adopted. But with regard to the depth of the tanks, I think that Mr. Beaton is running into an opposite extreme to a rev. gentleman whose name appeared in your columns a few weeks since, who recommended that the tank should be two feet deep. The difference is certainly very great between these two ardent advocates of the system, but in order to avoid extremes, I advise that the tanks should be between six and nine inches deep. I do not state this without reason. In my original house which I erected for experiment, the tanks were only four inches in depth, whereas in the new one, (which is but 50 feet by 13, and considered one of the most complete houses of the kind in the kingdom,) the tanks are eight inches in depth; my motive for making this alteration has been already stated in this Paper, and in my treatise, namely, "that so large a body of water, when once heated, retains its heat for a considerable time." This I have fully experienced, and my experience, I trust, will not be thought little of; I would always advise the tank to be of a moderate depth, as being the most economical, for the saving of fuel will be found very great. When the tanks are only an inch in depth, a very little fire will raise the water to a great heat, but the fire will require constant attention. The water in a tank of eight inches in depth must certainly have a strong fire to get it up to a high temperature, but the firing afterwards required is trifling. I have tried the difference, let others do the same and be satisfied. Mr. Beaton then goes on to state that "Mr. Rendle's system falls short of previous arrangements, he makes no provision for moistening the bottom of such a bed." In answer to this, I would observe that in my treatise a plan is suggested for forming a bed for growing Pines without pots. The first stratum over the slates, or tiles, should be of rough materials, the cultivator applying, as the case requires, according to his judgment, liquid, which would filter to the bottom of the bed, and again act on the soil in the same ratio as influenced by the heat below. This plan is equally applicable to the cultivation of Melons or Cucumbers. I am gratified to think that it is the intention of Mr. Beaton to write an article or two bearing on the subject of hot-water for bottom heat. He cannot enter upon a more laudable pursuit.—*W. E. Rendle, F.H.S.*

Disease in Larch.—Can any of your Correspondents inform me through your columns the cause of Larch turning brown, as if it had been scorched? The bottom extremities of the young shoots with the leaves are the most infected; the Larch will be three years old next spring; the side branches, especially the lower ones, make no growth; the leaves turn brown and fall off; the upper shoots are a little infected, and also the leader for a few inches, while half the plants die, or nearly so; here and there one makes a moderate growth, (about one in ten,) but it is weak and sickly. I have three lots of Cullians (?) that were planted out into nursery lines in the same year, (1842,) and are growing within 50 yards of the other; yet they are quite healthy, and have made very fine growth. I may state that the diseased were all one year's seedlings. The healthy three years' Culls were what remained after the best had been selected, and there was no difference in the treatment either with respect to the soil or winter digging. The seedlings planted this spring are not infected. I have had Larch diseased in the same way before, but never to the same extent. One square of Larch may be infected, and another, only a few yards off, may not be injured, or but very slightly. It generally comes on in the spring, but I can remember their being once slightly infected in the same way about the latter end of summer. I ought to state the climate is late and wet, being in the south of Ireland, within 20 or 30 miles of the west coast. I shall be glad to know if there be any remedy.—*A Paddy.*

Wasps.—Last year there was a great number of nests in this neighbourhood (south of Ireland); this year I have only heard of two, and seen one, and that one on the top of a Red Currant bush. Is such a thing uncommon, or are they a peculiar kind? The nest is about 6 inches in diameter and 7 to 8 inches deep; the Wasps enter at the bottom, through a small hole. The nest increases in size, and appears to be enlarged from the inside.—*A Paddy.*

Wasps.—We have a great quantity of Wasps in this neighbourhood, near Shiffnall, (South Shropshire,) but

not quite so many as last year. There has been upwards of 130 nests destroyed, and it has not weakened them much; the Bees, too, eat the fruit nearly as much as the Wasps. There was a great quantity of Queen Wasps this spring. We destroyed a great many, and the wet weather in the beginning of June put an end to nearly all the remainder.—*A. B.*

Transmutation of Corn.—I lately preached a sermon, at Northtawton, upon the parable of the "Tares" (*ζιζανία*, most probably Darnel), in which I introduced, for the purpose of illustration, a remark from the *Gardeners' Chronicle* respecting the *Lolium arvense*, or temulentum, which is generally known among the farmers of Kent as Droke, and was understood to be—but which it really was not—degenerated Wheat. In the part of Devon to which I refer, it is known by the name of "Ever" and "the Drunken Plant." A strong-minded and observant farmer of that parish, Mr. William Durant, afterwards observed, "Your remark respecting the Droke was sufficiently correct as an illustration of your subject, but, depend upon it, you erred as regarded the fact. It is degenerated Wheat! It is not often seen in good land; but it almost uniformly appears where a rough moorland has been broken up and sown with Wheat. I lately met with a stalk of it, and upon pulling it up, brought up the entire root, with two ears of Wheat—a fine illustration of 'Lest ye root up the Wheat also'." Upon the most accurate examination, by disengaging the earth from the fibrous roots,—first by the finger, and then with my knife,—I found all three stalks growing inseparably upon one root. I laid it aside,—but lost it,—intending to have endeavoured, by cultivation, to restore it to Wheat again! I assured him it was a distinct plant, and not degenerated Wheat. "Well," said he, "you may use my name as publicly as you please for the fact, that, Wheat or no Wheat, all the plants spring from one root." You will perceive that the misapprehension is not, by any means, confined to Kent.—*T. D.*

Morphology.—At p. 630, Mr. Paxton has described as a monstrous state of the cone of the Spruce Fir, a not uncommon production on that tree, occasioned by injury done to the leaf-bud, by Aphides. It is this which assumes the character of a pseudo-cone, and which afterwards develops, as he describes, into the usual condition of a branch. He will find that this appearance generally extends about two thirds of the way round the axis. The cell-like cavities at the base of the abortive leaves are filled with Aphides, in an early state of their development; and I have also seen them containing a species of Coccinella, which I presume had entered them to attack the Aphides. If I remember rightly, this appearance has been noticed and figured in "Richard's Coniferæ," and also somewhere in the "Magazine of Natural History."

—*J. S. Henslow.*—In reply to your correspondent from Chatsworth, I beg to state that the branch of Spruce Fir presenting some appearances which he supposes to proceed from cones never properly developed, is the production of an insect. These occurrences are perfectly familiar to my eye, although they are less prevalent this year than usual. They begin to appear in the spring, and soon contain in cells numerous larvæ which finally emerge in the shape of small flies. These nests then become brown and hard, and are certainly not unlike imperfect cones. P.S.—Since writing the above I have referred to Selby's "British Forest Trees," at p. 465 your correspondent will find this matter fully explained. The insect is there called an Aphis—it has, I think, rather the appearance of a Cynips, but it is no doubt well known to naturalists, and perhaps some one may oblige us by giving its scientific name and history.—*Asterope.*

Conservatory Climbers.—Allow me to correct a typographical error in my remarks on Conservatory Climbers in a late Number. After recommending Bignonia Chere, and stating that it bloomed most freely, in conjunction with B. jasminoides, I mentioned a few plants that refused to flower at all; among them Bignonia jasminifolia, not jasminoides, as it has been printed, and which contradicts the former part of my statement. I bought the latter plant from the strong recommendation of a nurseryman, but it has never blossomed. It is named in *London's Hortus Britannicus*, as an ornamental stove-climber, ten feet high, of an orange colour, and a native of Orinoco, introduced in 1826;—does Mr. Beaton know it?—*A Devonian.*

Myatt's Pine Strawberry.—The information which you have collected on the culture of this valuable fruit will be very useful. I have before me, however, directions, which ought in addition to be known to every one; they are given in the "Auctuarium" of the "Botanic Garden," published on the 1st of the present month, and as Mr. Maund, the writer of them, is a careful experimenter, I will copy them for your use. He has lately tried the effects of Guano on several garden crops, and says, "It is quite evident that the luxuriant growth given by Guano to this shy-bearing Strawberry is highly advantageous to its fertility. Most persons agree in acknowledging Myatt's Pine Strawberry to be the finest flavoured, and most difficult to cultivate successfully, of any in our gardens. We believe, however, that complaint against its fertility need no longer exist. If runners be planted as early as they can be obtained, certainly not later than July, and the beds be supplied with Guano-water, 4 oz. to the gallon, once a week, for four weeks, commencing as soon as the blossom-buds are visible in the hearts of the plants, we believe they will not fail to bear abundantly; and by maturing the latest flowers, will continue longer in bearing than many other sorts. Probably it would be advantageous to apply a little Guano to the plants in September; but if greatly stimulated at this season, the plants may possibly be driven into flower to the prejudice of the spring blossom."—*Acwa.*

Prejudices.—Gif your correspondent "Q." expects a favour frae ane, he might aye be civil, I think, a d n c misca' ane; for though a puir chield may hae the misfortune to be planted on a moor, and may be a "Moorland Gardener," it disna happen as a necessary case that he maun be a "Moorland Willie," sic a ane, ye ken, as a Scotch poet describes, wha went a courting auld Gaffer's bonny Jean, wha lived in Glen-Jeoch; the carl was half blind wi' age, and had to look for the lassie wi' his spectacles on, and when he saw her, sang to the tune of "Whistle o'er the lave o't." I hae learned mony a gude lesson about gardening since I began reading the *Chronicle*; and anither thing I hae also observed by means o' that periodical—that it is nae canny thing to be an innovator: it taks guns o' nae small calibre, and bullets that wad fill the mou' o' "Mons Meg," to batter doon the walls o' pride and prejudice, and indurated custom. If ony ane like mysel' was just to say that "Wines do not work when Vines are in the flower," he would soon be knocked down by the believers in antipathetical and sympathetic doctrine, with large extracts from the work o' Sir Kenelm Digby and Nicholas Culpepper; and it will not be out o' the mind o' thousands o' the readers o' the *Chronicle* what an unco ado there was about the recommendation of "glazed pots" and "the one-shift system;" and there is reason to believe that mony a gardener disna think them gude things yet, just because they didna mak the discovery themselves, or had ony merit in bringing them before the public. But if people would just keep their een open at times, and no gang sleeping through the world a'thegither, they would learn mony a usefu' lesson frae sources that they little dream of, for even bairns will speer things and do things that might mak auld folk wonder; and sae it happened when the "glazed-pot" and "one-shift system" controversies were attracting the attention o' mony, that an earthen dish that had been used for holding pickle met with an accident that made it of no use for the purpose it was intended for, and so it was laid aside as useless; it was somewhat less than a firlet, and ye ken it requires a clay vessel to be weel burnt and weel glazed to hold pickle that will soom a tawtie; and it sae happened that some bairns in their daffin would build houses and mak gardens, and they would have a flower-garden in the muckle glazed pot, and they managed to fill it with garden-earths, and planted a flowering shrub in the centre, and lesser plants nearer the edge, and a bonny looking thing it was when they had finished it. Thought I to mysel', when I saw it, puir things! ye never heard o' "glazed pots" and the "one-shift system," and yet ye are combining them baith together, and no an ill word about it; ye little ken what division there is in the gardening world about the things that are gieing ye sae muckle delight. And weel the plants grew, as they were allowed to remain, and sae it may happen with the maturing o' out-door plants in dry weather. Gardeners hae got so accustomed to the watering o' certain crops in summer that mony o' them will not give it up, although the plants, if they could speak, would say—"No more, I thank you;" but they will continue to pour it down their throats, or rather up their throats, although the drink that they receive may not be to their liking; it may contain the oxide of iron, the sulphate of lime, the carbonate of lime, and carbonate of soda, besides nitrates and muriates, that I ken little about; and the warst thing ava is, that mony gardeners neither ken nor care about the testing o' their water—they dinna ken the use o' the chloride of barium, or the oxalate of ammonia, or oxalic acid. Noo to understand the use o' these and sic like things, would be a wonderfu' help to dispel the mists frae their een, and they would be enabled to look upon the secrets o' nature wi' as clear a sight as if they had rubbed their een with eyebright. But it would, perhaps, be an easier way, and it would save a great deal o' trouble baith to the head and the hands, to be more carefu' o' the ammoniased water o' the heavens when it comes to the earth for the benefit o' the plants we hae charge o'; for I think we are taught somewhere in the *Chronicle*, that all the nitrogen o' plants can only be obtained in the form of ammonia, and that the ammonia is supplied by rain-water, that carries it doon frae the air in which it had been hanging for I dinna ken how lang; but all the ammonia that falls wi' the rain disna remain in the earth, for only a part of it is taken up by the roots, and the rest flies awa again, maybe to be washed down on the sands o' Africa. Noo I am thinking that the covering or mantle that is spread over the roots o' certain crops answers a twafold purpose in dry weather—it may prevent much o' the ammonia frae escaping by means o' evaporation, and retain a sufficient quantity o' moisture for assisting the decomposition of organic matter in the soil. It often taks awa the pleasure o' gardening in summer when every muscle o' the body is strained wi' the water-barrow and watering pots, and the legs and feet as wet as if they had been dwelling in the same habitation wi' Callitriche and fresh-water soldiers. Noo I can assure your readers that it is a far pleasanter thing for the mind, and much easier for our mortal parts, just to tak a walk among the out-door crops, and witness the progress they mak when a proper covering is applied to their roots in dry weather; and although I may hae succeeded to please mysel' in the material I hae used, there may be nae harm in using a wee thing o' Scotch cautiousness until anither season may test it better; but as "Q." wishes to ken what the covering may be, I may tell him something o' its nature—it sucks in water nearly as weel as a sponge, and parts with it as reluctantly as the devotee o' Mammon would part with his gowden gear.—*A Moorland Gardener.*

The *Early May Pea*, alluded to by Mr. Noble, is, probably, the *Early May* of the seed-shops, which is sometimes one sort, and sometimes another. The *Pea* known

in this neighbourhood under that name grows about three feet high, and is, as I before stated, several days earlier than Farnes's First Early. Mr. Noble might easily satisfy himself upon that point, by procuring the kind I alluded to; mine were obtained from Mr. Richard Gadd, Seedsman, &c., Dorking.—*J. B. Whiting.*

Peas.—I think that the paragraph headed "Farnes's Early Peas," in the *Chronicle* of the 9th instant, must have escaped your usual penetration. It appears to me to be an advertisement, for the purpose of bringing into public notice a *Pea* which I have no doubt is a very good one; but I have no hesitation in saying that there is not any *Pea* known in this country (by whatever name it may be called) that will be fit for table ten or fourteen days before a good stock of Warwick's, procured from the principal houses in London, if sown in the open ground on the same day and under similar circumstances. And I think that the Horticultural Society would be conferring a great benefit on its members and the public at large if they would devote a portion of their garden to a proof of the new vegetables which are advertised, (but I fear this would be impracticable, as it would require too large a space); the public would then be introduced to many of their old acquaintances with new names. I had intended the foregoing for the last week's *Chronicle*, but was too late; I am, however, glad that I did not send it, as I observe in your present Number another article headed "Peas," which requires a few remarks. Your correspondent, an "Original Subscriber," says that in the spring he sowed a pint of the Prince Albert *Pea*, and that they came in a week earlier than the *Early Frames*, which were sown six weeks before them; this may be very true, but it proves nothing. Had he, at the same time that he sowed the Prince Albert, sown some of the same *Frames* that he had previously sown, he would probably have found that they would not have been fit to gather more than one week—instead of seven—before the others. The earlier that *Peas* are sown, the longer time they require to come to maturity, as I have proved in my own garden; for two or three seasons I sowed early *Peas* in November and some of the same *Peas* in March, but I always found that the latter sown were not more than a week behind the first. On the 23d of February of this year, as an experiment I sowed in the same garden side by side, some "Prince Albert," "Early Kent," "Early Warwick," and "Early Frames." The first were fit to gather seven days before the *Warwicks*, the Kent four days, and the *Warwicks* about four or five before the *Frames*. I beg, however, to observe the two former bore no comparison in the size of the pods or quantity with the two other sorts.—*F. H. S.* [The paragraph in question was certainly overlooked. All new vegetables are tried in the Horticultural Garden, as far as it is possible that they should be.]

Clover Dodder.—Since reading the paper from Prof. Henslow, on a species of *Cuscuta* which he suspects to be introduced with foreign seed, I have observed it growing in some rows of *Lucerne*, which I sowed with seed imported from *Khelat*, and I am confident there was not a plant of *Cuscuta* on the ground, or anywhere near it. On a piece of ground close adjoining that sown with the *Khelat* seed, I sowed some *Lucerne*, saved in this country, which is quite clear from the *Cuscuta*, which proves that it must be imported with the *Khelat* seed. I have sent you a specimen, cut from the middle of one of the rows, and which is a faint sample of the rows that are infected with it.—*W. Scott.* [The specimen sent was not in flower, but it looked very like the *Clover Dodder*.]

To keep Wasps from Fruit.—The best remedy to prevent Wasps from attacking wall-fruit is to plant close against or near the fruit tree *Symphoricarpos racemosa*. In the year 1826 (when I made the memorandum), in my father's garden, we had a Moor-park Apricot with a quantity of fruit upon it, and near to it stood in blossom *S. racemosa*, which the Wasps preferred to the fruit, as there was not a single fruit touched, although all day long the blossoms of *S. racemosa* were frequented by the Wasps.—*G. S. Wintle.*

Vegetable Marrow.—I perceive that a correspondent complains of his fruit falling off. Mine have this year fallen off by hundreds in the early part of the season, and I attributed it to the uncongenial early summer, which was all against them. I have now as large and fine a crop as can be produced of all the different sorts.—*Rus.*

Grouping Plants in Flower-Gardens.—If there is one feature more characteristic than another of the improvement in modern Flower-Gardens over the old, promiscuous method of planting, it is the facility with which a plant's character can be determined at first sight,—from the large masses of one plant grown together, as well as the contrast of colour produced in grouping: this seems to me to meet the difficulty so often complained of by those who urge as an excuse for their limited knowledge of plants, the abstruseness of the art; and it is in some degree to this circumstance that I attribute the rapid progress grouping has made of late years, and the prospect of a wonderful increase to the number of its followers in future years. Some important facts conspire to lead me thus to hope, and amongst these is the readiness with which employers co-operate with their gardeners in carrying into practice their intentions, and also the improved taste of gardeners; for, after all, it may be safely asserted that without this all will be of no avail. It is quite just and proper that employers should suggest, but at the same time recollect that this is so completely a practical system, that large scope should be given to the gardener's inventive faculties, for in proportion as this is observed do I see good order and all that belongs to high-keeping developed in the Flower-Garden. Another reason why I think it is progressive is the fact of an increased number

of plants adapted for such a purpose, and these, too, within the reach of all. And what better proof could I cite than the circumstance of meeting with the grouping system—not only in the noble domain, but also in the suburban residence? Dropmore is distinguished for this system—so is Stanmore Priory; also Brooklands, Broom House, and many others. It is invaluable as a system to the man of leisure, as well as to the man of business; for there is no strong sensation wanted to unravel a complex expression—all being distinctly seen, and the whole picture conceived with ease and facility.—*C.*

FOREIGN CORRESPONDENCE.

Salerno, August 27, 1843.—These latitudes have been visited with a summer of extraordinary coolness, accompanied by a long duration of dryness, which renders the circumstance more singular still. Till within the last fortnight the temperature has never approached that of the average summer weather, and even now the mornings and nights are decidedly cold, though the sun acts with great intensity through the clear medium always afforded by the prevalence of north winds at this time of year. The consequences have been prejudicial to the crops, especially the later harvest of Indian Wheat, which was dried up before the ears properly filled. The vintage will likewise suffer from the same causes. The ornamental vegetation has, however, not been subjected to the same evil, except in some of the late-flowering exotics of higher growth, such as *Sterculia platanifolia* and the *Lagerstroemia*, the blossoms of which have never expanded, and are now falling off.—*K.*

PROCEEDINGS OF SOCIETIES.

HORTICULTURAL SOCIETY.

Sept. 19.—G. Bain, Esq., in the chair. The Rev. R. C. Jenkins, C. R. Read, Esq., Mr. J. Youell, and Mr. J. Backhouse, were elected Fellows. From Mr. Mills, of Gunnersbury Park, was a *Cucumber*, named *Jewess*, (an early forcing sort), measuring in length 24½ inches, and 3½ inches in diameter; the stem on which it grew was 3½ inches in circumference, immediately above the ground. Mr. Dawson, 17, Abbey-road, St. John's-wood, sent two curious specimens of monstrous *Pears*. From Mr. Fleming, gr to his Grace the Duke of Sutherland, were three Persian *Melons*, measuring respectively 15 inches long and 7 broad, 16 inches long and 6 broad, and 16 inches long and 7 broad, and weighing 8 lbs. 8 oz., 10 lbs. 5 oz., and 8 lbs. 15 oz., for which a Banksian Medal was awarded. From Mr. Busby, gr, Titniss Park, Sunning-hill, was a beautiful large green-fleshed *Wellington Melon*, weighing 6 lbs. 5 oz., also a scarlet-fleshed one, weighing 3 lbs. 2 oz. A certificate was awarded for the *Wellington*. Mr. Fish, gr to T. Sowerby, Esq., sent a dish of Keen's Seedling *Strawberries*, highly coloured and of excellent quality, being the second crop which was gathered from plants that had been forced in spring. Mr. Fish states that he has been gathering them for more than three weeks past, and expects them to continue until checked by the cold, frosty nights. There is, however, nothing new in the system, although it is not generally adopted. From three years' experience, he adds, he finds a good crop now will not prevent the plants from bearing abundantly in the succeeding season, and states, moreover, that his best fruit during the months of June and July is generally obtained from plants that had been turned out of their forcing-pots in the preceding year; for these a certificate was awarded. From Mr. M. Henderson, gr to Sir G. Beaumont, was sent a *Globe Pine-Apple*, weighing 5 lbs. 5 oz., and measuring 9½ inches long and 6 inches in breadth; number of pips in length, 10, a rather handsome fruit. Mr. Saul, gr, to Lord Ebrington, sent a *Queen Pine-Apple*, weighing 4 lbs. and measuring 9 inches long and 5½ inches in breadth; number of pips in length, 10; a very handsome, well-swelled fruit: also three fine large bunches of *Black Hamburgh Grapes*, grown on the spur-system, with well-swelled berries, but not so highly coloured as could have been wished, one of them weighing 1 lb. 14 oz., and the two others 2 lbs. 1 oz. each. A Banksian medal was awarded. From Richard Brook, Esq., was a bunch of *Muscata of Alexandria Grapes*. From Mr. Ivery, Nurseryman, Peckham, was a new seedling *Fuchsia*, called *Pride of Peckham*. R. W. Barchard, Esq., sent a plant of *Hæmaphysa toxicaria*. From the Gardens of the Society were plants of *Begonia Evansiana*, *Mandevilla suaveolens*, *Chironia frutescens*, *Babingtonia camphorosma*, and a *Hymenocallis*, sent from Jamaica by Mr. Hartweg; also *Brassavola venosa*, *Comarostaphylis arbutoides*, *Fuchsia Standishii*, and cut flowers of *Lupinus semperforens*; also a dish of the late *Admirable Peach*.

ROYAL SOUTH LONDON FLORICULTURAL SOCIETY.

Sept. 19.—This exhibition, the last for the season, was held in the Surrey Zoological Gardens, and was numerously attended. The *Dahlia*s on this occasion were not so good as we have usually seen them, and the contest was not so severe. We missed the stands of Messrs. Brown, Widnall, Gilling, Bates, &c. There was also a deficiency among the miscellaneous collections of plants. The best was that sent by Mr. Bruce, gr, to Boyd Miller, Esq., among which were some well-grown plants of *Achimenes coccinea* and *longiflora*, a beautiful specimen of *Witsenia corymbosa*, *Erica vestita coccinea*, numerous covered with its beautiful dark red blossoms, and *E. Altoniana*, and *Irbiana*, pretty little plants; also good plants of *Justicia oblongata*, *Polygala grandiflora*, *Crinum amabile*, and a very fine well-grown plant of *Crowea saligna*, producing a multitude of its beautiful light pink flowers; likewise *Amaryllis reticulata*, and a small plant of the curious and rather beautiful *Curcuma Roscoeana*. From Mr. Atlee was a collection of plants consisting chiefly of *Heaths*, among which we noticed a very pretty plant of *Erica mammosa pallida*, exsurgens coccinea, *Altoniana*, bearing a profusion of its pretty white flowers, and a good plant of *E. verticillata*, with its fine rich scarlet blossoms. Also a beautiful plant of *E. Cliffortiana*, densely covered with delicate white flowers; three young plants of *Gardouquia Hookeri*, and a fine specimen of *Boronia pinnata*. In Mr. Hamp's collection were *Gloxinia violacea* and *candida*, pretty good plants of *Erythrina Crista-galli*, *Ceropegia elegans*, and *Crowea saligna*; from Mr. Pattison was a good plant of *Fuchsia Youngii*, covering the pot with its fine pendent branches, *Sollya linearis*, and *Hoya carnosa*. Mr. Jackson, of Kingston, sent a collection of plants, comprising a beautiful specimen of *Erica declinata*, quite covered with bloom, a handsome plant of *Petunia splendens*, also *Achimenes grandiflora*, *pedunculata*, and coccinea, the latter covered with its brilliant scarlet flowers, also *Fuchsia tricolor*, a nice little plant of *Gloxinia rubra*, and a particularly well-grown plant of *Statice sinuata*. Mr. Allerton, gr to D. F. Shears, Esq., exhibited six plants of *Globe Amaranthus*. From Mr. Gaines was a collection of *Fuchsias*, consisting of some of the newer kinds. Mr. Pawley also sent 12 *Fuchsias*, rather pretty plants. From Mr. Cuthill were eight most beautiful plants of *Lisianthus Russellianus*, well-grown, which attracted much attention.

The following is a list of the prizes awarded:—CLASS I.—AMATEURS.—*Dahlia*s, 24 blooms.—1, Gold Medal, Mr. Headley, for the following:—*Admiral Stopford*, Hudson's Princess Royal, Dodd's Favourite, Mrs. Shelley, Lady Cowper, Bridesmaid, Sir F. Johnstone, Adam's Prince Albert, Wheeler's Maria, Conductor, Ansell's Unique, Beauty of the Plain, Essex Triumph, President of the West, Phenomenon, Dodd's Prince of Wales, Lady Ann Murray, Lady Middleton, Perpetual Grand, Indispensable,

Duchess of Richmond, Bedford Surprise, Burnham Hero, and Conservative. 2, Mr. Goodchild, for Asmodeus, Widnall's Eclipse, Springfield Purple, Lee's Bloomsbury, Perpetual Grand, Duchess of Richmond, Widnall's Queen, Ansell's Unique, Grand Baudine, Will Watch, Conservative, Bedford Surprise, Admiral Stopford, Beauty of the Plain, Burnham Hero, Hudson's Princess Royal, Springfield Rival, Bridesmaid, Rienzi, Essex Triumph, Pickwick, Northern Beauty, Sir R. Sale, Indispensable. 3, Lady Paget, for Northern Beauty, Pickwick, Ansell's Unique, Lee's Bloomsbury, Widnall's Queen, Bridesmaid, Rienzi, Maid of Bath, Springfield Rival, Widnall's Eclipse, Bedford Surprise, Lady Ann Murray, Adams's Prince Albert, Sir R. Sale, Catleugh's Eclipse, Beauty of Sussex, Conservative, Essex Triumph, Hudson's Princess Royal, Rouge et Noir, Indispensable, Andrew Hofer, Duchess of Richmond, Dodd's Prince of Wales. 4, Mr. Proctor, for Will Watch, Northern Beauty, Sir F. Johnstone, Bridesmaid, Grace Darling, Girling's Liberty, President of the West, Optime, Rose Unique, Dodd's Prince of Wales, Wheeler's Maria, Conqueror of the World, Ansell's Unique, Laura, Dodd's Countess of Pembroke, Beauty of Sussex, Miss Abbot, Hope, Lady Ann Murray, Mrs. J. Richardson, Admiral Stopford, Hodges' Competitor, Perpetual Grand, Andrew Hofer. AMATEURS—12 blooms: 1, Mr. Wildman, Perpetual Grand, Mrs. Shelley, Dodd's Prince of Wales, Beauty of Sussex, Wheeler's Maria, Queen of Trumps, Sir R. Sale, Gregory's Regina, Virgil, Essex Triumph, Bianca, Miss Abbot; 2, Mr. Cook, Perpetual Grand, Dodd's Prince of Wales, Mrs. Shelley, Will Watch, Hudson's Princess Royal, Sir F. Johnstone, Girling's Prince of Wales, Andrew Hofer, Essex Triumph, Bedford Surprise, Sir R. Sale, Vivid; 3, Mr. Muuro, Antagonist, Widnall's Queen, Coronal, Essex Triumph, Argo, Hudson's Princess Royal, Nicholas Nickleby, Bedford Surprise, Maria, Ansell's Unique, Andrew Hofer, Beauty of the Plain; 4, Mr. Golding, Phenomenon, President of the West, Lady Cowper, Essex Triumph, Admiral Stopford, Dodd's Prince of Wales, Mrs. Shelley, Bridesmaid, Rouge et Noir, Will Watch, Rival President, Lee's Bloomsbury, 5, Mr. Hatchman, Bridesmaid, Pickwick, Widnall's Queen, Duchess of Richmond, Bedford Surprise, Phenomenon, Indispensable, Ansell's Unique, Garrick, Admiral Stopford, Antagonist, Sir F. Johnstone. GENTLEMEN'S GARDENERS.—1, for 24 blooms, Mr. Bourne, Chelsea, for Beauty of Sussex, Essex Triumph, Dodd's Prince of Wales, Euclid, Catleugh's Tournament, Bedford Surprise, Bree's Rosa, Pickwick, Northern Beauty, Rouge et Noir, Hudson's Princess Royal, Catleugh's Eclipse, Beauty of Wakefield, Adams' Prince Albert, Bridesmaid, Conservative, Duchess of Richmond, Lady Ann Murray, Hope, Unique, Andrew Hofer, Widnall's Queen, Egyptian Prince; 2, Mr. Parsons, for Optime, Lee's Bloomsbury, Dodd's Prince of Wales, Hope, Widnall's Eclipse, Perpetual Grand, Bridesmaid, Andrew Hofer, Grand Baudine, Essex Triumph, Antagonist, Pickwick, Mrs. Shelley, Hudson's Princess Royal, Headley's Phoenix, Indispensable, Attila, Lady Ann Murray, Bedford Surprise, Coronal, Bianca, Admiral Stopford, Springfield Rival, and Rouge et Noir; 3, Mr. Bennet, for Catleugh's Eclipse, Dodd's Prince of Wales, Amato, Phenomenon, Duchess of Richmond, Cousin's Scarlet Defiance, Girling's Prince of Wales, Grand Baudine, Admiral Stopford, Argo, Andrew Hofer, Twyford Perfection, Essex Triumph, Holmes' Unique, Pickwick, Conservative, and Hope; 4, Mr. Stockwell, for Hope, Ansell's Unique, Cyclops, Dodd's Prince of Wales, Bridesmaid, Admiral Stopford, Hudson's Princess Royal, Maria, Ansell's Queen, Springfield Rival, Coronal, Adam's Prince Albert, Indispensable, Eva Ne Plus Ultra, Countess of Pembroke, Pickwick, Nicholas Nickleby, Burnham Hero, and Andrew Hofer. NURSERYMEN.—24 blooms—1, Mr. Bragg, Slough, for Mrs. J. Richardson, Catleugh's Eclipse, Perpetual Grand, Virgil, Beauty of Essex, Lady Cowper, Beauty of the Plain, Blue Bonnet, Vivid, Springfield Rival, Widnall's Eclipse, Mrs. Shelley, Hudson's Princess Royal, Admiral Stopford, Dodd's Prince of Wales, Springfield Purple, Catleugh's Tournament, Duchess of Richmond, Penelope, Bedford Surprise, Widnall's Queen, Paul Fry, Miranda, Pickwick. 2, Mr. King, for Beauty of the Plain, Admiral Stopford, Girling's Prince of Wales, Perpetual Grand, Thompson's Vivid, Antagonist, Essex Triumph, Mrs. Shelley, Dodd's Prince of Wales, Duchess of Richmond, Andrew Hofer, Widnall's Queen, Phenomenon, Northern Beauty, Virgil, Widnall's Eclipse, Pickwick, Lady Cowper, Egyptian Prince, Lee's Bloomsbury. The Prize for 50 blooms was awarded to Mr. Gaines, Surrey Lane, Battersea, and contained the following sorts:—Gaines' Orange Perfection, Sir William Middleton, Empress of Whites, St. George, Surpass Primrose, Springfield Purple, Attila, Gaines' Compacta, Lady Prudhoe, do., Bing Up, Princess Royal, T. Novelty, Beauty of Wakefield, Lord Prudhoe, G. Lady Highland, Essex Triumphant, Princess Royal, H. Sir Robert Sale, Grenadier, Duke of Richmond, Prince Albert, Westbury Rival, Euclid, Prince of Wales, Bedford Surprise, Beauty of Sussex, Zorsta, Antagonist, Bloomsbury Lass, Oakley's Surprise, Bridesmaid, Victory of Sussex, Carnea, Sure Enough, Indispensable, Will Watch, Widnall's Queen, Perpetual Grand Antiope, Burnham Hero, Dowager Queen, Lady Murray, Unique Pickwick, Mrs. Shelley, North Midland, Lady Dugannon, Lady Glenloch, Ploughboy, and Coronal.

CLASS I.—COLLECTION OF CUT FLOWERS.—AMATEURS: 1 *Middle Silver Medal*, Mr Davis; 2, *Small Silver Medal*, Mr. Townley. *Collection of Miscellaneous Plants*, 12 pots, Mr. Cox; *Asters*, 12 varieties, Mr. Bridges.

CLASS II.—MISCELLANEOUS COLLECTION.—GENTLEMEN'S GARDENERS: 1, *Gold Medal*, Mr. Bruce; 2, *Large Silver*, Mr. Atlee; 3, *Middle Silver*, Mr. Hamp. *Heartseuse*, 36 varieties Mr. J. Mason; *Cut Flowers*, 1, Mr. Bruce; 2, Mr. Parsons; 3, Mr. Hamp; 12 *Cockscombs*, Mr. Scorer; *Four sorts of Fruit grown in Englund*, Mr. Parsons.

CLASS III.—NURSERYMEN, MARKET GARDENERS and FLOW-
ERISTS.—*Miscellaneous Collection*, large Silver Medal, Mr. Jackson
Henshawe, 36 cur., 1, Mr. King; 2, Mr. Henbrey. *Collection of Roses*
in bunches, Mr. Paul. *Cut Flowers*, Mr. Fairbairn. *Six sorts of*
Fruit (Pines and Grapes excluded), Mr. Martin. *Collection of*
Vegetables, Mr. J. Gaines. *Asters*, 36 varieties, Mr. Henbrey.
OPEN TO ALL CLASSES.—*Specimen Plant, of any genus*, 1.

Mr. Cathill; 2, Mr. Bruce; 3, Mr. J. Mason. *Specimen Plants, of six distinct genera*, 1, Mr. J. Mason; 2, Mr. Cox; 3, Mr. Townley. *Orchideaceous Plants, four specimens*, Mr. Cox. *Basket of Grapes*, Mr. Chapman. *Fine Apple*, Mr. Parsons. The first contest for the prize of 10 guineas offered for the best *White Dahlia*, to be exhibited on three occasions, was awarded to Mr. Wildman's *Bianca*; these were the smallest blooms exhibited, but were the only two flowers that were quite perfect in the centre. Mr. Bragg's *Antagonist*, which carried off the prize of 5 guineas offered by Mr. Wildman last year, was exhibited, but both blooms were defective in this respect. The remaining contests will be at Salt Hill and at the exhibition of the Floricultural Society of London. There were several *Seedling Dahlias* exhibited, and among them some very promising flowers of the Seedlings of 1842. *Four blooms*: 1st prize was awarded to Mr. Bourne, of Chelsea, for a purple flower named *The Model*; 2, to Mr. Keynes, of Salisbury, for his *Standard of Perfection*. The Seedlings of the present season for their good and promising qualities were, 1, a light purple, named *Espartero*, from Mr. Cousins; 2, dark purple, Mr. Wildman. *PANSIES*.—*Seedling Pansy*, Mr. Buxton. *AMATEURS' STAND*, 1, Mr. Bridges; Mr. Hentrey. *GENTLEMEN'S GARDENERS*, 1, Mr. J. Mason. *Good Seedling Verbena* was exhibited by Mr. Cook, of Longwich called *Cook's Lavender*.

It is to be regretted that the universal complaint that names of flowers are not attached to collections, should be so entirely neglected as it was at this exhibition. This omission should be remedied. If the Committee were to frame a resolution to the effect that every collection of flowers should be disqualified, which this point is disregarded, and act strictly up to that law we should hear less of these inconveniences.

ERRATUM.—In the Report of the Meeting of the Floricultural Society, for "Mr. Smith's President," read Mr. Orson's.

COUNTRY SHOW.

SALT HILL DAHLIA SHOW.—This exhibition was held in the grounds of the Slough Nursery, where, in addition to the immediate attractions of the flower-show, the company had the privilege of strolling through the houses and the extensive and well-managed gardens of Mr. Brown's establishment. The day was remarkably fine; a military band was in attendance, and as the whole affair appeared to be conducted with good sense and judgment, the numerous parties of visitors appeared much gratified. The stands of Dahlias were very numerous and good, many of them remarkably fine. The following is a list of the awards:—**CLASS I.—AMATEURS.**—12 *Blooms*: 1, —Emmerson, Esq.; 2, Mr. Howard; 3, Mr. Shelton; 4, Mr. Headley. **CLASS II.—GARDENERS.**—12 *Blooms*: 1, Mr. Maher; 2, Mr. Turville; 3, Mr. Ford; 4, Mr. Weedon. **CLASS III.—NURSERYMEN.**—24 *Blooms*: 1, Mr. Brown; 2, Mr. Bragg; 3, Mr. Keynes; 4, Mr. Harrison. **SEEDLINGS OF 1842.**—*Four Blooms*.—1, Mr. Spary, for Lady Antrobus, white and lavender; 2, Mr. Brown, Lady St. Maur, white tipped; 3, Mr. Brown, Rembrandt, dark; 4, Mr. Turville, Champion of Essex, vivid scarlet. **SEEDLINGS OF 1843.**—*One Bloom*.—1, Messrs. Heale, Emperor of the Whites; 2, Mr. Procter, Nonpareil; 3, Mr. Whale, Duchess of St. Albans; 4, Mr. Headly, Meteor. The second competition for the prize of 10*l.*, offered for the best white, was awarded in favour of Mr. Bragg's Antagonist. The names of the flowers in the successful stands will be given next week.

NOTICES OF NEW PLANTS WHICH ARE EITHER
USEFUL OR ORNAMENTAL.

FUCHSIA EXONIENSIS. The Exeter Fuchsia. (*Greenhouse Shrub*.) ONAGRACEÆ. Octandria Monogynia.—The Floricultural markets are now rapidly becoming filled with all kinds of hybrid Fuchsias, between some of which the most discriminating judges would scarcely be able to perceive any tangible distinction, or one which could be expressed in words. And this is in great part due to the hybridist taking hybrids which are not themselves sufficiently distinct in habit, or in the form and colour of their flowers, to breed from; the result of which practice must always be an increased confusion among the sorts, without obtaining anything novel enough to deserve special notice or culture. It cannot be too much urged on the attention of those who seek to obtain good seedling hybrids, that the parents must, in all cases, be very distinct species; or, if themselves seedlings, they should be equally different. This beautiful Fuchsia was raised by Mr. Pinck, of Exeter, between *F. cordifolia* and *F. globosa*, the former being the female, the latter the male parent. It was thought, in the experiment, likely that the fine long flowers of *F. cordifolia* might be united with the superb colours of *F. globosa*; and this object seems to have been very well accomplished; for *F. Exoniensis*, besides a kind of intermediate habit and foliage, has large flowers, which have a long tube, expanded deep crimson scarlet sepals, and a dark purple corolla. It was raised during the spring of 1842, and planted out in the open border with many other seedlings. It first flowered there, and has proved to be quite hardy at Exeter. We cannot say much concerning it from personal observation; but we are informed that it blooms freely, and is a very handsome plant. The flowers are certainly fine, and of the very best colours. It would appear to bloom best when suffered to produce its blossoms at the natural season, and not at all forced forward. A cool greenhouse or pit will therefore be most favourable. Like all hybrids of this class it should have a tolerably rich soil, and a rather large pot. Either leaf-mould or rotten manure should be freely mixed with loam to form a compost for it, and it will require to be carefully watered in the summer, because Fuchsias are apt to be injured by drought at this season.—*Paxton's Magazine of Botany.*

ACHIMENES LONGIFLORA. Large-flowered *Achimenes*. (*Stove Perennial*.) Gesneraceæ. *Didynamia Angiospermia*.—Our first knowledge of this very handsome plant was obtained at Mr. Low's, Clapton, and Messrs. Rolisson's, Tooting, in the autumn of last year, when it flowered, somewhat imperfectly, at both the nurseries. It appears to have been discovered in a district of Mexico, by Messrs. Schiede and D. Lieke, through whom the first plants received in this country came through a continental nurseryman, M. Van Houtte, of Ghent. It has now been diffused through most of the English nurseries, and will probably soon be as common as *A. longiflora*, to which it promises to be a rival. The flowers, apparently, are not quite so large as those of *A. longiflora*; but they are of a very rich and brilliant colour, essentially distinct from anything else of the kind we yet possess, and probably from the shortness of the upper joints on the shoots evince a disposition to come in something like huge terminal clusters. As an associate with *A. longiflora*, too, and *A. rosea* and *coccinea*, the species will be a valuable addition to the present race of stove or warm greenhouse ornaments. It should be cultivated like *A. coccinea*, and requires a light nutritive soil, composed of fresh loam, and a large proportion of leaf mould, or a somewhat less amount of decayed manure. It must not be stinted for pot-room, and should be started into growth in a stove or pit supplied with bottom heat, where it may be kept till it is about to flower. When in a flowering state, it may gradually be removed to a warm greenhouse or cool stove, where it will bloom profusely.—*Paxton's Magazine of Botany*.

LABICHEA BIPUNCTATA. Two-pointed-leaved Labichea (*Greenhouse Shrub*). Leguminosæ. Diandria. Monogynia. A neat and rather showy greenhouse shrub, the flowers of which remind us, in their size, form, and colour, of *Euthales macrophylla*, a handsome Swan River herbaceous plant, of recent introduction; but, being a shrub, and less straggling in its character the present object is of more value, while, when grown favourably, it will possibly be quite as profuse as the *Euthales* in its production of bloom. Seeds of it were imported by Mr. Low, of Clapton, from the Swan River Colony, two or three years ago, and the plants have flowered repeatedly in the Clapton nursery. It seems disposed to grow erectly, and not to ramble, but to attain the height of three or four feet when left unchecked. Indeed it has much of the upright tall habit of *Hôvea* celsi, when that species is unpruned, and subjected to no peculiar treatment, though *L. bipunctata* has a freer development of branches. The flowers are borne in a kind of short raceme from the axils of the leaves, and are not at all inclined to be terminal. They abound most, however, towards the top of the plant; which is perhaps a necessary circumstance in all tall specimens. We have little doubt that, when differently managed, this plant would as readily yield to culture as many other well-known greenhouse shrubs, and become as dwarf, bushy, and free-flowering. To bring about these conditions, it should be treated pretty liberally in regard to soil and pot-room; mixing a quantity of leaf-mould with the loam used for potting it in, and giving it a larger shift than is allowed to common greenhouse plants generally. It ought, at the same time, to have its shoots kept stopped while they are growing, so as to induce it to remain low, and to throw out a number of laterals. Such treatment answers admirably with *Lalage ornata*, and this is a species of a very similar nature. It blooms in the months of March, April, and May; demanding only a light and airy place in any greenhouse. Cuttings, taken off in early spring or summer, root with freedom.—*Paxton's Magazine of Botany*.

MISCELLANEOUS.

Black Currant Wine.—To every gallon of water put 5 lbs of Currants, picked from the stalks, and a pint of Raspberries. Boil these for an hour, and strain them off without rubbing the pulp through the sieve; then add 2½ lbs. of raw sugar, and boil again for another hour when cool enough, work it with a toast of yeast, and let it stand for three days in the tub to work, before bottling. In the course of four or five days afterwards, add a pound

of chopped Raisins to every gallon, and stir it for a day or two with a clean stick, and bung it down when fermentation has subsided. Skim all off that rises in the tub before tunning, wash the barrel out with spirits, and add the latter in the proportion of a pint of spirits to 5 gallons of wine.—*Anonymous.*

WILLIAM and HENRY HAISE, *Taranaki, (New Plymouth.)*
[From the "Letters of Emigrants."]

GARDEN MEMORANDA.

Hewell, near Bromsgrove.—Within a few miles of the town of Bromsgrove lies a fair domain, long since wrested from the church by the iron hand of King Henry the Eighth, who gave it to the Earl of Windsor in exchange for the estate of Stanmore, in Berkshire. It was afterwards pillaged by the leaders of one of the petty risings in the time of James the First, and after other changes fell to the late good Earl of Plymouth, from whom it passed to its present noble proprietor, the Honourable Robert Clive. We had often heard of the excellent management of the gardens there, and a recent visit to them has shown us that, for once, rumour is much behind the truth. Hewell is a model in its way—what most gentlemen's residences may be, but few are, and all should be.

The Kitchen-garden is a walled area of about four acres, containing Pineries, Vineries, Peach-houses, and their usual accompaniments. The walls that surround it are about 1.90 feet long, and there are about four acres of Kitchen-garden ground outside the walls. We doubt whether it is possible for kitchen-gardening and forcing to excel what is accomplished here by Mr. Isaac Markham. The ground is completely filled with vegetables, and all good ones, except where the negligence of the seedsman has rendered it impossible. The walls are covered with perfectly trained fruit-trees; the crops in the forcing houses are all that can be desired. It is not here, as in too many places, that a fine house of Grapes stands by the side of ill-grown Pines; or that a well-kept Strawberry ground surrounds quarters of weedy, mismanaged, vegetable crops. All are alike, and all good. Weeds there are none. A short time since, the Peach-trees suffered from want of drainage, but the borders were raised, and all sign of disease is gone. Among other matters that deserve particular mention, is the commencement of an experiment of growing Pine-apples out of pots in heated peat-borders, in the French way, and nothing can be more promising than the experiment as far as it has gone. The construction of the house in which it is proposed to effect this we have Mr. Clive's permission to make public, and we shall do so as soon as the woodcuts are ready. It will surprise some Peach-growers to find the Peaches in one of the finest forcing-houses trained on a horizontal trellis eight feet from the roof at the back edge, and it may surprise them more to learn that the crops are excellent under those circumstances. This house, however, is admirably glazed. In another place is the delicious Nerji Fig, the best by far of the white sorts, ripening its fruit perfectly on a south-east aspect, which, for Worcester-shire, and the season of 1843, is something to think upon.

It is, however, by no means on the skillful management of the Kitchen-garden that we wish to dwell. The charming pleasure gardens are quite as interesting to a gardener, and of course more attractive to a casual visitor. Embosomed in beautiful trees, separated from each other by little natural ridges, or by skillfully managed evergreen screens, and seen, as each may be, from commanding elevations, for the natural inequalities of the ground are favourable to this style of gardening, there is all the pleasure of unexpected effect as you pass from one garden to the other, without the bad taste that is so generally associated with artificial "surprises."

In the first place, there is the ROCK GARDEN, an ancient stone quarry, with its sides covered, or hidden, with tastefully-disposed fragments of rock, overrun with a profusion of the Osmunda Royal, the Ostrich Fern, Blackfooted Maiden's Hair, Hart's Tongue in its many varieties, the Welsh Polypody, and other beautiful Ferns, among which are dispersed ornamental bushes and other suitable accompaniments. In the centre of this is a fountain and its basin, both in the best taste, (O that the authorities of St. James's Park had but gone to Hewell before the erected that wretched thing before the Palace! surrounded with fragments of rocks, for the cultivation of plants that love the dampness of such places. How the climate suits them will be judged when we mention that the Mountain Avena (*Dryas octopetala*), the Minorca Sandwort (*Arenaria balearica*), Corsican Thyme, and all such things, overrun the place. Round the base some gay flower-beds radiate, one of them containing a large mass

of the Vine-leaved Anemone.* You come suddenly upon this secluded place, by walks winding downwards among the overhanging trees, and as it first catches the eye when its emerald turf is illuminated by a bright sunshine, and the broad embankments and rugged sides are thus enabled to form deep masses of light and shade, an effect is produced which is far more easy to imagine than describe.

A remarkable contrast with this is offered by the FRENCH GARDEN, a parallelogram of between three and four acres, filled with parterres of flowers formally disposed in the French way, with broad turf-alleys and gravel-walks, all converging towards a noble fountain, constituting the centre. In this place all is symmetry and trimness, with the grass mowed till it more than rivals the most elastic carpet, parterres of all gay dwarf flowers, interspersed with crowds of Roses, pinnacles of Hollyhocks, small groves of Dahlias, and ranks of standard Roses, placed as sentries over all. It was a happy thought that, which deterred the contriver of this gay scene from making it a level; for if that had been done the garden might still have been beautiful, but its beauty would have been commonplace and little interesting. As it now is the effect is charming. It shelves gradually from either end to the middle, and falls moreover in the direction of the neighbouring valley; so that when you stand at one extremity of a noble turf terrace which bounds this garden on the side of the hill that backs it, the eye includes at once the whole varied pattern of that living glowing carpet. Beyond it, to the right, the wood retreats, and discloses the rich valley of the park, its ample lake, and the distant hills, while on all other sides the scene is closed by stately and most graceful trees, from which all others have been thinned by no unskilful hand. This is the true way to enjoy the effect of a geometrical garden, which by itself is the most dull and insipid thing in the world; but which thus introduced, amidst wild hill scenery, produces the same agreeable effect as rich furniture in a drawing room.

But our space is already much exceeded. We must pass over a pretty little GRASS GARDEN, where the many graceful species of that race which the crowd passes by without a regard, are tastefully collected into beds in front of the Conservatory. We must pass the CONSERVATORY itself, notwithstanding the excellent health of the Camellias, Oranges, and other plants. We cannot even stop to describe the copper sash-lines on which the heavy perpendicular windows are suspended, nor the neatest of all artificial edgings to the walks, formed of hard Stourbridge clay; but we must at once proceed to a little gem, called the DUTCH GARDEN. This is a nook among the trees near the House. It forms a semicircle, with its back resting against the walls of a tennis-court; around it is a walk, formed of the fragments of sandstone, used in this country as a substitute for gravel; beyond the walk is a dwarf hedge of Arbor vitæ, and at the back of the Arbor vitæ belt are the usual shrubs and trees. The garden itself is intersected by five walks, radiating at equal distances from a broad tessellated circular area in the centre, and paved with red and black lozenge-shaped tiles. Next these walks is a narrow gravel path, which, joining the gravel walk of the circumference, leaves for flower-beds four wedge-shaped spaces, with their points towards the centre. Each of these flower-beds is edged with Box. The space within them is divided into two equal parts, by a series of three lozenges, commencing in the middle of the back, and terminating at the point of the wedge. The lozenges themselves have two edgings of dwarf Box separated by a narrow path, paved with white pebbles. By these means a pattern is formed of very great beauty. The general effect thus obtained is enriched by a profusion of vases and Dutch porcelain boxes, holding small plants, disposed in lines along the main paved walks, and by a double row of umbrella Acacias, placed between the garden and the wall of the tennis-court. Nothing can be prettier than this, and it well deserves imitation; but it should be borne in mind that such designs will not be effective unless there is the same happy adjustment of proportions, colours, and accessories, and the same favourable circumstances in natural situation, of which advantage has been taken with so much good taste by Lady Harriet Clive.

Reviews.

Dr. Justus Liebig, in his Relation to Vegetable Physiology. By Dr. Hugo Mohl. (Dr. Justus Liebig's Verhältniss zur Pflanzen-Physiologie.) Tübingen. Fues. 1843.

(Continued from page 648.)

[ERRATUM.—In the last article, p. 648, towards the end, instead of "3 feet, and in the plain from 15 to 18 feet," read *inches*.]

In a subsequent part of this chapter (p. 124) Dr. Liebig expresses his surprise, that in all the works of Agronomists and Physiologists, one looks in vain for the leading principles of cultivation; nevertheless, at the end of this part of his work, he states that cultivation supplies every plant with that sort of food which it requires for the development of such organs or substances as are most available to man. He further dwells on the means of arriving at that end, viz., the chemical analysis of the inorganic ingredients of soil. But these latter facts, says Dr. Mohl, were known long before Liebig, Charles Sprengel having written a series of memoirs, to demonstrate the importance of the inorganic ingredients of the soil, both for the general growth of crops, and for that of certain organs in particular. Under this head, Liebig certainly ought to have mentioned the name of Sprengel, and although he has not done so (concludes Dr. M.), the history of science will amply repay the omission.

In the last chapter, which is headed "Rotation and Manures," L. opens the difficult question, why several crops of the same plant will not succeed on the same soil in an uninterrupted succession, and why, therefore, farmers resort to rotation. He thinks De Candolle's theory the best explanation of this, forgetting, it seems, that that coarse excrementitious theory has no better foundation than bad and injudicious experiments of Macaire Prinsep, the same man who misled De Candolle on other occasions also. Liebig, however, (says Dr. Mohl,) who has no idea that these experiments are fallacious and controverted by all succeeding ones of the same kind, works out this theory in its most minute details, and proves, *a priori*, (p. 149,) that plants *must* have excrements. He divides the latter into two classes: those, namely, which have been absorbed by the roots, but not being adapted for the nourishment of plants, are again returned to the soil; and secondly, such substances as having been transformed in the vegetable organism by the process of nutrition, are the result of the formation of starch, woody fibre, gluten, &c. Excrementitious matter of the first class may serve as food for other plants; nay, they may even be essential for that purpose. Those of the second, however, cannot be used by other plants in the formation of woody fibre, &c.

* Which is abundant at Hwell in other places, in consequence of Mr. Markham having discovered that it may be propagated to any extent by little cuttings of its fibrous roots.

until changed into humus, and decomposed into ammonia, carbonic acid, &c.

This theory, says Dr. Mohl, is not only destitute of all reasonable foundation, but is directly contradicted by the experience of Rotation. There is no known evidence in proof of the existence of such excrementitious matter. It is true, Liebig says, that such *must* be the case, but then he adduces no proof except an ambiguous analogy with the animal kingdom, and forgetting, as he so often does, what he said—page 24—"that analogy is the parent of that unfortunate comparison between vegetable and animal functions which places both on the bed of Procrustes, and is the cause of all error." "There is not," concludes Dr. Mohl, "the least necessity for assuming a secretion from roots. If substances formed by vital processes are of no further use to a plant, they are excreted in the form of gas through the leaves, or deposited in the form of secretion in the glands and other organs, or thrown off with decaying leaves." This theory is, moreover, at variance with the experience of what takes place in the shifting of crops. According to Liebig's views, the excrementitious matter of the second class above mentioned would not only injure the plants whence it is derived, but could not be assimilated by any others before it is transformed into humus. But experience points quite another way, because the stubble of Clover, Lucerne, or Saintfoin, which is unfit for the growth of those species, will at once produce excellent crops of other plants. If Liebig should attempt to meet this objection by saying that such excrementitious matter cannot be assimilated by the plants, whence they are derived, but may be used by others, he will upset his whole doctrine of vegetable nutrition, according to which not only all the organic compounds which remain behind after the formation of starch, sugar, &c., but even starch and sugar themselves (and thus all the organic substances of plants,) are absolutely deleterious to other plants. It is impossible, therefore, not to arrive at conclusions entirely opposite to those of Liebig, especially if we consider the phenomena of rotation at greater length. The barrenness of soil for the growth of one kind of plant, whilst it is still fertile for others, can only depend (says Dr. Mohl) on two causes. The first generation of plants may exhaust the soil of such substances as are indispensable to growth, so that the second generation will be starved; and this certainly takes place; but it cannot be the main cause of the failure of crops, else manure would again render the soil suitable for the same crop, which is only the case to a slight extent. We must, therefore, assume that the first crops do communicate to the soil substances detrimental to the subsequent crops. These substances must be of an organic nature. It has been shown that these cannot be excrementitious, and therefore it follows that such deleterious substances must consist of organic compounds, derived from the roots which have accumulated and remained behind in the land. If, then, in a soil filled with the remains of roots, the same crop will only succeed after a lapse of years, whilst other crops will thrive luxuriantly, we may conclude, that the organic compounds of such roots will be absorbed by plants *previous* to their being decomposed into inorganic substances; and that, consequently, plants of a different kind will use them for food, although those of the same kind will be injured by them.

(To be concluded in our next.)

CALENDAR OF OPERATIONS for the ensuing week.

WITHIN the last year or two we have had a new race of plants in the Achimenes family, and a pretty race they are, even in their native character. What may we, therefore, expect from them when they are industriously changed into new forms by skillfully hybridising them? This interference on our part is still jealously looked upon by at least some botanists: last July I heard a clever botanist express his regret that the Achimenes would soon be ruined by hybridisation. Another botanist and acute naturalist writes me, in answer to a remark I made on crossing—"I do not dislike the hybridisation of plants at all, when judiciously done; but there are so many mules of most miserable aspect raised, that it requires great judgment." I told this correspondent that I obtained three distinct varieties from Achimenes rosea by the pollen of the old coccinea, which has been in flower with me since last June. I impregnated them about this time last year, and he remarks—"Your Achimenes will be improved I doubt not. Try the same process with coccinea and longiflora, grandiflora, &c., and some high-coloured large varieties might turn up." This I have already done, but I find longiflora rather difficult to seed; rosea is merely a natural cross, and not a species, if the question was worth arguing; it will not reproduce itself true from seed, and it will soon be the parent of an endless race. Apart from the interest of producing crosses in this family, what would you think of shaking the validity of the family name, notwithstanding the high authority on which it rests (viz., De Candolle)? I think I see in them already the elements necessary for the purpose, but whether I shall be the first to obtain a cross between them and the Gloxinias or Gesneras, or to prove such a cross impossible, I know not. I was the first who shook the foundation of Sinningia, long recognised as a legitimate genus, when I obtained a cross by the pollen of S. guttata dusted on the old blue Gloxinia. Achimenes pedunculata comes very near the Gesneras in common appearance, and among the Gloxinias we have the imbricated scaly tubers peculiar to Achimenes in G. maculata; therefore, without diving into botanical matters, let us suppose the Achimenes pedunculata and Gloxinia maculata fit subjects for proving whether or not the Achimenes is a true genus. It is true we may fail in the first instance, or may have many "miserable aspects," or perhaps run the risk of ruining the whole family, as my friend of last July fears; nevertheless, the thing is feasible enough, and worth trying. As to the Achimenes interbreeding among themselves, there cannot be a doubt on the subject; and I hear there are several others of them in Guatemala, not yet introduced. I think I shall throw the A. rosea away next year, and keep the finer crosses from it in its stead; and I would advise every one who has it and the coccinea to cross a few flowers now; to sow the seeds early next February, and when the seedlings begin to flower, next June, to select the finer varieties in the same way. A. pedunculata and coccinea are the two latest-flowering ones, and if an equal number of the roots of each were planted in a large pot they would form a splendid specimen, as pedunculata throws up stems from two to three feet high, and only flowers on the upper half of the plant; the coccinea fills up the spaces below, and flowers down to near the edge of the pot; the contrast is very good in plants we have thus treated here this season, but not knowing how they would turn out, I did not suggest the union specimens at the time, but I shall always treat a few pots this way in future.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

PINEAPPLES.—A schoolfellow, who has been rooting up some Pitch-lake Pines, in Trinidad, a few years ago, writes thus:—"You will get yourself into hot water with this bottom-heat business; but you are on the right scent, and I can assist you, as far as the Pine-plant is concerned. I never could find the great-fruited Pine, of which we have heard. I had the curiosity to follow down the roots of one or two plants, and I recollect one root being nearly six feet long, and perpendicular, when I broke it accidentally; the lower I went the more moist was the soil, which is a strong, reddish loam, and full of round stones." Keep a brisk moist heat at top and bottom, while they keep growing so fast, and let all the crowns and suckers now taken off be plunged immediately in some safe place, that they may form strong roots before winter.

VINEY.—Have you tried the plan for thoroughly ripening the top wood which I spoke of last week? Take my word for it, you never adopted a better or a safer plan for the purpose; let in as much air as you think proper by the front ventilators and end or back doors, but keep the sashes fixed till every leaf in the house is down; and when the leaves on the earliest Vines are nearly all down you will, of course, prune the plants in the usual way. Vine-borders should now be well stirred with a fork, to make a light, porous surface, as long as the weather keeps fine.

Out-door Department.

The first half of September was more like summer weather than any we have had this season, and the current growth of all trees and bushes are, in consequence, in a fair way of being well ripened, which is, of all others, the surest hope of a good crop next season. Capsicums and Tomatoes, of which very little hopes were entertained early in the season, have made rapid progress since the middle of July, and will turn out a fair crop after all. The spring Broccolis were never more promising at this season, or less infected with the caterpillar, as far as I can hear. All seeds of weeds carried into the garden, or shed in it, this season, will now be springing on all hands, and this is the stage at which they are easiest got rid of.

CABBAGE and CAULIFLOWER PLANTS should be well earthed up and the soil kept loose between the rows while they are young.

ENDIVE and LETTUCE.—Some of each of these should be tied up for blanching, when they are in a fit state and dry.

WATER-CRESS.—Are you going to try a bed of this on a north border in the kitchen-garden? They may be planted for weeks yet, but the sooner you get them in now the less likely they are to be thrown out of the ground by the frost.

SWEET and POT-HERBS.—This is a very good time to pull up old beds of these and to plant young suckers of them on a fresh bed or border; any little jobs of this kind, which can be done in the autumn should never be put off till the spring. A row of Chives is useful in any garden; they may now be divided and planted as an edging somewhere. Old Camomile beds and 50 other things which I cannot think of now, may be renewed if you look about for them.

ORCHARD.—The good old rule of handling fruit as if they were so many eggs, when being gathered, should not be lost sight of, and the longer the fruit is expected to keep the precaution is more imperative. All bruised or worm eaten fruit should be kept by themselves, or with the "windfalls," if they are good for anything, and they may be used first in the kitchen. Almost any fruit-tree may now be pruned or transplanted.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

STOVE.—I forgot last week to tell "Devonian" that a west aspect, with the sun on the end of the house by 11 A.M., will do very well for all kinds of stove plants, and I should think for forcing a great number of plants, too, after the beginning of January. The best arrangement for a stove would be to have a walk down the middle, with a four or five feet wide bed on each side; that next the conservatory to be made for the climbers, with trellised shelves over, for other plants; the other side of the walk, being close to the glass, would make an admirable bed heated on Rendle's Tank System, and the whole may be heated by one fire; but this should be done by a first-rate artist, as some nicety will be required; besides, there are many bunglers in this profession.

GREENHOUSE.—This is the only part of the Calendar I dislike. I cannot define what a greenhouse ought to be; sometimes I think it ought to be a long, narrow house, with very steep sashes; and then it is only fit for rearing young plants (like nurserymen's houses), and the wider you make it the more unsightly it becomes. If you plant Vines to run up the rafters, it is neither one thing nor the other, or if you attempt climbers in the same way, your friends and neighbours will say, "What a taste!"

CONSERVATORY.—If you will send me a list of what climbers you have for this house, and say which of them you like best, the greatest length of time any of them kept in flower, the height of the house, whether you want them to run up between the front sashes and along the rafters, or up pillars which support part of the roof—and the depth of your borders; also, if there are horizontal iron bars from back to front, to brace up the roof—I shall engage to furnish you with a list suitable for the different parts of the house before next planting time; and also, if you wish it, the treatment of each plant through the whole year. From the end of March to the beginning of June is the best time to plant climbers; but recollect, I shall have done with this Calendar next Christmas, and must have your particulars before then.

FLOWER-GARDEN.—How do you manage to get up the necessary stock of plants for furnishing all these beds? I have been asked at least a score of times this very season. Simply by beginning early in August, and striking *everything* without a particle of artificial heat, Pelargoniums in the open air, the rest in long, narrow boxes, four inches deep, in close, cold frames.—D. Beaton, Shrubland Park Gardens, Ipswich.

State of the Weather near London for the week ending Sept. 21, 1843, as observed at the Horticultural Garden, Chiswick.

Sept.		BAROMETER.			THERMOMETER.			Wind.	Rain.

The highest temperature during the above period occurred on the 25th, 1842—thermometer 82°; and the lowest on the 27th, 1828—thermometer 24°.

REPORT ON COVENT-GARDEN MARKET.

For the Week ending Sept. 22, 1843.

THE long continuance of fine weather still keeps the nobility and gentry in the country, and the market is, in consequence, rather dull. Fruit, of almost every kind, is in general very plentiful, and is of good quality. Pine-Apples are quite sufficient to

meet the demand; good Queens are selling at from 3s. to 5s. per lb. Black Hamburg and Muscat of Alexandria Grapes are very plentiful, particularly the former, and bring from 2s. to 4s. per lb. Among Plums we noticed the Golden Drop, Goliah, and Damson; the latter are very abundant, and bring from 2s. to 3s. per sieve. Peaches and Nectarines, of excellent quality, realise nearly the same prices as last week. Figs continue plentiful, and bring from 2s. to 4s. per doz. Filberts are also very abundant, and are offered at from 30s. to 45s. per 100 lbs. Apples and Pears are plentiful. Melons bring from 1s. to 3s. each. Cucumbers are selling at from 6d. to 1s. per brace. Cauliflowers are becoming very scarce. Cabbages and Turnips of good quality, are abundant, Peas are not very plentiful, and are offered at the same prices as last week. French and Scarlet Runner Beans are abundant, and bring from 9d. to 1s. 3d. per half sieve. Tomatoes are excellent, and bring from 1s. 6d. to 2s. 6d. per half sieve. Carrots are very small, and inferior. Endive is selling at from 1s. to 1s. 6d. per score. Shallots bring from 6d. to 9d. per lb. Among Cut Flowers were:—Erica mammosa and triceps, Agapanthus umbellatus, Amaryllis guttata, Plumbago capensis, Gardenia radicans, China and Perpetual Roses, Calceolarias, Pelargoniums, China Asters, Verbenas, Pinks, and Carnations.

PRICES, SATURDAY, September 23, 1843.—FRUITS.—
Pine Apple, per lb., 3s. to 5s.
Grapes, hothouse, per lb., 2s. to 4s.
Portugal, per lb., 1s.
Peaches, per dozen, 2s. to 4s.
Nectarines, per dozen, 2s. to 4s.
Figs, per doz., 2s. to 4s.
Melons, each, 1s. to 3s.
Dutch, each, 1s. to 2s. 6d.
Plums, per punnet, 1s. to 2s.
Golden Drop, per pun., 1s. to 2s.
Goliah, per punnet, 1s. to 2s.
Damosons, per hf. sv., 1s. 6d. to 2s. 6d.
Apples, dessert, p. bush, 2s. 6d. to 5s. 6d.
Apples, Kitchen, per bush, 2s. 6d. to 4s.
Pears, per half-sieve, 2s. to 4s.
Oranges, per dozen, 1s. 6d. to 3s. 6d.

VEGETABLES.—
Cabbages, per doz., 6d. to 1s.
Cauliflowers, per dozen, 4s. to 6s.
Beans, Kidney, per hf. sieve, 9d. to 2s.
Scarlet, per hf. sv., 9d. to 1s. 3d.
Peas, per sv., 3s. to 4s.
Potatoes, per ton, 50s. to 70s.
per cwt., 1s. 6d. to 4s.
per bushel, 1s. to 2s. 6d.
Kidney, p. bush., 2s. to 4s.
Artichokes, green, per doz., 1s. 6d. to 3s.
Vegetable Marrows, per doz., 6d. to 1s.
Turnips, per doz. bunches, 1s. to 2s.
Red Beet, per dozen, 9d. to 1s.
Horse Radish, per bundle, 1s. to 2s.
Rush, spring, p. doz. hands, 6d. to 1s.
Turnip, p. doz. bunch, 9d. to 1s.
Carrots, Horn, p. doz. bun., 2s. to 6s.
Spinach, per sieve, 9d. to 1s.
Leeks, per doz. bun., 1s. to 2s.
Onions, Spring p. doz. bch., 1s. 6d. to 3s.

Notices to Correspondents.

MANURES.—J. H.—Gypsum will fix ammonia, if in fine powder, and provided the manure to which it is applied is kept moist.
Gwyn.—Woollen rags may be applied, notwithstanding their not being rotted. The Kentish farmers chop them into pieces, an inch or two across, and strew them evenly over the ground by hand. They give them no other preparation. The great value of the rags depends on their slow but gradual decay when in the soil. All analyses are troublesome, and that of peat no less so than others; you had better pay a good chemist his fee, and get him to do it for you; it is much the cheapest plan. For the detail of the manner of proceeding you may consult Johnson's "Agricultural Chemistry," which contains long and full directions; short ones are useless.

HEATING.—A Paddy.—Such dips as you describe may be effected with particular arrangements, but they are always better avoided and are wholly inapplicable to the tank system of heating. You should consult Mr. Ainger's excellent papers on such matters in our volume for 1841.—E. Y. S.—We hope that a leading article to-day will give you the information you desire. We know of no cheaper mode of constructing a pit with bottom-heat.—Leyton.—We, also, refer to the same plan. Four-inch walls will do, but nine-inch are better. If you do not mind the expense, you can employ hot-water pipes in addition, for heating the air; but if the pits are only to be used for the purpose you name, it seems hardly necessary.

VINES IN POTS.—J. H.—Plants grow better in compost fresh from the heap than in that which has been in pots for any length of time; therefore you will do better to shift your Vines on the approach of spring than in the autumn.—Merlin.—By plunging the pots in garden-soil during winter the drainage will become completely stopped, and this, independent of frost, will cause many of the roots of your Vines to perish. They should be kept in a cool vinery; or if this accommodation cannot be afforded, they may be placed on bricks beneath a narrow temporary shade, the pots being surrounded with dry litter to protect them from frost, and modify sudden changes of temperature.—An Original Subscriber.—Where the Black Hamburg will ripen, so will likewise the White Muscat Muscadine, or, which is the same thing, the Chasselas Musqué. Turf from a rich pasture, with plenty of bone manure, will form a good compost for your Vine-border.—Ignoramus.—Your Vines being very vigorous, their present heavy crop may be brought to maturity, notwithstanding the great reduction of foliage; but they will not continue to bear half as many weighty bunches as there are leaves on the plants. In future it will be advisable to leave fewer bunches and more foliage, otherwise the constitution of the Vines will be impaired.—S. C.—A variety, in addition to the Black Hamburg and White Sweet-water may be either the White or Black Frontignan, according to your preference as regards the colour.

NEPENTHES DISTILLATORIA.—A Constant Reader.—This plant will flourish best in a warm humid atmosphere. It requires a soil consisting of peat, leaf-mould, and sand, and should be well attended to with water; the temperature should not be below 60°.

FUCHSIAS.—G. S. Wintle.—In all probability a deficient supply of water is the cause of your blooms dropping off.
GLADIOLUS.—Georgina.—Keep your seed dry till next spring, then sow it in a gentle hotbed, thin, and let the seedlings grow for the first season without disturbing them. After that, when the young bulbs are formed and the leaves have died off they may be treated like their parents. All you have to take care of is that the seedlings have plenty of room to grow in and plenty of light.

ANNUALS.—J. D.—The cause of failure in some of your Annuals is their being sown at an improper season. Others, such as Rhodanthe Manglesii, Clintonia pulchella and elegans, and Lupinus nanus, will do much better if they be sown in shallow pans, in the month of February, and put into a cool pit where the temperature is about 40°, if they be wished to flower early; but if not, and there be no convenience of this kind, sow these along with the others, about the beginning of April. If you treat them in this way, and the season be favourable, you may possibly meet with success.

RASPBERRIES.—Gwyn.—Do not on any account cut down your new Raspberry shoots, for they are what will produce your crop next year. It is, however, a good practice to stop them in September, because the buds which are to bear fruit next year become strengthened. In the winter, or now if you like, cut out the old canes which are done with.

STRAWBERRIES.—Fragaria.—Three varieties, early, medium season, and late, may be Keen's Seedling, Old Pine, and Elton. The Old Scarlet is the earliest of all, but is rather a shy bearer.

PEACHES.—W. L.—Having space for five trees on your east aspect wall, you may plant the Noblesse, Malta, Bellegarde,

and Royal Charlotte Peaches, and the Violette Hative Nectarine. Three trees for your south aspect may consist of the Gross Mignonne Peach, and the Violette Hative and Elrue Nectarines.

PEARS.—W. L.—Six good keeping dessert Pears are these:—Hacon's Incomparable, Winter Nelis, Knight's Monarch, Glout Morceau, Passe Colmar, and Beurré Rance.

PLUMS.—M. D. C.—Your Plum is the Queen Mother. The cause of its cracking is owing to some derangement in the flow of sap. This in standard trees is generally occasioned by vicissitudes of wet and drought; but in wall trees it is likely to occur in consequence of a sudden privation of foliage by the operation of summer pruning, which of course should be guarded against.

INSECTS.—R. Ingleby, Jun.—The larva you sent us somewhat resembling the Wireworm, is that of a dipterous insect. It is probably the larva of Thereva plebeia, a common fly. Little appears to be known of its history; but as it is supposed to be a vegetable feeder you will do well to destroy as many of the larva as you can find.—E. L.—The grubs you find boring underneath the bark of your Oak-trees near the roots we have no doubt are those of a beetle, but we cannot say what species until we have a grub for examination. Wherever from the appearance of the bark the grubs show themselves, we advise you to remove the bark, as you will find it loose, and take out and destroy the grubs. Careful hand-picking appears to be the best remedy.—J. D. and Co.—The beetle you forwarded to us is called Otiorhynchus sulcatus. The injury it does in the grub-state to your young Rhododendrons, eating the bark off just below the surface of the ground, we think may be prevented by pouring a little gas-liquor and water, mixed in the proportion of nine of water to one of the liquor round the root of each plant at the time the grubs prevail. The perfect insect should be destroyed whenever found, and to secure as many as possible you must search well your Rhododendrons, and look well under all stores of dead leaves or rubbish, which may be laying on the ground near them.—W. C. McC.—The Caterpillars you find so very injurious to the young Firs in your plantations, are those of one of the Saw-flies, and we think they belong to Lophyrus rufus. This insect is known on the Continent to do very great injury to the Fir-tribe, and the usual remedies pointed out for its destruction, are the shaking the Caterpillars from the branches, destroying all that fall on the ground, and the removing of the moss and dead leaves collected at the roots of the trees, which will be found to contain quantities of the insect in the pupa state. The moss and leaves should be burned.

TRANSPLANTING.—Peter.—If you must remove your trees now, take them up carefully and replant them as soon as possible, taking care that their roots are kept moist in the interval. Let them be thoroughly watered on planting; and afterwards sufficiently supplied, if the state of the weather render such attention necessary.

PRACICES.—J. K.—The article on the Melon in the Dundee paper, and some others, is stolen from the Gardeners' Chronicle. Quousque tandem?

MISCELLANEOUS.—Chemical Jack.—Cobæa scandens is a perennial, but it is treated as an annual, because it is always killed by frost. It is always multiplied by cuttings, which strike freely. We are much obliged by your information about the country paper, and think we must have acknowledged it. The plunder committed by some newspapers is most disgraceful to them. We believe that the ground on which they defend themselves is that they cannot afford to be honest, which is the excuse of pickpockets, highwaymen, and all such worthies.

An Old Maid's seeds are from some Indian Botanic Garden, and not from Afghanistan, as she has been informed. They all require a stove, and must be raised in strong bottom-heat. If sown now they are more likely to grow, but then the seedlings will probably be lost in winter. Upon the whole, it is better to take the chance of their succeeding next March. They are of little value.—A Constant Reader.—We would not expose our Pines to the smell of paint, if we could avoid it; nevertheless, we do not apprehend very serious mischief, if there is no help for it.—W. H.—Philibertia grandiflora is a greenhouse plant, and those who deny it do not know what they talk about.—A Journeyman.—Provide yourself with a grammar, it does not much matter which, a dictionary, and a Latin Testament, and you will be provided with the means of beginning to learn Latin. The latter will be a good exercise for translating, &c.—G. W.—We cannot judge of the merit of your Salvia; so much depends on management. The flowers are not larger than we have occasionally seen them when the plant is well grown.—Rus.—We cannot advise you as to disposing of your crops. You must trust to the nearest market.—Tome.—Sophronitis pterocarpa.—Anna.—Cassia chinensis; a Greenhouse shrub, propagated by cuttings of the ripe wood. It is not much worth cultivating.—Russelliana.—1, apparently White Clover; 2, Cerastium tomentosum; 3, Achillea ptarmica, with double flowers. There is no reason why the seed of the Shamrock should not ripen, unless it should run excessively by the root, in which case it is very likely to be barren. We presume you regard the Shamrock to be the Trifolium repens, but the real Shamrock is the Oxalis Acetosella.—W. Revue.—The plant is a Gloxinia, new to our garden; but it has no beauty, and is not worth cultivation. If you wish to have its real name determined you must send some uncrushed flowers.—N.—We cannot volunteer in your case. An advertisement you would have to pay about 5s.—Georgina.—The models of Pekin Peaches are not authentic. It is, however, true that this fruit grows at Pekin to an extraordinary size and weight. They would do very well with us if we could get them.—I. S. M.—There is a good receipt for Tomatoes at p. 697 for 1842, only 4 lbs. of salt are misprinted for 4 oz.—W. H.—Your Fig is the Brunswick. It may be forced; but it is more apt to drop its fruit prematurely than the Brown Turkey, and other short-necked varieties. The Pears were too much decayed.—An Amateur.—It is the variegated variety of Convolvulus major.—W. C.—Ptelea trifoliata.—A Constant Reader.—When the first stand is disqualified the prize is awarded to the second.—J. M. Dyck.—2, Laurus Sassafra; 1, Rhus coccinea; both common hardy trees, that every gardener ought to know.—A. D.—Aspidium lobatum.—P. R. W.—Euphorbia cyparissias, Mentha hirsuta, Artemisia maritima, Erigeron acris, Trifolium repens.—H. P. I.—Malva capensis, Psoralea bituminosa, Erica verticillata and taxifolia, Acacia linearis, and an Oxanthus of some kind, but so shrivelled up, that it is not easy to say of what species. We have named them this time, but we beg to refer you to our advertisement at p. 592, relating to this subject.—F. K.—"Paxton's Botanical Dictionary."—A Young Pine-grower.—In your bark-bed, 26 ft. by 8 ft., you can plant in the two back rows 30 fruiting-plants; in the next two rows, 30 succession-plants; and in 2 feet along the front a sufficient quantity of crowns and suckers can be nursed, say more than 30, in case of accidents.—A Devonian.—No. 1, Passe Colmar; 3, Beurré de Capiaumont; not certain as to the names of the other two.

SEEDLING FLORISTS' FLOWERS.

VERBENAS.—J. Walton.—Your seedlings have been examined and compared with the different kinds in cultivation, and the only novelty appears to be No. 1, which is of a rich plum-colour, and dies of a rich blue: the other seedlings, though good flowers, do not differ from sorts already out.—J. Andrews.—Your Fascination is a brilliant scarlet, but it does not surpass other varieties.

PANSIES.—The seedling marked A. has two faults apparent at first sight—the jagged edges of the petals, and the ground-colour of the lip, different from the side-petals; in other respects the flower has good properties—it is round, the petals large, of good substance, and in good proportion; the side-

petals meet well above the eye and make the shield perfect; the colour of the top-petals, and the broad margin of the lower ones, is a uniform rich mulberry hue.

DAHLIAS.—Mr. Spary.—Your seedling named Lady Antrobus, white, mottled with lilac, is a flower of good substance, and good general form, and will prove a desirable and useful flower. Aurantia possesses good properties but is rather deficient in depth; it is large, distinct in colour, orange buff, and will be a useful flower in a collection.—S. Young.—Your seedling is a well-formed flower of considerable depth; the petals are of a good shape (a little ribby) and well arranged; the principal defect is an irregularity in the unfolding of the petals, towards the centre, which gives it a confused appearance—cultivation may probably correct this; the flower is very pretty, white, irregularly tipped with purple.

As usual, a host of letters have arrived too late for answers this week.

NEWS OF THE WEEK.

HER MAJESTY'S progress through Belgium, and her return to Windsor on Thursday, after a flying visit to some of the most interesting cities in Northern Europe, will be found recorded in detail in our general account of the Excursion. The reception given to her Majesty by the Belgian people, and particularly by the citizens of the ancient seats of European commerce, was at once gratifying and honourable to both countries. The details of the visit to Bruges, more especially, will be read with interest; nothing can be imagined more picturesque than the welcome given to our Sovereign by that fine old capital of the merchant Princes of the middle ages.

From France we learn that several political arrests were made last week among the lower classes in the capital, and that papers have been discovered which prove the existence of a secret society among the idlest and most dangerous portion of the people. The Republican party are beginning to show their opposition to the arming of the fortifications of Paris, which are now so far advanced that the Government may be considered independent of their hostility. The National Guards at a review last week made a public demonstration against the armaments, and the Republicans of Nantes have published a protest to the same effect. The Minister of Marine, notwithstanding the clamour raised at his supposed reduction of the fleet in compliance with the views of England, has issued a report stating that he needs a supplement of 15 millions of francs to his Budget, in order to meet the charges of an extra force of armed vessels, and to defray the expense of the mission to China.—The accounts from Spain announce a fresh complication of parties and of interests; the adherents of Espartero having entered into a compromise with those of the Infante Don Francisco for the purpose of supporting the marriage of his son with Queen Isabella, and of demanding the Central Junta. The Government, however, beset by difficulties on all sides, have issued a manifesto, stating their objections to a Central Junta, and praying the nation to await the opening of the Cortes. At Barcelona both parties are inactive, and apparently await the arrival of reinforcements. Two commanders of the Government troops have joined the insurgents, and the neighbouring garrisons have sent in their adhesion to the Junta. The city is still closely blockaded, but a large force is collecting throughout Catalonia to march to the assistance of the insurgents. The insecurity of the Government is daily becoming more evident, and it is currently rumoured in Madrid that they have appealed to the intervention of France.—The state of Italy continues to give rise to much uneasiness; the revolutionary movement has spread to the streets of Rome and Naples, in which seditious proclamations have been distributed in open day. The insurgents have formed themselves into armed bands, and are still masters of the frontier passes. Several arrests, however, have taken place, and the absence of a competent leader must ultimately produce the failure of the insurrection.

Home News.

COURT.—The Queen and Prince Albert arrived at Woolwich on Thursday morning, on their return from Belgium, having embarked in the Royal yacht at Antwerp on the previous evening. Her Majesty and the Prince proceeded from Woolwich to the Great Western Railway, and from thence by a special train to Windsor Castle. The Princesses also arrived at the Castle from Brighton on Thursday afternoon. The Prince of Wales will not return to Windsor until the beginning of next month; the health of his Royal Highness has considerably improved during his stay at the Pavilion. The Prince and Princess Hohenloe Langenburg have arrived at Frogmore on a visit to the Duchess of Kent. Her Majesty the Queen Dowager continues in the enjoyment of excellent health, and takes daily exercise in the neighbourhood of Witley Court, paying occasional visits to the nobility and gentry of the western part of Worcestershire.

Her Majesty's Visit to Belgium.—Our account of her Majesty's excursion last week, came down to Thursday night, and concluded the festivities at Ostend. On Friday morning the royal party visited Bruges, the venerable seat of the merchant princes of the middle ages, the abode of the Counts of Flanders, and the regal residence of the Dukes of Burgundy. This fine old city once more appeared in her pristine glory, and the efforts of the inhabitants to do honour to the occasion produced a spectacle which, for beauty, pomp, and dramatic effect, has rarely

been surpassed. From the railway station to the Hotel de Ville, along all the streets leading from the *Grand Place*, through each avenue or passage through which the procession was expected to pass, one continuous canopy of cloth of every colour in the rainbow was formed by passing pieces of dyed stuffs from window to window—each being tied in the centre with knots of various fashions, and most of them having suspended from the centre some device or emblem complimentary to the royal visitors. In addition to this fantastic but really beautiful awning under which the procession was destined to pass in alternate shade and sunshine, trees innumerable were planted on either side of the streets, charming the eye with their singular contrast, and decorated with festoons and garlands intertwined among their branches with all the ingenuity imaginable. Besides this avenue of a thousand dyes, flowers, bouquets, flags, festoons, transparencies—in fact, every conceivable badge or emblem of festivity and welcome, hung from every window and pinnacle of house, steeple, and tower. All this, superadded to the picturesque and quaint gable-ends of the private dwellings, mingled with the ornamented scrolls and carvings of the old mansions, lit by a brilliant sun, presented a sight at once astounding and delightful. The Royal party were received at the station by the Provincial Governor, the Burgomaster, and the other political and municipal authorities. They then entered their carriages, and were escorted by two troops of Cuirassiers to the Hotel de Ville. As the cortege passed along, the reception given to it by the multitude was most enthusiastic. “Vive la Reine d’Angleterre” was repeated by every tongue in the mingled dialects of Dutch, Flemish, Walloon, English, French, and German, and altogether the scene was one of genuine pleasure to the visitors and visited. Mounted gendarmes and a great many companies of infantry, chasseurs, national guards, and other military, added brilliancy to the entire spectacle. On their arrival at the Hotel de Ville, the party were led into the *salle à manger*, where a sumptuous banquet, under the modest appellation of *déjeuner*, was prepared for them. The Hall of Council had the honour of being converted into a breakfast-room for this occasion. The plate laid out was splendid, a portion of it, for twenty-four persons, being the old massive plate belonging to the ancient corporation of the city, the remainder having been lent by the King for the banquet. Immediately after the *déjeuner* the Royal party went to the residence of the Governor of West Flanders, where they made but a short stay, and then proceeded to visit the Church of Notre Dame, containing the monuments of Charles the Bold and his daughter Mary, wife of the Emperor Maximilian, and the statue of the Virgin and Child, by Michael Angelo. From Notre Dame the Royal visitors went to the Cathedral of St. Sauveur, when they examined the pictures it contains, and thence they passed to the Hospital of St. John, and its Chapter House, containing the masterpieces of Hans Hemling. They then proceeded to the convent of English nuns, whence, after a short stay, they went to the hall of the Company of Crossbowmen, and from that to the Palais de Justice, in which, in the council chamber of magistrates, they stayed some time, admiring the famous chimney-piece, which includes the full-length statues of Charles the Fifth, Mary of Burgundy, Charles the Bold, and Margaret of York, sister of our Edward the Fourth, all full of life and character. From this place the Royal party proceeded to the railway station, on their way back to Ostend. As our Queen and Prince passed through the *Grand Place*, which they were obliged to do several times during the day, they never failed to look up with admiration at the great tower or belfry which rises majestically above the ancient Cloth Hall, and from which, each time as they passed, its celebrated bells pealed forth “Rule Britannia,” “God save the Queen,” and other airs. Her Majesty also, as she traversed the square, invariably glanced with interest at the house inhabited by Charles II. of England, when he was but an exile, and king of the company of Crossbowmen. As the procession traversed the square for the last time, it halted to allow the Queen to take a last view of these objects, after which it proceeded, amidst the cheers of the people, to the station, where the authorities of Bruges received the thanks of the Royal visitors and took their leave. The Royal party arrived before six o’clock safely at the Palace of Ostend, and dined at the Casino, but were too fatigued to go to the theatre afterwards, as had been anticipated. On Saturday morning the ancient city of Ghent was honoured by a visit of the Sovereigns, an incident as remarkable in its history as any among the long number of events by which its annals are distinguished. The Royal party entered the city about 12 o’clock, from the railroad station, amidst the loyal and hearty congratulations of thousands of voices. The streets, as at Bruges, were decorated with triumphal arches, flags, banners, devices, interminable lengths of coloured cotton, and white cotton cloth—the manufacture of the place, and branches of trees and young firs stuck in the pavement. The Royal party on leaving the railroad, proceeded through the principal streets, all of which were crowded with people. The corporation of the city and the various public societies, with their banners and ensigns, fell into rank, and a regiment of Cuirassiers and the band of the regiment of the Guides also joined the procession—the cannon firing a salute, and the bells of the celebrated belfry, as well as those of all the churches in the city, pealing forth a welcome. The royal party first stopped at the hotel of the Provincial Government, where their Majesties alighted, and were conducted into the apartment in which refreshments were prepared. After having remained some time, they were driven to the celebrated Cathedral of St. Bavo; on their way they passed under a triumphal arch bearing the inscription

“La Ville de Gand, à la Reine Victoria et à son auguste épouse; L’ancien voisinage d’Artevelde, salue de nouveau une Reine d’Angleterre.” On the outside of the arch was painted in large characters “A la Reine Victoria et au Prince Albert;” and on either side “Victoria Reine d’Angleterre, 1843—Philippine de Haynault Reine d’Angleterre, 1843.” Their Majesties were received by the bishop and clergy of the cathedral in full canonicals, and surveyed its stately monuments and rare specimens of carving and sculpture. The celebrated font in which the Emperor Charles V. was christened, in the transept, was particularly pointed out to the observation of the Queen, who admired it for some minutes. The candlesticks brought from the old palace of Whitehall, which are also here, attracted her Majesty’s attention. They are very fine specimens of workmanship, and recall many historical recollections. From the Cathedral the royal visitors went to the university, and, after a brief visit to the Quai aux Blés, proceeded to the “Beguinage,” or convent of Beguin nuns—where everything that could make the reception such as it should be was attended to. The royal party then returned to the hotel of the Provincial Government, where, after a short stay, they proceeded to the theatre, a very elegant building, in which a morning concert was prepared for their amusement. As the royal visitors passed through the Place d’Armes, the acclamations increased, and on their alighting at the theatre a universal shout rent the air. Their Majesties acknowledged their gratification in the most affable manner. Their reception in the theatre was a counterpart to what took place without. The air of “God save the Queen” was played by the musicians, the whole company standing. The royal party, on leaving the theatre, went again to the Government-house, where their stay was but short. The cortege then made for the station of the railroad, and quitted the birthplace of the Emperor Charles V., and of “Time-honoured Lancaster, great John of Gaunt,” amidst demonstrations of good wishes towards them similar to those by which they have been everywhere accompanied. On Sunday the Rev. Mr. Jessop, British Chaplain at Ostend, performed the service of our Church in a private apartment of the palace, and the whole of the day was devoted by her Majesty to repose. On Monday at 9 o’clock the royal party set out for Brussels, where they arrived about 2 p.m. The city was densely crowded with visitors and troops, who greeted her Majesty with loud and repeated cheering as the procession made its way to the palace. After partaking of a *déjeuner* at the Palace, the Royal visitors and their suites assisted at a concert given in the open air in the Park by the Royal Harmonic Society. After this they visited the museum, the exhibition of Fine Arts, and other sights, and then returned to the Palace. They were followed in their course by crowds anxious to get a look at the Queen and Prince Albert, and were everywhere hailed with acclamations. At eight o’clock a banquet was given by the king, at which all the distinguished persons in Brussels, and the chief civic authorities were present. Soon after 10 the Royal party went to Laeken. In passing along the illuminated streets they were recognised and cheered at every step. The illuminations which Brussels exhibited in honour of Queen Victoria are described as really superb. The number of illuminated temples, triumphal arches, and transparencies, was countless, and along the principal streets and boulevards, there was one continuous sheet of various-coloured lamps, festooned and wrought into many elegant shapes. The whole *Allée verte* up to the château of Laeken was a blaze of light, and about the Park the devices and illuminated arches were truly magical. Her Majesty had every reason to be satisfied with her reception in the Belgian capital; and even at Laeken, notwithstanding the lateness of the hour, the festivities were continued, fireworks were discharged, and six young girls of the village presented our Queen with a bouquet. On Tuesday afternoon the Royal party left Laeken for Antwerp. At Malines the train stopped for a few minutes, when the cardinal archbishop, the burgomaster, and other authorities, were presented to her Majesty. Madlle. Keitelaers, the daughter of one of the sheriffs, accompanied by a party of young ladies, were also in attendance to present the Queen with a bouquet of the choicest flowers. About four the train arrived at Antwerp, amidst enthusiastic cheering. The usual compliments were paid to her Majesty by the civil and military authorities, and the reception given to the royal party by the people at large was even more cordial and interesting than they had received at any previous part of their route. They drove direct to the Palace, when the usual presentations took place. After this, the citizens entertained her Majesty with the procession of the Giant, which perambulated the town with the ship, dolphins, &c., all of which figured at the celebration of Rubens’s festival. After taking a short repose and refreshment, the Royal party left the Palace with the intent of visiting some of the sights of Antwerp. But such was the crowd, and the anxiety to follow them, that they were obliged to limit their inspection to the cathedral; celebrated for its beautiful spire, and for the “Deposition from the Cross” by Rubens. From the cathedral the Royal party passed to the Place Verte, where a concert was prepared for their entertainment, and where a handsome pavilion was raised for their accommodation, opposite the statue of Rubens. The fatigue, however, under which the whole party were suffering prevented them from waiting for more than one piece. A banquet at the palace, to which all the distinguished persons and authorities in Antwerp were invited, terminated the day’s entertainment. The city was brilliantly illuminated during the evening, innumerable pyramids of lamps, of triumphal arches, of pavilions, and transparencies, contributing to render the

general illumination the more beautiful. Fireworks were discharged in abundance, and the bells of the cathedral continued playing “God save the Queen” with extraordinary correctness and effect. Her Majesty did not go to the theatre, or to the many other entertainments which the liberality of the city had prepared for her. During the entire evening and night, Antwerp was one continued scene of festivity out-of-doors and within. In the course of the day, a special envoy despatched by the King of Holland to compliment the Queen on her arrival near the confines of his dominions, and to invite her to honour his territory with a visit, was received by her Majesty, who returned thanks for the King’s courtesy, but declined the visit at present. On Wednesday morning, the Royal travellers left the Palace, accompanied by the King and Queen of the Belgians, to visit the Museum, previous to their taking their departure for England. Her Majesty remained an hour inspecting the various works of Rubens, Vandyke, Matsys, Jordaens, and the other Flemish masters which it contains. Soon after 12, they embarked in the Royal yacht amidst a succession of salutes from the steam squadron and the citadel. The King and Queen of the Belgians accompanied her Majesty as far as Lievenkenschhoek, opposite to Fort Lillo, where they went ashore, and bid farewell to their illustrious guests. The Royal standard was saluted by 101 guns from the batteries at Batch as soon as the ship arrived within the dominions of the King of Holland. The Royal yacht bore away for the coast of England, and arrived in the night in Margate roads, where she hove-to till daylight, as there was scarcely sufficient water for her to run over the flats, and she could not make her way through the Queen’s Channel, as the night was too dark to distinguish the buoys. The Cyclops also brought up for the night, but the smaller steamers were a long way astern, and were hulled down before sunset. The Yacht got under weigh again soon after daybreak, and was much impeded by a dense fog in her passage up the river. She reached Woolwich, however, shortly before 11, when her Majesty disembarked amidst the salutes of the batteries and welcomed by enthusiastic cheers from the people assembled at the landing-place. The Queen immediately proceeded to Paddington, and arrived at Windsor by the Great Western Railway at 1 o’clock. Her Majesty and Prince Albert were looking remarkably well, and have derived much benefit from their marine excursion. In the afternoon, the Queen and the Prince drove to Frogmore Lodge in a pony phaeton to pay a visit to the Duchess of Kent and the Prince and Princess of Hohenloë. Her Majesty and the Prince, after remaining at Frogmore about an hour and a half, returned to the Castle through the Park.

Post-Office.—An inquiry having been made of the Postmaster-General, whether, if a letter bearing the penny stamp be addressed to the residence of a person, and be thence forwarded to him at some distance in the country, the original stamp will cover the further transmission by post, the letter not having been opened, and having undergone no alteration beyond the mere substitution of address? the Postmaster-General, in reply, states that a letter re-directed from one place to another is legally liable to additional postage for the further service.

The Army.—Her Majesty has been pleased to permit the 22d (or Cheshire) Regiment of Foot to bear upon its regimental or second colour, and also upon its appointments, the word “Scinde,” in commemoration of the distinguished gallantry displayed by the regiment in the campaign against the Ameers of Scinde, in the early part of the present year.

Foreign.

FRANCE.—Several arrests for political causes were made in Paris on Friday and Saturday last. For some time the police were aware that a society had been organised for the purpose of plunder, and that they were about to put their criminal projects into execution. During the night of Friday the principal members of this association were arrested at a wine-shop in the Rue Pastorel, and in other quarters of Paris. The individuals arrested are about 20 in number, and on a search made at their places of residence, a quantity of seditious pamphlets, arms, cartridges, and gunpowder were discovered. All these individuals belong to the operative classes, and most of them are destitute of the means of existence; they had refused for some time past to labour for their bread, a fact explained by the principles of communism which they profess. Notwithstanding the secrecy they observed, the authorities traced them, and at once seized all the elements of this conspiracy. That the individuals just apprehended are of a desperate description, though of a very low degree, is affirmed by persons connected with the Government, who add that it has reason to rejoice at having seized them in due time, and that the public will be surprised at the evidence procured against them. There are persons who connect this projected Republican attempt with the insurrection at Barcelona and the disturbances in Italy. There are those likewise who affirm, that if her Majesty had come to Paris, and a review of the National Guards had taken place on the occasion, the Republicans would have contrived to provoke some hostile demonstration. That something of the kind was meditated was hinted by a Republican print, when it was ascertained that the Queen would not visit the Capital.—Her Majesty’s visit to the King and Queen of the Belgians is noticed at considerable length by several of the papers, and with much displeasure by such of the ultra-Liberal prints as her brief stay in France offended. Thus the *National*, which maintains that if the Queen had come to Paris she would have been received there with the consideration due to all women and nothing more—declares that her Majesty extends her

excursions to Bruges, Ghent, Brussels, and Antwerp solely because Belgium has proved ungrateful to France; and the *Commerce* deems it quite evident that, in displaying more courtesy towards King Leopold than towards King Louis Philippe, the sole object of our Sovereign and Government has been to diminish the effect of the visit to Eu! The Ministerial *Journal des Debats* replies to these insinuations by saying, that the Radicals, having been unable to make out as they wished, that the visit of the Queen of England was an insignificant and unimportant act, have changed their tactics, and now endeavour to transform it into a malevolent and hostile proceeding. "England, however,—and we are pleased to say it,—has cordially approved of the step of the Queen, and unanimously expressed a hope that this kind of advance may contribute to efface entirely the resentment, and even the remembrance, of past misunderstanding. Whatever may be said or done, it will be impossible to prevent the Royal interview at Eu from being viewed in France, in England, and in Europe, in its true light—that is to say, as a pledge of reconciliation between the two nations."—The *Commerce* contains a protest signed by the republicans of Nantes against the armament of the fortifications of Paris, and states that, at a review of the National Guards of Paris, which took place on Saturday in the Bois de Boulogne, some cries were raised in one of the legions against the arming of the fortifications constructed round the capital.—The Spanish Count Toreno, the Finance Minister of Queen Christina, died in Paris last week, in his 55th year.—The *Moniteur* publishes a report of the Minister of Marine, stating that he will need a supplement of fifteen millions of francs to his Budget. The Minister begins by owning, that instead of 164 armed vessels, to which he was limited by the Chamber, he kept up upwards of 200. This surplus of expense, together with that necessary to fit out three more vessels for China, has incurred an expense of five and a half millions. The French naval force off China is to consist of two frigates and three corvettes. The eighteen transatlantic steam-packets require five and a half millions more; steamers for Senegal, a quarter of a million; barracks in Guadaloupe, two millions. These, with a deficit of three millions on the Marine Budget of 1842, make upwards of fifteen millions required as a supplement to the Budget—of these, the Minister says he only wants six millions immediately.

SPAIN.—We have advices from Madrid to the 14th inst. No fresh disturbance had occurred, but several persons said to be connected with a secret political association had been apprehended, and the precautions which continued to be taken both day and night, denoted the insecurity of the Government. Such were the difficulties which beset it, that its enemies found the people disposed to credit their assertions as to the intervention of France being demanded. The Government has published a manifesto, stating their objections to a Central Junta, and praying Spaniards to await the Cortes, which will content all. A complete schism had taken place between the Progresistas and Moderados, and a compromise had been entered into between the former and the Esparterists, who have agreed to support the marriage of Isabella II. with the eldest son of the Infante Don Francisco; to demand the Central Junta; and to insist on the question of the marriage being decided at the same time as that of the majority. The Military Intendant-general has published through the *Gazette*, a refutation of the statement of the financial chief of Espartero's army, M. Paredes, who certified the fit appropriation of the 1,500,000 reals brought from Madrid by the ex-Regent. The Intendant asserts that only 563,650 reals of that sum had been lawfully employed; that the remainder was carried out of the country, and, as stated by M. Cardero, distributed among the followers of Espartero at Lisbon. It is said, however, that the disinterestedness of the ex-Regent, and indeed his contempt for money, is so notorious, that even his enemies did not credit M. Lopez's assertion in the *Gazette*, that he had stolen funds belonging to the public Treasury. The Queen was said to be seriously unwell, with an affection of the stomach. Mr. Aston left Madrid for England on the 9th. From Barcelona we learn that the insurgents were in high spirits at Colonels Martell and Amettler having joined them. The former had addressed the people on the Rambla, declaring that any union was impossible with Cols. Prim and Milaus. The city continued to be strictly blockaded, but a large force was collecting throughout the province of Catalonia to march to the assistance of the insurgents. The Captain-General Araus, who still continued inactive in the citadel, had been obliged to discharge 400 of his men, who manifested an unwillingness to fight against the inhabitants of Barcelona. Col. Prim was in the same inaction at Esplugas, three leagues from Barcelona, with a battalion and some hundreds of National Guards. Meanwhile the *pronunciamento* against the Government, and in favour of a Central Junta, was progressing rapidly throughout Catalonia. The garrison of Figueras, described as the strongest and most formidable fortress in Spain, had declared in favour of the junta. Lampurdan, and another important garrison and fortress, Hostalrich, had also sent in their adhesion to the junta of Girona. An attempted rising at Vich, in favour of the Government, had totally failed. A Barcelona letter of the 10th informs us that Mr. Penleaze, the British Consul, who had landed from the *Medea*, to which he had gone in consequence of his house being exposed to the fire of the forts, was arrested while walking in the streets; but upon the application of M. de Lesseps, the French Consul, who interfered with great promptitude, he was instantly set at liberty by order of the junta, with many apologies for the conduct of the civic guard, who had mistaken him for another person. On the 13th the insur-

gents fired on a boat of the French brig of war *Méleagre*, which was about to take in water at the fountain of the port of Barcelona. One of the shots took effect and a sailor was seriously wounded. The Consul of France demanded satisfaction. The *Constitutional* of the 10th had announced that the vigilance of the Junta had prevented the French from setting fire to four factories. The Consul has also demanded and obtained satisfaction on this subject. On the 14th the condition of Barcelona was still the same, and the delegates who had returned from Madrid made common cause with the Junta. The fire from the citadel and from Montjuich had already occasioned more damage than was caused by the bombardment of November. The houses in the square of the Palace, that of M. Cifré, one of the finest in Barcelona, several French manufacturing establishments, and other buildings, were in ruins, and some children had been killed by the bursting of the shells in the streets. It is said that no less than 100,000 persons have fled from the city.

PORTUGAL.—The accounts from Lisbon are to the 11th inst., but the news is altogether unimportant. The pending treaty with Great Britain still continues to agitate the hopes and fears of the expectant multitude. Those more immediately interested in the non-execution of the convention, use every means in their power through the press to bring it and its negotiators into disrepute, and were it not for this important affair the public mind would scarcely have anything to engage attention. The Queen and Royal family are at Mafra.

GERMANY.—It is reported at Berlin that the King of Prussia has written an autograph letter to the Queen and Prince Albert, inviting them to extend their continental excursion as far as Berlin. The best understanding exists between the Emperor of Russia and the King of Prussia; the two monarchs walk through the streets of Berlin unattended by any guard, whilst the inhabitants cause them no inconvenience. It was said that the Israelite community of Berlin were about to present an address to the Emperor in favour of their fellow Israelites in Russia, who complain of oppression.—A review of the tenth corps of the army of the German Confederation is to take place in the neighbourhood of Lunenburg, between the end of this month and the 8th October. The whole number of troops assembled on this occasion will be 28,000, of which Hanover sends 13,054; Brunswick, 2,096; Holstein-Lunenburg, 3,600; Mecklenburg-Schwerin, 3,580; Mecklenburg-Strelitz, 718; Oldenburg and the Hanseatic Towns, Lubeck, Bremen, and Hamburg, 5,019.—In Hanover the magistrates have given notice that, by order of the Treasury of Great Britain, the differential duties are abolished which Hanoverian ships have hitherto been obliged to pay on the exportation of coals from England to any other than Hanoverian ports; henceforth Hanoverian ships will not have to pay, in this case, any higher duty than English ships.—An anti-temperance society has been founded at Hamburg by a person called Bocker, and numbers 2,000 members. The Government thought fit to prohibit such opposition to the principles of Father Mathew. The society consequently met on the Danish territory, and on returning to Hamburg caused a serious riot, which led to several arrests. On the 7th inst. the hospital which M. Solomon Heine, the banker of Hamburg, has built at his expense for indigent Jews, in honour of the memory of his wife, who died some years back, was publicly inaugurated. The members of the Senate, the foreign ministers, most of the public functionaries, and a great number of citizens, were present on the occasion. M. Heine, in an address to the spectators, declared that he had founded the establishment principally for Jews, but not exclusively, as the poor of all sects should receive assistance there. This hospital, called Betty's Hospital, from the first name of Mme. Heine, is situated in the midst of a fine garden. A library, a gymnastic ground, covered with piazzas for exercise in wet weather, &c., are provided in the building.—From Hungary we learn that a dreadful conflagration has desolated the town of Stuhlweissenburg, about 35 miles from Pesth. The fire began on the 5th, and was still burning when the despatch was sent off; 400, and according to other statements, 600 or 800 houses were already reduced to ashes.

HOLLAND.—Her Royal Highness the Princess of Orange was delivered of a prince on the morning of the 15th and is doing well. A letter from Amsterdam states that pauperism has become really frightful in Holland. "It appears," says the writer, "that, in 1841, the charitable institutions relieved 595,093 individuals, which number, compared with the whole population, estimated at 2,931,143 souls, is at the rate of one to five. The number of charitable institutions is 6,331, and the sum expended by them in 1841 amounted to 19,026,993 florins (about 41,000,000*fr.*)"

MALTA.—Accounts from this island mention the death of Cardinal Fab. Scerberras Testaferrata, at Valletta, on the 1st inst. His obsequies were performed with great pomp on the 2d. The Cardinal was one of the oldest noble families in Malta, and was Bishop of Sinigaglia in the march of Ancona.—Lieut. Holman, the blind traveller, took his departure from Malta on the 3d for Naples. He will afterwards proceed to the Roman States and Trieste.

ITALY.—Accounts from the frontier state that, on the afternoon of the 29th ult., at Rome, when the Corso was much crowded, a number of proclamations were distributed containing a most violent attack upon the Pontifical Government, and inviting the people to arouse from their apathy. Several persons were arrested, but no disturbance took place. Travellers who had arrived a few days previously by the Naples diligence, by the San Germano and Ceprano road, reported that the whole part of that road situated on the Neapolitan territory was infested by a numerous band of brigands, most of them mounted on

good horses, and all of them well armed. Two carriages, which preceded the diligence, were completely plundered by those robbers. All the way from Capua carabinieri were posted on the road, but they were unable to check the brigandage, and had been more than once compelled to fly before the banditti. At the head of the band were three convicts who have escaped from the galleys.—The most contradictory reports were circulating as to whether the Government will act by itself or demand foreign assistance in order to quell the Bologna disturbances. Meanwhile, the malcontents disseminated in the mountains are daily increasing in numbers. They propose to carry on a guerilla war. Most of them are well armed. They are now in the narrow passes of the Apennines, in the direction of Pistoja, the Bagni della Porretta, Savigno, and Vergato. It was said that the Government had offered passports to the leaders to quit the country and an amnesty to their men; but that those conditions had been rejected. The Tuscan Government has despatched 200 Dragoons to watch the Papal frontier, and the Government of Modena is about to do the same. It is believed that the insurrection would have extended throughout Italy had the insurgents possessed a leader sufficiently skilful to conduct the attempt. The cause of the insurrection is said to be the constant refusal of the Pontifical Government to make concessions to public opinion. The decree relative to the Israelites of Ancona and Sinigaglia is now said to be authentic, but it is only a revival of old decrees. However, they who are acquainted with the real state of things are convinced that the decree will not be executed.—Letters from Naples of the 26th ult. mention that symptoms of disorder were beginning to manifest themselves in that capital. Attempts had again been made to set on fire the clothes of ladies of rank in the streets of Naples, and with fatal effect. Several arrests had taken place. The Neapolitan Government was afraid to call in regiments from the provinces, where, it appears, considerable excitement prevailed; but the four Swiss regiments had been sent to the festa of the Madonna di Pié di Grotta, which took place on the 8th without interruption, although the Government arrested several persons, in fear of a movement. It was said at Naples that two guerillas had shown themselves in the Abruzzi, and that four battalions were about to be sent into that province. Mount Vesuvius has lately given signs of an approaching eruption. The crater, after having sent forth for some days columns of fire and smoke, emitted on the 18th, from six to ten in the evening, loud detonations like cannon shots.

GREECE.—Letters from Athens of the 31st ult. state that the dismissal of General Church and some other British officers from the service of the King of Greece was felt by the British residents as a proof of the ill-will entertained by the existing Government towards everything English, which could only be counteracted by the appearance of a few British ships of war off the coast. Considerable discontent had been created by extra pay and allowances made by the King to his favourites, and a sum of 18,000 drachmas had been granted to the Ministers of War and of the Interior for secret service money, which absorbed the whole of the economy made in other departments. An article has appeared in the Continental papers, dated from Constantinople, and pretending to be a kind of review of a pamphlet, published at Constantinople, under the title of "Divine Providence constantly watches over Greece," in which it is stated that King Otho's dynasty cannot last, and that the only way of securing the permanent prosperity of Greece would be to elect a descendant of the ancient Byzantine Emperors to the Grecian throne, of which there still exist many in different parts of Europe, such as the Courtenays, Montmorencis, Hohenlohes, &c. Several thousand copies of this pamphlet have been circulated through Greece and Turkey.

WEST INDIES.—By the mail-steamer *Dee*, which arrived at Southampton on Wednesday, we have accounts from Jamaica to the 23d Aug. The weather continued favourable for the planter, some seasonable showers having removed the apprehensions of severe drought. Generally in all the colonies the weather was reported to be seasonable and favourable, and the crops promised well. The combined Court at Demerara had discussed and passed a new tariff of duties for 1843 to 1844, by which the duties on imports from Great Britain were reduced generally from the surcharge of two-and-a-half per cent. on the specific duties to one per cent. Among the passengers by the *Dee*, is the Ex-President Boyer of St. Domingo, who has come to Europe for the benefit of his health.—Accounts from Bogota state that Mr. Stewart, the British Chargé d'Affaires to the Republic of New Granada (formerly M.P. for Haddington, and a junior Lord of the Treasury), died in that city on the 15th July.

CITY.

Money Market, Friday.—Consols closed at 95½ to ½ for money, and 95¼ for account; New Three-and-Half per Cents., 102½ to ½; India Stock, 267 to 9; Exchequer Bills, 1½d., 63s. to 65s.; 1½d., 61s. to 63s. prem.; India Bonds, 69s. to 71s. prem.

Metropolis and its Vicinity.

General Espartero.—On Monday General Espartero, with his Duchess and niece, visited Woolwich with his suite. After witnessing the evolutions of the Royal Horse Artillery and field batteries, under the directions of Lord Bloomfield, they visited the Rotunda, containing the models and specimens of arms, the barracks, stables, and hospital. After partaking of a *déjeuner* at Lord Bloomfield's residence, they visited the departments of the Royal Arsenal, including the laboratory and store-

houses, where accoutrements are always ready for 10,000 horses and their riders. In this department General Espartero and his officers seemed struck with the immense number of articles to be seen at one view, and their surprise was not lessened when Lord Bloomfield at the eastern wing, pointed out to them about 28,000 large guns, and upwards of 4,000,000 of balls and shells arranged on the grounds of the Arsenal. The whole party then proceeded to the marshes, where ricochet practice was carried on, under the command of Major Horsby, and the firing was the best exhibited for some time, almost every ball falling at the foot of the flagstaff, about 700 yards distant. Two rounds of 10 rockets each were then fired by the rocket troop, under the command of Major Strangways, and went off beautifully, some of them entering the target at 800 yards' range. It was intended to continue this practice for some time, but the number of vessels entering the range causing considerable delay, it was discontinued; and General Espartero, the Duchess, and the Donna Elidia returned to town. On Tuesday they paid a visit to the public establishments in the City. At the Guildhall they were received by Sir C. Marshall, Sir J. Pirie, &c., by whom they were conducted into the Aldermen's room, the council chamber, the freedom-office, the library, reading-rooms, &c. The Court of Common Council were assembled at the time, and received their visitors with loud cheering. His Excellency and family next proceeded to the Mansion-house, to pay their respects to the Lord Mayor, by whom they were subsequently accompanied to the Bank. At this establishment they were met by the Governor and Directors, by whom they were shown the various offices and departments, with the machinery and apparatus employed in printing notes for circulation. They examined the room containing the bullion, the treasury department, and a new machine for weighing sovereigns. A highly respectable assemblage had collected inside the Bank, by whom they were enthusiastically cheered, the same demonstrations being manifested both on their approach to and exit from the Bank. They also went to the Mint, where they inspected the machinery.

Court of Aldermen.—Alderman Magnay has declared his intention of becoming a candidate for the ensuing mayoralty, the resignation of Alderman Lainson having placed him in competition with Alderman T. Wood.—On Monday a Wardmote was held in Bread-street Ward, for the election of an Alderman, in the room of Mr. Lainson. The two candidates proposed were Mr. Benjamin Lawrence and Mr. Hughes Hughes (High Sheriff of Hants). The Lord Mayor declared, upon the show of hands, that Mr. Lawrence had the majority; upon which the friends of Mr. Hughes demanded a poll. At the termination of the polling for the day, the numbers were—for Mr. Lawrence 57, for Mr. H. Hughes 57. At the close of the second day Mr. Lawrence had a majority of 10 votes. On Wednesday at the close of the poll the Lord Mayor declared the numbers to be, for Mr. B. Lawrence, 89; Mr. Hughes, 82—majority, 7. The Lord Mayor said he should have declared Mr. Lawrence elected had not a scrutiny of the votes been demanded. His Lordship, having read the names of the scrutineers appointed by each party, appointed Monday, the 10th October, for the scrutiny.

Court of Common Council.—On Tuesday a Court was held, at which Mr. Bunning was chosen Clerk of the Works, in the room of the late Mr. Montagu, by a majority of 38 over Mr. Young, who had been several years principal clerk in Mr. Montagu's office. The numbers were—for Mr. Bunning 106, for Mr. Young 68.

City Revenues.—An article on the corporation of London and municipal reform, which appeared in a recent Number of the *Westminster Review*, has been reprinted as a pamphlet, with a view to its extensive circulation. It contains a general view of the city revenue, corporate and parochial, from the summary of which we learn that the trust estates in the city bequeathed for public and charitable objects produce an annual sum of 364,096*l.* 1*l.* 9*d.* But, notwithstanding these endowments, the local rates for the poor, the church, paving, lighting, watching, &c., form a heavier burden upon the inhabitants than exists in any other part of London, or in any corresponding district of the United Kingdom, amounting for the year 1841 to 272,788*l.* 4*s.* 5*d.*, besides octroi duties and tolls, or taxes levied by the corporation on coals, provisions, &c. paid by the public at large to the amount of 202,549*l.* 12*s.* 7*d.* These sums are annually raised for municipal objects within an area embracing only a 15th section of the Metropolis.

Bank of England.—At the general half-yearly meeting of the proprietors of Bank Stock on Thursday, a dividend was declared of 3½ per cent. for the half-year ending the 10th October next, deducting 7*d.* in the pound for income-tax. In making this dividend of 3½ per cent., minus the income-tax, the Directors took from the "rest" the sum of 7,167*l.* 17*s.* 11*d.*, the state of the banking business, and the difficulty which all banking concerns experience in realising profits, having rendered this step necessary. The amount taken from the "rest" for the last dividend was 5,864*l.* 0*s.* 3*d.*; so that the two sums together make about 13,000*l.* taken in the twelve months.

Acceleration of the Indian Mails.—A numerous meeting of merchants and others interested in the speedy transmission of letters to and from India, China, Australia, Ceylon, &c., was held on Tuesday at the Hall of Commerce, Mr. J. A. Smith in the chair. In stating the object of the meeting, the chairman explained that all that was expected was an expression in general terms in favour of improved communication, without reference to any company whatever. Consistently with this view, the resolutions had been carefully prepared so as to show what

the public desired, and to leave entirely to the Government the manner and the means to be adopted in carrying out their wishes. They were to the effect that the present arrangement was defective in two particulars, as the mails from Bombay seldom reached England in time for the merchants to answer their letters, and that a similar inconvenience attended the arrival of the outward mails at Calcutta; that any plan that could be adopted to remove these defects, by accelerating the communication between the two countries, would be of the greatest national benefit; that memorials on the subject should be addressed to the East India Company, and copies sent to Government; and that to manage and watch over the matter a committee should be appointed. The resolutions were passed almost unanimously, and the committee was named, with the understanding that it should call a public meeting on the 1st of December.

The Houses of Parliament.—In order to afford room for the employment of additional workmen, a portion of Palace-yard, extending from the entrance to Westminster-hall to the Terrace, has been inclosed by a high paling of wood, within which sheds are erected for the purpose of enabling the stone-masons to proceed in chiselling the ornamental designs. The construction of the external walls has advanced so rapidly within the last month, that Mr. Barry conceives that the roof may be thrown over a great portion of the main structure before the winter. There are at present upwards of 300 masons engaged, including those employed in hewing the stones; but as the latter operation is necessarily tedious, the contractors have determined to carry out Mr. Barry's design, so far as they can, by putting on the additional hands which the increased space obtained by the inclosure of Palace-yard will permit to work with convenience. Considerable progress has been made in the preparation of the carpentry work for the interior, which will consequently have the advantage of being well-seasoned, and less subject to warp.

The Prize Cartoons.—The eleven cartoons, which obtained the premiums announced by the Commission of Fine Arts, have been placed in the Suffolk-street Gallery, for public inspection. The rest of the cartoons have been conveyed to the Pantechnicon, Belgrave-square, for exhibition. At the Suffolk-street Gallery artists are already employed in making reduced copies of the prize cartoons, for the purpose of engraving.

Custom House Frauds.—A few weeks since a large seizure of contraband tobacco was made by Mr. Fogg, an inspector of the Thames Police, on the premises of a baker in Eastfield-street, Limehouse, which was removed to the Custom House. Since that time an inquiry has been made by the Commissioners of Customs, on the information of some of the parties engaged in the transaction, which has terminated in Exchequer writs being issued against Fogg and 10 other persons. It appears that the revenue has been defrauded to a great extent by the smuggling of foreign tobacco, which was carried on upon the Thames in the presence of the numerous revenue officers constantly on duty. For some time previous to the seizure, two lightermen had been in the habit of going down to Gravesend for chalk, which they brought up in a large boat. Every trip they made to that place was to cover the contraband trade they were carrying on—that of bringing four or five tons of foreign manufactured tobacco from a sloop several miles below the Nore, and landing the tobacco at Limehouse or Ratcliff. The parties ultimately quarrelled, and information was given to the Custom House, which led to the discovery of the scheme. Fogg immediately put in bail for 1,100*l.*, the amount of penalties sought to be recovered by the Crown. Six others have also put in bail, but two have not been able to obtain it, and are confined in Whitecross-street Prison, where they are likely to remain till next term, when the trial will take place in the Court of Exchequer. The sloop which brought over the tobacco from Flanders, and the barge, have been seized and condemned. The Board of Customs have rewarded the two lightermen with appointments, although, on their own showing, they have been for some time engaged in extensive smuggling transactions. They have been receiving weekly salaries for some time past, and one of them boasts that he is to receive a permanent appointment as gauger. They were, it is said, generally employed as informers and witnesses in the proceedings against persons for employing non-freemen on the river. One of the principal purchasers of the contraband tobacco was a tobacconist and cigar-dealer in the Whitechapel-road, against whom an Exchequer writ has been issued. The tobacco was generally conveyed to his house by a man dressed as a baker, in a bread-basket, carried over his shoulders, and, to carry on the deception, quarter loaves were placed over each bale of tobacco. Other dealers received it in like manner.

Wesleyan Conference.—The daily papers state that the Wesleyan Methodists have been compelled to abandon their mission at Malta, and that others will be given up or reduced immediately. The permanent income of the society is said to have diminished to such an extent as to render this step necessary.—The annual address of the Conference was published last week, and contains a general notice of the public occurrences of the year which bear upon the religious interests of their body. After referring to the efforts made to bring about a substantial union between different religious bodies, it proceeds to lament the recent settlement of "emissaries of the Pope" at Tahiti, "supported by the authority and force of a great European nation." It alludes to the late secession in the church of Scotland, and expresses a strong adherence to the principle avowed by the seceders, in asserting the right of every Christian church to exercise its ecclesiastical functions uncontrolled by the civil courts. In regard to

the Government measure for promoting education in the manufacturing districts, it congratulates the body on its withdrawal, but states that the Conference must not disguise or overlook the fact, that their recent proceedings in reference to public education have involved them in a most serious responsibility. "The case," they say, "stands thus: A large number of the youth of our country are found to be greatly in need of education. It is proposed to give them a certain amount of education upon certain terms; but we, in common with other bodies, object to the terms proposed, and are understood thus to prevent them from receiving the education offered. Unless, therefore, the education offered was itself an evil as great or greater than absolute ignorance, or unless the terms proposed were such as to neutralise the benefit of education altogether, it is manifest that we must either exert ourselves to the utmost of our power for the instruction of the people on a better system, or we must incur the guilt of depriving them of instruction altogether—neither giving it ourselves nor allowing it to be given by others. We do not suppose, indeed, that any private or denominational efforts can effect an amount of good equal to that which would result from a well-devised and equitable measure of national education; but we are sure that patient zeal and self-denying liberality may find ample scope, and secure an ample reward, in almost any circuit in our connection. The establishment and maintenance of efficient day and infant schools in large towns, and the further improvement of our valuable Sunday-schools everywhere, are objects which we once more earnestly commend to your kind and most careful attention." In regard to the Church of England they state that they have been hitherto accustomed to regard her as one of the main bulwarks of the Protestant faith; but her title to be so regarded has of late been shaken by the encouragement of Tractarian principles. "We deeply condemn and deplore," they add, "this alarming departure from the truth of the Gospel in doctrine, and from its godly simplicity in divine worship and ecclesiastical observance. Yet we are aware that there is a numerous and powerful body of holy and faithful men to be found in the ranks of the National Church; and we cherish the hope that they, and the authorities of that Church, may soon feel it to be a duty which they owe to Christ and to the souls of men, to stand forth, and, by a more vigorous, explicit, and united assertion of the doctrines of the Reformation, purify their branch of the Christian community from the evils which at present threaten its destruction."

Allhallows, Barking.—At a meeting of the vestry of this parish a few days since, a correspondence was read between the Vicar and the churchwardens, on the Curate's departure from the usual mode of performing divine service, which had caused several of the parishioners to secede or absent themselves from the parish church. The Vicar had expressed regret that any alteration in the performance of divine worship had taken place, or that anything had occurred to disturb the harmony of his parishioners. In consequence of this, the churchwardens reported that the former mode had been resumed, and those parishioners who had discontinued their attendance at the church had returned.

The Spitalfields Weavers.—On Saturday a meeting of hand-loom weavers was held to receive the report of an interview which took place at the Board of Trade on the previous Thursday, between a deputation of the operative weavers and Mr. M'Gregor, on which occasion a memorial, signed by 3949 persons was presented to the Lords of the Privy Council for Trade. The deputation stated to Mr. M'Gregor that the abodes of many of the weavers had been visited by them, and that they presented a scene of deplorable poverty. Several had no bed to lie upon, and had scarcely any clothing. This was the case in many instances where the loom was at work. The deputation then referred to the advantages derived by the Spitalfields Act, observing that since that act was repealed the effect had been injurious to the operatives and the tradesmen, as the average earnings of the former per week had been reduced from 12,000*l.* to 6000*l.* The deputation was informed that Government was aware of the operation of some of their allegations in reference to smuggling; that their case would be investigated by Government between that time and the meeting of Parliament, and that whatever measure of relief the Government considered advisable would be introduced by them early in the next session.

Model Prison.—The commissioners appointed by Government to superintend the management of the Pentonville Prison have just presented their report for the approval of the Secretary of State. The report, which is signed by Lord Wharcliffe, Duke of Richmond, Earls of Devon and Chichester, Lord J. Russell, the Speaker, Sir B. Brodie, Dr. Ferguson, Maj. Jebbs, Mr. Crawford, and Rev. W. Russell, states that it is intended to appropriate the prison to the reception of convicts between 18 and 35 years of age, under sentence of transportation not exceeding 15 years, and that the convicts so selected shall undergo a term of probationary discipline for 18 months in the prison, when they will be removed to Van Diemen's Land under their original sentences. The Commissioners report that the prisoners evince a ready conformity with the rules and regulations of the prison, and that they have made considerable progress in the trades in which they are instructed, namely carpentry, joinery, shoemaking, tailoring, rug-weaving, mat-making, and weaving. The report contains a letter from Sir J. Graham to the Commissioners, wherein he says—"I propose that no prisoner shall be admitted into Pentonville without the knowledge that it is the portal to a penal colony, and that he must thenceforth look forward to a life of labour in another hemisphere."

Statistics of the Metropolitan Police.—By a return just

issued, in compliance with an order of the House of Commons, relative to the city and metropolitan police force, it appears that there are 20 superintendents in the metropolitan division, receiving from 200*l.* to 600*l.* per annum; 110 inspectors, whose salaries vary from 80*l.* to 200*l.* per annum; 465 serjeants, with incomes ranging from 60*l.* to 80*l.* per annum; and 3790 constables, receiving from 44*l.* to 81*l.* per annum, including clothing and 40 pounds of coals weekly throughout the year. The amount paid on this account during the past year, including 3620*l.* for superannuation and retiring allowances to officers and constables late of Bow-street horse patrol, and Thames police, amounted to 295,754*l.* In this is likewise included a sum of 9721*l.* received from theatres, fairs, and races. The number of district surgeons is 60, and the amount paid for books, &c. is 757*l.* The total rate received during the past year from the various wards in the City of London and its liberties, for the maintenance of the City police force, is put down at 41,714*l.*, and the expenditure at 41,315*l.*, the gross pay, irrespective of other charges to the force, amounting to 29,800*l.*

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, Sept. 9th, was as follows:—West Districts, 141; North Districts, 156; Central Districts, 160; East Districts, 182; South Districts, 241: total, 880 (males 460; females, 420). Weekly average for the last 5 years 903 (461 males, 442 females); and for the last 5 summers, 846.

Provincial News.

Aldborough.—On this part of the coast of Suffolk last week the sound of the heavy firing on the occasion of Her Majesty's visit to Ostend was distinctly heard. The weather was very fine, with a slight breeze from the east. The distance from shore to shore is 88 miles. The firing during the siege of Antwerp was distinctly heard on the Suffolk coast.

Bangor.—The Bishop of this diocese, at his fifth triennial visitation last week, delivered a charge which has excited much interest in North Wales. The Bishop first adverted to the question which had occasioned so much interest in the principality and sympathy in the English dioceses—the law which provided for the union of the sees of St. Asaph and Bangor, which he said was still in suspense; and although he could not encourage any sanguine expectations, he would not despair of the ultimate success of their appeals to the justice and good feeling of the Government and the Legislature. After adverting to the different measures which have recently been brought forward in connexion with the church, the bishop proceeded to examine the progress of Tractarian principles. "After making every allowance," he said, "for the uprightness and good intentions of the writers, the soundness and orthodoxy of many of the principles which they have advanced, and the advantages which have resulted from their labours, it must be confessed that they have in many respects taken a wrong direction, and assumed an exaggerated, and therefore erroneous, form; and that much of what they have written is, under the most favourable construction, liable to just exceptions and censure. In an address of this kind I cannot of course enter into an analysis of those writings and opinions, but must content myself with animadverting on a few of those leading features of their theological school—if I may so express myself—which seem to be exceedingly objectionable. In the first place, they appear to have thrown—the phrase is, I believe, their own—themselves into a system, or I should rather say have been following the phantom of a system which they call Catholic, and hold it up to admiration as something infinitely superior to the imperfect and lifeless Catholicism of their own Church; for I cannot discover that they have any clear or definite notion of the system which they admire, or have drawn any precise line between Catholic truths and traditions, and the Catholic errors and corruptions of doctrine and discipline. We must not, however, suffer ourselves to be led astray by the cloudy grandeur of this system. An attempt has been made to show that the Romish doctrine condemned in our 22d Article of Religion concerning Purgatory, Pardons, Worshipping and Adoration of Images, as well as Relics, as also Invocation of the Saints, is not the doctrine publicly professed by the Church of Rome, and ultimately sanctioned by the decrees of the Council of Trent, but certain superstitious practices and opinions, which, though tolerated and winked at by that Church, form no part of its system. The inference drawn from these statements appear to be that—I will not say Protestantism, for this is a term which the writers have taken great pains to repudiate—but members of the Church of England may safely hold this doctrine, as it is authoritatively taught by the Church of Rome, without contravening the doctrine of our own Church, or offending against the spirit of this article of religion. Now, no one who is acquainted with the history of those times, can doubt that it was the intention to condemn unreservedly those doctrines, as they were held and acted upon in the Church of Rome at the time when God's providence called them to their great and necessary work; nor can it be doubted that it was the object of that Council to give sanction and fresh authority to the doctrine which she had taught, and which had been rejected and condemned by the Reformers. That Church may have condemned a few gross and glaring indecencies connected with these matters, but it not only left the doctrines themselves—the principles on which they were grounded, and the practices to which they necessarily led—untouched, but they were converted into articles of faith, and added to the ancient Creed of the Church Catholic and Apostolic." The Right Rev. Prelate dwelt at considerable length upon these points, and observed, that it had been urged that the line

of argument pursued in the last Tract, and the sense affixed to the several Articles of our Church brought under view, were intended to confirm in their attachment to the Church of England certain persons whose minds were going astray in the direction of Rome. But he felt convinced that the tendency of this Tract is to draw such minds still nearer to Rome, by palliating the evils of her doctrine and practice, and cutting from under our feet that ground of necessity and of an imperious sense of obligation, on which our Reformation is based. The Bishop explained and defended the term Protestantism, observing that the eminent divines of the seventeenth century identified themselves and gloried in the name of Protestant. He did not look upon the movement with the same feelings of alarm that many, for whom he had a great respect, seemed to regard it; being persuaded that through the favour of Providence, the effect of any erroneous doctrines would soon pass over. The Bishop next adverted to certain irregularities in the performance of the public services of the Church—practices which, if they do exist (he observed), must be discontinued, and such arrangement made for the discharge of those public duties, as shall cut off the plea of necessity. Another statement, which he trusted was not correct, that clergymen do not scruple to give their attendance at dissenting places of worship, thus giving their sanction to opinions that were, he feared, too commonly held, that there is no difference between the Church and the Meeting-houses, and that there is no such sin as schism. But (observed the Bishop) if there are any of the clergy who allow themselves this liberty, they may be sure that while they give offence to the sound part of their own Church, and to thoughtful Christians of all denominations, they will not secure the good will of those whom they expect to conciliate by this show of liberality. The Bishop concluded by exhorting the clergy to observe a wise and seasonable moderation.

Beaumaris.—The new quay in this town has been commenced, and several stones have been already laid down. The length of the quay will be 570 feet, breadth at the top 27 feet, at the base 35 feet. It is expected that the work will be completed before next summer.

Birmingham.—This town has been rendered very gay during the week by the Musical Festival, which has filled the town with company. The rehearsal took place on Monday morning at the Town Hall, and on the same evening the entire music for the evening performances was gone through at the theatre. The morning performances commenced at the Town Hall on Tuesday, with Rossini's *Stabat Mater*, a selection from Handel's *Deborah*, and other oratorios. On Wednesday the performance consisted of scraps from Dr. Crotch's *Palestine*, and a miscellaneous selection from Costa, Croft, Attwood, Luther, Handel, Haydn, Mozart, and Cherubini. On Thursday they included the *Messiah*, and on Friday they terminated with gleanings from Handel, Haydn, Mozart, &c. At the theatre, on Tuesday evening, the English version of Rossini's *Lady of the Lake* was given with a selection, as an afterpiece, from Weber, Beethoven, &c. On Wednesday night there was the English adaptation of Bellini's *Norma*, concluding with extracts from Schira, Mozart, Mendelssohn, and Rossini. On Thursday there was a concert. The Festival concluded last night by a full dress ball at the theatre, the pit of which was boarded over, and the stage fitted up as a tent, M. Jullien conducting the band, with Herr Konig on the *cornet à piston*. The proceeds of this Festival are appropriated to the General Hospital.

Carmarthen.—The Rebeccaites have thrown the country into still greater alarm, by adopting measures for the ejectment of the landlords. As Mr. Adams, of Middleton-Hall, one of the county magistrates, was returning home last week, from this town, where he had been attending the adjourned Quarter Sessions, he observed a fire in the direction of his seat. Upon inquiry, he was coolly informed that Middleton-Hall was on fire. On approaching nearer, he found this to be too true, for the stacks in the farm-yard were in flames, and the wood near his house was literally alive with armed men. He entered his house, and found his family in a state of despair, the female members of it expecting every moment would be their last. After endeavouring to reassure them, Mr. Adams armed himself, and proceeded to secure his papers, title-deeds, and other documents, at the same time despatching an express to Carmarthen for the military, to protect his property and the life of himself and family. Colonel Trevor sent the messenger to Colonel Love, but as the men had before been out on duty, it was not thought proper to send assistance. The feeling of want of protection in the midst of a lawless, and well-armed mob, at midnight, with a part of his premises blazing near him, induced Mr. Adams to take the determination of at once leaving the country with his family. The family of Mr. Chambers, of Llanelly, three of whose farms had the hayricks fired a few days before, have already left for England, Mr. Chambers, jun., alone remaining. It is believed that Mr. Adams has been made to suffer from the vindictiveness of the incendiaries, through some expressions that fell from him in the grand jury room at Carmarthen, and which reached the ears of Rebecca. Since the extraordinary verdict returned at the inquest on the old woman shot at Hendybridge-gate, near Pontardulais, the most grave apprehensions are entertained. It is said that the jury durst give no other verdict; that such a system of terrorism prevails, that men dare not render themselves obnoxious by even doing their duty. The attack by the police on the Rebeccaites at the Pontardulais-gate, and the wounding of some of the parties concerned in that attack, have been productive of the most serious consequences. It was confidently predicted, by both the magistrates and the police authorities, that it would put

an end to Rebeccaism, but the result is directly the reverse. The multitude declare that they will have a deep revenge, and bodies of soldiers are obliged to march throughout the night upon every road, in order to prevent incendiarism and other acts of violence. The Pontardulais-gate, which the military went to protect on Saturday night, was again destroyed on Sunday, and the tollkeeper given notice, that if any more tolls were attempted to be taken, they would pull the house down. The rioters have also destroyed the Fishguard and Parkymorfa turnpike gates, and cautioned the toll-collectors not to levy more toll; but not heeding Rebecca's warnings, they collected the toll as usual on the Saturday. This exasperated the Rebeccaites, and notices were sent to them to remove their furniture, or the toll-houses would be destroyed on Monday night. On Monday night, true to their threat, about 400 persons visited the Fishguard toll-house and completely destroyed it. They then proceeded to Parkymorfa toll-house, and instantly demolished it. After firing guns and frightening a great number of the inhabitants, they levelled a piece of wall belonging to the road surveyor and dispersed about 3 o'clock. About 2000 persons were assembled in the town looking on whilst this was going on, but no one interfered. A weir near Cardigan has also been destroyed. It appears that an alarm had been given that it was the intention of the Rebeccaites to pull down a small weir near a place called Velingigran; the marines consequently marched down to protect it, and during their absence the Rebeccaites embraced the opportunity of demolishing another called Llechryd weir. Though this weir had stood for ages, and braved many a mountain flood, it was destroyed in about 15 minutes. The number of Rebeccaites on this occasion was about 300. While the marines were returning from Velingigran, one of the rear-guard, who was behind the others, fell in with a party of Rebeccaites on a cross road. He was asked if he had a musket. He said yes. Is it loaded? Yes. Capped? Yes. Take off the cap, which was done. He was then marched off to a neighbouring public-house, treated with some ale, and liberated. He arrived in Cardigan about two hours after his comrades. It is satisfactory, after these details, to add that the strike of the coppermen at Swansea has ceased, and that all the men have returned to the works.

Grimby.—The Duncannon steamer was lost on Wednesday last, on the Spurn Sands, at the entrance of the Humber. It appears that she had been engaged by a party of ladies and gentlemen for an excursion down the Humber to the Spurn light. She left Barton at an early hour, and during her passage called at Hull and other places to receive the company, which amounted altogether to about 130 passengers, including a military band. On reaching the Spurn, the company were landed on the sands, which are high and dry at low water, and are a great resort for pleasure parties along this coast during summer. The steamer was run on the sands for the purpose of more safely landing the company, and it appears that proper precautions were not adopted to get her off before the tide fell lower. The consequence of this neglect was, that her stern kept lowering as the water receded, whilst her bow was firmly imbedded in the sand, until she slipped completely into one of the steepest parts of the Spurn. In the meantime the party was enjoying themselves on the sands, unaware of the calamity which had befallen their conveyance, and on their return to the vessel, about 3 o'clock in the afternoon, they found to their surprise that the sea was rushing in at the cabin-windows. The crew failed in altering her position, and as the tide rose she gradually became filled, and was soon lost to the eye. It is presumed, from the manner in which she is imbedded in the sand, that her back is broken, and that she will consequently become a total wreck. The company were rescued from their perilous situation by a sloop, and were safely landed at a late hour the same evening at Barton.

Guernsey.—The Bishop of Winchester in his recent visitation of the clergy of the Channel Islands, delivered a charge at several of the parish churches. His Lordship stated that he had lately published a charge to the clergy of other parts of his diocese, in which he had expressed his opinions on various matters, and especially on those points of controversial doctrine, which, at the present time, engrossed so large a share of attention. He had seen no reason to change the opinions he had then expressed. It was only in proportion as they leaned upon the great doctrines of the Reformed Church that they could hope to become faithful instruments in their vocation, and to give glory to the name and word of God throughout the British empire, and the world at large. It was the duty of every minister of the Church to examine seriously the ground on which he stood, and by his life and teaching to avoid creating doubt and uncertainty in the minds of those to whom he was called upon to minister. His Lordship proceeded to speak of a few points on the right understanding of which the usefulness of the ministry depended. The first of these was the doctrine of justification by faith, as maintained in the Eleventh Article of the Church, and cited a long list of eminent divines, British and foreign, who in all periods of the Church had maintained it. One of these authorities had said, "If this article is lost all is lost;" and there could be no dispute that doubt on this point opened doubts on all points. If the clergy preached anything else they did not preach the gospel. The bishop then considered the doctrine of sanctification, contending that it was the effect, not the means of justification. His Lordship deprecated reserve in the communication of religious knowledge. In regard to the Sacraments, he maintained emphatically the great importance which was inherent in them; but they were not to receive undue

exaltation. With respect to preaching, his Lordship considered that too much prominence was given to it by some persons. Its efficacy was undoubted, but as a human instrument it ought to be kept in subordination to the means of grace which had been given in the gospel and sacraments. The bishop dwelt at great length on the character and claims of the clergy, and concluded by urging upon them the duty of renewed energy and faithfulness in the discharge of their ministerial labours.

Hafod.—On Tuesday, Hafod, with its magnificent domain and mansion, and the estate and mansion of Cwmlan, on the banks of the Elam and Wye, with other properties in the counties of Cardigan and Radnor, belonging to the Duke of Newcastle, were sold at the Auction Mart; the quantity of land to be disposed of consisting of about 30,000 acres. Hafod was formerly the property of Mr. Jones, the translator of Froissart, and was for many years in Chancery, during which period it fell into considerable decay. About ten years ago it was purchased by the Duke of Newcastle. The property comprised, in addition to the land, several mines, farms, and sheep pastures, with the advowson of Eglwys-Newydd. The estate of Hafod, as originally announced, was divided for sale into four lots; but, at the sale, the auctioneer stated that the entire property would be offered in one lot. This consisted of 13,500 acres, with the mines, pastures, advowsons, &c.; and 1,390 acres of woodland and plantation, of which 400 acres was a Larch plantation. The rental from the estate was 1,979*l.* The auctioneer calculated the value of the estate to be about 135,000*l.*, at thirty years purchase, taking the woodlands at a valuation of from 50*l.* to 100*l.* an acre; and for the purchase of the annual income arising from the rental, with the profits from the mines, &c. One article for sale consisted of a monument in a niche in the church of Eglwys-Newydd, by Sir F. Chantrey, representing Col. and Mrs. Jones at the couch of their daughter, in her last moments. Another article was excepted from the sale, which was a chimney-piece in the dining-room of the mansion at Hafod, which cost 1,400*l.* The first offer for this estate was 75,000*l.*; the next, 80,000*l.*; and it was knocked down eventually for 109,000*l.* It was said that the reserve sum was higher than the sum offered. The next estate was that called Cwmlan, which abounded with mines and sheep pastures, consisting of about 14,000 acres. For this 24,000*l.* was offered. The reserve sum being stated to be higher, it was put up in lots, but relinquished at the third lot. The same result took place with the Dolyclett estate, consisting of 176 acres, returning a rental of 237*l.* 2*s.* 3*d.*, for which 7950*l.* was offered. The room was crowded during the sale, but there were few buyers.

Isle of Man.—It appears by the balance-sheet put forth by the directors of the Isle of Man Joint-stock Bank, that after deducting the doubtful and bad debts from the assets, the capital of the bank has been lost three and a half times over. It is said that one of the heaviest losses was a loan of 10,000*l.* advanced to Don Carlos, to be repaid on his entry into Madrid. On the morning of the 12th instant six criminals confined in Castle Rushen contrived to make their escape from their cells, and to let themselves down from the parapet into the fosse, a height of 60 feet, by means of blankets. They climbed the outer wall, and seized a boat on the beach, by which they reached a pleasure-boat at anchor in the bay. In this they immediately set sail, and are supposed to have gone to Ireland.

Liverpool.—A man, named Henry Eastland, alias James F. Bentley, was apprehended in this town, on Tuesday, for obtaining money by forged letters of credit, purporting to be drawn on Messrs. Lubbock's Bank in favour of "Mr. James F. Bentley" by "Edward Flampton," manager of the County of Gloucester Bank. The fraud was detected, and the prisoner was remanded for further inquiry.

Manchester.—A young man named Tyler, cashier in the employ of Messrs. Reynier and Brothers, of Ashton-under-Lyne, whose warehouse is in this town, absconded last week, having received, in the course of the day, accounts to the amount of nearly 900*l.* It has since been ascertained that he sailed the same evening to New York, by the Caledonia steam-ship from Liverpool.

Oxford.—The Rev. James Norris, whose name stands the third in the list of Fellows of Corpus Christi College, was on Saturday elected President of that Society, in the room of Dr. Bridges. As the late President did not hold any College living, his death has occasioned no vacancy.

Portsmouth.—A court-martial was held on Tuesday, on board H.M.S. Victory, Rear-Admiral Sir Hyde Parker, President, to inquire into the circumstances attending the loss of H.M.'s steam-vessel Lizard, off Carthage, on the 24th July, in consequence of the French steam-vessel Veloce running foul, and nearly cutting her in two, and to try Lieut. Postle, the officers and ship's company, for their conduct on that occasion. The Deputy Judge Advocate having read Lieut. Postle's narrative of the circumstances, addressed to the senior officer at Gibraltar, Mr. Hoskins, on the part of that officer, read a statement describing the loss of the vessel. The Officers of the Lizard were then called as witnesses; and having substantiated the statement of the Lieutenant, the Court delivered sentence as follows:—"That the loss of H.M.'s steam-vessel Lizard was occasioned by the French man-of-war steamer Veloce running foul of her, on the morning of the 24th July, by which the Lizard was sunk; that no blame was imputable to Lieut. Postle for his conduct on the occasion; that Mr. Slaughter, a supernumerary midshipman, serving on board her, was highly blameable for having left the deck before he was regularly relieved; and that no blame was imputable to any other of the officers, or of the ship's company; and the court adjudged the

said Mr. Slaughter to lose two years' time of service as a midshipman; and adjudged Lieut. Postle and the remainder of the officers to be fully acquitted."

Reading.—Extensive repairs are in progress in St. Mary's church, in this town. During the course of last week three ancient sedilia, of early English architecture, were discovered in ruins behind the wainscoting on the south side of the chancel; the fresco painting at the back of them, and the encaustic tiles, being still in excellent preservation.

Southampton.—In accordance with the new regulations, making this port the station for the Royal mail packets, the first mails arrived on Monday by railroad. They consisted of 54 bags, weighing upwards of two tons, for various islands in the West Indies, and were immediately shipped on board the mail-packet Teviot. A numerous assemblage of persons collected on the pier, to witness the first embarkation of mails from this port. The Teviot, on passing the town, was saluted from the platform and from the Royal Yacht Squadron's house. All the establishment formerly belonging to the Falmouth station have arrived here to superintend the packets.

Windsor.—On Saturday Capt. Fernyhough was installed in St. George's Chapel, with the usual ceremonies, as Governor of the Military Knights of Windsor, in the room of the late Capt. Cummings, and on Monday Capt. Cochrane was installed one of the Military Knights, a vacancy having been occasioned by the appointment of Capt. Fernyhough to the Governorship.

Railways.—The following are the receipts for the past week:—Birmingham and Derby, 1,413*l.*; Birmingham and Gloucester, 2,141*l.*; Eastern Counties, 2,988*l.*; Edinburgh and Glasgow, 2,629*l.*; Great Western, 15,053*l.*; Grand Junction, 8,459*l.*; Glasgow, Paisley, and Ayrshire, 1,597*l.*; Great North of England, 1,552*l.*; Hull and Selby, 1,090*l.*; London and Birmingham, 17,484*l.*; South-Western, 7,614*l.*; Blackwall, 1,120*l.*; Greenwich, 763*l.*; Brighton, 5,558*l.*; Croydon, 304*l.*; Liverpool and Manchester, 4,993*l.*; Manchester and Leeds, 5,611*l.*; Midland Counties, 2,663*l.*; Manchester and Birmingham, 3,255*l.*; Northern and Eastern, 1,711*l.*; North Midland, 5,024*l.*; South-Eastern and Dover, 4,393*l.*; Sheffield and Manchester, 569*l.*; York and North Midland, 1,968*l.*—A special meeting of the North Midland Company was held at Derby on Monday, for the purpose of considering proposals for the amalgamation into one concern of the capital stock, shares, and property of the North Midland Company, with the Midland Counties and Birmingham and Derby Companies respectively, and upon other business touching the future management of the traffic. The attendance of proprietors from Manchester, Liverpool, York, and London, was more numerous than on any previous occasion. The Chairman explained the recent negotiations between the directors of the three companies, with reference to an amalgamation of the three companies into one, and which had resulted in a mutual determination to consolidate a measure which now only required the formal ratification of the proprietors. He believed it would benefit not only the railway, but the public generally—in the one case, it would economise the working, and enhance the value of the shares; and in the other, it would enable passengers to pass through to the north without those obstructions and loss of time now incident to the present system. The propositions were to the effect that, in future, the three lines, with their lands, buildings, capital, &c., should be consolidated into one company, which should be liable for the mortgages, bonds, &c. of the other companies, to the amount of 1,855,000*l.*; the united company to be also liable for all the contracts of the other companies prior to the union; the aggregate share capital to amount to 5,158,000*l.*; each holder to be allotted the amount of stock in the united company, equal to his amount in the other companies, the North Midland and Midland Counties holders receiving an equal amount of dividend, but the Birmingham and Derby receiving 27*s.* 6*d.* less per share. The number of directors not to exceed nineteen, three to form a provisional committee; and finally, that an Act of Parliament be obtained in the ensuing session, the three companies, in the meanwhile, using their united efforts for the efficient conduct of the traffic. A long debate ensued on the various propositions, which were ultimately carried unanimously. The Birmingham and Derby Company have since met and agreed to the proposals. On Wednesday a special general meeting of the Northern and Eastern Company took place, in order to authorize the directors to raise a sum, not exceeding 67,822*l.* 4*s.* 5*d.*, for the purposes of the undertaking. A resolution to that effect was submitted, and passed unanimously. Mr. Masterman, a director, said he had the satisfaction to report that they had the offer of the whole of the money at 4 per cent. for five years. In reply to a proprietor, the chairman said the Hertford branch was expected to be opened by the first week in November, and as soon as they arrived at the proper information in respect to carrying the line northward, a special meeting would be called.

IRELAND.

Dublin.—The weekly meeting of the Repeal Association took place on Monday. Mr. Connor, the well-known advocate of fixity of tenure, rose, as he said, to give notice that on the next day of meeting he would move the adoption of a resolution to the following effect:—"That until our national rights of self-legislation, in the possession of our own Parliament, and of a valuation and perpetuity of his farm to the tenant, we Repealers shall pay no rent, county cess, rent-charges, tithe, poor-rate, or any other charge out of land." This notice having been read with great emphasis, was applauded vociferously by the galleries, but it was received with great surprise by

the rest of the meeting. Mr. Connor, appearing to get heated by the commotion he had raised, spoke a few abrupt sentences. He said that humbug had been going on long enough. It was time now to do something for the people. There was much talk in this room about pounds, shillings, and pence, but in the meanwhile the millions were starving. The resolution was one which he would never give up; he would sooner part with his life. Mr. John O'Connell called on Mr. Connor to desist. Such a notice as he had read could not be received by the Association. It would at once endanger their cause. It was not treating the Association fairly to introduce such a matter there. The effect of such a motion, if adopted, would be to divert the public mind from the peaceable progress they were making, and to bring them in direct collision with the law authorities of the land. Had that notice come from anybody else but him, it would not matter so much, and at a moment, too, when they were informed that opposition to rent had begun in the county Carlow, and that it had even reached portions of Tipperary. He was not surprised at this unconstitutional violence—this traitorism to repeal and the country spreading in Carlow, because that country was the blank in the repeal map of Ireland. Several other members expressed their disapprobation of the motion, and after considerable interruption, the following resolutions were passed:—1. That this Association has heard with horror and indignation the doctrines propounded by Mr. Connor respecting the payment of rents, county cess, tithes, poor-rate, or rent-charge, this day, in the attempt he made to put upon the books a notice plainly and grossly illegal, and directly tending to create and encourage criminal outrage and violence throughout the country.—2. That if anything can add to these feelings, it is the consideration of the time Mr. Connor has chosen for making such remarks—a time when, in the county of Carlow, where Repeal has as yet made little progress, a violent and criminal opposition to rents has, according to the public prints, already begun to manifest itself.—3. That this Association indignantly rejects, and refuses to insert on its books, or to allow to be for a moment entertained, Mr. Connor's notice; and that they declare that all who put forward such doctrines, and offer such advice to the people as is contained in that notice, are either madmen or traitors to the glorious cause of Repeal, to the noble people who support that cause, and Old Ireland." The repeal rent for the week was 1,462*l.* 17*s.* 8*d.*—A gunner of the Royal Artillery, at Ballincollig, has been sent away prisoner to Woolwich for trial by court-martial. His name is O'Brien, a native of France, but the son of Irish parents. He was heard to give a warm expression to his sentiments upon the question of repeal, and treated with contempt the barrack fortifications now in progress. —Father Mathew arrived in Kingston from England on Saturday, in excellent health. The mail packet reached the jetty soon after seven o'clock, but even at that early hour there was a large crowd assembled, who warmly cheered Father Mathew on his landing.—The Dublin papers state that the account of Lord Cardigan having placed one of his officers under arrest was exaggerated in all the material points; that the officer was reprimanded for lounging when on duty, and was told to consider himself under arrest until the circumstance was reported to the Lieutenant-General commanding, who was then on another part of the field, and who, on being made acquainted with the case, rode down, and after severely reprimanding the officer removed the arrest.—Dr. Prior, Vice Provost of Trinity College, died on Saturday, aged 79. The lucrative appointment of First Clerk in the Chief Secretary's office, vacated by the promotion of Mr. Hamilton to the Second Remembrancer'ship, has been conferred on Mr. J. Pennefather, eldest son of Baron Pennefather.

Clifden.—The Repeal agitation has extended to the "far west" of Ireland, amidst the wilds of Connemara. A meeting was held on Sunday, at what may be called the extreme western point of Ireland, Clifden, which is 145 miles distant from Dublin, being a new town, not having been built thirty years. Mr. M. J. Ffrench presided, supported by Dr. M'Hale, Mr. D. Browne, M.P., and a large number of ex-magistrates. The proceedings, which were greatly interrupted by heavy rain, commenced with resolutions expressing allegiance to the Queen, and condemning the Act of Union. Mr. O'Connell then addressed the meeting at great length on the usual topics. He stated that as soon as the repeal of the union should take place the tithe, rent-charge, and county cess would be abolished, the franchise extended to every householder and father of a family, vote by ballot established, absentee rents spent in Ireland, and equity of tenure enforced; the land would be drained, population would increase, there would be good wages for everybody, and plenty and prosperity would spread over the country.

Lisburn.—On Wednesday week, an anti-Repeal demonstration took place in this town. The meeting was called for the purpose of addressing the Queen, and of tendering to her Majesty the best thanks of the inhabitants of Lisburn and its neighbourhood, for the especial reference which, in the Royal speech delivered at the close of the last session, she was pleased to make to the Repeal agitation.

Carlow.—On the night of the 8th inst., about fifty men assembled on the lands of Coolmanna, in this county, and cut down about two acres of oats under seizure for rent due to the landlord, whose attorney, having received intimation of the proceedings, collected some people in the vicinity, who came up in sufficient time to prevent the property being carried off the land. Informations have been sworn against sixteen of the persons concerned.

Cork.—The fortifications of Cork garrison are proceed-

ing with considerable expedition, and already have loopholes been formed in the different angles of the building, under the inspection of the Royal Engineers. To the north-east of the building a platform is in course of erection, which will command a long range of country, and it is supposed will be surmounted with a swivel gun, of considerable calibre.

SCOTLAND.

Edinburgh.—The *Northern Star* of last week contains an account of the present state of Chartism in Scotland, from the pen of Mr. Hill (late editor of the paper), who has just been making a tour in this country. "The general complaint," he says, "which met me in almost every town was, 'That agitation is dead; the enthusiasm of the people seems to have greatly gone down everywhere. Great demonstrations, expensive and numerous processions, and flags, banners, music, and hurraing noises, are by no means so plentiful; it is even difficult to get the people out to hear lectures. They seem tired of lecturing, and tired of the agitation altogether.'—The estimates for the execution of the works for the improvement of the Caledonian Canal show the differences which sometimes occur in the calculations of contractors. Only four tenders were given in. The respective amounts were, in round numbers, as follows:—Lowest, 134,000*l.*; second lowest, 136,000*l.*; third lowest, 223,000*l.*; highest, 230,000*l.* It seems that the second lowest offer has been accepted.—An old man, named Allan Mair, 84 years of age, was found guilty of the murder of his wife, at the Stirling Court of Justiciary. It was attempted to prove that he was insane in regard to his conduct towards his wife, though his reason in other respects might not be affected. The Jury, however, unanimously found him guilty, and Lord Moncrieff passed sentence of death.—Colonel William Nicol Burns, the second son of the poet, has lately returned to Dumfries, after an absence in India of 34 years.

St. Andrews.—The proceedings of several meetings and conferences have been published in reference to a minute of the Senate, stating "that Sir D. Brewster, Principal of the United College, has, by his signature of a public deed, laid on the table of the General Assembly of the Church of Scotland, seceded from the Established Church, and has since joined himself with those who have openly and officially declared their hostility to that Establishment, and their determination to overturn it." After a correspondence with the Chancellor of the University, and the adoption of a memorial to the Secretary of State, the University met a committee of the Presbytery of St. Andrews, for the purpose of holding a mutual conference in reference to the case. The meeting was unanimously of opinion that they ought in no way to interfere with the proceedings of the Presbytery, but should leave them to follow their own course.

Hamilton.—Great festivities have taken place in this neighbourhood in honour of the first visit of the Princess Marie of Baden, Marchioness of Douglas, to Hamilton Palace. The road from Douglas Mills to the palace (about 18 miles) was lined by the Duke of Hamilton's tenants—some from as far as thirty miles off—chiefly farmers on horseback, who fell in after the open carriage, in which were the bride and bridegroom. The procession was headed by a troop of cavalry, and when a salute of cannon from Chatelherault announced its entrance into the park, it was joined by a body of tenantry on foot, who followed the horsemen to the palace. On the balcony stood the Duke and Duchess of Hamilton, the Countess of Lincoln, and the Countess of Dunmore, with several gentlemen. His Grace descended the steps to hand the Marchioness up to the balcony, and her appearance there, with that of the Marquis, was hailed with the heartiest cheers. After this, about 1600 persons, consisting of the Duke's tenantry, the yeomanry cavalry, and many gentlemen of the county, sat down to a cold collation in three large buildings fitted up for the occasion. In the Riding House the Duke of Hamilton presided; in the second room the Marquis of Douglas, and in the third Sir Norman Lockhart, with Mr. Magee at a supplementary table. The tenantry were placed at the tables in clans, each clan wearing a different and appropriate device, and distinguished by a banner of its own. The magistrates and town council dined together in the town-hall of Hamilton, under the presidency of Colonel Richardson.

Miscellaneous.

Wellington's Birthplace.—Having visited some of the remarkable ruins around Trim, the chief of which is a vast pile called John's Castle, we hired a car, and at six in the evening drove off to Dangan Castle, four miles south or south-east. Arrived at the margin of the domain, we entered a narrow avenue by an iron gate, which was opened by a woman whose house was one of two or three low thatched huts. There were no trees shading the avenue, but a high thorn hedge, bushy, wild, and lofty, skirted it on either side. When we had proceeded 300 or 400 yards, the park, that had once been finely wooded, but which, like a bald head, with a tree here, and two or three there, and a few more, stunted and denuded of their ornamental branches, beyond—this park, with its fine vallies and finer eminences, once so magnificently wooded, now so shabbily bare, opened upon our view. The road went towards the left, and again wheeled to the right. On the brow of a gentle slope stood the castle, like a huge ill-shaped barn; gray, treeless, shelterless, and in most parts roofless. Broken cars and waggons, and ploughs that were idle because it was summer, and harrows idle as the ploughs, lay strewn about, and told of people who were as idle as any of them, else they would have had them put tidily out of the

way. Cows were lowing in rear of the house to be milked; and calves were clamorous for their allowance of what the cows were to give. The gates that crossed the road at various places, keeping vagrant pigs and cattle asunder, were kept to their posts by old ropes and stones, which had to be rolled away ere they could be opened, and rolled back again ere the pigs could be restrained from accompanying the visitors to the front of the castle; and even then, a sharp admonition over the snout was requisite to make them remember they were pigs. The dogs, which were ready to bite them on the ears, or to bark at the refractory cows and calves, or at strangers like us, until told to be quiet, were lying on the dunghills that lay on the roadside; and those who bade them be quiet were leaning idly on the hay waggon or the stone wall, doing nothing more than making us think they were looking at us, and us only. On being spoken to, one came and opened a gate to allow us entrance to the front of the castle, and another went the back way to carry our compliments to the inmates, and our request to be admitted to the interior. The front showed us the windows partly built up, and the roof wholly carried away. It may have been a pleasant house, it occupies a fine situation, and is surrounded by ground which, if it has not been, might be made, one of the finest pleasure parks in the world; but at all times the house must have been plain. A red-painted door, made to fit its place by a great portion of the doorway being built up to fit it, being opened to us from the inside, we entered and found the main portion of the building entirely cleared of its partitions and party-walls. It was all open above; and what had once been the dining-room, parlour, and library floors, was now a flower-garden. During the time the house was occupied by the O'Connor family, who rented it from the Marquess Wellesley, it was burnt, save in the wing towards the rear, where the present inhabitants now live. To this wing we proceeded, and the young lady who kindly led the way, on taking us to what is now a comfortably-furnished parlour, told us the common belief was, that in this room the Duke of Wellington and the other members of the Mornington family were born. There was a spacious bow-window looking out upon the garden and farmyard, which occupied ground sloping from this to a streamlet below, distant 100 or 200 yards. Inside the room was a large circular recess, now shelved round, the shelves filled with articles of ornament and use—glass, china, and such like. This recess is quite large enough to have held a large bed; and, as we were told, did hold the family couch of the Countess of Mornington, and subsequently that of the mother of Feargus O'Connor. When about to leave Trim on this visit, I put a few questions to an old gentleman who stood by the doorway of the hotel, such as "How far to Dangan Castle?" "Who lives there now?" and so on. He told me that he was a tailor, still carried on business in Trim, and had made clothes for the young Wellesleys when boys. He made clothes for the Hon. Arthur Wellesley, now Duke of Wellington, when a boy. He also did work for him when he was the Hon. Captain Wellesley, and came to Trim on the recruiting service. He remembered, "as distinctly as if it had been yesterday," when the corporation of Trim elected this young officer to be one of their members in the Irish Parliament, when it was alleged that he had not attained his majority. On that occasion the nurse who attended at his birth was brought into the Court-house at Trim, and he remembered seeing her, "as plainly as if it had happened but yesterday," put on the witnesses' table and sworn, and she proved that that very day one-and-twenty years she saw the Hon. Arthur Wellesley born at Dangan Castle.—*Morning Chronicle.*

Imperishable Bread.—On the 13th inst., in the Mayor's private room, at the Town-hall, Liverpool, a box of bread was opened which was packed at Rio Janeiro nearly two years ago, and proved as sound, sweet, and in all respects as good as on the day when it was inclosed. This bread is manufactured of a mixture in certain proportions of rice-meal and wheat-flour. The coarsest quality of flour may be used, and will produce bread not inferior to that of the finest description by the ordinary method. It was stated that it is also extremely nutritious, very beneficial to the system, and a certain anti-scorbutic. Some of it was eaten by the Mayor, who pronounced it excellent, in which opinion he was joined by all present. It was asserted by M. Alzard, the discoverer of the process, that the bread would keep two centuries without alteration.

The Jacquard Loom.—A Lyons journal states that M. Mirlaveau, silk manufacturer of that city, has applied the principles of the Jacquard loom to musical instruments. His first trial has been on the accordion. A card is used to vary the tunes as it is used in the weaving to change the pattern. M. Mirlaveau has, it is added, devoted five years and much expense to this invention.

The Electrical Eel.—Two fine specimens of this singular animal arrived last week at the Adelaide Gallery, brought by the brig Romance, from Para, in South America, where they were caught in one of the tributary streams of the Amazon. They are each about two feet six inches in length, and appear to be male and female, judging from the difference of colour, one of them being nearly the same throughout, with the exception of the abdomen, while the other is studded with spots. They have been purchased by the proprietor of the Adelaide Gallery, and will have their powers tested as soon as they have recovered from the effects of their sea voyage. Three of them were shipped, but the largest died on the voyage during a gale of wind.

Form of Ships.—An important paper on the form of ships was read at the recent meeting of the British Association, which attracted a great deal of attention. The report which was only given in an abridged form; for the mass of papers and drawings would fill volumes, is formed

on a series of experiments extending over five years, which were perseveringly conducted by the late Sir James Robison, of Edinburgh, and Mr. John Scott Russell; and for this purpose grants, amounting to nearly 1000*l.*, have been made at different times by the British Association. It would occupy too much space to notice even the nature of the experiments, and the various plans adopted for arriving at the form of ships best adapted to go through the water with least resistance, combining at the same time the qualities of a good sea-going boat. The general results alone can be given, and these are of the most startling kind to those ship-builders who conceive the old plan of construction, of having a round head and a fine run aft, to be best adapted for encountering a rough sea. One great object to be accomplished was to avoid the formation of a head-wave, which resists the progress of a vessel as effectually as if it were so much deeper immersed in water. This, it was found, would be best effected by increasing the length of the ship, for length seems to be an essential requisite. The shortest length for a boat required to move through the water with a velocity of seventeen miles an hour was found to be 205 feet, and the shape of the water-line, or of that part of the ship which floats on the surface of the water, is thus calculated:—The fore part of such a vessel, from the widest midship section, must be 120 feet, and be tapered off to a fine point, like a Thames wherry. The afterpart must be 85 feet; and the form more rounded, though still terminating in a sharp point. Mr. Russell said that when old seamen and ship builders saw this plan they were positive that such a vessel could not live in a rough sea, as it was directly opposed to all their notions of ship-building, the *cod's-head* and *mackerel-tail* form being the one they had always preferred. Experiments, however, were made on a large as well as on a small scale, with a view to test the qualities of the differently-shaped vessels, some of the experiments being made on ships of 2,000 tons burden. The results proved that the plan now recommended is far superior to the best of the old forms of ships, and that, as compared with the *cod's-head* and *mackerel-tail* construction, the advantage, when moving at the rate of seven miles an hour, was more than double, or, in other words, the resistance to the motion through the water, was as 52 to 129; and the advantage of the new form was found to increase with the increase of speed. As sea-going boats, those of the pointed shape were found far superior, for they not only shipped less water, but were less agitated by the motion of the waves—which fact was ascertained after a series of experiments, also conducted at the expense of the British Association. The bottom of the vessel being of the same shape as the waves, they conceive that it moves through them without being so much tossed about as it would be if the undulations of the water were not corresponding with the vessel moving through it. Be the cause, however, what it may, the results of these experiments were so conclusive, that the ship-builders on the Clyde, where they were carried on, have in a great measure overcome their partiality to the *cod's-head* and *mackerel-tail* form, and have adopted the principles of construction which these experiments have proved to be the best. The practical effect of these experiments is, that there are at this time 20 first-class steamers constructed of the sharp-pointed form which surpass in speed, and in other requisites of a sea-boat, all those previously constructed on other models.

The Parrot's Dog.—Everyone will remember the fireman's dog, which for many years was the constant attendant at a fire, let the distance have been ever so great. Another instance, equally extraordinary, of the devotedness of one of the canine species, to another occupation, may be daily witnessed in the neighbourhood of the Borough. The commissioners of pavements of the eastern division of Southwark have a number of men constantly employed in the parishes of Bermondsey, St. John's, St. Olave's, &c., and wherever they are will be seen a brown terrier running about the works they are engaged on, and never leaving till they leave. No one knows where he comes from, where he sleeps, or how he obtains his food, except what he gets from the men, whose strange companion he has thus been for no less than eight years. He goes regularly to the stone-yard near the Greenwich Railway about five in the morning in summer, but later in winter, and waits till the men go to their work. But if he should have missed them in any way, he proceeds over the district till he meets with them, and then takes his station by a barrow. No other dog dares approach the spot, or a biped the clothes of the men. When the labour is over he goes away, but no one knows where. As a matter of course, he is a great favourite among the men, and from Mr. Hall, the superintendent, having made his peculiarities known, he has become much noticed.—*Post.*

A New River.—Lieut. Christopher, of the Indian Navy, who was despatched from Aden upon a survey of the coast of Africa, by Capt. Haines, has succeeded in discovering a large river to the northward of the river Jub, which he entered and traced for 130 miles. As he advanced, he found it increase in width and depth, and according to the report of the natives, a civil and obliging race, it continued to do for the next 400 miles. The river is described to be from 200 to 300 feet wide, and 60 feet deep, a clear meandering stream, with banks in a high state of cultivation, yielding all kinds of grain, which are abundant and cheap. Lieutenant Christopher has named his discovery the "Haines River."

Hydro-Electric Machine.—A few days ago there was a private exhibition of Armstrong's Hydro-Electric Machine, at the Polytechnic Institution, the powers of which far exceed anything ever before shown. Previous to the experiments, the lecturer, Mr. Backhoffner, gave a succinct account of the accidental discovery, in 1840, by a workman at Newcastle,—that, when a common steam

boiler was discharging its steam, a large quantity of electricity was produced, by the friction probably of the steam and water against the valves and tubes. The workman thrust his hand into the steam, and received a severe shock, for which he could not account. Mr. Armstrong, however, applied himself to a series of experiments, proving that the workman received an electric shock, and that the common steam-boiler was capable of producing a larger and more powerful stream of electricity than any other apparatus. The machine now exhibited is nothing more than an ordinary steam-boiler, with a few metal points added at the top, the more effectually to produce the negative electrical state to which the machine was brought when the steam is discharged. The pressure of 90 lbs. on the square inch had been in practice found the best for all experimental purposes; and with this pressure the machine produced effects, compared with which the very large electrical machine, heretofore exhibited at this institution, was powerless. Instead of 60 spontaneous discharges in a minute, the hydro-electric machine produced 140; and filled Leyden jars, having 80 square feet of tin-foil, in 12 seconds, whilst the former machine filled them only in 50 seconds. A constant stream to all parts of the boiler was kept up, and with this increased power it may well be supposed that all the former electrical experiments were greatly increased in magnificence. The passage of the electricity over the tin-foil on the tubes was far more brilliant, and the aurora borealis exceeded in intensity and in beauty anything before witnessed; the violet colour was brighter, and at the same time deeper, and the exhausted receiver showed more plainly the progress of the electric spark. Five discharges were taken consecutively from the battery over beaten metal placed upon paper in a less space of time than could possibly have occurred by the aid of any electric machine hitherto made. Nor were the experiments confined to those already performed, increased though they were in brilliancy. The electricity was passed through and ignited common wood shavings; and an electric spark easily and immediately ignited loose gunpowder. The lecturer well observed, that with such a power, yet unworked in experimental philosophy, it was impossible to say what other new facts might be brought to light. The former electrical machine was most surprising in the effects it produced, but this will far outstrip in interest all former machines.

Whirlwind.—The *Presse*, Paris paper, says:—"A phenomenon as strange as it was frightful is now the subject of conversation at St. Pierre, in the Oise. Two children have been carried off by a whirlwind in presence of their parents. The whole country, within a circumference of two leagues, has been visited without any news being heard of them. It is feared they were carried into the river Oise."

Law.

CENTRAL CRIMINAL COURT.—*Theodore Gombrecht*, a young German, stated in the calendar to be a merchant, was indicted for unlawfully embezzling 485*l.* 10*s.*, the moneys of Frederick Huth and another, his employers. The prisoner expressed his desire to retract the plea of Not Guilty, and to plead Guilty to the indictment. The Recorder said the prisoner must clearly understand that his pleading guilty would not in any way avail him so far as regarded a mitigation of the sentence. The case would be dealt with entirely upon its merits, just as though the evidence had been gone into. Upon a former occasion, in a case where he had passed a sentence, upon the representations of Counsel, and in reference to a specific charge, without being aware of the actual circumstances of the transaction, a very great clamour had been raised as to its inadequacy, and he should take care to avoid such a course in future. Mr. F. Gruning then deposed that he was a partner in the firm of Huth & Co. The prisoner had been in their service for some time, in a confidential employment, and was not respectably connected. On account of circumstances that had come to his knowledge, in reference to the transaction, he was most anxious to recommend the prisoner to the merciful consideration of the Court. The Recorder—I believe the present indictment charges the prisoner with embezzling the sum of 485*l.* 10*s.* Is that the extent of your loss? Mr. Gruning—No. We have reason to believe that the prisoner has embezzled at different times nearly 3,000*l.* He was in the habit of getting cheques for the purpose of our business, and appropriated the proceeds to himself. The Recorder having consulted with Alderman Copeland ordered the prisoner to be called up for judgment, and after observing that he had been convicted of a most serious offence, he felt it to be an imperative duty to pass upon him a sentence that would remove him from this country. He might apply, however, to the Secretary of State, and he had no doubt that if he could state any circumstances that would warrant the Crown in exercising its prerogative of mercy, that it would be extended to him, and the sentence he was about to pass might be revised. Taking into consideration all the circumstances as they at present appeared, he felt himself called upon to direct the prisoner to be transported for seven years.

Slave Trading.—*The Queen v. Zuluka and Others.*—Thursday having been appointed for the hearing of this case, Senior de Zuluka, with several friends attended. Mr. Clarkson and Mr. Bodkin for the defendant, applied for the postponement of the trial, on the ground of the absence of a material witness, without whom it would not be safe for their client to go to trial. It appeared from the statement of Mr. Sergeant Bompas, that the Augusta, the vessel in question, had been captured on the 7th Feb., 1841, having left England in the November previously. She was condemned as a slave by the Privy Council. She had sailed from Liverpool, and the question was, whether she was upon the voyage equipped by defendant for the purpose of carrying on a mercantile trade, or a traffic in slaves. After a long discussion, Mr. Justice Erskine and Mr. Justice Cresswell allowed the postponement of the trial to the next session.

The Satirist.—The case of Mr. B. Gregory, Editor of the *Satirist*, was also postponed to next session.

Police.—At the Woolwich Police-office on Wednesday, Messrs. Alexander Blakesley and William Hort, two gentlemen cadets at the Royal Military Academy, attended, to undergo an adjourned examination, on a charge of assaulting several police constables, in the execution of their duty at Woolwich races. Three other young men, named Charles Ingleby, Frederick Cust, and James Atkinson, were also placed at the bar on a similar charge, being brought up by their officers from the Cadet Barracks, where they had been detained under arrest. The Court was crowded to excess; the majority of the auditory consisting of officers of the garrison and military men. After a long examination, the cadets said their original object was to clear away the thimble-riggers, who, as they were told, occupied the booths, and at the first they were unharmed, but the police acted with great violence, and turned them out. Mr. Colquhoun, solicitor to the Ordnance,

attended on behalf of the prisoners, and said that probably the justice of the case might be met by an apology, and the submission of the defendants to make any compensation the magistrates might deem right, besides which a faithful promise should be given that no recurrence of the offence should take place. Mr. Grove said that he most certainly would not take upon himself to adjudicate in such a case. That a furious riot had occurred there could be no doubt. Whatever the future punishment from another court might be, he could not take into consideration. He would not make any remarks on the case, but, having had a consultation with several magistrates at the Greenwich police-court, and his opinion being coincided in by them, he should hold all the offenders to bail to answer the charge at the Central Criminal Court or at the sessions. Mr. Colquhoun protested against such a proceeding, as there was no evidence of an intention to proceed. Mr. Grove said he had stated his determination, and would not waver from it. All the defendants were dressed in plain clothes; and on being liberated from the dock were placed under arrest by their officers, who became their bail.

SPORTING.

DONCASTER RACES, FRIDAY.—*The Park Hill Stakes* of 50 sovs. each, h. ft., for 3 yr old fillies, 8st 7lb each. (27 subs.) Won by Col. Craddock's Peggy, beating Mr. Payne's Mania, Mr. Osbaldeston's Martingale, Mr. Whitworth's Gipsy Queen, and Sir C. Monck's f. by Silkworm.—*The Scarborough Stakes* of 20 sovs. each, 20 ft., for 3 yr old colts, 8st 7lb; and fillies, 8st 4lb. (Six subs.) Won by Mr. Jacques's Semiseria, beating Mr. Gully's The Era, and Mr. Meiklam's Philip.—*The Town Plate* of 100*l.*, heats, 2 miles, 3 yr olds, 7st 5lb; 4 yrs, 8st 7lb; 5 yrs, 9st; 6 yrs and aged, 9st 3lb. Mr. Plummer's Alice Hawthorn, 5 yrs, beat in both heats Mr. J. Day's Patriot, 5 yrs; and Mr. Sheppard's Peter the Hermit, 3 yrs.—*The Earl of Glasgow, and Mr. G. R. Lumley of Tickhill*, have accepted the stewardship for 1844.

STATISTICS OF THE ST. LEGER.—This celebrated sporting event has now been established 67 years, as the first race recorded in the "Calendar" was run in 1776, which was won by a filly by Sampson, the property of Lord Rockingham. On that occasion there were six subscribers, five horses starting, and all being placed. Last year, when Lord Eglintoun won with Blue Bonnet, the entries amounted to 136, being the highest number of subscribers ever known; while this year they have decreased to 127. The largest field that ever started was in 1826, when Mr. Watt's Memnon was the winner, 30 appearing at the post, and two being placed by the judge. There are several instances recorded where all the horses that started have been placed, particularly in 1792, when Lord A. Hamilton won with Tartar, 11 starting, and all being placed. But the first time that this practice occurred of placing all the horses was in 1777, the second year of the race, when 10 started, and were placed, Bourbon, the property of Mr. Sotheron, being the winner. The first time that two horses were placed was in 1797, when Mr. Goodricke carried off the stakes with Lounger. The first nobleman or gentleman who won the St. Leger in succession was Lord A. Hamilton in 1786, with Paragon; 1787, with Spadille; and 1788, with Young Flora. His Lordship was subsequently a winner in 1792 with Tartar; and, when Duke of Hamilton, in 1808, with Petronius, the following year with Ashton, and in 1814 with William. Mr. Petre, also, was a winner three successive years; in 1827, with Matilda; 1828, with the Colonel; and in 1829, with Rowton. Mr. Petre likewise won in 1822 with Theodore. The first year that the Marquis of Westminster became successful was in 1834, with Touchstone; afterwards, two years in succession—in 1840 with Launcelot, and in 1841 with Satirist. Mr. Mellish and Mr. Pierce were both winners, two years in succession; the former in 1804 and in 1805, with Sancho and Staveley; and the latter in 1817 and 1818, with Ebor and Reveller. Mr. Goodricke was a winner of four Legers; in 1782, with Imperatrix; 1790, with Ambidexter; 1797, with Lounger; and 1801, Quiz. Mr. Watt likewise won four races; in 1813, with Altisidora; 1823, with Barefoot; 1825, with Memnon; and 1833, with Rockingham. The only horse that ever won the Derby and St. Leger the same year (1800) was Champion, the property of the late Mr. Wilson, "the father of the turf," and the only mare that ever carried off the Oaks and St. Leger in one year (1835) was the Queen of Trumps, belonging to Mr. Mostyn. The length of the St. Leger Course is one mile six furlongs and 132 yards, being about a quarter of a mile longer than the Derby Course at Epsom. The shortest time on record of the race having been run is 3 minutes and 17 seconds. This was achieved in 1838 by Lord Chesterfield's Don Juan.

MARK LANE, FRIDAY, SEPTEMBER 22.—We are without any fresh arrivals of English Wheat since Monday, and that which remained over has been taken off at prices pretty well equal to that day.—In Foreign there has been a fair business doing, and prices are fully maintained, Barley must be written 1*s.* cheaper; other articles are unaltered in value, excepting Oats, which are the turn dearer.

BRITISH, PER IMPERIAL QUARTER.			
Wheat, Essex, Kent, and Suffolk	White	44 to 56	Red 44 to 52
Norfolk, Lincolnshire, and Yorkshire	White	47 to 53	White to —
Barley	Malt and distilling	28 to 32	Grind. 24 to 30

GAZETTE OF THE WEEK.

BANKRUPTS.—J. Abbott, Amwell-street, Middlesex, late of Milton-on-Thames, Kent, and of Keynsham, Somerset, builder.—W. M. Smith, Strand, upholsterer and picture-dealer.—G. Winning, Dover-street, Piccadilly, upholsterer.—St. J. Cartwright, Workson, Nottinghamshire, grocer.—J. Newnham, Dewsbury, Yorkshire, blanket-manufacturer.—J. R. Munden, Warwick, Somerset, flax and tow-spinney.—E. Brittan, late of Bath, victualler, but now of Augusta-place, Lyncolnshire, millwright.—M. Potter, New Bond-street, haberdasher.—W. Shepherd, jun., Iron Acton, Gloucestershire, miller.—D. Smith, Midgley, Yorkshire, worsted-manufacturer.—T. Osborn, Aston-juxta-Birmingham, banker.—G. Strawbridge, Bristol, builder.—J. M. Knight, Rugby, Warwickshire, ironmonger.—C. Clark, Liverpool, wool-dealer.

SCOTCH SEQUESTRATIONS.—J. Fraser, Clury, Inverness-shire, tackman.—A. Simpson, Navy, Cromarty.—N. Buchanan, Tronigate, Glasgow, commission-merchant.—W. Spalding, Edinburgh, solicitor.

BIRTHS.—On the 17th inst., at Broomhall, Lady Louisa Fortescue, of a daughter.—At Kensington, on the 13th inst., the Right Hon. Lady Headley, of a daughter.—At Drury-lane, on the 14th inst., the lady of Dr. Webster, of a son.—On the 16th inst., at Stoke Hamond, Bucks, the lady Julia Bouwens, of a son.—At Warrington-hall, Cheshire, on the 16th inst., the lady of the Right Hon. E. J. Stanley, of a son.—On the 17th inst., at Woodcote, the Lady Louisa Cotes, of a son and heir.

MARRIED.—At Gibraltar, on the 6th inst., Lieut.-Col. Lewis, of the Royal Artillery, son of the late Admiral Sir Thomas Lewis, Bart., to Helen Talavera, daughter of J. M. Brackenbury, Esq., K.H., late her Majesty's Consul at Cadix.—At Catsfield, Sussex, on the 14th inst., Elizabeth, third daughter of Lieut.-Col. Williams, R.E., of Catsfield, Sussex, to W. Pridmore, Esq.—At St. George's, on the 20th inst., Lord Dalmeny, eldest son of the Earl and Countess Stanhope, to Lady Wilmot Stanhope, only daughter of the Earl and Countess Stanhope.—On the 14th, at St. Luke's, Chelsea, the Marquess of Ormonde, to Miss Frances Jane Paget, eldest daughter of Gen. the Hon. Sir E. Paget, G.C.B., Governor of Chelsea Hospital.

DIED.—On the 12th inst., at Malvern, aged 47, the Hon. Mary Jane, wife of Sir E. C. Hartopp, Bart., and daughter of Morton, Lord Henley.—On the 17th inst., at Sidmouth, the Lady Mary Taylor, daughter of the late and sister to the present Marquis of Headfort.—At Invercauld, on the 14th inst., G. Houston, the younger, of Johnstone, Renfrewshire, North Britain.—At Meelick, county Galway, aged 68, D. Blake, Esq., second son of the late Sir W. Blake, of Menlo, Bart.—At Demerara, on the 28th July last, W. Dauney, Esq., Advocate-Solicitor-General in British Guiana.

FAMILIAR ASTRONOMY. By GEORGE DARLEY, A.B., Author of A System of Popular Geometry,—Companion to the Popular Geometry,—A System of Popular Algebra,—and a System of Popular Trigonometry. 12mo, with Engravings, 5*s.* cloth lettered.

"There is a vast deal of astronomical information conveyed in a most winning and unassuming manner in this delightful little volume, which, not less for the novelty of its plan than the extent of its intelligence, reflects infinite credit on the taste and talents of its projector and editor, Mr. Darley."—*Sun.*

TAYLOR and WALTON, Booksellers and Publishers to University College, 28, Upper Gower-street.

DRESS COATS, Superfine cloth, 30*s.* to 40*s.*; extra quality, 50*s.*; Frock-coats, silk facings, 35*s.* to 45*s.*; ditto, silk velvet collar and silk facings, 50*s.*; Waterproof Wrappers, 10*s.* 6*d.* to 21*s.*; fashionable York and Chesterfield ditto, 16*s.* to 25*s.*; Waistcoats, 5*s.* to 8*s.* 6*d.*; Silk, Satin, and Kerseymer, 10*s.* to 14*s.*; Trousers, 8*s.* 6*d.* to 12*s.* 6*d.*; stout Doeskin and Kerseymer, 16*s.* to 25*s.*; Shooting Jackets, 10*s.* 6*d.*; Boys' and Youths' Tunic and Hussar Suits, 30*s.*; a Suit of Superfine Black Cloth, 31*s.*; best quality, 51*s.*—At FISHER and Co.'s, 31, King William-street, City, 10 doors from London bridge.

BUTTER MADE IN TEN MINUTES BY THE NEWLY-INVENTED CHURN. REGISTERED ACCORDING TO ACT OF PARLIAMENT.

ATTWOOD, WIMBLE, & WARNER, MANUFACTURERS, LEWES, SUSSEX.

This CHURN being made entirely of Block Tin, the necessary degree of temperature can be given to the cream, by placing it in a pan of cold or hot water, which ensures the butter coming in 10 or 12 minutes. The simplicity of its construction, and the facility with which it may be cleaned, are no inconsiderable advantages over those now in common use. The great advantages of this Churn will be found in the winter; but in the heat of summer placing the Churn in cold water will be the means of hardening the Butter.

Sizes	No. 1	2	and 3
Churn from	7 to 8 lbs.	13 to 15 lbs.	26 to 28 lbs.
Price, carriage paid to London.	25 <i>s.</i>	35 <i>s.</i>	42 <i>s.</i>

Metal Pans for Churns to stand in, 4*s.* 6*d.*, 6*s.*, and 7*s.* Larger sizes made to order.

To be seen in London, at WRIGHT'S Range Warehouse, No. 3, Arthur-street, near the Monument; RICHY'S Brush Warehouse, No. 80, Gracechurch street; LIVERMORE and SON, Ironmongers, No. 30, Oxford-street; BENHAM, 19, Wigmore-street, Cavendish-square. Export Agents, BARNES & Co., 109, Fenchurch-street.

EDWARD BECK invites the attention of Horticulturists to the different articles manufactured by him in SLATE. They may be seen in use at WORTON COTTAGE, IRLWORTH, upon application to the Gardener.—*Sundays excepted.*

ROWLAND'S MACASSAR OIL.—Under the Special Patronage of Her Most Gracious Majesty the QUEEN, the Royal Family, and the several Courts of Europe. This Oil is universally acknowledged to be the ONLY ARTICLE that will effectually produce and restore Hair, prevent it from falling off or turning grey, free it from scurf and dandruff, and will render it delightfully soft and flexible. It will also preserve the coiffure in the heated atmosphere of crowded assemblies. CAUTION.—Much pernicious trash is now offered for sale as "MACASSAR OIL;" it is therefore of great importance to purchasers to see that the words "ROWLAND'S MACASSAR OIL" are engraven on the wrapper. All others are "GROSS IMITATIONS." The Proprietors' Signature is also engraven on the wrapper, thus:—A. ROWLAND & SON, 20, HATTON GARDEN, LONDON; Countersigned "ALEX. ROWLAND." Price 3*s.* 6*d.*—7*s.* Family Bottles (equal to four small), 10*s.* 6*d.*, and double that size 21*s.* per bottle. Ask for "Rowland's Macassar Oil." Sold by them, and by Chemists and Perfumers.

WANTED, as PRINCIPAL SHOPMAN in an extensive retail Seed Establishment, a respectable active person of industrious habits and good address; he must possess a thorough knowledge of the business, and give unexceptionable references as to character, ability, and integrity.

Also, a NURSERY FOREMAN of experience, who is competent to undertake the General Management in every department, and whose character for ability, integrity, and sobriety will bear the strictest investigation. Apply, in the hand-writing of the applicants, to A. B., care of Mr. GEO. CHARLWOOD, 14, Tavistock-row, Covent-garden, London.—Sept., 1843.

WANT PLACES.—All Letters to be post-paid.

AS FOREMAN in a Nursery, or Private Gardener.—A middle-aged Man of extensive Practice in the Nursery Department; no objection to a private family; could take the management of Land, Cattle, &c. if required.—Direct to G. S. T., 47, Cochran-terrace, St. John's-wood, London.

AS GARDENER.—A married Man, without incumbrance, 33 years of age, a native of Scotland, who is perfectly acquainted with every branch of his profession on the most improved principles, and can be well recommended by a Nobleman, with whom he lived about 4½ years.—Direct to A. W., at Messrs. RONALD'S Nursery, New Brentford, Middlesex.

AS GARDENER.—Where one or more hands are employed. An experienced young Man, aged 30, who well understands the Greenhouse and Hothouse, early and late Forcing, Pruning, and Cropping. Can have an undeniable character from his last Situation.—Direct, H. T., at Mr. HIDE'S, Hertford.

AS GARDENER.—A respectable married Man, aged 30, who is a first-rate Grape-grower, and thoroughly understands the cultivation of Pines and early Forcing, the management of the Greenhouse, and Flower and Kitchen Garden. He can have 8 years' undeniable character from the situation he has just left on account of the death of his late employer.—Direct to A. Z., No. 2, Adelaide-terrace, Halton-street, Islington.

AS GARDENER and BAILIFF.—An active married Man, with out family, 40 years of age, who possesses sound practical knowledge in Gardening, Farming, and Stock; woodlands, and plantations; the care of game; and can shoot, if required. His recommendation is perfect in every respect.—Direct to T. T. S., Post-office, Richmond, Surrey.

AS GARDENER.—In a Nobleman or Gentleman's Family: a practical, experienced, active, middle-aged Man, without incumbrance, who is now disengaged from a Situation where he has been living the last 15 years, having previously lived in a Nobleman's family in the north of England. A satisfactory reference can be given.—Direct to T. S., Mr. PAMPLIN'S, Lavender Hill Nursery, Wandsworth-road.

AS GARDENER or BAILIFF.—A middle-aged, married Man, without a family, of extensive practice, whose ability and character will bear the strictest investigation.—Direct to T. W., 2, Strong's Cottages, Brook-green, Hammersmith.

Printed by Messrs. BRADBURY and EVANS, Lombard-street, Fleet-street, in the Precinct of Whitefriars, in the City of London, and Published by them at the Office, B. CHARLES STREET, COVENT GARDEN, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, September 23, 1843.

UNIVERSITY COLLEGE, London.—Faculty of Arts and Laws, Session 1843-44. The SESSION will COMMENCE on MONDAY, October 16, when Professor BROOKE will deliver an INTRODUCTORY LECTURE, at 2 o'clock precisely.

CLASSES.
Latin—Professor Long, A.M.
Greek—Professor Malden, A.M.
Hebrew—Professor Hurwitz.
Oriental Languages—Professor Falconer, A.M.
English Language and Literature—Professor Latham, A.M.
French Language and Literature—Professor Merlet.
Italian Language and Literature—Professor Pepoli.
German Language—Teacher, Mr. Wittich.
Comparative Grammar—Professor Key, A.M.
Mathematics—Professor De Morgan.
Natural Philosophy and Astronomy—Professor Brooke.
Chemistry—Professor Graham.
Civil Engineering—Professor Vignoles.
Architecture—Professor Donaldson.
Geology—Professor Webster, F.G.S.
Drawing, in all its branches—Teacher, Mr. Moore.
Botany—Professor Lindley, Ph.D.
Zoology, Recent and Fossil—Professor Grant, M.D.
Philosophy of Mind and Logic—Prof. the Rev. J. Hoppus, Ph.D.
Ancient and Modern History—Professor Creasy, A.M.
Law—Professor Carey, A.M.
Jurisprudence—Professor Graves, A.M.
Residence of Students—Several of the Professors, and some of the Masters of the Junior School, receive students to reside with them, and in the office of the College there is kept a register of parties unconnected with the College who receive boarders into their families—among these are several medical gentlemen. The register will contain references as to respectability, terms, and other particulars.
Flaherty Scholarships.—A Flaherty Scholarship of 50l. per annum, tenable for four years, will be awarded in 1844 to the best proficient in Mathematics and Natural Philosophy among the Students of the College, under the age of 20 years. The examination will take place in the second week in January. A similar Scholarship for proficiency in Classics will be awarded in 1845, and in subsequent years, alternately, for proficiency in Classics, and in Mathematics and Natural Philosophy.
Printed copies of the Regulations concerning the Scholarships may be had on application at the office.
The Session of the Faculty of Medicine commences on the 2d of October.
The Junior School opens on the 25th September.
Prospectuses and further particulars may be obtained at the office of the College.—September, 1843.
GEORGE LONG, A.M., Dean of the Faculty.
CHARLES C. ATKINSON, Secretary to the Council.

LIVERPOOL BOTANIC GARDEN.—The HORTICULTURAL EXHIBITIONS for the year 1844 will take place on FRIDAY, May 25; FRIDAY, June 28; and FRIDAY, August 25; when the SUM of TWO HUNDRED AND SEVENTY POUNDS will be distributed in Premiums. For further particulars, apply to Mr. SHEPHERD, Curator, at the Garden.
JOSEPH DICKINSON, M.D., Honorary Secretary.
Botanic Garden, Liverpool, Sept. 22, 1843.

SEEDLING PANSIES.

SILVERLOCK has now ready for Sale a fine healthy stock of his PRINCE OF WALES, which Flower is well known to many, and would have been sent out last autumn if a sufficient number of plants could have been obtained to supply the orders received for it. The colour of this Heartsease is a bright maroon, with yellow centre and good eye; petals of good substance, and perfectly even at the edges; shape good, size about that of Thompson's Eclipse.
H. S. has also to offer three other Seedlings, which, with the above, he can strongly recommend. BLACK DWARF, an intense black flower, of excellent substance and good shape. MRS. HARCOURT, a deep golden yellow, with fine eye, good form and substance. MARMION, a very large flower, of excellent shape and substance; ground-colour creamy, white with lilac margin to the lower petals, upper petals lilac, eye finely marked. Price 5s. each.
H. S. can also supply healthy, strong plants of the best varieties in cultivation at the following moderate prices:
12 extra fine and very superior varieties 20s.
12 very fine do. 12s.
12 good do. 9s.
A fine stock of Pinus Pinaster, 1 to 5 feet; Cedar of Lebanon, 3 to 5 feet; Cedrus Deodara, 6 to 12 inches.
Chichester, Sept. 30, 1843.

NORLAND NURSERY, NOTTING HILL, LONDON.
BLACK AND GOWER, having this day dissolved partnership by mutual consent, the business will now be carried on by R. E. GOWER, who will settle all bills against the late firm, and to whom all debts due to the firm are to be paid.
R. E. GOWER trusts, by attention and fair prices, to receive a share of public favour; he also begs to state that he has just received from Holland an assortment of FLOWER-ROOTS, which are particularly fine and in excellent condition; he has also a good collection of Garden and Flower seeds, Hothouse and Greenhouse Plants, Trained Fruit-trees, and Vines of the best sorts. Buck's true intermediate forcing Stock, at 3s. 6d. p. oz.
September 22, 1843.

JAMES BLACK begs to intimate that he has retired from the Norland Nursery, Bayswater, and will thank all persons having claims against him to forward the same as soon as possible, when payment will be made.
P.S.—J. B. is now at liberty to treat with any respectable Wholesale Nursery or Seedsmen who may require an Assistant to travel in Town or Country.—Direct, as above, to No. 13, Charles-street, Kensington-square.

TWO NEW SEEDLING PICOTEES.—“LADY ALICE PEEL,” 10s. 6d., and “MRS. BENYON,” 10s. 6d. per pair.—These two splendid Picotees were raised by the Rev. J. Burroughs, of Lingwood Lodge, Norfolk, and kindly presented by that gentleman to Messrs. Youell and Co., for Particulars of which, see their Advertisement in this Paper of the 16th inst. Catalogues of their extensive collection may be had on application, and will be found to contain upwards of 800 of the very best varieties in cultivation, and which are sent out upon the following terms:—

	£	s.	d.
12 pairs of good show varieties, 1 pair of each	1	4	0
12 „ fine ditto ditto	1	10	0
25 „ ditto ditto ditto	3	0	0
12 „ Extra fine and very superior ditto	2	10	0
25 „ ditto ditto ditto	5	0	0
12 „ ditto Pinks ditto	0	12	0
25 „ ditto ditto ditto	1	0	0

The selection being left to Youell and Co.
Great Yarmouth Nursery, Sept. 28, 1843.

ARRIVAL OF DUTCH HYACINTHS AND OTHER BULBS.
YOUELL & Co. beg respectfully to announce they have received from Haarlem their annual importation of the above in most excellent condition, adapted either for Glasses, Forcing, or open-border culture. Prices as follows—
Fine Single or Double Show Hyacinths 6s. per doz.
Red, Blue, White, or Yellow
Extra fine Ditto 9s. to 12s. „
Extra fine, and very superior Ditto 18s. „
The selection being left to Youell & Co.
Catalogues may be had on application.

FASTOLFF RASPBERRY.—For particulars of which see their Advertisement in this Paper of the 2d inst.
ARAUCARIA IMBRICATA, fine 4-year old plants, 8 to 10 inches, 10l. per 100, or 30s. per dozen.
Great Yarmouth Nursery, Sept. 28, 1843.

NEW SEEDLING PICOTEES.
Raised by the Rev. J. BURROUGHS, of Norwich. Mrs. Beavon, red edge, 10s. 6d.; Miss Jane, fine purple edge, 10s. 6d.; and Miss Osborne, scarlet edge, 7s. 6d.

MESSRS. NORMAN being appointed to send these out, feel confident the first two will give great satisfaction, having grown two pairs of each, and exhibited them in their winning pans; also first prize for Mrs. Beavon, in class-showing; they possess beautiful long pods, petals large, with a good wiring round each, making a noble back tier flower. The stock being limited, early application will be necessary. They have also fine plants of John's Prince Albert, purple edge, 7s. 6d. per pair. N. and B. NORMAN beg to state that their Catalogues can be had, on prepaid application, of their select and useful Show varieties, with which they have gained 59 prizes at the principal exhibitions near London.—Bull Fields, Woolwich, Sept. 30.

DUTCH, CAPE, AND OTHER BULBOUS FLOWER-ROOTS.
HURST AND McMULLEN, SEEDSMEN, &c., 6, Leadenhall-street, respectfully solicit attention to their BULBOUS-ROOT CATALOGUE, which will be found to contain many new and beautiful varieties of HYACINTHS, AMARYLLIS, IXIAS, &c., &c., all of which are of first-rate quality. Since they had the pleasure of transmitting their Catalogue to their friends (the prices of which are about the same as other respectable Houses), another list has been circulated with several leading articles offered under theirs. HURST & McMULLEN beg to state that their prices shall be reduced in conformity with any other Catalogue. The list will be forwarded by post on application.—HURST and McMULLEN, 6, Leadenhall-street.

TULIPS, RANUNCULUSES, HYACINTHS, &c.
H. GROOM, Clapham Rise, near London (removed from Walworth) by APPOINTMENT FLORIST TO HER MAJESTY, respectfully informs the Nobility and Gentry, that his Bulb Catalogue for this autumn is ready, and will be forwarded by post on application. He begs to state that he has a large stock of the beautiful New Lily (Lilium lancifolium) and a fine collection of Auriculas, which he can supply at very moderate prices.

NEW PICOTEES.

HEADLY'S NANETTE; purple edge, rather heavy, thick petal, rose edge, good white, and edging well defined, 10s. per pair. Bond's Countess of Winterton, after the style of “Trip to Cambridge,” although distinct, 7s. 6d. the pair, and all the others that are coming out. John Dickson's Catalogues for 1843 are now ready, comprising all the best flowers in cultivation. Applications for Catalogues may be made at the Nursery, Acre Lane, Brixton, and WARNER and WARNER's, Cornhill, London.

FERNS.

W. PAMPLIN has lately considerably increased his stock of FERNS, and respectfully invites the attention of cultivators of these elegant plants to the same.
W. P. will furnish his new priced Catalogue of the sorts he grows, on being supplied with six penny postage stamps. The Prices of established plants in Pots range from 9d. upwards.
Lavender Hill Nursery, Wandsworth, near London.

ROSES IN POTS.

A. PAUL AND SON, NURSERYMEN, &c., Cheshunt, Herts, beg to intimate that the present is the most advantageous time to remove ROSES from the open ground to grow in Pots. They have paid particular attention to Roses for this purpose, and have now some thousands, both in Pots and worked on short stems, expressly for the purpose, ready for sale. When left to their selection, they will furnish 100 fine Plants for 7l. 10s., free of carriage to London.

ACHIMENES HIRSUTA.—Plants of this New Species of Achimenes, which was exhibited at the Meeting of the Horticultural Society of London, in Regent-street, on Tuesday, the 5th inst., for which a Silver Knightian Medal was awarded—may be had of the Messrs. HENDERSON, Nurserymen, Pine-Apple Place, at 21s. each.—Pine-Apple Place, Sept. 23, 1843.

DUTCH HYACINTHS for Forcing, 4s. per dozen, Best do., for Glasses, 6d. to 1s. each. Double Roman and Paper-white Narcissus, 4s. per dozen; Single and Double Duc Van Thol Tulips, 2s. per dozen. Also Crocus, Iris, Jonquils, Narcissus, Anemones, and Ranunculus, of which priced List may be had free, per post, from A. COBBETT's Italian and Foreign Warehouse, 18, Pall Mall.

NEW AND DESIRABLE PANSIES.

YOUELL AND CO. beg respectfully to inform Growers of the above that they have succeeded in raising Four New and highly-beautiful Seedlings, possessing first-rate properties, both in size, form, and substance, forming quite a novelty. They will prove a valuable acquisition to those who compete at any Horticultural Exhibition in the Kingdom. Description, as follows:—“Eclipse,” a large, flat, and well-formed flower, of fine yellow, and intense eye. “Duke of Norfolk,” large, well-formed flower, with a fine eye, primrose ground, with a pencilled edging of delicate blue round the petals. “Lady Anne Peel,” white ground, is a large round flower of extraordinary substance, the petals are well formed, and in fine proportion, the quantity of yellow shown in the purple eye increases the beauty of the flower; top petals and margin of a dark purple. “Ann” is also a flower of good form and substance, white ground, slightly tinged with purple, with fine brown and purple eye.

Y. and Co. can most confidently recommend the above, which are now ready to be forwarded to any part of the Kingdom, per post free, at 21s. the four varieties. They also beg to draw attention to their healthy stock of this tribe, which they are offering upon the following terms:—

12 Extra fine and very superior show varieties	18s.
12 Very fine ditto ditto	12s.
12 Fine ditto ditto	9s.

Great Yarmouth Nursery, Sept. 27, 1843.

TO GROWERS OF PANSIES, &c.

JAMES MAY begs to return his most sincere thanks to his numerous Customers and Friends for all past favours, and begs to apologise for not being able to comply with many orders he was favoured with last spring, his stock of Plants having suffered so much by his removal from Edmonton. J. M. begs to inform the Public that he has now ready fine healthy Plants, consisting of all the best, at moderate prices, a list of which may be had on application.

Extra fine PANSY SEED, all warranted, collected from the best named varieties, 2s. 6d., 5s., to 10s. per packet.
May's Crimson Superb Sweet William Plants, 4s. per doz.; Seed, 1s. per packet. Also, fine Plants of Double White Rockets, 3s. per doz., or 20s. per 100. New Double Purple Rockets, 6s. per doz., or 40s. per 100. True large Mitcham Crown Daisies, 3s. per doz., or 20s. per 100.

A Gentleman Amateur Farmer having commissioned J. M. to offer Warranted True EGYPTIAN MUMMY WHEAT, 25 grains for 20s., or 50 grains for 30s., which will be sent post free, with directions for planting, on receipt of a post-office order, payable at the Edmonton Post-office, or General Post-office, London.

Any of the articles here offered, may be had on application to Messrs. WARNER, 28, Cornhill, London; or Mr. WATKINSON, Market-place, Manchester.—Pansy Nursery, Tottenham, near London.

DUTCH FLOWER-ROOTS.

P. E. ERHARD, of the Firm of J. D. ZOCHER & VOORHELM SCHNEEVOGT, begs most respectfully to inform his Friends, and the Public generally, that he has received a very extensive Collection of DUTCH FLOWER-ROOTS, of the best quality, and at the most moderate prices. He trusts, from the superior quality of the roots, and by prompt attention to any order which may be confided to him, to deserve the support and recommendation of the discerning Public.
Depot, 359, Strand, corner of Bury-street.

TO CALCEOLARIA GROWERS.

A rare opportunity occurs to make a Collection of CALCEOLARIAS at a small expense.

JOHN STANDISH, NURSERYMAN, of Bagshot, has raised a great number of Seedlings this autumn, which are now ready to send out by post, in tin cases, post paid, at 16s. per dozen. The above have been raised from two of the best spotted Calceolarias in the Kingdom, the seed saved from the plants, which were crossed with great care; and J. S. will warrant that the worst of them will be worth full the price given, and are precisely the same as he will grow himself; but should any doubt arise, customers are solicited to come to Bagshot and select for themselves, as J. S. has bred from two sorts only, and those were selected as being the best in every way, and will, no doubt, bring some of the greatest novelties ever seen in Calceolarias; they can be sent by post for the next month, after which the plants will be too large, and can then be sent packed in small boxes or hampers. N.B.—A remittance is expected from unknown correspondents.

PRESERVATION OF PLANTS.

HUMPHREY'S COMPOUND to Promote the Beauty and Preservation of Plants, may be used either in the Drawing room or in the Conservatory, and from its condensed fertilizing power a few grains dissolved in water at intervals is effective. Applicable to all Greenhouse plants, to Hyacinths, and other bulbs; and to promote the growth of cuttings and the germination of seeds. Sold in bottles 1s. 9d. each, by PLANAGAN & SON, Mansion-house-street; HURST & McMULLEN, Leadenhall-street; W. CLARK, Bishopsgate-Within; THOMAS WATKINSON, No. 6, Market-place, Manchester; and other leading Seedsmen, &c. in town and country. Wholesale Agents, DAVY, MACKENROD, & Co., 100, Upper-Thames-street, London.

JAMES PIPER, Parkstone Nursery, near Poole, begs leave to offer the following articles, at very moderate prices:

have to enter the following articles, at very moderate prices:			
Achimenes longiflora	1s. 0d.	Fuchsia Eclipse, Smith's	3s. 6d.
rosea	1 0	Epsil	3 6
Manettia bicolor	2 0	Gem, Ivory's	2 6
Maurandia alba	1 0	Majestica, Smith's	3 6
Fuchsia Brockmanii	3 6	pulchella	2 6
Britannia, Smith's	2 6	Paragon, Smith's	2 6
Champion, Do.	2 6	robusta, Smith's	2 6
Cormackii	3 6	St. Clare	1 6
Defiance, Smith's	3 6	Rogersiana	3 6
Deansia	3 6	Toddiana	3 6
Exoniensis, Pince's	7 6		

J. P. has a few hundreds of large Rhododendrons fit to plant singly on lawns, and about 10,000 of other sizes, which he could furnish at greatly reduced prices. Nursery Stock and Bulbs of all descriptions at very reduced charges.

WOODLANDS NURSERY, MARESFIELD, near UCKFIELD, SUSSEX.

WM WOOD AND SON have the honour to announce to their Friends and the Public that their CATALOGUE of ROSES may be had GRATIS, on application. Their immense stock of both Standard and Dwarf Roses is this season particularly luxuriant, and in fine condition. The new Supplementary List of Greenhouse Plants and Nursery Stock (comprising many novelties), is just published, and may be had at the same time.

S. GIRLING, of Danecroft Nursery, near Stowmarket, begs to refer the readers of the *Gardeners' Chronicle* to his Advertisement of SEEDLING VERBENAS, &c. of the 16th inst.

MYATT'S NEW SEEDLING STRAWBERRIES.
J. AND W. MYATT are now ready to send out their **NEW STRAWBERRY**, the **DEPTFORD PINE**, the fruit of which has been exhibited at the London Horticultural Society, and a Banksian Medal awarded. It has also been submitted to Professor LINDLEY, for whose opinion see *Gardeners' Chronicle*, No. 26, p. 447. It is a most prolific bearer, exhibiting at the same time a profusion of fine fruit and bloom on the same truss. Price, Deptford Pine, 2l. 10s.; British Queen, 1l., and Eliza, 10s. per 100.—Manor Farm, Deptford, Sept. 21, 1843.

THE BRITISH QUEEN AND PRINCE ALBERT PEAS.
W. J. CORMACK & CO., beg to announce to their Friends and the Public that they have harvested the above two New Varieties, and will be obliged by early orders, as the stock is limited. They will be sent out, as last spring, in packages, bearing the name of the firm, price 3s. 6d. per quart. The usual allowance to the trade.
N.B.—"CORMACK'S Early Kent Pea," 14s. per bushel.
Newcross, Sept. 21, 1843.

NEW BLACK NEMOPHILA.—Seed of *Nemophila discoidalis* to be had in small packets at 2s. 6d. each of **W. J. NUTTING**, Seedsman, 46, Cheapside, London.

IMPORTANT SALE OF GREENHOUSE PLANTS.
MESSRS. PROTHEROE AND MORRIS are instructed to submit to public competition, at the Auction Mart, Bartholomew-lane, on **TUESDAY, 3rd Oct., 1843**, at 12 o'clock, a **COLLECTION OF GREENHOUSE PLANTS**, consisting of the newest varieties of *Camellias*, *Azalea indica*, *Fuchsias*, *Geraniums*, *Chrysanthemums*, and about 100 other varieties of Choice Greenhouse Plants.—May be viewed the morning of sale. Catalogues may be had at the Mart, and of the Auctioneers, Leytonstone.

MESSRS. PROTHEROE & MORRIS are instructed to offer for competition, at the Auction Mart, Bank, on **TUESDAY, Oct. 3**, at 12 o'clock, a splendid Collection of Greenhouse Plants, consisting of the newest Varieties of *Camellias*, *Azalea indica*, *Fuchsias*, *Geraniums*, *Chrysanthemums*, &c.

ALBION ROAD NURSERY, STOKE NEWINGTON.
MESSRS. PROTHEROE AND MORRIS respectfully announce they are instructed by the Executrix of the late **MR. JOHN MILNE** to offer for public competition about the middle of October the valuable **NURSERY STOCK**, consisting of fine Evergreens, Ornamental Trees, American Plants, Deciduous Shrubs, and other Plants, of which Catalogues will be duly published.—American Nursery, Leytonstone.

TO NURSERYMEN, GARDENERS, AND OTHERS.
TO BE LET OR SOLD, with immediate possession, all that well-known **NURSERY-GROUND AND GARDEN**, situated at Battersea and Elizabeth-street, South Pimlico, with the Stock and Houses and the valuable Business and connexions attached to the same, belonging to the late **MR. JOHN ROGERS**, recently deceased. For particulars apply to **MR. JONES, Baker**, 6, Eccleston-street, or **PROTHEROE AND MORRIS**, American Nursery, Leytonstone.

HORFIELD NURSERY, one mile from the city of Bristol, on the Gloucester road, containing Four Acres of Land, with a Lease of 22 years unexpired, consisting of a good young Stock of every description, to be taken at a fair valuation; 100l. worth of the stock is sold. There are barracks now building, and the situation will prove to be a populous neighbourhood. Further particulars may be had by applying to **MR. R. FORRESTER**, Nurseryman, Kensington, or to the proprietor, on the premises, who is leaving the business on account of ill health. Fifteen per cent. taken off.

BRITISH AND FOREIGN INSTITUTE.—President—The Right Honourable the Earl of DEVON.

Lord Courtenay, M.P. The Lord Bishop of St. David's
Sir George Larpent, Bart. Benjamin Bond Cabbell, Esq.

The second enrolment, making 500 members, being now filled up, immediate measures will be taken for opening the establishment. For this purpose the spacious and handsome residence of the late Lord Wrottesley, in George-street, Hanover-square, has been taken, and will be furnished for the use of the Literary Department of the Institute, while the adjoining mansion, formerly the residence of Lady Cowper, will be also fitted up with all the requisite conveniences for the Club Department of the Institute, under the direction of a skilful and experienced restaurateur, with a communication between the two buildings. As candidates for admission are entered in the strict order of priority, early application can alone secure an early registry. Such applications can be made personally, or by letter, to the undersigned, from 10 to 5 o'clock, at the Hanover-square Rooms, where the Committee sit daily, and where prospectuses and cards of admission may be procured.
Sept. 12, 1843. **JAMES S. BUCKINGHAM**, Managing Director.

HORTICULTURAL BUILDING & HEATING by HOT-WATER.

J. WEEKS & Co., ARCHITECTS, &c., Gloucester-place, King's-road, Chelsea, Hot-house-Builders, and Hot-water Apparatus Manufacturers, beg leave to inform the Nobility and Gentry, that their business, which has been extensive throughout the country for many years, is entirely confined to the **BUILDING OF HORTICULTURAL ERECTIONS** of every description, and the **HEATING** of them by **HOT WATER**.

CONICAL and other **BOILERS** of all sizes; their largest consumes but a small quantity of fuel, only requiring attention once in 10 hours, and will heat a range of Forcing-houses 300 feet in length.

Their improved plan of **BOTTOM-HEAT FOR PITS**, by means of an open trough under the bed, is now being universally adopted. References may be had, and their works seen at most of the Nobility and Gentlemen's seats in the country, nearly the whole of the London Nurseries, and a great variety of Horticultural Erections and Hot-water Apparatus, Models, Plans, Estimates, &c., at their Horticultural Manufactory, Gloucester-place, Chelsea, near Sloane-square.

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by **DANIEL and EDWARD BAILEY**, 272, HOLBORN.

D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals required, and which may be seen at their Manufactory.

THE CONICAL HOT-WATER BOILERS, invented by **J. ROGERS, Esq.**, may be obtained of any size from **JOHN SHEWEN**, Ironmonger, &c., Sevenoaks, Kent.

J. SHEWEN having had every opportunity afforded him by an extensive practice to bring this apparatus to perfection, begs to offer it as most efficient and economical: it may be seen at Messrs. Chandler & Sons' Nursery, Vauxhall; Messrs. Lodgiges', Hackney; Messrs. Henderson's, Pine Apple-place; Messrs. Veitch and Son's, Exeter; Mr. Pontey's, Plymouth; the Royal Botanical Society's Gardens, Regent's Park; and at the Gardens of the Horticultural Society of London. Considerable improvements have been effected since last season; particulars of which are in course of preparation.

RENDLE'S TANK SYSTEM OF HEATING.
STEPHENSON AND CO., 61, Gracechurch-street, London, Inventors of the **IMPROVED CONICAL and DOUBLE CYLINDRICAL BOILERS**, having been much engaged in heating buildings upon the above system with Tanks of various materials, solicit the attention of scientific Horticulturists to an Iron Tank now fitting up on their premises, which offers most decided advantages over every other article hitherto employed for the same purpose. These tanks which are ornamental in appearance can be made from 10 to 100 feet long and of any width and depth, and can be connected or disconnected by any working Gardener without the slightest difficulty, thus affording the opportunity to persons in remote districts of employing this much approved method of heating without the assistance of Engineers. The Tanks can be applied to Boilers and Pipes already fixed, and from the present low price of Iron will be found cheaper than of any other material. **MR. RENDLE**, of Plymouth, has kindly undertaken to receive orders and furnish information to any persons in his neighbourhood, and prices for any size will be forwarded upon application to S. and Co.

HORTICULTURAL IMPROVEMENT.
READ'S PATENT GARDEN SYRINGE, for the invention of which he has been honoured with the Silver Medal of the Royal Horticultural Society, as the best instrument ever offered to their notice. **J. R.** has so improved the above, by an additional branch, to turn in every direction, so that water may be dispensed into all pots in Conservatories, in a perpendicular direction, resembling a gentle shower or dewfall, and in any quantity, from a pint to a table-spoonful. Likewise, small Machines, Pails, Trucks, and Garden Engines of every description, that will discharge water in a continuous, powerful stream, made on the most improved principle, and may be worked with half the usual labour required for other Engines now in use. The above are the best adapted for destroying Insects, which make such deadly havoc on all choice Fruit-trees and Plants in Gardens, &c. which the Patentee, from 31 years' experience in Gardening, and 23 years in Manufacturing and Improving Instruments, can safely warrant. The valves, being solid metal, can never get out of repair. May be seen and proved at the Patentee's, 35, Regent-Circus, Piccadilly. N.B.—None are genuine except stamped with the words, "READ'S PATENT."

AGRICULTURAL MACHINE WORKS, BEVERLEY, YORKS.
CROSSKILL'S LIQUID MANURE CART, which received the Honorary Reward of the Roy. Agricul. Society.

The Body of the Cart is made of Cast-Iron, and holds about 200 gallons. A, The Brass Valve Lever. Without stopping the horse, the man pulls the Iron Lever, A, to let out the liquid upon the Spread-board, C. B, Patent Iron Pump, which cannot possibly choke or get out of order. E, The Flexible Leather Pipe, 7 ft. long, with 3 ft. copper pipe at the end.—Price, delivered in Hull, 25l.

CROSSKILL'S PORTABLE MANURE DRILL, for drilling any quantity of soot, lime, salt, &c.—will contain 8 bushels of manure—price 12l. 12s.

WHEAT-SOWING.
POTTER'S GUANO.—The superiority of this powerful MANURE being now completely established, it is only necessary to inform the public that a material reduction has been made in the price, and that it may be obtained either at the Works or of Mr. POTTER'S Agents, who have testimonials of its efficacy.—28, Upper Fore-street, Lambeth, London.
Mr. MARK POTTERGILL, 40, Upper Thames-street, Sole London Agent.

*Nurserymen required as Agents in all the principal towns.

J. B. LAWES'S PATENT MANURES, composed of Super Phosphate of Lime, Phosphate of Ammonia, Silicate of Potash, &c., are now for sale at his Factory, Deptford-creek, London, price 4s. 6d. per bushel. These substances can be had separately; the Super Phosphate of Lime alone is recommended for fixing the Ammonia of Dung-heaps, Cesspools, Gas Liquor, &c. Price 4s. 6d. per bushel.

GUANO ON SALE,
BY THE IMPORTERS,
ANTHONY GIBBS & SONS, LONDON;
GIBBS, BRIGHT, & Co., LIVERPOOL AND BRISTOL.

GUANO ON SALE.—Any quantity of this valuable Manure can be had from the bonded stores of the Importer either in London or Liverpool, on application to **COTTESWORTH, POWELL, and PRYOR**, St. Helen's Place, London; **EDWARDS, DANSON, and Co.**, Liverpool; and **WILLIAM J. MYERS and Co.**, Importers, Liverpool.

PUBLISHING MONTHLY.
LARGE, 1s. 6d.; SMALL, 1s.; GARDENERS' EDITION, 6d. THE BOTANIC GARDEN; OR, MAGAZINE OF FLOWERING PLANTS.

WITH MANY IMPORTANT AND USEFUL ADDITIONS.
By **B. MAUND, F.L.S.**
Each Number contains **BEAUTIFULLY-COLOURED FIGURES OF ORNAMENTAL PLANTS**, both herbaceous and shrubby; suitable for the Flower Garden or Pleasure Ground. With the derivations of names; classes; orders; height of the plants; time of flowering; native country; history; qualities; most approved modes of propagation and culture; and other information, interesting to every lover of a Garden. Annexed to each Number, is the **FLORAL REGISTER**, With Wood-cuts of admired Flowering Plants, mostly such as have been newly imported into this country; with the necessary information respecting them. Also,

THE AUCTIONARY, In which are given, improved methods of cultivation and preservation of vegetables, fruits, and flowers; new discoveries connected with gardening; and miscellaneous information. Also, in each Number, till complete, commencing with the new volume, on the 1st of January, 1843, a portion of Professor Henslow's **BOTANICAL DICTIONARY**.

Written expressly for the Author, there being so great a want of such a Work: thus, the **BOTANIC GARDEN** contains four distinct Works, proceeding together, at a trifling cost, once a month.

The Volumes already completed of this Standard Botanical Work, can be had at the following Prices:

	LARGE.	SMALL.
Hf.-bd., green mor. backs, gilt edges, each	2 2 0	1 10 0
Cloth gilt, beautifully embellished	2 0 0	0 0 0
Drab boards	1 17 0	1 5 0

The *Gardeners' Edition* at 6d., with partially coloured plates, commenced in January, 1843, with No. I.

The portions of the **FLORAL REGISTER** and **AUCTIONARY**, already published, contain nearly Twelve Hundred Engravings, forming one handsome volume, which will be delivered GRATIS to the purchaser of four volumes of the **BOTANIC GARDEN**.

GROOMBRIDGE, PATERNOSTER-ROW.

This day is published, price 3s., with three Engravings, No. II. of

THE JOURNAL OF AGRICULTURE and the TRANSACTIONS of the HIGHLAND and AGRICULTURAL SOCIETY of SCOTLAND. CONTENTS: Land, Labour and Capital—Remarks on the Report on the Employment of Women and Children in Agriculture—Economy of Manures—Whitfield Farm—The Use of Salt to Man and Animals—Comparative Experiments with Guano, Rapedust, and Dung—The Expediency of forming Arboricultural Societies—An Estimate of the Value of different Manures—Experiments in Raising Potatoes with Dung, Rape-cake, and Guano—Cheese from Buttermilk—On Shelter—Meeting of the Highland and Agricultural Society at Dundee—On the Feeding Qualities of the Natural and Artificial Grasses in different states of Dryness—Report of Experiments made with certain substances as Manure, compared with known Fertilizers—Report of Comparative Trials with Guano as a Manure for Turnips—Account of an Experiment in Deep Ploughing—On the Rational Excretion of Plants—On the Action and Uses of Lime in Agriculture, and the most Efficient and Economical Modes of applying it to the Soil—On the Culture and Keeping of Potatoes over Season—Description of Alexander's Draining Plough—Reports, with Plans and Specifications, of Cottages built by Proprietors—Agricultural Report—Table of the Revenue, Foreign Markets, Prices of Grain, Butcher-meat, and Wool.

The Second Edition of the First Number may now be had. **WILLIAM BLACKWOOD and Sons**, Edinburgh and London; and sold by all Booksellers.

Just published, large 4to, price 5s.
FREEMAN'S FARMER'S ACCOUNT-BOOK, for keeping with ease and accuracy particulars of Workmen's Names, Labour, Wages, and Daily Occurrences throughout the Year; Statement of Live Stock, Cash Account, &c.

An Edition for Extensive Estates, price 8s. 6d.
Also, **THE AGRICULTURAL LABOURERS' WEEKLY ACCOUNT.** By **W. GIRLING**, Land and Estate Agent, Peasenhall Grove, Suffolk. 4to. Price 3s. 6d. sewed.

Woodbridge: J. LODGE. London: SIMPKIN, MARSHALL, & Co.

DARLEY'S SCIENTIFIC LIBRARY, for the Use of Schools, Private Students, Artists, and Mechanics.—It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the Public at large. To youth of either sex at public and private schools, to persons whose education has been neglected, or whose attention has not been directed in early life to such studies, and to Artists and Mechanics, these little Works will be found particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind, and brief for the memory; and the Elements of each Science are reduced, not only to their simplest, but to their shortest form.

1. A SYSTEM OF POPULAR GEOMETRY. Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading Truths and general Principles. By **GEORGE DARLEY, A.B.** Fourth Edition, 4s. 6d. cloth.

2. COMPANION TO THE POPULAR GEOMETRY, in which the Elements of Abstract Science are familiarised, illustrated, and rendered practically useful to the various purposes of Life, with numerous Cuts. (Second Edition.) 4s. 6d. cloth.

3. A SYSTEM OF POPULAR ALGEBRA, with a Section on Proportions and Progressions. Third Edition. 4s. 6d. cloth.

4. A SYSTEM OF POPULAR TRIGONOMETRY, both Plane and Spherical, with Popular Treatises on Logarithms, and the application of Algebra to Geometry. Second Edition, 3s. 6d. cl.

For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra.

—Library of Useful Knowledge, Article "Mechanics."
TAYLOR and WALTON, Booksellers and Publishers to University College, 28, Upper Gower-street.

Bound in cloth, price 5s. 6d.,

JOE MILLER'S JEST-BOOK.

A Reprint from the first and genuine edition, such omissions and alterations only having been made as were required by the greater delicacy observed in modern conversation; but, that the volume might have some substance, and be a good table or travelling book, copious additions have been made from other old volumes of Facetiae.

Extract from the Preface.

"Another strange circumstance connected with this work is, that everybody presumes that he himself and everybody else are perfectly familiar with its contents. . . and yet, if the reader will ask his acquaintance, it will appear that not one in five hundred ever set eyes on a copy. It is in consequence of like questions that this edition is published."

London: WHITTAKER and Co.

Now ready, price 4s. 6d.,
R U R A L C H E M I S T R Y
 By EDWARD SOILLY, Esq., Jun. F.R.S.,
 Experimental Chemist to the Horticultural Society of London,
 Hon. Mem. of the Royal Agricultural Society, and Lecturer
 on Chemistry at the Royal Institution.
 London: 3, Charles-street, Covent Garden.

The Gardeners' Chronicle.

SATURDAY, SEPTEMBER 30, 1843.

MEETINGS FOR THE FOLLOWING WEEK.

Tuesday, October 3 . . . Horticultural . . . 3 P.M.
 Friday, — 6 . . . Botanical . . . 8 P.M.

RUMOURS of further important alterations in the Royal Botanic Garden of Kew having found their way into the daily papers, we have made such inquiry into their truth as enables us to state the exact facts. We need not do more than remind our readers that after a careful investigation of the state of Kew in the year 1838, by order of the Government of the day, and after an attempt made a few years afterwards by some gentlemen connected with Lord Melbourne's Government, but not by that minister himself, to break up and disperse the collection, had been frustrated, this noble establishment was transferred from the Lord Steward's department of the Royal Household to the department of Woods and Forests, and placed under the able direction of Sir William Jackson Hooker. On several occasions we have adverted to the great improvements that immediately followed this wise measure, in conjunction with an immediate discontinuance of that narrow-minded exclusiveness which had well nigh ruined the Garden. We have spoken of the altered system of cultivation—of the renovated collections,—of the excellent plan of naming the plants—of old walls pulled down,—thickets cleared of their rubbish,—old houses repaired and others built,—and of a general infusion of more than its former activity into an establishment whose decrepitude had for years been the wonder of Europe and the scandal of England.

Of such improvements there has been no cessation; on the contrary, all that a full examination of the state of the Garden has shown to be required in order to render it effective has been liberally sanctioned by the Commissioners of Woods and Forests. The noble Lord at the head of that department has taken a personal interest in the works, and no doubt can now be entertained that the Royal Botanic Garden at Kew will soon become, as it ought to be, the first establishment of the kind in Europe. While the parks near London are rendered, by the excellent plan of naming the trees and shrubs there, a source of information and delight to those who seek for no more knowledge than floats on the surface of things, others who desire to apply themselves to the study of the Vegetable Kingdom in detail, and as a branch of science, can do so at Kew with all the advantages which the most extensive collections can afford them. To enable the public to gratify their increasing taste in this way, the Garden is open freely to all comers, daily, except Sundays, from 1 to 6; and that this is no small source of enjoyment may be gathered from the fact that, although Kew is 7 miles from London, and few people yet know that the Garden is open gratuitously, upwards of 20,000 persons have visited it within the last 12 months; and, be it added, without any serious cause having arisen for regret at the adoption of so liberal a measure. Additions to the plants are flowing in from all quarters; communications are opened with almost every part of the world, whence valuable acquisitions may be expected, and collectors are despatched to foreign countries to assist in augmenting the supplies.

When Sir William Hooker took charge of the garden in 1841, it consisted of only eleven acres, including the Arboretum. These, during the very first winter, were altered and improved, and the four acres were added on which stand the large Conservatory, built by King William the Fourth, and the noble Orangery belonging to the palace—an old-fashioned Hibernatory, crowded in the winter with large plants in tubs.

The latter building has since been greatly improved, by having a large window opened out at each end, and these ends made to correspond with the front, while powerful ventilators have been constructed at the back; and it is now a very handsome place, well adapted for the purposes it was intended for. A large double propagating-house has been built upon an admirable construction, heated with hot water, and furnished with slate tables, and slate tanks for catching the rain-water. An Orchidaceous house has been doubled in size, completely renewed within, and heated upon the best principles, with a double hot-water tank in the centre, covered with slate. This house, however, is not likely to remain of sufficient size for the Orchidaceous collection, for many species are still kept necessarily in a propagating-house, equally well suited to their growth.

One half of this fine Orchidaceous-house is occupied by a noble collection of such plants from Woburn, which his Grace the Duke of Bedford presented to the Queen, and which her Majesty graciously resigned to the Royal Gardens of Kew. There is an inscription indicative of this present. The Cactus-house has been doubled in size, and heated by hot-water pipes, and is now wholly filled with a most extensive collection of such plants, many of which have been procured by purchase, and others presented by the late Mr. Lambert, Mr. Parkinson, and others. Among them is the Cochineal Cactus, bearing the Cochineal insect, the gift of Mr. Bruce. The house, thus extended, is made to join and open into the Heath-house, which, indeed, is itself almost a new construction, and filled with Heaths or allied genera. From this building the hot-water pipes are conducted into the side pits on the outside, where many varieties are now cultivated. The large Proteaceous-house, and what has been called the Cape-house, have been much improved by the removal or alteration of the steep shelving which till lately deformed them, and the plants are seen to much greater advantage.

It was not intended to make any further alteration in the stoves at this season, because the almost immediate erection of a magnificent hothouse is contemplated; but in consequence of her Majesty's present of Orchidaceæ, Sir W. Hooker felt it his duty to make a requisition to the Commissioners of Woods and Forests for the enlargement of the first large stove on the left hand side as you enter the garden. This, like every other reasonable application that has been made for benefiting these noble gardens, was immediately granted. The important alterations are at the present moment in progress, and the house will soon be completed on the most approved principles; the glazing of the new portion being with sheet glass, and the heating partly on the tank system and partly with hot-water pipes.

Such has been the progress in renovating the Kew garden up to the present time.—But other and grander plans, more worthy of a great nation, are either in progress or under consideration. The excellent management of Lord Lincoln, and the skilful advice of Sir William Hooker, can hardly fail in rendering them worthy alike of the establishment and of the country; and we are persuaded that in the erection of them, utility, beauty, and needful economy, will be alike consulted. We know that the able architect and master of the works, Mr. Robinson, is devoting his best energies to the consideration of the plan of a magnificent stove, and it is probable that his designs will be completed in a few weeks. It is intended that this building shall be 200 feet long (exclusive of the approach or vestibule), 100 feet wide, and 55 high. Like the great Conservatory at Chatsworth, it will have a lofty centre surrounded by aisles (forming one interior), with a carriage drive through the middle.

But it was impracticable to find a site for so large a building within the old and narrow limits of the garden; and this impossibility compelled Sir W. Hooker to make application for an extension of the garden, from the adjoining pleasure-grounds, which in themselves are in the highest degree beautiful and ornamental, and are already stocked with fine trees. Seventeen acres were at first asked for; but if we are not misinformed, upon this plan being submitted to the consideration of the Duke of Cambridge, who, as well as the Duchess, takes the deepest interest in all that concerns the prosperity of the Gardens, and their being made available to the public good, H.R.H. saw that by taking into the Botanic ground an area of rather more than forty (we believe forty-six) acres, surrounded by a magnificent belt of wood, and including a fine piece of water, the form of the Botanic Garden, and what remained of the pleasure-ground, would be better preserved. This view was also taken by the Woods and Forests; and at this moment a light and elegant wire fencing—so light, indeed, that the grounds they separate appear to be but one—is actually in progress. The Garden, therefore, may now be reckoned to contain sixty acres, and a more suitable piece, whether as to extent, or beauty, or convenience as to distance from the metropolis, cannot, perhaps, be found in the world. The noble stove above alluded to will be erected on this area, a large portion of which will be occupied as Arboretum.

Having thus stated the facts connected with the Royal Botanic Garden, as far as they are at present within our knowledge, we cannot but advert to certain newspaper attacks upon the King of Hanover, in which that Sovereign is asserted to have "obstinately refused his consent to the proposed measures." This, and similar statements respecting Kew, tending to prejudice the King in the public mind, we have authority for asserting are wholly untrue. It is, indeed, not to be denied, that, at first, his Majesty showed some displeasure at the many alterations that had taken place, during his absence, in the domain which he had long been accustomed to look upon as regal and patrimonial property; but no sooner was the nature of the alteration in question explained to

him, with the improvement it would be to the property as viewed from the Palace and from the other Royal residences, together with the advantage the public would derive from it, than his opposition, if so it can be called, was withdrawn.

And now that we have alluded to this gossip of the day, we may as well contradict another story, of similar origin, which asserts that the King of Hanover would not permit the British Association to construct a pathway to an old Observatory in Kew Park, which has lately been placed at the disposal of that body. No such pathway was ever required by the Astronomer who formerly had charge of the building; the Royal Family never experienced the want of it when they visited it; and to construct it would be so costly that we do not for one moment believe that the managers of the British Association would think of misapplying the money they are intrusted with in so indefensible a manner. We believe the story, the origin of which we can easily guess, to be either wholly unfounded or an enormous exaggeration.

WHEN we were considering the means of increasing the comforts of agricultural labourers our attention was chiefly directed to their education, and the means by which they might be more independent of the vicissitudes arising from a greater or less demand for labour. A correspondent drew our attention to the subject of early and improvident marriages—one of the natural results of that reliance on parish charity, which should be a comfort to declining strength and helpless old age, but which the young and active should look forward to as a great evil to be avoided, if possible. In those countries where there is no legal provision for the destitute, the idea of the wants of sickness and old age is continually present in the mind of the daily labourer. It is a stimulus to exertion and self-denial; and no man would feel happy and comfortable if he had not some little store reserved for sickness or accident. Hence young men hire themselves out to farmers, who lodge and feed them, and they lay by the greater part of their wages for several years before they venture to marry. The young women do the same. In Prussia a man is not permitted to marry until he has a certain sum wherewith to begin the world. This would be looked upon as an intolerable tyranny in a free country like Britain; but of all arbitrary laws few are better calculated to increase the comforts of the lower orders. In other parts of Germany, where there is no such law, custom and prudence have the same effect: a young man of eighteen will receive from 8*l.* to 10*l.* a year wages, besides his board and lodging; much less than half this sum keeps him decently in clothes and linen. In ten years he has accumulated a sum sufficient to buy a cottage and a piece of land. The young woman, to whom he has been long engaged, has also been in service, and saved 3*l.* or 4*l.* a year, which at the end of a few years amounts to a sum sufficient to furnish a cottage. As soon as this is provided they marry, settle themselves comfortably, buy a cow and a pig; and while the husband continues to work for his old master, or for another, the wife takes care of the garden, the cow, and the pig. They have children; but these are no burden to them—as soon as they can run about they begin to be useful; they go to the village school, where they learn subordination and the rudiments of learning suited to their station; and in the intervals of school-hours they assist the mother in her domestic arrangements. Her time is fully and usefully employed, and if she occasionally works in the fields, it is at harvest, when good wages are paid. The husband returns from his work in the evening, and finds a hot supper ready,—if it were only some boiled milk and bread, but most commonly a mess of vegetables stewed with a piece of pork, or a kind of soup chiefly made from vegetables, with the addition of a piece of butter or a little meat, in which his brown bread is soaked.

The comfort produced by a hot meal, as well as its economy, can only be appreciated by those who are accustomed to it; and the use of skimmed milk or butter-milk for this purpose is one of the great advantages in keeping a cow. With a cow and a little industry there is seldom any poverty. The cow is kept constantly in the stall; grass is cut by the side of roads and fields, which otherwise would only produce weeds. A spot of Lucerne in the garden, or little field, may be cut five times in the season, if kept clean by weeding. In winter there are Turnips, Cabbages, Carrots, and Potatoes. A few Beans soaked in water add richness to the milk, and these are easily raised in the garden. The butter is mostly sold. A calf is reared or fatted, according to circumstances; and a great part of the husband's earnings can be laid by for times of accident or sickness. Should they be spared in health, the time may come when a little field may be purchased, or when a daughter is to be married, or a son set up in some small business or trade. When time has brought grey hairs there are dutiful sons and daughters, who will not see their aged parents overworked or in want of comforts in their old age. With the same affection

with which the parents nursed their infant children do these, when grown up, attend to the wants and comforts of their aged parents. There is no Union-house in which they may seek a dismal refuge; and to let an aged parent be in want, would cause the children to be looked upon as ungrateful monsters, not fit to be associated with. This picture is no doubt a favourable one, and there are exceptions; but in those countries where prudence is looked upon as a cardinal virtue the exceptions are few. Would that we could say that in Britain the exception was not the rule! Boys and girls marry without a bed of their own to lie on; they have no thought beyond the day; and if they have children and cannot maintain them, the parish must. They cannot, neither do they expect, assistance from their children. As soon as these can earn bread to maintain themselves, all connection with the parent often ceases. A poor widow who asks for charity, if she is reminded that she has able-bodied sons who earn good wages, and who have no families of their own to maintain, will answer, without casting any reflection on her children,—they spend their own money: and so they generally do, even before it is earned, at the beer-shop. Go into a clean neat cottage—for it must be allowed that in England the cottages are generally neat and clean—ask what they have for dinner, and unless there are boiled potatoes, there will be nothing hot. The husband has taken a piece of bread and cold bacon or cheese, and this he washes down with a pint of bad beer at the nearest beer-shop. The children, if they go to school, have a piece of bread and drink water. No comfortable meal at night; a cup of hot water miscalled tea, and at best a piece of bread and dripping with it, is the chief food of the wife, and if the husband comes home sober, which is not always the case, he finds nothing comfortable, after a hard day's work. If the wife earns anything, it is by occasional work in the fields in hay and harvest time, and in destroying weeds. This barely finds her a few clothes. When accidents or sickness lays the labourer on his bed, unless he belong to some club—which luckily is often the case—and has a weekly allowance, the wife goes to the vestry or relieving officer, and demands an allowance, which is given as a cheaper alternative to taking the whole family into the Union-house. Is this caused by a greater depravity among the British labourers? By no means, but simply by a disregard of prudence, and a want of foresight; by improvident early marriages; by beginning life without a provision for it, and by the utter despair of rising above that class who earn their daily bread, and eat their daily bread, literally taking no thought for the morrow. The greatest benefactor to the whole race of labourers would be the man who could impress on their minds that *prudence is a virtue, and improvidence a heinous sin.*—M.

ENTOMOLOGY.—No. XLVIII.

THE SMALL BROWN SCALE, *Aspidiotus Proteus*, nobis.—It was, I believe, upon the succulent leaf of some species of Aloe or Amaryllis that I observed a variety of Coccoi, which were transmitted to me as the Small Brown Scale; they were scattered over the shining upper surface of the leaf, as shown in the figure 1, which is a portion of the apex only, and they were more crowded near the base. The first variety I examined resembled an elongated mussel (fig. 2): it was horny, of a dirty testaceous colour, brown at the middle and along the margins, which were edged with white; at the tip, which was attenuated, was a blackish spot; some of them were pierced with a round hole, from which I conclude that they had been stung by a minute Hymenopterous fly, called *Encyrtus*;

most of them were empty, but beneath one of the largest I detected what I suppose to be a dead female; the horny proboscis was long and visible, and some of the legs were projecting from the side: the body was composed of many segments; the apex was rounded, and indistinctly denticulated, but the sides were strongly serrated by the angles of the segments (fig. 3).

Another species, but more abundant, of the same colour and very tender, formed oval spots upon the leaf (fig. 6); the anterior portion is orbicular (fig. 4), with a smaller ovate scale (fig. 5) on its back, and projecting over the margin;

* Curtis's Brit. Ent., fol. and pl. 395; and Guide Genus, 599.

this was easily detached, and must be one of the young which had just formed a shield; they both have an elevated ridge along the centre: this latter is the base of the large oval membranous one, which is dusky immediately behind it, with an ochreous and opaque band across the middle, the apex being rounded and membranous, as are also the sides. On lifting up the large orbicular scale I generally found the female dead, with a few elliptical purple eggs beneath the brown space just alluded to, with masses of whitish egg-skins, which, shining through the transparent shield, imparted an ochreous and opaque tint to the surface; occasionally a living female was disclosed sticking by its proboscis to the leaf; the outline was somewhat orbicular, the head narrow and semioval, the body of a dirty purple colour, the margin ochreous and crenated, but the hinder portion was denticulated and ciliated (fig. 7).

A third kind of scale was elliptical (fig. 8), with an oval shield over the head, often blackish, with transverse stripes; this occupied only one-fourth of the entire length, the remainder forming a separate membranous appendage, two-thirds of which describe an oval of a chestnut colour; beneath these scales either a pupa is concealed, exhibiting the black eyes, antennæ, and the slender apical process of the male, or the male itself, which is a mere atom, yet similar in form and colour to that of the "Small White Scale," which we lately described and figured: the antennæ are as long as the animal, clavate and nine-jointed, and hairy; from the tail issued a slender, horny bristle, nearly as long as the antennæ; the wings are large and rounded, with a subcostal and an oblique nervure; the anal setæ appeared to be wanting.

The Small Brown Scale, although unnoticed by authors, seems to be very abundant and perfectly distinct from the others. It evidently belongs to the second section, or *Aspidiotus*; and as it is undescribed I have given it the name of *A. Proteus*, from the variety of forms it assumes. I cannot, however, be certain that figures 2 and 3 may not be the scale and the female inhabitant of some other species; but as they were not united they cannot belong to the true *Coccoi*, and I know of no other *Aspidiotus* to which they can be referred. Obs.: all the figures are greatly magnified, and their natural sizes are shown upon the leaf, where the corresponding numbers exhibit the larger figures in their natural positions. It may be as well to state that fig. 3 is a very minute creature, and was taken from under a larger scale than those exhibited on the leaf at fig. 2.

That every endeavour ought to be made to extirpate the Scale insects on their first appearance cannot be too strictly insisted upon; for if this be neglected, all the plants, of a similar character at least, will shortly partake of the disease. "Mr. Knight found that a Nectarine in a pot taken from his Peach-house with a few of the Scales upon it, communicated them to the trees on the open wall, and during the succeeding summer and autumn, increased so as to extend over nearly a whole tree and half another. In the winter of 1832 a dressing of lime and flower of sulphur was applied to them, and in the following spring the insects wholly disappeared. In the spring of 1834, when the blossom-buds of Peach-trees were as large as hemp-seeds, a solution of lime, sulphur, and soot, was thrown on all the trees by an engine, and not a single blistered leaf was to be seen." In the course of our researches we have found many gardeners who have spoken very highly of a mixture of equal parts of soot and sulphur, which they had dusted over their Pine-apple plants with perfect success in eradicating the Scale, and at the same time causing no bad effects to the plants. On the other hand, some cultivators state that the application of sulphur is of no use. Surely a course of experiments might be pursued without much difficulty, which would lead to the truth as well as to beneficial results in these important matters. The best means of cure may be brought into disrepute by careless operators, after which no one has any faith in them, and thus scarcely a remedy that has been recommended, but has either been condemned as useless or asserted to be injurious.—*Ruricola*.

PLANTING.

I HAVE just enjoyed a great treat in a morning's ride through the woods of an old and respected friend in North Wales, who has adopted an improved system of planting and pruning, with such judgment and success that I am induced to communicate to you, for your own satisfaction, and for the benefit of your readers, his simple methods, and a few of their results. I am not without hope that by your recommendation, and his example, much might be done to render lands now uncultivated highly profitable, and add much to the beauty as well as the healthiness and productiveness of our country.

The system adopted is the plantation of poor soils and waste lands on the elevated parts of the country. He plants the summits of hills and ridges of elevated land, which are otherwise unproductive; and by his systematic method of pruning and thinning, obtains healthy, thriving, and profitable woods. By this means he not only improves the landscape by clothing its prominent features, but, as you will readily conceive, gives shelter and warmth to the surrounding parts of his property.

The circumstances in which these trees are planted are by no means favourable to the growth of timber. They are 800 feet above the level of the sea; the poverty of the soil is such that its actual value in 1816 was so low that the fee-simple did not exceed one pound an acre. It is necessary to keep in mind these circumstances, when considering the value of the results; the ground was formerly waste-land, covered only with Moss and Heath.

The plantations were made in 1814-16, and the trees which I saw on this visit were of such sizes as the follow-

ing. Six or seven years ago I visited these trees, which were little more than healthy plantations; they now extend at this place over some 500 acres. The progress they have made since that time has surprised me. The luxuriance of the foliage and the clear skin on the bark testify the health of the timber as well as the following list of sizes:

1843.
Size of Trees at Merquis, in Flintshire, 800 feet above the level of the sea, planted in 1814-16, the property of Dr. Thackeray, M.D., Cantab.

	Girth at bot. om.	Girth at 7 feet.	Height of clean straight timber.
	ft. ins.	ft. ins.	feet.

Oak . . .	2 10	1 7	18
Do. . .	2 10	1 10	18
Do. . .	3 0	1 10	20

The method by which these are produced is very different from the common method of pruning—the method of Dr. Thackeray is to prune always, not at stated periods of three and seven years,—not at stated seasons of the year, but every day all the year round. His system of treatment is rather the *prevention of injurious growth* than its cure. These 500 acres are in the charge of one woodman—and but one; but there he is all the year round, not with hatchet and saw, but with his pruning-knife or chisel—nothing larger. He does not allow large branches to flourish and then lop them off, so destroying much of the produce of the soil, and leaving in the timber the unsightly scars of extensive wounds. He corrects the errors in the young green twig before it has developed itself, and in the following manner,—and this is a second feature of his system, viz., by pruning always, which is the first, and by pruning downwards, which is the second;—perhaps I may add, by cutting close and leaving no stump, as a third maxim.

Thus, then, the woodman spends his days in the woods,—he examines each young tree, beginning at the top: here his object is to select the leading shoot, and he immediately removes all who dispute its supremacy. The strongest shoot is left without reference to direction, for if nearly oblique, it will nevertheless rise and become straight when its competitors are removed;—going down the tree, only the large branches are removed, leaving an ample foliage of the smaller branches to cover and feed the stem of the tree; thus all the nourishment goes to increase the stem, and there is nothing to divert this life-stream. The woods are unmercifully thinned, and health, light, and air pervade them. To me it seemed that the plants were happy—in short "the trees clapped their hands and sung in joy,"—not a decayed branch, or wound, or unhealthy plant was to be seen, and below luxurious fern and grass grew healthful and rank.

Such is the pleasing sight which has made one of the most agreeable and instructive morning rides I have ever enjoyed. The surrounding woods, which have not been educated under this gentle schoolmaster, present a lamentable contrast, and shew the value of such an education. Should you ever be in this country, I hope you will not fail to pay a visit to these woods, and I wish you would bring your readers with you to see and judge for themselves, and go and do likewise.—P. S. L.

AMATEUR'S GARDEN.—No. XXXIX.

In one of the best books that have yet been written on "The Culture of the Vine under Glass," the author, Mr. James Roberts, recommends a system of pruning, or rather disbudbing the Vine, which I believe, prior to the publication of the work, was peculiar to himself. The peculiarities of this system consist in pruning the Vines while the leaves are yet green, and of divesting the rods or spurs at the same time of such of the buds as are not required to produce fruit in the following season, the effect of which is to get the organisable matter prepared by 60 or 100 leaves concentrated in 20 or 30 buds, instead of being divided among three times that number, as it would be on the old or general system of management. This operation is founded on a physiological law, which is brought into practice in the every-day occupation of the practical gardener, viz., the concentration of the sap. Thus we all know that by divesting a healthy tree of the greater part of its fruit in the early part of the season, the sap will be concentrated in that retained, and it will become much finer in consequence—a circumstance taken advantage of in the preparation of Cucumbers for exhibition and many other crops; and we are equally well aware that by pruning a young tree very closely in the autumn, it will break much stronger in the following spring than if it had been left unpruned; and why? because the sap is more concentrated. Now, in Mr. Roberts's practice, he not only takes advantage of the concentration of the plant's resources, but he also husband the plant's strength, while it is still capable of being improved thereby, and therefore removes all the superfluous wood and buds (retaining the leaves uninjured) early in autumn, or as soon as the wood is tolerably ripe, and growth or elongation has to a very considerable extent ceased; and the result is, he gets an immense volume of highly elaborated sap concentrated in the plant; the buds become plump, full, and highly excitable, so that by the least application of

heat in the forcing season, the buds burst from their bonds with all the strength of giants refreshed. In this way Mr. Roberts gives his plants no more to do than they are quite capable of performing; and thus he gets regular crops of large bunches from the top to the bottom of the Vine, and not two or three large bunches at the top of the plant, with a few spindlers, or none at all at the bottom, as is generally the case.

Ten days back, I took two young Vines, of equal strength, and growing side by side, and having pruned them to the length intended for fruiting next season, I divested one of half its buds, and this morning the buds on the plant so treated are at least three times the size of those on the plant not disbudded, and so satisfied am I with the result, that I intend to disbud the whole of my Vines without delay. The only thing to fear is the bursting of the buds prematurely; but if a lateral or two are left on the most vertical part of the Vine, this cause, of fear is removed.

Now, as the Vines in the greenhouses of a great number of Amateurs are generally in a very unfruitful state, I introduce this system of management to their notice with the hope that it may be of use to them, and introduce a little order and regularity where hitherto all has been confusion. In the management of out-door Vines it is also equally applicable; in truth, in the management of all Vines whatever, because it is a system of nursing the strength of the plant, and therefore must be good. I will, however, let Mr. Roberts speak for himself as to the method of performing the operation:—"You may proceed to disbud, beginning at the bottom of the Vine, leaving a bud you think well placed on the side of the shoot, (preferring that to either the top or underside,) then cut clean out the two following, leaving the fourth, taking out the next two, and so on till you reach eight or nine feet in height, as to that length the cane must be cut back; proceed again at the bottom, disbudding the other side in the same manner, so that in that length you will be able to leave eight or ten permanent eyes to form fruit bearing spurs for the following year, or five on each side. I particularly caution against injuring the leaves when the bud is cut out, as they may not naturally drop for weeks after, and may yet be useful in more perfectly maturing the stem and remaining buds. In a few days the wounds or cuts will have dried up, touch them with a little paint, keep them cool and dry until the leaves have commenced dropping generally." This system of disbudding may seem severe, and though the Amateur can use his own discretion as to the number of buds taken out, it must be recollected it is recommended by a gardener of sound practical attainments, and is therefore not a theoretical speculation. Those who are interested in Vine culture would do well to peruse Mr. Roberts's publication.—*W. P. Ayres, Brooklands.*

HOME CORRESPONDENCE.

Encouragement to Planters.—In the *Chronicle* of last week is an article of some length under this heading; and so far as its tendency is to encourage planting, I should say everything in its favour; but it holds out very conspicuously also encouragement to pruning, which cannot, in my opinion, be too strongly deprecated. Having formerly written so many articles against pruning, I need not take Mr. Humphreys' paper in detail, but merely call on all proprietors and managers of young woods and plantations to consider well what they are about before they adopt the practice either of Dr. Thackeray or that recommended by the "highly-respectable Scotch gentleman residing near Cupar, in Angus." Judicious thinning is absolutely necessary; but systematic pruning is unquestionably injurious; and however thriving appearances may be presented by some plantations that have been pruned, yet I maintain that they would have been better without it, and that their thriving appearance is in spite of the pruning, and not the effect of it. I am therefore anxious that it should be published to all the planting world that pruning is rather a discouragement, inasmuch as it retards rather than accelerates the growth of trees. It is much to be lamented that woods and plantations generally are not better managed than they are; and in as far as the efforts of Mr. Humphreys tend to correct that evil, I cordially bid him God speed: for one cannot walk or ride in any direction, but for a very short distance, without having taste and feelings shocked by crowded or mangled plantations.—*Quercus.* [We quite agree.]

Destruction of Small Birds.—"Este," referring to an article in *Gardeners' Chronicle* two or three weeks back, on the Destruction of Small Birds, begs to say that he never allows a bird to be killed. He never has the Caterpillar. In a neighbouring parish, where a Small Bird Club exists, they are yearly overrun with vermin.

Fruit without Leaves.—In addition to the statements already made, respecting the maturation of fruit upon shoots devoid of leaves, I can give you another instance. There is here three healthy good-sized Peaches growing upon a shoot which has not an atom of leaf upon it, from the point to three inches below the lowest fruit. The end of the shoot has died back nearly to the first fruit. I would scarcely have believed this upon the testimony of another; for I had imbibed the idea that it was essential to the well-being of the fruit, both in swelling and ripening, to have a few leaves upon the end of the shoot, for the purpose of attracting the sap. This is one thing I have had to unlearn. Gardeners have many things to unlearn before they have a perfect knowledge of their business.—*R. H., Cantley, near Doncaster.* [This matter seems to be misunderstood. The necessity of a leaf above a fruit before swelling off seems clear; but after it has once begun to swell, the leaves above it may, no doubt, be dispensed with, for reasons which we cannot now find

room for. Would "R. H.'s" Peaches have stoned if they had had no leaves beyond them?]

Interment of Bees.—A correspondent who signed himself "Yeoman" favoured your readers with a simple and easy method of preserving Bees during the winter, namely, burying them in leaves several feet deep. I made the trial with one hive of Bees in the winter of 1841-42, but from some cause or other the experiment was unsatisfactory, as the Bees were all dead when I took them out in March, 1842. "Yeoman's" communications were published in the autumn of 1841, and he mentioned that he found his plan very successful. It appears to me that it will be difficult to procure a sufficient quantity of leaves dry enough to cover three or four hives; at any rate, they would not be sufficiently free from moisture to be used for that purpose, unless they could be dried in a kiln or oven. I should be obliged if "Yeoman" will inform me if he still continues to inter his Bees during the winter, and whether he is still successful. I shall also be glad to know if dry Wheat-straw will answer to cover the Bees instead of leaves: it might be cut into short pieces with a chaff-cutting machine, if required. What is the proper time to put the hives into the leaves, and what sort of house or building is most proper? Ought the Bees to be interred on a frosty day? Should they be stopped up with perforated zinc before the holes? It is stated by all writers on Bees—at least in all the works I have consulted—that damp is very injurious to Bees, and I scarcely conceive that leaves are dry enough; but if "Yeoman" will give us a few lines in an early Number of the *Chronicle*, I shall be extremely obliged to him. Most of the cottagers in my neighbourhood destroy their Bees with sulphur; could they not be smoked with the puff-ball recommended by Taylor, Cotton, and others, put into a hive, and buried in the way "Yeoman" recommends?—*W. E., Suffolk.*

Saline Manure.—Mr. Potter kindly and promptly answered the queries of a "Paper-maker" respecting his "retort refuse" in the *Chronicle* of the 26th August, when he hoped the result of any trials might be communicated. I have not had time to make the trials he suggests, but one or two others of a practical nature which I made during the past and present year are quite at his service. Last autumn I carted into a Wheat eddish (?) a quantity of mud washed down from off a sandy soil, intending in the spring to carry it over the land and sow it with Oats. To this mud I put about one cart-load to ten of the refuse, turning it over twice during the winter, and breaking the hard pieces, that it might amalgamate the better with the mud. This I carted over my field in February, leaving a small portion without any. In March I sowed my Oats; they came up, and looked well, promising a good crop; but after a little time I perceived a failure in that part of the field that was not covered with it. On examining the spot more closely, I concluded the worm had got into them, and from that time it continued so to destroy the root of the Corn, that at harvest I had none, in comparison with the other parts of the field; but a luxuriant crop of weeds, &c. Still I must state further that the plant of Oats was destroyed a little beyond where this was not laid, but that only for a small space. I tried it also this summer for Swede Turnips. I carted together some mould and ashes, with a little dung, and added, as before, some of the retort refuse, turned it together two or three times, and laid it over my field (about 15 small cart-loads to the statute acre), ploughed it in, and then, after some time, ploughed it again, bringing it to the surface, and sowed my Swedes, putting over a few ashes also. I considered my season for Swedes a very unpropitious one, for the weather was so wet, and the subsoil being clay, I could not sow till the 27th June, and then, after repeated rolling and harrowing, I could not sufficiently pulverise the soil; but my Swedes soon came up, and I have never had any grow faster, or promise better, than they do at present. I must, therefore, consider this refuse very beneficial as I now use it. With regard to the manganese that is left behind, I have no doubt the quantity is considerable. The foreman I now have in the paper-manufactory had been for some years superintending a concern of the same kind in Sweden; his master there was a chemist also, and he was aware of the manganese left, and tried to separate it by washing, but he could not sufficiently dissolve it for that purpose; and having a large quantity of manganese by him, he is putting this refuse by till there is a large accumulation, and then purposes putting up some simple machinery to grind it in water, washing away all the saline and other refuse (leaving the manganese behind), as he had no thought of using that as a manure. But there is another refuse we make, which he did use for that purpose; it is the liquid we draw away after boiling our rags in lime; this liquid he carried to a distance in wooden shoots over a piece of pasture-land; but on applying it, it was too powerful, and killed the Grass; he then had a large place dug out, into which he turned this liquid, filling the hole with any description of refuse he could collect, and then after a sufficient time carried it over his land, and found it very beneficial in promoting vegetation. We boil our rags for several hours, so that what pieces of woollen rags may be mixed with the others are dissolved. May not this add something to the vegetating properties of this liquid?—*J. S.*

Potter's Guano.—I have read with interest your recommendations of Potter's Guano, and as I have made an experiment with it for Wheat, the result, as far as I at present can give it, may be interesting. For many years I have been convinced that the present improved knowledge in chemical science would discover some concentrated dressing for land that would equal, if not surpass, in usefulness and cheapness, much of the common manures now in use. I was, therefore, greatly pleased to

observe lately the attention of scientific men turned to this subject; and having accidentally seen some circulars in reference to Potter's Guano, and understanding that Mr. Potter himself was a practical chemist, I determined to give the dressing a fair trial for Wheat. For this purpose I prepared a field in the usual way, and dressed one-third of it with the Guano according to the directions sent with it, and the other two-thirds with common manure; and the result has, in every respect, answered my expectations. During the whole year the crop on that part had the advantage over the other; and towards harvest, it was very visibly superior, as was evident to all who saw it, though the other was a very good crop; it being thicker on the ground, the straw longer and firmer, and the ears much larger, fuller, and heavier. I will also observe, that I took several persons into the field, and, as a trial, asked them to point out the part where the Guano was put on; this they always did exactly. I may add, that at harvest, when the crop was cut, I was from home, and the workmen who were employed, eight in number, were sent by a friend, who as soon as I saw him on my return told me that I had a very excellent crop generally, but much the better where the Guano had been. When the Crop was carried, I was pleased to hear the men remark how very heavy the sheaves were, and large the ears of Corn. So far, this trial of the Guano has been perfectly satisfactory, and I intend to employ it again more extensively. I regret that I am not able just yet to thresh the crop, but as soon as this shall be done, I will send you the result in quantity and weight.—*George Wilkins, Wis, near Harwich.*

Bees.—In criticism and controversy it is difficult to avoid giving offence. This is applicable to myself. In the *Chronicle* of Sept. 9, Dr. Bevan complains of the "tone which I adopted towards his esteemed friend, Mr. Golding." If I have gone beyond bounds I am very sorry for it, and sincerely hope that expressions I may have inadvertently used will in no way "deprive our apiarian brethren of farther information from the same source." My observations on one point in the "Honey Bee" are, I am happy to say, taken by Dr. Bevan in the true light. I accept his kind offer of a copy of the second edition of his work on Bees, with many thanks, and I shall regard it as a great favour from the able Author.—*John Wighton.* [If it is sent to 3, Charles-st., Covent-Garden, it will be forwarded.]

Mulberry.—Lop off a straight branch, at least 8 ft. long, from a large tree in March, the nearer the trunk the better; clear away every little branch, and leave it quite bare; dig a hole 4 feet deep, plant the naked branch, and make it firm in the ground; leave around it a little basin of earth to hold water, and if the season be dry give it every morning a bucketful of water throughout the summer. In two years it will have made a good head and will bear fruit.—*Zeta.*

Gardeners' Association.—From an advertisement in the *Chronicle* of last week I learn that the Gardeners in the neighbourhood of Stoke Newington are about to form an Association for Mutual Instruction. I am glad to hear of this, as I consider it to be essential to the happiness and well-being of the Gardening community. Having for some time witnessed the scarcity of employment for Gardeners, I think it high time that they should adopt for themselves some means of preventing the distress that appears to await them, and from so many noblemen and gentlemen reducing their establishments it is evident that situations will become still more scarce. There are many good practical Gardeners at present out of employment, and before this distress becomes more prevalent, I beg to call the attention of my brother Gardeners to the necessity of forming a Society.—I will say a Joint Stock Company, and let the shares be 1*l.* each; and out of the number a Committee may be chosen to frame rules and regulations for conducting the Society. I may suggest the further practicability of establishing a garden, to be conducted by a practical and confidential man, where forcing might be carried on in all its branches, and, if the funds should allow, likewise ornamental gardening, and when any member of the Society shall be thrown out of employment, if he bear a strictly moral and sober character, that he should be employed, and receive 15*s.* per week, until something better offer for him. I beg leave to observe that all Gardeners should give this a fair and weighty consideration, as it is in their power to provide a comfortable livelihood for many of their now starving brethren, and as situations are generally uncertain, we do not know how soon we may want employment ourselves, and when such a Society as that proposed is once formed and set a-going, it will pay itself, and will not require yearly subscriptions.—*William.*

Fumigating.—My standard Rose-trees being very much infested this year with the Green Fly and other insects, I had recourse to the following useful, and at the same time very cheap and simple, contrivance to rid myself of them. I ordered my carpenter to make me a box not unlike a watchhouse, of half-inch deal, seven feet high and four feet in diameter, of an octagon shape, with one of the sides made to open like a door, with a hole an inch in diameter three inches from the ground to admit the nose of the bellows. I then lifted it over one of my Rose-trees, and placed the fumigating apparatus in the interior; after a few minutes' application at the bellows I had the pleasure of seeing those detestable pests fall to the ground. After a good syringing the trees looked as healthy and were as free from insects as I ever saw any. Of course the box may be made of any size.—*G. Young, Hulseing.*

Clover Dodder.—On looking through a small field of Khelat Lucerne, I found a great many patches of the enclosed plant, which I strongly suspect to be the Dodder

to which you have recently been calling attention. Wherever it has appeared the Lucerne is either dead or dying, and at all events whether it is the Dodder or not, it appears to be something equally pernicious.—*B. Milne-Thorpe*. [It is the Clover Dodder, certainly; and this is an interesting fact connected with the probable introduction of this pest.]

Transplanting, &c.—I am very much obliged to your correspondent "Timothy" for what he has stated in the *Chronicle*, at p. 645, and I am fully aware of the truth of what he states. I take blame to myself for not expressing myself differently when speaking of the Pear-tree mentioned at p. 630. I should have said that it was never expected to survive such a check; indeed, it was never put into the ground after it was taken from the place which it had occupied for about eight years before. To save any further doubt, allow me to say, that it was no sooner out of the ground, than it was chopped into pieces. The height of the Pear-tree was about twenty feet; it was trained against a south wall, and its shoots were only allowed to be produced on one side of the main stem. These shoots ran more than five feet along the wall, and produced a good quantity of fruit. It was by the method mentioned by "Timothy" that the Rose-tree was saved; and I am quite sure it is impossible to save a Pear-tree of any size, if removed in the month of June.—*Ortolano*.

Vine Disease.—You are certainly right (see "Notices to Correspondents," p. 649) in imputing the want of colour in my Hambro' Grapes to the disease of the leaves. But the cause of the disease puzzles me. The house is twenty feet long by twelve wide, with the usual height. I have about seven cart-loads of tan, besides heating with fifty feet of four-inch diameter hot-water pipe. I seldom allowed the heat to be more than eighty degrees. I gave air by opening partially two lower and two upper sashes. Perhaps the current of air may have caused the mischief. I have another house about the same size as the one just described; here the sashes are so fastened that I cannot ventilate by them. Here I have no tan, and here the foliage of the Vines is in full vigour, whilst the Grapes, Hambro' and Esperione, are as black as Sloes; in short, I am puzzled. Perhaps you can throw some light on my failure from an examination of the leaves I have sent. The roots of all the Vines in both houses are from the same bed or ground, where nothing is allowed to interfere with their growth.—*A Subscriber*. [From the appearance of the leaves sent to us, we should judge that the mischief has been caused by allowing a current of cold air to pass over the leaves while tender, and perhaps wet with dew.]

Vines.—I perceive that a correspondent has been endeavouring to prove the propriety of a certain system of Vine culture by arguments drawn from a passage in the Gospel of St. John. Now I think it would be much better if Scripture were not brought forward in cases where Scripture can be no authority at all. The object of the mission of the Great Founder of Christianity to this world was one of far higher import than the improvement of Horticulture, or of any other of the arts of life; consequently, while He gave His followers a set of rules whereby to regulate their lives, which, unlike any other system of Ethics ever promulgated, was incapable of improvement, suited at once to every man in every age, adapted alike to nations just emerging from barbarism, and to those which have attained to the highest pitch of refinement, He left science just in the state in which He found it, to await the slow progression of ages for its development. Whenever the arts of life are mentioned in the sacred writings, they are merely alluded to in order to illustrate something else. In the passage in question, it was not necessary that the principles of Vine culture referred to should be the best that could be adopted; but it was absolutely necessary that they should be such as were at the time universally understood and acted upon. Had they been one step in advance of the age, the illustration would have required a mental effort to understand it, and consequently would not have answered its purpose. It appears to me that we might as reasonably employ women to grind our Corn by manual labour, in the Eastern fashion, as attempt to cultivate our Vines by the rules of Scripture. I would say, in conclusion, let your correspondents in their life and conversation adhere as closely as they please to Scriptural rules; let them make the Scriptures (to use their own expressive language) "a lamp to their feet, and a lantern to their paths;" but they must seek some other guide in the culture of their Vines.—*W. H. M., Trentham*.

Petunias.—From two or three pods of Petunias, viz., the one called "scarlet," but which is in reality a bright rose-colour, I have raised this year seedlings of several shades of peach-blossom and lilac, deep rosy-purple, and pure white; also white, with the outside shaded with lilac, and dark eye, without any hybridisation.—*E. J.*

Double Stocks.—In compliance with your suggestion I have minutely examined flowers of the Double Stock, and I find them to be decidedly destitute of male organs of fructification (and, of course, without the female ones, as we never have seed from the double flowers). I was in the Isle of Wight last week, and I consulted two or three eminent Stock-growers on this subject, and they were not aware of the double flowers being useless. At my request, each examined a flower, and their opinions exactly agreed with mine, viz., that they are entirely destitute of either stamens or pistils. Your correspondent "Quercus" agrees with me in this respect, and I hope to learn, through the medium of the *Chronicle*, the opinions of others respecting this beautiful flower.—*Timothy*.

A Petrified Tree.—At the stone quarry of Mr. Littler, in the outskirts of St. Helen's, is a petrified tree, apparently a relict of an antediluvian period, which has attracted many

visitors. The lower part of the trunk of the tree, which is about 5 feet high and 2 feet in diameter, is in a perfect state, and stands out in alto-relievo from the side of the quarry in the solid stone, and at the depth of about 25 feet from the surface. The top root is quite discernible, and the course of many of the smaller roots is distinctly marked in the stone for the space of several feet. The branches and upper part of the tree have been cut away in the course of excavation. The bark, apparently from the contact with it of a slight stratum of coal, has a blackish appearance, and beneath the roots there are also traces of coal, in which one of the roots has been imbedded. The rock, to the depth of several feet below the tree, and at least 10 yards below the surface of the soil, is strewn with vegetable fossils, some of which are marked in longitudinal or transverse ribs, whilst others bear the impression of leaves, &c. It is the intention of the proprietor of the quarry to present this petrified tree to the Liverpool Mechanics' Institution.—*Facile*.

Camelina, or Gold of Pleasure.—There is a report that the seed of this, when crushed into cakes for the feeding of cattle, has an acrid quality which disagrees with them. Perhaps some correspondent may be able to satisfy the public on this point. As it appears not to exhaust the soil, this plant may be more safely cultivated than Flax, for the mere purpose of producing oil and oil-cake, though not available for thread.—*C. M. S.*

Schomburgkia tibicinis.—I send you the following extract from the letter of a friend resident in Honduras, to whom I am indebted for specimens of this plant, which so seldom flowers. He says, "You talk of the Cowhorns not flowering with you, or but once. When round at the New River lately in the dry season, they were all in flower, of a pale straw-colour, (some are of a deep pink) hanging over the water, where there was plenty of air and sun. Now at home, it struck me that your hothouses were far too moist and confined, at least for this sort." It would seem that there are very distinct varieties of this species, and that the description of our friend, Mr. Skinner, must not be thought too glowing from the pale variety which flowered at Lady Auckland's.—*Pons Aëli*.

Rats.—In answer to your Correspondent "Devonensis," at p. 574, I beg to prescribe a cure. Take powdered Assafoetida 2 grains, Essential Oil of Rhodium 3 drachms, Essential Oil of Lavender 1 scruple, and Oil of Aniseed 1 drachm, and prepare them as follows:—first, mix the Assafoetida well with the Aniseed, then add the Oil of Rhodium, and still mix all in a mortar, after which add the Oil of Lavender; then cork all close in a bottle until wanted. Next, procure a large wire cage-trap, into which introduce your mixture on a small saucer, or any such vessel; close down the trap and place it in some conspicuous part of the garden, and leave it to work for itself, and communicate the result.—*An Irishman*.

Peat.—I think it is Dean Swift who says, that, however closely an assemblage is crammed or wedged together, one thing is remarkable, viz., that there is always plenty of room upwards; but then the difficulty, the *vexata questio*, arises, how are we to get at it? I am strongly reminded of this by the piece of kind information communicated by your correspondent "Thomas Cowan,"—p. 629, of the *Gardeners' Chronicle*—who advises me to use pulverised dry peat to protect the roots of my vegetables, till "Moorland Willie" unfolds to view his marvellous "mackintosh." I do not know where "Churchill Gardens" are situated, perhaps in the "Moorlands" also, as the material recommended is not to be found everywhere. Having been bred in a part of the country—

"Mong Moors and Mosses, many, O!"

I am very well acquainted with the virtues of pulverised peat; but here, in regions of chalk and clay, Dean Swift's question arises—How am I to get at it? I know where there is plenty—400 miles off, and some nearer—but, even in this age of railways and steam-boats, it is as much like a *terra incognita*, and as inaccessible to me, as "Moorland Willie's" mackintosh; but, *à propos* of peat earth: when a youth, I went first to work in a new garden, one half of which was made out of a complete quagmire, the other half a dry sandy bank or acclivity. When the former remained in its natural state it consisted of a substance something like semi-liquid, with a tough surface of tangled vegetable matter, and when drained, there was found immersed old Roman millstones, and some other antiques; but when dry and used for garden crops, it was in consistence a light porous peaty earth, and its productions were of a character I have never seen excelled. Every kind of garden crop grew in it with the utmost luxuriance—especially Celery and Cauliflowers; the former came out as white as if new washed—some of the latter measuring from 20 inches to 2 feet over the crown, taking the convexity. Ever since, I have had a favourable opinion of peat as a garden soil, and if this should attract the notice of any of your numerous readers who have had the privilege of gardening on peat, I should feel gratified to learn the result of their experience.—*Quercus*.

Fungus on Bark-beds.—In the *Chronicle* of August 12th I observed in the "Notices to Correspondents" that an inquiry had been made respecting a method to destroy the Fungus which springs up in Bark-beds, which question, with your permission, I will answer; as I have been very much annoyed with it this season myself, inasmuch that I was compelled to turn a great many plants out of their pots in order to clean the roots, which was effected by brushing the Fungus completely off with a brush, and this, as I anticipated, has had the effect of wholly saving my plants, and I am happy to state that I have not lost one since in consequence; although it had spread through the mould in the pots, and for some inches up the stem. Before replacing the plants, I watered the bed well all

over with boiling water, and covered it with salt, which quickly dissolved, and in half an hour afterwards I covered it over again with an inch of sand, to prevent the bottom of the pots from coming in contact with the salted tan, and I can safely affirm that I have never seen the least appearance of anything of the kind since.—*D. Z.*

Onions.—The Onion seed was remarkably good this season, and in many places the crops were thicker than what they were intended to be. After some of my beds of Onions were thinned, some of the thinnings were left in the ground. In a short time after they were pulled, I observed that the bulbs swelled much faster than those that were left growing;—the outside leaves of those that were pulled soon withered, and one or two of the heart leaves continued green for some time, after which they died. The bulbs were as large as common marbles, and had the appearance of being firm and ripe, while those that were left in the beds were scarcely half the size, at the time when the thinnings were ripe, although they were in a healthy growing state. Would the leaves draw nourishment from the atmosphere, to swell the bulbs when the roots were dead?—*Peter Mackenzie*.

Hawthorn.—There is a brown knot-like substance common upon the young shoots of the Hawthorn hedges; it is full of small apertures. The mouths of the openings appear to be surrounded with fringes, something like the Peristome of Mosses. Is it a Fungus, or the work of insects?—*P. M.* [This is the Fungus called *Æcidium laceratum*.]

PROCEEDINGS OF SOCIETIES.

FLORICULTURAL SOCIETY.

Sept. 26.—This Dahlia exhibition is confined to class showing, and to the exhibition of seedlings. There were some remarkably fine blooms set up, and it was the best show of seedlings we have seen this season. The prizes were awarded as follows:—*AMATEURS AND GENTLEMEN'S GARDENERS: White-tipped Purple*, 1, Mr. Wildman, Brown's Miranda; 2, Mr. Wildman, Brown's Queen of Trumps. *White-tipped Pink*, 1, Mr. Procter, Ansell's Queen; 2, Mr. Turville, Whale's Phenomenon. *Dark*, 1, Mr. Ford, Turville's Essex Triumph; 2, Mr. Wildman, Turville's Essex Triumph. *Lilac*, 1, Mr. Turville, Turville's Essex Bride (seedling, double prize awarded); 2, Mr. Wildman, Widnall's Queen. *Crimson*, 1, Mr. Wildman, Smith's Sir R. Sale; 2, Mr. Ford, Springfield Rival. *Purple*, 1, Mr. Ford, Brown's Blue Bonnet; 2, Mr. Procter, Girling's Indispensable. *Rose*, 1, Mr. Ford, Mitchell's Mrs. Kelly; 2, Mr. Ford, Jackson's Lady Cooper. *Scarlet*, 1, Mr. Ford, Thompson's Vivid; 2, Nil. *Yellow-tipped*, 1, Mr. Wildman, Hudson's Princess Royal; 2, Mr. Turville, Hudson's Princess Royal. *Yellow*, Mr. Procter, Dodd's Prince of Wales. *Orange*, Nil. *White*, Nil. *SEEDLINGS, 1843: 1st Class: Red*, Mr. Procter, Nonpareil. *2d Class: 1, White and Purple*, Mr. Gaines, Matilda; 2, *Dark*, Mr. Bragg, Monitor; 3, *Deep Rose*, Mr. Keynes, Princess Alice. *NOT PLACED: 1842, White*, Mr. Riley, Pearl; Mr. Dodd, Orange Superb; *White and Purple*, Mr. Davis, Beauty of Birmingham; *White and Pink*, Mr. Bushell, Emma; 1843, *Yellow*, Mr. Gaines; *Scarlet*, Mr. Procter; Mr. Cook, Notting-hill Rival. *NURSERYMEN: Dark*, 1, Mr. Brown, of Slough, Turville's Essex Triumph; 2, Mr. Bragg, of Slough, Turville's Essex Triumph. *Rose*, 1, Mr. Bragg, Lady Cooper; 2, Mr. Brown, Mitchell's Mrs. Shelley. *White*, 1, Mr. Keynes, Keynes' Emma Noke (seedling, double prize awarded); 2, Mr. Bragg, Bragg's Antagonist. *White tipped with Pink*, 1, Mr. Brown, Widnall's Marchioness of Exeter; 2, Mr. Bragg, Widnall's Marchioness of Exeter. *White tipped with Purple*, 1, Mr. Brown, Brown's Lady St. Maur (seedling, double prize awarded); 2, Nil. *Scarlet*, 1, Mr. Bragg, Thompson's Vivid; 2, Mr. Brown, Thompson's Vivid. *Purple*, 1 and 2, Mr. Bragg, Silverlock's Candidate and Brown's Blue Bonnet. *Crimson*, 1, Mr. Keynes, of Salisbury, Keynes' Standard of Perfection (seedling, double prize awarded); 2, Mr. Gaines, of Battersea, Stanford's Victory of Sussex. *Yellow-tipped*, 1, Mr. Bragg, Hudson's Princess Royal; 2, Mr. Brown, Hudson's Princess Royal. *SEEDLINGS, 1842, (Six blooms): 1st Class: Mr. Keynes, Standard of Perfection. 2d Class: Lilac*, 1, Mr. Turville, Essex Bride; 2, Mr. Sperry, Lady Antrobus; *White*, 3, Mr. Keynes, Emma Noke (neat and compact, but rather pink, and requires bleaching); 4, Mr. Bourne, Model; 5, Mr. Brown, Rembrandt (fine form and petal, but not good centre); 6, Mr. Brown, Raphael (fine form and petal, but not good centre); 7, Mr. Brown, Orange Perfection (low centre). The third and final competition for the 10l. Prize, offered for the best White, was decided in favour of Mr. Bragg's Antagonist.

COUNTRY SHOW.

Salt-Hill Dahlia Show, Sept. 22.—Names of the flowers in the winning stands, as promised last week.—*1st CLASS, AMATEURS.—12 blooms: 1*,—Emmerson, Esq., Bath, for Mrs. Shelley, Widnall's Queen, Candidate, Phenomenon, Indispensable, Bedford Surprise, Widnall's Eclipse, Pickwick, Beauty of the Plain, Essex Triumph, Lady Cooper, Hudson's Princess Royal; 2, Mr. Howard, Burnham, for Dodd's Prince of Wales, Admiral Stopford, Mrs. Shelley, Beauty of Sussex, Lady Cooper, Bedford Surprise, Widnall's Queen, Phenomenon, Essex Triumph, Hudson's Princess Royal, Vivid, Sir R. Sale; 3, Mr. Skelton, Ivor, for Andrew Hofer, Dodd's Prince of Wales, Adm. Stopford, Duchess of Richmond, Walter's Unique, Perpetual Grand, Hudson's Princess Royal, Antagonist, Widnall's Queen, Essex Triumph, Mrs. Shelley, Sir F. Johnstone; 4, Mr. Headley, for Cambridge, Phoenix, Lady Cooper, President of the West, Essex Triumph, Victor, Dodd's Prince of Wales, Duchess of Richmond, Confidence, Hudson's Princess Royal, Sir F. Johnstone, Man of Kent, Phenomenon. *2d CLASS, GARDENERS.—12 blooms: 1*, Mr. Maher, Hawthorn-hill, for Grand Baudine, Phenomenon, President of the West, Hudson's Princess Royal, Mrs. Shelley, Dodd's Prince of Wales, Euclid, Admirable, Essex Triumph, Bedford Surprise, Perpetual Grand, Widnall's Queen; 2, Mr. Turville, Springfield Lyons, for Northern Beauty, Vivid, Indispensable, Widnall's Queen, Phenomenon, Essex Triumph, Dodd's Prince of Wales, Lady Cooper, Hudson's Princess Royal, Grand Baudine, Springfield Rival, Mrs. Shelley; 3, Mr. Ford, Pinkney's Green, for Admiral Stopford, Duchess of Richmond, Blue Bonnet, Great Mogul, Hudson's Princess Royal, Catleugh's Eclipse, Lady Cooper, Grand Baudine, Marchioness of Exeter, Mrs. Shelley, Widnall's Queen, Sir R. Sale; 4, Mr. Weedon, Hillingdon, for Mrs. Shelley, Bedford Surprise, Widnall's Eclipse, Antagonist, Widnall's Queen, Burnham Hero, Hudson's Princess Royal, Beauty of the Plain, Lady Cooper, Grand Baudine, Essex Triumph, Dodd's Prince of Wales. *3d CLASS, NURSERYMEN.—24 blooms: 1*, Mr. Brown, Slough, for Lady Cooper, Competitor, Adm. Stopford, Springfield Rival, Asmodeus, Mrs. J. Richardson, Springfield Purple, Mrs. Shelley, Hudson's Princess Royal, Great Mogul, Widnall's Queen, Sir R. Sale, Vivid, Pickwick, Phenomenon, Candidate, Catleugh's Eclipse, Grand Baudine, Beauty of the Plain, Essex Triumph, Marchioness of Exeter, Andrew Hofer, Bedford Surprise; 2, Mr. Bragg, Slough, for Vivid, Great Mogul, Admirable, Candidate, Lady Cooper, Admiral Stopford, Springfield Purple, Marquis of Lansdowne, Widnall's Queen, Indispensable, Perpetual Grand, Marchioness of Exeter, Essex Triumph, Hudson's Princess Royal, Catleugh's Eclipse, Phenomenon, Burnham Hero, Beauty of Sussex, Col. Baker, Mrs. Shelley, Duchess of Richmond, Catleugh's Tournament, Paul Fry, Andrew Hofer; 3, Mr. Keynes, Salisbury, for Duchess of Richmond, Mr. J. Richardson, Girling's

Prince of Wales, Dodd's Prince of Wales, Mrs. Shelley, Admirable, Beauty of the Plain, Widnall's Eclipse, Queen of Lilacs, Marquis of Lansdowne, Ne Plus Ultra, Hudson's Princess Royal, Springfield Purple, Twyford Perfection, Admiral Stopford, Phenomenon, Perpetual Grand, Essex Triumph, Catleugh's Eclipse, Widnall's Queen, Bedford Surprise, Competitor, Conservative; 4, Mr. Harrison, Downham Market, for Widnall's Eclipse, Hudson's Princess Royal, Grand Baudine, Miranda, Suffolk Hero, Indispensable, Lady Cooper, Essex Triumph, Bridesmaid, Catleugh's Tournament, Admiral Stopford, Penelope, Dodd's Prince of Wales, President of the West, Metella, Mrs. Shelley, Beauty of the Plain, Beauty of Sussex, Norfolk Hero, Maria, Marchioness of Exeter, Burnham Hero, Favourite, Hero of Stonehenge.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

RHODODENDRON FRAGRANS. Fragrant-flowered Rose-bay. (*Hardy Evergreen*.) Ericaceae. Decandria Monogynia.—This plant is probably a hybrid between *R. catawbiense* and some of the hardy fragrant-flowered Azaleas; though it was raised accidentally, from seed of a variety of *R. catawbiense*, 25 or 30 years ago. It forms a compact, dwarf shrub, decidedly evergreen, with small and dense foliage, and numerous clusters of pretty pale pinkish lilac blossoms, in which there is a variety of delicate tints, approaching to white in the centre. It has quite the habit of a *Rhododendron*, and looks like a small, close-growing, pale-flowered variety of *R. ponticum*, with the leaves a little wrinkled, and destitute of much glossiness. Its natural flowering season is early in May, when the other *Rhododendrons* bloom. On account of the difference in its aspect from the common varieties of *R. ponticum*, and the delicate fragrance of its blossoms, it is well suited for the front of shrubby borders, or for giving variety to beds of *R. ponticum*, by being placed at intervals round their margin. It is also an excellent plant for growing in tubs or large pots, to place about the flower-garden or pleasure-grounds in conspicuous positions, or to stand in the conservatory, or portico or hall of a mansion, for purposes of occasional decoration. But, as its pleasing scent can hardly be appreciated out-of-doors, it is perhaps best adapted for keeping in a warm greenhouse or conservatory, in pots or tubs, where, without any forcing, it will come into bloom sufficiently early to prevent its appearing too common, while its fragrance will be brought readily within reach. Treated in this manner it constitutes a really attractive plant. It is multiplied by layers or by grafting on stocks of *R. ponticum*. The latter is the most economical plan, as it only requires a small portion of a shoot; but it is probable that the layering method will best retain the habits of the plant.—*Paston's Magazine of Botany*.

STANHOPEA MARTIANA; var. bicolor. Two-coloured Von Martius' Stanhopea. (*Stove Epiphyte*.) Orchidaceae. Gynandria Monandria.—A native of Mexico, discovered by Baron Karwinski in 1827, and afterwards by M. Galeotti. It is one of the most distinct and magnificent species of the genus, and in the magnitude of its blossoms is second only to *S. tigrina*. The sepals are straw-coloured, or almost white, faintly and sparingly marked with clusters of little vinous dots; the petals appear transparent white, with large spots of intense crimson; the lip is also a clear ivory white, except a slight discoloration at the base. The horns are of great size and strength, and taper into a kind of tendril, besides which they are exactly parallel with the epichilium, the form of which is almost linear, the two edges being as nearly as possible parallel with each other, and not a great deal broader than the column; a mark by which the species is immediately recognised. The present variety is a lovely plant, with large, pure white flowers, richly but sparingly spotted with crimson. In the original *S. Martiana* the sepals are straw-colored, and much more dotted with purple. Messrs. Rollisson have lately flowered it, and believe they obtained it from Mexico. It is as fine a thing as *S. tigrina* would be if its flowers were white, and is very sweet-scented.—*Botanical Register*.

SCHIZANTHUS CANDIDUS. White Schizanthus. (*Half-hardy Annual*.) Scrophulariaceae. Diandria Monogynia.—This plant has pinnatifid leaves, with linear, entire, rather wavy segments. The flowers are pure white, without a stain of any other colour; their lower lip has the middle lobe divided into two acuminate flat segments, and the two lateral ones setaceous and shorter. The upper lobe is two-lobed. It was found wild near Coquimbo, and is a very pretty half-hardy annual, well worth cultivation.—*Botanical Register*.

PLEUROTHALLIS SMITHIANA. Smith's Pleurothallis. (*Stove Epiphyte*.) Orchidaceae. Gynandria Monandria.—This plant was imported from Rio in December, 1841, by Lieut. Christopher Smith, of her Majesty's packet Star, and added to Sir Charles Lemon's collection at Carelew, where it flowered in May, 1843. Like others of this genus it proves to be only interesting as a subject for the Botanist, who, on dissecting the various parts of the flower and examining them through the microscope, cannot fail to be highly delighted with their singular construction, and the beautiful frosted appearance they present. Leaves ovate oblong, slightly curved and hollowed in the centre, about two inches and a half long, and an inch broad, very thick and leathery, of a brownish green colour. Flowers six, sometimes seven, arranged alternately in a close raceme. Sepals fleshy, covered on the outside with dense brownish pubescence, the lower marked with numerous elevated purple-coloured spots. Petals very small, thin, and delicate, having a purplish line along the centre and the margin, fringed and slightly marked with the same colour. Labellum spotted in the same manner as the lower sepals. The plant requires the constant heat of a moist stove, and thrives either on a piece of wood or in a pot of decayed vegetable matter.—*Botanical Register*.

MISCELLANEOUS.

The Cinnamon Plant.—“The best and most productive soils of Ceylon are a brown loam, resulting from the decomposition of gneiss or granitic rock, abounding in felspar, or a reddish loam, resulting from the decomposition of clay iron-stone, called in Ceylon, Kabookstone. The soil of the Cinnamon garden, in the neighbourhood of Colombo, (as well as that near Galle, and elsewhere, in which the Cinnamon tree is grown; and in many places it is produced naturally,) is a remarkable instance of the silicious kind. The surface of the ground in many places where the Cinnamon plant flourishes is white as snow: this is pure quartz sand. Below the surface a few inches, where the roots penetrate, the sand is of a grey colour. A specimen of this, dried thoroughly, was found to consist of—

98.5 silicious sand
1.0 vegetable matter
0.5 water

100.0

“It may appear surprising that the Cinnamon plant should succeed best in so poor a soil; but, other circumstances considered, it admits of explanation. The garden is nearly on a level with the Lake of Colombo, its situation is sheltered, the climate is remarkably damp, showers are frequent, the temperature is high, and uncommonly equable. These are the principal peculiarities to which the excellence of the Cinnamon, and the luxuriant growth of this valuable shrub, in a soil so apparently unpromising,

may be justly attributed. * * The interior is supposed not to be so well adapted for the growth of the Cinnamon as the sea-coast; at least, that hitherto brought from thence is coarser and thicker in appearance, and of too rich and pungent a taste. The best description, and that which grows in the gardens around Colombo, and at the other places mentioned, is obtained from what is termed the *Laurus Cinnamomum*. This is a tree of small size, from four to ten feet in height: the trunk is slender, with a number of branches shooting out from it on every side. The wood is light, soft, and porous, and in appearance resembles that of the common Osier. A vast number of roots and fibres run out from the root of the tree, and shoot up rapidly into slender twigs, which form, as it were, a bush around it. The leaf, though not of so deep a green, resembles that of the Laurel. When the leaf first appears, it is of a red or scarlet colour, but it afterwards changes gradually to green. The blossom is white, and when in full blow, seems, as it were, to cover the tree in a very beautiful and striking manner. This tree produces a species of fruit resembling an acorn, but not so large, which, when ripe, is gathered by the natives, in order to extract oil from it; this they use for perfuming their bodies and hair, and, when mixed with cocoa-nut oil, it also gives a very pleasant and good light. When the tree is old and decays, it is usually burned down to the ground; the roots are then seen to shoot up again in long straight plants, much better formed than the preceding ones. The bark of these shoots is extremely valuable.”—*Col. Campbell's Excursions in Ceylon, as quoted in the Athenæum*.

Ginger Wine.—Put 5 gallons of water to 16½ lbs. of lump-sugar, boil and skim it, then put in 5 oz. of ginger bruised, (not ground,) the peel of 3 Lemons and 3 Seville Oranges tied in a thin cloth; let it boil for half-an-hour and put it into a vessel, and let it stand until just warm; then put in 1 spoonful of good yeast, and let it remain until next day slightly covered over. Wash out the barrel with some brandy; put into the wine the peel and juice of the Oranges and Lemons and 2 lbs. of Raisins cut open; stir it every day for a fortnight, and let the bung be put in lightly. Add 1 oz. of isinglass and 1 pint of brandy, and stop the barrel close. When done working, let the wine stand seven weeks before you bottle it.—*Anonymous*.

New Phlox.—Another of those pretty varieties of *Phlox suaveolens*, with red introduced among the white flowers, has been raised by Mr. Van Houtte, and is, we understand, in the possession of the Nurserymen under the name of *striata delioutissima*. Its flowers are delicately streaked all over with rose of different tints on a white ground.

Loudonia.—In the “Sketch of the Vegetation of the Swan River Colony,” a genus was named *Loudonia*, in compliment to Mr. Loudon, the well-known writer on Horticultural subjects, who, we regret to learn, is lying at Southampton dangerously ill. The author of the “Sketch” had seen only one species, which he named *Loudonia aurea*, a plant which first makes its appearance on the lower slopes of the Darling Range, but it is more common to the east of the hills, where it sports from a golden yellow to a deep red in the flowers and seed-vessels. We learn that Mr. Drummond has since found another species with differently shaped leaves and seed-vessels, which he has named *Loudonia flavescens*; it grows in a flat piece of land, where water stands in winter, about twelve miles to the east of Hawthornden, Mr. Drummond's residence at the Swan.

GARDEN MEMORANDA.

Mount Edgecumbe, the seat of the Right Hon. Earl of Mount Edgecumbe.—This delightful place, which has been highly extolled by all who have seen it, has lately been visited, and much admired, by our Most Gracious Majesty and Prince Albert, so much so, that during her stay at Plymouth, on her late marine excursion, the Queen visited it twice, and spent many hours in the flower-gardens and pleasure-grounds, and expressed herself highly pleased. Mount Edgecumbe is a promontory about five miles long and three broad; it is situated on the west of Plymouth Sound. The beauties of this celebrated place cannot be portrayed by the most enthusiastic admirer of Nature's grandest ornament, nor would it be possible for the most skilful artist to do justice to it, in depicting its charming and truly magnificent appearance. The scenery from Mount Edgecumbe is grand in the extreme, and in giving a description of it I cannot do better than use the words of Mr. London, who visited the place last year. In his Magazine he states, “High as were our expectations from the published descriptions, and the long celebrity of the place, we were not disappointed. We never before looked down on the sea, on shipping, and on a large town, all at our feet, from such a stupendous height. The effect on the mind is sublime in the highest degree, but yet blended with the beautiful. There was something to us quite unearthly in the feeling it created.” This is a vivid description, but not at all over coloured. It is certainly without comparison—of great height in the middle, and slopes gradually on either side toward the sea. In some places it is rocky and abrupt, and irregularly bounded with noble trees: it is in itself a great ornament to the neighbourhood of Plymouth, and is visited by almost every stranger who comes to the town. Certainly Nature, combined with Art, has done a great deal for this place: its summit, which can be seen for more than 20 miles distance, is crowned with handsome specimens of trees. The house is a building of considerable antiquity, and is at once picturesque and appropriate to its situation. It was erected in the year 1550, by Sir Richard Edgecumbe, Knt., but has recently undergone extensive alteration, and a large sum of money has been expended by the present Earl on its improvement. There are three separate and distinct flower-gardens, viz., the Italian, the French, and the English. The Italian garden is a large plot of ground, surrounded by a fine belt of *Arbutus*, *Laurestinas*, *Aucubas*, and other evergreen shrubs, which thrive here in great luxuriance: it is nicely laid out, and has a very handsome fountain in the centre, which is adorned with four Caryatides, representing mermaids, standing on a square pedestal, and supporting on their heads a large basin, through which the water rises to a considerable height. On one side of the garden is a very large and ornamental conservatory, upwards of 100 feet in length, and of proportionate width; in this is a large collection of Orange and Lemon trees, of considerable size and growth; during the summer months these are placed along the garden-walks, and produce a grand effect, some of them are 14 feet in height, and have a stem 23 inches in circumference; six of these noble specimens cost the late Earl a sum exceeding 900 guineas. The garden is adorned with handsome specimens

of Alocs, Yuccas, &c., with statues of Flora, Ceres, Apollo Belvidere, and the Venus de Medicis. Passing from the Italian garden, we are led by a circuitous walk, bounded by evergreens, to the French one, which is but of small size, and is nicely ornamented with a Fountain, Roses, Fuchsias, and various sorts of herbaceous plants. Advancing from this little retired spot, we arrive at the English garden, an irregular piece of ground, of considerable extent, laid out with beds of various shrubs and flowers, and traversed with gravel-walks. In this garden, or rather ornamental pleasure-ground, are some very fine specimens of Cedar of Lebanon, of immense size; Magnolias, upwards of 30 feet in height; also Cork trees of great age; Ilex Oaks, 100 feet in height, and some fine specimens of *Camellia japonica*, which stand out without the least protection, and thrive most luxuriantly; also fine plants of *Edwardsia grandiflora* are to be found in vigorous growth. But one of the chief attractions in this garden to the Horticulturist is a very fine and healthy specimen of the *Araucaria imbricata*, which is above 5 feet in height; it seems to grow rapidly, and is in good health. We were informed by Mr. Pawley, the gardener here, that it has stood for some years without the least protection; indeed, in the winter of 1840-41, which it will be remembered was very severe, the plant was completely covered with snow, which had partially thawed but was again frozen, so that the shoots appeared like large icicles; but piercing as the frost must have been, not a leaf was injured or disfigured, thus affording a proof of the perfect hardiness, and consequently, the inestimable value of this highly-ornamental tree. The Myrtles are likewise of great size and beauty. There are also two fine specimens of *Abies Douglasii*, which are feathered with foliage from the ground, and form a perfect pyramid. The collection of plants in the greenhouses is by no means rare; the chief study being to enrich the grounds with ornamental shrubs and forest-trees. We advise every one who visits Plymouth to see this lovely place, and they will be charmed with its rich and beautiful scenery. The drives and walks are many miles in extent, and are arranged so as to exhibit to full advantage the natural beauties of the situation.—*W. E. Rendle*.

Reviews.

Dr. Justus Liebig, in his Relation to Vegetable Physiology. By Dr. Hugo Mohl. (Dr. Justus Liebig's Verhältnis zur Pflanzen-Physiologie.) Tübingen. Frues. 1843.

(Concluded from page 664.)

After having assigned the utility of rotation to the formation of humus, Dr. Liebig states his views of vegetable nutrition at the different periods of growth. He says, that a plant returns just so much carbon to the soil as it has absorbed from it in the form of carbonic acid produced by decomposing humus. This supply of carbon is sufficient for many plants at the first period of their growth, but it is not sufficient to supply some of their organs with the necessary maximum of food. But the object of agriculture is to gain the maximum of produce, and this, says Liebig, p. 154, “stands in a direct ratio to the amount of food which has been given to a plant during the first period of its development,” therefore all pains are to be taken to increase the amount of humus.

The short and the long of these rather vague assertions (says Dr. Mohl), is, apparently, that a crop will be the greater the more food a plant has received from the soil before its period of flowering. But this axiom, although true in the main, is somewhat contradicted by another at p. 111, where it is stated that humus is useful to young plants by contributing to the increase of their organs of atmospheric nutrition; but it is not indispensable, and its excess may even be detrimental in the first stages of development. The food, namely, which a young plant receives from the air in the form of carbonic acid and ammonia, is restricted within certain limits,—it can assimilate no more than the air contains. If, therefore, in the beginning of growth, the number of twigs, sprouts, or leaves overpass this proportion in consequence of a superabundance of food obtained from the soil at that period, when the plant requires more food from the air for the completion of its development and for its flowering and fruiting than the air can supply it with, blooming and fruiting will not take place. In many cases, such food will merely suffice for the development of leaves, stems, or branches.

Here Dr. Mohl complains of the strange ambiguity of this part of Liebig's theory. In one instance (says M.), the usual quantity of humus in the soil suffices merely to form leaves, and if we want an abundant harvest, we must get it by conveying a maximum of food from the soil. On the other hand, humus adds nothing to the crops, but, on the contrary, is noxious, by conveying too much food, for it causes the production of too much foliage, a sufficient supply of food for which cannot be obtained from the air. Whence, then, does it arrive that a plant which has many leaves can not obtain from the air the food required for blooming, although it can do so if it has only a few leaves? It has been hitherto supposed that the reception of food from the air was in proportion to the number and size of its leaves; and this is plausible, but the contrary is not. When a plant standing in a moist and shaded situation grows too luxuriantly, and will not flower, the reason is not to be sought in a deficiency of food, but rather in its superabundance, and its influence on the too luxuriant development of its vegetative organs; for that will counteract the contraction of the axis and the metamorphosis of vegetative into floral organs.

Another statement, however, shows how Liebig arrived at the above conclusion. He says that, after the completion of its leaves, a plant does not require more carbonic acid from the soil; and that even perfect dryness of the soil will not impede the completion of its growth, if the plant continues to receive from dew and air the amount of moisture required for the process of assimilation; and that, in fine, it will derive in a hot summer its whole carbon exclusively from the atmosphere.

This assumption (says Dr. Mohl) is the result of an erroneous view of the fact, that in many plants—by no means in all—such organic substances are employed for the development of fruit, as, having been prepared by the leaves before the period of flowering, have been depo-

sited in the stem or other organs, and are subsequently conveyed to the fruit. We know that some bulbous plants will fruit even when taken out of the soil. But general assertions, taken from special facts, can only lead to absurd conclusions. Let Professor Liebig cut plants in bloom above their roots (*unnecessarily*, he says, at that period), and expose them to as much dew and rain as he likes, and see what will happen; or, as he is fond of experiments on a large scale, let him take the hay harvest for a test of this theory; which, after all (concludes Dr. Mohl), seems to be nothing more than a distorted and overdone copy of the doctrine of the development of plants given by Schwert, in his treatise on Practical Agriculture (Anleitung zum Pract. Ackenbau, iii. 56).

Besides the formation of humus, Liebig adduces another reason for the rotation of crops, viz., the relation which plants bear to the inorganic constituents of the soil. As every plant deprives the soil of certain ingredients, it thus makes it unfit for feeding similar plants, until by subsequent decomposition a fresh amount of such ingredients is again set free. To this proposition (says Dr. Mohl) no one will object; but it has long been known.

Having thus examined in detail the work of Dr. Liebig, Dr. Mohl concludes with the following general recapitulation. It appears upon the whole that Liebig has not availed himself of his chemical resources to clear up doubtful points in the nutrition of plants. Contrary to the spirit of a true investigator of Nature, he has not formed his conclusions on the detailed facts of vegetable phenomena, but on random observations, or vague operations on a large scale, destitute of all precision. His calculations are based on arbitrary assumptions. His book, therefore, far from being a consistent and well-digested theory, swarms with contradictions and false reasoning. He does not possess a knowledge of the most elementary doctrines of vegetable physiology. His assertion that physiologists have hitherto considered humus as the chief food of plants is untrue. The assumption that plants live merely on inorganic substances is by no means new, but has long been one of the controverted points of vegetable physiology. The assertion that all Botanists have doubted the absorption of carbon by plants by their decomposition of carbonic acid is untrue. The assertion that plants neither absorb organic substances, nor assimilate them, rests on mere theoretical speculation, and is destitute of all proof. The statements as to the relation borne to the atmosphere by plants in the dark is in direct opposition to every fact bearing on the subject. The assertion that the nitrogenous food of plants, and that which contains no nitrogen, are absorbed in certain proportions, is uncorroborated by the analysis of either the seed or the full-grown plant. The theory of the rotation of crops is contrary to experience, and unsound in its details. The assertion that plants receive their food during summer from the atmosphere alone, is incorrect.

On the other hand, it cannot be denied that Liebig's idea that plants derive their nitrogen from the ammonia of the atmosphere is very happy and pregnant with results. It is also probable that the absorption of saline bases is in direct ratio to the power of saturation of the acids formed in plants. These two views are a real gain to science, and it may be expected that his work will also have the merit of exciting others to make correct experiments on the nutrition of plants. But he has endeavoured to introduce into vegetable physiology a series of most erroneous notions, and his unbecoming outbreaks against other physiologists have proved him to be very little acquainted with the subjects on which his book is written.

CALENDAR OF OPERATIONS for the ensuing week.

For some years there has been a growing disposition on the part of young ladies to execute some of the lighter operations of the garden with their own hands; this disposition has considerably increased since the example set by her Majesty last year in Scotland. No sooner did it become known that Queen Victoria planted some trees at Taymouth Castle, to commemorate her first visit to the Highlands, than surmises were rife as to the probable effect the example would have on lady gardeners throughout her dominions: and gardeners, too, in all parts of the country, looked on the event as an auspicious omen to their craft. In the general excitement the *Gardeners' Chronicle* was not behind:—"We trust (said the Editor) that our fair friends will thus be fortified in their horticultural resolves, and, indeed, become good gardeners, now that so illustrious an example has been set them. Horticulture, too, will more than ever claim the dignity of an honourable profession, when it is known that the Queen of England has condescended to labour at the art with her own Royal hands."—(Vol. ii., p. 619.) Notwithstanding all this enthusiasm, few gardeners will be prepared to learn that a young English lady, following the example of her Sovereign, has, in one of her late "horticultural resolves," outstripped the very best of them. It will be recollected that a few weeks back I noticed, as a piece of interesting intelligence, the success of an experiment in budding Rhododendrons, &c. in the open air. A few years ago nobody ever dreamed that this tribe could be increased otherwise than by seeds and layers; but more recently this beautiful tribe has been found to yield with no great reluctance to the various modes practised in the laboratory of the skilful propagator. Judge, therefore, of my surprise on reading the following, from a correspondent:—"I was much pleased with the idea of budding Rhododendrons, but, strange to say, on mentioning it to a very skilful lady-gardener in this district, she at once took me to a bank of them, where she showed me several buds she had inserted in the usual way, which looked as if they had taken, and I have no doubt they have. I met her in the spring, with a bunch of the scarlet hybrid in her hand, which she had only then seen for the first time, and I found she intended to bud it on the common varieties in her father's grounds." Here is news and encouragement to those who have common Rhododendrons to clothe them with the finest hybrids, merely by the simple operation of budding.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

PINES.—Those who do not know much about Pine-growing are very apt to commit mistakes at this time. The increased heat, to meet the decline of the season, is either deferred too long or is too suddenly applied. When Pines are in their highest growth, as they always are at this time, sudden checks of this sort are very injurious to them. If the increased heat is by fires, or even pipes, the danger is greater. I once saw a whole row of young Providence Pines, next the fire, throw up fruit like so many buttons on the first application of

fire-heat, and I am not sure that good sprinklings of water could prevent it; this sort is very impatient of fire heat while young. Now that the French system of growing them out of pots, and in peat-earth, has been tried down at Hewell, we shall be curious to learn if the experiment succeeds. There cannot be a doubt that Pines will grow better out of pots, but we have partially failed in the use of peat for Camellias, which they find to answer on the Continent, especially at Berlin and Vienna, while in Italy, and even at Paris, they soon get long-legged in this soil.

VINERY.—Now comes the trying weather for the late Grapes. Occasional fires, and free ventilation, with a sharp eye after decaying berries, are the best remedies after all, and everything in the house that is likely to create damp should be removed. If there are earth borders inside the house they should be stirred up, and three or four inches of very dry leaf-mould laid over them; rotten tan, if thoroughly dry, will do as well. It is high time now to prune any Vines that are to be forced before Christmas, and also Peaches that have been forced early; but later ones, that have not yet begun to cast their leaves, may be left as they are, for a few weeks yet.

Out-door Department.

The continued fine weather has been very favourable to all operations in the kitchen garden, and also to the crops. The large crops of Onions have been safely harvested, and look as if they would keep well. Potato-lifting time will be coming on by-and-by; but it is not a good plan to dig them up too early on light soils; neither is it safe to put off the work long on heavy lands, for if we should have unfavourable weather the ground is much damaged by the operation. Now that the farmers and gleaners have cleared the fields, and left little for the rats, they will begin to prowl about the garden and out-houses, and if you once let them breed near you it is difficult to get rid of them.

CROPS.—Except the usual course of salading, there is very little sowing to be done for some time; and as soon as the spring Lettuces and late Cauliflower plants are pricked or planted out, little more will be needed in the planting way for a long time, except among the market-gardeners, who will still plant out a large breadth of plants for late Coleworts. If, therefore, a few Endive plants are kept blanched, and the Celery rows not let grow too long without moulding up, you may turn your attention to getting forward such work as will forward you in the spring. Your cropping book will tell you what plots want trenching, and to what depth: never trench twice the same depth.

ORCHARD.—It is not too much to say that young fruit-trees should never rest more than two years without being taken up and replanted nearer the surface, till they are 12 or 15 years old. After they have attained to a medium state of growth the intervals of transplanting may run to three or four years; this is much better than allowing them to run half wild in the first instance, and then use severe and unnatural means to correct them afterwards. Nonpareil and other tender Apple-trees infected with canker, or otherwise unhealthy, may be improved by being taken up and replanted in fresh soil, using some turfy compost about their roots, their young growth pruned off two-thirds of its length, and firmly tied up to stakes till they get a fresh hold on the soil. Early autumn pruning is the life and soul of delicate fruit-trees, not excepting even the Peach.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

STOVE.—I have just been trying a little experiment with a few stove plants, chiefly Gesnerias, but the principle is applicable to a great number of plants, perhaps to all that do not flower on terminal shoots or heads. Then such of these plants as you cannot get to flower until late in the autumn, if you take cuttings of them a short time before they come into flower, or even when they are in flower, you stop the flowering of the cutting until it begins a new life, and there is a chance if you carry it over the winter that it will flower in the spring, or early in the summer. We often see little side-shoots growing out near the tops of Achimenes about this time, and perhaps if these were struck they would go on flowering all the winter. Gesneria longifolia and zebrina flower late in the autumn; their side-shoots might also do in the same way, but this hint is quite enough. I forgot last week to mention that the Gesneria mollis has scaly tuberous roots, like the Achimenes, which brings it nearer to that family in affinity; and it is therefore a fit subject to try to cross with A. pedunculata, or, indeed, with any of that tribe.

GREENHOUSE.—The Chrysanthemums will soon require the shelter of this house, particularly the early ones, and some of the later sorts should be left out as long as a mat or two can secure them from the frost; this will prolong their succession. They will require some stakes, but avoid the exhibition plan of staking them, which, although necessary for bringing the flowers to view altogether at one time, is most unsightly for general purposes. I have often heard gentlemen say, at the exhibitions at Chiswick, how much they should like their gardeners to be there, to see the beautiful Pelargoniums straggled up in this fashion, that they might do the same at home, although nothing in the whole range of gardening could display worse taste.

CONSERVATORY.—As little water as possible should be scattered here for the next two months, as this dull season is enough of itself to damp off the flowers without such aids. Slight fires will also be necessary in the daytime, if the bloom show signs of dampness. This house and the late Vinery should now be managed nearly alike. Ipomoea bicifolia grafted on Learni, it being a more robust grower, makes a fine contrast to it, and succeeds it about the beginning of October. I always thought Mandevilla suaveolens would be more at home against a south wall out-of-doors, as it is so subject to red spider by house confinement, like the Tacsonia; but "Devonian's" account of it shook my faith in the idea. A young plant of it, however, struck last year, was turned out against our conservatory wall last May, where it grew away with great freedom, and yesterday I noticed a great number of flower-buds on it, and as the wall is safely guarded from the frost, with plenty of iron pipes and conical boilers, &c. &c., I expect we may cut Mandevilla flowers through the whole winter. Our old plant of it in the conservatory, which began flowering last June, has no signs yet of ceasing to produce its lovely, fragrant, snow-white flowers.

COLD AND FORCING PIT.—Get forward a few Pelargoniums (alba multiflora) as soon as possible, if only to say that you had Pelargoniums in flower every day in the year. Half-a-dozen plants of the Prince of Orange, stunted all the summer, and lately potted in one large pot, are now ready to be removed from the cold pit to the conservatory, where it will flower all the winter. It is rather too soon yet to take the Heliotropes in-doors, so many of them being yet to be seen in the beds outside. Compactum and Shrubland Scarlet struck last May and June will now be fine sizeable plants to introduce into staircases, lobbies, rooms, &c., where such furnishings are wanted; these are among the best to stand over the dull months. I can trace an old custom a long time back of introducing the first forcing Roses into a gentle heat the first week in October. The old Cabbage and Moss Roses were then, as now, the greatest favourites. There were no Bourbons in those days to flower with a little protection from cold. Bourbons and their crosses with the Chinese breeds are mere children's play, compared with having the Moss Roses in bloom by Christmas Eve. "Beaumaris" will see that he was anticipated by Mr. Ayres, who will no doubt follow up the subject.

FLOWER-GARDEN.—Every week now tells more or less on the appearance of the flower-gardens; leaves from above and worms from below, with short days and long cold nights, will keep people busy here until the frost settles the business for the season. Mr. Smith, of Ipswich, author of a treatise on Cucumbers and on Peach-trees, called in the other day, and told me that chalk lime will kill worms if it is first slacked, but that its caustic properties are destroyed if mixed with the water before it is slacked. His directions for using lime-water are very judicious: watch for a rainy day or two, which will bring the worms to the surface, then roll the ground well in the afternoon, and the worms will make fresh holes in the night; and next morning pour large quantities of lime-water all over the surface; the ground being firm by the rolling, the greatest portion of the lime-water will find its way through the fresh worm-holes, and kill every one of them that it reaches. *Esperio crede.*—D. Beaton, Shrubland Park Gardens, Ipswich.

State of the Weather near London for the week ending Sept. 29, 1843, as observed at the Horticultural Garden, Chiswick.

Sept.	Barometer.			Thermometer.			Wind.	Rain.
	Max.	Min.	Mean.	Max.	Min.	Mean.		
Friday 22	30.446	30.383	30.414	71	48	59.5	N.E.	
Saturday 23	30.509	30.460	30.484	69	45	57.0	N.E.	
Sunday 24	30.467	30.376	30.421	65	45	55.0	N.W.	
Monday 25	30.289	30.181	30.235	65	41	53.0	N.W.	
Tuesday 26	30.038	29.947	29.992	60	38	49.0	N.W.	
Wednesday 27	29.781	29.687	29.734	55	32	43.5	N.W.	
Thursday 28	29.634	29.735	29.684	59	34	46.5	N.W.	
Average	30.193	30.103	30.148	63.6	40.4	52.0		.00

Sept. 29. Clear and fine throughout.
23. Very fine.
24. Overcast; fine; overcast at night.
25. Overcast; cloudy; clear and cool at night.
26. Clear; cloudy and fine, clear and cold.
27. Thickly overcast; cloudy, with cold wind, clear; slight frost.
28. Frosty; very clear throughout; cold at night.
Mean temperature of the week nearly 14° below that of the preceding, or 4.2° below the average.

State of the Weather at Chiswick during the last 17 years, for the ensuing Week ending October 7, 1843.

Oct.	Aver. Highest Temp.	Aver. Lowest Temp.	Mean Temp.	No. of Years in which it Rained.	Greatest quantity of Rain.	Prevailing Winds.							
						N.	S.E.	E.	S.W.	W.	N.W.	N.E.	N.
Sun. 1	63.4	49.1	51.7	8	0.53 in.	2	1	2	1	1	1	1	1
Mon. 2	64.4	42.6	53.5	8	0.48	1	2	1	1	5	5	2	1
Tues. 3	62.5	44.8	53.7	8	0.14	1	2	1	1	6	4	1	2
Wed. 4	63.5	42.0	52.8	8	0.36	1	5	1	1	5	4	1	1
Thurs. 5	62.7	41.4	52.0	9	0.57	4	2	1	1	4	3	2	1
Fri. 6	66.3	41.4	50.9	7	0.78	1	2	2	2	3	4	1	1
Sat. 7	61.5	43.8	52.7	5	0.58	1	1	2	1	2	4	3	1

The highest temperature during the above period occurred on the 2nd, in 1842—thermom. 81°; and the lowest on the 5th and 6th, 1826—thermom. 29°.

REPORT ON COVENT-GARDEN MARKET.

For the Week ending Sept. 29, 1843.

There has been little variation in the prices of most articles during the past week, and trade has been somewhat brisker. The weather having become much colder for the last two or three days, and the nights being a little frosty, have had rather an injurious effect on some vegetables, particularly Tomatoes and French Beans. Pine Apples, of good quality, still continue plentiful, and are selling at from 3s. to 6s. per lb. Among Grapes, the Black Hamburg are abundant; but Muscats are not quite so plentiful as last week. Plums, fit for table, have become rather scarce: we noticed a few of the Golden Drop, which are selling at 2s. per punnet. Damsons are sufficient to meet the demand, and are offered at from 2s. 6d. to 3s. 6d. per sieve. Good Peaches and Nectarines bring from 3s. to 6s. per dozen. Figs bring nearly the same prices as last week. Filberts still continue abundant. Pears are good and plentiful; but Apples are rather inferior. Melons, of good quality, bring from 1s. 6d. to 4s. each. Cucumbers are selling at from 4d. to 8d. per brace. Cabbages and Turnips still continue plentiful. Carrots are sufficient to meet the demand, but are rather of inferior quality. Endive is selling at from 1s. to 1s. 6d. per score; and Shallots bring nearly the same prices as last week. Cut flowers are chiefly composed of Erica Boweiana, cerinthoides major, Aitoneana, and verticillata; Amaryllis belladonna and guttata; Plumbago capensis, Silene laciniata, Erythra crista-galli, Pelargoniums, Calceolarias, Fuchsias, Dahlias, China and Perpetual Roses.

PRICES, SATURDAY, September 30, 1843.—FRUITS.—

Pine Apple, per lb., 3s to 6s	Lemons, per doz., 6d to 2s
Grapes, hothouse, per lb., 2s to 4s	— per 100, 3s 6d to 12s
Portugal, per lb., 3d to 1s 6d	Cucumbers, per brace, 4d to 8d
Peaches, per dozen, 3s to 6s	Gherkins, per 100, 5s to 7s
Nectarines, per dozen, 3s to 6s	Green Capsicums, per 100, 1s 6d to 2s
Figs, per doz., 2s to 4s	— 4s to 8s
Melons, each, 1s 6d to 4s	Almonds, per peck, 6s
Dutch, each, 1s to 2s 6d	Sweet Almonds, per lb., 2s 6d
Plums, per punnet, 1s to 2s	Nuts, per bushel —
Golden Drop, per pun., 2s	— Brazil, 16s
Damsons, per sv., 2s 6d to 3s 6d	— Hazel, 3s to 4s
Apples, dessert, p. bush., 4s to 7s	— Barren ones, 22s
Apples, Kitchen, per bush., 2s to 4s	— Cob, 12s
Pears, per half-sieve, 2s to 8s	Filberts, English, p 100lbs., 40s to 55s
Oranges, per dozen, 2s to 3s	Barberries, per hf.-sv., 3s to 4s
— per 100, 16s to 24s	Tomatoes, per hf.-sv., 2s to 3s 6d

VEGETABLES.

Cabbages, per doz., 6d to 1s	Onions, Large, per hf.-sv., 1s to 1s 6d
Cauliflowers, per doz., 4s to 6s	— Spanish, per doz., 1s to 3s
Beans, Kidney, per hf.-sieve, 3d to 2s	— pickling, p. hf.-sv., 3s 6d to 4s 6d
Scarlet, per hf.-sv., 1s to 1s 6d	Shallots, per lb., 1s 6d to 2s
Potatoes, per ton, 40s to 70s	Chillies, per 100, 1s to 2s
— per cwt., 3s to 4s	Lettuce, Cabb., p. score, 6d to 1s
— per bushel, 1s 6d to 2s	— Cos, per score, 6d to 1s 6d
Kidney, p. bush., 2s to 3s 6d	Celery, per bun., 6d to 2s
Artichokes, green, per doz., 1s 6d to 3s 6d	Mushrooms, per pottle, 1s 6d to 2s
Vegetable Marrows, per doz., 6d to 1s	Wallnuts, Green, per bushel, 5s to 7s
Turnips, per doz. bunches, 1s to 2s	Small Salads, per punnet, 2d to 3d
Red Beet, per dozen, 6d to 1s	Sweet Basil, per doz. bunches, 2s to 3s
Horseradish, per bundle, 1s to 2s	Watercress, per doz. sm. bun., 3d to 4d
Radish, spring, p. doz. hands, 6d to 1s	Parsley, per 100, 1s to 2s
— Turnip, p. doz. bunch, 6d to 1s	Tarragon, per bun. 2d to 3d
Carrots, Horn, p. doz. bun., 3s to 6s	Fennel, per doz. bun., 2s to 3s
Spinach, per sieve, 6d to 1s	Endives, per doz. sm. 1s to 1s 6d
Leeks, per doz. bun., 1s to 2s	Mint, per doz. bunch, 1s to 2s
Garlic, per lb., 6d to 8d	Marjoram, green, p. doz. bun. 1s 6d to 2s
Onions, Spring p. doz. beh., 1s 6d to 2s	Chervil, per punnet, 2d to 6d

Notices to Correspondents.

HEATING.—*Needy.*—We have given you all the information we possess on Tank heating, and would rather not speculate upon possibilities, lest we should mislead you. The plan given last week, completely obviates all the objections to open tanks, for the water-gutters represented there are closed. Such gutters are not dry, for vapour always finds its way out through their sides, though water does not. There can be no objection to having pigeon-holes in the sides of the tanks, for the escape of steam, provided you secure the means of stopping off the steam when you do not want it.

PITS.—*H. G.*—Canvas frames will not keep off severe cold any better than glass; they are intended to keep off wet and slight frosts. Nor will they do for Melons, which demand all the light we can give them, and more. They will possibly, however, answer for Cucumbers but we have no experience with them. On many former occasions we have pointed out the main circumstances to be attended to in pitting plants for the winter, and must refer you to our indexes for information. The main point is to keep the plants dry, and that is best effected by raising the bottom of the pit above the ordinary ground level.

PROTECTION.—*A Young Florist* can only preserve his tender plants from frost by one of two means: he may produce heat inside his houses, like other people, or he may cover them with movable thatched mats. But the labour of putting mats on and off a greenhouse, and the breakage of glass in doing so, costs more than a heating apparatus—unless, indeed, he can construct a movable thatched roof, which will slide off at one end, by working on a kind of railway. If he is contented with pits, he may preserve such plants as Pelargoniums, and the like, in the manner described at p. 659 of the vol. for 1841; namely, by thick walls of turf, a raised dry floor, and straw or mats over the lights in very hard weather.

GRAPES.—*A. P.*—On an open wall with a south-east aspect, in lat. 52°, you can scarcely expect to ripen the Black Hamburg. You may try the White Frontignan under a glass coping. Sorts to be recommended are the Black Cluster, Early Black July, Black Prince, White Sweetwater, Royal Muscadine, and Pit-maston White Cluster.

VINES.—*A Puzzled Gardener*, who has "kept good fires day and night for the last two months, and pulled off all the leaves to let the sun colour the fruit, and kept the lights and door quite close, and has had the heat 105°, but whose Grapes are very small, and quite green," seems to have mistaken his profession.

We cannot undertake to instruct persons so entirely ignorant of the rudiments of gardening.

VINES, PEACHES, &c.—*Rusticus*.—We do not apprehend that you will succeed well, in growing Vines, Peaches, and Flowering Plants all in one house; but since you are desirous of making the experiment, you may train the Vines along a trellis, at right angles with the rafters, in order to admit as much light as possible to the plants and Peach-trees on the back wall. A little fire-heat will be necessary to preserve the plants from frost in Winter; but as this will only be applied as occasion requires it, and as the temperature need never be raised above 40°, it will not have the effect of starting either the Peaches or Vines.†

PEACH-TREES.—*A Subscriber*.—While fine weather continues it is quite unnecessary to apply fire-heat to your Peach-trees; but if a change should take place, and cold damp weather ensue, then fire-heat will be of advantage, both for ripening fruit and wood.†

LAWNS.—*Amateur*.—You may convert your bed, at present occupied by shrubs, into a grass-plot, by removing the shrubs, and making the ground perfectly level. Then lay it with turf if that can be procured, if not, you may sow it with the following Grass seeds, viz.:—Crested Dogstail, Meadow Poa, Sheep's Fescue, and Meadow Fescue, mixed with a little White Clover.†

BULBS.—*D.*—As the bulbs you have just received from the Cape have already begun to grow, they may be potted off immediately, in a rich light soil. Let the pots be filled rather full, and insert the base of the bulb only into the soil.†

TROPÆOLUMS.—*Geo. Young*.—Keep your Tropæolum and Achimenes bulbs perfectly dry during Winter. When Spring arrives let them be potted in a light rich soil consisting of peat sand, rotten dung, and a little leaf-mould; let water be given very sparingly for some time, and increase the quantity as they advance in growth.†

OLEANDERS.—*H. G.*—Few plants like to have their roots constantly in stagnant water, and you must not trust your Oleander to it. While growing, give it a great deal, however, so that it never is dry; when not growing give it very little. Its natural habit is to follow the course of streams in Barbary, where it glows with rosy flowers and dark green foliage when everything else is parched.

FUCHSIA CORYMBIFLORA.—*An Original Subscriber*.—Let the seed-pods of Fuchsia corymbiflora be opened, the seeds taken out, and sown in light rich mould in March: water very slightly, until they begin to grow.†

FUCHSIAS.—*M. W. K.*—A good way of treating your Fuchsias is to allow them to go gently to rest with the natural decline of the season, and gradually to withdraw the waterings as the leaves fall off; and when the plants shall have lost their foliage, keep them perfectly dry. No shifting or pruning will be required until next spring. When they begin to grow, all dead points should be removed, the plants turned out of their pots, and their balls reduced a little, taking care to injure as little as possible the newly-formed roots, and to repot them in the same sized pots in a rich light soil.†—*W.*—The best time to sow Fuchsia seeds is in spring; they ought to be put, when sown, in a slight bottom-heat.†

PELAGONIUMS.—*A Constant Subscriber*.—If you have no other way of keeping your Pelargoniums and half-hardy plants during the winter, you may possibly preserve them in your Melon pits, by placing the plants on some dry material, the wooden frame you mention will answer that purpose very well. You must take care in watering to scatter as little as possible; give plenty of air in fine weather, and cover carefully at night with mats; but to ensure the plants completely from danger, in case of a very severe winter, it would certainly be advisable to have some sort of heating apparatus, such as an Arnott stove.†—*J. B.*—It is a disputed question what causes the spot in Pelargonium leaves. It is certainly not the work of an insect, nor is it anything in the soil, but is to all appearance produced by cold. The diseased leaves cannot be cured, but if they are removed, and the plants are put into a warm house, you will see no more of it. The sudden chill produced by the late hail-storms is very likely to have given rise to it.

CARNATIONS.—*Alquis*.—We recommend you to procure the following:—*Bizarres*—Twitche's Don John, Headley's William Cobbett, Puxley's Prince Albert, and Cartwright's Rainbow. *Flukes* (purple)—Mansley's Beauty of Woodhouse and Lascelles' Queen of Sheba. *Scarlet Flukes*—Chadwick's Brilliant and Addenbrooke's Lydia. *Purple Picotees*—Trip to Cambridge and Ely's Grace Darling. *Yellow Picotees*—Barraud's Euphemia and Royal Standard.*

CARYOPHYLLUMS.—*Alquis*.—Wheeler's Changeable Yellow, Early Blush, Champion—Jemson; Princess Marie—rosy lilac; Duke de Canigian—dark red; Chancellor—white and pink; Formosum—primrose; Lucidum—white; Celestial—pink; Gauvion St. Cyr—dark orange; Campestrum—dark crimson; and Golden Lotus flowered.*

HYACINTHS.—*Alquis*.—*Rose*—Groot Vorst, Bouquet Royal, L'Ami de Cœur. *White*—Grand Vainqueur, Colossus, Prince of Waterloo. *Blue*—Quentin Durward, Orondates, and Grand Vidette.*

PLANTS.—*H. S.*—It is now too late in the season to raise plants from seeds or cuttings, to flower about Christmas. The following will furnish Bouquets, with the application of a little heat, viz.:—Camellias, the different kinds of Azalea, Persian Lilacs, Chrysanthemums, Lily of the Valley, China, Bourbon, and Moss Roses, and of course the various bulbs that are used for forcing.†

HERBACEOUS PLANTS.—*A Constant Subscriber*.—Fifty hardy herbaceous plants, all dissimilar and pretty:—*Statice latifolia*, *S. tatarica*, *Hoteia japonica*, *Aconitum japonicum*, *Geranium ibericum*, *Gentiana asclepiadea*, *Epimedium grandiflorum*, *Dictamnus rubra*, *Delphinium grandiflorum*, *Coreopsis lanceolata* (10), *Anemone vitifolia*, *A. palmata*, *Clematis integrifolia*, *Monarda didyma*, *Cnothera speciosa*, *C. macrocarpa*, *Pæonia tenuifolia*, *Lupinus polyphyllus*, *Pentstemon ovatus*, *P. Scouleri* (20), *Phlox nivalis*, *P. Coldreysana*, *Rudbeckia hirta*, *Sphaera trifoliata*, *Soldanella alpina*, *Lathyrus grandiflorus*, *Inis Pallida*, *Papaver bracteatum*, *Helicopsis niger*, *Gnaphalium arvense* (30), *Adonis vernalis*, *Alyssum saxatile*, *Epilobium latifolium*, *Campanula grandis*, *C. pulla*, *Aquilegia glandulosa*, *Baptisia australis*, *Aubrietia deltoidea*, *Belomoea grandiflora*, *Hemerocallis Sieboldii* (10), *Liatis spicata*, *Trollius asiaticus*, *Uvularia grandiflora*, *Saxifraga crassifolia*, *S. oppositifolia*, *Potentilla atrorubra*, *Linaria dalmatica*, *Anemone latifolia*, *Dracopcephalum speciosum*, *Primula nivalis* (30).†

PLANTS FOR FLOWER BEDS.—*A Lady*.—The following 38 kinds of Plants are suitable for flowering all the autumn, and are easily cultivated:—1. *Verbena melandres major*, scarlet; 2. *Lotus Jacquinii*, dark brown; 3. *Nierembergia calycina*, white; 4. *Verbena purpurea*, purple; 5. *Calceolaria lugosa*, yellow; 6. *Pelargonium Frognote*, scarlet; 7. *Verbena the Queen*, white; 8. *Isotoma (Lobelia) axillaris*, blue; 9. *Petunia superba*, rosy purple; 10. *Verbena tenuicoides carnea*, flesh-coloured; 11. *Diplacus (Mimulus) glutinosus*, orange; 12. *Verbena atrosanguinea*, crimson; 13. *Anagallis cerulea grandiflora*, bright blue; 14. *Calceolaria integrifolia*, yellow; 15. *Verbena B. Scholii*, rosy purple; 16. *Pentstemon gentianoides coccinea*, scarlet; 17. *Senecio elegans* (double), deep purple; 18. *Verbena tenuicoides*, white; 19. *Fuchsia microphylla*, bright purple; 20. *Verbena variegata*, salmon; 21. *White sweet-scented China Rose*, white; 22. *Heliotropium peruvianum*, deep blue; 23. *Tropæolum adnuncum*, yellow; 24. *Fuchsia discolor*, scarlet; 25. *Verbena compacta alba*, white; 26. *Petunia (Beauty)*, rosy purple; 27. *Verbena ignea*, bright scarlet; 28. *Anagallis Monelli*, bright blue; 29. *Gaillardia picta*, orange and crimson; 30. *Pentstemon gentianoides*, brown purple; 31. *Bouvardia splendens*, scarlet; 32. *Fuchsia Chaudieri*, flesh-coloured; 33. *Rosa indica sanguinea*, crimson; 34. *Cnothera missouriensis*, yellow; 35. *Diplacus puniceus*, orange scarlet; 36. *Nierembergia intermedia*, pale lilac; 37. *Verbena Tweediana*, scarlet; 38. *Lobelia Erinus*, blue.†

PLANTS FOR A VINERY.—*A Beginner*.—For relieving the nakedness of your Vinery, we recommend you the following Pelargoniums; they are very good, but not expensive varieties, and will answer your purpose exceedingly well:—*Matilda*, *Sylph*, *Cyrrus*, *Corona*, *Erectum*, *Orange Boven*, *Annette*, *Hodge's Emperor*, *Priory Queen*, *Madelina*, *Bridesmaid*, *Una*, *Victory*, *Coronation*, *Comte de Paris*, *Gaines's King*, *Alexandrina*, *Sidonie*, *Corinne*, *Grand Duke*, *Lady Carlisle*, *Jehu*, *Conservative*, *Clarissa*. Roses in pots, such sorts as *Fabvier*, *Sanguinea*, *Devoniensis*, *Yellow Noisette*, *Old Blush China*, *Theresa Stravius*, and *La Superbe*. *Fuchsias*—*Thompson's formosa elegans*, *Venus victrix*, *Devoniensis*, *Curtisii*, *conspicua arborea*, and *Pontey's Tricolor*. A few pots of *Cinerarias*, the same of *Calceolarias*. *Clematis azurea* and *C. Sieboldii* are both very ornamental. Bulbs in pots of *Polyanthus Narcissus*. A collection of *Hyacinths* would assist very much, with the white and lilac varieties of the Chinese Primrose. The best annuals for the purpose are *Nemophila insignis*, *Schizanthus retusus* and *pinnatus*, *Rhodanthus Mangelsii*, *Alonsoa grandiflora*, and *Erysimum Peroffskyanum*, and a few pots of *Heliotropes*, *Scarlet Pelargoniums*, *Lily of the Valley*, &c. &c.; as you proceed other objects will be suggested to you, and you can procure duplicates of such as are most agreeable to your taste.*

PEARS.—*A Surrey Subscriber*.—The Bon Chrétien Pear will not succeed well as a standard. The following are proper:—*Dunmore*, *Fondante d'Automne*, *Rondelet*, *Aithorp Crassane*, *Beurré Bosc*, *Thompson's*, *Hacon's Incomparable*, *Winter Nelis*, *Glout Morceau*, *Knight's Monarch*, *Ne plus Meuris*, and *Beurré Rance*.†

VEGETABLE MARROW.—*Constant*.—This plant abhors cold. There is no reason why it should not be grown in the open air as early in the season as the nights cease to be cold and the mornings frosty. It may be treated exactly like a Cucumber, and may probably be raised under transparent cotton lights.

INSECTS.—*G. S. Wintle*.—The small insects attached to the legs of the dead house fly, which you forwarded to us, are the Mock Scorpion, *Chelifer cancrorides*. These insects must have attached themselves to the fly after it was dead, but for what purpose, except that of devouring it, we cannot inform you. The round whitish ball which you found attached to the Fuchsia blossoms is a nest of one of the smaller spiders. The exact species which constructed it we are unable to point out.†—*Este*.—Two of your caterpillars reached us in good order; they appear to be those of the Common Yellow Underwing Moth, *Triphana Pro-nuba*, which does much injury at times to many of our favourite vegetables. Where the Caterpillars abound, we should advise you to turn up the soil and carefully hand-pick all that appears; after which water the soil with a mixture of 3 gas liquor and 2 water. This will easily get into the soil where it has been recently turned up, and destroy many of the Caterpillars which may remain.†—*Ruth*.—It is a Caterpillar of one of the larger Geometridæ, a family of Moths, which you found adhering to your standard Rose-tree. This Caterpillar is one of those commonly called Loopers, which at times stretch themselves rigidly out in a straight line, holding by their hind legs, when they much resemble, from their colours, a portion of the tree on which they rest.†—*I. E. P.*—The Grubs you send us are those of *Melolontha vulgaris*, the Common Cockchafer. We should recommend you to water your lawn with a mixture of one tenth gas-liquor and nine-tenths water. This will not do the grass any injury and will prove most obnoxious to the grubs, which are doing you so much injury—strong salt and water might also be used with advantage if you find any difficulty in procuring the gas-liquor.

RED SPIDER.—*M. W. K.*—You must persevere in syringing your Vines, infested by this insect, night and morning, as this is an effectual means of destroying it. If the weather continue as cold as it has done for the last few days, it will be advisable to have your greenhouse plants, also infested with spider, taken indoors, and treated in the same way as the Vines. A damp, moist atmosphere is most injurious to it.†

BOOKS.—*Chauv.*—We either did not receive your former note, or we recommended you Lindley's "Guide to the Orchard and Kitchen-Garden." Erica Hibbertia has red flowers, green at the ends; it may be had of all dealers in Heaths.†—*T. W.*—Martin Doyle's "Cyclopedia of Practical Husbandry" is the book for you.†—*L. E. G.*—Mackintosh's "Practical Gardener," in 3 vols., 8vo., is probably the best for your purpose. But you can do nothing well without understanding the "Theory of Horticulture."†—*S. A. S.*—Sweet's "Hothouse and Greenhouse Companion," and Mackintosh's "Practical Gardener," will give you as much information as such books can convey; but we fear you must trust to your own experience for such knowledge as you are searching for. Always ascertain in the first place what sort of country a plant comes from, and its natural LOCALITY, if you can, and form your practice on that evidence. For example—the Oleander naturally grows in Barbary, along the margin of rivulets. In the warm weather of Spring and early Summer it makes its growth; when the hot, dry autumn comes, it reduces its gaudy flowers. In cultivation grow it in heat, harden it, and then flower it out of doors if you like. But it is a plant of a very obliging disposition, and may be managed otherwise, though not so well. As to the Chorozemas, although they come from a country whose atmosphere is dry, yet it is to be recollected that they are low bushes, and all the subsoil is springy. Semi transparent covers, instead of glass, will hardly suit them, we fear. They will grow too much in shade.

ORGANIZABLE SUBSTANCE.—*Thyrs*.—As a plant proceeds in its growth it first forms its organs out of matter previously stored up within it, and then, having formed them, it proceeds to secrete a further supply of such matter for the next season's growth. That matter is what is meant by "Organisable Substances," an expression we do not approve of as used in the place you mention, although strictly correct. It would have been much better to have said that cuttings should be selected sufficiently ripe, which in gardening language means nearly the same thing. As this is an important subject we shall probably treat of it fully in another place, one of these days.

MORPHOLOGY.—*R. T.*—Wait a little, and you will hear enough of this.†—*Rural Chemistry*.—Your leaf is an accidental monstrosity, and does not much affect the questions of Morphology. The glands at its base are supposed to be secreting organs, by which the plant gets rid of matter that it does not want.†—*W. M.*—Your Rose-apple is a local disease, produced by the puncture of an insect, and has no relation to morphological questions.†—*Constant*.—The Oak is *Quercus pedunculata*. The bodies found upon it are abortive acorns, the scales of whose cup are expanded into little leaves, while the Acorn itself has perished.

SEEDS.—*An Original Subscriber*.—You may sow your seeds from Polynesia in shallow pans, in a soil consisting of peat, loam, leaf-mould, and sand, in nearly equal proportions. Place them in a gentle bottom-heat, and keep them perfectly dry for a week or 10 days after sowing; then begin to water them slightly, and afterwards treat them as greenhouse plants.†

MISCELLANEOUS.—*A Subscriber* for making an Asphalte path at p. 593, of this year.†—*Lyma*.—You must apply to some respectable Nurseryman.†—*Leptostachya*.—*Angelonia salicariaefolia*.†—*J. G.*—If water stagnates or keeps continually soaking through your ground, by all means drain it.†—*W. X. Y.*—1. *Agavea celestis*; 2. a *Cistus* of some kind, but without a better specimen we cannot determine the species; 3. *Potentilla fruticosa*; 4. *Escallonia rubra*.†—*A. B.*—Sow your Pinus-seed about the end of March.†—*W. M.*—1. *Bartsia Odontites*; 2. *Scutellaria minor*; 3. *S. galericulata*; 4. *Verbena officinalis*; 5. *Melilotus officinalis*; 6. *Lysimachia nemorosum*.†—*Stura*.—Your Brassia is new, if its labellum is always narrow, as in the specimen sent.†—*Melocactus*.—We see that the Persian Melons have been advertised (see p. 642), but we know nothing of the genuineness of the seeds. Any

one having Indian connections can procure them, with the exception of the Sirdar, which is in few hands as yet.†—*A. C.*—It is useless to send flowers packed in dry moss; no care will restore them to an examinable state. Your *Thunbergias* are shrivelled up till they are not larger than a cowslip blossom.†—*James Smith*.—Of your seedling *Gloxinias* No. 2 is the best; but the country is full of such things.†—*E. H. W.*—1. *Old English Codlin*; 2. *White Costin*; 3. *Beachamwell*; 4. *Wormley Pippin*.†—*H. P. J.*—Pear, No. 8 is the *Ambrosia*; Apple, No. 10, is the *Duchess of Oldenburg*.†—*M. W. R.*—There must be a place made, from three to four feet deep, for Stephenson's boiler to stand in, the top must be level with, or rather below, the level of the gutters. The stone-cistern need not have any partition to divide the flow and return-pipes. For a pit 12ft. by 6ft., procure the smallest sized boiler you can get.†—*A. D.*—We should think it is not necessary to clean your boiler.†—*An Original Subscriber*.—Speed's "Indian Handbook of Gardening," reviewed at p. 271. You will find much information respecting border Hyacinths at p. 36 of this year. We know of no better way to keep mice from Crocuses than to trap them.†—*O.*—Some *Scorzonera*, not worth the trouble of sending or determining.

SEEDLING FLORISTS' FLOWERS.

VERBENAS.—*J. Miller*.—We have precisely the same colour in the Verbena as your seedling named *Zeusis*, but the flowers of your variety are larger; it is very brilliant.†—*G.*—Your seedling is a pretty flower, but it does not appear to differ from others we have seen.†—*W. C.*—Verbena travel exceedingly well when packed in wet Moss. Your specimens were enveloped in dry cotton wool, and were shrivelled up when we received them, and we could not revive them. No. 4 appears a curious variety, the truss being composed of rose and white flowers, quite distinct. Do the flowers open in this manner, or does the change take place afterwards?†—*Walter Gray*.—In colour your seedling resembles a variety named *versicolor*, but your flowers are larger, equal in size to any we have seen.†—*S. Gilling*.—*gs* is distinct in colour, and resembles some of the purple flowers of *Pilox Drummondii*. In 10 the colour is dull, and appears to differ but little from some we have seen.†—*Affied*.—All your seedling Verbena are good flowers. 6 and 1 are the best, and most distinct from those already out: 4 is also a fine variety; the remainder appear to have been anticipated by varieties we have seen. No. 6 appears a very distinct colour, a bed of which would be very handsome.*

FUCHSIAS.—*Forton*.—Three seedlings of the same character, having delicate pink tubes, with sepals tinged with green; of these *Unique*, though the smallest, is the best, having the greatest contrast of colours, the lightest tube, the greenest tip, and the deepest-coloured corolla; in *Gregoryana* the corolla is too dull, and in *Carnea superba* the sepals do not expand sufficiently.*

DABLIAS.—*M. S.*—Your yellow seedling is of no use; the petals are too ribby, and the centre indifferent. The dark variety is a flower of fine general form; the centre up and well formed. It is a flower of good properties, but the colour is that in which our best flowers abound, and the blooms are rather undersized.†—*E. B.*—Both your seedlings are small; the darkest is decidedly the best, and from its general good properties is worth trying again; the lighter flower, No. 2, does not promise so well.†—*W. S. of P. C.*—Your named seedling of 1842 does not possess the improved qualities looked for in seedlings of the present day; the centre is sunk and bad, the petals are narrow, pointed, and too much quilled, and the flower is what is technically called starry; it is of no use.†—*E. B.*—Your second bloom supports the opinion previously written on the first; it promises well.*

As usual, a host of letters have arrived too late for answers this week.

NEWS OF THE WEEK.

A TELEGRAPHIC despatch reached Paris on Monday, announcing that a revolution broke out in Greece on the 15th inst., which has ended in the complete triumph of the popular cause, without compromising the personal safety of the King or the dignity of his crown. The details of this revolution present one of the most remarkable examples of national unanimity in the history of modern times. The people, the army, and even the principal authorities, had combined for the accomplishment of their purpose; and so secret were their movements, that neither the Foreign Ministers nor the King himself were aware of the approaching crisis. The people and the troops assembled in the middle of the night, surrounded the palace, and cut off all communication between the King and his Bavarian counsellors. They then in one voice demanded a Constitution. The King, aroused from his sleep, found that he was completely isolated, and that resistance was impossible. He had therefore no alternative but to assent to the proposals submitted to him by the Council of State, and to promise that the National Assembly should be convoked to draw up a new Constitution. Not a shot was fired, nor a voice raised against the obnoxious advisers of the King; and in less than 12 hours the immense multitude had quietly dispersed, without the occurrence of a single act of violence or aggression. This pacific revolution has excited considerable interest on the Continent, more especially in reference to the disturbances in the Italian States, and to the possibility that the example of the Greeks may be followed in the South of Italy. The Foreign journals concur in bestowing great praise on the moderation with which the Greeks accomplished their purpose, and contrast this result with the desultory proceedings of the Italian insurgents, whose attacks on individuals have given to their rising the character rather of a systematic brigandage than of a movement for political redress.†—In France, the clamour against the armament of the fortifications of Paris is still the leading topic of the Opposition journals; but the people as yet appear to regard the question with indifference. Some further arrests have taken place in connection with the late conspiracy, but no important facts have been made known.†—From Spain we learn that an engagement took place on the 21st, in the neighbourhood of Barcelona, between the contending forces which dispute the possession of that city. The bombardment commenced on the same day, and continued until the insurgents had retired from their

position. An attack on the city by the Government troops was hourly expected, and a fresh bombardment will no doubt take place before this second contest is decided. In other respects, the state of Spain continues to give rise to serious apprehensions. Saragossa has declared against the Government and in favour of a Central Junta, while a conspiracy for the same objects has been detected among the non-commissioned officers of the garrison at Vittoria. The Elections, also, in the great cities have terminated in favour of the Opposition, and unless the provincial elections present a very different result, the Government will hardly be able to meet the Cortes.

At home, the Repeal agitation has begun to assume another, and not less important character. In addition to the attempt made last week to identify the movement with the non-payment of rent and taxes, Mr. O'Connell in his speeches at Lismore has declared his conviction that the people and the clergy are going beyond him. He still promises that his Council of 300 will be in full operation before New Year's day, but says that instead of agitating as heretofore he must now moderate, and that it has become his duty to regulate the vigour and temper the energy of the people. In Wales, the hostility to turnpike gates appears, for the moment, to have given way to attacks on private property, and the disturbed state of the country has suggested the idea of proclaiming martial law in the Principality. Several meetings of farmers have been held, at which they have condemned the recent outrages, and adopted petitions to the Queen praying that the New Poor-law and the Tithe Commutation Act may be repealed, that free-trade may be adopted, and that the present Parliament may be dissolved, and another convened more likely to attend to the wants of the petitioners.

Home News.

COURT.—Her Majesty and Prince Albert remain at Windsor Castle with the Princesses, the Prince of Wales being still at Brighton. Her Majesty and the Prince have taken daily drives during the week with the Prince and Princess of Hohenlohe Langenburgh, and on Monday and Wednesday Prince Albert and the Prince of Hohenlohe shot over the Royal preserves in the Great Park.—It is expected that the Court will leave the Castle in the course of next week for Claremont, to remain for about a week or ten days, in order that Prince Albert may shoot over the preserves of the King of the Belgians.—The Duke of Cambridge is, we understand, expected at Cambridge House from Germany the week after next. The Duchess will remain some weeks longer abroad.—Lord Hawarden has succeeded the Earl of Hardwicke as the Lord in Waiting, and the Countess of Charlemont has succeeded Viscountess Canning as the Lady in Waiting on her Majesty.

Her Majesty's Belgian Excursion.—A paragraph appeared last week in the *Examiner*, stating, on the authority of accounts from Brussels, in a Belgian paper, that "the Queen of England and another personage had visited Waterloo *incognito* on the morning of the 19th." It has since been announced, on authority, that neither Her Majesty nor Prince Albert visited the field of Waterloo during their brief visit to Belgium. The mistake must have arisen either from the Brussels or the English paper misquoting the article they copied. This article originally appeared, we believe, in Brussels, and distinctly stated that "a person in the suite of the Queen of England," &c.,—meaning the Earl of Aberdeen, who went there to visit the grave of his brother, Sir Alexander Gordon, who fell in the battle.

Illness of Earl Grey.—We regret to state, that Earl Grey's indisposition has increased since his arrival at Howick Hall, and that Sir Stephen Hammick is in attendance upon him. His lordship, among other unfavourable symptoms, has lost the use of his limbs; but no apprehensions of immediate danger are entertained.

Foreign.

FRANCE.—The Paris papers are principally occupied with the fortifications of Paris, which the joint protest of the Republicans and Legitimists against their armament had again brought before the public. As yet, however, the people seem to view this outcry with apathy, as the real object of the fortifications must have long been generally known.—A person named Becker was arrested on Friday, at his residence, in virtue of a warrant from the Prefect of Police, charging him with being one of the most active and influential leaders of the communist plot detected some days ago. A clandestine press was seized at his lodgings, which, according to all appearances, served to print the proclamations of the conspirators. In 1833, the prisoner was sentenced to a year's imprisonment for an offence against the person of the King.—The *Ministerial Journal des Debats* has an article on a recent speech of Mr. Tyler, son of the President of the United States, in favour of Repeal, and observes, that "to do the French Radicals justice, their language is the most inoffensive mildness compared to that of the Radicals of New York. If such extravagant language could be regarded as serious, we should deplore it even for the interest of Ireland, for not only is it of a nature to excite sentiments of irritation amongst the English people, but such language must at the same time totally ruin the cause of the Irish, by depriving it of its national character, in order to give it the appearance of a revolutionary movement." In regard to Mr. O'Connell's proceedings, the

same journal has a remarkable article, from which the following are extracts:—"Every one must have remarked, that since the Queen of England, in proroguing Parliament, expressed in the most explicit terms her indignation against the attempts made to produce a dismemberment of the United Kingdom, there have been less meetings in Ireland, many less monster speeches from Mr. O'Connell, and many less hurrahs for Repeal. The Queen's speech has deprived him of his last chance of any longer abusing the simplicity of his auditory. Here commences the embarrassment of the agitator; he is in a dilemma where he cannot remain without danger, or leave without committing an act of madness. He sees himself at the head of an army whose number astounds him, and whose force threatens to turn against himself. Formerly he called meetings to pass reviews, and, as he said, to count heads; at present he confesses that he only holds them to suffer the boiling courage of the Irish people to evaporate, who are asking him every day when he will lead them against the Saxons. Thus Mr. O'Connell, in place of agitating, seeks but to calm: he only wishes to find an issue to give a passage to the waves he has confined, and by which he fears to be carried off. No one better than himself comprehends this critical position: he knows better than any other that the first step made towards violence would be his destruction, and at the same time a sanguinary repression. He knows well that the repeal of the union is an insane dream—he knows that England, which is the stronger, will not grant it, because it would make her descend to the rank of countries of the third order—he knows that not only it would be the ruin of England, but that it would also be the ruin of Ireland, because the Irish people, in their present condition, are incapable of living and walking alone; but it is because he knows all this, and knew it beforehand, that a heavy responsibility weighs upon his head. There are, we know, evils to be remedied, but the Irish themselves appear to oppose an obstacle to all reasonable reform. Mr. O'Connell has ventured his stake upon a dangerous card; he has placed Ireland between Repeal and revolution. Repeal he cannot have; and as to a revolution, if it were attempted, which God forbid! the attempt would infallibly conclude in an unfortunate and impotent revolt."—Some of the journals dwell at great length on the Duke and Duchess de Nemours' progress through Burgundy on their way to Lyons, where they arrived on the 20th; according to the Opposition prints their Royal Highnesses met with a very cold reception. At Macon, M. Lamartine, the poet, as chief of the Academy, prepared an address for the future Regent, which has been severely censured even by the Liberal papers. The following are extracts:—"Prince, you do us the honour of visiting us, and we receive you with cordiality. Welcome. You will meet with neither adulation nor insolence in our language. We will show merely dignity. We welcome your young Princess with somewhat more sentiment. The official harangues which greet you everywhere, tell you that France is fanatically attached to personal monarchy, to the royal power emancipated, to a throne predominating over other institutions; that France sees all the future in a dynasty, and places its trust in the fortifications which guard it; and, in fine, that France thirsts after princes, and is weary of freedom. We are too full of respect to contradict this; but history will do it for us if you open its page. Our real sentiments are other. We recognise the services rendered by the King your father. Order and peace are the fruits of the first painful years of his reign. We are grateful. But in return he owes his throne to France. And France has immense wants. Behind the legal, the electoral France of only 200,000 citizens, there stands an entire people, which demands its place. If you wish this people to be monarchic, form a monarchy in its image," &c. The Ministerial journal combats, and even republishes these manifestoes, which it does not seriously fear, because such vague demands of universal suffrage and uncourteous remonstrances flung in the face of Princes disgust the more moderate and large majority of French Liberals. The venerable M. Lacretelle addressed to the Prince, in the name of the Literary Society, a very different speech, from which we make the following extract in reference to the Queen's visit:—"Whilst your Highness was fulfilling your duties, the Château d'Eu, for ever consecrated in history, offered a great spectacle, a great promise to the world. In remote times, whose darkness the sacred volume alone has penetrated, a King, the most renowned for wisdom, received the visit of a Queen who offers herself to our veneration by this homage alone, for it is all we know respecting her. Here it is a young, amiable, and highly-honoured Queen, who came to visit a Monarch whose wisdom, profound discernment, and indomitable courage have triumphed over such painful trials and such formidable attempts on his life. The two greatest nations on the earth were represented on this occasion. Their calm, and at the same time unlimited liberty, increases the majesty of the Sovereigns. She does not on this occasion display her pomp, but her elegance and grace. The heavens, ocean, and the two shores are brilliant with the festivities. The sentiment of the two Sovereigns is comprehended, and dilates all hearts. The object was to render more intimate and friendly the long peace which Europe has enjoyed. This is the representative Government in all its glory, since this peace is its work. To strengthen esteem by affection and by a free interchange of amiable and generous qualities,—this is what an august example ought to inspire the two people in whom the world will see every day more and more their arbiters and models." The Prince replied,—"I thank you for having spoken in such noble terms of a recent visit, because I see in that event an honour for my country and a favourable omen for all. I see in it an

honour, because France, however great and glorious she may be, and worthy of such homage, cannot remain indifferent to the visit of a young Queen, who has appeared on our shores as it were to demonstrate the providential link that connects two great nations. I regard it as a favourable omen, because the union of two such powerful countries must accelerate the progress of humanity towards those happy destinies which peace makes it every day love more and more and better appreciate. I thank you for having afforded me an opportunity of giving utterance to a thought which was already in my heart, and I congratulate myself on concurring in the opinion of the illustrious writer to whom history has so often confided her most intimate secrets and her surest appreciations."—General Boyer, ex-President of the Republic of Hayti, landed at Havre on the 21st, on his way to Paris. M. Olozaga, the special ambassador from Spain, has arrived in Paris to demand, it is said, an armed intervention.—An authentic return has been made of the receipts produced by the performances of Mademoiselle Rachel at the Comédie Française since her *début* in 1838. The sum amounts to 1,503,000f. This is at the rate of 4900f. for each representation.—Marseilles was visited on the night of the 15th with a most violent storm. The visitors to the theatre could not reach their homes until three o'clock in the morning. A house in the market-place was washed down, but no lives were lost.—The sale of the furniture, &c. of the too celebrated *château* of Glandier, the late residence of Madame Laffarge, has just taken place, and it has revived the infatuation which all the newspapers in Europe have recorded. The most trifling articles have fetched the highest prices. The wedding dress of Mlle. Marie Capelle sold for 800f., and still excited envy; the Prayer-book she used at her wedding yielded 50f.; a mere sketch of her face fetched 25f.; some little albums, a few soiled pages of verses addressed to her, and other trifles, have attracted a crowd to Glandier for a whole fortnight.

SPAIN.—Advices from Barcelona of the 22d state that an engagement took place on the 21st, between the insurgent forces under Brigadier Ametler, and those of Brigadier Prim. Ametler had his head-quarters at Badalona, a town on the coast at two leagues from Barcelona, and on the Mataro road; his vanguard occupied San Andres de Palamar. Prim attacked the latter, and completely routed the insurgents. The engagement lasted two days, and on the morning of the 22d Prim's troops were masters of all the houses. He made 200 prisoners; the rest were killed, or fled. Col. Milans was wounded. Brigadier Ametler abandoned Badalona, and retired towards France. The suspension of hostilities in Barcelona mentioned in the last despatches, only lasted 24 hours. The citadel and Montjuich both fired on the 22d on the sea-gate and Atarazanas, but ceased firing after the retirement of Ametler. Brigadier Prim was hourly expected to attack the insurgents of Barcelona. The movement of Reus has failed, and the insurgents driven out by the inhabitants of the town have fled to the mountains. Vich and Puyceda have refused to submit to the Junta, and the National Guard have refused to march to the succour of those towns recognising the Junta. A great number of those who left Figueras have returned. The weather has been very severe in Catalonia, particularly on the eastern frontier, and in consequence of the floods all communications with France have been cut off, except by the Perthus road. Madrid was calm on the evening of the 20th, in spite of the impression produced by the rising of Saragossa, which has declared against the provisional Government, and even against its Cortes, a movement having broken out there on the evening of the 17th in favour of the Central Junta. The municipality and the national militia took part in it, and a Junta was formed without opposition. Letters from Vittoria, of the 17th, mention that a conspiracy had been discovered in that city among the non-commissioned officers of the cavalry Regiment del Principe. Their object was to proclaim a Central Junta. Seven sergeants had been arrested. At Madrid the elections are the great topic of the day; the "Progresista" party, or Anti-Ministerialists, are steadily gaining ground in the poll. Of the 7,000 or 8,000 electors, not more than 2,000 had polled. The Government journals assert that the provincial elections will be more favourable to them. One of the powder magazines, at some distance from the capital, blew up on the 22d. Some workmen and guards were killed, but the city sustained no serious injury. The cause of this accident is not yet known.

PORTUGAL.—Accounts from Lisbon of the 18th state that General Zurbano, who arrived on the 7th inst. at Oporto, was made a prisoner, and lodged in the castle of Foz. He was seized in the French hotel at Oporto, and had come in the packet from Vigo. An order, however, was immediately forwarded from the Government for his release, and Zurbano is now in Lisbon. He is said to be greatly broken down by the distresses which he has endured since he was driven from Madrid, and his spirits appear to be completely shattered.—Dr. Miller, of Kilmarnock, brother-in-law of Dr. Kalley, of Madeira, has received a letter from the Foreign-office, in answer to the representation made by him to Lord Aberdeen, on hearing of Dr. Kalley's imprisonment at Funchal; in which it is stated that "her Majesty's Minister at Lisbon has been directed to require that Dr. Kalley be liberated on bail, and his case brought before the Conservatorial Court."—An official notification has been received of the formal installation of the Mixed British and Portuguese Commission, under the treaty concluded last year for the suppression of the slave-trade, at Boa Vista, in the Cape de Verd Islands. This event took place on the 7th June. The act of installation was signed by Mr. Rendall, Consul-General of England in those islands, by

Captain Dos Santos, as Commissioner for Portugal, and by Senhor d'Almeida as arbitrator.

GERMANY.—Letters from Vienna of the 12th state that since Prince Metternich's return, the arrival and departure of couriers has become even more frequent than it was before, and that the frequent conferences which the Prince holds with the French Ambassador leave no doubt that the object of the present important negotiations are Spanish affairs. Upon two questions it is said the principal Cabinets agree. No immediate or particular proposals will be made to the Spanish Government, but all exertions will be made to secure the hand of the Queen to a member of the Bourbon family, exclusive of the Orleans branch. The candidates, therefore, would be members of the families of Don Carlos or the King of Naples.—The Emperor of Russia left Berlin on the 19th for Warsaw; the Grand Duke and Duchess of Saxe-Weimar for Weimar; the Duke of Leuchtenberg for Stettin; and the Crown Prince and Princess of Sweden, with their daughter the Princess Eugenia, for Stockholm.—The King of Bavaria's magnificent plan to form a union of the members of the German Confederation, for the purpose of contributing to the fund for rebuilding Cologne Cathedral, has been responded to, and it is now understood that the Emperor of Austria has offered 40,000 florins a year until the work shall be completed.—Great preparations are making at Gratz for the reception of the naturalists who are to hold their annual meeting there in the course of this month. A room has been erected, in which 1000 persons may dine. The Archduke John will treat the naturalists with a Styrian *fête*. He has caused persons to come from all the provinces of Styria, who are to execute in their different costumes national dances and songs. The governor will also offer to the scientific strangers a brilliant *soirée* in his gardens.—Prince Hohenlohe, of miracle-working celebrity, but of whom nothing has been heard for some time, is stated, in a letter from Innsbruck, to have performed some new miracles there during the last month. Among the persons stated to have been cured were the daughter of a Councillor of the Court of Appeal of the Tyrol, after a painful illness of three years, and a woman of fifty-five, who had been for seven years afflicted with paralysis.

ITALY.—Accounts from the Frontier state that Count Radetsky, military governor of Venice, has received instructions from Vienna to keep 4,000 men ready to march at a moment's notice into any of the Italian States, as soon as their respective Governments should require and demand such assistance. The Bolognese insurgents have made an attempt to surprise the city of Ravenna, to arrest three cardinals, and to establish the centre of the operations in that place. They had agreed to meet other conspirators at Imola, but the police discovered their intentions, and when the insurgents arrived before Imola they found the gates closed and the garrison under arms. A letter from Rome, of Sept 14, in the *Augsburg Gazette*, contains the following:—"We have just received by express information that the diligence (what diligence is not stated), and the dragoons who were escorting it, had been attacked by a band of 150 men, armed with English muskets. The dragoons were made prisoners. It is asserted that this band had suddenly attacked several posts of cavalry, and carried off their arms and their horses. In consequence of this news, there was yesterday a Council of Cardinals. The Government is said to have sent off immediately for Cesena several battalions of infantry." From Naples we learn that no instance of burning has lately taken place, and the streets, which were almost deserted by females, are again assuming that life and noise so peculiar to this city. Sir Woodbine Parish, who has been in Naples since the sulphur question, for the purpose of extending our commercial interest in the kingdom, has returned to England, having failed in inducing the Government to agree to anything beyond the sulphur duties, which are already known and acted upon.

GREECE.—A telegraphic despatch has reached Paris announcing that a revolution has at length broken out at Athens. The accounts of the proceedings of King Otho which have appeared from time to time will cause this news to be received without surprise. It appears that at 2 o'clock in the morning of the 15th a few musket-shots fired in the air announced the assembling of the people in the different quarters of Athens. Soon afterwards the inhabitants, accompanied by the entire garrison, marched towards the square of the palace crying, "The Constitution for ever!" On reaching the palace the artillery, cavalry, and infantry, drew up under the windows of the King, in front of the palace, and the people having stationed themselves in the rear, all in one voice demanded a constitution. The King appeared at a low window, and assured the people that he would take into consideration their demand and that of the army, after consulting with his Ministers, the Council of State, and the representatives of the foreign Powers. But the Commander M. Calergi, having stepped forward, made known to his Majesty that the Ministry was no longer recognised, and that the Council of State was already deliberating on the best course to be adopted under existing circumstances. A document was soon afterwards presented to the King by a deputation of the Council, composed of Messrs. Conduriotis, the President, G. Eynian, A. P. Mavromichali, jun., G. Psyles, and Anastasius Londos. Whilst his Majesty was reading the propositions of the Council of State, the representatives of the foreign Powers presented themselves at the Palace, and were told by the Commander that nobody could be admitted at that moment, the King being in conference with the deputation of the Council of State. The latter came out two hours afterwards with the consent of the King. The new Ministry recommended by the Council then repaired to the Palace,

where they held a long consultation with his Majesty, who shortly appeared on the balcony, surrounded by the new Ministers and Ambassadors, who had just been admitted, and was received with acclamation by the people. The cry of 'Long live the Constitutional King' resounded, together with that of 'The Constitution for ever.' The following Ministers entered immediately on the discharge of their functions. Messrs. André Metaxa, President of the Council, with the department of Foreign Affairs; André Londos, Minister of War; Canaris, for the Navy Department; Rhigas Palamidis for the Interior, Mansolas for the Finance; Leon Melas, for Justice, and Michel Schinas, for Public Instruction and Ecclesiastical Affairs. The military revolution was directed, on the part of the regular Army, by the Colonel of Cavalry (Demetri Calergi), and on that of the irregular army by Colonel Macryany. At 3 o'clock in the afternoon the garrison, after defiling before the Palace, re-entered their quarters, preceded by their bands, amidst the acclamations of the people. An hour afterwards the city, in which order had not been an instant disturbed, resumed its customary aspect, the whole revolution having been accomplished successfully and without bloodshed, in about 12 hours. The students of the university joined the movement, and were remarkable for their patriotism and moderation. (Similar movements occurred at Chalcis, Corinth, and Nauplia. Letters from Athens of the 17th state, that all foreigners holding offices under Government were to be dismissed, including even M. Lemaitre and other Frenchmen employed in the administration of the National Bank. The chiefs of the movement had adopted every precaution for the safety of that establishment; the Directors were beforehand informed of the hour at which the movement was to take place, and 12 trusty soldiers were sent thither during the night for its protection by M. Calergi. The revolution was effected without any violence. The Ministers were arrested in their houses, but liberated on the next morning. A Bavarian Aide-de-Camp of the King was also apprehended, and confined in the barracks, where, however, he remained a prisoner only a few hours. It appears that the King yielded with bad grace, when he found that all resistance on his part would be unavailing. It was eleven o'clock when his obstinacy was subdued. The military bands were then playing the "Marseillaise" and the "Parisienne," which gave his Majesty cause to suppose that affairs might proceed to unpleasant extremities. On the 16th King Otho took his customary airing, and was saluted, as he passed along the streets, with cries from the people and soldiers of "Long live the Constitutional King!" An exception had been made in the decree of exclusion against foreigners in favour of the old Philhellenes who held office under the Government. The National Assembly will be convoked within 30 days from the date of the revolution, to draw up the new Constitution in conjunction with the King.

TURKEY.—By the Levant mail we have advices from Constantinople to the 8th inst. The *Beral* had been sent for the investiture of Prince Alexander Georgiewitch, and was published in due form at Belgrade on the 14th inst. The greatest activity prevailed in the military departments of the Porte, and on the 6th an Imperial *hât*, incorporating the militia with the regular army during a period of five years, had been proclaimed with great pomp in presence of the Sultan, the Ministers, and the troops of the garrison. Redschid Pasha, President of the Military Council, had been appointed Seraskier or General-in-chief of the troops of Rumelia, with the title of Muschir, and was to reside at Adrianople. The Porte appeared to be inclined to give France every satisfaction for the insult offered to her consul at Jerusalem. Before Baron de Bourquenay had made any communication on the subject to the Divan, the Sultan had anticipated him, by enjoining the authorities of Syria and Jerusalem to punish the parties who had committed the outrage with exemplary justice. Prince Bibesco, the new Hospodar of Wallachia, accompanied by his younger brother and a number of Boyards, had arrived at Constantinople. The Sultan had sent his portrait to King Louis Philippe by the French steamer. A provisional government has been established in the mountains of the Nestorians. Zenail Bey, a well known Kurdish marauder, has been named governor, and has established himself in a new house built by Dr. Grant, in Tujari, for the purposes of the American mission.

EGYPT.—The last French packet has brought here Arnim Bey, first interpreter to the Pacha, on his return from his mission to Paris. Accountants to be employed in the regulation of the accounts of the Egyptian government have accompanied him from Paris. The Pacha is expected to return shortly to Cairo, and the alarms which had prevailed of a too abundant inundation have subsided. Up to the 6th inst. no Indian mail had been signalled as having arrived at Suez, and moreover, there was no steamer at Alexandria to bring the mail on should it chance to arrive before the Oriental, which left Malta for Alexandria on the evening of the 13th.

NEW SOUTH WALES.—Sydney papers to the 1st June have come to hand. The colony was in all the bustle of the first general election of a legislature under the constitution lately conceded, and then first to be put in force. The quarterly returns of revenue for the three months ending with March last, published there, show a decrease of 2,551*l.*, as compared with the corresponding quarter of 1842; the returns for 1843 being 77,079*l.* against 80,530*l.* for 1842. Stock had been selling at very low prices in Western Australia. Sheep were sold by the importers at 1*l.* a head; and cows at from 6*s.* to 10*s.* each. Colonial bred cows and heifers were sold at Perth at an average price of 9*l.* per head.

CITY.

Money Market, Friday.—Consols closed at 94½ to 5 for money, and 95 to ½ for account; New Three-and-Half per Cents., 102½ to ½; India Stock, 267 to 9; Exchequer Bills, 1½*d.*, 6*l.*s. to 63*s.*; 1½*d.*, 60*s.* to 62*s.* prem.; India Bonds, 67*s.* to 69*s.* prem.

Metropolis and its Vicinity.

Dinner to Gen. Espartero.—On Tuesday a magnificent banquet was given at the Mansion-house, as a mark of sympathy with General Espartero on his arrival in this country. Nearly three hundred sat down to dinner. The hall was decorated in the usual manner. There was a meeting of the Council in one of the rooms of the Mansion-house previous to the dinner, when the Lord Mayor read the resolutions of the Common Council, which have already been noticed in this Paper, and to which Gen. Espartero returned a suitable reply: After dinner, the usual loyal toasts having been given, the Lord Mayor proposed the health of his Highness the Duke of Victory, expressing his belief that "if we do not see Espartero again at the head of affairs, we shall at least see his principles in the ascendant." The toast was received with loud cheering, after which the Duke of Victory rose and addressed the assembly in Spanish. Having been listened to with profound attention, the Lord Mayor, at the conclusion of his speech, said that as the Duke of Victory was not sufficiently acquainted with English to deliver his address in our language, he had put a translation of his remarks into his hands, which he begged to read. His Lordship then read the following address:—"My Lord Mayor and Gentlemen—The generous and hospitable reception I have met with from the British people, their Queen and Government, will ever be to me a source of most grateful recollection. The British nation—the high-minded and liberal British people—have thoroughly understood the feelings that have ever guided the actions of him who has now the honour of addressing you, and who having hoisted the constitutional flag of his country, carried it victoriously, until finally the enemies of liberty disappeared. Solemnly elected Regent of Spain by the national will, I was determined to govern the kingdom within the law; to preserve the law, and allow no one to transgress the law. The enemies of the liberty and independence of my country and of the constitutional throne of my Queen are indebted for their momentary triumph to that religious respect which I have ever shown to the fundamental law of the state. But I shall never on that account regret that such has been my conduct; for I am convinced such is the only conduct a constitutional Regent ought to follow. Thus it was my intention, when the time fixed by the constitution for Isabella II. commencing the exercise of her constitutional authority should arrive, that she should find herself at the head of a flourishing and great kingdom; quiet within, respected without, and progressing in that prosperity to which it is entitled by its position, climate, and the character of its people. I have asserted it a hundred times, and it is with satisfaction I now repeat it here—to secure and consolidate the public and civil liberty of my country; to preserve intact the constitutional throne of Isabella the Second, to deliver into her hands the authority with which I was entrusted precisely in the manner determined by the law, and then to retire into private life, and become once more a private citizen—such were ever my wishes—such my determination. An evil destiny has prevented the fulfilment of my intentions, and I have been obliged to retire from my country; but in the midst of my misfortunes it is a great consolation to have met with so generous a reception in this, the classic soil of constitutional liberty, whence I offer the most fervent vows for the happiness of my country. And wherever fate may lead me, I shall always have the most lively recollection of the sympathy shown me by the British people, and more particularly by the City of London, the prosperity of which I now beg leave to offer as a toast." Vehement cheering followed the conclusion of this speech. The health of Gen. Van Halen and the other officers of Espartero's suite, was then given and acknowledged by that General. Viscount Canning returned thanks for the House of Peers, and expressed his hope that, whatever future events may bring about, when Gen. Espartero and his countrymen, here and at home, recalled the memory of the reception which had been given them, they will feel that it was given to a man who filled a station the highest to which a subject can be called, with a scrupulous honesty as regards the interests of his country, and with unflinching fidelity to his young Queen. Mr. Ward acknowledged the toast of the House of Commons, and said that they came there to honour one who had been most undeservedly driven from the highest station in his own country, and who would, in all probability, still fill it, if it were not for foreign interference. That Spain might be again restored to constitutional liberty, through the instrumentality of Espartero, was a wish in which every man in this country heartily joined, be he Whig, Tory, or Radical. The Lord Mayor then gave "The Members for the City," praised the late Sir M. Wood for his humane and useful conduct, and stated that Lord J. Russell was anxious to attend the banquet to Gen. Espartero, but that he could not conveniently leave the country, where he was at present residing.

General Nogueras.—In connection with the banquet to Gen. Espartero we may notice a correspondence which has appeared in the daily papers on the part taken by Gen. Nogueras, one of the ex-Regent's suite, in the murder of Gen. Cabrera's mother during the contest with Don Carlos. On the first announcement of the Lord Mayor's intention to give this banquet, Lord Ranelagh

wrote a letter to the morning papers, asking whether the city authorities were aware that Gen. Noguera was the perpetrator of that crime. To this Gen. Noguera replied, that the imputation was false; "it was another General," he said, "who ordered the trial and execution, and neither have I to take on myself the responsibility of his acts nor the denunciation of his name." Lord Ranelagh declared this letter a subterfuge, and explained that Gen. Noguera did not actually shoot the unfortunate lady, but entreated Gen. Mina to do so; quoting Gen. Mina's despatch, dated March 15, 1836, to prove the fact. On the 24th inst., Gen. Noguera published his reply, stating that "he had not the least interference in the affair;" and that, "satisfied with the repeated public demonstrations of the affection of his countrymen, and resting on the testimony of a pure conscience, he will not trouble the public of this country any more on a subject to which it can attach but little interest." This has called forth a rejoinder from Lord Ranelagh, containing the following passages in immediate reference to the main facts:—"In answer to the first point, I offer the following extracts from Lord Clarendon's despatch to Lord Palmerston, dated March 7th, 1836, and not quoted by me before:—"I consider it my duty to inform your lordship of an occurrence that has lately taken place in Catalonia, and which, with reference to its atrocity and its consequence, has produced a considerable sensation at Madrid. A Carlist chief, called Cabrera, shot the alcaldes of two small villages in Lower Arragon. The mother of Cabrera, a poor old woman nearly 70 years of age, lived at Tortosa, and General Noguera, who commanded the Queen's troops in the neighbourhood, ordered the Governor of that place to have her seized and shot. The Governor refused to commit this barbarous deed, upon which General Noguera wrote to General Mina, the Captain-general of the province, for his sanction, which was unhesitatingly given, and the mother of Cabrera was executed for the crime of her son. Immediately upon these facts coming to my knowledge I waited upon Mr. Mendizabal, with whom I found the Minister of War, and I told their Excellencies that I was come, in the performance of a painful duty, to announce to them what would be the feelings of his Majesty's government, and the whole people of England, upon learning those unparalleled acts of barbarity. Mr. Mendizabal and Count Almodovar, with expressions of horror, admitted the facts, and seemed to be aware of the impression which they would produce in England. I have several times since spoken to Mr. Mendizabal upon the matter, and his Excellency yesterday informed me that General Noguera had been deprived of his command in Arragon, and that a court of inquiry had been ordered into all the circumstances of the case, with a view to ulterior measures." Lord Clarendon, in another despatch of April 23d, says, in confirmation of his former statement, that "General Noguera had been deprived of his command, and ordered to repair to Valencia, where proceedings were to be instituted against him." In addition to the above, there is Cabrera's authority on record that Noguera is the murderer of his mother; and when he signed a treaty for the exchange of prisoners, he exempted General Noguera from any such benefit. One more unquestionable corroborative testimony:—The wife of Colonel Fentivero (a companion and brother officer of Noguera) was shot, in retaliation for Cabrera's mother. The Colonel presented a beautiful petition to the Queen, calling for the trial of Noguera, and denouncing him as the murderer of his wife. This petition from Colonel Fentivero appeared in all the Madrid papers of the 24th and 25th March. Lord Palmerston, in his despatch to Lord Clarendon, of April 2, 1836, says:—"You will at the same time state to the Spanish Minister, that it is impossible to express in adequate language the disgust and indignation which this atrocious crime has produced in the minds of all persons in this country, or to describe the degree of injury which such abominations necessarily do to the cause of the Queen. You will earnestly entreat the Spanish Government to take the most effectual means to prevent the recurrence of such disgraceful acts, and to give the war in every province in which it may be unfortunately carried on the character of a contest among the inhabitants of a civilised country." As to the little interest General Noguera supposes that the English people take in such atrocious acts, it cannot be forgotten that General Moreno, the Carlist Commander-in-Chief, was ignominiously and properly driven from this country by the voice of public opinion, for his murder of an Englishman in Spain."

Death of Sir Matthew Wood.—Alderman Sir M. Wood, Bart., one of the Members for the City of London, died at Gloucester on Monday last, after a long and severe illness. He was in his 76th year, having been born on the 2d June, 1768. The name of Alderman Wood will be long remembered in the annals of the City. For more than a quarter of a century he has been one of the most conspicuous members of the Corporation; has filled all the highest offices connected with it, and has taken an active part in every political question which has agitated the public mind during his time. After filling several offices of lesser importance, he was chosen, at a comparatively early age, Alderman for his ward, and having served in his turn the office of Lord Mayor, he was elected a second time to fill that chair. As a politician it is almost unnecessary to say that Alderman Wood was a supporter of Whig principles, and was the Representative of London in no less than nine successive Parliaments. He was the son of a tradesman in Devonshire, and commenced life as a commercial traveller. He afterwards settled in Falcon-square as a brewer's druggist and hop merchant, and realised a considerable fortune, independently of that derived under the celebrated will of Mr. Wood of Gloucester. His advocacy of the cause of Queen Caroline

first brought him prominently before the public. He is succeeded in the baronetcy by his eldest son, the Rev. Sir John Page Wood, Bart., rector of St. Michael's, Cornhill, and vicar of Cressing, Essex. The death of Alderman Wood has created a vacancy in the representation of the Ward of Cripplegate in the Court of Aldermen, and of the City of London, in Parliament. With regard to the latter, active preparations are already in progress for a contest. A requisition has been got up to Mr. Thomas Baring, calling upon him to come forward as the Conservative candidate, Mr. Wolverly Attwood having been obliged to decline on account of ill health. On the Liberal interest, Mr. Samuel Gurney, Mr. Patteson, and Lord Morpeth, have been mentioned; and it is believed that Mr. Patteson will comply with the invitation. The election will take place on the old registration, and may not occur for some time. Several gentlemen are talked of for the aldermanic gown of Cripplegate. Among these are Mr. John Dillon, of the firm of Morrison, Dillon, and Co.; and Mr. Thomas Challis.

Election of Lord Mayor.—Yesterday being Michaelmas day, a Common-hall was held at Guildhall, according to annual custom, for the purpose of electing a Lord Mayor for the year ensuing. After the usual forms had been gone through, the two senior Aldermen below the chair, Alderman Thomas Wood and Alderman Magnay, were put in nomination, together with the present Lord Mayor. The latter, however, declined sustaining the labour and expense of the office for another year, and Alderman T. Wood expressed his intention of retiring from the contest. A poll, however, had been demanded by his friends, and the sheriffs had no power to interrupt the voting. The polling was merely nominal although it must be continued for seven days, and Alderman Magnay is virtually elected.

The Sheriffs.—The new sheriffs, Alderman Musgrove and Mr. Moon, were sworn into office on Thursday, with the usual ceremonies. The Rev. Dr. Vivian, rector of St. Peter-le-Poor, Old Broad-street, has accepted the office of chaplain to Mr. Alderman Musgrove, and the Rev. Dr. Croly to Mr. Moon.

East India Company.—On Wednesday the quarterly general court of this corporation was held at the India House, pursuant to the charter, Mr. Cotton in the chair. The proceedings were mostly of a routine character. After the presentation of various papers laid before Parliament since the last Court, consisting of accounts relative to the revenues of India, salaries, annuities, compensation to the colleges of Haylebury and Addiscombe, the number of students, &c., various papers were submitted relating to the claim to compensation by Captain J. Patterson, and documents connected with appeals in India. Mr. Poynder then brought forward his motion, complaining of the annual payment of 60,000 rupees to the Temple of Jugernaut, the attendance of the police at the temple, and the compulsory steps adopted to obtain coolies to draw the car. The chairman suggested, that, as the directors had required specific explanations upon these points, the motion should be withdrawn for the present, to which Mr. Poynder assented, with the expression of a hope that the object he had in view would be accomplished in another way. Mr. Lewis then brought under the consideration of the Court a motion relating to appeals from India, the prosecution of which was made compulsory on the Company by orders in Council; but the motion was withdrawn, on the understanding that the Board of Control had promised to give the subject its serious attention.

Metropolitan Improvements.—The mews at the corner of James-street and Stafford row, nearly opposite the equestrian entrance to Buckingham Palace, were pulled down last week by order of the Commissioners of Woods and Forests, in order to clear the site for the intended improvements in the vicinity of the Palace. The demolition of the White Horse public-house is deferred for the present, and the improvements to be immediately commenced will be limited to building a wall to James-street; the wide space thus obtained will enable the Commissioners to remove the hackney coach stand several feet from the present locality.—Mr. Cubitt has completed a direct road from Belgrave-square, through Eaton, Chester, Eccleston, and St. George's squares, to the river at the end of St. George's-square. He is about to erect a chain pier for the accommodation of the public.—In consequence of a material sinking of Westminster Bridge, it has been determined to remove a great portion of the wall and heavy balustrades, together with the covered stone recesses on each side, and to substitute a low wall, similar to that recently adopted at Blackfriars Bridge. The road and footpath will also be reduced.—The New Lincoln's Inn Hall has so rapidly advanced since the commencement of the year as to insure its being roofed by the early part of the ensuing spring.

The Murder of Mr. Westwood.—It will be recollected that some years ago the shop of Mr. Westwood, a watchmaker, in Princes-street, was broken open and robbed of property to a large amount, and the proprietor murdered. The criminals have hitherto escaped detection, although a reward of 300*l.* was offered at the time for their apprehension. At the last May session of the Central Criminal Court a person named Henry Stocker was convicted of stealing six Irish bank notes for 100*l.* each from the person of Mr. Jeffs, a railway contractor, in Dublin, and sentenced to be transported for seven years. He is now confined in the Model Prison, at Pentonville, where some doubts are entertained of his sanity. At the time of his conviction he declared his innocence, insisting that he was engaged in his business in London on the day of the robbery. A representation to this effect, supported by the certificates of several respectable persons, vouching for that fact, has been made to the Home Secretary, but hitherto without avail. Stocker now states that he is able

to give such information as will lead to the discovery of the murderers of Mr. Westwood, which he is ready to do, on having his sentence reversed or mitigated. He asserts that, during the time of his imprisonment in Newgate, preparatory to his trial, he was employed by a fellow-prisoner to write out his defence, and that in the course of his confidential intercourse with this man, disclosures were made to him which, if divulged and followed up, will enable the police to discover the murderers. This circumstance has been communicated to the family of Mr. Westwood, who have placed the affair in the hands of the police, who have already set an active investigation on foot, so that the long-concealed culprits may now possibly be brought to justice.

The Nelson Column.—It is said that the statue of Lord Nelson will be placed on its column on the 21st of next month, the anniversary of the battle of Trafalgar. An entertainment in honour of the event will be given by public subscription to his surviving companions in arms, and Sir R. Stopford has sent a letter to the committee, stating, that the pensioners now in Greenwich Hospital who shared in the victories of Lord Nelson, and whose present state of health will allow of their attending, amount to 199, viz.:—in the battle of Trafalgar, 130; Copenhagen, 31; the Nile, 25; and St. Vincent, 13. Prince Albert has contributed 20*l.* to the fund now raising to defray the expenses of the entertainment.

General Pension Society.—On Monday the annual general meeting of this society, formed to grant monthly pensions of 31 shillings to decayed citizens, mechanics, and manufacturers, and of 22 shillings to their widows, was held, Mr. Haywood in the chair. The report stated that the society continued to receive distinguished patronage and support. Prince Albert had condescended to become its patron, and marked his approbation of its object by a donation of 50 guineas. Sixty persons, men and women, were recipients of its bounty, and another election for four men and two women as pensioners would shortly take place. The funded property, exclusive of 500*l.* in the life fund, was 4814*l.*, the surplus fund 600*l.* The receipts for the year were 1794*l.* 12*s.* 6*d.*, the expenditure, including 628*l.* 7*s.* disbursed in pensions, and the purchase of 500*l.* stock, left a balance of 316*l.* 14*s.* The report then stated that the Earl of Craven was the newly-elected president, and that in future decayed tradesmen and their widows would be eligible as pensioners.

South Sea Company.—A general meeting of this company was held last week at the South Sea House, for the purpose of considering an address to be presented to her Majesty, and for making an alteration in the by-laws. Mr. Franks, deputy-governor, took the chair, and proposed the adoption of an address to her Majesty, praying that her Majesty would be pleased to continue governor of the Company. After a long discussion on the question whether her Majesty, holding no stock, was qualified to act as governor, the address was agreed to by a majority of 13 to 6. A resolution was then agreed to, altering the transfer days for public stock to Tuesdays, Wednesdays, Thursdays, and Fridays; and for private stock to Mondays and Saturdays.

The High Tides.—The equinoctial gales during the week have swelled the Thames to such an extent as to create serious alarm to persons whose premises lie along its banks. The tide of Monday rose to five feet above high-water mark; and the steamers had some difficulty in passing under the arches of the different bridges. The wharfs along Bankside were flooded to the depth of 18 inches, and the yards and wharfs from Blackfriars to Westminster-bridge were likewise under water. The tide flowed over the river-wall of the Bishop's-walk, and rendered the streets leading to Vauxhall-bridge impassable, the water forcing its way into the ground-floors. At Lambeth Palace the water also rushed into the cellars. The embankments from the Horseferry-road Pier to Chelsea, on the north side, and those from Vauxhall-bridge to Putney, were completely under water for nearly an hour. The tide of Tuesday morning rose to a still greater height, induced by a strong wind from the northward. The overflow was very great along the Kentish coast from Woolwich Marshes to Deptford and Rotherhithe, and from Blackwall to the Isle of Dogs, on the opposite side. Cellars, kitchens, and warehouses, were flooded; causing considerable destruction of property. The market-gardeners were severe sufferers, and a great number of private gardens in low situations were inundated, and the soil washed away. The Lewisham meadows were overflowed by the Ravensbourne, to the extent of many acres. The pleasure-ground in the rear of Dr. Smith's house, in the Blackheath-road, was two feet under water; and, on the tide receding, nearly 100 fish, flounders, roach, dace, &c., were found on the lawn. In the afternoon, at four o'clock, the river was several feet above high-water mark, and the banks were overflowed. To prevent an overflow of the ground surrounding the Millbank Penitentiary, three large breakwaters were moored in the river, and had the desired effect. This was not the case nearer Westminster; for, at the Horseferry, the river had overflowed the embankment and covered the road. Along the Lambeth side the water flowed into the cellars of several houses, and did considerable damage. The lower parts of Shadwell, Wapping, and Bankside were also inundated. On Wednesday, the tide rose much higher than on either of the previous days. Although in many places precautionary steps had been taken, considerable destruction of property ensued. All the warehouses near Chelsea, Wandsworth, Batterssea, Lambeth, and at Bankside, were completely inundated. The timber-yards near Southwark-bridge were entirely overflowed, and the roadway was above a foot under water, rendering the highway quite impassable for upwards of an hour. At

one time the tide rose so quickly up the iron gratings connected with the sewers, that in some instances it forced them up several feet into the air.

The Stoddart and Conolly Fund.—The committee of this Fund had an interview with Lord Aberdeen on Saturday, at the Foreign-office, when his Lordship offered to render every assistance in his power to the Rev. Dr. Wolff, for the purpose of obtaining intelligence of the fate of Colonel Stoddart and Capt. Conolly, and stated that Dr. Wolff's mission would not in any way interfere with the instructions he had already given to Colonel Shiel.

Anti-Corn-Law League.—On Thursday evening the Anti-Corn-law League held its first monthly meeting for the season, in Covent-garden Theatre. The building was crowded in every corner half an hour before the time for commencing the business, and a great number of ladies were present. Mr. G. Wilson, the chairman of the League, presided, and opened the proceedings in a long address. The report for the past year was then read, from which it appeared that tracts had been distributed among 26 counties, containing 300,000 electors, and in 187 boroughs, containing 400,000 electors, exclusive of 4,000,000 tracts given to the working classes, and non-electors, making a total of 9,000,000 of tracts, weighing 100 tons. 426,000 tracts had also been stitched up in magazines. 23 boroughs and 47 counties remained unvisited by the League. In 56 counties of England, Scotland, and Wales, 650 lectures were delivered by 14 lecturers, and 140 towns were visited by deputations from the League. The great Manchester meeting was attended by 20,000 persons and 501 deputies. The receipts of the League Fund for the year were 50,290*l.* 1*s.*, and the expenditure amounted to 47,814*l.* 3*s.* 9*d.*, leaving a balance of 2476*l.* 10*s.* Mr. Hayward moved the adoption of the report, which was carried, and the meeting was subsequently addressed by Messrs. Bright, Cobden, and Fox.

St. Paul's Churchyard.—A few days since, in the course of excavations in St. Paul's Churchyard, the workmen came to a bed of peat at about 13 feet from the surface. The depth of the bed was 4½ feet. There have been above 20 carts filled with it. A quantity of bones, earthenware, and various other articles, were dug up from the soil immediately above the bed, from which it is supposed that this was the original surface, as all above is what is called made earth.

Marylebone.—Within the last fortnight the board of guardians of St. Marylebone parish have publicly offered a reward of two guineas each for the apprehension of no fewer than seventeen fathers of families, who have deserted their wives and children. More than one hundred individuals have thus become chargeable to the parish.

Fires.—Since the great fire at Topping's wharf, near London Bridge, scarcely a night has elapsed but the metropolis has been visited by several outbreaks, some of them of a destructive character. A similar repetition of fires took place in Liverpool in the early part of the present year, immediately after the extensive conflagration which destroyed property to the amount of half a million; and it is said to be a fact, that for the last eleven years, the period the brigade has been formed, all the great fires in the metropolis, namely, the Houses of Parliament, Royal Exchange, Davis's, Fenning's, and St. Andrew's wharfs, and the Tower, have been followed rapidly by numerous outbreaks in the same manner as those that have occurred of late. From the returns made by Mr. Braidwood, it appears that the number of fires that have occurred in London from the 1st January last up to Saturday night were 670. Most of the recent fires have occurred at the east end of town, and on the Surrey side of the river. On Monday a meeting of the friends of the Royal Society for the Protection of Life from Fire was held at the Freemasons' Tavern. Mr. Pownall took the chair, and opened the proceedings by adverting to the dilapidated condition into which the Society had fallen, notwithstanding its claims on the public. It was much to be regretted that the parishes of the metropolis did not co-operate with the Society like the parish of St. James's, where in the first year of the Society's existence aid was afforded by fire machines and escapes at 13 cases of fire, in the second year at 25, and in the third year at 14 fires. By the system adopted by the Society, it was proposed to place the fire-escapes, which at present amounted to only seven, at distances of from half to a quarter of a mile from each other in different parts of the metropolis, whereby assistance might be immediately given. It was then resolved that the meeting, feeling the paramount utility of the Society, which from untoward circumstances had fallen into decline, recommend the election of a provisional committee, with a view to the revival of its usefulness.

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, Sept. 16, was as follows:—West districts, 151; North districts, 152; Central districts, 200; East districts, 189; South districts, 223. Total, 915—(males, 471; females, 444). Weekly average for the last five years, 903—(461 males, 442 females); and for the last five summers, 846.

Provincial News.

Birmingham.—The receipts up to the close of the morning's performances at the recent festival, are said to be about 6700*l.*; and there is little doubt the aggregate will amount to 10,000*l.* Last festival the aggregate amounted to upwards of 11,000*l.*, but the expenses this time will be at least from 1600*l.* to 2000*l.* less, so that the General Hospital will, in all probability, be a considerable gainer by the present festival. The Queen Dowager, instead of giving her attendance at the festival, remitted the sum of 50*l.* for the benefit of the Hospital.—The Birmingham requisitionists to get up the new national movement, met on Thursday, for the purpose of consider-

ing and adopting the preliminary steps. The requisition to Mr. T. Attwood has been very numerous signed.

Bristol.—In reference to the loss of the Queen steamer, noticed in our paper of the 9th, the Rev. S. D. Waddy, Wesleyan minister, of Bath, who was a passenger on board the steamer, at the time of her sinking, states that, among the losses sustained on that occasion, was one of 2000*l.* in sovereigns, the entire saving of 20 years, by one of the passengers, who, with his wife and three children, were going over to Ireland, to settle upon a farm which he had requested his father to buy for him. By carrying his sovereigns with him, this man saved sixpence, the cost of an order upon the Bank of Ireland.

Cambridge.—The committee for conducting the restoration of the church of the Holy Sepulchre have just reported progress. The church is celebrated as the oldest of the four round churches, built in imitation of the Holy Sepulchre at Jerusalem, now remaining in England, having been consecrated in the year 1101. Part of the building fell in 1841, and prompt measures were rendered necessary for its preservation. The walls and columns have been strengthened, and Norman windows have been put up, filled with stained glass of great beauty, the gift of individual contributors, and an entirely new aisle has been erected in the south. The architect's estimate for the completion of the work, is 1206*l.* 10*s.* The amount paid for work already done is 2311*l.* 2*s.* 7*d.* About 2000*l.* have been received in subscriptions.

Carlisle.—The directors of the Carlisle City and District Bank have published a circular, informing the shareholders and the public that their late manager, Mr. John Brown, has absented himself from the bank under circumstances which have excited suspicion that he will not return. The directors have, consequently, made a careful investigation of the books, securities, cash, and vouchers, and have communicated with their London and other agents, and they now announce that they have found everything correct, with the single exception that Mr. Brown's own cash account has been overdrawn to the amount of 2,544*l.* 9*s.* 3*d.*, which sum, however, is considerably within the amount of the securities in the possession of the directors.

Carmarthen.—A bill has been issued offering a reward of 500*l.* for the apprehension and conviction of the murderer of Sarah Williams, the Hendey-gate toll-collector, and her Majesty's pardon to any accomplice, except the person who shot her. Another bill has been issued, offering a reward of 100*l.* for the detection of the parties who destroyed the Lleebyrd Fishing Wear on the 14th inst. About fourteen different toll-gates and bars have been pulled down during the week, and the system of lawless violence has scarcely, if at all, abated. On Thursday night, the 21st, the rick-yard and out-buildings of Mr. Lloyd, of Dolhaid, were completely destroyed, several ricks having been fired by some incendiary. No effort could arrest the progress of the flames, and it is said about 800*l.* worth of corn and hay has been destroyed. Mr. Lloyd is a magistrate for the county of Carmarthen. On the same night a party of the Rebeccaites assembled and set fire to a house and premises near the Black Mountain, in the hamlet of Gwynfe, in the parish of Llangadock, the property of Mr. Bevans, of Cowbridge, which was all burnt down. The premises had only just been leased by a person in the neighbourhood, and it is reported that they were destroyed because the man had taken them without the knowledge and consent of the Unionists. 100*l.* reward is offered for such information as will lead to the conviction of the perpetrators. A meeting of Welsh farmers was held on Friday at Cwm Twlech, in the midst of the mountains. A long discussion took place on the affairs of the principality, and a petition to the Queen was adopted, in which they complain of the depression of the value of agricultural produce, arising from the inability of the people to purchase and consume the necessaries of life; of high rents, promised for several years, on the faith of enactments which have held out hopes to the farmers which have not been realised; and they conclude by praying for a "repeal of the corn-laws and protecting duties generally," and for the "dissolution of Parliament." "Your Majesty's petitioners," they say, "conceiving that the present Parliament was called under circumstances wholly different from those which at present exist in this country, and, moreover, that events have occurred to enlighten your Majesty's subjects with respect to the causes of the depressed state of trade, humbly implore your Majesty to exercise your royal prerogative to dissolve the present Parliament, and convoke a new Parliament that shall legislate in accordance with the great changes in opinion which have, under the teachings of experience, taken place within the last two years." A similar meeting was held at Trelech, about twelve miles from Carmarthen, on Monday, which was attended by about 70 farmers. After passing resolutions condemning the recent outrages, and pledging the farmers present not to attend any nightly meetings, a petition to the Queen was adopted, praying for repeal of the Tithe Commutation Act, and for permission to manage their own poor. They also pray for some measure which shall restore harmony between landlord and tenant, charge rates and tithes upon the land, and after expressing a desire for an extension of the commerce of the country on principles of reciprocity, they conclude by praying for a dissolution of Parliament, as "by the present Parliament they cannot bring themselves to think that their numerous complaints could or would be attended to."

Dover.—We last week noticed the account of the salutes at Ostend having been heard on the coast of Suffolk. The Dover papers have since stated that the salutes at Tréport (upwards of seventy miles off) were heard at Dover on the 2d. The report was heard at five

o'clock, which, allowing for the time required for the sound to travel the distance, exactly corresponds with the time of her Majesty's arrival in France. They also state that during the time of the battle of Waterloo, the roar of the cannon was distinctly heard at Dover.

Grimsby.—The Duncannon steamer has been rescued from her perilous situation on the sands near Spurn Lighthouse. She has suffered considerable damage, but not so much as was feared. It was supposed that her keelson was broken, and that, from the serious injury she had sustained, no hopes existed of her being got off. Her owner, however, went down with four vessels, chains, and other requisites for raising her immediately, and commenced the weighing, which he effected on Friday, and during Sunday night the packet arrived at Barton.

Halifax.—On Monday week a meeting of the wool-combers was held in this town, at which resolutions were agreed to, declaring the propriety of equalising wages, and calling on the masters to assist the men in that object. On Tuesday a deputation of the committee waited upon two firms at Sowerby-bridge, and solicited an advance, which was refused. The men then returned to finish up their work, intending to take in their combs, with a determination not to resume work until they have accomplished an equalisation of wages.

Huddersfield.—A meeting was held in this town on the 25th, the High Constable in the chair, to consider a memorial to the Queen for the protection of labour, submitted to them by Dr. Sleigh, of Brill House. About 5000 persons were present. Dr. Sleigh said that, perceiving that session after session of Parliament, whether under Whig or Conservative management, terminated without doing anything to relieve the wants and necessities of the great masses of the suffering population of these realms, he had determined to take a tour through the manufacturing districts, in order to submit to them a measure which appeared not only to him, but to many others more experienced than he could be, the only efficient means of rescuing not only the operatives of the land, but the manufacturers, merchants, and tradesmen, from the impending ruin which threatened to overwhelm them. He was not sent there by any party, nor did he come there for the purpose of advocating the interest of the operative to the detriment of his employer. Neither had he come for the purpose of exciting unfriendly feelings between them, or making them discontented with their employers. His only object was that the working classes of this country might have a fair day's wages for a fair day's work; and if they did not obtain this, it would be because they were not sufficiently united amongst themselves; because if they joined hand in hand in sending their voices to the throne, he had every reason to believe the petition would be most graciously received. After some further remarks he read the petition, from which the following are extracts:—"That as manual labour is the only capital of the working classes, and the great source of national wealth, it is unjust towards them, and impolitic towards the nation at large, that this property should be the only one in the nation unprotected. That in the midst of immense wealth hundreds of thousands of your Majesty's loyal subjects are destitute of the common comforts of life; wages having been, from time to time, through cupidity, so reduced that at length the reward of labour has ceased to be, in this country, equivalent to the procuring even the necessities of life; and this even in what have been termed prosperous times; so that while some were creating vast fortunes, the working classes, by whose labour those fortunes were made, have been rendered, by a reduction of wages, unable to purchase any of the comforts, and vast numbers of them unable to procure even the necessities of life. That your Majesty's petitioners ask no exclusive privileges, but such as would be beneficial equally to all; nor the adoption of any measures but such as justice demands, sound policy inculcates, and the peace and prosperity of this nation imperatively require. While your Majesty's petitioners do not express any opinion on the merits or demerits of the Corn Laws, they desire most unequivocally to declare their conviction that while labour remains unprotected, if those laws were repealed to-morrow, the comforts of the labouring classes can never be restored, but their condition become worse and worse, and consequently agricultural, manufacturing, and mercantile affairs still more embarrassed. They therefore most ardently trust that the first step taken by the Legislature prior to any further advance in the theories of free trade will be to protect the operative classes of the community. Your Majesty's petitioners do therefore most humbly pray that your Majesty will be graciously pleased to command your Majesty's Ministers to take this all-important subject into their immediate and serious consideration, so as to devise some means by which the labouring classes may be extricated from those direful and trying privations to which they have been exposed for years, in consequence of labour being unprotected—in consequence of the gradual withdrawal of protection from British industry—and in consequence of their having been left to the evils of selfishness, cupidity, and avaricious competition." Various persons spoke in favour of this petition which was ultimately adopted, only six hands being held up against it.

Isle of Man.—From the latest intelligence, it is ascertained that the pleasure yacht of Mr. Gawne, of Ken-trough, which was taken from Port St. Mary by the prisoners who lately escaped from Castle Rushen gaol, was scuttled by them off Bangor, North Wales.

Isle of Wight.—The Lord Yarborough steamer on Monday took on board a large company of ladies and gentlemen at Ryde, to convey them round the Isle of Wight. All went well till they reached Scratchall's Bay, when making too bold with the shore, she struck on a rock; fortunately the Ruby steamer, which had a pic-nic

party on board from Cowes, was near enough to see the accident, and sent her boats to take off the passengers. The steamer's forefoot was knocked off, with other damage, but she has since been got off; fortunately the wind was off the shore.

Knutsford.—A meeting of the farmers, labourers, electors, and other inhabitants of North Cheshire, was held here on Monday, to hear addresses from Messrs. Cobden and Bright, as a deputation from the Anti-Corn-law League, on "the operation of the corn-laws upon tenant farmers and farm-labourers." About ten days' notice had been given of the meeting, and invitations by placard and circular had been given to every farmer, labourer, and indeed, to every elector and person connected with agriculture in this division of the county. Mr. E. D. Davenport, of Capesthorpe, took the chair, who opened the proceedings by advocating a small fixed duty, to decrease at stated periods, and finally to cease in two or three years. Mr. Bright and Mr. Cobden then addressed the meeting at great length in favour of a total and immediate repeal. Mr. Cobden read a copy of a Cheshire farmer's lease, which had been put into his hand, and said, with such leases he did not wonder at bad farming. In the first place, it reserved "all game, fish, and rabbits." Then the farmer was "not to have in tillage, in any one year, more than one fifth part of the premises—summer work and potato ground included; the potato ground not to exceed one statute acre. He was not to take more than three crops at one tillage, nor without once sufficiently marling or liming the land while under the said course of crops: not to fresh plough, pave, or burn any part of the premises, nor to break up any of the ancient meadow land, nor to use any soot as manure, nor to sow any vetches, nor to mow more than once in any one year, nor to sow any wheat or rye on the brush, nor without a summer fallow; nor to sow any hemp or flax, nor to break up or mow any pasture land (except the meadow and bone-dusted land), in rotation and due course, and lay the same down with good clover and hay grass seeds at the end of each tillage, when after once mowing, the same is to be considered as pasture, to embrace a stock. To imbare or stack and consume on the premises all the hay, fodder, straw, and not to expend all the manure (except such as is used for rotation as aforesaid), arising from or to be gathered from the premises or the meadow land, or on the grass land last laid down only." Now what would be said to the manufacturer who should take a mill on such terms, binding him to use the old machinery without improvement? If this were to be done, the manufacturers would soon be in the condition of the farmers. He concluded by reading a calculation of the expenditure on a Cheshire farm, the produce of which brought in 535*l.*, and of which he said 360*l.* was swallowed up for rent alone. Mr. Henry Swinborne, of Knutsford, then moved the following resolution, which was carried unanimously:—"That in the opinion of this meeting the principles of free-trade are in accordance with the laws of nature, and conducive to the welfare of mankind; and that all laws which interfere with the free intercourse of nations, under the pretence of protection to the agricultural, colonial, or manufacturing interests, ought to be forthwith abolished."

Lancaster.—On Saturday, Messrs. Cobden and Bright visited this city to address the agriculturists on the effects of the Corn Laws. Although a market-day was chosen for the convenience of the farmers, scarcely any agriculturists attended, the bulk of the meeting being people belonging to the factories. Mr. R. Bateman, an extensive landowner, presided. Mr. Bright and Mr. Cobden addressed the meeting in favour of free trade, after which it was resolved unanimously—"That it is the opinion of this meeting that the principles of free trade are in accordance with the laws of nature, and conducive to the welfare of mankind; and all laws which interfere with the free intercourse of nations, under pretence of protection to the corn or manufacturing interests, ought to be promptly abolished." Upon the motion of Mr. Livesey, of Preston, a vote of thanks was given to Messrs. Cobden and Bright, for their addresses, and their kindness in coming to address the farmers of North Lancashire.

Leeds.—The local papers state that while Mr. O'Connor recommends Dr. McDouall as a fit and proper person to be a member of Parliament, Mr. Hill says that "Dr. McDouall should hang himself on the first tree that presents itself, as he is an idle demagogue, who by his fire-brand speeches puts the necks of his dupes into a halter, while he keeps himself out of danger." This difference of opinion as to Dr. McDouall's merits has caused a rupture between Mr. O'Connor, the proprietor, and Mr. Hill, the editor, of the *Northern Star*, which has ended in the dismissal of the latter.

Leicester.—Last week two of the metropolitan police apprehended at Waltham fair, near Melton Mowbray, a horse-dealer, named John Britton, charged with committing a highway-robbery, accompanied by violence. It appears that about 16 years since, a robbery was committed on a farmer returning from market at Wells, in Somersetshire, when such violence was used, that he was left for dead, several blows having been inflicted, and his mouth stuffed with clay. After some time a gipsy named Burton was apprehended, convicted as one of the parties implicated, and executed. From that time till about three weeks since no clue was obtained to the other parties, when the prisoner being in London, was recognised by a Somersetshire man, now one of the metropolitan police, as "Gipsy Jack," one of the parties suspected. A communication was made to the authorities at Wells, and the prisoner was traced and apprehended. On being seized he said, "Oh, it's a mistake; it's another man you want, named Burton," the name of the man who was executed. Upon searching his person, 100*l.* in bank notes were found, and

several sovereigns, besides a large string of horses. After the necessary forms had been gone through, he was conveyed by railway to London, on his way to Wells. Much astonishment prevailed in Leicester on the arrival of the prisoner, who had been known and respected in his line of business for 16 years, in the course of which he had accumulated a respectable competency. Last year he had a contract with Government to supply the army with a large draught of horses, and there was no suspicion in the neighbourhood that he had at any time formed improper connexions.

Liverpool.—The proprietors of the Bank of Liverpool recently held their 12th annual meeting. The net profits were stated to be 56,000*l.*, out of which it was proposed to pay the income-tax, and a dividend of 10 per cent. This would leave a balance to be added to the reserved fund of upwards of 5,000*l.* The bankers of Liverpool have signed an undertaking to close their establishments on Saturdays at one o'clock, instead of on Fridays as heretofore.—Some alarm has been excited by the sudden disappearance from the Adelphi Hotel, in this town, of Mr. Dyce Sombre, a native of the East Indies, who married the daughter of Lord St. Vincent, and was lately pronounced insane by a Court of Lunacy. About ten days ago Mr. Sombre arrived in Liverpool from London, accompanied by a physician and three servants, and put up at the Adelphi Hotel. The object of his visit was change of air and scene. It appears that about four o'clock on Thursday morning, he came down stairs in his night-dress, opened the hall door, and went out. He has not since been heard of. It is supposed that he took with him a considerable sum of money, and that he has fallen into the hands of thieves, who are keeping him locked up until his gold has been exhausted.

Maidstone.—A corporal of the 58th Regiment, named Henry Donnelly, was accidentally shot in Brompton barracks on Saturday, while at his dinner, by another corporal, named Thomas Lawrie. The deceased had, on his return from Maidstone gaol with a prisoner, forgotten to draw the charge in his musket, and on Lawrie entering the barrack-room, he took it up, not thinking it was loaded, when it went off and shot him. The two corporals were intimate friends, and the jury at the inquest being satisfied that it was an accident, returned a verdict to that effect.

Margate.—The competition among the steamers from London to Margate has been so great, that some of them have begun to carry passengers for one shilling each, which is not sufficient to pay the pier dues for landing and embarking; two shillings each is charged for the return voyage. It is expected that the fares each way will be only sixpence next week, and the owner of two of the boats has threatened to carry people from London to Margate for nothing.

Norwich.—The local papers state that Norwich Cathedral has this week assumed a new appearance, its spire being converted into an observatory, for the purposes of the trigonometrical survey, now making throughout the kingdom, by order of the Board of Ordnance. A party of sappers and miners has arrived, and have commenced their works, by carrying a scaffolding up to the top of the spire, from whence they will take their observations. The weather-cock is taken down, and its place will, for the present, be supplied by the instruments used in the survey.

Oxford.—The Rev. Mr. Newman, one of the editors of "Tracts for the Times," has tendered his resignation of the vicarage of St. Mary's, Oxford, together with other preferments he holds, to the bishop. Since the publication of Tract XC., Mr. Newman, it is said, has been subject to much annoyance from the University, and the heads of the respective colleges have exerted themselves in prevailing upon the young men under their charge not to attend Mr. Newman's sermons. Other reasons are said to have induced the rev. gentleman to resign his benefice, but the one mentioned is stated to be the principal.—The Rev. James Norris, B.D., late Fellow of Corpus Christi College, and President elect, was admitted and installed on the 21st with the accustomed ceremonies into the presidency of that society, vacant by the death of the Rev. Dr. Bridges.

Portsmouth.—The three pilots engaged to conduct back to Treport the French steamers which formed part of her Majesty's convoy from the shores of France were agreeably surprised, on their return to Portsmouth on Wednesday week, by being presented with an order to draw on the French Consul for sums which may be regarded as munificent remuneration for services of a comparatively trifling nature. The first was authorised to receive 24*l.*, the second 23*l.*, and the third 21*l.*

Ware.—In consequence of the resolution agreed upon at the last vestry meeting, to quit the church immediately after the reading of the Nicene creed, a number of persons from Hertford and other places attended Ware church on Sunday last, for the purpose of witnessing the scene. Many of the usual attendants were absent, and their places occupied by persons unconnected with the parish. At the appointed time, just as the curate was proceeding to the pulpit, about 100 persons, comprising a large proportion of the most influential inhabitants of the town, quietly rose from their seats and quitted the church. The strangers remained in their seats, so that a tolerably numerous auditory was left. No allusion was made in the sermon to the existing differences.

Wetherby.—The annual meeting of the Wetherby Agricultural Society took place in that town on Wednesday week. The show of stock, of all kinds, was the largest and finest that has been seen since the establishment of the society in 1840. The annual dinner of the society took place as usual in the Castle Garth, where a spacious pavilion had been erected. The Earl of Harewood, President of the Society, took the chair. After the usual

toasts, Mr. Lane Fox returned thanks for the Vice President, and subsequently for the successful candidates. Mr. Dent proposed "The Agricultural Servants and Labourers." He wished to draw attention to this the last link in the chain of rural life, still not the least important, the agricultural labourers. They were the basis of all those things of which they had heard to-day. It was a most gratifying thing in rural life to see a well-ordered population, and to think that the proprietor of the land regarded himself as the head of the community, and endeavoured to draw the link closer and closer between the labourer and the employer. He knew from experience that during the last winter the privations and sufferings of the honest industrious labourer were very great; and as these periods of distress were constantly recurring, it was the duty of both occupier and proprietor to render whatever assistance was in their power, either by improvements in draining, or works of the like sort, which he was convinced would not only repay the occupier for the capital employed, but would afford labour, and consequently money, to the labourer. And he was satisfied that if this was more attended to, it would be productive of great advantage to the three classes of the community—the proprietor, the tenant, and the labourer. He recommended greater attention to the construction of the dwellings of the labourers, so as to secure the greatest comfort of which they were susceptible, and also in affording them small plots of land for cultivation. How far this latter point should be carried out was an open question; he did not know whether they should have a greater quantity than a rood or half an acre, or whether every cottager should be enabled to keep a cow; these were matters that experience would determine; but to improve their condition was to strengthen the hands of the farmers in every point of view. Improvements were going on apace in the manufacturing districts; let them take care not to leave the agricultural labourer in the back-ground. They wanted their minds enlarged; and he thought there were some small farmers who were also in need of improvement. Many of them kept their sons at home, who, not having had the means of observation and experience elsewhere, follow in their steps, and do not make that advancement in the cultivation of the soil that they ought to do. The toast was drunk with three times three, after which Mr. Ferrand, M.P., said that as an humble labourer in the cause of agricultural and manufacturing labour in this country, he had been requested by the committee to reply to the toast which had just been drunk; and on behalf of the labourers of this country he would beg to return thanks for the Christian, the English, the old English speech which they had just now heard uttered by Mr. Dent; for they might depend upon it that unless the labourers were kept happy, peaceable, contented, and prosperous, England must soon sink into oblivion, destitution, and misery. It was from labour that all capital had sprung; it was to labour that they were indebted, from the highest to the lowest, for every blessing which they enjoyed. And he was sorry to say that amidst the comforts and blessings which Providence had showered down upon them, they were too apt, as a people and a nation, to forget the labourers of the country. God had declared that man should earn his bread by the sweat of his brow, and he had allotted to those around them, and to others in stations like them, the means of bringing that labour into active existence; and he felt convinced that although the labourers themselves were not now present to plead their cause, he had no occasion to make any strenuous appeal to their charitable feelings for the adequate exercise of those charities which were alike honourable to the rich, and merciful and kind to the poor. He cared not whether the manufacturing or the agricultural labourer was in distress; they were both our fellow-countrymen, and they had a sacred public duty to perform towards them; if they did not wish to see this country the most degraded upon earth, they must save them from want. How was that to be done? They knew that continuing to reduce wages to the lowest level was not the way; they all knew that to enable the working-classes of this country to be, as usual, a happy, moral, contented people in the land, they must rescue them from their present degradation by some great effort. He must tell them that there was not an hour to spare; the emergency was more frightful than many now calculated upon. Hunger would break through stone walls, and the people of this country had borne their sufferings with a degree of forbearance and Christian humility which was unparalleled in the history of the world. He wished not to use one expression which was unfair towards their employers, but, having been deputed to reply to this toast, he had no desire to shrink from performing the duty. Mr. Ferrand went on to enlarge upon the duty which devolved upon landed proprietors, as the stewards of the property committed to their care, of taking care of the poor of the land; and he spoke at some length upon the advantages afforded by the allotment system, and commended to public attention the late report of the Commons' committee on that subject.

Whitehaven.—A collision has taken place between the colliers who have struck in Lord Lonsdale's collieries and those who were willing to work on the conditions laid down. On Thursday week, Lord Lonsdale's agent applied to the magistrates for protection, the result of which was a despatch to Carlisle for military assistance. A company of the 82d Highlanders immediately marched into Whitehaven Castle, and numerous workmen were sworn in as special constables. The leading rioters have been apprehended and committed for trial.

Windsor.—On Saturday morning Prince Albert, accompanied by Prince Hohenlohe Langenbourg and Mr. G. E. Anson, shot over the Royal preserves near Flemish Farm, in the Great Park. The birds were very numerous,

the greatest care having been taken to breed and preserve them since last season, and exceedingly strong on the wing. During the short time Prince Albert remained on the Farm, his Royal Highness bagged 13 brace, and Prince Hohenlohe five brace, besides a fair sprinkling of hares. From the immense number of pheasants which were seen in this portion of the preserves, first-rate sport may be anticipated by his Royal Highness on Monday next.

Railways.—The following are the returns for the past week:—Birmingham and Derby, 1,524l. 7s. 1d.; Birmingham and Gloucester, 2,212l. 16s. 10d.; Eastern Counties, 2,991l. 3s. 2d.; Edinburgh and Glasgow, 2,908l. 4s. 3d.; Great Western, 15,007l. 7s. 0d.; Grand Junction, 8,600l. 9s. 8d.; Glasgow, Paisley, and Ayr, 1,449l. 1s. 5d.; Great North of England, 1,496l. 7s. 8d.; Hull and Selby, 1,129l. 19s. 8d.; London and Birmingham, 17,217l. 3s. 11d.; London and South-Western, 7,202l. 0s. 5d.; Blackwall, 1,199l. 8s. 11d.; Greenwich, 870l. 13s. 4d.; Brighton, 5,717l. 7s. 4d.; Croydon, 329l. 11s. 5d.; Liverpool and Manchester, 4,895l. 5s. 8d.; Manchester and Leeds, 6,064l. 8s. 2d.; Midland Counties, 2,878l. 2s. 5d.; Northern and Eastern, 1,755l. 19s. 4d.; North Midland, 5,725l. 18s. 7d.; Newcastle and Carlisle, 1,684l. 8s. 0d.; South-Eastern and Dover, 4,473l. 17s. 5d.; Sheffield and Manchester, 661l. 0s. 4d.; York and North Midland, 2,007l. 7s. 10d.—A special general meeting of the Midland Counties Company was held last week, to take into consideration proposals for consolidating into one company or concern the North Midland, Midland Counties, and Birmingham and Derby Railways, which centre and have a common terminus at Derby. The other companies had already assented to the proposals at meetings reported in our last. Mr. Dicey, chairman of the company, addressed the proprietors on the various points, contending at considerable length that it would be inexpedient to adopt the proposed agreement, and suggesting that the contest which had so long existed between the Midland Counties Company and the Birmingham and Derby ought to be amicably settled before any negotiations for an amalgamation with the North Midland Company were entered into. Sir R. Morley, Mr. Alderman Hudson, of York, and numerous other shareholders, strongly urged upon the meeting the propriety of the proposed amalgamation. The discussion on the main question was prolonged for several hours, when the question for amalgamation, on being put to the vote, was carried by a majority of 115 to 11. The Chairman then demanded a poll on behalf of absent proprietors, with whose proxies he was armed, and who had intimated an intention of opposing the measure on its coming before the House of Commons. Mr. Alderman Hudson, Mr. Heyworth, of Liverpool, and others, protested against this; the latter, charging the chairman with being actuated by a factious opposition, and declaring that he had disgraced himself in his official capacity as chairman. A long and tumultuous discussion arose upon this subject, one of the proprietors proposing a resolution that the chairman be moved out of the chair. After a scene of much confusion, the result of the scrutiny was declared in favour of the original proposition, which will be immediately carried into effect as regards the three companies, which will henceforth be known and incorporated under the title of the "Great Midland Railway."—An assessment to the poor-rate having been made by the overseers of Hillfarrence on the Bristol and Exeter Company, to a considerably greater amount than was deemed just, the directors resisted payment. A warrant was in consequence issued, and one of the locomotive engines was distrained for the claim. It was put up for sale by auction on Saturday, and having been bought in by an agent for the company, under protest, the amount claimed was paid, and the point in dispute will be tried at the ensuing Sessions.—The guard of the Magnet coach, on the Northern and Eastern Counties Railway, died on Tuesday, from the effects of an injury sustained by coming in contact with one of the bridges through which he was passing with the train on the previous day.—The steam communication between Folkestone and Boulogne, in conjunction with the Dover railway continues to command the bulk of the traffic. The number of persons who passed to and from France, by Boulogne, from Sept. 15 to 21, was 2338, and by Calais, 588. The 2338 are thus subdivided:—From Folkestone, 620; from Dover, 238; from Ramsgate, 76; and from London, 225. To Folkestone, 574; to Dover, 215; to Ramsgate, 82; and to London, 308.—An arrangement has been just entered into between the Blackwall Company and the Watermen's Steam Packet Company, for the purpose of conveying passengers at a cheap and expeditious rate between London and Woolwich, every quarter of an hour. The fares each way throughout are to be, first class, 8d.; second class, 6d. each passenger. The fares to Woolwich will be collected at Fenchurch-street, or any of the intermediate stations. By this arrangement the journey from London to Woolwich will be performed in 25 minutes with the tide, and 35 minutes against tide, giving an average passage of half an hour.

IRELAND.

Dublin.—Mr. J. Primrose, of Cahirciveen, county of Kerry, agent and relative of Mr. O'Connell, has been superseded in the commission of the peace, by order of the Commissioners of the Great Seal.—Some important law changes are understood to be in contemplation, which will be definitively arranged before the opening of Michaelmas Term. Mr. Baron Pennefather retires from the bench, chiefly, it is stated, on account of the impaired state of his sight. According to some accounts, Mr. Smith, the Attorney-General, succeeds Baron Pennefather; Mr. Wilson Greene becomes Attorney-General; and Mr.

Brewster Solicitor-General. According to others, Mr. Greene is to succeed Baron Pennefather, the Attorney-General declining to take a puisne judgeship, but preferring his chance of a chief's place.—Lord Eliot, on hearing of the recent arrival of Father Mathew in Dublin, sent a request that the reverend gentleman would take up his residence in his house, in the Phoenix-park, during his stay in this city. Father Mathew soon after proceeded to the Castle, to thank his Lordship for his invitation, which, however, previous engagements had precluded him from accepting.—A correspondence has taken place between the Protestant operatives of Cork and Lord Eliot, on the subject of bells in Catholic chapels, the operatives having sent in a memorial against the intended erection of bells in the Roman Catholic Chapel of St. Paul, Dublin. Lord Eliot in reply, states that a similar representation was lately addressed to their Excellencies by the Dublin Protestant Operative Association, and that the legal adviser of the Crown having been consulted on the subject, is of opinion that there is no law to prevent the erection of bells in Roman Catholic Chapels.—At the adjourned meeting of the Repeal Association on Friday, Mr. J. O'Connell said that a note had been received by their secretary from Mr. W. Connor, tendering his resignation as a member of their society. The letter briefly stated that, in consequence of the general repudiation which his notice of motion for the non-payment of all rents and taxes had met with on the last day of meeting, he begged leave to tender his resignation. Mr. J. O'Connell said that Mr. Connor had been beforehand with him, as, unless he retracted his proposition, it was his intention to have moved the erasure of Mr. Connor's name from their books. That motion had become unnecessary, and he was now satisfied to let the matter drop without further comment. He thought that under the circumstances Mr. Connor had been treated with consideration. Mr. O'Neil Daunt said that he, for one, repudiated the doctrine of non-payment of rent, and that so did the Association. They contended that property had its duties, but they did not deny that it had also its rights, with which they by no means sought to interfere. The ordinary meeting of the Association took place on Monday. Mr. Daunt handed in several sums from Ulster, and announced that half the contributors were Orangemen. He next referred to the Repeal meeting in Liverpool, and said that the council of 300 would be sitting, and in full operation, before New-Year's-day. Mr. Hay then read a letter from Lord French, accepting the office of arbitrator in his district, another from the very Rev. Dr. M'Guinness, of Clones, inclosing the names of the arbitrators appointed in his parish, and one from the Hon. Thomas French on the same subject. These documents were ordered to be inserted on the minutes; after which the secretary proceeded to read letters from various parts of Ireland, all of which stated that the appointment of arbitrators had already begun, and was progressing rapidly. Mr. S. Gordon moved that a committee be appointed to prepare a list of the absentees, the sums drawn out of Ireland by them, and an account of the sums which were remitted back to this country by them in the shape of charities, and other ways. He considered this a very important motion at the present moment, and there could be no difficulty in getting materials for their report. He believed that the absentee-drain approached very near ten millions, and while the country was thus drained they could expect nothing but misery and destitution. In conclusion, Mr. Gordon proposed his motion, which was seconded by Mr. J. O'Connell, and carried unanimously. The repeal rent for the week was 689l. 11s. 6d. An adjourned meeting took place on Wednesday, at which Mr. O'Connell was present. The chief feature of the proceedings was Mr. O'Connell's attack on Mr. Connor, whom he proclaimed as the political enemy of Ireland, and insisted on his name being publicly erased from the books, which was unanimously agreed to.

Cork.—The three flag-ships, St. Vincent, Caledonia, and Camperdown, anchored off Cove on Friday, with the Eurydice frigate. The vessel bearing the flag of Admiral Bowles saluted the flag of Sir C. Rowley, Admiral of the squadron, by seventeen guns, which was answered by a similar salute from the St. Vincent. There are now two Admirals in commission at Cove. It is expected that the ships will remain in the harbour until 10th October.

Lismore.—The long-expected Repeal meeting was held in this place on Sunday, Sir B. Morris of Waterford in the chair. The first resolution, condemning the Queen's speech and the policy of Government, was moved by Sir R. Musgrove, and seconded by Mr. R. A. Fitzgerald of Muckridge, one of the recently dismissed magistrates. Mr. Meagher, son of the Mayor of Waterford, moved the second resolution, declaring that the Imperial Parliament is unable to legislate beneficially for Ireland. Mr. O'Connell spoke at length on the various topics connected with Repeal. He said, "though he was offered place and pension, and the highest office under the Crown would have been given to him, he laughed the offers to scorn and would do so again. He had the people's love and confidence, and he believed there was no love lost between them. He wanted them, therefore, as they were ready, a little too ready, to keep quiet. The stage-coach of the constitution was going down the hill too rapidly, and he wanted to put a drag upon the wheel. Let them believe no man that desired them to go faster than he desired them. Their keeping and safety were in his hands, and he would consent to the shedding of no man's blood save his own; but they might depend upon his taking them safely through the contest, provided they left the management to him. He had his plans maturing, and was prepared to deliver them by degrees, and before they again beheld him, they would find that he had advanced the cause. But they were in danger, and as he supposed they were not

aware of it, he would tell it to them. It was told him by an excellent friend, a clergyman. It was nothing less than that the Government were going to bribe the Catholic clergy by paying to them 600,000l. per annum. They tried another trick before, but did not succeed. It was an excellent plan, to be sure, to bribe the priests. Why, there would be a conspiracy in every parish, and the priest would finally get nothing at all; so the clergyman who informed them of it said, and they both laughed heartily over it. It could never come to pass. The priests had stood by the people, and the people had stood by the priests, and both combining were sure to obtain liberty and prosperity for Ireland. He called on them to stand by him and take his advice, for he never deluded nor deceived any man. He would instruct them as to the mode of obtaining their independence, and the brave, the moral, the temperate people of Ireland should possess their rights again." In the evening a dinner was given to Mr. O'Connell, at which Mr. Fitzgerald of Muckridge, presided; about 300 persons were present. Mr. O'Connell said that he "feared he should abandon his avocation as an agitator, for the people and the clergy were going beyond him. Like the heavy schoolboy on the ice, his pupils were overtaking him. Heretofore his duty had been to excite—it was now to moderate. It was now his duty to regulate the vigour and temper the energy of the people—to compress, as it were, the exuberance of both, springing though they did from their love of country. He had sufficient force at his back, moral and physical, to insure success. The Tory newspapers were urging him on faster than he was willing to go. Like the barrister who said to the witness, 'Rascal, why don't you say something I can lay hold of?' his enemies were angry that he did not give them an opportunity of pouncing on him. He defied them to go to war, and now he defied them to go to law with him. If they did not pack the jury he must be acquitted, for he had committed no violation of the law; and if they did pack the jury they would make a martyr of him, and if they made a martyr of him let them consider how far that would tend to quiet the people. (The company here rose in a body, shouted vociferously, and waved their handkerchiefs and hats for some minutes.) They might put him into prison; but they would not be a bit more secure for that, for they would thereby make moderate men violent, and violent men more so. He dared them to their teeth, and from that spot he defied them to go to law with him."

SCOTLAND.

Edinburgh.—The *Edinburgh Witness* states as an example of "English sympathy" with the Free Kirk, that the following note was handed to one of the members of the deputation at the Surrey Chapel meeting:—"John Thorogood, who is present, says he will cheerfully give to the Free Church cause the 5s. 6d. he refused to pay as church rate, and for the not doing which he was imprisoned twenty-two months in Chelmsford gaol. Surrey Chapel, 18th August, 1843."—The local papers mention that it was generally understood that R. B. Macleod, jun., of Cadboll, intended to revisit his paternal roof on Tuesday week, after a long absence, and that the inhabitants of Invergordon resolved to meet him in procession, and greet him with a suitable address. Unfortunately, however, church politics prevailed, and divided the procession into two unfriendly parties, each furnished with an address, eager to present it. On meeting the carriage, Mr. Gregor, banker, of moderate church politics, proceeded to read an address, which was speedily snatched out of his hands, and torn to pieces. A non-intrusionist made a similar attempt attended with a like result, when a row commenced, which ended in a manner fatal to several coat-tails and hats.—The papers announce the death of Professor Bell, professor of Scotch law in the University of Edinburgh, on Saturday last, after a protracted illness. Mr. Bell also held the office of one of the principal clerks of session.

Ayr.—The visit of Colonel Burns, second son of the poet, to his aunt, Mrs. Beggs, at Bridgehouse-cottage, last week, has given rise to a proposal, that, as the three surviving sons of Burns are all at present in Scotland, they ought to be invited to a public entertainment on the banks of the Doon, at as early a period as the necessary preparations will admit.

ITALY.

CENTRAL CRIMINAL COURT.—*Will Forgery.*—Edward Hemingway, and Edward Hemingway, jun., pleaded "Guilty" to a charge of forging a will. Mr. Justice Cresswell, in passing sentence, told the prisoners that their offence was of a peculiarly aggravated character, and one for which the Legislature had thought proper to retain the punishment of death after it had been done away with in other cases. Now, however, the forgery of a will was punishable with transportation for life, or with a lesser punishment, in the discretion of the judge. He had looked through the depositions, and had seen nothing that could palliate their guilt, or induce him to mitigate the sentence in the smallest degree, which was transportation for life.

Post Office Robberies.—William Pinfold, a postman, who had pleaded "Guilty" to two indictments charging him with stealing post-letters containing valuable property, was called up for judgment, and was sentenced by Mr. Justice Erskine to transportation for life. Thomas Mortlock, who had also pleaded "Guilty" to an indictment, charging him with stealing a post-letter containing two sovereigns, was sentenced to transportation for 15 years.

The Robbery at Lord Fitzgerald's.—Thomas Jenkins was indicted for stealing, on the 13th May last, at St. George's, Hanover-square, divers boxes, containing plate of the value of 500l. and upwards, the property of Lord Fitzgerald, deceased. Mr. Bodkin said the jury were doubtless aware that a few sessions ago a person of the name of Howse, who had been butler to the deceased lord, was tried and sentenced to a long term of transportation. Allusion was then made to another person as a confederate in the robbery, and that person it would be proved to-day was the prisoner at the bar. The learned gentleman then proceeded to detail the facts connected with the prolix inquiry, but as the evidence is the same as that given on the trial of Howse, it is unnecessary to give more than a mere epitome, and the links by

Printed by Messrs. BRADLEY and EVANS, Tailor and Dresser, Fleet-street, in the Precinct of Whitechapel, in the City of London, and Published by them at the Office, 3, CHARLINGTON STREET, Covent Garden, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor, on Saturday, September 30, 1848.

THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.

THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.

No. 40—1843.

SATURDAY, OCTOBER 7.

PRICE 6d.

INDEX OF THE PRINCIPAL HORTICULTURAL SUBJECTS IN THE LAST NUMBER.

Amateur's Garden, No XXXIX. 676 c.	Mulberry, treatment of . . . 677 c
Aspidiotus Proteus, or Small . . . 676 a	Mount Edgecumbe, gardens at, notice . . . 679 b
Brown Scale, described . . . 677 b	Nemophila discoidalis, adv. . . 674 a
Bee, to preserve, during winter . . . 677 b	Oleanders, treatment of . . . 681 a
Birds, small, bad effects of destruction of . . . 677 a	Onions, remarks on . . . 678 c
Books, remarks on . . . 681 b	Organisable substance, explanation of the term . . . 681 b
Camellia, or Gold of Pleasure, seed of, reported to disagree with cattle . . . 678 b	Peach-trees, to apply fire-heat to . . . 681 b
Cape bulbs, treatment of . . . 681 a	Pears, list of, for standards . . . 681 b
Carnations, list of . . . 681 a	Peat, query how to obtain . . . 678 b
Ceylon, remarks on soil of; Cinamon-plant described . . . 679 a	Pelargoniums, list of, to preserve during winter . . . 681 a
Chrysanthemums, list of . . . 681 a	Petunias, seedlings of different colours raised from the one called scarlet, without any hybridization . . . 678 a
Clover Dodder, effects of, on Lucerne . . . 678 a	Phlox suaveolens, var. . . 679 b
Forest-trees, bad effects of systematic pruning of . . . 677 a	Pits, canvass frames, remarks on . . . 680 c
— remarks on size of, at Merquid, Flintshire; Dr. Thackeray's method of pruning of, described . . . 678 b	Plants, kinds to flower in winter . . . 681 a
Fruit, maturation of, without leaves . . . 677 a	— herbaceous . . . 681 a
Fuchsias, list of . . . 681 b	— far flower-beds . . . 681 a
— treatment of, corymbi . . . 681 b	Picrothallis Smithiana . . . 679 a
Flora, to sow the seeds of . . . 681 a	Quercus pedunculata, bodies found upon it described . . . 681 b
Fungus on bark beds, to destroy . . . 677 c	Rats, to destroy . . . 678 b
Gard.ers' Association, plan for establishing a garden for these . . . 677 c	Red spider, to destroy . . . 681 b
— of employment, suggested . . . 677 c	Rhodod. ren fragrans . . . 679 a
Grapes on open wall, remarks on . . . 680 c	Rose-trees, contrivance to destroy green fly on . . . 677 c
Greenhouse, to protect from frost in winter . . . 680 c	Schimaurea, remarks on . . . 678 b
Guano, Poter's, beneficial effects of, on Wheat, &c. . . 677 b	Seeds from Polyne's, treatment of . . . 681 b
Hawthorns, fungus on, &c. . . 678 c	Schizanthus candidus . . . 679 a
Helidium laceratum described . . . 678 c	Stanhopea Martiana, var. bicolor . . . 679 a
Henting, tank system, remarks on . . . 681 a	Stocks, double, remarks on . . . 678 a
Hyacinths, list of . . . 681 b	— flowers of . . . 678 a
Insects, remarks on . . . 681 b	Transplanting, remarks on . . . 678 a
Kew, improvements in Royal Botanic Garden, noticed . . . 675 a	Tree, petrified, discovered in a stone quarry near St. Helen's, description of . . . 678 a
King of Hanover, false reports concerning, with respect to these alterations . . . 681 a	Tropeolum, &c., to keep during winter . . . 681 b
Lawns, Grass seeds, to sow on . . . 679 b	Vegetable Marrow, treatment of . . . 681 b
Londonia aurea . . . 679 b	Vines, disease in; Black Hamburghs, remarks on colouring of . . . 678 a
Manure, saline, experiment with, on Oats, &c. . . 677 b	— Penches, &c., to grow together, remarks on . . . 681 a
Marriages, early and improvident, bad effects of . . . 675 c	— system of pruning deduced from Scripture; remarks on . . . 678 a
Mohl (Dr.), his critique on Liebig's Work concluded . . . 679 c	Wine, ginger, receipt for making . . . 679 b

TWO NEW SEEDLING PICOTEES,—"LADY ALICE PEEL," 10s. 6d., and "MRS. BENXON," 10s. 6d. per pair.—These two splendid Picotees were raised by the Rev. J. Burroughes, of Lingwood Lodge, Norfolk, and kindly presented by that gentleman to Messrs. Youell and Co., for Particulars of which, see their Advertisement in this Paper of the 16th of Sept. Catalogues of their extensive collection may be had on application, and will be found to contain upwards of 800 of the very best varieties in cultivation, and which are sent out upon the following terms:—

	£	s.	d.
12 pairs of good show varieties, 1 pair of each . . .	1	4	0
12 " fine ditto ditto . . .	1	10	0
25 " ditto ditto ditto . . .	3	0	0
12 " Extra fine and very superior ditto . . .	2	10	0
25 " ditto ditto ditto . . .	5	0	0
12 " ditto Pinks ditto . . .	0	12	0
25 " ditto ditto ditto . . .	1	0	0

The selection being left to Youell and Co.

ARRIVAL OF DUTCH HYACINTHS AND OTHER BULBS. Youell & Co. beg respectfully to announce they have received from Haarlem their annual importation of the above in most excellent condition, adapted either for Glasses, Forcing, or open-border culture. Prices as follows:—

Fine Single or Double Show Hyacinths . . .	6s. per doz.
Red, Blue, White, or Yellow . . .	
Extra fine Ditto . . .	9s. to 12s. "
Extra fine, and very superior Ditto . . .	18s. "

The selection being left to Youell & Co.

Catalogues may be had on application.
ARACARIA IMBRICATA, fine 4-year old plants, 8 to 10 inches, 10s. per 100, or 30s. per dozen.
Great Yarmouth Nursery, Oct. 5, 1843.

NEW PICOTEES.

HEADLY'S NANETTE; purple edge, rather heavy, thick petal, rose edge, good white, and edging well defined, 10s. per pair. Bond's Countess of Winterton, after the style of "Trip to Cambridge," although distinct, 7s. 6d. the pair, and all the others that are coming out. John Dickson's Catalogues for 1843 are now ready, comprising all the best flowers in cultivation. Applications for Catalogues may be made at the Nursery, Acre Lane, Brixton, and WARNER and WARNER'S, Cornhill, London.

TULIPS, RANUNCULUSES, HYACINTHS, &c.

H. GROOM, Clapham Rise, near London (removed from Walworth) by APPOINTMENT FLORIST TO HER MAJESTY, respectfully informs the Nobility and Gentry, that his Bulb Catalogue for this autumn is ready, and will be forwarded by post on application. He begs to state that he has a large stock of the beautiful New Lily (Lilium lancifolium) and a fine collection of Auriculas, which he can supply at very moderate prices.

FERNS.

W. PAMPLIN has lately considerably increased his stock of FERNS, and respectfully invites the attention of cultivators of these elegant plants to the same. W. P. will furnish his new priced Catalogue of the sorts he grows, on being supplied with six penny postage stamps. The prices of established plants in Pots range from 9d. upwards. Lavender Hill Nursery, Wandsworth, near London.

TO CALCEOLARIA GROWERS.

A rare opportunity occurs to make a Collection of CALCEOLARIAS at a small expense.

JOHN STANDISH, NURSERYMAN, of Bagshot, has raised a great number of Seedlings this autumn, which are now ready to send out by post, in tin cases, post-paid, at 16s. per dozen. The above have been raised from two of the best spotted Calceolarias in the kingdom, the seed saved from the plants, which were crossed with great care; and J. S. will warrant that the worst of them will be worth full the price given, and are precisely the same as he will grow himself; but should any doubt arise, customers are solicited to come to Bagshot and select for themselves, as J. S. has bred from two sorts only, and these were selected as being the best in every way, and will, no doubt, bring some of the greatest novelties ever seen in Calceolarias, they can be sent by post for the next month, after which the plants will be too large, and can then be sent packed in small boxes or hampers. N.B.—A remittance is expected from unknown correspondents.

FASTOLFF RASPBERRY.

PATRONISED BY HER MOST GRACIOUS MAJESTY THE QUEEN, HIS GRACE THE DUKE OF RUTLAND, THE EARL OF HARRINGTON, THE LORD BISHOP OF LONDON, LORD VISCOUNT LORTON, LORD SONDES, &c.; as well as by the HORTICULTURAL SOCIETY OF LONDON.

YOUELL & Co. have much pleasure in announcing they will be enabled to supply, at the latter end of October, fine Canes of the above highly-valuable and much-esteemed RASPBERRY—unparalleled for the extraordinary size of its fruit and richness of flavour. Those to whom Y. & Co. sent last season have expressed their high admiration of its superiority over all other varieties, and it has been awarded several prizes at various Horticultural exhibitions during the season. As a proof that they have not exaggerated its excellent qualities, Fruit was submitted to Dr. LINDLEY (see *Gardeners' Chronicle* of the 22d July, page 502), whose opinion of it is as follows:—"FASTOLFF RASPBERRY.—We have received from Messrs. Youell, of Great Yarmouth, fruit of the Fastolff Raspberry, and we find it merits all that has been stated in favour of its excellence. The fruit that we have received is very large, obtusely conical, and of rich flavour, far exceeding in this respect some other new and large varieties. The plants bear abundantly and in long succession. They also exhibited it, on the 1st of August, before the London Horticultural Society, 21, Regent-street, to which a prize was awarded. It would, therefore, be unnecessary for YOUELL & Co. to recommend it more fully, or with greater confidence, to the notice of the public, merely observing that it continues in high perfection throughout the autumnal months, and has maintained its superiority in the most unfavourable soils and situations, and requires no other than the ordinary treatment of the old varieties. Fine Canes will be ready by the latter end of October, and can be sent with safety to any part of the United Kingdom (on the receipt of a Post-office order) upon the following terms:—

Packages containing 100 Canes . . .	2 5 0
" " 50 " . . .	1 5 0
" " 25 " . . .	0 14 0

Package included. The usual discount to the Trade, when not less than 200 are ordered.

Extensive orders are already received for the above; and to prevent a repetition of the disappointment which many experienced last season, by Y. & Co. not being able to meet the demand, they therefore respectfully solicit early application.
Great Yarmouth Nursery, Oct. 5, 1843.

DUTCH FLOWER BULBS.

J. CARTER, SEEDSMAN and FLORIST, No. 238, High Holborn, London, begs leave to inform the Nobility, Gentry, and his customers in general, that the late-flowering GLADIOLI, TIGRIDIAS, &c., are now arrived. His new Catalogue of Bulbs will be forwarded, prepaid, on application. The following items were partly omitted in the Catalogue:—

And every other kind of Flower-root, equally moderate in price. Inses in splendid Varieties, see last week's *Chronicle*.
N.B.—Carriage paid to any part of London.
BUTTON and SONS, Reading Nursery, Berkshire.

NEW AND DESIRABLE PANSIES.

YOUELL AND CO. beg respectfully to inform Growers of the above that they have succeeded in raising Four New and highly-beautiful Seedlings, possessing first-rate properties, both in size, form, and substance, forming quite a novelty. They will prove a valuable acquisition to those who compete at any Horticultural Exhibition in the Kingdom. Description, as follows:—"Eclipse," a large, flat, and well-formed flower, of fine yellow, and intense eye. "Duke of Norfolk," large, well-formed flower, with a fine eye, primrose ground, with a pencilled edging of delicate blue round the petals. "Lady Alice Peel," white ground, is a large round flower of extraordinary substance, the petals are well formed, and in fine proportion, the quantity of yellow shown in the purple eye increases the beauty of the flower; top petals and margin of a dark purple. "Ann" is also a flower of good form and substance, white ground, slightly tinged with purple, with fine brown and purple eye.

Y. and Co. can most confidently recommend the above, which are now ready to be forwarded to any part of the Kingdom, per post free, at 21s. the four varieties. They also beg to draw attention to their healthy stock of this tribe, which they are offering upon the following terms:—

12 Extra fine and very superior show varieties . . .	18s.
12 Very fine ditto ditto . . .	12s.
12 Fine ditto ditto . . .	9s.

Great Yarmouth Nursery, Oct. 5, 1843.

TO GROWERS OF PANSIES, &c.

JAMES MAY begs to return his most sincere thanks to his numerous Customers and Friends for all past favours, and begs to apologise for not being able to comply with many orders he was favoured with last spring, his stock of Plants having suffered so much by his removal from Edmonton. J. M. begs to inform the Public that he has now ready fine healthy Plants, consisting of all the best, at moderate prices, a list of which may be had on application.

Extra fine PANSY SEED, all warranted, collected from the best named varieties, 2s. 6d., 5s., to 10s. per packet.
May's Crimson Superb Sweet William Plants, 4s. per doz.; Seed, 1s. per packet. Also, fine Plants of Double White Rockets, 3s. per doz., or 20s. per 100. New Double Purple Rockets, 6s. per doz., or 40s. per 100. True large Mitcham Crown Daisies, 3s. per d. z., or 20s. per 100.

A Gentleman Amateur Farmer having commissioned J. M. to offer Warranted True EGYPTIAN MUMMY WHEAT, 25 grains for 20s., or 50 grains for 30s., which will be sent post free, with directions for planting, on receipt of a post-office order, payable at the Edmonton Post-office, or General Post-office, London.

Any of the articles here offered, may be had on application to Messrs. WARNER, 28, Cornhill, London, or Mr. WATKINSON, Market-place, Manchester.—Pansy Nursery, Tottenham, near London.

SEEDLING PANSIES.

H. SILVERLOCK has now ready for Sale a fine healthy stock of his PRINCE OF WALES, which Flower is well known to many, and would have been sent out last autumn if a sufficient number of plants could have been obtained to supply the orders received for it. The colour of this Heartsease is a bright maroon, with yellow centre and good eye; petals of good substance, and perfectly even at the edges; shape good, size about that of Thompson's Eclipse.

H. S. has also to offer three other Seedlings, which, with the above, he can strongly recommend. BLACK DWARF, an intense black flower, of excellent substance and good shape. HONOURABLE MRS. HARCOURT, a deep golden yellow, with fine eye, good form and substance. MARMION, a very large flower, of excellent shape and substance; ground-colour creamy, white with lilac margin to the lower petals, upper petals lilac, eye finely marked. Price 5s. each.

H. S. can also supply healthy, strong plants of the best varieties in cultivation at the following moderate prices:—

12 extra fine and very superior varieties . . .	20s.
12 very fine do. . .	12s.
12 good do. . .	9s.

A fine stock of Pinus Pinaster, 1 to 5 feet; Cedar of Lebanon, 3 to 5 feet; Cedrus Decidua, 9 to 12 inches.
Chichester, Oct. 6, 1843.

TO HEARTSEASE GROWERS.

WILLIAM CLARK having purchased the Stock of that Splendid SEEDLING PANSY, "BLUE PERFECTION," which took a first class Prize at the Horticultural Society, June 21st, last year, begs to offer strong healthy Plants at 5s. each, without exception. Early application is necessary, as the Stock is very limited. The following description was given in the *Gardeners' Chronicle* of June 25, 1842. "This Heartsease is novel in colour, being of a bright pure blue, without the slightest tinge of purple; it is finely formed, and perfectly distinct in colour from every variety we have seen."

Warranted Pansy Seed from the best Flowers grown. 2s. 6d. per packet. W. C.'s arrivals of DUTCH and other BULBOUS ROOTS are very fine and remarkably sound.—W. CLARK, Seedsman, 25, Bishopsgate-street within.

PRESERVATION OF PLANTS.

HUMPHREYS'S COMPOUND to Promote the Beauty and Preservation of Plants, may be used either in the Drawing-room or in the Conservatory, and from its condensed fertilizing power a few grains dissolved in water at intervals is effective. Applicable to all Green-house plants, to Hyacinths, and other bulbs; and to promote the growth of cuttings and the germination of seeds. Sold in bottles 1s. 9d. each, by FLANAGAN & SON, Mission-house street, HARTST and McMullen, Leadenhall-street; W. CLARK, Bishopsgate-within; and GORFON, THOMPSON, and BASKETT, 25, Fenchurch-street; and THOMAS WALKER, No. 6, Market-place, Manchester; and other leading Seedsmen, &c. in town and country. Wholesale Agents, DAVY, MACMURDO, & Co., 100, Upper-Thames-street, London.

SEEDLING VERBENAS.

S. GIRLING begs to inform the admirers of VERBENAS, and the public generally, that he is now sending out (in tin cases, postage free) his nine new and distinct Seedlings, which have been so universally admired, and awarded several prizes at the Horticultural Exhibitions during the season; in they have likewise been favourably noticed by Dr. LINDLEY, in the *Gardeners' Chronicle* of July 22d and following weeks; also by Mr. AYRES, in his "Amateur's Garden" for the 9th Sept. For description see *Gardeners' Chronicle*, Sept. 16th. Price as follows:—Single Set of 9, 11. 5s.; double do., 21. 5s.; treble, 31. Dance, of Nursery, Oct. 4, 1843.

SEEDLING VERBENAS.

R. WHITE and Co. beg respectfully to solicit the attention of the Public to the beautiful Varieties which have been submitted to the opinion of Dr. LINDLEY by them, and which are noticed in the present and last week's report, under the signature of "ALFRED," and which will be fully described in a future advertisement, and sent out in the Spring, at very moderate price. By the kindness of Mr. FLEMING we are again able to supply a few more packets of the HOOSAINEC PERSIAN MELON, at 5s. each.

F. CHAMBERLIN, GARDENER and FLORIST, Turnham-green, has for Sale 3000 TULIPS, at 5s. per 100; and 3000 RANUNCULUS ROOTS, mixed, at 7s. per 100—Part of the late Mr. WALKER'S of Hammersmith, Valuable Collection; also 3000 Lilac and Dark Blue CROCUSES, at 2s. per 100. An Allowance to the Trade.

F. AVELL BARRINGER, St. Cuthbert's, Bedford, Bedfordshire, begs to announce that his Catalogue can be had on application, of his choice and select CARNATIONS and PICOTEES, with which he has gained this year 56 Prizes, and upwards of 200 during the last three years at different exhibitions in the country.

JAMES PIPER, Parkstone Nursery, near Poole, has a few hundreds of LARGE RHODODENDRONS fit to plant singly in Lawns; about 10,000 of other sizes, and a quantity of LAURELS and LAURESTINAS, which he begs to offer at greatly reduced prices, as he must in some way clear his Lower Nursery, the Lease being expired.

GRAPE-VINE PLANTS FOR SALE.

J. DAVIS, Oak-hill Gardens, East Barnet, has a quantity of Black Hamburgs, St. Peter's, New Dutch, Sweetwaters, and Muscadines, at the usual Prices.—Oct. 3, 1843.

FINE PLANTS.

PERSONS in want of **PINE PLANTS** have an opportunity to choose, from an extensive stock, Plants of all sizes, from Suckers to those in fruit, at low prices. Warranted free from all insects, well rooted, and healthy. Apply by letter, or on the premises, to **WILLIAM DAVIS**, Green-street, Marlboro'-road, Chelsea.—Oct 6 1843.

MYATT'S NEW SEEDLING STRAWBERRIES.

J. AND W. MYATT are now ready to send out their **NEW STRAWBERRY**, the **DEPIFORD PINE**, the fruit of which has been exhibited at the London Horticultural Society, and a Banksian Medal awarded. It has also been submitted to Professor **LINDLEY**, for whose opinion see *Gardeners' Chronicle*, No. 26, p. 447. It is a most prolific bearer, exhibiting at the same time a profusion of fine fruit and bloom on the same fruss. Price, Deptford Pine, 2s. 10s.; British Queen, 1s., and Eliza, 10s. per 100.—Manor Farm, Deptford, Oct. 6, 1843.

THE BRITISH QUEEN AND PRINCE ALBERT PEAS.

W. J. CORMACK & CO., beg to announce to their Friends and the Public that they have harvested the above two New Varieties, and will be obliged by early orders, as the stock is limited. They will be sent out, as last spring, in packages, bearing the name of the firm, price 3s. 6d. per quart. The usual allowance to the trade.

N.B.—"Cormack's Early Kent Peas," 14s. per bushel. Newcross, Oct. 6, 1843.

JAMES CUTHILL begs to inform the trade that he has got a few ounces of his Improved **EARLY BLACK SPINE CUCUMBER** at 2s. per ounce, ready money. The *Chronicle* in April, at the Royal South London Show, thus speaks of it:—"The only fruit we saw was a box of Cucumbers from Mr. Cuthill, Camberwell, exceedingly well-grown, straight, long, stated to be grown by hot-water, and certainly highly creditable specimens for the time of year."

Seeds of the *Lisianthus Russellianus*, with which Mr. Cuthill has gained five Prizes for this year, will be ready shortly.—Direct to **J. CUTHILL**, Florist, Denmark-hill, Camberwell.

NEW BLACK SPINE CUCUMBER.—THE VICTORY OF ENGLAND!!!

THOMAS LATTER, the winner of all the **FIRST PRIZES** in 1843, at the most important shows open to all England, has with great care saved a few seeds of his new Cucumber, which has defeated Allen's "Victory of Suffolk," "Mill's Jewess," "Stewart's Ringleader," &c. &c., and will again be put in competition with them as early as possible. It answers in every point to the Standard of the "Ipswich Cucumber Society," is also a robust grower and prolific bearer. One plant (the stem of which is 5½ inches in circumference) occupies three lights each, 8 feet long and 4 feet wide, and has several times during the season produced at one time 15 splendid fruit, upwards of 20 inches long and 1½ inches in diameter, also ripened 20 seed fruit, and is still in perfect health. Printed particulars of its pedigree, with six good seeds, will be sent, postage free, on receipt of Post Office order, to Mr. Thos. Wild, 3, Tavern st., Ipswich, Suffolk.

TO CUCUMBER GROWERS.—"RINGLEADER"

CUCUMBER.—"At the earnest solicitation of his Friends, the raiser of the above begs to inform the Public, that he intends sending it out in packets of four Seeds, at 7s. 6d. per packet, the 1st Oct., so that those desirous of testing its merits may do so in the coming season. The first brace of fruit this kind ever produced, obtained a prize at Ipswich in 1842, and it also took the 2d prize at Ipswich in May, 1843, open to all England. It has, moreover, obtained 1st prize at Norwich, 1st and 2d prizes, May, 1843, at the Hull Botanic Garden (open to all England); 2d, at Beverly and East Riding Horticultural Society; 1st and 2d at the York Philosophical Society (open to all England); 2d at the Hull Botanic Garden, Sept. 1843; and has been exhibited at Regent-street in December 1841, and March 1843, when Dr. **LINDLEY** remarked, "I liked the appearance of your Cucumber very much." At Beverly and East Riding Horticultural Society, it was pronounced "as fine a specimen as ever grown;" length, 27½ ins.—*Vide Hull Packet*, Sept. 13th, 1842.

The fruit of **RINGLEADER** have been produced by "legitimate culture," and not by allowing one plant to occupy a three-light pit, and produce one fruit in a month, as is practised by some cultivators in the neighbourhood of London. **RINGLEADER** has been in public competition with, "and has defeated" the under-mentioned varieties, viz.:—"Victory of Suffolk," Man of Kent, Hero of Sussex, Deceiver, Prizefighter, Rambler, Infant, Manchester Prize, and many others. The following are the characteristics of **RINGLEADER**:—Length, from 18 to 20 inches, black Spine, slight Rib, from 1 to 1½ inch diameter, fills well home to the footstalk, retains the blossoms until quite full grown, and is a hardy and certain forer through the winter. "**RINGLEADER**" has been seen and approved of by **PROF. LINDLEY**, Mr. J. Duncan, and W. P. Ayres, authors of "Treatises on Cucumber Culture, Melon Culture," &c., and by that well-known and justly-celebrated Amateur, **Jas. O'Reilly**, Esq., Beltrasna, Oldcastle, Ireland, Mr. R. C. Kingston, gr. to R. F. Shaw, Esq., Brantingham Park, Yorkshire; Mr. T. Vane, gr. to Sir T. Hare, Bart., Stow Hall; Mr. J. Thrower, gr. to D. Gurney, Esq., Runcion Hall, and many other practical gardeners. Thus has **RINGLEADER** been submitted to authorities "second to none" in the United Kingdom or elsewhere.

The Advertiser begs to inform those friends who saw it growing on his plants that they will have their packets forwarded without delay. As the stock is very limited, early application is desirable, to prevent disappointment. To be had only of the raiser, **JAMES STEWART**, Shawssett Park, Downham, Norfolk.

MUSHROOM SPAWN.

EDWARD INGLISH, GARDENER, respectfully informs the Nobility and Gentry that he has now for Sale or Exportation a fine assortment of the best **PATENT SPAWN**. A considerable reduction will be made to the Trade. Country orders punctually attended to.—Westbourne Green, Paddington.

NEW BLACK NEMOPHILA.—Seed of *Nemophila discoidalis* to be had in small packets at 2s. 6d. each of **W. J. NUTTING**, Seedsman, 46, Cheapside, London.

TO NOBLEMEN, GENTLEMEN, NURSERYMEN, PUBLIC CEMETERIES, and other Public Companies engaged in Planting.

MESSRS. PROTHEROE AND MORRIS beg to announce that they are instructed by the Executrix of the late Mr. **JOHN MILNE**, to submit to public competition, on the premises, Albion Road, Stoke Newington, on MONDAY, Oct. 23, 1843, and following days, at 11 o'clock each day, without reserve, the **VALUABLE NURSERY STOCK**, consisting of Fruit and Forest Trees, Evergreens, American Plants, Deciduous and Ornamental Shrubs of every variety, in considerable quantities. Also a bed of Choice Tulips, consisting of 90 rows, which will be sold in lots to suit purchasers. An excellent Tulip Cabinet, a quantity of Wood, &c.

N.B.—The above ground is proverbial for its magnificent evergreens, and their safe removal, the mould adhering to their roots. The lots will be arranged for the convenience of large and small purchasers. May be viewed a week prior to sale. Catalogues, 1s. each, returnable to purchasers, may be had on the premises; of the principal Seedsmen; and of the Auctioneers, American Nursery, Leytonstone.

TO NOBLEMEN, GENTLEMEN, NURSERYMEN, BUILDERS, and Others.

MESSRS. PROTHEROE AND MORRIS are instructed to submit to public competition, on the Premises, the Cottage and Gravel-field Nurseries, Camberwell New Road, on MONDAY, Oct. 30th, 1843, and following days, at 11 o'clock each day, without reserve (unless previously disposed of by private contract), the whole of the valuable **NURSERY STOCK**, consisting of Fruit and Forest Trees, Evergreens, American Plants, Deciduous and Ornamental Shrubs of every variety, in considerable quantities. N.B.—The above offers great advantages, from the variety of the Stock. May be viewed a week prior to the sale. Catalogues one shilling each, returnable to purchasers, may be had on the premises; of the principal Seedsmen; and of the Auctioneers, American Nursery, Leytonstone.

FINE FLOWERS.—The Subscription Sale, advertised to take place at Glasgow, on 4th Oct., is postponed until the 25th; when a splendid Collection of fine-named **TULIPS**, in 1,000 Roots, and comprising nearly 600 Varieties, 325 finest named **RANUNCULUSES**, 225 finest **ANEMONES**; also **HYACINTHS**, &c., will be drawn for in 100 lots. Tickets only 5s. each, to be had of **JOHN WATERSTON**, 45, High-street, Paisley, 4th Oct., 1843.

TO NURSERYMEN, FLORISTS, and Others.

TO BE LET on Lease, a **NURSERY GROUND**, containing about nine acres of land, a part of which consists of a valuable stock of Plants, Trees, and Shrubs, large Greenhouse, Pits, Frames, &c. Added to which is a convenient Dwelling-house and Seed-shop, Cottage, large Barn, Stable, and spacious underground Tanks, with numerous other additions and improvements.

N.B. Immediate possession may be had on advantageous terms.—Apply personally or by letter at the Office of this Paper.

ST. COLUMB MAJOR, CORNWALL.

TO BE LET, and entered on in November, the **NURSERY GROUND & FRUIT-GARDENS** situate at **TREWAN**, near ST. COLUMB, containing Two Greenhouses with Vines in full bearing, Pasture Land sufficient for keeping a Horse and a Cow, a Cottage, and also the Good Will of the Nursery and Seed Business, for many years past carried on by **THOMAS BENNETT**, who retires in consequence of ill health. The Stock to be taken at a valuation.

For Particulars, apply to **THOMAS BENNETT**, Nurseryman, St. Columb, Cornwall.

RENDLE'S TANK SYSTEM OF HEATING.

STEPHENSON AND CO., 61, Gracechurch-street, London, Inventors of the **IMPROVED CONICAL and DOUBLE CYLINDRICAL BOILERS**, having been much engaged in heating buildings upon the above system with Tanks of various materials, solicit the attention of scientific Horticulturists to an Iron Tank now fitting up on their premises, which offers most decided advantages over every other article hitherto employed for the same purpose. These tanks which are ornamental in appearance can be made from 10 to 100 feet long and of any width and depth, and can be connected or disconnected by any working Gardener without the slightest difficulty, thus affording the opportunity to persons in remote districts of employing this much approved method of heating without the assistance of Engineers. The Tanks can be applied to Boilers and Pipes already fixed, and from the present low price of Iron will be found cheaper than of any other material. **MR. RENDLE**, of Plymouth, has kindly undertaken to receive orders and furnish information to any persons in his neighbourhood, and prices for any size will be forwarded upon application to S. and Co.

HOT-WATER APPARATUS FOR HEATING **HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES**, upon improved principles, and at very moderate charges, erected by **DANIEL and EDWARD BAILEY**, 272, HOLBORN.

D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals required, and which may be seen at their Manufactory.

WHEAT-SOWING.

POTTER'S GUANO.—The superiority of this powerful **MANURE** being now completely established, it is only necessary to inform the public that a material reduction has been made in the price, and that it may be obtained either at the Works or of Mr. **POTTER'S** Agents, who have testimonials of its efficacy.—28, Upper Fore-street, Lambeth, London.

Mr. **MARK POTTERGILL**, 40, Upper Thames-street, Sole London Agent.

* * * Nurserymen required as Agents in all the principal towns.

J. B. LAWES'S PATENT MANURES, composed of Super Phosphate of Lime, Phosphate of Ammonia, Silicate of Potass, &c., are now for sale at his Factory, Deptford-creek, London, price 4s. 6d. per bushel. These substances can be had separately; the Super Phosphate of Lime alone is recommended for fixing the Ammonia of Dung-heaps, Cesspools, Gas Liquor, &c. Price 4s. 6d. per bushel.

GUANO ON SALE,

BY THE IMPORTERS,
ANTHONY GIBBS & SONS, LONDON;
GIBBS, BRIGHT, & CO., LIVERPOOL AND BRISTOL.

GUANO ON SALE.—Any Quantity of this valuable Manure can be had from the bonded stores of the Importer either in London or Liverpool, on application to **COTSWORTH, POWELL, and PRYOR**, St. Helen's Place, London; **EDWARDS, DANSON, and CO.**, Liverpool; and **WILLIAM J. MYERS and CO.**, Importers, Liverpool.

LIEBIG'S AGRICULTURAL CHEMISTRY, New Edition. Now ready, in One Vol. 8vo, 10s. 6d., the Third Edition, Revised and partly rewritten,

CHEMISTRY; in its APPLICATION to AGRICULTURE and PHYSIOLOGY. By **JUSTUS LIEBIG**, M.D.; Ph.D., Professor of Chemistry in the University of Giessen, Edited, from the M.S. of the Author, by **LYON PLAYFAIR**, Ph.D., F.R.S.

Printed for **TAYLOR and WALTON**, Upper Gower-street; and sold by all Booksellers.

NEW WORK by PROFESSOR LIEBIG.

Now ready, in fols. 8vo, price 4s. 6d.,

FAMILIAR LETTERS ON CHEMISTRY; and its RELATIONS to COMMERCE, MANUFACTURES, and AGRICULTURE. By **JUSTUS LIEBIG**, M.D., Professor of Chemistry in the University of Giessen. Edited by **JOHN GARDNER**, M.D., Member of the Chemical Society. Printed for **TAYLOR and WALTON**, 28, Upper Gower-st., London.

No. VIII. was published on the 1st of August, and will be continued, at Sixpence a Month, of the

GARDENERS' EDITION OF THE BOTANIC

GARDEN, with numerous Additions and Engravings of Plants. By **B. MAUND**, F.L.S. It contains Coloured Engravings of the most Ornamental Plants, suited to the open Garden, with Descriptions, Cultivation, &c., for the assistance of Gardeners and Amateurs. Also, a **FLORAL REGISTER**, with Woodcuts and Descriptions of handsome Plants, newly introduced from Foreign Countries. Also, an **AUCTARIUM**, containing Miscellaneous Information on Gardening Affairs. Also, a portion of **PROFESSOR HENSLOW'S BOTANICAL DICTIONARY** of 5,000 Words, and 200 Cuts, descriptive of the Vegetable World; a complete Book of Reference on Subjects connected with the description of Plants.

Thus, it will be seen, that this Work, although sold at so very moderate a price, comprehends a greater variety of Botanical and Gardening Information than any Publication extant.

London: R. GROOMBRIDGE, Paternoster-row.

IN ONE VOL. UNIFORM WITH BYRON'S POEMS.

In a few days will be published, medium 8vo, with a New Portrait, by George Richmond, engraved in the line manner, and a View of Sloperston Cottage, the Residence of the Poet, by Thomas Creswick, A.R.A. 21s. cloth.

THOMAS MOORE'S POETICAL WORKS; containing the Author's recent Introductions and Notes. Complete in One Volume, uniform with Lord Byron's Poems. London: LONGMAN, BROWN, GREEN, and LONGMANS.

NOTT'S PATENT STOVES, for warming Churches,

Chapels, Public Offices, Halls, Staircases, Shops, Warehouses, &c.—These Stoves are unquestionably superior to any others that have been yet invented; they are much more simple and easy of management than Dr. Amott's, and, in proportion to the heat given out, quite as economical; they are not liable to an explosion of gas, or a rush of flame from the fire-door; on the contrary, they are perfectly safe and free from danger; they will keep alight 12 hours or more without replenishing. The fire being seen through the talc-glazed window gives a very cheerful appearance. Orders addressed to 80, Great Queen-street, Lincoln's Inn-fields, will meet with due attention, and a liberal allowance be made to ironmongers, builders, &c.

SMOKE PREVENTED AND VENTILATION EFFECTED, BY SPONTANEOUS ACTION.

MR. JEAKES, 51, Great Russell-street, Russell-square, Sole Agent in London for the Sale of **DAY'S PATENT WIND-GUARD**, by the use of which he guarantees to Cure all Chimneys Smoking from Wind, and also to prevent downward currents; it is admirably adapted for the Ventilation of Apartments of every description; also of Ships, Stables, Dairies, and Larders, as it ensures a constant change of air; and all its parts being fixtures, it is free from noise and not liable to derangement; it also offers no impediment to sweeping. Price for general use, 30s.; larger size, 45s.; larger sizes, especially adapted for ventilation, 60s. and upwards. To be had at 51, Great Russell-street, where it may be seen in action. The attention of Architects, Builders, and the trade in general, is especially invited.

PIANO-FORTES.—LUFF and Co.'s BOUDOIR or

PICCOLO PIANO-FORTE, 25d.; Cottage, 27d., package included. For tone, touch, durability, and cheapness, these Piano-Fortes are unequalled; warranted to keep well in tune, and prepared for extreme climates. L. and Co.'s Patent Piano-Fortes equally cheap. Piano-Fortes for hire, and in exchange very cheap.—**LUFF and Co.**, 103, Great Russell-street, Bloomsbury.

MECHI'S COMBINATION DRESSING-CASE

unites writing materials with every necessary for the toilet, in a most portable form, prices 3l., 3l. 15s., and upwards, to 12 guineas, fitted with razors and other articles of **MECHI'S** own manufacture. **MECHI** is the inventor of the justly celebrated Magic Strip and Paste, the cushioned Bagatelle-tables, the castellated Tortoise-bushes, and other unique articles. His stock of Papier Maché goods is most extensive, and remarkable for elegance and novelty of design. His Table and other Cutlery, and his Sheffield Plated Goods, are of first-rate quality.—Manufactory, 4, Leadenhall-street, London.

SHEEP-FOLDING NETS, RABBIT-NETS, TAR-

PAULING COATS, and CAPES.—Strong tarred cord Sheep-folding Net, 4d. per yard, run 3½ ft. high. Long Hare and Rabbit Net, on cords, 50, 80, and 100 yards long each; Net for fences against Poultry, Rabbits, Cats, &c., 2d. per yard. Net to cover Pigeonries, &c., 2d. per yard. Tarpauling Coats for Game-keepers, Watchers, &c., 8s. 6d. each. Upwards of 2000 London Policemen's Capes, 2s. and 2s. 6d. each. Tarpauling Garden Frame Covers, 9 ft. by 4 ft., 4s. each. Tarpauling Green-house Covers, &c., and all kinds of Garden and Fishing Nets, Tents, &c. **ROBERT RICHARDSON**, 21, Tonbridge-place, New Road, near Euston-sq.

ELECTRO-PLATED and GILT ARTICLES.—

ELKINGTON & CO., Patentees, gratefully acknowledging the distinguished patronage the articles of their manufacture have hitherto received, beg to announce that their stock, embracing every variety of Novelty for the Sideboard, Dinner, Dessert, and Breakfast Table, may be inspected at their Establishments, WEST END, —22, REGENT-STREET, corner of Jermyn-street.

CITY, —45, MOORGATE-STREET. The Patentees beg expressly to state, that their electro-plated goods differ entirely from any hitherto offered to the public as 'plated goods,' or 'substitutes for silver.' Both in appearance, sound, and wear, these goods are equal to **SOLID SILVER**; they are cast and chased in **SOLID WHITE METAL**, and strongly plated with silver by their **PATENT ELECTRO PROCESS**; all joints are made with hard silver solder, which cannot be used in ordinary plated goods, and neither acids nor heat affect them.

Their **ELECTRO-GILDING**, for beauty of colour and facility of application to **ALL METALS**, is much superior to the old method of water-gilding.

Old Sheffield plate restored and re-plated; plating and gilding on old or new articles promptly executed, at the Manufactory, 45, Moorgate-street.

Every article made and warranted by the Patentees bears their stamp, E. & Co. over a crown.

DRESS COATS, Superfine cloth, 30s. to 40s.; extra quality, 50s.; Frock-coats, silk facings, 35s. to 45s.; ditto, silk velvet collar and silk facings, 50s.; Waterproof Wrappers, 10s. 6d. to 21s.; fashionable York and Chesterfield ditto, 10s. to 25s.; Waistcoats, 5s. to 8s. 6d.; Silk, Satin, and Kerseymere, 10s. to 14s.; Trousers, 8s. 6d. to 12s. 6d.; stout Doeskin and Kerseymere, 10s. to 25s.; Shooting Jackets, 10s. 6d.; Boys' and Youths' Tunic and Hussar Suits, 30s.; a Suit of Superfine Black Cloth, 3l. 3s.; best quality, 5l.—At **FISHER and Co.**'s, 31, King William-street, City, 10 doors from London-bridge.

A GENTLEMAN in the West of England, Farming on the most improved principles, and keeping Stock of the first description, has a vacancy for one or two **AGRICULTURAL PUPILS**. All particulars may be had by application addressed to **H. H.**, Post-office, Cirencester.

LODON TESTIMONIAL.—An Advertisement having appeared in the *Times* of Sept. 26, and the *Gardeners' Gazette* of Sept. 30, with this heading, Mr. LODON, who did not return to town till the evening of Sept. 30, and did not see the above Papers till the following day, takes this mode of acquainting the Public, that so far from sanctioning these Advertisements, nothing would induce him to accept of the Testimonial alluded to in them.—Bayswater, Oct. 2, 1843. J. C. L.

The Gardeners' Chronicle.

SATURDAY, OCTOBER 7, 1843.

MEETINGS FOR THE TWO FOLLOWING WEEKS
Monday, October 9 . . . West London Gardeners' Association, 7 P.M.
Tuesday, October 17 . . . Horticultural . . . 3 P.M.

It is quite annoying to an admirer of good farming to go along the roads and by-ways in the country at this time of the year and see the abundant crops of Thistles just shedding their flying seeds, which the winds carry into the fields with such great impartiality, that the farmer who has expended considerable sums in clearing his fields of these disagreeable occupants has as good a chance of being overrun with them next year as he who has slept and let the weeds take their chance. Every farmer knows that a Thistle or a Dock in a Wheat-field usurps the place and food of many ears of Corn. Wherever Thistles thrive, the land will grow good Wheat; hence the saying of the blind man, "Tie me to a Thistle," when he was choosing his land: but there is no necessity for allowing this sign of fertility to be always conspicuous. In some countries there is a law compelling farmers to cut down and destroy the Thistles in their fields before they ripen their seeds; and when we consider how easily this might be done, by cutting them down when they have expanded their blossoms, in which case they will assuredly die off, it appears incredible that they should be allowed to seed the fields for miles around, as they now do in many places. They are kept down in the pastures and meadows, and more or less in the Corn-fields, especially where the crop is drilled and hoed: but how few farmers think of weeding their hedge-rows and the strip along every ditch, which the plough leaves unstirred, and which every careful farmer should invariably have dug up. In well-cultivated countries, where the spade is a great help to the other agricultural instruments, to make a field look like a garden the land is generally sloped down into the ditch, and cultivated with the spade where the plough cannot go, so as merely to leave a course for the water at bottom. What is now usually occupied by rank weeds, and forms a barrier to the water, which, after a heavy rain, should run into the ditch, is never seen, and the headlands, where the earth accumulates, are levelled down, to carry the superfluous earth into the hollows, where the water might lodge. If this were attended to, much land, now lost, and made a nursery for weeds, would become productive. The hedge-rows in many of the old inclosed lands in England are allowed to spread out to a width which would scarcely be believed, unless the whole were grubbed up and the ditch filled in. Theoretically, the ditch takes three feet and the bank three, and the bottom of the hedge is confined to the side of the bank nearest the ditch; but, in fact, two feet are lost by the side of the ditch, because the horses, when they plough, cannot go nearer; and if the bank be examined on the other side, it will oftener be found to extend six feet than three; besides, the roots of the Thorns, of which the hedge is composed, spread out farther into the ploughed land than the farmer is aware of—to say nothing of Elms and Ash-trees which are growing in the hedge-rows, and extend their suckers without limit,—unless the tenant has the sense to keep a ditch dug out on both sides of the row: but this again takes up ground; and the interval between the two ditches is often a perfect wilderness of weeds. The reducing the waste of land caused by old hedge-rows is a matter between landlord and tenant; and if the latter is wise, he will give an additional rent, where he is allowed to clear them of trees and substitute a covered drain for the ditch, and fully compensate the landlord for the loss in the increase of hedge-row timber, for we are fully persuaded that for every cubic foot of timber which the landlord cuts down after a number of years, the tenant has lost the value of many cubic feet, in the annual diminution of his crops. The beauty of those parts of England where hedge-row timber abounds, when seen from an eminence, cannot be denied: nor would we disfigure an estate by cutting down all trees in hedge-rows. But where inclosures of five or six acres are entirely surrounded with trees standing too close to grow, and only keeping the sun and air from the fields, the look of the country would be much improved by devoting some small irregular fields entirely to the growth of wood, where, if properly managed, it would pay a good rent: while larger inclosures of 15 or 20 acres might have trees round them, at a distance of 30 or 40 feet apart, where they would in time be ornamental as well as profitable, without injuring the crops by their shade.

But we have been led away from weeds to trees,

not very unnaturally, for trees are permanent weeds, and affect crops as well as lesser weeds, with this difference, that the farmers cannot remove them. To return to Thistles: we would suggest if no law could be framed to meet the case, that the occupiers of land in a parish or district, should agree to clear their hedge-rows of all pernicious weeds—especially those whose seeds are carried about by the winds—and submit to a fine, if any weeds are found on their land or in the hedge-rows at the time when their seeds ripen. Or perhaps a better plan would be, to empower the surveyors of the roads to employ old men and women, who receive relief from the parish, to clear all the sides of roads and hedge-rows of Docks and Thistles, and to burn them, paying the expense out of the highway rate, or, if that be not legal, to make a small rate for this especial purpose. In many parishes abounding in hedge-rows, the churchwardens were accustomed to pay a certain premium for the heads of hedge-sparrows; but some conscientious opposers of every irregularity found out that there was no law for this; the sparrows increased *ad libitum*, and it was found expedient among the farmers to establish a sparrow-club, and pay for the heads as before—so there might be a *weed-club*, much to the advantage of those who love clean crops. The general destruction of the weeds which most infest crops can never be effected but by the zealous co-operation of all the occupiers of land, and this, perhaps, may in many cases be impracticable without a special law made for the purpose. Wolves have been early destroyed in England by an old law as it is said; but the damage caused by a few wolves killing sheep is a trifle to the loss occasioned, year after year, in the Corn crops by the rank weeds, which might so easily be exterminated if the seeds were prevented from flying all over the country for miles around, owing to the carelessness of some small occupier of land who does not know his own interest and cares not for that of his neighbours.—M.

IN March of the present year we directed attention to a mode of growing plants in very large pots, without taking the trouble to shift them gradually in the manner usually practised; and on some subsequent occasions we insisted upon the expediency of adopting this plan when the best possible cultivation is sought after. At that time we were not aware that Mr. Wood, the experienced foreman in the Nursery of Messrs. Henderson, of Pine-apple Place, was the person to whom the promotion of the practice was principally owing; but as he has since that time stated his own views on the subject in two elaborate papers in "Paxton's Magazine of Botany," we have thought it desirable to reprint them in our own columns, which with Mr. Paxton's permission we commence doing to-day.

We have been the more anxious about this because some gardeners fail in their application of the system, either from want of skill, or from a misapprehension of the principles on which it depends, or from both; and because the papers themselves will form the best of all introductions to some communications on Cultivation with which we have been favoured by Mr. Wood himself, whose correct physiological views and great practical experience render them particularly valuable.

Our readers are, doubtless, aware that luminous appearances have been occasionally observed on certain plants, and that physiologists admit the presence of phosphorescent properties in vegetation. Fungi, in particular, are reported to possess such qualities. Certain Rhizomorphas are said to be so luminous as to light up the mines where they grow, as if the rays of a feeble moon were playing on them; and the Agarics of the Olive-grounds are said to behave in a similar way in the south of Europe. The younger Linnæus also reports that the flowers of the Nasturtium, the African Marygold, the Orange Lily, and other orange flowers, exhale, at the end of a hot summer's day, intermittent phosphoric discharges, which resemble little flashes of light. Such appearances as the last have, however, been sought in vain by ourselves and others; but it appears from the "Proceedings of the British Association," at Cork, that the phenomenon has been observed by an Irish gentleman.

Mr. R. Dowden is said to have made mention of a luminous appearance on the double variety of the common Marygold (*Calendula officinalis*). This circumstance was noticed on the 4th of August, 1842, at eight, P.M., after a week of very dry warm weather; four persons observed the phenomenon; by shading off the declining daylight, a gold-coloured lambent light appeared to play from petal to petal of the flowers, so as to make a more or less interrupted corona round its disk. It seemed as if this emanation grew less vivid as the light declined; it was not examined in darkness. The single kind is not suited to examination, because it "goeth to sleep with the sun," and has not the disk exposed to observation.

When, however, this matter was discussed, Dr.

Allman expressed his opinion that the phenomenon was not at all due to phosphorescence, but it was referable to the state of the visual organ, as he thought had been satisfactorily explained by Sir David Brewster. If it were phosphorescence, it would appear brightest at night, and it would be expected to occur in other plants than those of an orange or flame colour. This led Mr. Babington to mention that he had seen, in the south of England, a peculiar bright appearance produced by the presence of the *Schistostega pennata*, a little moss, which inhabited caverns and dark places, but this too was objected to by a member present, who stated that Prof. Lloyd had examined the *Schistostega*, and had found that the peculiar luminous appearance of that moss arose from the presence of small crystals in its structure, which reflected the smallest portion of the rays of light.

It would be interesting to examine this matter with more care than has hitherto been bestowed upon it; and we should be glad to know whether any of our readers can mention cases of vegetable luminosity witnessed by themselves. We confess our doubts as to the fact of crystals being present in the moss, whose illumination was mentioned by Mr. Babington, but we have no access to fresh specimens for examination.

AN OUTLINE OF GAVIN CREE'S, (of Biggar) SYSTEM OF PRUNING FOREST-TREES.

[HAVING read with much interest an article in your *Chronicle* of Sept. 10, headed "Encouragement to Planters," wherein the author appears to have many correct views, but others which I think are not altogether consistent with the principles of Vegetable Physiology, I have inclosed you an outline of Cree's system, written by him, which I have now practised for three years regularly, and from which I have found the most beneficial effects.]—J. M. Nasmyth, Bart.

To cultivate wood on physiological principles it is necessary to have a knowledge of the organs which constitute the internal and external structure of trees, and of the various functions these organs perform through the instrumentality of external agents. Trees are generally treated as if they were mere inorganic matter; they are operated on as the ploughman operates on the ground, or as the carpenter and blacksmith on the wood or iron under their hands. Many eminent men have written treatises on Vegetable Anatomy and Physiology, and many have promulgated their notions on the pruning of Forest-trees, while neither party understood how the science of Vegetable Physiology ought to direct the mechanical operation of pruning, so as to make it affect, to the greatest extent, the growth and health of the tree. There is in trees, as in animals, a vital power which presides over all their functions. This power is the agent by which the ascent and descent of the sap is produced, and certain internal and external causes facilitate the exercise of this phenomenon. Among the external causes is to be ranked the influence of air, heat, light, and moisture, and the system of operating on the lateral branches by shortening them.

I shall give an outline of the principles which led me to the conviction that the system of pruning by shortening the lateral branches, which I brought forward a number of years ago, is calculated, more than any other, to secure for the benefit of the tree an extra nourishment.

The organs of nutrition and vegetation have one common object to support, namely, life in the vegetable, and the power of these organs may be greatly increased by mechanical means. In order to use these means in a way to assist nature, some knowledge of the physiology of plants is requisite. Either the operator or the superintendent must understand how the organs exert their functions, otherwise they cannot reasonably expect to be successful. The different processes of the sap (or vegetative blood) of trees must especially be carefully studied, as by it their growth and vigour are sustained. The sap is acquired and influenced in divers ways. In spring, the small spongetlets or extremities of the roots absorb the fluids and gases from the soil, which are conveyed by an inherent power depending on the life of the tree; or, more properly, the ascending sap is acted on through the roots by atmospheric pressure, up through the capillary tubes, till it reaches the extreme ramifications of the stem, shooting forth buds and expanding leaves. The common sap having extended over all the branches, mingles with the fluid absorbed by the leaves, and, losing the watery and æriform principles, which are useless for nutrition, by evaporation, it returns down the vessels of the bark, and in its course deposits cambium, which forms the annual rings of wood; then extends to and strengthens the extremities of the rootlets, whereby they are made to extract more nourishment from the soil throughout the season; and as the two saps mingle in the leaves, the descending sap, which has not been deposited in like manner, mixes with that extracted by the rootlets, and is again carried up with the ascending sap.

How to economise these fluids for the advantage of the tree is next to be considered. It is obvious, then, that when the uppermost lateral branches are shortened to half the length of the leading stem, and the others proportionally, the sap has less superficies to cover than when they are allowed to extend to an improper length and thickness; in consequence there is a greater supply for every part of the tree; and as other fluids, such as water moving in a channel, acquire additional momentum when augmented, greater vigour and velocity of movement are imparted to the sap by the abundance of quantity, and so great is the beneficial effect resulting therefrom to the tree, that, from the extraordinary size and health of the foliage which clothes the branches, it attracts more than

three times the nourishment ordinarily imbibed from the atmosphere under different management.

The branches which are shortened always remain slender. By reason of the small superficies of the branch, and the rapidity with which the sap moves, very little of it is retained by the branch; and, of course, nearly the whole is deposited in the body of the tree. This truth, with the fact that the foliage remains nearly a month longer on the trees so shortened than on others, accounts for the wonderful rapidity of growth effected by this method of pruning. The smallness of the branches is of advantage likewise when it is necessary to prune close to the stem, as the wound made by that operation is proportionally small, and may be expected to cicatrize in the course of three years.

It may be worth remarking that, if the branches are properly shortened, trees never become what is termed hidebound. In the Royal Forests Lord Glenbervie had instruments for ripping the bark of Oaks (which never could increase nutrition), and for scraping off the lichens; but had the branches been judiciously shortened, the descending sap would have been so augmented through means of a more healthy foliage, as to have obviated the disease; as the bark expands in proportion to the quantity of sap carried down, and if that be abundant it soon clears itself of all impurities. Even mismanaged trees, on which a dryness of bark has occurred, may be brought to a proper condition in the course of three seasons. In cases of this kind, the distance from the body at which the branches are amputated must be regulated by the size of the tree—the larger the tree the greater the distance.

It has been found experimentally that trees under 18 feet in height and 15 inches in circumference advance, on an average, as much, both in height and circumference, in 6 years, if the branches are properly shortened, as they do in 15 years if these are not shortened or are improperly pruned. The more trees are pruned up close to the stem before they are 18 feet high, their growth is proportionally retarded. Trees pruned close to the stem, when the circumference of the part is under 15 inches, take in damp, so that the tree, if dissected, after a certain period at the part where the branches have been cut, will be found black into the pith. This department of pruning, when improperly managed, is the principal cause of rot, more particularly in the Larch. The reason is, the wood in young trees is more open in texture than in older ones.

I refer the reader to my Treatises on Thinning and Pruning in the "Glasgow Farmer's Register, 1828," to Vol. iii. of the "Quarterly Journal of Agriculture," No. XXIX. of the same Work; to "Loudon's Gardeners' Magazine," Nov., 1841, Jan., 1842, June, 1842, Sept., 1842, and the "Gardeners' Gazette," 1842, pp. 494, 671, 703, 718, 766, and 783; and to Sir John M. Nasmyth, Bart., of Posso, Peeblesshire, Dr. Balfour, Professor of Botany, Glasgow, and Dr. Neill, LL.D.

AMMONIA.

No person can peruse the writings of the German or French Agricultural Chemists without being struck with the vast importance attributed by them to the employment of Nitrogen or Ammonia as a manure for plants. Liebig says that, with every pound of Ammonia that evaporates, we lose 60lbs. of corn; and from Boussingault we learn that one pound of nitrogen increases the produce of a meadow 100lbs. The latter author also gives Tables in which the value of manure is estimated by the proportion of Ammonia contained in it. Since the publication of Liebig's work on Agriculture the attention of Agriculturists has been directed to the employment of a variety of substances containing Ammonia. But I believe that their success has been by no means equal to the promises held out to them. Liebig has, I think, satisfactorily proved that a certain quantity of Ammonia is supplied to plants by the rain that falls on the surface of the soil; as this is nearly a constant quantity, if plants were unable to obtain their Ammonia from any other source, it would be necessary to supply it by artificial means if we wish to obtain the full amount of produce which the soil is capable of yielding. But a question arises—What proof have we that plants are unable to supply themselves with Ammonia from sources unknown to us? and how far may the increase of crops, by the addition of substances containing Ammonia, be attributed to that element?

If we observe the practice of the Agriculturists of this country we shall find that the great bulk of manure is applied to the Turnip crop. The dung which has collected in the yards during the winter is thrown up for some weeks, during which time a large proportion of Ammonia escapes into the air; but at the same time, the inorganic matters—such as sulphates, phosphates, &c.—are reduced to a state which the Turnip is capable of assimilating. On reading Sir H. Davy's works some years ago, I was induced, and I also persuaded some of my friends, to cart out our manure without previous fermentation; but after two or three years we were obliged to return to the old custom, on account of the inferior crops that it produced. I have since tried the fixing the Ammonia by means of sulphate of lime and sulphuric acid. But the success which attended these experiments has been so slight as to make it appear to me that the escape of Ammonia in dung is of little importance. Five proportions of good horse-dung, each weighing 5 cwt., were placed in separate heaps; one had a certain quantity of sulphuric acid added to it, another was mixed with one bushel of caustic lime, the third was left alone, the fourth was converted into charcoal by being burnt in a close chamber, and the fifth was burnt to ashes. The first three remained six weeks before they were put into the ground; an equal space of ground

was sown with Turnips, and the weight of produce was in each case nearly equal.

Lime and ashes of coal and vegetables are used in large quantities as a substitute for dung in growing Turnips; they can only act by the inorganic matter contained in them. Superphosphate and sulphate of lime are other substances capable of producing very large crops of Turnips. I found that a field sown with Turnips, and manured, alternate rows, with calcined and unburnt bones, decomposed with the same weight of sulphuric acid, produced equal effect. If we examine the substances containing Ammonia which experience has proved to be beneficial for increasing the amount of Agricultural produce, we shall perceive that they contain some inorganic substance, to which their action may with equal probability be attributed. In Guano we have a substance containing from one to fifteen per cent. of Ammonia (part of the Ammonia combined with phosphoric acid,) and a large proportion of phosphate of lime. This phosphate of lime is in a state similar to that which exists in fermented dung; and although chemically the same as the phosphate of lime in burnt bones, still its effect upon plants would be infinitely superior. The nitrates of soda and potash are salts which contain nearly an equal proportion of nitrogen and oxygen combined with a different base; but their effect is known to differ on different soils, and this could hardly be the case if the nitrogen was the substance which produced the effect. On my own soil, nitrate of soda produces a much larger increase of grass than nitrate of potash; but they are neither of them capable of producing a crop of Turnips. On the soil where nitrate of soda produced great effect, I found little benefit from the use of Nitrate of Ammonia, although this salt contains about forty per cent. of Ammonia. I published some time ago, in the *Gardeners' Chronicle*, some experiments on the salts of Ammonia. Cabbage-plants were watered every other day with very dilute solutions of the salts of Ammonia; and I have repeated the experiments on a much larger scale upon Turnips; and although the increase of weight for the same weight of the salts has varied in different seasons, still the value of the salts has always remained the same. The phosphate of Ammonia was the best, then the sulphate, then the muriate; 4th, nitrate; 5th, carbonate. The result of other people's experiments, I think, proves phosphate of Ammonia to be one of the most powerful manures known. Sulphate of Ammonia is always found by those who have tried it, to be a very powerful manure, and the employment of it in Agriculture is rapidly increasing. The muriate has also had a considerable trial, but, I believe, with little advantage. I know of no experiments with the carbonate and nitrate; the carbonate that I used was the solid Carbonate of Commerce; the results obtained from diluted gas-liquor cannot be considered of any value in this question, as it contains a large quantity of sulphuretted hydrogen. If it is the Ammonia of these salts which proves so beneficial, they ought to be valuable in proportion to the weight of Ammonia contained in them, which is as follows:—nitrate, 14; nitrogen in the acid, 26=Ammonia, 40; muriate, 31; carbonate, 28; phosphate, 25; sulphate, 22: in 100 parts. Whether the addition of Ammonia to the soil is necessary or not, it is certain that the employment of it on a soil that is deficient in the salts of phosphoric and sulphuric acid must be useless; and the system pursued in England of taking corn-crops so repeatedly from the land, has rendered a great proportion of it very deficient in all inorganic matter; and until this is supplied either by a more extended rotation of crops, or by artificial means, there can be no fear that the Ammonia supplied by the atmosphere will be insufficient for the wants of a crop. —J. B. Lawes.

OBSERVATIONS ON THE NEW SYSTEM OF POTTING PLANTS.

By Wm. Wood, Foreman at Messrs. Henderson's Nursery. No. I.

PUBLIC competition has of late greatly excited emulation, produced many ingenious experiments, and led to many valuable results, in every department of gardening. Whatever may be the balance of merit and demerit in the influence of Horticultural exhibitions, it is certain that the encouragement they have held out to practical men has greatly favoured that large advance which has been made in the production of fine plants and blossoms.

It is on the former that the most obvious effects have been produced, because in attempting to attain higher excellence in the ultimate objects of cultivation, special attention has been called to the means of attaining a greater maturity of growth in connexion with uniform development of bloom.

Although the periods selected for public competition are often unfavourable to the timely production of a particular class of plants, yet this very circumstance has secured a better knowledge of the means of meeting such exigencies. But the same cause has also, in conjunction with the attainment of superior growth, been attended with unfavourable effects in over stimulating growth by an excessive application of fertilising agency, and by subjecting plants to a higher temperature than is favourable to the production of bloom.

Though it is almost universally understood that any course of treatment which tends to cause an excessive development of parts—or, in other words, an unusual exuberance of growth—is unfavourable to the formation of bloom, yet there are instances of many splendid exotics, in which, without an immediate application of those principles which involve the requisite treatment for maturing each successive year's growth, the most persevering cultivator will fail to realise those results which the ob-

jects under his care are, with such principles in view, calculated to produce. It would appear almost unnecessary to urge a special attention to this point, which must (in theory at least) be familiar to many excellent practitioners; but, up to the present period, it has not been unusual to meet with instances of cultivation, which for their splendid growth alone have excited admiration, but which are far from being equally interesting, by the presence of that which constitutes the primary object of all cultivation in ornamental flowering plants.

Instances readily occur of plants which, in consequence of a tardy development of leaf-buds, have caused disappointment by the scantiness or total absence of bloom until the attainment of several years' growth, or some accidental cause has tended to retard the circulation of sap or diversify its currents, and has thus induced a disposition to form flower-buds. *Wistaria sinensis*, in the hardy ornamental department; *Kennedya splendens*, in the greenhouse; and *Stephanotis floribunda*, *Mandevilla suaveolens*, *Ipomoea tyrianthina*, and *Thunbergia grandiflora*, in the stove department, are examples where the natural result of luxuriant growth is a partial and uncertain bloom.

As the present test of good cultivation is the attainment of the greatest constitutional vigour within a limited period; and as this test is proved, by repeated instances, to be unfavourable to a uniform development of flower-buds, unless such growth be regulated by principles hereafter to be adverted to, it becomes an inquiry of much interest to ascertain the means by which a certain amount of fertility may be attained in plants which are subjected to an excessive and continual supply of stimulants, whether planted out or in pots, admitting of an extensive growth on account of their large size. It is in illustration of the foregoing remarks that the following principles of Horticulture are brought forward, with a view to prove that it is only by their application that such a proportionate maturity of growth can be attained as is essential to a uniform development of bloom.

1st—All flower-buds, being analogous to leaf-buds, it follows as a corollary, that every flower with its peduncle and bract is a metamorphosed branch.

2nd—"Whatever are the laws of arrangement in branches, with respect to each other, the same will be the laws of the arrangement of flowers with respect to each other."

In adducing evidence in favour of these principles, it will be seen that the formation of flower-buds necessarily depends, as a general rule, upon the presence of developed leaf-buds or axillary branches, and that the same laws which operate in the production of the one, necessarily act in the production of the other. In corroboration of these truths, a practical instance is here given, which will clearly illustrate the analogy that exists between the first formation of a leaf-bud or axillary branch, and its ultimate transformation into bloom.

The engraving represents a plant of *Zichya coccinea*, which, in the month of July, 1841, was transferred from a 60 pot to a large

16 — being a heavy shift or removal at that advanced season. The plant was subjected with others similarly treated to the temperature of an intermediate house. To preserve a regular circulation of moisture, a promiscuous middle drainage was used in potting, in addition to the ordinary mode, and the texture of the soil was rendered more open by the disuse of its close or binding portion. Its growth was luxuriant and rapid, and would, had its fore-shoots been encouraged, have extended over a pyramidal trellis of two feet six inches in height. Finding the circulation of sap too rapid to permit the formation of leaf-buds by axillary growth, recourse was had during its progressive growth, to pinching off the terminal leaf-buds or fore-shoots above each second and third joint, which caused an equal distribution of lateral or side branches. In thus obtaining an accumulated vigour, by aiding the development of leaf-buds, which ultimately became matured axillary shoots, the season's growth was necessarily limited, covering the circular trellis to about 12 inches from the base upwards. The practice of removing the terminal growth at stated distances was adopted apart from any recognition, or even knowledge, of those principles of Horticulture to which it was ultimately referred; and in the following spring of

1842, the plant presented a beautiful and interesting instance of their application, in the uniform development of nearly 500 clusters of flower. Had the specimen been encouraged to continue its accumulating vigour throughout the season of 1842, it might ultimately have formed a still more striking example; but the present result proved most satisfactorily the possibility of attaining a perfect formation of bloom from a partial extent of growth.

There are, perhaps, no plants in cultivation to which the treatment here adverted to is more applicable than to *Stephanotis floribunda* and *Mandevilla suaveolens*, two most desirable exotic climbers, each remarkable for the slow and rare development of leaf-buds, owing to a constitutionally free and exuberant habit of growth; and the inevitable result, in these and all similar instances, when allowed to extend themselves without having recourse to the occasional operation of removing the fore-shoots, and thereby aiding the development of side branches, is an attenuated and useless length of growth, which, when it has attained its ultimate vigour, seldom produces more than a few scattered bunches of flowers from the extremities.

The rules from which the foregoing remarks are derived, or on which they are founded, may be stated as follows:—

1st. As the *secreted matter* (peculiar to all plants) in conjunction with an accumulated sap, is essential to the primary formation of flower-buds, and as this secreted matter is in strict proportion to the quantity of leaves,* it may be inferred that an equal formation of leaf-buds is essential to a uniform development of bloom.

2nd. In accordance with a previously stated principle, "that the laws which operate in the arrangement of branches, act simultaneously with respect to the arrangement of flowers," it may be inferred that a system of cultivation which is the most favourable to the production of branches (or axillary growth) will be found the most conducive to a liberal development of blossoms.

3rd. As an excessive vigour is (as a general rule) unfavourable to the formation of flower-buds, in preventing an accumulation of sap, it may be inferred that the most perfect system of cultivation will be that which is best calculated to attain a regular development of bloom from any proportionate extent of matured growth.

It appears from the evidence of general practice, that those principles upon which the growth of plants depends, are generally better understood than those which relate to the uniform development of bloom; a fact which is not the surprising, when we consider that the causes of the former are such as may be successfully applied apart from a knowledge of those reciprocal as well as counter-acting influences which operate (independently of mechanical means) upon the organs of plants, under every modification of treatment or situation to which they are subjected. But a reason still more obvious remains to be assigned for this difference—namely, that the agencies which lead to a higher and ultimate effect in the attainment of exuberant growth, are invariably found to exert, through the same medium, an opposing tendency upon the predisposing causes of fertility.

It is, however, in proportion to the attainment of a system of cultivation which embodies a *progressive* and accumulated maturity of growth, that an equally progressive step can be made towards the ultimate object of all ornamental cultivation: viz., bloom. The present modes of culture combine more than at any previous period the investigations of science with the deductions of practice, though time-rooted prejudices have hitherto proved obstacles to gaining a knowledge of first principles, and to their application to professional experience. In testimony of the approximation of the present age to a comparatively perfect system of cultivation, there is perhaps no instance of higher interest than that which involves a mode of culture, having for its ultimate object a *constitutional maturity of growth*, by dispensing with the attendant risk, and *restrictive* influence of intermediate shifts from smaller to larger pots.

The principle upon which such a practice is founded is now successfully applied by the most eminent cultivators, and the same principle, so easily adapted to stronger-rooting ornamental plants, has also been rendered applicable to those *the most difficult to rear*.

It is well known that growers of plants for public competition have often urged the difficulties and disadvantages attending the purchase of plants, which may have received a treatment in some respects opposite to that which they are desirous to adopt; and in many instances they have considered it essential to the accomplishment of their object, that the plants should have been subject to their system of management from the first, or initiatory, state of growth. These disadvantages are, however, now being overcome by a mode of potting (subject to a corresponding treatment) which, not unexpectedly, has been a subject of surprise to some, and a stumbling-block to others, who in asserting its impracticability, because contrary to the ordinary method, have failed to apprehend the principles upon which such a course of practice is founded.

The rule which is implied in the principle now adverted to may be defined as follows:—*that plants the most difficult to rear ought to be removed from their youngest state of growth, into the largest sized pot in which they are to be exhibited as specimens.* However opposite to prevalent opinion and practice such a rule may appear to those who are unaccustomed to view facts in the light of comprehensive truths, it may nevertheless be shown to be consistent with the first principles of Horticulture, and rendered conformable to general practice.

Having stated the rule, the following directions are necessary in the mechanical process of potting. "Take a

16 or 12 sized pot, place three inches of bottom drainage, and fill up with pieces of peat from one to four inches square; fill the interstices with the fibrous siftings of peat, and pieces of crocks, till the pot is *quite full*; then plant a seedling or struck cutting of Heath of similar habit, give very little water till the little plant shoots freely; and in this treatment is contained the only secret in growing fine specimens."

Such is the most ingenious and easy mode of potting yet offered to the attention of the cultivator; and though the plan of dispensing with intermediate shifts has been recognised nearly fourteen years ago, yet, for this most successful application of the system, the profession is indebted to Mr. D. Beaton, the gardener at Shrubland Park, near Ipswich, one of the most eminent Horticulturists of the present day.

This novel and original mode of attaining mature growth in the cultivation of plants may not inappropriately be termed the *accumulative* system, and involves, by its mechanical application of soil, one of the most important and essential desiderata in all systems of cultivation, without which all efforts to obtain constitutional vigour and fertility must prove abortive—namely, a uniform circulation of moisture.—*From Paxton's Magazine of Botany.*

AMATEUR'S GARDEN.—No. XL.

ONE of the greatest difficulties which the Amateur has to encounter, after he has procured a stock of plants for bedding out, is to keep them through the winter; and though the construction of pits for this purpose has been explained in previous Numbers, it may not be altogether out of place to advert to the subject again, now that every one begins to think of getting his plants into their winter quarters. The great requisite of winter management is to have the plants well hardened before severe weather sets in, to get them into a perfectly dormant state, that is, without any sign of growth, and to keep them as dry as is consistent with their not suffering from the want of water. To effect this without the use of fire is rather a difficult matter, but nevertheless it can be accomplished by proper management. In the first place, the site chosen for the pit or Hybernatory must be on a perfectly dry subsoil, and the more deeply it is sunk in the ground, the more warm it will be, from the circumstance of its sides not being exposed to the action of the weather, and from the interruption of the radiant caloric of the earth, which is ever escaping into space, so long as the superincumbent atmosphere is less heated, and its escape is not interrupted by the "Ice King" or some other equally impenetrable covering. Thus wild as the idea may seem, it is probable that if our green-houses were connected with a series of deep underground drains, with the power of forcing the air contained in them into the houses, we should obtain sufficient terrestrial heat for all purposes of protection, if not for the cultivation of half-hardy plants.

In the construction of the pits, the ground must be excavated to the depth of two feet, and the mould placed as an embankment round the sides—taking care to make it solid as you proceed, and to give it a good slope, so as to throw off the wet. It has been recommended to have the Hybernatory fronting northwards: and for the purpose of keeping the plants in a dormant state, this is an excellent plan; but as the plants frequently suffer more from damp than any other cause, it is as well to have the pit fronting both north and south—that is, with a span roof; so that, by exposing the south side, advantage may be taken of a dry sunny day, to dry the plants in case of need. At this place, our plant-pit is built with hollow walls, and covered with a span roof, one side of which is covered with glazed sashes, and the other with sashes covered with strong painted canvass. These sashes are adapted for either side of the pit; so that we have a command of either light or shade, whichever may be most advantageous. The sashes are hung on centres near the ridge of the roof, and are adjusted by an iron support, with a thumb-screw in the front rail of the sash; so that we can admit a thorough current of air among our plants, and yet be protected against sudden showers of rain.

When the pit is formed, the bottom, to the depth of a foot or eighteen inches, should be filled in with perfectly dry brick-rubbish—if fresh from the kiln all the better—and covered with dry cinder-ashes, in which the pots may be plunged. This brick-rubbish will prevent all escape of moisture from below, and at the same time allow of the terrestrial heat escaping without much hindrance.

Where it is inconvenient to sink the pit, as in wet subsoils, the side-walls must be built of dry peat turves, ten or twelve inches wide; and where these cannot be obtained, take dry adhesive turves from any bank or common. Let it be remembered it is of the utmost importance that every part of the pit be kept as dry as possible, and that one shower of rain on the plants will do them more harm than three or four degrees of frost. I lay particular stress on this point, as it would be far better that the plants should suffer for the want of water, than that the atmosphere of the pit should become saturated with moisture.—*W. P. Ayres, Brooklands.*

HOME CORRESPONDENCE.

The Daisy, a Guard against Wireworm.—In order to have fine plants and blooms, fresh soil obtained by paring the turf from a pasture is of such importance, as to be constantly recommended by writers on Gardening. Amateurs, in following specific directions, are often defeated in their object, by not knowing some little sequence involved in even the plainest directions. Such was my lot, for I took fresh soil obtained from a meadow, but although I cut and beat it about and turned it several times, the

Wireworm has always been so numerous, that my Pinks, Carnations, and Picotees, are always more or less injured, often destroyed; and it is only after two and three years constantly picking out the vermin (when, of course, the fresh soil has become rather stale), that I have been able to free the beds of this most troublesome annoyance—to be rid of which I have unsuccessfully tried salt, lime, soot, rape-dust, mustard-dust, traps of sliced potatoes and carrots, &c. &c.; and in my exertions to destroy the Worm by such means, I have, perhaps, often as much injured the objects of my solicitude as the Wireworm. However, I am gratified by having at last stumbled upon a method for controlling, and indeed preventing, the attacks of these pests. An ounce of practice is worth a pound of advice, the proverb says; and with great pleasure I have, this summer, learned from a very extensive Pansy-grower his experience on the matter, the result of which appears to me to be of such importance, that I think it worth dissemination. I observed that he had tried most of the plans recommended for catching, or preventing the attacks of, the Wireworm in his Pansy, Pink, Carnation, and Picotee beds: but not being aware of his object, I rather wondered, more than once this season, at his taste—as I fancied it was—in surrounding all his choicest flower-beds (and even amongst some of them) with edgings of double Daisy, but I now know his object in so doing was, not merely to do honour to the almost domestic Daisy, but that it was to entice the Wireworms, which always concentrate their attacks on the rows of Daisies, and thus leave the beds untouched. Indeed they appear so greedy of this little plant, that he assures me that he has from one row, 300 feet long, planted as an edging, in one day this summer, taken the extraordinary number of 2,000. I should mention, that his soil is quite fresh; an immense turf and weedy surface has been turned in, so that the ground swarmed with the Worm. The free habit of growth of the Daisy enables it, by stocking out or tillering, to survive without showing to any but a close observer the "Worm in the bud." This year I have lost an entire bed of the choicest Carnations and Picotees—not a plant has escaped: had I known that the Daisy was so good a protector, I should most cheerfully have sought its humble but effectual aid ungrudgingly, even at a greater price than I have given for galvanic protectors—which I by no means deprecate, but they do not keep off the Wireworm.—*S. Oram, Winchmore Vale, Edmonton.*

Heating with Earthenware Pipes.—All will agree that economy in the application of artificial Heat has of late deeply engaged the attention and study of scientific Horticulturists, and that highly important advantages have already accrued from the labours of those who have thus distinguished themselves. It is now no longer necessary that the erection of structures containing the apparatus for top and bottom heat should, as formerly, imply an immense outlay of capital; and probably, ere long, we shall have a beautiful apparatus complete for the same or less outlay than the "old-flue" system. I saw yesterday at the gardens of J. Greenall, Esq., a pit erected under the superintendence of his gardener, Mr. Calderbank, which combines extreme simplicity and economy. The pit is between 30 and 40 feet long, with front and back lights; and heated by one of the modern-constructed boilers, with circular earthenware pipes of large calibre. A portion of these pipes passes into a vault for moist bottom-heat, which is afforded very effectually from openings of moderate size, at certain distances, in the pipes. The pipes are continued all round the pit between the walls and the bed, and from the above contrivance afford moist or dry heat as occasion may require. Thus we have a complete apparatus, answering admirably every purpose, at a very moderate cost. I have been informed by Mr. Spencer, the maker of the pipes, that he would warrant them to stand any length of time, provided they were not intentionally injured. If this be true, we may expect—from the way in which they fulfil the desired end, their cheapness and durability—that they will ultimately supersede the use of iron.—*W. Hunt, Warrington.*

Budding Rhododendrons.—Mr. Beaton, in his "Calendar of Operations" for Sept. 30, mentions the success of an experiment in budding Rhododendrons in the open air, and also that a young English lady has outstripped the very best of gardeners in this operation; but I beg to inform him that it has been practised here with great success for many years, and we have now standards with large fine heads from buds; also a quantity of buds which have been inserted this season, that have taken well. It will, without doubt, be a great acquisition to gardening, as flower-buds are generally formed on the first season's growth.—*H. G. Y., Dorking.*

Verbena Seeds.—Perhaps there has been no season in which Verbenas have been more prolific in seeds than the present, in consequence of the very fine weather we had in September. Those who are fond of new varieties have only to save seeds from beds where plants of different coloured flowers are growing close to each other, to secure seedlings of innumerable shades of colour. So long as seeds were saved from different species apart from cross-breeding, either artificially or naturally, so long were the seedlings typical of the parent plant. But if the self-fecundating organs be displaced, and others substituted in their stead, there will be no end to the variety produced, especially if the seed happens to have been saved from hybrids. If I am correct in these remarks, they will in some measure explain how Petunias, (p. 678, "E. J.") should be of such various shades of colour. What I have noticed in this cross-breeding is, that when two distinct species are brought together by art, the habit of growth of the species from which the seeds have been saved is pretty much shadowed out in the seedlings,

* First Principles of Horticulture, 141.

while the colour of the flower approximates to that of the other; but far different, indeed, will it be when seeds are gathered from hybrids—for then the fixed colours are broken up, and nothing stable can be depended upon.—C.

Potato Crop.—In several Numbers in the early part of this season I observed remarks respecting the failure of the Potato-crop. I beg to make a few observations on the subject, if you think them worthy of a place in your *Chronicle*. Having had some experience in growing this plant, I consider that the growing of the old varieties in one locality for a length of time is the principal cause of failure; for instance, I have several old varieties which were free growers, and of first-rate quality some eight or ten years ago, which I have been unwilling to part with, and have grown them from year to year; two of the sorts are Kidney, one white and the other red. The white one was sent out by the Horticultural Society about 12 or 14 years ago; the red I bought in Covent Garden Market. At about the same period, for several years, a number of them have not come up, and the defect has been progressing, and in this season not more than one third of the sets came up, although they were principally planted entire, which proves that these two varieties have nearly lost their vegetative powers. In a tour through Scotland, I observed large breadths of Potatoes yielding not more than one-fourth of a crop, and the vacancies were filled up with Turnips. I made several inquiries respecting such a failure, and all agreed that the old varieties successively grown in one place were most subject to the disease. In Fifeshire I observed a fine field of Potatoes that had been planted with tubers imported from America two years ago, and a friend of mine in Kincardineshire informed me that he renews his stock of Potatoes every two or three years from seed; he raises a few seedlings every year, and selects the best sorts for a stock, and he never fails to have a good crop, although the failures in the old varieties are visible in every field in that neighbourhood. I trust these observations will be a means of calling the attention of the great growers of so valuable a root to the more careful procuring and selecting of their stock for seed, as by so doing many failures will be obviated; and I beg in conclusion to state that to plant from a field that has shown symptoms of disease or failure should be avoided if possible.—D. S.

Rhododendron.—There is a variety of the *Rhododendron ponticum* growing here, which appears to be different from any of the others. It comes into flower about the same time as the others, but instead of unfolding its blossoms at the same rate as its neighbours, it only opens a few at a time, and continues long in flower. It did not cease flowering this season the whole month of August, consequently was nearly a month longer in bloom than the others. It has a southern exposure, and is sheltered from the north and east.—Peter Mackenzie.

Propagation.—Perhaps there may be no harm in stating the fact, although it may be known to some of your readers already, that young plants may be propagated by means of birds' nests. Roses and other kinds of bushes will sometimes put forth roots into the old moist nests of the wren and hedge-sparrow.—Peter Mackenzie.

Enormous Mushroom.—A Mushroom of the species *Cow Boletus* (*Boletus Bovinus*) has this week been got on the farm of Mr. Thomas Beesley, Higher Bartle Wood, Plumpton, which measured 43 inches in circumference, and weighed the extraordinary weight of 5 lbs.—Facile.

Prolific Hive of Bees.—Mr. Anthony Balderston, of Barnfield, Mervith, has a hive of Bees that swarmed twice in May, the plumb swarm from which swarmed twice in July. From one swarm (including the old one) he has at the present time five flourishing hives.—Facile.

Blight on Corn from the Barberry.—In the *Chronicle* of August 19, under the head of "Vulgar Errors," we read as follows:—"People still maintain that the Barberry blights their Corn." This is nevertheless a matter deserving attention; for in this, as in many other instances, a popular prejudice has been founded on truth, although the real cause has been often overlooked. Some writers have treated this subject with respect, and among them is Dr. Thornton. The latter says, that the "leaves are very subject to the *Rubigo*, which will infect the Corn in the neighbourhood." Here the secret is at once explained, and the aversion of farmers to the Barberry-bush at once justified. The vulgar notion is, that the Barberry exercises some evil agency upon Corn within a certain distance, and accordingly farmers will never suffer it to grow near their fields. They are right as to the effect, but they attribute it to a wrong cause. I have seen some remarkable instances of Corn perishing in a semi-circle, in front of a Barberry-bush, and extending a good way into a field. Any one who has but superficially noticed the Barberry, must have observed that the leaves and young shoots of the shrub were covered with a peculiar kind of blight or mildew. Now it is by no means extraordinary that this should be carried by the wind into Corn-fields, and infect the Corn, so as to cause its destruction. This is the true explanation of the mischief caused by the Barberry to Corn in its neighbourhood.—J. Wighton. [This is the common explanation, but if any one will take the trouble to examine the parasitical plant which attacks the Barberry, and that of Corn, he will find that they are totally different things. One is the *Æcidium Berberidis* and the other some species of *Uredo* or *Puccinia*, for it is sometimes one and sometimes the other. We should as soon believe that a hen's eggs would be hatched into toads as that the seed of an *Æcidium* would produce an *Uredo* or *Puccinia*. We are aware of the facts mentioned by Mr. Wighton, for we have seen them ourselves, and they form a curious problem yet to solve.]

Mr. Loudon.—In the last *Chronicle* (p. 679) it is said

that I am now lying dangerously ill at Southampton. It is true that I have been very unwell, and went to the Isle of Wight, and afterwards to Southampton, for change of air, and that I remained at the latter place a month; but I am now recovered. As a proof of this, I may just state that I have since been to the neighbourhood of Bath, making a plan for laying out a gentleman's grounds there, and also a cemetery; and subsequently to Kidlington, in Oxfordshire, for the same purpose. I returned to town late on Saturday night, and was not a little surprised at various statements and doings to which I have referred in the advertisement sent with this note.

—J. C. Loudon, *Bayswater*, Oct. 3, 1843. [It is a great pity that busybodies are so numerous; and we much regret that Mr. Loudon should have been annoyed by their foolish proceedings. They, however, give us an opportunity of congratulating him on his restoration to health.]

Clover Dodder.—As it may be interesting to keep a record of the circumstances under which the Clover Dodder has made its appearance among us this year, I can add to your informant at p. 677, that I have seen one instance of its introduction with Lucerne-seed from Afghanistan, and heard of another—the former near Colchester, the latter near Bromley in Kent. A correspondent has also just furnished me with specimens from Reigate, which he believes to have been introduced with foreign Clover-seed. It is rather singular that it should have been brought among us both from the East Indies and the continent of Europe in the same year. I can see no very marked difference between the plants from both localities. Mr. Darwin also writes that he has seen a field of Clover near him in Kent studded with this pest, presenting an appearance of having had a dozen or more bonfires in it, each from 6 to 12 feet in diameter.—J. S. Henslow.

PROCEEDINGS OF SOCIETIES.

HORTICULTURAL SOCIETY.

Oct. 3.—R. W. Barchard, Esq., in the chair. W. Aldam, Esq., M.P., W. Ainslie, Esq., and the Right Hon. William, Earl of Mansfield, were elected Fellows. From Mr. Robertson, gr to curva, producing numerous spikes, densely covered with its small, fragrant, greenish-yellow blossoms; also a particularly well-grown plant of *Oncidium Harrisonii*, having seven flower-stems quite loaded with delicate yellow flowers; likewise a fine plant of the curious *Maxillaria Rollisonii*, with light pink labellum, closely dotted with fine dark purple spots, pretty plants of *Loelia Lawrenceana*, *Ismene flava*, having fine large yellow flowers, with a curious green stripe up the centre of each petal, *Pancreatum amicum*, *Witsenia corymbosa*, a plant of easy cultivation and highly beautiful when well grown; also *Hippeastrum aulicum*, *Griffinia hyacinthina*, and a very pretty plant of *Oncidium Suttonii*. A Knightian Medal was awarded for the *Rodriguezia* and *Griffinia*. From Messrs. Rollison, of Tooting, was a very pretty plant of *Cypripedium purpuratum*; beautiful plants of *Miltonia candida* and *Clowesii*, the former producing five stems, richly covered with flowers, whose pretty white labellum makes a good contrast with the dark-coloured upper petals; also *Sarcanthus pallidus*, a particularly well-grown plant of *Sobralia sessilis*, by no means showy, but rather pretty when the flowers are fully expanded; and a beautiful plant of *Renanthera coccinea*, having a fine spike of its brilliant scarlet blossoms. This plant is a native of China, where it clings to old walls, scrambles over their surface, and luxuriates in its native grandeur. A Knightian Medal was awarded for the *Cypripedium*, *Sobralia*, and *Renanthera*. Mr. Quesnel sent cut flowers of a very pretty *Epidendrum*, from Pernambuco. From Mr. Appleby, gr to T. Brocklehurst, Esq., were cut specimens of the beautiful *Odontoglossum grande*, *Miltonia Clowesii*, *Acanthophippium bicolor*, curious and rather pretty; it was the second time of flowering this season; also a species of *Epidendrum*; a supposed variety of *Oncidium trulliferum*, which had been imported from Brazil, having very long pseudo-bulbs, and three ovate lanceolate leaves at the top of each bulb; a beautiful dark, rather fragrant variety of *Oncidium lanceanum*, which is the best of all the race, and particularly worthy of cultivation. *Cattleya Loddigesii*, *Maxillaria Deppii*, *Huntleya violacea*, *Cattleya crispata*, and *Maxillaria macrophylla*, which, though not handsome, has the good quality of continuing in bloom for a length of time. Mr. Appleby stated that the plant from which this specimen was cut has been in flower for nearly six months. A Banksian medal was awarded for the *Odontoglossum grande*, *Oncidium lanceanum*, and *Cattleya crispata*. From the garden at Syon was a very remarkable cut specimen of *Elate sylvestris*, one of those noble Palm-trees which can only be cultivated in large conservatories. This plant possesses little beauty in its flowers; but produces panicles bearing a multitude of very pretty, oblong, orange-coloured berries, with a very curious flat stem, strong and tough, differing much from the usual form, and presenting a good subject for physiological investigation. Messrs. Lane and Sons sent a beautiful collection of named Roses, for which a certificate was awarded. From Mr. Cuthill was a very pretty plant of *Lisianthus Russellianus*. Mr. G. Sheils, gr to Lord Blantyre, sent from Glasgow Black Hamburg Grapes weighing 1 lb. 7 oz. and 1 lb. 9 oz., that had been grown on a flued wall in the open air, where, notwithstanding the unpropitious weather in spring and in the early part of summer, they finely swelled and beautifully coloured. Mr. Sheils states "that the Vines produce an abundant crop and ripen their fruit in good time, and that some of the bunches which are not so ripe as those sent are twice as large, but that the berries are not quite so well swelled." From B. Maund, Esq., were specimens of Grapes grown on a wall protected by a glass-case, which is fixed close to the face of the wall, with a hole in the end to allow the Vine to pass without being bruised. The bunches, although beautifully coloured, were not large, but those unprotected in this manner are miserable little things. Mr. Markham, gr at Hewell, sent two excellent bunches of Black Hamburg Grapes, weighing 1 lb. 4 oz. and 1 lb. 2 oz.; also two Queen Pines, weighing 3 lbs. 5 oz., and 3 lbs. 6 oz., and measuring 7 inches in length by 5 inches in diameter, number of pips in length 8, exceedingly handsome fruit, crowns very small; likewise an Antigua Pine, weighing 5 lbs. 12 oz., and measuring 6½ inches long by 6 inches in diameter; number of pips in length, 7, a very well-formed fruit; crown rather large and handsome. A Banksian medal was awarded to Mr. Markham for the Black Hamburg Grapes and the Antigua Pine Apple. From Mr. A. Scott, of Leigh Park, was a bunch of Bananas, weighing upwards of 129 lbs. The plant on which it grew was imported a few years ago from St. Helena, to the Edinburgh Royal Botanic Garden; for this a Banksian medal was awarded. Mrs. Mason sent a curious specimen of a Trumpet Gourd, measuring 4 feet 2 inches long. From G. T. Lay, Esq., Interpreter to her Majesty's mission, China, was fruit of the Wung Kwo or Shan Le, the red fruit, or Wild Apple, of the Chinese, which appears to be a kind of *Crataegus*. These unfortunately were much decayed and shrivelled up, so that it was impossible to say what the quality once had been. It is stated by Mr. Lay that the pulp is made into red translucent cakes, which are very pleasantly

tasted, and may be eaten freely without fear of indigestive flatulency or fulness. The fruit is reputed medicinal by the Chinese in bowel complaints among children. Mr. Green sent some most excellent fruit of Williams's Bon Chrétien Pear also two Catillac Pears. Mr. Green states that "the tree on which these grew was formerly a Catillac, and that it grew very vigorously, as this sort usually does, but did not bear well; the fruit was also small and cracked; in consequence of which the tree was headed back, and grafted with Williams's Bon Chrétien, which has always produced fine fruit ever since it came into bearing." He also states that "the two Catillac Pears sent grew upon a branch of the same tree, which was allowed to remain where one of the grafts had failed; this branch, ever since the grafts began to bear, has borne abundantly, and the fruit has been of much finer quality than what it was before the other sort was worked upon the tree." From S. Solly, Esq., were specimens of an Apple called the Normanton Wonder, which has kept twelve months in good condition. From the Garden of the Society were plants of *Oncidium recurvum* and *sanguineum*; the beautiful *Miltonia candida*, *Brasavola venosa*, *Gloriosa superba*, *Gesnera longifolia*, and *Sedum Sieboldii*—a plant of considerable beauty, of easy cultivation, and can be grown by every one possessing a common greenhouse. Also specimens of Pears, consisting of Louise Bonne (of Jersey, a most excellent Pear), Ambrosia, Aston Town—this is an excellent standard Pear, bears well, and has a flavour something like that of Crassane. Also Flemish Beauty, Belle et Bonne, and the Wormsley Pippin—which is an excellent kitchen Apple, and although rather large, is likewise a good table Apple.

CERCLE GENERALE D'HORTICULTURE DE PARIS.

The second exhibition of this Society was given from the 19th to 25th September, at the Orangerie of the Louvre. As this was the only autumnal show in or within 30 miles of Paris, a good sprinkling of Fruit, Plants, and Cut Flowers was anticipated. Country florists and amateurs who make but one annual visit to the capital, look forward with anxiety to the spring and autumn shows, which are considered as botanical *réunions* from the most distant parts of France. Alas for the disappointment that awaited them! for a more meagre display has been seldom witnessed, even in Paris; the room was not above half filled, and the Society is much indebted to Messrs. Cels for sending a very large collection of about 500 plants. Past failures have not taught wisdom to the Societies here, and to whatever cause it may be attributable in this case, whether to the long continuance of cold and wet in spring and summer, the dry hot weather in August and September, or the preposterous regulation of keeping open the show for six days; certain it is that but few fine specimens of rare or good plants were to be seen, and the necessity of replenishing cut flowers, such as Roses and Dahlias, every other day, was quite sufficient to deter very many from exhibiting. These observations are not applicable to the fruit, but even in this department but comparatively few persons showed; nevertheless some of it was splendid, especially Pears, Apples, and late Peaches, which were all that could be wished; the Grapes were far inferior to those of last year; some of the bunches of Gros ribier de Maroc, Gros Damas Blanc, Chasselas de la Palestine, de Bar sur Aube, Muscat d'Alexandrie and Cornichon Blanc, were very large, but none of them had that luscious golden appearance which generally characterizes the Grapes here. The Melons, of which there were only three or four varieties of Cantaloupe, had nothing to recommend them. The Cayenne Pines, both Lis and Epineux, were very fine, and weighed from 10 lbs. to 12 lbs. each. There were also two seedling Pines of great beauty, and very large fruit; one of them of a remarkably waxy sea-green colour. As to Vegetables there were literally none, except Potatoes and Aubergines; one of the former, however, weighed 5 lbs. Cut flowers (Dahlias and Roses), were numerous; but the late dry weather has been anything but favourable, and the blooms were generally small. Mr. Lafay exhibited a seedling Perpetual Rose, named La Reine, which appears to be an hybrid, between Quatre Saisons and lie de Bourbon du Luxembourg; the flower is very large, petals well formed and cupped, and of a bright rose, the odour like Quatre Saisons, and of the same habit of growth; it is not, however, very double, but notwithstanding, it cannot fail to become a favourite, and will be no doubt in every good collection, when it is let out, which will be as soon as he gets 200 subscribers at one guinea each. The Society offered silver and bronze medals, which were awarded for the following subjects. For the finest collection of Fruit, 1st prize, M. J. L. Jamin; this contained 110 varieties of Bergamot, Beurré, Doyenné, and other Pears, 20 varieties of Apples, besides Plums, Peaches, Grapes, and certainly was a splendid collection. Among the Pears were Bergamotte de Pentecôte, Crassane, Libetent, Beurré d'Aremberg, d'Anjou, d'Angleterre, Noiré, incomparable, Capiaumont de Flandres, Doyenné Gris, Doré, d'Hiver, Louis, Colmar d'Hiver, Blanc d'Aremberg, Bezy Sanspareil, Belle de Berri, Bon Chrétien d'Été, Napoleon, Gros Colmar, Van Mons, Enfant Prodigue, Ferdinand de Meistr, Marie Louise, Louise bonne d'Avranche, Passe Colmar Doré, Prince de Ligne, Van Mons Léon Leclerc, Williams, Duchesse d'Angoulême, St. Germain d'Hiver, Panaché, Reine des Pays Bas, Saint Michel Archange, Chaptal, Catillac, Belle Angevine, &c., &c. Apples, Hawthorn Dean, Beauty of Kent, Alexander, Pearmain, Belle Josephine, Gravenstein Pippin, Queroudon Plums: Mirabelle d'Octobre, Coe's Golden Drop, Waterloo, Imperial, Koëche d'Italie and d'Allemagne. Peaches: Galandé, Bourdine, Téton de Venus, Violet Nectarine. Grapes: Pied de perdrix, Black Hamburg, &c.; 2d Prize, M. Boissy, for 40 varieties of Pears and Apples. For the finest specimens of Fruit: 1st prize, M. Souchet. This contained 16 varieties of Pears and Apples, and 2 of Peaches; not simply one or two, but a basket of each kind, all equally large and in excellent condition, and certainly was a splendid collection; the varieties were, Pears: Beurré d'Été, Incomparable, d'Aremberg, Saint Germain, Doyenné d'Été, Belle Angevine, Bon Chrétien de Curé, Doyenné d'Hiver, Crassane, Duchesse d'Angleterre, Grosse de Bruxelles, Catillac. Apples: d'Api, de Canada and Calville blanc. Peaches: Bon Ouvrier and Belle Beausse; 2d Prize, M. Lepere, for Bon Chrétien Colmar, Doyenné doré, Doyenné d'Hiver, Incomparable, Duchesse d'Angoulême, St. Germain, Beurré d'Aremberg. Apples: Calville blanc and de Canada. Peaches: Belle Beausse, Bon Ouvrier, Bourdine, and Téton de Venus; this collection was also excellent, but the specimens were neither so numerous or large as the former. Grapes: 1st prize, M. Barbot, for Muscat blanc, Noir musqué, de la Palestine, Rose, Violet, de Bar sur Aube, Suisse, Petit Gromier, Gros Gromier du Cantal, Frankantal, Bourdelaïs, Gros Maroc Hatif, Gros Ribier de Maroc, Gros Damas blanc, Poulsart du Jura, Madeleine blanc, Noir, Clota, and Cornichon blanc. Pine Apples: 1st prize, M. Bergmann, for Cayenne Lis, and Epineux. Seedling Pine Apples: 1st prize, M. Goutier, for two fine plants in fruit for the first time. Hot and Greenhouse Plants: 1st prize, Messrs. Cels, for a large collection, containing upwards of 200 specimens of Palms, Orchidaceae, Ferns, &c. &c. both in and out of bloom; among them were *Areca sapida*, *Caryota urens*, *Chamaerops excelsa* and *humilis*, *Chamaedorea elatior*, *elegans*, *lindeniana*, and *oblongata*, *Cocos australis* and *nova species*, *Desmoncus polyanthus*, *Euterpe globosa*, *Fulchironia senegalensis*, *Gulielma speciosa*, *Latania rubra*, *Oreodoxa regia*, *Thrinax argentea* and *parviflora*, *Scaevola elegans*. Orch. *Oncidium flexuosum*, *papilio*, and *trulliferum*, *Acropora Loddigesii*, *Catasetum cristatum*, *Epidendrum cochleatum*, and *Zygopetalum maxillare*, *Aletris fragrans*, *Achimenes longifolia* and *pedunculata*, *Æchmea fulgens*, *Centradenia rosea*, *Begonia coccinea*, *dregii*, *fischeri*, *manicata*, *peltata*, and *zebrina*, *Cecropia digitata* and *discolor*, *Cedrela odorata*, *Cerbera fruticosa*, *Crinum amabile*, *Clusia rosea*, *Cycas circinalis* and *revoluta*, *Doryanthes excelsa*, *Dracaena draco*, *elliptica*, *terminalis*, for var., and *umbrellifera*, *Echites melaleuca* and *paniculata*, *Gloxinia discolor* and *rubra*, *Gesnera zebrina*, *Inga Harrisonii*, *Justicia carnea* and *cristata*, *Nepenthes distillatoria*, *Strelitzia augusta* and *reginae*, *Stephanotis Thoursii*, *Zamia muricata* and *pungens*,

&c. &c. *Cacti*: 1st prize, Messrs. Cels, for a large collection, containing 120 varieties of Echinocactus, Echinopsis, Mammillaria, &c., among which were some very fine specimens of *aulacognus*, *conigerus*, *einacens*, *ancistracanthus*, *formosus*, *torquatus*, *scopa*, *marum*, *cirriferus*, *elephantidens*, *caput Medusae*, *spinosissima*, and *senilis*; 2d prize, M. Modeste Guerin, for 50 vars. of Echinocactus and Mammillariae. *Roses in pots*, 1st prize, M. Paillet, for 60 vars. of Bengales, Thés, Bourbons, and hybrids, among which were some tolerably good plants of Clara Silvain, Belle Octavie, Carmin d'Yebles, General Seyer, Frederic, La Pactole, Barbot, Triomphe de la Guillotière, Boudier, Gombault, Princesse Marie, Niphetos, Comte de Paris, Arance de Navaro, Triomphe d'Orléans, Reine Victoria, Manzanais, Thérèse Isabelle, Comte d'En, Prince Charles, Docteur Roques, Reine, Comice de Seine et Marne, Grand Capitaine, Rivers, Prince Albert and Clémentine. 2d prize, M. Levêque, for 60 varieties. *Cut Roses*, 50 varieties, 1st prize, M. Gauthier, for Prince Albert, Comte de Paris, Madame Laffay, Bernard, Coquette de Montmorency, Reine des Amateurs, Rivers, Joséphine, Amélie Duval, Gloire de Guerin, Belle Fabert, Reine Victoria, Louis Bonaparte, Isaure, Fulgorie, Luxembourg, Aurore, Hélène, Bougère, Lamarque, Paul Joseph, Madame Desprez, Bonquet de Floce, Comice de Seine et Marne, Jeanne Desprez, Docteur Roques, Emile Courtier, Aimée Vibert, &c. 2d prize, M. Marguttin, for 30 varieties. *Seedling Rose*, 1st prize, M. Laffay, for Hybrid Perpetual, La Reine. *Neriums*, 1st prize, M. Mabire, for album duplex, atropurpureum odoratissimum (very fine), nigrum, speciosum, candidissimum, cupreum, elegans, grandiflorum, novum, lacteolum, Mabirii, ochroleucum, purpureum plenum, roseum grandiflorum, splendens coccineum, macrophyllum, maximum, splendissimum, striatum plenum, venustum and puniceum. *Dahlias in pots*, 1st prize, M. Barbier; 2d prize, M. Dufay. Both these collections were poor, the varieties being those which are cultivated for the markets. *Cut Dahlias*, 1st prize, M. Soutip, for Potent, Miss Chester, Favourite, Reine des Fées, Prince of Wales, Reine d'Or, Patience, Caroline Walter, Antagonist, Beauté de Paris, Annibal, Akbar Khan, Orion, Exéque de Naim, Tiers, North Midland, Beauty of Sussex, Virgil, Sir I. Johnson, Dame de Beauté, Henri IV, Liberty, Die Wigel, Dame, Vandal Queen, Charivari, Eximia, Baronne Gérard, Héloïse, Mary Jane, Surprise, Alba purpurea superba, Belle d'Or, Perfection, Mrs. Shelley, Lady Corper, Pierre Puget, Miranda, Dumont d'Urville, &c.; 2d prizes to M. Robin and M. Uterhart. *New Plants*, prizes to M. Thibaut, for Phlox Van Bontick, Cyripedium barbatum, Griffonia purpurea, Pitcairnia punicea, Dionaea muscipula, Begonia manicata, and hydrocotylifolia. Prize to M. Salter, for Achimenes pedunculata, and two seedlings to M. Fuchsias, Audot and Le Chinois. *China Asters*, prize to M. Pansart, for 25 varieties, very poor. *Fuchsias*, prize to M. Chandlerii, for 15 very old varieties, every one of which (except Chandlerii) is now cast aside by English growers as worthless. M. Trepot Leblanc exhibited several seedling plants of Dauben-M. Trepot Leblanc, in bloom, and although the seed was only set in February last, some of them were five feet high; the bright orange scarlet flower gives this plant a very gay appearance, but its straggling habit of growth deteriorates from its general merits.—Paris, 29th September.

FLORICULTURAL SOCIETY.

Oct. 3.—Several Dahlias were placed on the table for exhibition and judgment. Twelve blooms of a very pretty Dahlia of a peculiar rose colour, named Espartero, from Mr. Bragg, of Slough; it was pronounced a good 2nd class flower, medium size, good general form, with the centre well up, but not well defined. Six fine blooms of Brown's Raphael, a dark and light shaded crimson, much improved since its last exhibition. Sixteen blooms of Bushell's Emma; the petals of this flower are too pointed, but though second rate, it will from its size, constancy, and colour, be found a useful and ornamental variety. The Pet Rival was also exhibited, and though condemned by the Society last season from having been shown in a bad state, proves under better cultivation, to be a flower of better properties than was anticipated. A very fine bloom of Proctor's Nonpareil was placed on the table, which promises to be a flower of first-rate proportion. An extraordinary bloom of Bianca, for size and purity of white surpassing every specimen we had previously seen. It is evident this is a late flower, as we noticed last season, and it is uncertain also; and though inferior to Antagonist, particularly in the country, it will often be found useful to London growers. Several Seedlings of the present season were sent, but not considered sufficiently good to report on.

SURREY FLORISTS' SOCIETY, WALWORTH.

Sept. 25.—At this Dahlia Show the public were admitted gratuitously. The prizes are confined to its members, and divided into classes, according to the number of plants grown by each member and distance from the place of exhibition. The following prizes were awarded:—GROWERS UNDER 40 PLANTS, (6 blooms): 1, Mr. Sparrow, for Sir F. Johnson, Indispensable, H's Princess Royal, Bridesmaid, Maria, Scarlet Defiance; 2, Mr. Nokes, for Regina, Metella, Countess Pembroke, Eva, Exquisite, Hope, Triumphant; 3, Mr. Perry, for Metella, Unique, Ansell's Queen, Hope, Triumphant, Maria, Princess Royal; 4, Mr. Rudd, for Metella, D's Prince of Wales, Ne plus Ultra, Cyclops, Hon. Miss Abbott, Hope; 5, Mr. Wickes, for D's Prince of Wales, Regina, Rouge et Noir, Pickwick, Countess Pembroke, Catleugh's Eclipse. GROWERS UNDER 80 PLANTS, (9 blooms): 1, Mr. Fivash, for Bedford Surprise, Pickwick, D's Prince of Wales, Ne plus Ultra, Sir F. Johnson, Unique, President of the West, Coronet, Indispensable; 2, Mr. Collins, for Regina, Hedley's Penelope, Sir F. Johnson, Bedford Surprise, Eva, Regina, Ansell's Queen, President of the West, Bridesmaid, Maria, Ansell's Queen, (12 blooms): 1, Mr. Proctor, for Bridesmaid, Beauty of the Plain, Widnall's Queen, D's Prince of Wales, Ansell's Queen, Ne plus Ultra, Unique, Beauty of Sussex, Burnham Hero, Indispensable, H's Princess Royal, Lady Sussex, Burnham Hero, Indispensable, H's Princess Royal, Grace A. Murray; 2, Mr. Bushell, for Bridesmaid, Mrs. Shelley, Grace Darling, Eva, Pet Rival, Hero of Stonehenge, Dodd's Prince of Wales, W's Queen, Attila, Smith's Duke of Wellington, Nicholas Nickleby, Kennington Rose. OUT-CLASS AMATEURS, (12 blooms): 1, Mr. Meade, for Vivid, Queen of Trumps, Blue Bonnet, Gilling's Prince of Wales, Miss Chester, Essex Triumphant, Pickwick, Petal Grand, Unique, Cyclops, D's Prince of Wales, Adm. Stopford; 2, Mr. Cook, for Blue Bonnet, Burnham Hero, Queen of Trumps, Mrs. Shelley, Chieftain, Mrs. Richardson, Adm. Stopford, Cat-leugh's Tournament, D's Prince of Wales, Sure Enough, Dodd's Favourite, Essex Triumphant. GENTLEMEN'S GARDENERS (12 blooms): 1, Mr. Birchett, for Burnham Hero, Bridesmaid, Dodd's Prince of Wales, H's Princess Royal, Maid of Bath, Pickwick, Essex Triumphant, Mrs. Richardson, Knockholt Rival, Widnall's Queen, Adm. Stopford, Beauty of Sussex; 2, Mr. Moseley, for Optime, Adm. Stopford, W's Queen, H's Princess Royal, Nicholas Nickleby, Perpetual Grand, Hedley's Penelope, Indispensable, Bedford Surprise, Maid of Bath, Le Grand Baudine, Dodd's Favourite. NURSERYMEN (24 blooms): Mr. Back, CLASS FAVORITE (best white): 1, Mr. Back, for Empress of White; 2, Mr. Stein, for Antagonist; 3, Mr. Domeyer, for Bianca. SELF: 1, Mr. Moseley, for Essex Triumphant; 2, Mr. Meade, for Essex Triumphant; 3, Mr. Stein, for Bedford Surprise; 4, A. Sparrow, for Sir F. Johnson; 5, Mr. Back, for Mrs. Shelley. Yellow, Mr. Stock-F. Johnson; 6, Mr. Back, for White Tip or Blush, 1, Mr. Back, for H's Princess Royal; 2, Mr. Stein, for Mrs. Richardson; 3, Mr. Cook, for Mrs. Richardson; 4, Mr. Moseley, for H's Princess Royal. EXTRA PRIZES GIVEN BY MEMBERS (best white): Mr. Back, for Bianca, (14 blooms), Mr. Meade, for Blue Bonnet, Bridesmaid, Attila, Gilling's Prince of Wales, Adm. Stopford, Yellow Defiance, Essex Triumphant, Prince Albert, W's Queen, Pickwick, President of the West, Hon. Miss Abbott. (6 blooms), Mr. Perry, for Maria, A's Queen, Bridesmaid, Cyclops, Pickwick, D's Prince of Wales. (12 blooms): Mr. Cook, Queen of Trumps, Le Grand Baudine, Phenomenon, C's Tournament, Springfield Purple, Favourite, Perpetual Grand, Mrs. Shelley, D's Prince of Wales, W's Queen, Springfield Rival, Antagonist.

SEEDLING 1842 (four blooms): 1, Mr. Bushell, for Emma; 2, Mr. Stein. SEEDLING, 1843 (one bloom): 1, Mr. Proctor; 2, Mr. Bushell. A fine collection of miscellaneous Plants were exhibited by Mr. C. Smith, gr to J. Townley, Esq.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

ECHEMA FULGENS. Brilliant-flowered Echea. (Stone Perennial.) Bromeliaceae. Hexandria. Monogynia.—This showy plant, which is probably one of the finest and best of the Bromeliaceae order, was introduced to the Garden of Plants, at Paris, by M. Eugène Melinon, who obtained it, we believe, at Cayenne, in South America, where he was curator of some public garden. It was brought from Paris to the collection of His Grace the Duke of Devonshire, Chatsworth, by the same individual, in the spring of 1842, at which time it was in flower. It has not since bloomed at Chatsworth, but from shoots which it is now producing, blossoms are again expected during the present month (September). It is not so straggling as many plants of this class; and the flower-spikes are more compact than usual, while the flowers possess the brilliant colours common to many Bromeliaceae, besides being of a greater size. Scarlet and blue, both very deep and rich, are the principal tints in them. Beyond its more pleasing proportions, however, and showier inflorescence, it promises to be a more manageable plant than most of its allies in point of culture, appearing to bloom with considerable freedom. It grows vigorously in a light and sandy, yet rather rich soil; and a compost of open loam and leaf-mould, in equal proportions, would doubtless be very suitable. It is necessary to water it very sparingly when in a torpid state; though it requires a tolerable share of fluid while growing, and should be freely syringed. The best way of treating it in the summer, is, most likely, to plunge the pot containing it in a bark or dung bed, supplied with bottom-heat. Being, in all probability, partially epiphytal, it would no doubt succeed in a suspended basket, filled with either very turfy loam or heath-mould, or moss, and watered liberally during the growing season. It would have a more interesting aspect in this condition; and a better opportunity would be given for keeping it properly dry in winter. On the last-named circumstance its flowering must greatly depend. Suspended amongst Orchidaceae, it would help to produce an agreeable diversity in the house. The plant is propagated by suckers, which it throws up freely, in the manner of the Pine-apple; to which, in fact, it is related, and would do with similar treatment. The generic name is taken from *echme*, a point; the calyx of the flowers having very rigid points.—*Patton's Magazine of Botany*.

BERBERIS DULCIS. Sweet-fruited Berberry. (Hardy Evergreen Shrub.) Berberaceae. Hexandria. Monogynia.—Our object in introducing this beautiful shrub, which has now been in the country about thirteen years, is to show how very ornamental it is when covered with its handsome fruit, and to press our readers to cultivate it more, with a view to the production of that fruit. This plant is an evergreen shrub, of a rigid habit, sometimes attaining the height of 4 or 5 feet, but more generally keeping about 3 feet high. Its branches are a little inclined to turn downwards towards the top, and bear a considerable number of spines, with clusters of small foliage. The flowers issue from amidst the tufts of leaves, and are solitary, drooping on long stalks, large, bright deep yellow, and more expanded than in some other species. They are succeeded by fine roundish berries, of a rich purple tint. The blossoms appear from March to June, and the berries ripen in August. When ripe, the latter have a most delicious flavour; and they are used, both in the green and ripe state, for making tarts and preserves, which are said to be excellent, in the native country of the plant. It is an inhabitant of the Straits of Magellan; and, in Britain, is entirely hardy. There is no difficulty whatever about its culture, as it will flourish in any garden soil. It seems to thrive best, however, in an open sun. Young plants are most readily obtained either by seeds or suckers, both of which are borne profusely. A though by no means peculiar in regard to situation, it is better to place it where there is plenty of light and air. Towards the front of a shrubbery border is a fit place for it; but it deserves to be planted on a lawn, and encouraged to form a spreading bush. To promote this object, the soil in which it is put should be well turned up and lightened before it is planted; and, if unsuitable, some fresh loam should be substituted for it. It will not thrive well in a wet or low locality.—*Patton's Magazine of Botany*.

MISCELLANEOUS.

To make British Champagne.—To 1 pint of Grapes (when picked and bruised) add 1 quart of water; let it stand 24 hours, then strain it, and to every gallon of liquor put 3½ lbs. lump-sugar. Tun it the following day, and hang an ounce of isinglass in the cask; in two or three days stop it down close—bottle it as soon as the sweetness is sufficiently off.

Wheat-planting.—In the "Philosophical Transactions," vol. lviii., is a paper by Mr. C. Miller, upon the same subject as that which has lately engaged the attention of Mr. Archdale Palmer (p. 659). As the matter is likely to give rise to some discussion, we think it right to reprint the substance of it:—"In consequence of Dr. W.'s desire, Mr. Charles Miller informed him, that having made, in the autumn of 1765, and in the spring of 1766, an experiment of the division and transplantation of Wheat, by which near 2000 ears were produced from a single grain; and he having reason to think, from the success attending this experiment, that a much greater quantity might be produced, he determined to repeat the experiment next year. Accordingly, on the 2nd of June, 1766, he sowed some grains of the common red Wheat, and on the 8th of August, which was as soon as the plants were strong enough to admit of a division, a single plant was taken up and was separated into 18 parts. Each of these parts was planted again separately. These plants having pushed out several side shoots about the middle of September, some of them were then taken up and divided, and the rest of them between that time and the middle of October. This second division produced 67 plants. These plants remained through the winter, and another division of them made between the middle of March and the 12th of April, produced 500 plants. They were then divided no further, but permitted to remain. The plants were in general stronger than any of the Wheat in the fields. Some of them produced upwards of 100 ears from a single root. Many of the ears measured seven inches in length, and contained between 60 and 70 grains. The whole number of ears, which by the process before mentioned were produced from one grain of Wheat, was 21,109, which yielded three pecks and three quarters of clear corn, the weight of which was 47lb. 7oz.; and from a calculation made by counting the number of grains in one ounce, the whole number of grains might be about 576,840. By this account we find that there was only one general division

of the plants made in the spring. Had a second been made, the number of plants, Mr. Miller thinks, would have amounted at least to 2000 instead of 500, and the produce have been much enlarged; for he found by the experiment made the preceding year in which the plants were divided twice in the spring, that they were not weakened by the second division. He mentions this to show that the experiment was not pushed to the utmost. The ground in which this experiment was made is a light blackish soil, on a gravelly bottom, and consequently a bad soil for Wheat. One half of the ground was very much dunged, the other half was not prepared with dung or any other manure: no difference was, however, discoverable in the vigour or growth of the plants, nor was there any in their produce.

Instance of the Sagacity of Bees.—A few pounds of honey had been taken from a hive (about six miles from London), and placed in a closet, under lock and key. The windows of the room having been left open, the Bees obtained admission, and entering the closet under the door, removed the whole of the honey. The cells of wax were left entire, and the honey was conveyed to the central division of the hive, where it was safely deposited in the course of the day. It is evident that spies must have been employed to observe where the honey was placed, and that as soon as the information was communicated to the hive, the swarm took this vigorous measure for the recovery of the stolen property. It is remarkable that they should have succeeded so completely and in so short a time, since the closet was entirely dark, and they could only enter by a crevice under the door.—*Pharmaceutical Journal*.

GARDEN MEMORANDA.

Kensington Gardens.—Great exertion is making to get the beds on either side of the long walk, newly-formed in these gardens, covered with flowers, similar to those at Hampton Court Palace, and we understand that 1000 Pelargoniums, Petunias, Verbenas, and Anagallis, have been purchased; besides 2000 Pelargoniums and about 1000 Petunias and Verbenas, which have been contributed by private individuals. Mr. Henderson, of Pine Apple Place, has liberally supplied some of these gratuitously. The walk is about half a mile in length, with a border on each side, so that it requires a great many plants to cover such an extent. The two islands in the Serpentine are about to be made permanent and ornamental, which will produce a pleasing variety of scenery, and add considerably to the beauty of the Gardens. The naming of the trees and shrubs has had, as was anticipated, a beneficial effect upon the public mind, in awakening a spirit of inquiry, and exciting a taste for Botanical and Horticultural pursuits, so much so that gentlemen go direct from these Gardens to the nurseries, with their lists made out from their own inspection.

Holme Gardens, near Inverness.—Nowhere has the wisdom of old Monkbarns' sage advice, "be ye aye sticking in a tree, it'll grow when ye are asleep" been more beautifully illustrated than in the valley of the river Nairn, from Geudes westward to the confines of Culloden Moor. I recollect to have seen, with young plantations—Broom, Juniper, and a few Scotch firs, growing naturally covering; and the huge round oak trees, especially on the southern side, were but part of the forest. Now, the whole country face presents a different appearance. The trees standing "thick as leaves in Vallambrosa," and growing but occasional glimpses of the elegant chateaux of Craggan, Bervock, Holme, and Cantray. Indeed, so rapidly the forest trees spring up in this climate, that those planted for shelter round gardens soon overtop the walls, and shut out the sun and breezes from the grounds; and such is already beginning to take place at Holme, though the walls are there very high, and the gardens not been inclosed above 20 years. It occupies about half a Scotch acre of a level terrace-bank on the north side of the valley, and the surface is thus beautifully exposed to the sun; but, to a Highlander's taste, it might, perhaps, be more interesting were it more on a hanging bank, declining towards the river. Of course I need scarcely remark that the Holme gardens yield the utmost profusion of Fruits and Vegetables, and that no difficulty is experienced in bringing to perfection all the varieties grown out-of-doors in this country. It is with the flower-gardens, however, I have at present most to do. They extend along a most picturesque and interesting piece of haugh ground, close to the water's edge, and between it and the main garden wall, and thus they are admirably sheltered, and look out upon the river, which sweeps along, either gurgling over a rough pebbly bed, or reposing in deep quiet limns, which form excellent salmon pools. The garden walks are extended a great way along the river's bank, thus affording varied and beautiful peeps of the water and of the forest glades; and to the eastward they sweep in front of the forest glades, and encircle the lawn—an open grassy park, mansion-house, and the garden wall, and thus they are admirably sheltered, and look out upon the river, which sweeps along, either gurgling over a rough pebbly bed, or reposing in deep quiet limns, which form excellent salmon pools. The garden walks are extended a great way along the river's bank, thus affording varied and beautiful peeps of the water and of the forest glades; and to the eastward they sweep in front of the forest glades, and encircle the lawn—an open grassy park, mansion-house, and the garden wall, and thus they are admirably sheltered, and look out upon the river, which sweeps along, either gurgling over a rough pebbly bed, or reposing in deep quiet limns, which form excellent salmon pools. (longiflora, coccinea, and rosea), beautiful specimens of several varieties of Thunbergia and Salpiglossis, three Ipomœas, seven Passifloras, as also a fine collection of Cape bulbs, and an excellent specimen of Arum esculentum, with very large leaves. Not the least interesting feature of the Holme gardens is the good feeling and professional zeal inspired among the apprentices and journeymen, by the enthusiasm of the head gardener, Mr. Ross, whose ingenuity and devotedness to his employment are unbounded; and much of the harmony which prevails is, no doubt, owing to the considerate attention of the proprietor, who has furnished each of the workmen with a substantial and neat cottage.—*Viator*.—*Inverness Courier*.

Florence Court, the Residence of the Earl of Enniskillen.—On the lawns here, are some extremely handsome ornamental dwarf Fir-trees; some of them are about eight feet in height, and the branches at the base of the tree extend nearly the same distance, and rest on the ground. These trees form regular pyramids, and much resemble gigantic specimens of the Clambrazil Fir; they are the most beautiful in spring when they have begun to grow, as the pale green colour of the young shoots contrasts well with the dark green winter foliage, and renders them highly interesting and truly beautiful. Their management is to select from a young plantation any of the American Firs, either stunted plants, or those which have lost their leading shoots, and to plant them in a poor moist clay soil, and to shorten back to half their length annually all shoots which show a tendency to become leaders.

Reviews.

Arboriculture: A Paper read before the Geological and Polytechnic Society of the West Riding of Yorkshire.
By James Hamerton, Esq. Leeds: Bains. 8vo.

THIS is a pamphlet of two sheets, with five lithographic plates. The opinions of the author upon the subject of foresting are essentially the same as those which have been constantly advocated in our columns, to which he has indeed been occasionally a valuable contributor. A neglect of early and constant thinning, and a fondness for injudicious pruning, are the giant evils of our ordinary system of mismanaging woodland property; and Mr. Hamerton adduces through every page of his pamphlet striking proof of the mischief caused by those means. Like us, he does not object to a little pruning when trees are very young; but then only, and in cases of absolute necessity, would he permit it. We need not occupy the time of our readers with extracts, the matter of which would differ more in words than in facts or ideas from many parts of our own columns; but we shall content ourselves with expressing our gratification at finding that foresting has so able and earnest an advocate.

Natural History; a branch of School Education, is a small pamphlet (reprinted from the "Bible Christian," for Sept., 1843), strongly advocating the introduction of Natural History among the studies of children. We perfectly agree with the author in the views he takes upon this subject; but fear that it can hardly become a practicable measure, until teachers are induced to make themselves acquainted with such matters. To go into the whole question, however, would require more space than we can at present spare; we shall therefore only quote a paragraph from Mr. Patterson's remarks, and leave them for the present to the consideration of our readers.

"What are the objects to which the child, of his own accord, directs his attention? What are the things on which he exercises his touch, his sight, his hearing, his smell, and his taste; and about which he asks a thousand simple, yet often puzzling, questions? They are the most common articles of household furniture; the ordinary implements of agriculture; the horse; the cow, with her grateful milk and her fragrant breath; the joyful bark of the dog; the quiet purring of the cat. They are, in fact, the objects which surround him in early life. We are thus naturally led to inquire: might not these objects be made systematically the means of cultivating the senses and the observant powers? Might not every school-room have a portion of time devoted to such exercises; and question and answer, in quick succession, be made to minister both to the improvement and the relaxation of the pupils? Might we not, in one word, teach from things rather than from books? This principle, if recognised, would admit of a great variety of application, suited to the tastes, habits, and acquirements of the teachers; the age, situation, and proficiency of the children; and the local circumstances of every different school. It would sanction the use of the most common flowers of our glens, and our hedge-rows, as objects of instruction; and gradually lead the pupils to

find tongues in trees—

Books in the running brooks—sermons in stones—
And good in everything."

It may be permitted, therefore, to inquire by what process such a result might be attained? By what means could any information on the subjects which are embraced by the term "Natural History," be communicated to those whose previous acquirements are often "poor indeed," and whose future prospects in life are such as to forbid the supposition that science can ever form the object of pursuit for its own sake? Is such teaching compatible with the school business? Would it not interfere with the true objects for which the children are sent to school, and for which the parents pay? Would the children understand it? Would they care about it? And if they did, what good would it do them?"

How this is to be done Mr. Patterson next explains, and as we think, with much good sense; but for this we must refer to the little pamphlet itself.

CALENDAR OF OPERATIONS for the ensuing week.

I LATELY received a letter, a blossom which at first sight I took to be that of a new Gloxinia or Achimenes; the colour was that soft blue lilac tint peculiar to Gloxinia maculata. The want of union in the anthers, however, showed that it did not belong to Gesneriaceae, and I set it down as a new Bignonia, thinking that some one had sent me a flower of a fine new conservatory climber, but the letter settled the question thus: "I herewith send you a flower of Paulownia imperialis," &c. &c. I was taken by surprise, not expecting to see this plant flower with us at least for a year or two to come,

seeing that it was propagated from mere morsels of the roots and young wood within the last two years. I wrote back immediately for the particulars of culture, and for permission to publish them, with the names of the parties who have thus signalled themselves by flowering this splendid tree for the first time in England. In the meantime I examined the flower minutely, and compared it with Dr. Siebold's figure and description, and had it not been that the same plant flowered in the *Jardin des Plantes*, at Paris, in the spring of 1842, and that the name is acquiesced in by the French botanists, I should say that Paulownia imperialis was yet a desideratum in Europe. Be this as it may, our plant is a most valuable acquisition. Mrs. Wray, of Oakfield, near Cheltenham, who has been so successful in flowering novelties heretofore, has also the merit of flowering the Paulownia, and by her kind permission I am enabled to give some particulars respecting it which were previously unknown. In the first place, the flowers are deliciously sweet, and are produced freely on very young plants, if forced for that purpose. The conditions to be attended to are to keep the plants under-potted—to force them slowly in a cool stove, early Vinery, or forcing-house, beginning early in the spring; by Midsummer they will have finished their growth, have begun to show their flower-buds, and to cast their leaves; they will then require less water, and in six weeks or two months the flowers will begin to expand, and the plants, of course, will be brought into the conservatory, where they will take up little room, as they may be set anywhere, only leaving their heads of flowers free above other plants which surround them. Now, we can easily see that with a good stock of these plants we may have some of them in flower for the conservatory all the winter and most of the spring months, by introducing a few plants into a forcing-house once a month from January to May, and if at first the succession comes in faster than we wish, the plants may be set out-of-doors in a cool frame, to keep them back, as, under this culture, the young wood will become perfectly ripened, and the tree rendered much more hardy. But, as Mr. Brewster, Mrs. Wray's successful gardener, remarks—"If you allow these plants large pot-room you are only laying the foundation for that great superstructure of wood and foliage which can only be ripened in a more favourable climate than ours; and unless you get the wood well ripened, you must be content with large leaves only." Last year I kept one of our plants of Paulownia in the stove until it was quite ripe, then inured it by degrees to the open air, and by the beginning of July had it planted out in an exposed situation in the pleasure-ground, giving it no protection in winter; early in May it was in leaf, and about four feet high; after a few weeks a strong sucker came up from the collar; I cut down the old plant to this sucker early in June last, and now the sucker has formed a little tree about 10 feet high, with immense large Rhabarbar-like leaves. Might not the Catalpa syriacifolia be treated like Paulownia for the sake of its large, trumpet-like flowers? which are produced in abundance in the neighbourhood of London and farther south, but are seldom to be met with in colder parts of the country.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

PINES.—Artificial heat, to keep up the temperature above 60° in the morning, will be necessary for the next month or six weeks, as the plants will make great progress if judiciously assisted during this time, but given by fits and starts will run them prematurely into fruit. Another great evil often occurs about this time to counteract the dry heat of fires or pipes; the plants are syringed over-head too often, and many of the pots get soddened, and the roots perish in consequence, before the winter is over. Dry bottom-heat from tanks would cure this certainly; but this remedy is as bad as the disease; the rest of the plants, if plunged in tan in the usual way, and especially the middle rows, will require but very little water, and that at long intervals through the winter; but if dry bottom-heat is applied to them they must be watered daily. I shall perhaps offer a few remarks on this dry bottom-heat by-and-by, but what I have already said will modify the subject in the hands of beginners.

VINERY.—Nothing now remains to be done, save keeping the late Grapes in a free, dry atmosphere; and as the fruit is cut the shoots may be pruned at the same time. In 1827 I saw a house full of Vines just setting their fruit in the first week in October, and I learned afterwards that there was a good crop, which began to ripen in February. This house, as far as I can recollect, was mismanaged by putting on the lights too early, and then leaving the Vines to their fate for five or six weeks, when they were found to be breaking into leaf, and then it was too late to stop their growth. Any houses that are uncovered for a few of the summer months ought to be carefully looked to when covered up, as if they are not properly ventilated at first, the plants may suffer, although not altogether apt to grow.

Out-door Department.

We never believe that we are so near winter until we are actually into October. You may see crops seeding, ripening off, or falling into the sear leaf, all through the summer months, and yet think no more about winter than if everything was fresh springing up around you. How altered now! not a leaf that turns yellow and drops from yonder bough but asks you if your handglasses are in proper repair, for protecting your Cauliflower plants, or your frames cleared out, ready to receive Endive and many other things; and, in short, tells you plainly that your tactics must now be altogether changed. Temporary hotbeds, again, must soon be in requisition for Asparagus. Nothing can be too good, or out of season, on Lord Mayor's day, the 9th of November.

ASPARAGUS.—Those who still adhere to the old practice of giving all sorts of rich manures to Asparagus beds in winter and spring, when the plants are dormant, and neglect that kindness in summer, when they require it, will now have the satisfaction to see the tops fit for the hook or scythe, and the beds may be cleared now whenever hands can be spared for the work; but those who neglect them altogether in winter, and feed them the whole summer through, cannot tell when their crop may be ready for the sickle, for their beds are yet as green as Leeks.

CROPS.—No one, I presume, will leave their crops of Carrots, Parsneps, Potatoes, &c. &c., long now in the ground, if only for the sake of getting the ground dug over before wet weather comes on. But there is one mixed sort of crop, viz., weeds, which by some are never thought worth gathering after this time, as it is either not forward enough, or too far gone, to be touched before next spring.

ORCHARD.—After the fruit is all gathered in there will be a good deal of work in the fruit-room for some weeks, arranging, naming, and stowing away the late sorts, after they are ascertained to be quite sound. Large currents of air should be admitted during this time, but after this work is finished the fruit-room should be kept close and as uniform in temperature as circumstances will allow. The next six weeks is the best time to transplant fruit trees; but where this is impracticable, the fruit-trees ought to be ordered without waiting till the ground is ready, as they are sure to be good thus early, whereas, if you delay your order until the spring, the stock is selected from by so many other customers that you must be content with what you can get.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

STOVE.—When stove bulbs are about done growing, water is withheld from them by degrees, till at last the leaves turn yellow and die off; the pots are then turned on their sides, and placed out of the way, on shelves near the glass; but where room is scarce, and the bulbs are at rest through the winter, they are often shook out of the soil and put by in drawers in the seed-room, or in a dry cupboard indoors. Now, the whole tribe of Orchidaceae which rest for the winter, and more especially those of them which cast their leaves, may be treated after the manner of stove bulbs, and to those who find any difficulty to winter them in the usual way, this is the safest plan. I have repeatedly kept scores of them this way. The winter growers, on the other hand, require now to be put nearer the glass, and all shading is of course dispensed with after this time. Lælia superbens throws up its flower-stems at the rate of an inch a day, and they are now upwards of two feet high, and promise to go up a long way yet; the base of the largest shoot is nearly as thick as "one's little finger" (*scapo longissimo multifloro*). Mr. Skinner says that the "flower-stems of this most magnificent plant grow from 9 to 13 feet long, and carry from 18 to 20 flowers each," and that its "native

place, Chantla, is very cold." I suspect Mrs. Wray, of Cheltenham, will also be fortunate enough to flower this Queen of beauties for the first time in Europe; and, strange to say, if anything can be strange in these days, the old and obstinate Renanthera coccinea is throwing up three strong flower-spikes at Oakfield, treated on the cool system, on which I shall have something to say soon.

GREENHOUSE.—We scarcely ever miss a slight frost or two between the 15th and 25th of October, and we have all seen at times that if our plants and flowers escaped this early frost, they might have gone on safe enough for the next month or six weeks. Except very young and soft-wooded plants, there are few greenhouse plants that are much hurt by a slight frost late in the autumn; two or three rainy days do them much more harm, and it is really a very bad plan to house these plants early. Nurserymen never consider some of their finer Heaths safe out-of-doors after August, and they house almost all their plants from the middle of September to the middle of October; but theirs are all young, and many of them have been strongly forced for propagation, and have hardly yet got over the confinement of the propagating-house, so that they require early protection.

CONSERVATORY.—The finest plant that can be placed in this house for the next twelve months is the *Luculia gratissima*, the earliest of which is now about opening its delightfully fragrant flowers. Some of the London propagators are aware that I have been experimenting on this plant for a series of years, trying to find out a stock on which to graft it, as it is very difficult and uncertain to get a large stock of them by cuttings. I have at last succeeded, and grafted it successfully this season; but to set their heads to work, I shall not say at this time what the stock is, but I shall not fail to do so in due time. Meantime a correspondent who is "going to manage the top of his conservatory next season on the close system, but has no room for a stove pit behind," &c. &c. may graft or inarch the whole of the stove Passion-flowers on the top of long shoots of the cærulea, or any of the hardy seedlings from it; this will take the tender one "up from the cool stratum" at once, and they will all flower as freely as in the stove. Echites, Allamanda and Beaumontia next week.

COLD PITS.—All the Roses that are to be forced on this side of Christmas should now be pruned forthwith, and placed in different pits, for forcing and protection; at any rate, let no more rain touch them this season, it chills and soddens the soil about their roots. A good way to begin to force Roses is to stir up the surface of an old Melon-bed, after removing the soil, and perhaps to add a few fresh leaves, or some tan—to get up a mild heat of 80°, and to plunge the pots in this—not to cover the frame for the first week, and then to begin by drawing the lights only half over the frame for the next week, and to draw them closer by degrees, but still having large portions of air, till the flower-buds appear, &c. &c. Moss and Cablage Roses worked on free stocks of China breeds will thus flower three weeks or a month sooner than others on their own roots, or on the Dog Rose, because the roots of China Roses begin to grow immediately on the first application of bottom-heat, and will always keep in advance of the tops, if properly managed as to air.

FLOWER-GARDEN.—The Heliotrope is the first affected by frost; many of our tender stove-plants stand more cold than this. It may seem strange to some to have flower-beds matted over, to save them from early frosts, but it has been a regular practice here and in many other places for years, and some of the beds next this house, or castle, are often saved till the middle of December. We had a bed of Pelargoniums in full flower in the open air last Christmas-day.—*D. Beaton, Shrubland Park Gardens, Ipswich.*

State of the Weather near London for the week ending Oct. 5, 1843, as observed at the Horticultural Garden, Chiswick.

Sept.		BAROMETER.		THERMOMETER.				Wind.	Rain.

The highest temperature during the above period occurred on the 11th, in 1832—thermom. 72°; and the lowest on the 14th, 1838—thermom. 26°.

REPORT ON COVENT-GARDEN MARKET,

For the Week ending Oct. 6, 1843.

THERE has been a good supply of Fruits and Vegetables of every kind during the past week; and they have been, generally speaking, of excellent quality. The weather has also been very mild, and congenial to vegetation. Pines are not so plentiful as last week; they are selling at from 3s. to 6s. per lb. Black Hamburgh Grapes, of good quality, are still sufficient to meet the demand, and are offered at nearly the same prices as last week. Plums of good quality continue rather scarce; a few of the Golden Drop are still to be seen in the market, and are selling at 2s. per punnet. Damsons continue very good and abundant. Peaches are sufficient to meet the demand, and are of excellent quality. Figs are selling at from 3s. to 6s. per dozen. Filberts are very abundant. Apples and Pears have been liberally supplied during the week. Good English Melons are selling at about 4s. each; a few Spanish ones have been imported during the week, which, if they had not been gathered rather too early, would have been of excellent quality. These are selling at from 4s. to 6s. each. Cucumbers bring from 4d. to 8d. per brace. Cabbages and Turnips are good and plentiful. Carrots are sufficient to meet the demand, and are rather improved in quality. Endive and Shallots are offered at nearly the same prices as last week. Cut Flowers consist of Erica Bowiciana, mammosa pallida, and verticillata, Rondeletia speciosa, Ixora coccinea, Sedum Sieboldii, Alstromeria pelegina, Camellias, Calceolarias, Verbenas, scarlet Pelargoniums, Fuchsias, Dahlias, China and Perpetual Roses.

PRICES, SATURDAY, October 7, 1843.—FRUITS:—

Pine Apple, per lb., 3s. to 6s.	Lemons, per doz., 1s. to 2s.
Grapes, hothouse, per lb., 2s. to 4s.	— per 100, 6s. to 14s.
Portugal, per lb., 1s. to 1s. 6d.	Cucumbers, per brace, 4d. to 8d.
Peaches, per dozen, 3s. to 6s.	Gherkins, per 1000, 5s. to 7s.
Figs, per doz., 3s. to 6s.	Green Capsicums, per 100, 1s. 6d. to 2s.
Melons, each, 1s. 6d. to 4s.	Red ————— 4s. to 8s.
— Dutch, each, 1s. to 2s. 6d.	Almonds, per peck, 6s.
— Spanish, each, 4s. to 6s.	Sweet Almonds, per lb., 2s. 6d.
Plums, per punnet, 1s. to 2s.	Nuts, per bushel —
— Golden Drop, per pun., 2s.	— Brazil, 16s.
Damsons, per sv., 2s. 6d. to 3s. 6d.	— Hazel, 8s. to 4s.
Apples, dessert, p. bush, 4s. to 8s.	— Narcissus, 22s.
Apples, Kitchen, per bush, 2s. 6d. to 5s.	— Cob, 12s.
Pears, per half-sieve, 2s. to 7s.	Filberts, English, p 100lbs., 5s. to 60s.
Oranges, per dozen, 1s. 6d. to 3s.	Barberries, per ht.-sv., 3s. to 4s.
— per 100, 1s. to 30s.	Tomatoes, per ht.-sv., 2s. to 8s. 6d.

VEGETABLES.

Calabages, per doz., 6d to 1s
 Greens, per doz. 2s to 2s 6d
 Cauliflowers, per dozen, 4s to 6s
 Beans, kidney, per lb. sieve, 1d to 2s
 — Scarlet, per lb. sieve, 1d to 1s 6d
 Potatoes, per ton, 50s to 70s
 — per cwt., 2s 6d to 3s 6d
 — per bushel, 1s 6d to 2s
 Kidney, per bush, 2s to 3s 6d
 Artichokes, green, per doz., 1s 6d to 2s
 Vegetable Marrows, per doz., 6d to 1s
 Turnips, per doz. bunches, 1s to 2s
 Red Beet, per dozen, 9d to 1s
 Horse Radish, per bundle, 1s to 6s
 Radish, spring, p. d. z. hands, 4d to 1s
 — Turnip, p. d. z. bunch, 9d to 1s
 Carrots, Horn, p. doz. bunch, 3s to 6s
 Spinach, per sieve, 8d to 1s
 Lettuce, per doz. bunch, 1s to 2s
 Garlic, per lb. 6d to 8d

Onions, Spring p. doz. bunch, 1s 6d to 3s
 — Large, per hf. sv., 1s to 1s 6d
 — Spanish, per doz., 1s to 3s
 — pickling, p. hf. sv., 3s 6d to 4s 6d
 Shallots, per lb., 6d to 9d
 Chillis, per 100, 1s to 2s
 Lettuce, Cabb., p. score, 9d to 1s
 — Cos, per score, 6d to 1s 6d
 Celery, per bunch, 6d to 2s
 Mushrooms, per pot, 1s 6d to 2s
 Wallnuts, per bushel, 10s to 24s
 Small Salads, per punnet, 2d to 3d
 Sweet Basil, per doz. bunches, 2s to 3s
 Watercress, per doz. sm. bun. 3d to 4d
 Parsley, per half sieve, 1s
 Tarragon, per bunch, 2d to 3d
 Endive, per score, 1s to 1s 6d
 Mint, per d. z. bunch, 1s to 2s
 Marjoram, green, p. doz. bunch, 1s 6d to 2s
 Clervil, per punnet, 4d to 6d

Notices to Correspondents.

MR. PAXTON'S COTTAGERS' CALENDAR.—At the earnest solicitation of many of our subscribers, we have determined on reprinting Mr. Paxton's "Cottagers' Calendar." It will be ready in a day or two, in the form of a small volume, for general distribution, price 3d. each copy, and may be ordered of all booksellers. Gentlemen wishing to distribute copies among their cottage tenantry, may have them delivered in any part of London, by remitting a post-office order to this Office, at the rate of 5s. for every 25 copies. We shall feel obliged by those gentlemen who wish for a large supply giving their orders at once, that the number printed may be regulated accordingly.

TO CORRESPONDENTS.—We are under the necessity of stating that all letters of inquiry whatsoever, addressed to us after this week, will be answered through our columns, and in no other way. We would willingly oblige our Correspondents with private answers, but we are sure that they will perceive the utter impossibility of doing so with 5000 inquirers. If letters are of such a nature that they cannot be answered publicly, we trust that the writers will not think themselves neglected if they remain unanswered.

MANURES.—T. B. H.—We have not yet sufficient experience of artificial manures, especially the saline, to say what their effect will be when often repeated. What will increase a crop on the first application may not do so afterwards. We must have patience, and in time we shall know more about it. Many of them which we now see daily advertised will probably disappear from the Catalogues. M.—Lapis.—By all means add the fluid you mention to the stable manure. You will find that it is infinitely the stronger of the two. Throw gypsum in to fix the ammonia, and add black earth of any kind to absorb it, unless you have a liquid manure cart. The residue of the gypsum will be useful if your land wants liming. It is inconceivable that these things are not always done.

DRAINAGE.—An Overseer.—We will endeavour to get a drawing of the pipe-making machine, and a more minute description of it.

HEATING.—Nector.—A pipe of cast-iron, passed through a tank of water, will heat it conveniently without injuring the water. A better source of heat would be a close hot-water brick gutter, if the tank is made of brickwork set in cement. J. S.—For working a pit 45 feet long and 7 feet wide, with gutters, the second size conical boiler is best, but the small size will do, as you will hardly work the whole length at stove-heat 70° to 75° in the dead of winter. The plan you want will be of little use to you. D. B.—S. B.—You cannot convert your flues into hot-water gutters unless they are level through all the space which the water traverses. But you may carry a pipe to any distance for the purpose of feeding the gutters, and that pipe may rise. Your plan of employing the existing cistern for the purpose of ascertaining the level of water in the gutters, will do very well, only it will give your boiler so much the more to do; however, in so small a house, this will not matter. We see nothing to object to in your plan. Lead pipes are applied to Stevenson's boilers, and both answer the purpose.

TANKS.—I will explain my reasons for the depth of water I recommend as soon as I shall have an interview with a young gentleman, who is said to have nearly lost his life last winter through his ignorance of a simple law in hydrostatics—an ignorance under which I laboured for a long time, and which was I think participated in by Mr. Rendle at the date of his last letter on the subject. D. Beaton.

VINES.—Croydon.—Twelve Vines, early and late for a Vinery, may be the following:—3 Black Hamburg, White Sweetwater, Black Prince, Royal Muscadine, Chasselas Musqué, White Frontignan, Grizzly Frontignan, Black Frontignan, Charlesworth Tokay, and Black St. Peter's. K. M.—If you keep the border warm and your hot-house well glazed, although situated in a high cold climate, you can grow any variety of the Vine. The following is a selection more especially for a late crop:—Black Hamburg, Charlesworth Tokay, White Frontignan, White Muscat of Alexandria, Red Muscat of Alexandria, and Black St. Peter's.

PEACH-TREES.—Rambler.—A wash of sulphur, soot, and lime applied to Peach-trees in spring does not prevent the leaves from blistering. This disease is occasioned by cold. Ammoniacal liquor, diluted with 10 or 12 parts of water, will kill the Aphis which infests your Peach, Nectarine, and other Fruit trees. The Ants do not feed on these insects until the latter are either dead or sickly, and then they carry them off the tree. It is understood that it is the sweet exudation from the Aphides which tempts the Ants.

GRASSFIELD.—D.—You may try salt dissolved in water, about the strength of sea-water; but you must watch the time when the slog makes its appearance. A large quantity of salt water may be used without doing much harm to the grass, say 6 bushels of salt per acre. Lime water will probably be as efficacious. If your soil is gravelly, the defect on the grass may be owing to the want of moisture. Minute observation will enable you to find the real cause and suggest the remedy, M.

BULBS.—Q. I. will find no better directions for the management of Hyacinths than those given by us in 1841. We confidently recommend the directions there given, for they are the result of long and very successful practice.

ROMORPHIS SPLENDENS.—A Constant Subscriber.—This plant is an annual in this country, and is not sufficiently hardy to stand the winter without protection. Therefore, in the event of frosty weather, you had better cover your plant with a hand-glass.

NIPIHA OBLONGA.—An Old Subscriber.—This plant has a pure white flower, and blooms in autumn and winter, after which the stems die off, and the plant remains in a dormant state until the following season. When in this state it ought to be kept perfectly dry, but after the season of rest is past, and the young shoots begin to grow, it may be watered, sparingly at first, but as the plant advances in growth the quantity may be increased. It should be potted in a light soil, and requires a moist stove heat between 50° and 60°.

BRAYOA GEMINIFLORA.—An Old Subscriber.—This is a tender Greenhouse-plant with a fleshy oblong tuberous root and long lance-shaped, sharp-pointed leaves, a little rolled up at the margin; the flowers are drooping, and grow in pairs, of a deep reddish orange, tinged with darker red at the edges. These only remain a few days in perfection, and when fully expanded, are upwards of an inch in breadth at the mouth of the tube; the stem rises between 9 inches and 1 foot high. This plant requires to be grown in a light sandy loam, and should be kept rather dry during winter.

CAMELLIAS.—F. of V.—If these have plenty of pot-room, and are in good health, there is no need of shifting them. If they are in small pots give them larger. Scilla bifolia rests in winter. It would probably be the better for a little sea-water while in a state of growth.

HEATHS.—P. P.—Cape Heaths have been advertised at 5l. a hundred in the *Chronicle*, all of which are suited for bedding out in the flower-garden. D. B.

PINE APPLES.—A Young Pine Grower.—Remove the gills from your Pine Apples as soon as you can discover them; they do not rob the fruit directly, but indirectly; they appropriate a portion of the nourishment which is conveyed through the stem, and which would otherwise be directed towards supplying the fruit.

MELONS.—F. P.—I have not seen the Persian Melon, and therefore cannot enter into your views. I have no doubt all these Syrian and Persian Melons will in time degenerate with us, partly from the climate, and more especially by getting intermixed with our coarser varieties. D. B.—The best directions for the management of this plant are those by Mr. Knight, in the "Horticultural Transactions," and republished in his "Physiological Papers." There are also short but good instructions in "Lindley's Guide to the Orchard and Kitchen Garden." But, in reality, almost every treatise contains useful information upon the mere practical operations. There is a kind of skill which books cannot give, but which results from experience, and which just makes the difference between one grower and another. Excellent directions have been given from time to time in our columns.

ASPARAGUS.—Seven Oaks.—The principal use of trenches between Asparagus beds is to enable the roots of the plants to be stimulated by sun-heat early in the season; and when it is wanted early that is of importance; sometimes, also, they are used for irrigating, or for receiving stable-litter for forcing. When, however, Asparagus is not wanted unseasonably, level beds are just as good, and in some respects better. The beds should consist of very rich light soil; the Asparagus should be constantly fed with rich manure, while growing, and saline matter, especially common salt and sulphate or muriate of magnesia. It likes guano excessively, and Potter's guano still better.

CELERY.—J. F. G.—By strict attention to your Celery crops you may assist in keeping the maggot under by removing the leaves as soon as they begin to indicate its presence, or by nipping the blisters, so as to destroy the inmates.

POTATOES.—Rambler.—To preserve such early Potatoes as are ripe in July from sprouting in the same season, they should be taken up as soon as the stems have fallen, and put in a cool dark cellar, excluding the air as much as possible; or they may be pitted deep in the earth, provided the subsoil is not wet.

INSECTS.—W. C.—It is a Caterpillar of a moth belonging to the family Geometridae which you found clasped to the shoot of your Apricot-tree. Caterpillars of this family put themselves into very extraordinary attitudes at times, and much puzzle those who are not conversant with Entomology.

BOOKS.—Adolescents.—"Lindley's Theory of Horticulture" is, we imagine, the book most likely to be useful to you. R. G.—The new edition of Liebig, just advertised, is almost a new book, so much having been altered, omitted, and added. We shall notice it as soon as we can find room. A Caledonian Youth must inquire of the booksellers. It has already been advertised.

NEW ZEALAND.—R. L.—It is true, as the writer in the *Times* says, that New Zealand Flax is of excellent quality; but it is not true, as another writer in the same paper alleges, that it is produced from *Linum usitatissimum*, which is the Common Flax. We did not imagine any person to be ignorant that the New Zealand Flax is a *Phormium* and not a *Linum*—two plants as different as a horse and a snake.

CATTLE FEEDING.—J. B. H.—When Beans are given to cows in addition to hay or other food, about 6 lbs. may be given per day to a moderately-sized cow, with hay and straw. If hay is dear, it may be useful to know that 24 lbs. of Beans are about equal in nourishment to a truss of good hay, and as more Beans are given, the hay may be diminished in proportion. A cow requires food in proportion to her size and the quantity of milk she gives. No fixed rule can be given. M.

MISCELLANEOUS.—Subscriber will find an excellent receipt for Grape Wine in another column. J. Scott.—Your seedling Ipomoea, between 1. Horsfalliae and scabra, is remarkably handsome, with flowers paler than in the one and darker than in the other. We do not admire your double Pansy. S. B. Girdling.—The Dahlia with the palest of its receptacle changing into leaves is not uncommon. A. L. D.—The substance you find in Currants gathered off the wall is a portion of thin tissue forming a layer just beneath the skin. It is a curious and beautiful microscopical object. A Reader may grow Peaches on wood piling in clayey soil, on a south aspect, provided he mixes a good deal of lime-rubbish with the soil, and thoroughly drains it. They should be nailed to the paling. Seven Oaks.—We have no notion what is the matter with your Muebny-tree. Hyacinth.—If you water a white variety of your namesake with the juice of the Phytolacca, the veins of the flowers will shortly become crimson, but the colour will disappear again. So also, if you grow a white Hyacinth in weak sulphate of iron, for a couple of hours, and then in weak prussiate of potash, the veins will become blue. A. C.—We cannot publish personal disputes; if we did we must do so on both sides, and our columns are not suited for such purposes. All we can say is that, if the judges acted contrary to the regulations, and partially, they did very wrong. Such matters interest nobody but the parties concerned. S. B.—Your climate is too hot for Petrea volubilis, and not sunny enough. If you persevere in your new management of Quisqualis indica you will make it flower, provided it is sufficiently exposed to light. J. F. G.—Combretum purpureum. A. Y. will find a descriptive list of hardy Creepers at p. 633 of this year. J. D.—Your specimens are correctly named, with the exception of Verbena calycina, which is Lippia nodosa. I. W. B.—Any Ironmonger who will take the trouble to do so, can procure for you Lyndon's spade. We cannot advertise the names of dealers for them. A Subscriber.—1. Erica hemialis. The others are not such specimens as could be named by any one except an Oddity. T. Y. P.—Your Pears are, No. 1, Beurré Diel; 2, Easter Beurré; 3, Louise Bonne (of Jersey); 4, Williams's Bon Chrétien; 5, Marie Louise; 6, Passe Colmar; 7, Unknown; 8, Beurré de Capiaumont. Eight varieties for Espaliers may be Nos. 1, 2, 5, and 6 of the preceding, the Gloit Moreau, Winter Nelis, Hacon's Incomparable, and Beurré Rance. Cartmel.—Your Apple appears to be the Borsdorfer; in this variety the upper side of the leaves is remarkably convex. J. F.—We will give 6s. for Nos. 2, 21, 25, 35, 36, 41, 46, and 47, of 1841 and 10, 13, 26, 30, 31, 32, and 53 of 1842.

SEEDLING FLORISTS' FLOWERS.

FUCHSIAS.—A Young Gardener.—Your seedling is surpassed by many of the small varieties we have seen, both in colour and substance; in the latter quality it is very deficient. J. M.—Both your seedlings are stout and bright flowers. No. 2 is the best; it is very compact, and the corolla is of a better colour than No. 1, they are good flowers, but not equal to many cultivated varieties of the same character. E. M. D.—The hybrid between F. globosa and fulgens differs so little from some of the cultivated varieties, that it is not worth sending it forth to the public. C. H.—If the habit of your seedling is good, it will prove very ornamental as a border variety.

CAMELLIA.—R.—The bloom sent, is fine in colour, and the outside petals are well formed and of good substance, but the filling up of the centre is very irregular, the petals differing so much in size, it is of little value; flowers of this character are out of date.

DAHLIAS.—W. Deans.—As you anticipated, your blooms were so much shaken by the journey that but little remained to judge of. The dark seedling has a finely-formed petal, but the flower appears full of florets, and the centre thin and irregular; what remained of the bloom of the *Duchess of Buccleugh* was extremely pretty in colour, the lavender edging is very regular,

but the eye of this flower also appears to be thin; at the same time it must be acknowledged that a correct opinion cannot be formed from specimens so mutilated by a long journey, and after so severe a frost. Chas. Daniels.—The rosy-purple seedling, named Dr. Ho nor, was very much raised by its journey; the centre, which was the only part remaining in a fresh state, is thin of petals, and they appear to open irregularly. The general form of the flower we had no means of ascertaining. H.—Your seedling of this year promises well; the flower is very desirable in colour, and probably cultivation will improve its size; the eye is very perfect. R. F. The petals of your seedling are too pointed, and though of a good colour, it will never be a desirable flower. W. Douding.—Your white Dahlia, named Emma Noke, is a neat, pretty, and compact flower; general form good, and the centre fair and well up; the colour wants purity, and probably it can never be exhibited as a white without bleaching.

VERBENAS.—Alfred.—No. 11 is the best seedling among those now sent; the flower is large, and of a good and distinct colour. In No. 10 you have been anticipated; a variety is already out precisely of the same colour, with larger blossoms; 9 and 12 are both good varieties, but too much like others in cultivation; 8 is bright in colour, but the flower is small and too much serrated. C. H.—Your seedling is of a very desirable colour, but the flower is too deeply indented, the divisions curl back, and present scarcely any surface to the eye; this is a great defect, and renders the flower not worth preserving. S. Girdling.—As your Verbenas have already been noticed fully, we cannot insert any further description of them.

PANSIES.—Unknown.—The bloom of the *Fair Bride* did not appear to be fully expanded; it promises well; the eye is very fine—cream-coloured; ground uniform, and the flower of good substance. The *Duke of Devonshire* is a flower of good form, colour, and substance, but the edges of the top petals are very much serrated, which if permanent will destroy the value of the flower; both blooms were very young. H. B.—No. 50, *Belvidere*. This is a flower of good form and substance; eye very fine, and if the marking comes more distinct and regular, it will be a desirable variety; 51, good in colour, but bad in form; 52, too small and thin; 53, deficient in substance; 54, lower petals good, but the upper ones are too high, which destroys the symmetry of the flower; 55, form not good, and the ground-colour not uniform; 56, fine eye, but the flower too small and thin.

As usual, a host of letters have arrived too late for answers this week.

NEWS OF THE WEEK.

The anxiety occasioned by the non-arrival of the Overland mail for July has been painfully set at rest by the announcement of the total loss of the Memnon steam-ship, with the missing mail, at the entrance of the Red Sea. The particulars of this accident have been received by the Hindostan steamer, which left Calcutta on the 11th August, with the mails for that month. She reached Suez on the 11th ult., but her advices from India and China have not yet arrived. We learn, however, by telegraphic despatch, that the Memnon, after a remarkably fine voyage of 10 days from Bombay to Aden, performed in the very height of the monsoon, left Aden on the 1st August for Suez, with 170 persons on board. In the evening of the same day, when off the African coast, she struck on a reef of rocks, and so speedily became a wreck, that it was impossible to save more than the crew, passengers, and five chests of treasure which were on the deck at the time; all the passengers' baggage, the cargo, and the mails went down with the wreck. The accident fortunately occurred within reach of Aden; the political agent of that place sent three steamers to their assistance, and no lives were lost. The Memnon was a new vessel, recently built in London for the East India Company, and was one of the finest ships employed in the service of the Overland Mail.

From France we learn that considerable astonishment has been excited in Paris by Mr. O'Connell's recent attacks on the reigning royal family of France, and by his offer to send an Irish Brigade to place the Duc de Bordeaux upon the throne. The Ministerial journals of course condemn this threat as an attempt to disturb the tranquillity of France, while the Opposition and Republican papers denounce it as an interference with the popular will as expressed in the Revolution of 1830, and as an ungracious return for the recent sympathy of the French Repealers. Several of the persons arrested in connection with the late plot have been set at liberty, and the apprehensions excited by the first announcement are beginning to subside. Accounts from Madrid state that a conspiracy was detected in that capital on the night of the 25th, a few hours before the time appointed for the outbreak. The troops of the garrison were immediately under arms; the streets were guarded by picquets of cavalry; a number of persons were arrested, and a large depot of fire-arms was seized. These precautions appear to have deterred the insurgents, and no attempt had been made at the date of the last advices. The Government are still in an uncertain state, but most of the recent Elections have been decided in their favour. At Barcelona the insurgents have gained no fresh advantage, and those at Saragossa have begun to quarrel among themselves; the latter city is closely blockaded by the Government troops, and additional reinforcements are expected. From Italy we have further accounts of the disturbances in Romagna, but they merely indicate a continuance of disaffection, and confirm the rumour that Austria has offered armed assistance to suppress the movement. In Greece everything continues tranquil, and the new Ministry are actively engaged in the arrangements for the National Assembly. From the United States we have accounts to a recent date. They relate chiefly to the progress of the state elections, and their probable influence on the approaching contest for the Presidency, for which Mr. Clay, Mr. Calhoun, and Mr. Van Buren are the can-

didates. From Canada we learn that the prosecution of Messrs. Papineau, O'Callaghan, and Brown, who were implicated in the late insurrection, has been abandoned by order of the Home Government.

Home News.

Court.—The Queen and Prince Albert arrived at Buckingham Palace on Saturday morning from Windsor Castle. Prince Albert went to Somerset House, and presided at a meeting of the Duchy of Cornwall. The Prince returned to Buckingham Palace about one o'clock, when her Majesty and his Royal Highness left town by the Great Western Railway for Windsor. On Sunday, the Queen and Prince, with the Prince and Princess of Hohenlohe Langenbourg, attended divine service in St. George's Chapel. On Monday, her Majesty held a Privy Council, which was attended by nearly the whole Cabinet. The Ministers returned to town at the breaking up of the Council, with the exception of Sir R. Peel, who remained on a visit to her Majesty. The Prince of Wales arrived at the Castle from Brighton on Monday afternoon, under the charge of Lady Lyttelton, Capt. Duncombe, and the Hon. C. A. Murray. His Royal Highness's health has greatly improved during his visit to Brighton. On Tuesday the Queen and Prince Albert paid a visit to the Duchess of Gloucester at Kew, and afterwards inspected the Botanic Garden, attended by Sir W. J. Hooker. His Imperial Highness, the Grand Duke Michael, only brother of the Emperor of Russia, arrived on Tuesday, on a visit to her Majesty, and returned yesterday to town. The Hon. Col. Grey and Col. Bouverie have resumed their duties; the former as the Equerry in Waiting on the Queen, the latter as Equerry in Waiting on Prince Albert.

Imperial Parliament.—At the Privy Council on Monday, it was ordered that the present Parliament, which stands prorogued until Thursday the 19th inst., be further prorogued until Tuesday the 14th November.

The Army.—The Queen has been pleased to declare H.R.H. Prince Albert Captain General and Colonel of the Artillery Company, in the room of the late Duke of Sussex.

Order of the Bath.—The Queen has been pleased to appoint Major-General Sir C. F. Smith, C.B., and Colonel R. England, with local rank of Major-General in India, to be Knights Commanders of the Bath. Lieut.-Colonels Gore Browne and J. Simmons, of the 41st Foot; Majors A. P. S. Wilkinson and H. Wade, of the 13th Light Infantry; Major G. Hogarth, of the 26th Foot; and Lieut.-Colonel G. Huish, of the 26th Bengal Native Infantry, to be Companions of the Bath.

Earl Grey.—Favourable accounts have been received in town of the health of Earl Grey, who has rallied, and is now able to take carriage airings at Howick. Sir Stephen Hammick, his Lordship's medical attendant, has returned to town in consequence of his convalescence.

Church Preferment.—The Queen has made the following appointments to benefices in the Church of Scotland, void by the late secession:—Rev. W. Menzies to the parish of Maybole, Ayr, in the room of the Rev. A. Thomson; Rev. P. Bell to the parish of Carmylie, Forfar, in the room of the Rev. W. Wilson; Rev. J. Crosbie to the parish of Westruther, Berwick, in the room of the Rev. W. Wood; Rev. R. Williamson to the parish of Knockbain, Ross, in the room of the Rev. J. M'Rae; Rev. P. McIntyre to the parish of Edderschillis, Sutherland, in the room of the Rev. G. Tulloch; Rev. J. Robertson to the parish of St. Fergus, Aberdeen, in the room of the Rev. J. Anderson.

Ecclesiastical Commission.—Sir Robert Peel has, within these few days, forwarded a cheque of 4000*l.* to the Ecclesiastical Commissioners, in aid of the fund for the building of new churches. The gift was accompanied by a letter, in which the Premier spoke of it as a debt due from him in consideration of the large fortune he had derived from trade. It will be remembered that Sir R. Peel was the first who subscribed 1000*l.* to the special fund of the National Society.

Post Office.—The following notice is put up at the General Post Office:—"With reference to the notice issued from this department in May last respecting the new postage communication with France, as it would appear that some misapprehension exists respecting the uniform rates on letters between that country and the United Kingdom, it must be understood that the French uniform rate of 5*d.* single, and so on in proportion, has reference to those letters only the postage of which is paid, whether on despatch or delivery, in the United Kingdom; but that if the French rate be paid in France, it then varies according to the distance, in conformity with the laws of France. The British rate of 5*d.* single, &c. is the same, whether paid in the United Kingdom or in France."

Light Gold.—A proclamation was agreed to at the Privy Council on Monday, ordering that, as a great quantity of light gold is still in circulation, no gold sovereign of less weight than five pennyweights two grains and a half, and no gold half-sovereign of less weight than two pennyweights thirteen grains and one eighth, be allowed to be current or pass in any payment whatsoever. And the officers, collectors, and receivers of revenue, are required, from and after the 1st day of January next, to cut, break, and deface such pieces of gold coin as shall be found deficient in weight.

Foreign.

France.—The fortification question is still the principal theme of the Paris papers; but though a subject of much discussion and discord between them, it affords

little interest to the English reader. Some attention is also bestowed by the Opposition prints upon the satisfaction obtained from the Porte for the insult offered to the French flag at Jerusalem, by which the Pacha is to be dismissed, and his successor is to make an apology to the French Consul, besides saluting the French flag at Beyrout. This severe reparation is pronounced by some of them a fresh insult to France, because the flag is to be hoisted and saluted at Beyrout instead of Jerusalem. The Ministerial *Journal des Débats* dwells at great length on the disturbances in Wales, and expresses surprise that no really energetic measures have been adopted to quell them. "The Reformers of Wales," it says, "have taken the law into their own hands, and executed it according to their own views. It is in vain to say that this strange state of things has nothing to do with politics; it constitutes, nevertheless, an extraordinary anomaly in a civilised state subject to regular laws. The insurgents of Wales have before them the example of Ireland and Mr. O'Connell. We may fully expect to see them establishing, in like manner, courts of arbitration, demanding their own local Parliament, denouncing the Saxon, and swearing that Wales shall be a nation. Without doubt, the English Government is strong enough to repress these disorders, both in Ireland and Wales, as soon as it pleases to do so. If it does not do this at once, it is because it finds it more prudent to wait and let things take their course; but it is an unsatisfactory position for a Government to submit, as a necessary and inevitable evil, to permanent insurrections in two of the principal portions of the empire." The papers of Monday, of all shades of politics, express their amazement at Mr. O'Connell's threat at one of his recent meetings, that he would send an army of Irishmen to place the Duc de Bordeaux on the throne of France, as Henry V. The banquet given at the Mansion-house, in honour of General Espartero, is noticed by the papers; but, owing to the absence of the Members of our Cabinet, and the very few persons of political note who attended it, it is but briefly commented upon. It is stated that five of the persons arrested as participators in the Communist plot of the Rue Pastourelle have been set at liberty. Other warrants, however, had been issued by the Attorney-General, but the charges against the accused were not of a very serious nature. A treaty of commerce has been concluded between France and Sardinia, to which M. Guizot has annexed a special convention, protecting the rights of French authors residing in Sardinia as if they continued in France. Literary property thus guaranteed, extends not only to books, but to drawings, engravings, and music.—The *Journal du Loiret* states that on the 29th ult., M. Bruitte, formerly parish priest of the diocese of Montauban, and Knight of the Legion of Honour, abjured the Catholic religion in the Protestant Church of Orleans, in presence of a numerous assemblage. M. Bruitte had published a pamphlet, entitled "My Farewell to Rome," in which he explained the reasons which had induced him to abandon the Church of Rome.—The *Courier Français* says, that a young Englishwoman who is yet unmarried, purchased for 50*l.*, at the auction of Glandier, the glass in which Madame Laffarge gave her husband his drink.

Spain.—Accounts from Madrid to the 26th ult. state that the capital had just been visited with another alarm. On the 25th, at midnight, all the troops of the garrison were summoned to arms, and various parts of the town, which had not hitherto been guarded, were occupied by picquets of cavalry. The military were placed in the churches, and great care was taken to prevent the bells from being rung under any pretence. General Concha stationed himself at the Puerta del Sol, whilst General Narvaez visited in succession every quarter of the town. It appears that the movement was to have taken place on the following morning. The design of the conspirators was to take possession of some of the churches, spread alarm by ringing the bells, set fire at the same time to several houses in opposite directions, and whilst the troops were moving thither to afford assistance, to set fire to their barracks. Owing to the precautions immediately adopted by the Government, no such attempt had been made, but a number of persons had been arrested, and a depot of fire-arms had been discovered. The garrison was still kept ready to act, and the posts were doubled when these advices left, and it was probable that the troops would continue under arms on the night of the 26th. General Narvaez appears to have assumed the exclusive command without consulting his colleagues on his policy. Among other proceedings he had sent a passport to Colonel Bristow, an English gentleman, who repaired to Madrid last year to make arrangements for the establishment of an Anglo-Hispanic bank. The Colonel protested against this measure, which was to be carried into effect within 24 hours. The British Chargé d'Affaires had expostulated with the Minister for Foreign Affairs, who, it appears, had not been consulted on the subject. General Mazaredo, the military governor of Madrid, has been appointed to the post of political chief, as a concession by the Ministry to General Narvaez, in order to save the capital from being declared in a state of siege. The liberty of the inhabitants is thereby entirely placed at the mercy of the latter. The inquiry into the cause of the explosion of the gunpowder magazine was still in progress; most of the individuals arrested were kept in solitary confinement.—From Barcelona our accounts state that on the 25th the new Captain-General, Laureano Sanz, notified to the consuls that he had thought proper to declare the province in a state of siege, and that he was about to lay the strictest blockade to that city. The French residents had accordingly retired on board the vessels of war, where they were fed at the expense of the state. The Captain-General

expected shortly to have a force of 34 battalions at his disposal. There was no change at Saragossa on the 27th. The insurgents were beginning to quarrel among themselves, and General Canedo had assumed the command of the Government forces. The blockade is extremely strict, and the city has consumed its provisions. The Junta has levied an extraordinary contribution on the inhabitants. Gen. Zurbano, one of the followers of Gen. Espartero, has written from the castle of Foz in Portugal to declare his adhesion to the Provisional Government, and has been authorised to return to Spain and take up his residence at Palencia.—Mr. Henry Lytton Bulwer has left London for France, to wind up his private affairs in that country, preparatory to his departure for Madrid, to succeed Sir Arthur Aston, as Minister at that court.

Germany.—Letters from Berlin of the 24th ult. state that the King of Prussia had given to the Duke de Bordeaux an exceedingly warm reception. The young Prince is to proceed from Berlin to Hamburg, thence to the Hague, on a visit to the King of the Netherlands, and will embark at Rotterdam for London. He intends to remain in that city for some time, and receive a great number of his partisans, amongst others M. de Chateaubriand, who had hitherto refused to undertake the journey to Goritz, in order not to meet Prince Metternich. His Royal Highness will visit Scotland before his return to Austria. A matrimonial alliance is talked of in Berlin between Prince Adelbert, of Prussia, second son of the heir apparent to the Prussian throne, and Princess Eugenia, the eldest daughter of Oscar, Crown Prince of Sweden; and it is mentioned that the Emperor of Russia, during his late visit at Berlin, was particularly anxious to forward this plan. The Rhenish papers contain a formal protest against the succession of Hesse Cassel being exchanged for that of the Duchy of Holstein in favour of the Duke of Holstein Augustenburgh, next heir to that important part of the Danish dominions. The same paper states that Prince Frederick of Hesse, heir presumptive to the Danish throne, and heir apparent of Hesse Cassel, had, during his late visit at Cassel, obtained a formal consent from the reigning Landgrave to his alliance with the daughter of the Emperor of Russia.—Letters from Cologne state that M. Peitzer, a lieutenant in the army, who, as will be recollected, killed M. Hains last winter in a duel, in consequence of a quarrel at a ball, and was condemned to death by a court-martial, has received a commutation of his punishment into confinement in a fortress for fifteen years. M. Peitzer and his second, who is sentenced to the same punishment for ten years, have arrived at Ehrenbreitstein, where they are to be confined. The two other persons implicated in the duel have been condemned to imprisonment, the one for five and the other for two years.—The following is an extract of a letter from Dresden, dated Sept. 21:—"The recent discovery of the 'Venus,' by Titian, now excellently restored, excites the greatest interest. The picture is an object of the greatest admiration with all amateurs. This magnificent work has been more than 100 years concealed under a mass of unimportant paintings and different kinds of rubbish. For the discovery of this treasure we have to thank the Director Mathai and the Academy Council. It is the most perfect picture that can be looked upon. Exquisite as are some of the paintings of 'Venus' we already possess, they are far behind this masterpiece, particularly in the handling of the flesh and background."

Italy.—The latest accounts from Bologna are of the 24th. They state that although the Government announces that the province is restored to order, the troubles continue, although the failure of the attempt on Imola has certainly discouraged the band. The prisoners had been brought to Fort St. Leo, near Rimini, not being secure at Bologna. Austria has offered armed succour, but, at the same time, Prince Metternich has sent the Aulic councillor, Sebergandi, to Rome, who, in concert with Count Latour Maubray, will examine what modifications ought to be made in the Roman Government, to prevent such disaffection and manifestations. It is said that an Englishman is among the insurgents, and that an English and a French Colonel quitted Spain to join them, but withdrew from Romagna on learning the true state of affairs. There is no doubt, however, that most of the Italians who served in Spain under Borso di Carminati, and who were active in the troubles of a few weeks back in Catalonia, have returned and joined the bands of Romagna, whom they thus render more formidable partisans than otherwise they would have been. Letters from Milan of the 22d ult. state that a number of persons had been committed to prison on different points of the Lombardo-Venetian territory. The Governor of Lombardy had been directed to hold a few battalions of infantry and a brigade of light cavalry in readiness to march into Bologna, should the authorities of that city require their co-operation. The insurgents have extended their excursions to the north as far as Piedmont. These bands appear to act according to orders from a superior authority, and are well supplied with money. A propaganda is said to exist, which has ramifications, not only throughout Italy, but likewise in Switzerland, Malta, and even France. A Jewish paper announces from an authentic source, that the decree of the Roman Inquisition, first issued under the authority of Leo XII., and recently put in force by the Inquisitor-General of Ancona, has been again suspended. The utmost consternation had been produced not only throughout Italy, but everywhere in the Mediterranean, both among the Jews, and among Protestant Christians, either subject to Catholic governments or surrounded by Catholic populations, at this revival of the Inquisition. Some misapprehension has existed as to the genuineness of the decree; but the same paper states that certain of its clauses had already begun to be acted upon.—The two bandits who, about three years ago,

attacked and robbed Don Miguel while he was out shooting, were executed at Rome on the 12th ult., having been condemned for various robberies and murders.

Russia.—A telegraphic despatch from St. Petersburg announces that the Princess Marie of Darmstadt, wife of the Hereditary Grand Duke of Russia, gave birth to a prince on the 20th ult. The Emperor arrived at Warsaw on the 21st, and was received with universal rejoicings. It was believed that his stay in the Polish capital would only be of short duration this time, but that the Emperor intended a longer visit on his return from the southern provinces.—The German papers state that an association has just been formed at Pesth, in Hungary, with the object of paralyzing the influence of Russia, and inducing all the Slavonian races to fraternise. The circle of action of this association, which counts adherents in Hungary, Poland, Paris, and London, is not to confine itself to the inferior Danube alone, but is to extend so widely as to lead one to suppose that it will everywhere resist the influence of Russia. Special organs are to be established in certain places, to direct the attention of the public to the views of Russia. A certain number of Polish refugees are to be the emissaries of this association. Hitherto their efforts have met with sympathy chiefly in the principalities of the Danube, Hungary, and the Christian populations of Turkey. In the latter, in particular, the hostile feeling to Russia has been principally manifested. The clause of the association which applies to all the Slavonian races appears to be only an accessory, intended to aid the realisation of the principal object, which is opposition to Russia. It is possibly in connexion with this report that the Augsburg papers of the 15th inst. state that above 300 persons had been arrested at Warsaw, accused of having formed part of a society of above 3,000 persons, whose object was to effect a revolution in Poland; but all these accounts of anti-Russian intrigue require confirmation.

Greece.—Accounts from Athens to the 29th contain further details of the late insurrection, but no very important facts are mentioned in addition to those given in our last. As soon as the new Ministry was organized, it proceeded to make important changes in the Administration, and to adopt measures for the convocation of the National Assembly on the 15th inst. One of the most remarkable instances of the self-possession of the nation was in its conduct towards the Minister Tzinos, who lately ordered several persons to be subjected to torture. The King, after the revolt, still continued to conceal him in the palace, but at last, on the Ministers sending him word that they could not be answerable for the consequences if he continued to do so, he gave him up. The Government has ordered him to be banished to an island of the Archipelago, and meanwhile a military guard is placed round him to protect him from the populace. Since the crowd withdrew from before the palace, the most perfect tranquillity has continued to exist.

India.—The steam-ship *Hindustan*, Captain Moresby, arrived at Suez on the night of the 11th ult. from Calcutta, which place she left on the 10th August, with some cargo and 108 passengers. She has brought the melancholy intelligence of the total loss, on the evening of the 1st August, of the East India Company's new steam-frigate *Memnon*, off Cape Guardafui, on the coast of Africa, with the missing Overland Mail. There were on board 170 persons, who were fortunately all saved, but none of their effects have been recovered. The mails are entirely lost; and it is to be regretted that owing to their late arrival at Bombay the preceding month, there had been an accumulation of mails from Madras and Ceylon. The *Memnon* left Bombay on the 20th July, ten days earlier than she would have done on ordinary occasions, on account of the monsoon, which prevails in those seas during the month of August. She was a splendid new ship, which had recently been sent out from England, having been built expressly for the service of the Overland Mail. She was much larger and more powerful than any of the other steamers on the station; and so great was the confidence of her commander in her powers, that he determined to steer direct from Bombay to Aden, instead of taking the longer route generally adopted during the prevalence of the monsoon. The experiment was thought a dangerous one, and it was the opinion of many naval men that it must fail, as it had done in a previous instance; but the result has shown that the confidence of the captain was not misplaced, as she completed the voyage to Aden within ten days. No sooner, however, had she completed this feat, than she was fated to meet with a misfortune little looked for. On the evening of the 1st of August, when off Cape Guardafui, on the coast of Africa, and not far from Aden, she struck upon a reef of rocks, and in a very short time became a total wreck. The crew and passengers, with five cases of treasure, which were on board, and which happened to be on the deck at the time of the accident, fortunately were saved; but the mails, cargo, and passengers' baggage were entirely lost, having gone down with the wreck. Captain Haines, the political agent at Aden, had sent three small steamers to their assistance. Two passengers by the *Memnon*, Messrs. Southey and Crawford, arrived at Suez by the *Hindustan*.

TURKEY AND PERSIA.—The Levant mail, which brought news of the loss of the India mail, has brought Constantinople letters of the 17th ult. Riza Pacha was fast monopolising power, and had just obtained the office of Seraskier. The adjustment of the Turko-Persian difference was progressing but slowly, owing to the new difficulties constantly started by the Commissioners of the Shah. The affairs of Jerusalem had been arranged on the conditions stated in our French article. Letters from the Persian frontier announce the important fact of the death of the King of Herat, Kamram Shah, whose throne has been usurped by his Vizier, Tar Mahomed Khan, who has expelled the sons of the late King. The usurper has

been acknowledged as King of Herat by the Shah of Persia, to whom he sent his submission.

UNITED STATES.—New York papers have been received by the steam-ship *Britannia*, in a passage of 11 days from Halifax. The New York dates are to the 15th; Boston, 16th. The *Caledonia*, which left Liverpool on the 5th ult., arrived at Halifax on the 18th. The principal points of interest in the papers relate to the progress of the state elections, and their probable effect on the coming Presidential contest. The candidates for the Presidency are understood to be, on the Whig interest, Mr. Clay; and on the Democratic, Mr. Calhoun and Mr. Van Buren. The elections, so far, were in favour of the Whig party, but to so trifling an extent, that the election would have to be decided by the House of Representatives, unless the Calhoun and Van Buren parties were to form a coalition, or one of them give their interest to the Whig candidate. There had been a disastrous accident on the Susquehanna Railway, occasioned by the breaking of the front axle-tree of the first passenger car, by which that and the two following cars were thrown off the rails. A large number of persons were seriously injured. The yellow fever still prevailed at New Orleans: the number of cases reported for the month of August was 188, of which number 90 had died. A "Copyright Club" of American literary men has been formed in New York, with Mr. Cullen Bryant as chairman. The object of the Club is to procure the enactment of such laws as will ensure the rights of authors, by reciprocal copyrights with foreign nations. It is not expected that they will succeed, the people being so much accustomed to European literature at astonishingly low prices, and it is feared that the publishing, bookselling, and paper-making interests will be too strong for them. A bookseller will not pay for the MSS. of American authors, when he can obtain multitudes of English works on similar subjects for nothing. It is admitted that such a state of things is a great hardship upon authors, and particularly American authors, who cannot even hope to get a fair remuneration for their labours, even in their own country. From Canada we learn that a *nolle prosequi* has been entered in the cases of Messrs. Papineau, O'Callaghan, and Brown, implicated in the late insurrections in Canada. Sir C. Metcalfe left Quebec on the 28th for the Three Rivers, whence he would proceed across the St. Lawrence and through the townships.

WEST INDIES.—The Mail steamer, *Tay*, has just arrived with the West Indian and Mexican Mails. She brings an account of a calamitous fire in Kingston, Jamaica, on the 26th of August, the work of incendiaries; upwards of four hundred houses were reduced to ashes, involving a loss of property variously estimated from 250,000*l.* to half a million. 1,000*l.* reward has been offered for the discovery and conviction of the incendiaries. The *Royal Gazette* is filled with details relative to this awful conflagration.

CITY.

Money Market, Friday.—Consols closed at 94½ to 95, both for money and account; New Three-and-Half per Cents., 102; Exchequer Bills, at 1½*d.*, 61*s.* to 63*s.* prem.; 1½*d.*, 62*s.* to 64*s.* prem.

Metropolis and its Vicinity.

Her Majesty's Visit to Kew Gardens.—On Tuesday morning the Queen and Prince Albert visited Kew, for the purpose of inspecting the Royal Botanic Garden, the Palace, &c., and paying a visit to the Duchess of Gloucester and the Princess Sophia, who have, since the departure of the King of Hanover, been residing at his Majesty's residence on Kew-green. The Royal party alighted at the King of Hanover's residence, and shortly afterwards were conducted by Sir W. J. Hooker over the gardens. An intimation of the intended visit having been received at Kew on the previous evening, Sir William Hooker was in attendance to receive Her Majesty and Prince Albert; but it being quite a private visit, the gardens were necessarily closed against the public, by which arrangements the Royal party had an opportunity of inspecting every portion without the slightest interruption. Both the Queen and Prince Albert expressed much pleasure and gratification in witnessing the recent extension of the gardens, and particularly at their being thrown open to the public every day, except Sunday; and more especially that since that arrangement had been carried into effect, no damage had been done by the great influx of persons who have lately visited the gardens. Before leaving, Prince Albert requested to be informed at any future time of the flowering of the more particular plants, in order that he might come and inspect them. On leaving the Botanic Gardens, the Royal party proceeded to inspect the Old Palace and grounds, through which they were conducted by Mrs. Murphy, the housekeeper; after which they returned to Windsor Castle.

Arrival of the Grand Duke Michael.—On Sunday morning, his Imperial Highness the Grand Duke Michael (Paulowitch) arrived at Blackwall on a visit to this country. His Imperial Highness, on leaving Berlin, repaired direct to the Hague, to visit the King of Holland and the Prince and Princess Royal of Orange. After passing a few days with his royal relatives, his Imperial Highness and attendants embarked at Rotterdam on Saturday morning on board the *Ocean*, and was received on his arrival at Blackwall by Baron Brunnov and the other members of the Russian legation. The Grand Duke, who was loudly cheered on his landing, proceeded at once to Mivart's Hotel, where the state apartments had been prepared for his reception. In the afternoon his Imperial Highness went with Baron Brunnov to the Zoological Gardens in the Regent's Park, where the Grand Duke remained about an hour, and then drove to Kensington

Gardens, and, after promenading for some time, proceeded through Hyde Park and along Constitution-hill to St. James's Park. His Imperial Highness, in company with Baron Brunnov, walked through the inclosure amidst the pedestrians. On Monday the Grand Duke went to the Horse Guards to see the change of guard, and afterwards visited Stafford-house, the residence of the Duke of Sutherland, where he minutely inspected the choice works of art in the Stafford Gallery. His Imperial Highness then visited the new Houses of Parliament, the old Houses, Westminster Hall, and the Abbey. The several monuments, and the historical incidents attached to them, were explained by the ordinary attendants, who were at first unacquainted with the rank of the august stranger, as no intimation had been received of the purposed visit. On leaving the Abbey, the Grand Duke went to the Surrey Zoological Gardens. In the evening he honoured Baron Brunnov with his company at dinner, and was afterwards present at the performances at Drury-lane Theatre. On Tuesday his Imperial Highness took a drive in the Regent's Park and the northern suburbs of the metropolis, and afterwards left town to pay a visit to the Queen, at Windsor Castle. His Imperial Highness was loudly cheered on leaving the hotel by about 300 people who had collected there. On arriving at the Castle, he was received by Prince Albert, the Lord Chamberlain, and the Lord Steward, who conducted him to the Queen in the grand reception-room, when the presentations took place. In the evening her Majesty gave a state banquet in honour of the visit of his Imperial Highness. On Wednesday Prince Albert conducted the Grand Duke over the castle, who afterwards visited St. George's Chapel, where the banners and emblems of the Knights of the Garter had been newly hung for the occasion, under the direction of Sir C. Young. They then inspected the new stables and riding-house, and in the afternoon rode out on horseback in the Park, accompanied by her Majesty and suite. The banquet in the evening took place in the Waterloo Chamber. On Thursday Prince Albert, accompanied by the Grand Duke, Prince Hohenlohe Langenbourg, the Earl of Liverpool, and Prince Dolgorouky, proceeded to the royal preserves in the Great Park, in the vicinity of the Flemish Farm, and had between three and four hours' excellent sport. His Imperial Highness shot with admirable precision; and during the day 105 brace of rabbits, nearly 100 pheasants, with an excellent sprinkling of partridges and hares, were bagged by the royal party. Yesterday morning a review of the two regiments in garrison at Windsor (the 1st Life Guards and the 3d battalion of Grenadier Guards), and the 13th Lt. Dragoons, stationed at Hounslow, took place before her Majesty, Prince Albert, the Grand Duke Michael, the Duke of Wellington, and the distinguished personages on a visit to the Queen. After the review Prince Albert and the Grand Duke went to Sandhurst, and inspected the Cadets, after which his Imperial Highness took his departure for London. Baron Brunnov, the Russian Minister, will give entertainments to his Imperial Highness this day and to-morrow, and the Grand Duke to go to Newmarket on Tuesday, to see the Cesarewitch Stakes run for.

General Espartero.—On Thursday morning General Espartero, accompanied by the Duchess of Victoria, Donna Elidia, and some members of his suite, arrived at the London Docks, for the purpose of visiting that establishment. They were received by Mr. Catley and the directors, by whom they were taken through the Crescent vault, in which there are stored upwards of 20,000 hogsheads of Spanish wines. They were subsequently led through the Spanish wool, the indigo, spice, drug, and tobacco-warehouses, and in the various departments the General and the Duchess expressed their astonishment at the regularity with which the business was conducted. After traversing the different departments, the visitors returned to the Board-room of the company, where a *déjeuner* had been prepared. General Espartero on taking leave expressed his acknowledgments for the attention paid to him by the authorities connected with the docks, and his gratification at seeing the productions of Spain imported and about to be consumed in this country.

The City Election.—Mr. Baring and Mr. Pattison have consented to become candidates for the representation of London—the former as the Conservative, the latter as the Whig candidate. The election takes place in three weeks.

Election of Lord Mayor.—The poll, which was commenced last week and continued for seven days as a matter of form, closed yesterday, when Alderman Magnay was returned by a large majority. The numbers at the close of the poll were as follows: Ald. Magnay, 853; the present Lord Mayor, 149; Ald. T. Wood, 82.

Court of Aldermen.—Mr. Challis has acceded to the call made on him to stand for the gown of Cripplegate Ward, vacant by the death of the late alderman, Sir M. Wood, and was elected yesterday without opposition. Mr. Payne, the city coroner, who has for several years filled the office of chief clerk at Guildhall, has sent in his resignation. It is said that the lucrative office will be conferred on a clerk of the city solicitor.

The Sheriffs.—On Saturday the Lord Mayor, with the several officers of the Corporation, proceeded in state to Westminster, where the Recorder introduced to the Cursitor Baron of the Exchequer Alderman Musgrove and Mr. Moon, as the Sheriffs for the ensuing year. The Recorder having paid the usual compliment to those gentlemen as citizens of London, the Cursitor Baron stated that her Majesty had been pleased to approve the choice of the citizens. The usual ceremonies were then gone through, and the Sheriffs and their friends returned to attend the inauguration dinner, which took place in Clothworkers' Hall. About 200 gentlemen sat down to dinner, the company present consisting of the Lord Mayor, who took the chair, Lord Burghersh, the Cursitor

Baron, several members of the Royal Academy, and the principal authorities of the Clothworkers' and Stationers' Companies, to which the Sheriffs belong. The usual loyal and civic toasts were drunk with the customary honours, after which some amusement was caused by Sir Peter Laurie, who said he had a toast to propose which he knew would be received with great warmth of feeling. They all hoped for the benefit of clergy, and he felt much gratification in proposing the health of the Chaplains to the Sheriffs. Dr. Croly, in acknowledgment, said that Sir P. Laurie had alluded to benefit of clergy; he should exhibit his gratitude to him by hoping that the worthy knight may never require the plea; but in case it should fail him, he promised that the Sheriffs' Chaplains will feel bound to see the best ceremonial of the law administered with all the consideration due to merit in misfortune. Mr. Masterman, one of the City members, the Recorder, and other personages, afterwards spoke in acknowledgment of various toasts.

Death of Mr. G. W. Wood, M.P.—Accounts reached town on Wednesday of the melancholy death of Mr. G. W. Wood, M.P. for Kendal, which took place suddenly on Tuesday evening in the rooms of the Manchester Philosophical Society, of which he was a Vice-President. Mr. Wood had just entered the coffee-room and was sitting on a bench between Mr. Joule and Mr. Clare, conversing about the Ordnance Survey of the Northern Counties, when Mr. Clare was startled by hearing him breathe stertorously, and feeling him tremble. At first Mr. Clare thought he was faint and laid hold of his arm, but Mr. Wood appeared to be unconscious. Mr. Clare immediately rose, and said aloud that Mr. Wood appeared to be very ill, and Mr. Stanway immediately got hold of Mr. Wood's arm and called for Dr. Clay, who was at another table on the other side of the room. Dr. Clay, on reaching Mr. Wood, directed some one to remove his neckcloth, and open the windows to admit air; but on feeling the wrist he found that there was no pulse. An ineffectual attempt had been made by two gentlemen to raise Mr. Wood, and he was then placed on the form; his head was propped up with cushions, and preparations were made to bleed him. There were two other medical men in the room—Dr. Marshall and Dr. Jarrold. Dr. Clay instantly made an incision in the left temporal artery, but no blood followed the lancet. He next tore up the coat sleeve to open a vein in the arm, but it was found that there was not the slightest pulsation. On examining the eyes, Dr. Marshall perceived that the iris was not sensible to the action of light, and that the pupil did not contract, and thence inferred that there was a total loss of nervous sensibility. All these proceedings passed in less time than it has taken to describe them, and the medical gentlemen agreed that Mr. Wood must have expired instantaneously. Dr. Jarrold states that there was neither the slightest pulsation nor any tremor of the flesh, or in short anything to indicate that a spark of life remained; that, in fact, his death must have been more instantaneous than if he had been shot. At the time the attack commenced, Mr. Wood appeared to be sitting at ease; one arm was thrown across the back of the form, and with the other hand he was twirling the guard chain of his eye-glasses. He had not partaken of any coffee or other refreshment. Mr. Wood was formerly one of the representatives for South Lancashire, and by his death a vacancy has occurred in the representation of Kendal. Mr. Wood was the son of a dissenting minister, and a native of Leeds, and it is supposed that he was in his 66th year. He had been in the commission of the peace for Lancashire for several years. The Jury at the inquest returned a verdict of "Died of Apoplexy."

St. Stephen's, Wallbrook.—A meeting of the parishioners was held last week, for the purpose of receiving a statement from Alderman Gibbs, relative to the present state of the parish accounts. Dr. Croly, the Rector, took the chair, when Alderman Gibbs objected to the presence of all who were not legally constituted vestrymen. This gave rise to a long discussion as to what was considered the requisite qualification of a vestryman; and in reply to several inquiries, the vestry clerk stated, that since 1775 it had been the custom in the parish, that no person should be a qualified vestryman who had not previously served the office of overseer. The chairman said he was on the side of justice, and thought that an account ought to be laid before the parish, concerning the receipts and disbursements of the parish estates. Wherever a trust existed, he held that the obligations of that trust ought to be strictly respected, and he hoped that in this case the trust with which the parishioners had invested the churchwarden would be known and felt, and clearly recognised. On the part of the churchwarden he was satisfied that there could be no unwillingness to give an account of these monies, though there might be some etiquette as to the persons to whom he ought to surrender it; but certainly he could say no more on his behalf unless he fully cleared up these accounts, and so saved them the only means of putting an end to these unpleasant differences. Alderman Gibbs protested, and said that the vestry had, from time immemorial, as described by Stowe, been considered a select vestry, and to such a properly constituted vestry alone did he consider that his allegiance was due. He was ready and willing to render his accounts before a legally constituted vestry of the parish. He then left the vestry-room amid hisses and considerable confusion, intimating that in the ensuing week he would call a meeting to revise the accounts. Mr. Rock, in a lengthy address, gave a detail of the circumstances which had instigated himself and fellow-parishioners to adopt the present proceedings. He stated that from inquiries instituted, he had learned that the parish possessed estates of the value of 1,000*l.* per annum, of which Alderman Gibbs was appointed one of the trustees

in 1812, and that after the death of his co-trustees, he became sole trustee for the disposal of the funds, not having thought fit to renovate the trust by the introduction of new coadjutors. He had further ascertained that since 1825 no auditors had been appointed to examine the accounts, nor had any allusion been made to them in the vestry books, Alderman Gibbs having acted as his own auditor, and that within the last ten years only twelve vestry meetings had been held, attended by only two or three persons. The chairman suggested that time should be allowed for the production of the accounts, and the vestry adjourned for a week. They met again on Thursday, when a protest was read from Ald. Gibbs, who said he would lay the accounts only before a select vestry. A committee was then appointed for the purpose of endeavouring to obtain the accounts, and to report thereon at a future meeting. It was also resolved that the Church should be insured forthwith.

Rebuilding of St. Olave's Church.—The parishioners of St. Olave's held a meeting last week, for the purpose of receiving the report of the committee appointed to consider the best means of providing a new church. The Rev. Dr. Kenny, the Rector, took the chair. The report of the committee, which was very voluminous, recommended four distinct plans for the parishioners to decide upon. The first was to restore the church on its present site, with all its fittings, which, as it would require the tower to be rebuilt to bear the vibration of the peal of bells, would, according to the surveyor's report, involve an expenditure of 9445*l.*, being 3495*l.* beyond the insurance money. The second plan also recommended the restoration of the church, but to dispense with all the bells except two, as the tower would not then be required to be rebuilt, only to be repaired, whereby a saving of nearly 3000*l.* would be gained, reducing the estimate to 6445*l.*, being only 495*l.* above the amount of the insurance-money. The third plan was to erect a new church altogether, on the same site, on modern principles. The last plan was to restore the church, dispensing with all the bells, and save the expense of rebuilding the tower; and by removing the east end of the church somewhat to the westward, obtain sufficient space at the east end for the erection of a rectory-house. A stormy discussion arose, in the course of which a letter was read by the rector from the Bishop of Winchester approving of the second plan. On the question being put, the adoption of the second plan was carried by a large majority. The church will therefore be restored, with the exception of the peal of bells.

St. Leonard's, Shoreditch.—One of the most tumultuous meetings ever witnessed in the metropolis was held on Tuesday in this church. A vestry meeting had been convened to make a poor and churchyard rate, the churchwarden in the chair. The proceedings commenced at 3 o'clock, and did not terminate till 10 at night. During that period the church presented one continued scene of clamour and altercation, which ended in a general fight. The rate-payers contended that the trustees had allowed the parish money to be embezzled by their collectors to the amount of 1200*l.*, and resolved, with few dissentients, "that all the liabilities for which bills were not sent in by tradesmen should be disallowed." The clergyman having ascended the pulpit at six o'clock to read evening prayers, the meeting adjourned for half-an-hour; after which the proceedings were resumed with increased uproar. In order to raise the sum of 5798*l.* 1*s.* 4*d.*, a ninepenny rate was voted and carried against an elevenpenny rate proposed by a trustee. Several rate-payers accused Mr. Coste, the relieving-officer, of great cruelty in telling a poor widow, who had applied for crutches for her lame child, that she might get a pair of broom-handles, as there was no crutches for him. This accusation, with other similar charges, drove the meeting into a state of fury against the officer. It having been proposed that a farthing churchyard rate be allowed to raise 170*l.*, a ratepayer, after alluding to the "Puseyite doctrines" inculcated in the church, moved that there be no churchyard rate allowed, as it was principally applied for the support of the church. The motion was carried by a majority of 123 to 19. A vote of thanks to the chairman was also lost by an immense majority. At the termination of the meeting a conflict commenced, during which blows were struck, and the church seats were overturned. The affair was ended by the beadle and constables ejecting the parishioners, and closing the church doors against them.

University College.—The by-laws of the college, passed at a general meeting of the proprietors, in May, 1842, contain a regulation for the gradual admission of *alumni* of the college to a participation in its government. With this view, the council are authorised to constitute students of the college, who have graduated with honours at the University of London, members of the corporate body, by conferring on them for life such shares as, in consequence of forfeiture, or of being ceded for the purpose by proprietors, they shall have the power of disposing of. The members to be so constituted are to be styled "Fellows of the College," and to enjoy the privileges possessed by other proprietors, especially the right of taking part in the election of the council, and eligibility to be themselves members of that body. Not more than one-third of the shares to be so disposed of in any one year are to be conferred on graduates in medicine, nor more than two-thirds among graduates in arts and law. This law has lately been acted upon for the first time by the council, by the appointment of three fellows—one for each faculty. The gentlemen who have received this distinction are Mr. John Richard Quain, of the Inner Temple, Bachelor of Law; Dr. John Taylor, Keppel-street, M.D.; and Mr. Jacob Waley, of Lincoln's-inn, M.A.

The Murder of Mr. Dadd.—Considerable doubt appears to exist as to the actual position of the unfor-

tunate young man whose parricide has given such notoriety to Cobham Park. It appears that he is now in custody at Fontainebleau, and that his family have memorialized the Home Secretary for permission to allow him to remain in France, where he will be properly taken care of as a lunatic, thus avoiding a trial in this country, which can terminate only in his confinement for life.

Custom House Frauds.—Several new frauds were discovered at the Custom-house last week, in which parties before unsuspected, are implicated. The greatest secrecy is observed by those who are conducting the investigation, and consequently the particulars have not yet transpired; but it is generally understood that some of the more important discoveries relate to the foreign fruit trade. Large quantities, it is said, have been admitted from foreign shores either entirely duty free, or at a very reduced rate of duty. Owing to the dismissals and suspensions at the Custom-house, in consequence of the recent frauds, several Officers of the Customs at Bristol have been removed to the metropolis until those vacancies are filled up.

Excise Notice.—The Commissioners of Excise having been informed that the medical profession continue to retail spirits of wine without a license, have issued the following official order:—"Excise-office, London, Sept. 12, 1843.—It having been discovered that various apothecaries, chemists, and druggists, have been selling spirits of wine in a pure and unmedicated state, by which they have incurred the 50*l.* penalty imposed by 6 Geo. IV., c. 81, s. 26, for retailing spirits without a permit: Ordered, that the attention of the several collectors, supervisors, and officers in the United Kingdom be directed to this subject; and that the officers call upon the different surgeons, apothecaries, chemists, and druggists, in their respective divisions and rides, and respectfully explain to each of them the liabilities which they will incur under the above law should they sell pure and unmedicated spirits of wine without entry and license. And if any cases be discovered where such practices are continued after the parties have been cautioned, the same must be stated to the Board for prosecution." If this order be strictly enforced, no chemist or apothecary will be able to dispense less than two gallons at a time, even in an urgent case.

Kensington.—At the petty sessions last week, a question which has often been discussed at previous meetings in this parish, was revived for the purpose of deciding what class of jurors is entitled to the term "Esquire." Captain Bague said, he found that the name of "Thomas Chancellor" was described in the printed form as "coach-master," while it now stood as "Esquire." He should, therefore, require the senior churchwarden to explain the reason for the alteration. Mr. Chesterton, in explanation said, the parish officers had been instructed that every person ought to be called an "Esquire" who held the office of Commissioner of Land-tax, as, although they were not holding a commission direct from the Crown, they were entitled, as "filling an office of trust," to be so termed. Mr. Hanson, as one of the parish Officers, would contend that all gentlemen who filled the office of Commissioner of Land-tax, held an "office of trust under the Crown." By the 43d of George III., cap. 99, Mr. Thomas Chancellor and other gentlemen resident in the parish of Kensington are mentioned by name as the commissioners appointed to carry the provisions of those acts into effect, and they had all qualified according to law. Now he would contend that if Mr. Chancellor had not been a man of trust, he would never have been appointed by the Crown as a Commissioner of Land-tax, and as the act of Parliament had received the sign-manual of the King, all appointments under it became appointments under the Crown, as well as under the Parliament, and being thereby placed in an "office of trust under the Crown," he submitted that the Commissioners of Land-tax were as much entitled to be in the jury list designated as "Esquires" as any other class of persons. As the question was an important one, and necessary to be decided, he would, if the bench would postpone their decision, obtain a legal opinion on the subject. Captain Bague considered Mr. Hanson had brought forward no proof that the appointment of Commissioners of land-tax was any act of the Crown. The chairman said, according to Mr. Hanson's reading, every postman filled an office of trust, and ought to be an esquire. He considered Mr. Hanson had proved himself out of court, and he for one would pay no attention to any opinion on the subject less than the opinion of the judges of the land. The Bench then directed the clerk to give the necessary notice to each of the persons whose designation was objected to to attend the next meeting of the justices, to show cause why such designation should not be altered. On Saturday the magistrates held an adjourned sessions, and after hearing some further arguments, the chairman said it was the opinion of the bench that Mr. Chancellor, and the other gentlemen acting as commissioners of land-tax, did not hold offices of trust under the Crown, and were, in fact, not entitled to rank as esquires, or to sit on special juries. Mr. Hanson said it was his intention to take the matter before a superior court. It was also decided in the case of Mr. Pitt, who had been a captain of volunteers, that that gentleman was not entitled to "esquire," and his designation was altered to that of "gentleman." Upon this case, also, it was intimated that the opinion of the Judges would be sought. We may here state that a discussion similar to the above has been going on before the magistrates at Brighton, and with the same results.

Lotteries and "Distributions."—On Monday night a meeting was held at the National Association, in Holborn, to hear a lecture from a Mr. Mudie on Scottish minstrelsy, and to witness a "distribution" of prizes, varying from one shilling to one guinea, promised by Mr. Lee, the publisher of a penny periodical, to all purchasers. The

hall was crowded to excess. As there was no appearance of the promised prizes a general row ensued. Mr. Mudie in vain attempted to address the meeting, and ultimately the anger of the assembly was vented upon the building. An attack was made upon the forms, tables, chairs, and gas-fittings of the hall, which were quickly demolished. The gallery railings were destroyed, and the violence of the mob extended to the adjoining houses, the windows of which were broken. A messenger was at last dispatched to Bow-street for the police, by whom the rioters were ejected, but not before 30*l.* worth of property were destroyed. A woman's arm was broken in the affray.

Wood Pavement.—The Commissioners for Improving the Liberty of Saffron-hill have resolved that Hatton garden from Charles-street to Holborn shall be paved with wood on the hexagonal plan of Mr. Steede. The St. Pancras vestry, on Wednesday, contracted with the Metropolitan Company to lay down 11,000 square yards in the New Road, at the rate of 1*l.* 6*d.* per square yard, the works to commence forthwith, and the entire road from King's Cross to Euston-square to be completed within two months.

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, Sept. 23, is as follows:—West Districts, 135; North Districts, 159; Central Districts, 199; East Districts, 221; South Districts, 269; Total, 983. (Males 483, Females 590.) Weekly average for the last five years 903, (461 males, 442 females), and for the last five summers 846.

Provincial News.

Birmingham.—A meeting was held at the Public-office in this town on Thursday week, when a deputation was appointed to wait upon Mr. T. Attwood, with a requisition signed by upwards of 16,000 persons, inviting that gentleman again to come forward in public life. The next day the deputation waited on Mr. Attwood, and the requisition having been presented, Mr. Attwood, in reply, said that "the late great changes in the corn and provision laws, by removing in a great degree the buttresses which propped the powerful landed interest, have given a prodigious accession of strength to the public cause. Those changes are now forcing the owners of land into a community of suffering and feeling with the owners of labour. Holding these opinions, and having your confidence to assure me, I will immediately consult the friends upon whose assistance I rely; and with their concurrence I will shortly submit for your approbation the best plan which my humble reason can devise, for restoring safety, prosperity, harmony, and contentment to all classes of the people."—The Chartist Convention, lately held in this town, have started the project of raising 100,000*l.*, to be appropriated in the purchase of 1,000 acres of land, to be divided into small allotments.

Brighton.—On the 28th the Bishop of the diocese laid the first stone of a new church at Hurstpierpoint, near this town. The old church has been removed, and above 6000*l.* have been raised by subscription, for the purpose of building a large church on the site, capable of holding 1000 persons, and at an expense of 7000*l.* Mr. Barry, the architect of the new Houses of Parliament, has been employed to prepare the plans for the church, which is to be in the decorated Gothic, with chancel, transepts, and spire. The Rector, Rev. Cary Borrer, is a donor to the extent of 1000*l.*; Mr. Campion, of Danny Park, gives 1200*l.*; and Mr. Borrer, the Rector's father, 500*l.*, in addition to the stone for the building.

Bristol.—We learn by the local papers that a proposal has been made to erect a monument in Redcliffe church to the poet Southey, who was a native of that city.

Buckingham.—A correspondence lately appeared between Lord Nugent and Mr. Edmund Dayrell, of this county, in reference to a petition presented to the House of Commons by Mr. T. Duncombe, bearing the signature of Lord Nugent, the high sheriff, and others, in which were expressions Mr. Dayrell considered objectionable, if not personally offensive. Several letters passed, which only served to widen the breach, and a hostile message was the result. The affair was then placed in the hands of friends, of high standing in the army, who have amicably arranged the matter, by withdrawing the expressions objected to on both sides. The seconds decided that the petition was drawn up by a lawyer, that its language was such as is commonly used in official and legal documents, and that it did not constitute grounds of personal offence.

Carmarthen.—A proclamation was issued by the Queen in Council on Tuesday, in reference to the late outrages in South Wales, calling upon the local authorities to use their utmost endeavours to bring the offenders to justice, offering a reward of 500*l.* for information which may lead to the conviction of a principal in any case of incendiary fire or loss of life, and of 50*l.* on the conviction of any other rioter, together with the Queen's pardon for the offence, in case the person making such discovery shall be liable to be prosecuted for the same.—At the recommendation of the Lord Lieutenant the names of twenty gentlemen have been added to the commission of the peace by the Lord Chancellor. This step has been taken in consequence of repeated representations from various quarters of the inadequacy of the former number of magistrates in the present disturbed state of the county. Mr. Maule, of the Treasury, arrived at Carmarthen on Thursday night, and early on Friday had interviews with Colonels Love and Trevor. His visit appears to have been well-timed, for in the evening there was marched into town, in the custody of the London police, one of the most notorious disturbers in the county, named Jones, who had long been a terror to the inhabitants. Latterly he has been seen going about with a gun and a brace of pistols, and it has occurred in

many instances that farmers and labourers were, under the fear of death, forced by him to the perpetration of nocturnal outrages. At length information was received by Inspector Tierney, of the London police, who, with 17 men, marched from the Gwendraeth iron-works on Thursday evening, and scoured the mountains round for ten miles, and at length captured a companion of Jones at a public-house on the Pombray mountain. This man was instantly sent back in custody, when the remainder of the police started in search of the principal offender, whom they arrested without receiving injury, though he was fully armed at the time. Both prisoners have been lodged in Carmarthen gaol. The nightly outrages continue more or less frequently in different parts of the county. On Thursday night the house of a poor woman who had given them some offence, situated at Penhrw-common, near Cross-hands, was attacked by a party in disguise, and razed to the ground. The meetings of the farmers and turnpike-trusts are also very frequent, and the latter in most instances have decided on not re-erecting the gates. At St. Clears, where the late outrages had their origin, the farmers met on Friday week to discuss their grievances, but the only one named was the unsatisfactory manner in which the affairs of the Whitland turnpike-trust had been managed. It appeared that this trust was first established in the year 1791, and that the money borrowed at the time was between 3000*l.* and 4000*l.*; since that period the gates had been let at 500*l.* and more per annum, but even with this large rental the tally-holders had lost the interest of several years. The farmers were of opinion that if the affairs of the trust had been properly conducted, the money originally borrowed must have been long since paid, and that they should be now reaping the benefit of having their lime and coal free of toll. A strong feeling was expressed against the managers of the trust, and some of the farmers were desirous of moving that they should be proceeded against for expending money contrary to the provisions of the Act of Parliament. Another meeting was held on the 27th at On Allt-cyn-adda, for the purpose of seeking a redress of grievances, the mayor of Kidwelly in the chair. A petition to the Queen was adopted, embodying the question of legal fees, fixity of tenure, and consolidation of taxes charged upon the land as rent, and concluding with a prayer for the dissolution of the present Parliament.—A meeting was held on Wednesday, on the mountain Ben Crag-y-balog, at which a petition to Parliament embodying the grievances of the farmers was adopted, but omitting all reference to vote by ballot, fixity of tenure, or the dissolution of Parliament.

Deal.—Preparations have commenced this week under the direction of Captain Bullock, of the Trinity-board, for the purpose of fixing on the Goodwin Sands an iron beacon, invented by Mr. Stewart, and constructed upon the principle of the ponderous-footed pile, which is the great novelty in Mr. Stewart's plan for the formation of a harbour of refuge.

Derby.—The Rev. H. L. Oxley, late a priest of the Church of Rome, publicly renounced that Church, and received the Sacrament on Sunday week, at Christ Church, in this city. Mr. Oxley had been for some years priest of the Catholic Church in Leeds, chaplain to a nunnery in Leicestershire, and a member of the order of Dominicans.

Gloucester.—The funeral of Sir Matthew Wood took place on Monday, at the parish church of Hatherley, near this city. The ceremony, in accordance with the directions of the deceased, was altogether private, and attended only by the immediate relatives. Hatherley is part of the property which the late Sir Matthew inherited from James Wood, the banker.—On the debate which arose on the motion of the Earl of Powis, respecting the union of the sees of St. Asaph and Bangor, the Duke of Wellington and the Bishop of London stated that as far as they had heard, the union of the sees of Gloucester and Bristol had worked well, and was a measure in accordance with the feelings of the Church. The *Times* now announces that a circular, signed by a majority of the resident clergy of these united bishoprics, has been forwarded to the Duke and the Bishop, informing them that the union is a measure disadvantageous to the Church.

Halifax.—A few nights ago a large barn in the occupation of Mr. P. Dixon, of Liversedge-hall, near Heckmondwike, was burnt to the ground, and corn, the produce of 21 acres, and hay, of 10 acres, stacked within and around the building, were entirely consumed. Mr. Dixon estimates his loss at more than 300*l.*, and not having secured his crop before the preceding night, he had not taken any steps towards insuring his produce, which is therefore lost. There is no doubt that the fire was the act of an incendiary.

Ilford.—During the last two or three weeks considerable sensation has been created amongst the parishioners of Great Ilford and Barking-side, in consequence of the introduction of certain novelties in the performance of Divine service. Some of the influential gentry of the district have left the church in the midst of Divine service, particularly since the curate has introduced the custom of crossing himself on approaching the communion table. These circumstances have led to a strong remonstrance from the parishioners, to which the vicar has replied by denying that the crossing and bowing before the communion has his sanction; but, at the same time, he proceeds to justify it under an old ecclesiastical law of the Church; states that it is practised in all Protestant churches on the continent; and declares that the Bishop of Exeter, although he does not himself practise it, sanctions the clergy in crossing themselves on approaching the communion; and that it is a practice common among ministers of the "High Church" party, of which he avows himself a member. He concludes, however, by expressing his willingness to obey whatever commands the bishop may think proper to make in the matter.

Isle of Man.—We mentioned last week that six criminals had effected their escape from Castle Rushen, in the Isle of Man, and, having seized the governor's pleasure boat, had put out to sea. Subsequent accounts state that they had landed near Amlwch, in the island of Anglesey, and immediately resumed business. This led to the recapture of two of the party. One of them subsequently escaped from the constable, but the other has been committed to Beaumaris for trial. They are represented as Liverpool thieves of well-known reputation.

Ipswich.—The *Temperance Recorder* for this month contains an "Essay on the Town of Ipswich," from which it appears that no less than 50,000*l.* a year are spent there in beer, porter, wine, and spirits.

Lichfield.—The annual meeting of the Lichfield Agricultural Association took place in that city last week. The show of cattle was described by judges to be exceedingly good; but, notwithstanding the contiguity of Birmingham, there was but a poor display of Agricultural implements. The dinner took place as usual at the close of the show, Lord Hatherton as President for the year in the chair, and Sir R. Peel officiating as Vice-President. Lord Hatherton, in proposing "Success to the Society," inculcated the necessity of farmers and their children visiting those parts of the country where the best systems of cultivation were known to exist. They would then become acquainted by ocular survey with many advantages of which they had previously been unaware, and be enabled to apply them with efficiency in the tillage of their own land. For the last 24 years he had been a practical farmer, and had never less than 2,000 acres of land on hand. He was happy now to say that vast improvements were taking place in his own neighbourhood, that some of his tenants, distinguished for their enterprise and skill, had visited Scotland and the northern parts of England, and the result was, that they were knocking down their hedges, removing timber from encumbered land, laying out their farms on new plans, incurring increased expense in draining and sub-soiling, reducing their fences, filling up ditches, and employing labourers in hand-weeding; all of which operations had been for years in practice in those parts of the country to which he had referred, and to which the farmers were indebted for the good results witnessed in those districts. There was, however, one other topic to which he could not help referring; it was of the utmost importance—the economizing of water. Many farmers were not aware of the nature of water which was drawn from the land by draining, and instead of esteeming it as a precious gift from heaven, treated it as an enemy, suffering it to be entirely lost. Now he himself, acting under the advice and experience of Mr. Bright, had caused his waste water at Teddesley to be directed into one stream, and at the small expense of 1,000*l.* he had obtained a mill power, whereby he effected a saving of 450*l.* per annum in threshing, cutting straw, sawing, grinding malt, and other agricultural operations. His Lordship then directed the attention of the company to the beneficial effects of stall-feeding, and stated, that as he had become an enthusiast in the cultivation of land, and knew from his experience as a stock farmer that it was impossible to succeed where game was rigidly preserved, it was his intention to destroy all the rabbits and hares upon 900 acres of his land. Lord Hatherton then proposed the health of Sir R. Peel, stating that he could affirm in the strongest possible terms, that although the right hon. baronet had many political opponents, he had not one political enemy throughout the country. Sir R. Peel returned thanks at great length. After expressing his concurrence in the opinion of the chairman, that the greatest benefit would result to the agricultural interest of this and other localities if they would themselves take the opportunity of watching the result of successful experiments in other parts of England, he proceeded to the question of giving to the occupying tenant a more permanent interest in the land than that which he can have where the duration of the tenancy is only from year to year. "Much," he said, "depends upon the custom of the country. In the north of England, and in some parts of Scotland, no tenant can be found who would expend his capital on a farm unless he had the benefit of a lease. That practice does not prevail in this part of the country; but I hope that a feeling of reciprocal confidence between the landlord and tenant has more the effect of giving the same feeling of security to the latter than the leasing system gives in Scotland. I believe, in fact, that where the practice of tenancy at will exists, there exists also an almost universal feeling of reciprocal confidence between landlord and tenant. But at the same time I do not hesitate to say, though I have not a single lease on my estate, because it is not the custom there, that if any tenant of mine did say to me that he would feel his character exalted by having a greater permanency of tenure, that it would induce in him a greater disposition to embark his capital in cultivation, or that it would be more agreeable to him to have that permanency of tenure which a lease would give, I should hesitate very long before I declined to accede to his proposition. Of this I am confident, that unless there be that feeling of reliance on the part of the tenant, either by a lease or by a full confidence in the generosity of the landlord, a full assurance in some way or other, either legally or morally, that advantage will not be taken of his improvements, that neither political differences nor any other cause will be allowed to disentitle him to the benefits derivable from the capital he may expend.—I am certain, I say, that unless this condition be complied with, agriculture will not make that progress which I consider to be essential to the best interests of the country. Now, one word as to the condition of those who are immediately occupied in the cultivation of the

soil. I think it is impossible not to see that it is of immense importance to the possessors of property that the farm-labourer should have a deep interest in the soil. The question was agitated last session with reference to the policy of allotments to farm-labourers, and much important evidence was taken upon the subject before a committee of the House of Commons. I have read that evidence, and the impression on my mind, whether in a political or a moral point of view, is in favour of allotting to the respectable labourer on a farm such a small portion of land as would afford occupation to the vacant hours of himself and his family, and give him an interest in the soil common with the great proprietors. I do not know a better occupation for the few leisure hours he has to devote to the superintendence of his family, than the attention to a small portion of land for the increase of his means of subsistence. I am now speaking of farm-labourers only, and not referring to those in towns and villages; and I must say, as far as my experience goes, limiting the quantity allotted to what can be cultivated by the labourer and his family—not converting him into a small occupier of land, but giving him only a garden allotment—that I consider such a system of allotments would have a great tendency to raise the moral character and increase the happiness of the class of farm-labourers. Attention to the condition of the labourer will do more to raise these institutions in general estimation than any improvements we can make in machinery or in stock. You who have witnessed the scene of the last quarter of an hour—who have seen respectable labouring men called forth to receive prizes for their good conduct—cannot have seen it without feeling that these institutions have a tendency to strengthen the bonds of connexion between the tenant and the landlord. Gentlemen, if my life and health are spared, I shall have the satisfaction of presiding at your next meeting. Meetings of this kind have a great tendency to remedy one evil under which the agricultural community labour. From the extent of your farms you live separately, and do not possess those means of meeting frequently and of profiting by mutual intercourse which are possessed by persons in the manufacturing districts. These meetings bring you together in unrestrained and free intercourse, and tend to destroy that unhappy prejudice among farmers that the particular course of agriculture pursued by each is the best. Why, there was not a competitor here to-day who did not leave home under the perfect conviction that his beast was the best. I myself participated in that delusion when I left home, but I found out that I was unsuccessful. So with the farmers generally. When they come to these meetings they see better beasts than their own; and they go away with the opinion that they have not yet arrived at the utmost limits of success, but that increased attention will lead to more improvement. I hope all who have been successful this day will strive to maintain their position next year, and that the unsuccessful will try to deprive them of the advantage they have gained. I do hope, gentlemen, that I shall have the satisfaction of meeting you again next year. I am afraid that the occupation of my time and my want of experience I shall not be able to give you so excellent a lesson as my noble friend has delivered to you this day; but this I can assure you, that I shall equal him in the desire to promote the prosperity of this institution, and that there is no one, however versed he may be in practical agriculture, who feels, whether on private or on public grounds, a more sincere desire than your vice-president entertains to see the agriculture of this country so prospering that it may improve the condition of those who pursue it, and add to the strength and resources of the British empire." Several other toasts followed, including the Members for the county and city, for which Lords Ingestre and Leveson returned thanks.

Liverpool.—It is understood that Mr. Dyce Sombre, who, it will be remembered, disappeared from the Adelphi Hotel, a few days ago, has written a letter to his friends, in which he gives them to understand that he is in Paris. —The sales of cotton on Monday amounted to not less than 25,000 bales, and an advance of $\frac{1}{2}$ d. per lb. was established. This is one of the largest daily sales that has ever taken place in Liverpool. The hand-loom weavers have also had a full share of the benefit of the present revival in the cotton trade. From the great demand for the mousselines de laine, the cloth of which is better manufactured by hand than by the power-loom, they are mostly fully employed, and are receiving better wages than they have received at any time for the last 10 or 15 years.

Lutterworth.—A serious accident occurred to Mr. Sidney Gurney, son of Baron Gurney, whilst shooting with Mr. R. Gough, at Misterton, near this place, on Tuesday, the 26th ult. In getting over a hedge, both barrels of Mr. Gurney's gun accidentally exploded, the contents lacerating the muscles and flesh of the left arm. The hemorrhage was so great that, had not Mr. Gough immediately tied his handkerchief tight round the arm, fatal consequences might have ensued. Mr. Gough then placed Mr. Gurney upon his shooting pony, and conveyed him to the Lutterworth mill, where a surgeon dressed the wound, and it is hoped that the limb may be saved. The concussion was so violent, that both locks of the gun were broken to pieces.

Oldham.—The local papers state that Mr. Thomas Fielden, brother to Mr. Fielden, M.P. for this town, has permitted the sale of his property, rather than pay the amount claimed by the Income Tax Commissioners. It appears that the three years on which the return of income was made were most disastrous to the firm in which Mr. Fielden is a partner; and though the usual statements were made by the firm, and sworn to as correct, yet the Commissioners assessed the firm in a sum which Mr. T. Fielden refused to pay. The consequence has been the sale of some hay and a horse for the amount due.

Oxford.—The Rev. William Thompson, M.A., Fellow of Queen's, has been appointed principal of St. Edmund's Hall, vacant by the death of the Rev. Dr. Grayson. The names of the Rev. C. P. Eden and C. Marriott, Fellows of Oriel, are mentioned as likely to succeed the Rev. J. H. Newman in the vicarage of St. Mary. The living is in the gift of the Provost and Fellows of Oriel, by whom Mr. Newman was appointed in 1828. The Rev. Dr. Pusey has returned to Oxford, with his health quite restored. It is understood that Wednesday, Oct. 11, is the day appointed for the hearing of the appeal from the Vice-Chancellor's Court to the delegates in convocation, in the cause of "Macmullen v. the Regius Professor of Divinity."

Ryde.—On Sunday last, the Rev. R. Waldo Sibthorp received the Holy Communion at the parish church of St. Helen's, near this town. It is presumed that this is a virtual renunciation of his connection with the Church of Rome, and of his return to the Church of England, from which he seceded about two years since.

Worcester.—Mr. Strensham, of Strensham Park, in this county, on whose estate the author of "Hudibras" was born, has erected in the parish church a monument to his memory. The following is the inscription:—"This tablet was erected to the memory of Samuel Butler, to transmit to future ages that near this spot was born a mind so celebrated. In Westminster Abbey, among the Poets of England, his fame is recorded. Here, in his native village, in veneration of his talents and genius, this tribute to his memory has been erected by the possessor of the place of his birth—John Taylor Strensham." Samuel Butler, the son of a farmer of the same name, was born in the parish of Strensham, on the 13th February, 1612, and was buried in St. Paul's, Covent Garden.

Railways.—The following are the returns for the last week:—London and Croydon, 3284; Sheffield and Manchester, 6724; London and Greenwich, 8264; London and Blackwall, 10404; Hull and Selby, 10414; Great North of England, 13474; Glasgow, Paisley, and Ayr, 13644; Newcastle and Carlisle, 15704; Birmingham and Derby, 16014; York and North Midland, 17984; Northern and Eastern, 17614; Birmingham and Gloucester, 22754; Midland Counties, 22604; Edinburgh and Glasgow, 26794; Eastern Counties, 29604; Manchester and Birmingham, 33164; South Eastern and Dover, 43884; North Midland, 47074; Liverpool and Manchester, 47474; London and Brighton, 53444; Manchester and Leeds, 55094; Grand Junction, 88254; Great Western, 15,5294; London and Birmingham, 17,6384.—The half-yearly meeting of the Sheffield and Manchester Company took place on Wednesday week, at Sheffield, when the report of the directors announced that considerable improvement had taken place in the prospects of the line, which was now proceeding with vigour. The receipts for the half-year upon the line already opened, were 93914; expenditure, 64594; leaving a balance of 29324. The number of passengers amounted to 347,414, being an increase of 189,080. It was expected that a saving of 50,0004. over the Parliamentary estimates would be effected. The branch line to Ashton was about to be commenced, and another to Barnsley was in contemplation. —The operations at the H. 3-oniff Lay Viaduct of the Dover Railway, and the Ash cliff Tunnel are fast approaching to completion. The timber portion of the viaduct is within a few feet of its entire length, and the range of cliffs in its rear is about to be scarped down to a uniform incline, similar to the cliff at the entrance of Shakspear Tunnel. The trains passing along the viaduct will be screened from the spray of the sea by a fence or parapet along its side, and on the bottom by the timber platform. The arches of the tunnel are completed, but at present blocked up, and concealed by exterior mining operations. The approach walls at both ends have reached their half height. The brickwork is much admired for soundness and execution: in this instance there are not only the walls of a tunnel, but also those of a fortress, the massive masonry in some parts is 10 feet thick. It is understood that the tunnel, in consequence of its immediate connexion with the fortress, is to be barricaded with gates of great strength, and that provision will be made for defending it by musketry.—Last week Mr. Braithwaite and another gentleman arrived at Brentwood from the Shoreditch station of the Eastern Counties Railway, each upon a four-wheel locomotive propelled by themselves, at the rate of at least twelve miles an hour. The name given to these novel carriages is "Railway Velocipedes."

IRELAND.

Dublin.—On the 28th ult. an adjourned meeting of the Repeal Association took place, at which Mr. O'Connell noticed the article in the French *Journal des Debats*, quoted in our Paper last week. He commented particularly on the statement of the *Debats*, that "Ireland was blind to wish for repeal, and as to England, she ought never to consent to it, inasmuch as her separation from Ireland would cause her to descend to the rank of a third-rate power." He then proceeded to attack the King of the French, and condemned in violent language every member of the junior branch of the House of Bourbon. He apologised, however, for the elder branch, which, he said, was always friendly to the Irish, and terminated by declaring that if Henry V. would give a charter to France, and should afterwards require an Irish brigade to enter Paris, he should have it in forty-eight hours. —The usual weekly meeting of the Association took place on Monday. A letter was read from the Hon. Mr. J. Ffrench, requesting that the people of Ahascragh, who had been punished for pulling down an arch erected in honour of Mr. O'Connell's visit, might be now forgiven. According to Lord Ffrench, they have "expressed the deepest feelings of sorrow at having, however innocently, suffered themselves to be mixed up with

any transaction which should cause them to incur the displeasure of their august leader and of the Loyal National Repeal Association;" and his lordship offered himself as a guarantee that "they will in future conduct themselves peaceably, and strictly observe the counsel and regulations of the association, upon their being graciously pardoned by the Liberator, and the town of Ahascragh once more replaced within the pale of the association." Mr. O'Connell said that any request from Lord Ffrench must be granted, and Ahascragh was accordingly forgiven and restored to the repeal map of Ireland. He announced that on the reassembling of Parliament he would devote one or two days at the commencement of the session, if the union be not repealed before that, to presenting petitions. What he wanted was to get some ten or twelve petitions, with 100,000 signatures each. He then read a letter from the United States, signed by John Arlington Bennett, major-general, and John Clinton Beckman, adjutant-general, offering military organisation to assist him. "Of course," he said, "I spurn it (tearing the letter in pieces). That is the way I treat their military organisation. I have a trick worth two of that." He next announced a return of the population and probable number of voters of the town of Athlone. This, said he, completes letter A, and we shall now proceed in order, for we must finish these returns before we get up the three hundred—bog-trotters, as the *Times* calls them. As yet we have but four—ah! this is what delays me—for I can do nothing without these returns. We must have everything ready for her Majesty, so that she may at once issue her writs and summon the Irish Parliament to meet in Dublin." He therefore moved that similar returns be procured from the towns of Carlow, Clare, Carrick, and Clonmel. The rent for the week was 8144. 7s.—Another adjourned meeting took place on Tuesday, at which Mr. O'Connell complained that his observations on the Royal family of France had been misrepresented. "He had never bestowed unqualified praise upon Charles X. of France. He might have spoken commendably of his domestic virtues, but he had committed the greatest of all crimes in having put down the constitution of France, probably misled by that madman Polignac. He certainly did praise the grandson of Charles X., Henry V.; and he repeated that eulogium now, and he also repeated that he would wish to see Louis Philippe—who was the friend of an infidel university, who had abolished the liberty of the press, and the trial by jury where it was most required, that was in Crown prosecutions—succeeded by Prince Henry, provided he gave constitutional guarantee of rational liberty. He would not go to war, notwithstanding the taunts of the journals. He would continue the agitation peaceably, and he defied anybody to say that six months of that peaceable agitation would pass over without the Government coming to talk to them of an arrangement for a domestic Parliament. He certainly would not go to war to please the French democracy or the English conservatives." —The first of the Repeal Arbitration Courts was held on the 29th at Blackrock, five miles from Dublin. The following arbitrators, appointed by the Repeal Association, were in attendance:—Dr. Gray, (chairman), Mr. J. O'Connell, M.P.; Major Nicholson, Messrs. James Nugent, John Rafferty, and Matthew Moriarty. Immediately after the arbitrators entered the court, it became densely thronged, and the liveliest interest appeared to be taken by the spectators in the proceeding. Not the slightest interruption took place throughout the day, and two cases were heard and disposed of to the satisfaction of all parties. Dr. Gray stated that the origin of the court was the dismissal of certain gentlemen from the magistracy, because they exhibited an attachment to legislative independence, and the people had therefore determined to appoint their own magistrates—a right which the constitution and statute law vested them with, and which they thus resumed at the recommendation of the Association. The court would be perfectly open to all, and would submit to the strictest scrutiny in all their proceedings, all its members having made a solemn pledge to do justice to all parties impartially.

Mullaghmast.—Another of Mr. O'Connell's "monster" assemblages took place on Sunday, at the Rath of Mullaghmast, in the county of Kildare. The matter had been much spoken of beforehand, and consequently a vast concourse of people were assembled. With the associations connected with the locality of Mullaghmast—the alleged massacre of four hundred of the principal persons of the district in the early period of English rule, the public had been made familiar, as the subject has recently given rise to much controversy. Mr. O'Connell appeared in the scarlet velvet robe which he wore as Lord Mayor of Dublin, and was accompanied by the Aldermen in their robes of office, which appeared to be objects of great curiosity to the peasants. Among those on the platform was Mr. Hughes, one of Mr. Gurney's short-hand writers, who attended on the part of the Government. This is the first occasion on which a professional reporter was sent by the Executive since the commencement of the present agitation. Mr. O'Connell said he thought that Mullaghmast as the scene of English treachery was a fit and becoming spot on which to show their unanimity, and on which, in the open day, to evince their determination not to be misled by any treachery. "Oh, my friends, I'll keep you free of treachery. But do not fear—there shall be no bargain, no compromise, nothing but repeal and a Parliament of our own. My advice to you is to confide in no false hopes that may be held out to you—to confide in nothing until you hear me say, 'I am satisfied.' And I'll tell you where I'll say that—near the statue of King William in College-green. We have come here to express our determination to die to a man, if necessary, in the cause of Ireland. We have come here to take the advice of each other, and above all I believe you have come to take my

advice. If you obey my advice, repeal is certain. I'll go slow, you must allow me to do that, but I'll go sure. No man shall be fined, imprisoned, or prosecuted who takes my advice. I have led you thus far in safety: I have swelled the ranks of the Repealers until they are identified with almost the entire population of Ireland. I have seven-eighths of the people enrolling themselves as associates. I don't want more power. I have enough, and only ask that you should allow me to use it. The arbitrators are beginning to sit, and the people to submit to them their differences. You will have in those courts friends who will do justice to all parties alike, and without costing you one farthing. I'll go on with that plan until all disputes are decided. I wish to live until I see justice to Ireland and liberty proclaimed throughout the land. It will take me some time to arrange my plan for the new House of Commons—a plan which will be one day submitted to her Majesty, when the present miserable Administration shall be supplanted by one that can be regarded as friendly to Ireland. The Conciliation-hall, in Dublin, will be soon finished, and when it is I'll call together 300 bog-trotters, as the *Times* calls them, although better men never stepped upon pavement. But, until I ascertain the form of the new House of Commons, I do not wish to go further. It is theory, but it may be ascertained in three weeks." A resolution was then passed in favour of the native Parliament, after which a curious scene took place. "The national cap" was presented to Mr. O'Connell, with an address from the committee of management. The material of the cap was green velvet, turned up with light blue, and richly ornamented with gold lace. The form, as described in the address, is that of the old Milesian crown, to which is added a wreath of shamrocks on a white band. When the cap was placed on Mr. O'Connell's head, the plaudits of the people rent the air. The address was signed, among others, by Mr. Hogan, the sculptor. Mr. O'Connell said he accepted with pride and pleasure the national cap as well as the address, which they did him the honour to present to him. He perceived at the head of the list of those signed to the address the name of the first sculptor of the day, Mr. Hogan, the fame of whose genius was recognised wherever art was known. The cap he would preserve through life in recollection of its having been presented to him at the Rath of Mullaghmast, and when he died it should be buried with him in his grave.

Cork.—A ridiculous story has been published in a Cork paper respecting the Lynx brigantine, while under the command of Lieut. Burslem, having been ordered by that officer to fire upon the town while lying in the Cove of Cork. There is not the slightest foundation for the statement. Lieut. Burslem has been invalided in consequence of severe illness, having been attacked by the fever peculiar to the coast of Africa, to which he was subjected when on that station in command of the *Viper*, and which has since repeatedly attacked him in this country. The story of the First Lieutenant having taken the command upon himself is equally erroneous, there being no such officer on board the *Lynx*.—The squadron under Admiral Sir Josias Rowley sailed on Saturday, previous to which the Admiral, accompanied by Captain Rowley and Lieut. Prevost, of the flag-ship, paid a visit to Father Mathew, who received his gallant visitors with his usual urbanity, and on taking their leave, presented each of them with a silver medal. Father Mathew proceeded to Cove on the next morning to return the admiral's visit on board the *St. Vincent*, where his reception was of the most complimentary character.

SCOTLAND.

Ross.—Several serious riots have occurred in East Ross, connected with the induction of the new ministers appointed to benefices void by the late secession. At Resolis last week the Presbytery was deformed at the settlement of the Rev. Mr. M'Kenzie. The authorities were attacked by a large mob of men and women with showers of stones, which compelled the sheriff to read the riot-act, and to direct a party of the coast-guard to fire upon the rioters. One man was apparently wounded in the leg, but being on an elevation, the pistol, although loaded with ball, did not do much apparent damage, and not possessing further ammunition, the revenue officer ordered the party to charge with their cutlasses and sticks. At this juncture, and while leading his men on, he was knocked down, and it is said had a rib fractured by a blow from a stone, and unfortunately, about the same instant, he received a severe wound on the back of the neck from a missile, which covered him with blood. One woman, more bold than the rest, advanced so near that Mr. Cameron, the Procurator Fiscal, seized her; she resisted, however, so vigorously, that it was not until they had both fallen and rolled upon the earth that she was secured, placed in a gig, and driven off to Cromarty gaol by a messenger at arms. In the evening the officer who had taken her to prison was waylaid, seriously maltreated, and his vehicle dashed to pieces. A mob also surrounded the gaol at Cromarty the greater part of the night, and an attempt to rescue was anticipated by the authorities. The presbytery went to Fortrose, where Mr. M'Kenzie was, after certain forms, inducted in the inn; but the rev. gentlemen were, on entering and leaving Fortrose, hooted and pelted with stones. Mr. M'Kenzie endeavoured to preach at Logie on Sunday, but the people again assembled, and violently attacked every one who attempted to enter the church. Among others, Lady Ross was struck, and compelled to escape amidst a shower of stones. The mob retired as soon as they had carried their point, and assembled at Rosskeen, but the Presbytery did not appear. At Kiltarn, on the 27th ult. a similar disturbance was expected, but the measures taken to prevent it were fortunately successful. The lord-lieutenant, accompanied by the sheriff and

a numerous body of magistrates, and even by several of the seceding clergy, among whom was Mr. Campbell, the late minister of the parish, repaired to Kiltarn; there was no interruption to the business, and the Rev. Mr. Mann was quietly inducted. The seceding clergy have condemned the rioters in the strongest terms from their pulpits, and have abjured all such aid and adherents.

Glasgow.—The local papers state that for some time past a kind of secret expedition has been fitting out at this port, and the vessels that have already sailed are under sealed orders, which are not to be opened until the ships have crossed the line. In spite of the secrecy observed, it is now known that the expedition has sailed for an island said to be west of the Cape of Good Hope, and the speculation is likely to be not only lucrative to those engaged in it, but of immense benefit to the agriculturist, as well as to the shipping and commercial interests. It is said that the island in question contains guano of a richer description than any hitherto known. Several vessels have already sailed from this port with implements of every description, and boats constructed for the purpose of carrying the cargo from the shore to the ships. A number of other ships, of large burden, are about to follow. In London and Liverpool, vessels are fitting out for the same destination, but the Clyde shippers have had the start. It is understood that the speculators are two firms in Glasgow, who have chartered the vessels.

THEATRICALS.

DRURY-LANE.—This theatre opened for the season on Saturday evening. The performances consisted of Mr. Balfe's popular opera, "The Siege of Rochelle," and of the new ballet, "The Peri," the last production of this class at the Grand Opera of Paris. In opera and ballet Mr. Bunn has endeavoured to provide the strongest possible companies. He seems actually to have engrossed all the musical actors and actresses of the Metropolis; he has committed the musical direction to M. Benedict; his orchestra is excellent, and his chorus numerous and apparently efficient. The opera was well cast, and well got up, Miss Rainforth appearing as *Clara*, and Mr. Templeton as *Valmour*; but the audience throughout appeared indifferent to the piece, and were more alive to its defects than formerly. The opera, however, was announced for repetition amidst considerable applause from its supporters. The "Peri" is one of the most beautiful ballets ever produced on the English stage. Carlotta Grisi is already known at the Italian Opera-house; but this, her first appearance on the English boards, threw the audience absolutely into transports of delight. Their enthusiasm was exhibited at the falling of the curtain by acclamations which lasted for several minutes. This applause was well bestowed, for certainly a more delightful vision than her *Peri* never appeared upon the stage. As a whole, the ballet was got up in a style of splendour and beauty which has rarely been surpassed at the Opera-house; and it will undoubtedly be a favourite entertainment during the season. The house was crowded, and the boxes had a brilliant appearance.

COVENT GARDEN.—This theatre opened on Monday under the management of Mr. Wallack, with a new five-act drama, entitled "Woman," from the pen of Mr. Bourcicault, the author of "London Assurance," which was so popular two seasons ago at this theatre. On the rise of the curtain Mr. Wallack delivered an address for the occasion, cleverly written by Mr. G. A. Beckett, which was very well received. It alluded to the boldness of the enterprise, to the cold water that had been thrown upon it, to the overflows that were hoped for, and to the reduction of prices which, among other things, it was hoped would produce them. It also stated the resolution of the management to encourage native talent in every department, and to promote success by the production of novelties. The Play immediately followed. *Gaston de Foix* (Mr. Phelps) and *Doria* (Mr. Anderson) are both in love with *Inez* (Miss Vandenhoff) a young lady of great wealth, who has been confided to the charge of *Giotta*, a Genoese artist (Mr. Diddear); but *Doria* is the successful suitor, and thereby incurs the enmity of *Gaston*, whose conduct and speeches resemble those of *Iago*. *Gaston* first excites the jealousy of *Doria* by a playful letter, which *Inez* writes, under an assumed name, to *Cola de Foix* (Mr. W. Lacy), in order to please *Lina* (Mrs. Nisbett), *Giotta's* daughter, who is in love with him, but wishes to play him a trick. By this and other trifling circumstances he works upon the mind of *Doria*, until he believes that his young wife has been unfaithful. Having thus rendered the husband miserable, *Gaston* does not prevail upon him to murder *Inez*, but undertakes himself her death by poison, which he obtains from the Jew, *Benoni* (Mr. Vandenhoff). The Jew has a daughter, who in compassion substitutes a sleeping draught for the poison, so that *Inez* is preserved, when everybody but the young Jewess imagines that she is destroyed. After her supposed death *Doria* rushes into every species of excess and extravagance, and by the instrumentality of *Gaston* loses the whole of his property to a young French count, who, in fact, cheats him; and turns out to be *Ruth* (Miss Cooper), the daughter of the Jew, in disguise. *Gaston*, pursuing his career of villany, betrays *Benoni* to the officers of the Inquisition; and when he imagines they are on the point of seizing the Jew, and carrying him to the stake, one of the black ministers throws off her robe and cap, and discovers herself to be no other than *Inez*, returned, as it were, to life. The Jewess disinterestedly gives back all her wealth to *Doria*, and he is made happy by being restored to his innocent wife, while *Gaston* quits the scene, and vows vengeance against all womankind. This is the merest sketch of the serious incidents, to which we ought to add that it turns out in the end that *Inez* is, in fact, the daughter of the Jew, and that she alone had been saved

out of a wreck at sea. The piece was admirably brought upon the stage, but in many respects inefficiently acted. Mrs. Nesbitt and Mr. W. Lacy alone played earnestly, and did their best for the success of the play. The applause was not great at any time, and in the third act some disapprobation was expressed, but afterwards the action became more rapid, and at the fall of the curtain, when the piece was given out for repetition, the applause much predominated. A new one-act farce, by Mr. Rodwell, followed, which met with very merited success. It is called "My Wife's Out;" and Mr. and Mrs. Keeley, Miss Jane Mordaunt, and Mr. Wigan had parts in it, and acted to perfection. The performance of Mr. and Mrs. Keeley, in particular, was attended with loud laughter from all parts of the house, and the piece is sure to have a considerable run.

ADELPHI.—This house opened on Monday for the season. During the recess it has been cleaned, the ornaments rebrunished, and it looked altogether as well as the Adelphi ever can look. The pieces were a three-act drama from the French, called "Marie," in which Mrs. Yates appeared as *Marie*, and a melo-dramatic version of the ballet of "Ondine," concluding with the farce of "Binks the Bagman."

OLYMPIC.—This theatre also opened on Monday. During the recess the interior has been renovated, and boxes, pit, and gallery are now clean and commodious. The pieces selected for representation were the drama, "Our Village, or the Wreck of the Rattlesnake," which, on its thirtieth appearance, seemed to give as much satisfaction as ever; a farce called "The Little Offspring," and a burlesque on the "Merchant of Venice."

Miscellaneous.

The Fine Arts of England.—At the Sheriffs' inauguration dinner on Saturday, the Rev. Dr. Croly, in returning thanks as one of their Chaplains, made the following eloquent remarks on the present state and prospects of English Art:—"I have always regarded the fine arts much in the light of the original gift of woman to man as a helpmate for him. The bolder and more difficult arts of life and nations—war, law, commerce, science, if they strengthen, perhaps tend to harden the spirit of man. The fine arts, on the other hand, present a perpetual antidote to this sternness; occupying the mind without severity, softening it without weakness, teaching it enjoyment without offence, and opening a new and brilliant way to fame without the crimes and penalties of ambition. It seems to me beyond question that the country is at this moment preparing for a new and rapid advance in this direction. I see a new and powerful combination of cheering and invigorating impulses, all moving in this magnificent road to national greatness. The illustrious personage at the head of the empire, our Queen, whom none can name without honour, and whose cultivated tastes and personal example must so largely influence the higher circles of society, is herself strongly attached to the arts. Her royal consort, whose conduct has already 'won such golden opinions' from all men, and who, though born a stranger, shows by his acts that he has the spirit of a native, is an accomplished artist. The members of the Government, and especially the distinguished statesman at its head, are known for their personal patronage of painting and sculpture. A sudden sense of the beauty and interest of the arts is obviously pervading all ranks; and if the experiment of the cartoons has demonstrated that there were unsuspected originality and force among our rising generation of artists, it has equally demonstrated, in the multitudes of even the humblest ranks who crowded to see them, the sense of admiration and rational delight which the arts have the power to create among the people. I hope that this experiment will be repeated, and convinced that the vigour of the present display will be surpassed, that the future teems with powerful talents, and that the national voice has but to be uttered to bring up a host of new and brilliant spirits to the wing, ready to throw a portion of their lustre on the name of their country. I altogether disregard the scepticism which doubts the possible excellence of the British school. The country which produced Reynolds and Lawrence—to say nothing of our living artists, some of the most distinguished of whom I see around me—has already given pledges to eminence. But even if we had not a single living artist, I could not coincide in the idea that this country could be excluded from any province of national superiority. I have such strong faith in the inexhaustible ability of England, and such evidence of her success in every pursuit on which she has once fixed her mind—I see the miracles of her predominance, her supremacy in government, her glittering triumphs in war—I see the intellectual banner of the nation blazoned with the honours of so many victories—I see such ancient and various quarterings of renown on her heraldic shield, that I can never suppose her incapable of the highest honours in the most tempting and the most self-rewarding tract of national glory. I disdain all notion of despair in a country which has such memory to give her hope. I disdain all idea of falling short of the highest elevation in a country to which genius has so long lent its most soaring pinion. In the latter part of the fifteenth century all the depreciators of national ability cried out that the drama was undone. In the year 1589, at the moment when all the birds of ill omen were floating round the supposed death-bed, Shakspeare started in his immortal career. In 1667 the poetry of England was pronounced to be ruined. Before that year was at an end, the "Paradise Lost" refuted the calumny, and threw imperishable lustre on the land. Let us do our duty as a nation, and we shall find a noble answer. I say as a

GARDENERS' BENEVOLENT INSTITUTION.

Notice is hereby given that an Election for Two Pensioners upon this Charity will take place early in January next. All persons desirous of becoming Candidates are required to send in the Testimonials, &c. to the Committee on or before Tuesday the 3rd November next.

The necessary Forms of Petition may be had on application to EDWARD R. CUTLER, Secretary, 97, Farringdon-street.

WILLIAM IVERY, FLORIST, Peckham, near London.

begs most respectfully to inform his Friends and the Public that he is now ready to send out his six superb and distinct Seedling CINERARIAS; they have been successively exhibited at Chiswick Gardens; Botanical Gardens, Regent's Park, and South London Floricultural, where their merits are well known.

Ivery's Cineraria, Emperor—fine dark shaded purple	s. d.
" " Regina Victoria—pure white, beautifully tipped with purple	5 0
" " Pride of Peckham—pure white, blue eye	5 0
" " Triumph—bright crimson	5 0
" " Delicata—delicate lilac, shaded pink	5 0
" " Regulata—rosy purple, fine form	5 0

W. I. can particularly recommend the following named varieties:—

Webberiana	s. d.	Henderson's No. 7	s. d.
Smith's Challenger	2 6	Ivery's Rival King	2 6
Gaines's Prince of Wales	1 6	" Imperial Blue	1 6
Bell's Decora	3 6	" Royal Blue	1 6
Henderson's Compact Blue	2 6	" Queen Victoria	1 6
" Azurea	2 6	" Princess Royal	2 6
" Magnet	1 6	Youngii	2 6
" Eclipse	2 6	Splendida	2 6

HOLLYHOCKS, HARDY HERBACEOUS PLANTS, &c.

WILLIAM MAY begs to state that he is provided with a supply of the above plants of select quality. The Hollyhocks are of his own stock, which he has been selecting for the last 21 years, and are of every shade of colour. The Herbaceous plants have also been carefully collected, and are of the most showy varieties, comprising the most popular Generas in present cultivation, such as Phloxes, Pentstemons, Aconitums, Anemones, Delphiniums, Campanulas, Lupinus, Onocheas, &c.

The Hollyhocks in collections of 100 plants for 40s.; 50 plants, 20s.; 25 plants, 11s. The Herbaceous plants, 100 sorts correctly named for 42s.; 50 sorts, 25s.; of W. M.'s selecting, including package. Hollyhock seed saved from best double flowers, 200 seeds for 1s. 6d.; 500 seeds for 5s.; Pansy seed saved from best prize flowers, in 2s. 6d. and 5s. packets.

N.B. To those friends who received their Hollyhock plants late last year, W. M. begs to state that any they may have lost in consequence, he will be glad to replace free of charge. A remittance or reference from unknown correspondents is solicited.—Hope Nursery, Leeming-lane, Bedale, Yorkshire, 2d Oct., 1843.

NEW AND DESIRABLE PANSIES.

YOUELL AND CO. beg respectfully to inform Growers of the above that they have succeeded in raising Four New and highly-beautiful Seedlings, possessing first-rate properties, both in size, form, and substance, forming quite a novelty. They will prove a valuable acquisition to those who compete at any Horticultural Exhibition in the Kingdom. Description, as follows:—"Eclipse," a large, flat, and well-formed flower, of fine yellow, and intense eye. "Duke of Norfolk," large, well-formed flower, with a fine eye, primrose ground, with a pencilled edging of delicate blue round the petals. "Lady Alice Peel," white ground, is a large round flower of extraordinary substance, the petals are well formed, and in fine proportion, the quantity of yellow shown in the purple eye increases the beauty of the flower; top petals and margin of a dark purple. "Ann" is also a flower of good form and substance, white ground, slightly tinged with purple, with fine brown and purple eye.

Y. and Co. can most confidently recommend the above, which are now ready to be forwarded to any part of the Kingdom, per post free, at 21s. the four varieties. They also beg to draw attention to their healthy stock of this tribe, which they are offering upon the following terms:—

12 Extra fine and very superior show varieties	18s.
12 Very fine ditto	12s.
12 Fine ditto	9s.

ARRIVAL OF DUTCH HYACINTHS AND OTHER BULBS.

YOUELL & Co. beg respectfully to announce they have received from Haarlem their annual importation of the above in most excellent condition, adapted either for Glasses, Forcing, or open-border culture. Prices as follows—

Fine Single or Double Show Hyacinths	6s. per doz.
Red, Blue, White, or Yellow	
Extra fine Ditto	9s. to 12s.
Extra fine, and very superior Ditto	18s.

The selection being left to YOUELL & Co.

Catalogues may be had on application.

FASTOLFF RASPBERRY.—For particulars of which, see their Advertisement in this Paper of the 7th inst.

ARAUCHARIA IMBRICATA, fine 4-year old plants, 8 to 10 inches, 10s. per 100, or 30s. per dozen.

Myatt's British Queen Strawberry,	1s. per 100.
Eliza,	10s. "

Great Yarmouth Nursery, Oct. 12, 1843.

DUTCH FLOWER BULBS.

J. CARTER, SEEDSMAN AND FLORIST, No. 238, High Holborn, London, begs leave to inform the Nobility, Gentry, and his customers in general, that the late-flowering GLADIOLI, TIGRIDIAS, &c., are now arrived. His new Catalogue of Bulbs will be forwarded, prepaid, on application. The following items were partly omitted in the Catalogue:—

Extra fine mixed Ranunculus	per 100	0 7 6
Very good do.	"	0 4 0
Extra fine new Scotch Ranunculus	"	1 5 0
A splendid collection of English Iris, 150 varieties (matched against any in the kingdom)	"	5 0 0
50 extra fine new Spanish Iris	"	1 0 0
A collection of 75 varieties	"	2 10 0
" 50 very good varieties	"	1 0 0
Very good mixed English Iris	per doz.	0 2 6
Extra mixed Spanish Iris	per 100	0 6 0
Brodiaea—beautiful species from the desert of Copiapo in Chili	each	0 2 0

FLOWER SEEDS.

Nemophila discoidalis, new, black, with white border (should be sown now)	per packet	0 1 0
Tropaeolum polyphyllum—greenhouse	"	0 2 6
A beautiful new fragrant Perennial	"	0 2 6
A new yellow Loasa—Andes, Chili	"	0 1 0

238, High Holborn, London.

FINEST SORTS OF DUTCH FLOWER ROOTS.

HYACINTHS, very fine double, colours separate,	s. d.
per hundred	1 5 0
HYACINTHS, the finest known (by name) per doz.	0 12 0
ANEMONES, new large double, 8d. each, or the collection of 50 Varieties (by name)	1 5 0

EARLY DWARF TULIPS, for pots or open ground, 1s. 6d. per dozen, or per hundred	0 10 6
CROCUSES, of 12 Sorts, per hundred	1s. 6d. to 3 6

And every other kind of Flower-root, equally moderate in price.

It is in splendid Varieties, see last week's Chronicle.

N.B.—Carriage paid to any part of London.

SUTTON and SONS, Reading Nursery, Berkshire.

HYACINTHS AND OTHER BULBS.

HUMPHREY'S COMPOUND, applicable to all Greenhouse Plants, to Hyacinths and other Bulbs, and to promote the germination of Seeds. Sold in bottles 1s. 9d. each, by FLANAGAN & SON, Mansion-house-street; HURST & McMULLEN, Leadenhall-street; W. CLARK, Bishopsgate-Within; GORDON, THOMPSON, and BASKETT, Fenchurch-street; GRIMLEY and CO., Covent Garden; BATT and RUTLEY, 412, Strand; CHARLOWE, Tavistock-row; W. J. NUTTING, 46, Cheapside; G. LAWRENCE, 18, Piccadilly; JOHN KERRAN, Great Russell-street; GOVETT and CO., 156, Cheapside; THATCHER and SON, Islington; JOHN WATKINSON, Market-place, Manchester; and other leading SEEDSMEN in town and country. Wholesale Agents, DAVY, MACKMURDO, & Co., 100, Upper-Thames-street, London.

SEEDLING PICOTEEES.—HOLLIDAY'S HENRIETTE

and QUEEN OF ENGLAND, two beautiful light-edged red PICOTEEES, having taken Seedling prizes at the Floricultural Society Shows, at the Crown and Anchor Tavern, London, in 1842 and 1843, and also at Northampton, are now ready to send out, at 7s. 6d. per pair: the Plants are particularly strong and healthy. Direct, by letter, pre-paid, to J. HOLLIDAY, Horse Shoe-street, Northampton; or to Mr. R. ORSON, Florist, 12, Hall-place, Kensington-lane, Surrey.

NEW AND FIRST-RATE PELARGONIUMS, &c., &c.

W. CATLEUGH begs respectfully to call the attention of the cultivators of them to the Seedlings raised by E. FOSTER, Esq., and the Rev R. GARRH: they took the principal prizes at the Chiswick Horticultural Show, against the Seedlings from all parts of the country; they were universally admired as to properties and distinct colours. Good strong plants will be ready to send out by the end of October, with his Catalogue of Pelargoniums, Calceolarias, Carnations, Picotees, Chrysanthemums, Fuchsias, Verbenas, Roses, Cinerarias, &c., &c. A fine stock of Fresh Mushroom Spawn.—Hans-street, Sloane-street, Chelsea, Oct. 13th, 1843.

JOHN WHITLEY, Silcoates Nursery, near Wakefield, begs respectfully to offer the following articles, at the very low prices affixed.

Fuchsia Defiance	One dozen of any of the above

NURSERYMEN

TO HER MAJESTY,

AND FLORISTS

QUEEN ADELAIDE.

A CATALOGUE OF CARNATIONS, PICOTEES, AND PINKS, GROWN BY YOUELL AND CO., GREAT YARMOUTH, NORFOLK.

TWO NEW AND SUPERB PICOTEES, "LADY ALICE PEEL," 10s. 6d., and "MRS. BENYON," 10s. 6d. per pair. These two splendid PICOTEES were raised by the Rev. J. BURROUGHS, of Lingwood Lodge, Norfolk, and were kindly presented to YOUELL and Co. by that gentleman. They have already obtained Prizes at the Norfolk and Norwich Hort. Society's Exhibitions, and Y. and Co. feel assured that no further proof of their superior merit is necessary when they refer to the eminent raiser of them.

"Lady Alice Peel" is a large, well-formed flower, guard-leaves and petals throughout of fine form and substance, and of the purest white; the lacing a delicate rose, and confined entirely to the edge. This is considered by all who have seen it to be superior to Mrs. Barnard, or any flower of its class, and carries a beautiful long pod.

"Mrs. Benyon" (red edge) also possesses every character of a first-rate show flower, petals of a splendid size, form, and substance, and the blooms expanding so correctly as not to require dressing, and carries a beautiful long pod.

CARNATIONS & PICOTEES.

12 pair of good show s. d.

12 pair of fine ditto s. d.

12 pair of ditto ditto s. d.

25 pair of extra fine and very superior ditto s. d.

Araucaria imbricata, or, Sir Joseph Banks' Pine, 30s. per dozen, or 107. per 100. The finest single and double Dutch Hyacinths, Narcissus, Tulips, Ranunculus, Anemones, Crocus, &c., &c., imported direct from Haarlem, of which a separate Catalogue is printed. Catalogues of their superb Collection of Fuchsias may be had on application, and will be found to contain every known variety worthy of cultivation. Fine Tobolsk Rhubarb, fit for Forcing, 12s. per dozen. Seeds and Plants carefully packed for all climates. Youell and Co., in submitting the above List of Carnations and Picotees, beg to state that the Plants are fine and healthy. Every care will be observed in selecting and packing all orders they may be favoured with.
Great Yarmouth Nursery, Oct. 12, 1843.

THOMAS BROWN begs to acquaint the Growers of PANSIES that strong Plants of his fine collection are now ready for sending out, including several novelties not before offered for sale; also, an extensive collection of PINKS (comprising all the established Show-flowers), CARNATIONS, PICOTEES, TULIPS, &c., &c. Slough Nursery, Oct. 14, 1843.

MR. LYNE'S SEEDLING GERANIUMS, PRINCESS ALICE AND ENCHANTRESS SUPERB.
WILLIAM E. RENDLE returns his grateful acknowledgements for the liberal orders he has received for Mr. Lyne's New Seedlings, which shall be executed in strict rotation as received, excepting "Princess Alice," and "Enchantress Superb," which sorts cannot be sent out this season, on account of the quantity of orders received, and the stock not furnishing so well as might have been expected. In justice to those customers, however, who have ordered these valuable varieties, W. E. RENDLE will take especial care to supply every order that has already been entered, with extra-size double-headed plants at the current prices.

W. E. RENDLE would further state that in accordance with the wishes of many of his friends, he has consented to send out the following six sorts at very reduced prices, thus hoping to receive the encouragement and support of the patrons of this much-admired genus.

Lyne's Princess Alice 2l. 2s.	Lyne's Imogene 1l. 1s.
Do. Enchantress Superb 1l. 1s.	Do. Countess of Morley 1l. 1s.
Do. White Perfection 1l. 1s.	Do. Sappho 1l. 1s.

The above sorts are warranted to possess first-rate qualities, in fact they are all indispensable to a first-rate collection. If three plants are taken of any one sort by the Trade, the usual discount will be allowed. Plants will be sent out in the Autumn of 1844. All orders received before the 31st December, 1843, will be executed with extra strong plants. It will therefore be of importance to order immediately. — Union-road Nurseries, Plymouth, Oct. 10, 1843.

TO CALCEOLARIA GROWERS.
A rare opportunity occurs to make a Collection of CALCEOLARIAS at a small expense.

JOHN STANDISH, NURSERYMAN, of Bagshot, has raised a great number of Seedlings this autumn, which are now ready to send out by post, in tin cases, post-paid, at 16s. per dozen. The above have been raised from two of the best spotted Calceolarias in the kingdom, the seed saved from the plants, which were crossed with great care; and J. S. will warrant that the worst of them will be worth full the price given, and are precisely the same as he will grow himself; but should any doubtful customers be solicited to come to Bagshot and select for themselves, as J. S. has bred from two sorts only, and those were selected as being the best in every way, and will, no doubt, bring some of the greatest novelties ever seen in Calceolarias; they can be sent by post for the next month, after which the plants will be too large, and can then be sent packed in small boxes or hampers. N.B.—A remittance is expected from unknown correspondents.

TULIPS, RANUNCULUSES, HYACINTHS, &c.
H. GROOM, Clapham Rise, near London (removed from Walworth) by APPOINTMENT FLORIST TO HER MAJESTY, respectfully informs the Nobility and Gentry, that his Bulb Catalogue for this autumn is ready, and will be forwarded by post on application. He begs to state that he has a large stock of the beautiful New Lily (*Lilium lancifolium*) and a fine collection of Anemones, which he can supply at very moderate prices.

MAGNIFICENT LILY.
LILIIUM BULBIFERUM, VAR. MITCHELLIA.
J. MITCHELL, Junr., begs to call the attention of the Public to his very superb LILY, a specimen of which was submitted to Dr. LINDLEY, and noticed by him in the *Gardeners' Chronicle* of June 21st. "J. M., Slapton. The Lily is a very handsome variety of *Lilium bulbiferum*." Roots are now ready to send out: flowering roots 15s., small do. 7s. 6d.; sent free to any part of the kingdom on receipt of a remittance or reference. Flowering roots of *Amaryllis vittata*, 18s. per doz. Slapton, near Dartmouth, Devon.

CHOICE PINKS AND PANSIES.
JOHN C. OTTEY respectfully informs his friends that his priced Catalogue of the above may be had on pre-paid application.—Blenheim Floral Grounds, Peckham, Surrey, October, 1843.

H. SILVERLOCK, in calling attention to his Advertisement in the *Chronicle* of Sept. 30th and Oct. 7th, begs to state that the PINUS PINASTER, CEDAR OF LEBANON, and DEODAR CEDAR are in pots. He has also to offer fine plants of Phyllyria, 1 to 5 ft., with a good stock, in fine condition, of Evergreens of all kinds, which have been removed in 1842 or 1843; Grape Vines, raised from eyes, in pots, and out of pots, very strong, planted against walls last spring, with roots from 7 to 9 ft. in length, consisting of Black Hamburgh, Royal Muscadine, Muscat, Grizzly Frontignac, and West St. Peter's. Extra strong 2 and 3 years bedded White Thorns. The above are worthy the attention of Gentlemen planting, and may be had at moderate prices.—Nursery, Chichester, Oct. 13.

The above are particularly recommended for immediate planting by J. SUTTON and SONS, Reading Nursery, Berks.
N.B.—Carriage is paid to any Railway or Packet office in London.

NEW SEEDLING VERBENAS, GERANIUMS, &c.

R. WHITE & CO., NURSERYMEN, Poole, beg to offer the following beautiful collection of new varieties for 21s. to be delivered in the spring: they will be found to comprise the finest sorts in cultivation, of each colour. The first ten are seedlings which have been submitted to Dr. LINDLEY for his opinion, and are reported to be all fine sorts, (see *Chronicle*, October 1st and 8th). No. 1, Alfred, brilliant, fine pink with crimson eye, 2s 6d.; No 2, Perfection, very large, beautiful pink with white eye, 2s; No 3, deep rosy purple, 1s 6d.; No 4, Princess Alice, superb pink, with dark crimson eye, 2s; No 5, Modesty, pale lilac, 1s 6d.; No 6, Variabilis, very dark lilac, changing to blue, 2s 6d.; No 7, Cooperii, a magnificent scarlet, with yellow eye, 1s 6d.; No 8, Surprise, crimson purple, with yellow eye, 1s 6d.; No 9, S. mperi, light lilac, with fine white eye, 1s 6d.; No 10, Emma, deep crimson rose, with fine light eye. Liconi, 1s; Speciosa, 1s; Queen, 1s; Rubra purpurea, 1s; Ne plus Ultra, 1s; Elegans, 1s; Picta, 6d; Slaterii, 6d; Ingramii, 6d; Davisonii, 6d.

The above Seedlings have been selected from a bed of several thousand, and we can safely recommend them. We have already a considerable number of them ordered, and shall therefore be obliged to those who favour us with their commands, to let us know as early as possible, that they may not be disappointed. In consequence of having a much larger stock of PELARGONIUMS than we have room to winter, we are now offering 40 distinct kinds, including the undernamed, at 5l., or separately at the prices affixed:—Foster's Sir R. Peel, 10s 6d.; Favourite, 10s 6d.; Constellation, 10s 6d.; Lyne's Duke of Cornwall, 10s 6d.; Sunrise, 10s 6d.; Princess Royal, 10s 6d.; Fair Maid of Devon, 7s 6d.; Lord Elrington, 5s; Glory of the West, 5s; and all other fine kinds from 2s 6d to 5s each.

N.B. Our collection of CHRYSANTHEMUMS, comprising 40 of the finest sorts, will be in bloom in about a fortnight, and will be sent out in the spring, at 21s the collection. Hoosainee Persian Melon, 5s per packet, six seeds.

MR. LYNE'S SEEDLING GERANIUMS. —
Lyne's Celestial, 2l. 2s.; Apollo, 2l. 2s.; Princess, 1l. 10s.; Duke of Cornwall, 1l. 1s.; Redworth, 2l. 2s.; Modesty, 1l. 1s.; Rosebud, 1l. 1s.; Sunrise, 1l. 1s.; or the set of eight for 8l. Descriptions and figures can be obtained.

A dozen of all the leading sorts of last year, including a plant of LYNE'S SUNRISE; OR DUKE OF CORNWALL, for Five Pounds. Twelve good Show Varieties for Two Guineas.—Union-road Nurseries, Plymouth, Oct. 3, 1843.

J. PIPER, Parkstone Nursery, Near Poole, has a quantity of Large and Small Rhododendrons, Laurels, and Laurustinas, at greatly reduced prices, as he is about to clear his lower Nursery; and having a few more plants of his New Fuchsias to dispose of, begs to refer the readers to his advertisements of last month.

FAVELL BARRINGER, St. Cuthbert's, Bedford, Bedfordshire, begs to announce that his Catalogue can be had on application, of his choice and select CARNATIONS and PICOTEES, with which he has gained this year 56 Prizes, and upwards of 200 during the last three years at different exhibitions in the country.

MYATT'S NEW SEEDLING STRAWBERRY.
J. AND W. MYATT are now ready to send out their NEW STRAWBERRY, the DEPTFORD PINE, the fruit of which has been exhibited at the London Horticultural Society, and a Banksian Medal awarded. It has also been submitted to Professor LINDLEY, for whose opinion see *Gardeners' Chronicle*, No. 26, p. 447. It is a most prolific bearer, exhibiting at the same time a profusion of fine fruit and bloom on the same truss. Price, Deptford Pine, 2l. 10s.; British Queen, 1l., and Eliza, 10s. per 100.—Manor Farm, Deptford, Oct. 13, 1843.

THE BRITISH QUEEN AND PRINCE ALBERT PEAS.
J. CORMACK & CO., beg to announce to their Friends and the Public that they have harvested the above two New Varieties, and will be obliged by early orders, as the stock is limited. They will be sent out, as last spring, in packages, bearing the name of the firm, price 3s. 6d. per quart. The usual allowance to the trade.
N.B.—"Cormack's Early Kent Peas," 14s. per bushel. Newcross, and Bedford Conservatory, Covent Garden, Oct. 13.

PINE PLANTS
PERSONS in want of PINE PLANTS have an opportunity to choose, from an extensive stock, Plants of all sizes, from Suckers to those in Fruit, at low prices. Warranted free from all insects, well rooted, and healthy. Apply by letter, or on the premises, to WILLIAM DAVIS, Green-street, Marlborough-road, Chelsea.—Oct. 13, 1843.

NEW BLACK NEMOPHILA.—Seed of NEMOPHILA DISCOIDALIS to be had, in small packets, at 2s. 6d. each, of W. J. NUTTING, Seedsman, 46, Cheapside, London.—A large quantity of Dutch Roots, a priced list of which can be had upon application.

TO PINE-GROWERS.—To be disposed of about 250 Fruiting and Succession Pine Plants, perfectly clean and healthy. For particulars apply to Mr. ISAAC, 7, Centre Buildings, Covent Garden.

AUTUMN OF 1843 AND SPRING OF 1844.

Established in the Year 1728.

JOHN WEBBER begs to draw the attention of Noble-men and Gentlemen Planters, and the Trade, to his Stock of FOREST TREES, EVERGREEN SHRUBS, &c., &c., which he offers on the most reasonable terms, and are this season of the very best description, comprising upwards of 600,000 Larch, Scotch, and Spruce Firs, from 2ft. to 4ft.; 200,000 Ash, from 2ft. to 5ft.; 100,000 English Elms, from 4ft. to 10ft. in height, besides a number of Beach, Birch, Spanish Chestnuts, Oaks, Alder, Hazel, Privet, and numerous other articles, priced Catalogues of which will be forwarded on application. Three Million of THORNS, from one to five years' old. Planting done by contract to any extent.

LATTER'S VICTORY OF ENGLAND!

Six good Seeds for 5s.

THOMAS LATTER, the winner of all the first prizes in 1843 at the most important Shows (open to all England), is now sending out his celebrated Cucumber as above. It is not only the prettiest variety in cultivation, but it is also a robust grower and prolific bearer. One plant (the stem of which is 54 in. in circumference,) occupies three lights, each 8ft long by 4ft wide, and has several times during the season produced at one time 15 splendid fruit, upwards of 20 in. long, and only 1 1/2 in. in diameter; also ripened 20 seed-fruit, and is still in perfect health. The Seeds, with printed particulars of its pedigree, will be sent postage free, on receipt of post-office order for 5s., to Mr THOMAS WILD, 3, Tavern-street, Ipswich, Suffolk.

To Noblemen, Gentlemen, Nurserymen, Directors of Public Gardens, Cemeteries, and other public Companies, engaged in Planting.

MESSRS. PROTHEROE AND MORRIS are instructed by the Proprietors to submit to Public Competition, on the premises, the Kensington House Nursery, fronting the Great West Road, on Monday, 6th November, 1843, and following days, at eleven o'clock each day. The varied and interesting NURSERY STOCK OF ORNAMENTAL TREES AND SHRUBS well deserves the attention of Gentlemen who intend planting this autumn, and consists of large Magnolias, of sorts including the fine specimen of Magnolia conspicua, Cedar of Lebanon, Fan Yews, Pinus cembra, with a very extensive Collection of Evergreens of every description. This ground is proverbial for the fineness of its specimens and their safe removal, being of a loamy and adhesive nature; but is now required for building purposes. May be viewed a week before the sale, and Catalogues had of all the principal Seedsmen, and of the Auctioneers, Leytonstone.

Messrs. Forrest and Co. take this opportunity of inviting to an inspection of their general Stock in their other Nurseries, in the Gloucester-road, within five minutes' walk of their home-grounds.

TO NOBLEMEN, GENTLEMEN, NURSERYMEN, PUBLIC CEMETERIES, and other Public Companies engaged in Planting.

MESSRS. PROTHEROE AND MORRIS beg to announce that they are instructed by the Executrix of the late Mr. JOHN MILNE, to submit to public competition, on the premises, Albion Road, Stoke Newington, on MONDAY, Oct. 23, 1843, and following days, at 11 o'clock each day, without reserve, the VALUABLE NURSERY STOCK, consisting of Fruit and Forest Trees, Evergreens, American Plants, Deciduous and Ornamental Shrubs of every variety, in considerable quantities. Also a bed of Choice Tulips, consisting of 90 rows, which will be sold in lots to suit purchasers. An excellent Tulip Cabinet, a quantity of Wood, &c.

N.B.—The above ground is proverbial for its magnificent evergreens, and their safe removal, the mould adhering to their roots. The lots will be arranged for the convenience of large and small purchasers. May be viewed a week prior to sale. Catalogues, 1s. each, returnable to purchasers, may be had on the premises; of the principal Seedsmen; and of the Auctioneers, American Nursery, Leytonstone.

MESSRS. PROTHEROE & MORRIS respectfully inform their Friends and the Public, that the Sale of Nursery Stock at the Cottage and Gravel Field Nurseries, Camberwell New-road, Advertised for the 30th inst., is Postponed until further notice.—American Nursery, Leytonstone, Oct. 13, 1843.

DERBY.—TO NOBLEMEN, GENTLEMEN, NURSERYMEN, and Others, intending to plant.

MESSRS. WILSON AND SADLER beg, through this medium, to communicate that, in consequence of the expiration of the Lease of one of their Nurseries at Christmas next, they will have to offer by Public Auction, on TUESDAY and WEDNESDAY, the 7th and 8th of November next, the following valuable NURSERY STOCK:—

60,000 English Oaks, 1 to 2 1/2 ft	300 Weymouth Pines, 3 ft
1,726 Canada grafted Elms, from 4 to 10 ft	9,000 Privet, from 6 inches to 1 ft
4,331 Canada Elms, this summer budded	150 Ornamental Thorns
21,468 Broad-leaved Common Elms	35 Canada Service Trees
100 Devonshire Elms, 4 to 6 ft	25 Snowy Me-plus
2,100 Mountain Elms, 4 to 6 ft	10,000 Hollies, from 1 to 4 ft, Silver and Gold Striped ditto
511 Elms, various varieties, 4 to 6 ft	20,000 Common Laurels, from 1 1/2 to 3 ft
17,456 Common Beech, from 1 1/2 to 3 ft	2,000 Portugal Laurels
200 Purple Beech, various sizes	1,500 Fine Standard Apples, fine sorts
5,082 Birch, various sorts, from 2 to 5 ft	1,000 Dwarf Apples
2,350 Spanish Chestnuts, from 2 to 6 ft	600 Standard Pears
7,250 Horse Chestnuts, from 2 to 10 ft	300 Dwarf ditto, trained and untrained
1,150 Hornbeam, from 2 to 4 ft	1,400 One-year Pears, fine sorts
14,963 Mountain Ash, from 2 to 6 ft	100 Plums, Standards
32,750 Alders, from 1 to 3 1/2 ft	200 Dwarf Plums, in s, fine
1,620 Area Theophrasti, from 1 1/2 to 4 ft	1,400 Common Plums, budded
9,900 Sycamores, from 2 to 10 ft	1,500 Mussil Plum budded with Apricots
27,000 Larch, from 1 1/2 to 4 ft	300 Standard Cherries
5,000 Poplars, of various sorts, from 5 to 8 ft	200 Dwarf ditto
750 Hazels	300 Damasons
1,000 Willows, French, Weeping, and others of the newest kinds	300 Fruit-bearing Almonds
21,980 Spruce Firs, from 12 in. to 2 ft	400 Dwarf Peaches
12,000 Scotch Firs, from 1 to 3 ft	200 Dwarf and Standard Apricots, &c.
2,800 Silver Firs, small, from 4 to 9 inches	115,000 Seedling Oaks

N.B.—All the above are in Lots.

Messrs. W. and S. respectfully invite attention to the valuable Stock above enumerated, which will be put in lots to suit purchasers, and sold without reserve. The convenience of immediate transit by Railway from the Derby Station close adjoining, will enable Gentlemen or Nurserymen to forward articles to any part of the kingdom in a few hours. The sale will commence the first day precisely at Eleven. The Stock may be viewed on application to the Foreman at the Nurseries, or at the Seed Warehouse, Cheapside, Derby.

NURSERY STOCK.

TWO GREENHOUSES, PITS, one and two light Boxes, Hand Glasses, and sundry Effects.—Messrs. PROTHEROE and MORRIS are instructed by the Proprietor, in consequence of the Land being required for building purposes, to submit to public competition, on the premises, Highbury Nursery, Holloway-road, Islington, on WEDNESDAY, Oct. 18th, 1843, at Eleven o'clock, without reserve, the whole of the Stock, consisting of Greenhouse Plants, Fruit and Forest-trees, Evergreens, and Shrubs. May be viewed prior to Sale. Catalogues may be had on the Premises, of the principal Seedsmen, and of the Auctioneers, American Nursery, Leytonstone.

W. BUCHANAN begs respectfully to offer his services to Nurserymen, Gardeners, and others, as Auctioneer and Valuer of Nursery Stock, Garden, and Farm produce, &c. From his great experience and intimate knowledge of the value of this description of Property, he flatters himself that his services will be found beneficial to the interests of those persons who may favour him with their commands.—Camberwell.

NURSERY STOCK.—A large Collection of EVERGREENS, &c., by Mr. J. KING, on MONDAY, Oct. 16, at ten o'clock, on the Premises, Acre Lane, Clapham, by order of Mr. Dawson, without reserve.

The Stock consists of a very fine collection of several thousand Plants, comprising Laurestines, Arbutus, variegated and green Hollies, Portugal and common Laurels, Evergreen Oaks, Sweet Bays, Rhododendrons, Accubas, Arborvitae, and a variety of other Shrubs. May be viewed until the Sale, and catalogues had on the Premises, of Mr. GIBBS, Seedsman, Piccadilly; of Mr. CLARK, Seedsman, Bishopsgate-street, and at the office of the Auctioneer, Hackney-road.

THE CONICAL HOT-WATER BOILERS, invented by J. ROGERS, Esq., may be obtained of any size from JOHN SHEWEN, Ironmonger, &c., Sevenoaks, Kent.

J. SHEWEN having had every opportunity afforded him by an extensive practice to bring this apparatus to perfection, begs to offer it as most efficient and economical: it may be seen at Messrs. Chandler & Sons' Nursery, Vauxhall; Messrs. Loddiges', Hackney; Messrs. Henderson's, Pine Apple-place; Messrs. Veitch and Son's, Exeter; Mr. Pontey's, Plymouth; the Royal Botanical Society's Gardens, Regent's Park; and at the Gardens of the Horticultural Society of London. Considerable improvements have been effected since last season; particulars of which are in course of preparation.

HORTICULTURAL BUILDING & HEATING by HOT-WATER.

J. WEEKS & Co., ARCHITECTS, &c., Gloucester-place, King's-road, Chelsea, Hot-house-Builders, and Hot-water Apparatus Manufacturers, beg leave to inform the Nobility and Gentry, that their business, which has been extensive throughout the country for many years, is entirely confined to the BUILDING OF HORTICULTURAL ERECTIONS of every description, and the HEATING of them by HOT WATER.

CONICAL and other BOILERS of all sizes; their largest consumes but a small quantity of fuel, only requiring attention once in 10 hours, and will heat a range of Forcing-houses 300 feet in length.

Their improved plan of BOTTOM-HEAT FOR PITS, by means of an open trough under the bed, is now being universally adopted. References may be had, and their works seen at most of the Nobility and Gentlemen's seats in the country, nearly the whole of the London Nurseries, and a great variety of Horticultural Erections and Hot-water Apparatus, Models, Plans, Estimates, &c., at their Horticultural Manufactory, Gloucester-place, Chelsea, near Sloane-square.

RENDLE'S TANK SYSTEM OF HEATING.

STEPHENSON AND CO., 61, Gracechurch-street, London, Inventors of the IMPROVED CONICAL and DOUBLE CYLINDRICAL BOILERS, having been much engaged in heating buildings upon the above system with Tanks of various materials, solicit the attention of scientific Horticulturists to an Iron Tank now fitting up on their premises, which offers most decided advantages over every other article hitherto employed for the same purpose. These tanks which are ornamental in appearance can be made from 10 to 100 feet long and of any width and depth, and can be connected or disconnected by any working Gardener without the slightest difficulty, thus affording the opportunity to persons in remote districts of employing this much approved method of heating without the assistance of Engineers. The Tanks can be applied to Boilers and Pipes already fixed, and from the present low price of Iron will be found cheaper than of any other material. Mr. RENDLE, of Plymouth, has kindly undertaken to receive orders and furnish information to any persons in his neighbourhood, and prices for any size will be forwarded upon application to S. and Co.

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.

D. and E. BAILEY have devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery: they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals required, and which may be seen at their Manufactory.

WHEAT-SOWING.

POTTER'S GUANO.—The superiority of this powerful MANURE being now completely established, it is only necessary to inform the public that a material reduction has been made in the price, and that it may be obtained either at the Works or of Mr. POTTER'S Agents, who have testimonials of its efficacy.—29, Upper Fore-street, Lambeth, London.

Mr. MARK FOTHERGILL, 40, Upper Thames-street, Sole London Agent.

* * * Nurserymen required as Agents in all the principal towns.

HORTICULTURAL IMPROVEMENT.

J. READ begs to inform Ladies, Gentlemen, Amateur and Practical Gardeners, &c., that he has invented an additional branch to his Patent GARDEN SYRINGE, which will turn in every direction, so that water may be dispensed into all pots in Conservatories, from the bottom to every part of the stage and shelves, to fall perpendicularly, in form of a gentle shower or dewfall, even to a spoonful, without the danger of flooding the most delicate esculent plant, and in half the time it can be done by any other instrument now in use—which J. R., from 31 years' practice in the above science, can safely warrant.

May be seen and proved at the Patentee's, 35, Regent-circus, Piccadilly. N.B.—None are genuine, except stamped with the words "READ'S PATENT."

GUANO ON SALE.—Any Quantity of this valuable Manure can be had from the bonded stores of the Importer either in London or Liverpool, on application to CORNWORTH, POWELL, and PRYOR, St. Helen's Place, London; EDWARDS, DANSON, and Co., Liverpool; and WILLIAM J. MYERS and Co., Importers, Liverpool.

GUANO ON SALE, BY THE IMPORTERS, ANTHONY GIBBS & SONS, LONDON; GIBBS, BRIGHT, & Co., LIVERPOOL AND BRISTOL.

GUANO MANURE.—Guano, (Peruvian), Potter's Guano, Alexander's, Clarke's, Politevin's, and Watson's Composts. Also Nitrates, Soda, and Potash and Gypsum may be had of MARK FOTHERGILL, 40, Upper Thames-street.

J. B. LAWES'S PATENT MANURES, composed of Super Phosphate of Lime, Phosphate of Ammonia, Silicate of Potash, &c., are now for sale at his Factory, Deptford-creek, London, price 4s. 6d. per bushel. These substances can be had separately; the Super Phosphate of Lime alone is recommended for fixing the Ammonia of Dung-heaps, Cesspools, Gas Liquor, &c. Price 4s. 6d. per bushel.

PUBLISHING MONTHLY.

LARGE, 1s. 6d.; SMALL, 1s.; GARDENERS' EDITION, 6d. **THE BOTANIC GARDEN; OR, MAGAZINE OF FLOWERING PLANTS.**

WITH MANY IMPORTANT AND USEFUL ADDITIONS.

By B. MAUND, F.L.S.

Each Number contains BEAUTIFULLY-COLOURED FIGURES OF ORNAMENTAL PLANTS, both herbaceous and shrubby; suitable for the Flower Garden or Pleasure Ground. With the derivations of names; classes; orders; height of the plants; time of flowering; native country; history; qualities; most approved modes of propagation and culture; and other information, interesting to every lover of a Garden. Annexed to each Number, is the

FLORAL REGISTER,

With Wood-cuts of admired Flowering Plants, mostly such as have been newly imported into this country; with the necessary information respecting them. Also,

THE AUCTIONARIUM,

In which are given, improved methods of cultivation and preservation of vegetables, fruits, and flowers; new discoveries connected with gardening; and miscellaneous information. Also, in each Number, till complete, commencing with the new volume, on the 1st of January, 1843, a portion of Professor Henslow's

BOTANICAL DICTIONARY.

Written expressly for the Author, there being so great a want of such a Work: thus, the BOTANIC GARDEN contains four distinct Works, proceeding together, at a trifling cost, once a month.

The Volumes already completed of this Standard Botanical Work, can be had at the following Prices:

	LARGE.	SMALL.
Hf.-bd., green mor. backs, gilt edges, each	2 2 0	1 10 0
Cloth gilt, beautifully embellished	2 0 0	0 0 0
Drab boards	1 17 0	1 5 0

The Gardeners' Edition at 6d., with partially coloured plates, commenced in January, 1843, with No. I.

The portions of the FLORAL REGISTER and AUCTIONARIUM, already published, contain nearly Twelve Hundred Engravings, forming one handsome volume, which will be delivered GRATIS to the purchaser of four volumes of the BOTANIC GARDEN.

GROOMBRIDGE, Paternoster-row.

Complete in 6 Vols. 8vo, containing 509 Plates, price, coloured, 9l. Plain 5l. 15s.

FIGURES AND DESCRIPTIONS OF THE GENERA OF BRITISH FLOWERING PLANTS, with the Scientific and English names—Linnean Class and Order—Natural Order—Generic and Specific Characters—References to the most Popular Botanical Works—Localities—Time of Flowering—Description of the Plants—and Dissections showing the Essential Characters. By W. BAXTER, F.H.S., &c.

Oxford: Published and Sold by the Editor, at the Botanic Garden; sold also by J. H. PARKER; and by WHITTAKER and Co., London.

AGRICULTURAL GEOLOGY.—IMPROVEMENT OF SOILS, &c.

Next week will be published, 8vo., 7s. 6d., cloth, **THE APPLICATION OF GEOLOGY TO AGRICULTURE,** and to the Improvement and Valuation of Land; with the Nature and Properties of Soils, and the Principles of Cultivation. By NICHOLAS WHITLEY, Land-Surveyor. London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW WORK by PROFESSOR LIEBIG.

Now ready, in fols. cap. 8vo, price 4s. 6d., **FAMILIAR LETTERS ON CHEMISTRY; and its RELATIONS TO COMMERCE, MANUFACTURES, and AGRICULTURE.** By JUSTUS LIEBIG, M.D., Professor of Chemistry in the University of Giessen. Edited by JOHN GARDNER, M.D., Member of the Chemical Society. Printed for TAYLOR and WALTON, 28, Upper Gower-st., London.

Bound in cloth, price 5s. 6d.,

JOE MILLER'S JEST-BOOK. A Reprint from the first and genuine edition, such omissions and alterations only having been made as were required by the greater delicacy observed in modern conversation; but, that the volume might have some substance, and be a good table or travelling book, copious additions have been made from other old volumes of Facetiae.

Extract from the Preface.

"Another strange circumstance connected with this work is, that everybody presumes that he himself and everybody else are perfectly familiar with its contents. . . and yet, if the reader will ask his acquaintance, it will appear that not one in five hundred ever set eyes on a copy. It is in consequence of like questions that this edition is published."

London: WHITTAKER and Co.

HAND-BOOKS FOR THE PEOPLE.

THE HAND-BOOK OF GARDENING; expressly intended for Persons possessing and fond of cultivating a Garden of moderate size. Price 2s. cloth, a New and Enlarged Edition.

THE HAND-BOOK OF BOTANY; Or Linnean Lessons on Common Plants, for Field and Garden Practice. Price 2s.

THE HAND-BOOK OF AGRICULTURE; Chiefly for the use of those interested in the Allotment System. Price 1s. 3d.

THE HAND-BOOK OF THE TOILETTE; Having in view the union of Bodily Health with Beauty of Person. Price 2s. cloth.

THE HAND-BOOK OF THE LAUNDRY; Expressly intended for those who "wash at home." Price 1s. 9d.

THE HAND-BOOK OF MEDICINE; Forming a Useful Manual in time of Need, when Professional Aid cannot readily be procured. Price 2s. cloth.

THE HAND-BOOK OF NATURAL PHILOSOPHY. Price 1s. 9d.

London: W. S. ORR & Co.: and W. & R. CHAMBERS, Edinburgh.

FAMILIAR ASTRONOMY. By GEORGE DARLEY, A.B., Author of A System of Popular Geometry, Companion to the Popular Geometry, a System of Popular Algebra, and a System of Popular Trigonometry. 12mo, with Engravings, 5s. cloth lettered.

"There is a vast deal of astronomical information conveyed in a most winning and unassuming manner in this delightful little volume, which, not less for the novelty of its plan than the extent of its intelligence, reflects infinite credit on the taste and talents of its projector and editor, Mr. Darley."—*Sun*.

TAYLOR and WALTON, Booksellers and Publishers to University College, 28, Upper Gower-street.

FOR THE PUBLIC GOOD.

DR. ROBERTS'S CELEBRATED OINTMENT, called the POOR MAN'S FRIEND, is confidently recommended to the public as an unfailing remedy for wounds of every description, a certain cure for ulcerated sore legs, if of 20 years' standing, cuts, burns, scalds, bruises, chilblains, scorbutic eruptions and pimples in the face, sore and inflamed eyes, sore heads, cancerous humours, &c., and is a specific for those afflicting eruptions that sometimes follow vaccination. Sold in pots, at 1s. 1d. and 2s. 9d. each. Also his

PILULE ANTISCORPHULE,

confirmed by more than 40 years' experience to be, without exception, one of the best alternative medicines ever compounded for purifying the blood and assisting nature in all her operations; hence they are useful in scrofula, scorbutic complaints, glandular swellings, particularly those of the neck, &c. They are efficacious also in rheumatism, and form a mild and superior family aperient, that may be taken at all times without confinement or change of diet. Sold in boxes, at 1s. 1d., 2s. 9d., 4s. 6d., 11s., and 22s. each.

To those who cannot take pills, the proprietors would strongly recommend Dr. Roberts's

ANTISCORBUTIC DROPS,

for the cure of the scurvy, scrofula, leprosy, and all scorbutic complaints; they strengthen the constitution, purify the blood, and promote a circulation of the fluids; are gentle in their operation, and do not require cessation from business. In bottles at 2s. 9d. each. By the late Dr. Roberts's will Messrs. BEACH & BARNICOTT (who have been confidently entrusted with the preparation of his medicine for many years past), are left joint proprietors of the "Poor Man's Friend," "Pilule Antiscrophule," "Larwell's Pills," "Medicated Gingerbread Nuts," and "Antiscorbutic Drops," with the exclusive right, power, and authority to prepare and vend the same.

The still increasing demand for the above medicines, from all ranks, is the best and most substantial proof of their utility.

Observe.—No medicine sold under the above names can possibly be genuine, unless "Beach and Barnicott, late Dr. Roberts, Bridgeport" is engraved and printed on the stamp affixed to each package.

FINE FLOWERS.—The Subscription Sale, advertised to take place at Glasgow, on 4th Oct., is postponed until the 25th; when a splendid Collection of fine named TULIPS, in 1,000 Roots, and comprising nearly 600 Varieties, 325 finest named RANUNCULUSES, 225 finest ANEMONES; also HYACINTHS, &c., will be drawn for in 100 lots. Tickets only 5s. each, to be had of JOHN WATERSTON, 45, High-street, Paisley.—Paisley, 13th Oct., 1843.

DRESS COATS, Superfine cloth, 30s. to 40s.; extra quality, 50s.; Frock-coats, silk facings, 35s. to 45s.; ditto, silk velvet collar and silk facings, 50s.; Waterproof Wrappers, 10s. 6d. to 21s.; fashionable York and Chesterfield ditto, 16s. to 25s.; Waistcoats, 5s. to 8s. 6d.; Silk, Satin, and Kerseymer, 10s. to 14s.; Trousers, 8s. 6d. to 12s. 6d.; stout Doeskin and Kerseymer, 16s. to 25s.; Shooting Jackets, 10s. 6d.; Boys' and Youths' Tunic and Hussar Suits, 30s.; a Suit of Superfine Black Cloth, 3l. 3s.; best quality, 5l.—At FISHER and Co.'s, 31, King William-street, City, 10 doors from London bridge.

NOTT'S PATENT STOVES, for warming Churches, Chapels, Public Offices, Halls, Staircases, Shops, Warehouses, &c.—These Stoves are unquestionably superior to any others that have been yet invented; they are much more simple and easy of management than Dr. Arnott's, and, in proportion to the heat given out, quite as economical; they are not liable to an explosion of gas, or a rush of flame from the fire-door; on the contrary, they are perfectly safe and free from danger; they will keep alight 12 hours or more without replenishing. The fire being seen through the tall-glazed window gives a very cheerful appearance. Orders addressed to 80, Great Queen-street, Lincoln's Inn-fields, will meet with due attention, and a liberal allowance be made to ironmongers, builders, &c.

BUTTER MADE IN TEN MINUTES

BY THE NEWLY-INVENTED CHURN.

REGISTERED ACCORDING TO ACT OF PARLIAMENT.

This Act imposes a penalty of from 5l. to 20l., for each imitation, piracy, or selling, recoverable by the proprietors before a magistrate, or by civil action. Half the penalty will be given to any person informing the proprietors of any infringement. The words of the Act are "No person or persons shall copy or alter any design, either by adding to, or subtracting from," &c.

ATTWOOD, WIMBLE, & WARNER, MANUFACTURERS, LEWES, SUSSEX.

This CHURN being made entirely of Block Tin, the necessary degree of temperature can be given to the cream, by placing it in a pan of cold or hot water, which ensures the butter coming in 10 or 12 minutes. The simplicity of its construction, and the facility with which it may be cleaned, are no inconsiderable advantages over those now in common use. The great advantages of this Churn will be found in the winter; but in the heat of summer placing the Churn in cold water will be the means of hardening the Butter.

Sizes	No. 1	2	and 3
Churn from	7 to 8 lbs.	13 to 15 lbs.	26 to 28 lbs.
Price, carriage paid to London.	25s.	35s.	42s.

Metal Pans for Churns to stand in, 4s. 6d., 6s., and 7s. Larger sizes made to order.

To be seen in London, at WRIGHT'S Range Warehouse, No. 3, Arthur-street, near the Monument; ROBY'S Brush Warehouse, No. 80, Gracechurch street; LIVERMORE and SON, Ironmongers, No. 30, Oxford-street; BENHAM, 19, Wigmore-street, Cavendish-square. Export Agents, BARNES & Co., 109, Fenchurch-street.

Now ready, price 4s. 6d.,
RURAL CHEMISTRY
 By EDWARD SOLLY, Esq., Jun. F.R.S.,
 Experimental Chemist to the Horticultural Society of London,
 Hon. Mem. of the Royal Agricultural Society, and Lecturer
 on Chemistry at the Royal Institution.

SATURDAY, OCTOBER 14, 1843.

MEETINGS FOR THE FOLLOWING WEEK.
 Tuesday, October 17 Horticultural : : 8 P.M.
 Wednesday, October 18 Microscopical : : 8 P.M.

In our answers to correspondents, an inquirer was lately directed to select his cuttings at a time when they contain much organizable matter. But the meaning of that advice was unknown to him, and will probably be equally mysterious to others. It will therefore be as well if we at once explain it, especially as it is connected with points of cultivation of very considerable importance.

The term organizable matter is equivalent to what has been called *true* or *descending*, or *arterial*, or *vital* or *autumn sap*, in contradistinction to the term *aqueous* or *ascending sap*. Although in some respects the old expressions were useful enough, yet their diversity showed the insufficiency of them in the minds of physiologists, and they had the great fault of conveying incorrect notions of the nature of the matter spoken of. In particular the word *sap* necessarily recalls the idea of a fluid; *Purpurea sapa* was the juice of the grape. But the substance to which the term autumn, &c. sap belongs is more viscid than fluid, and to a large extent, especially in autumn and winter, is not only solid but insoluble by ordinary solvents. "This fluid," says Mr. Knight, "is closely analogous to the arterial blood of animals," and then he goes on to say that it also "assumes an organic solid form." (*Phys. Papers*, p. 340.) The truth is, that at first it is fluid, like all the solid tissues; by degrees it becomes thickened, undergoes various chemical changes, and at last consolidates into gum, sugar, starch, albumen, gluten, and other substances, all which, taken together, constitute "organizable matter." Such matter in its original semifluid state may be called *sap*, but can scarcely bear the name when consolidated and finally elaborated.

The history of organizable matter is this: When a plant reproduces itself, nature introduces into a small internal bag the miniature of a young plant, formed of all the qualities of its parent, and along with it a mixture of substances calculated to feed the vegetable infant when it first begins to be animated and grow. This bag, with the matters it contains, we call a seed. As soon as the vegetable embryo is excited within the seed, the nutritious substances laid up there quit the solid and assume a fluid state, and are gradually converted into the new organs or parts with which the embryo is clothed: hence the name organizable given to such matter, that is to say, able to form organs. The parts which are thus formed possess the power of producing, under favourable circumstances, more of this organizable matter, out of which additional parts are formed, and so on incessantly. But in the absence of such matter no new growth can take place, while the extent of growth, and the nature of the parts that are formed, depend entirely upon the quantity of organizable matter that the plant produces.

There is nothing in the whole range of Vegetable Physiology which more concerns the cultivator than this; and the history of organizable matter, the circumstances favourable or unfavourable to its production, the way in which it changes, the places where it is stored up, and the organs to whose action it is owing, may be said to form both the foundation and a large part of the fabric of the science of Organic Botany. This, indeed, will be apparent to everybody when it is once understood that organizable matter is the substance out of which all the parts of plants are formed. Nevertheless a few examples of its importance will assist in making the matter clearer.

The cause of these remarks was a question relating to cuttings. Every one knows that cuttings are generally selected when the wood is at least partially ripened; at that time organizable matter is collected within them, and enables them to put forth roots and new leaves. In the absence of it they could do neither. Moreover, the reason of the common practice of allowing an old leaf to remain on a cutting, is that the leaf may secrete more organizable matter to replace that which is expended in forming roots, so that the supply may not be exhausted.

A young Melon plant is unable to set its flowers, or if it does set them, the fruit produced is small and of inferior quality; that is, because organizable matter is not formed abundantly till after the plant has made some considerable progress in its growth. When the fruit, under the first circumstances, sets and begins to swell, it attracts to itself so large a proportion of the organizable matter that has been secreted, that the

formation of leaves is obstructed, and then the supply required for further nutrition is interfered with, because fruit has to depend upon leaves for its sustenance. Or a Melon plant with half-grown fruit suddenly loses its foliage, in consequence of negligence or accident; the fruit will swell but little afterwards, because the organizable matter, constantly forming by the leaves, is wanting.

An orchard bears a very heavy crop of late fruit; the next year the trees are stunted, and hardly grow. In that case the crop of one year has consumed so much of the organizable matter of the trees that little is left for future growth, which is consequently arrested till more organizable matter shall have collected.

Gardeners dig between the rows of their Strawberry plants, in autumn, or winter. There cannot be a more mistaken practice. By such means the roots, filled with organizable matter for the nutrition of the plant next year, are destroyed; and what is substituted in its place? Nothing.

Grapes shrivel: although more causes than one are probably connected with that malady, yet there can be no doubt that the want of organizable matter is a frequent—perhaps the most frequent—reason. Vines are exhausted by over-cropping; organizable matter is for the time diminished; before it can be replaced the new crop of Grapes has consumed all that the trees contained, and then, their food failing them, the berries necessarily shrivel. But this deficiency in organizable matter may arise from other causes than over-cropping: injuries to the leaves, of many kinds, are a fruitful source of the mischief; yet in all these instances the way in which the injury tells is the non-production of organizable matter.

In conclusion, it must never be forgotten that plants, like animals, consist of two essentially distinct parts: the one the organized material of their structure, the other the organizable matter out of which additions are to be made to that structure; and that under no circumstances whatsoever can growth take place, except in the presence of the latter. This law is not only one of the foundations of Vegetable Physiology, as we have already said, but one of the most important of all facts for the gardener to bear in mind, explaining, as it does, the sources of success or failure in multitudes of the operations in which he is daily engaged.

When the harvest is over, and all the corn is safely stacked or lodged in the barn, the farmer naturally feels inclined to rest himself and his horses, and to relax in his labour; and if the weather has been fine and they have worked early and late, they require a little rest to recruit their strength. Light work, such as horse-hoeing between the rows of Turnips, more to stir the ground than to mould them up, carrying mould to mix up with the farm-yard dung, and other jobs, may be done, so as not to work the men and horses too severely. But this must not last long, so long only as to let men and horses recover their strength; for no day should be ever lost in a well-regulated farm. A portion of the Wheat or Oat stubble ought immediately to be well scarified, if not hoed by hand, which last is an excellent practice, and gives employment to many hands which otherwise would not readily find work. The weather is generally fine for some time after harvest, and advantage should be taken of it to clear the fields of weeds by raking them together and burning them. If some heaps of manure or compost have been prepared during the summer and laid on some corner or headland, where they are now in a fit state of decomposition to be carried on the land, five or six tumbril loads per acre may be laid on and immediately spread and ploughed in. According to the size of the farm and the stock kept, especially working horses, a certain portion of this land is to be sown with winter Tares, as soon as possible; and this sowing is to be repeated every fortnight till near Christmas, at the rate of two bushels of seed per acre. They may be drilled or sown broadcast. There is no crop more profitable than Tares, to be cut green or fed off with sheep, in spring. On very heavy land unfit for Turnips, they are an admirable preparation for Wheat, giving ample time for a bastard fallow in the following summer. On good loams they come off in good time to sow Turnips, which, if properly managed, will grow as well after a crop of Tares as they would on a summer fallow. We will take another opportunity of giving directions for this important crop. We are well aware that we are only stating what every good farmer or bailiff knows well, or ought to know; but we write for young farmers and amateurs, and if any practical experienced farmer has any objection to make to our suggestions, which are all taken from our own practice for many years on very different soils of moderate fertility, we shall be very ready to receive information, and to compare the experience of others with our own, provided the facts be stated with accuracy, and sufficient reasons be given for adopting a different course. Our object is to diffuse the knowledge of those practices in husbandry which are

sanctioned by long experience, and which have been found to increase the crops, and to raise the greatest quantity of produce at the least possible expense. We have no theories of our own to support, and claim no new discoveries; but we are ready to impart to younger farmers the knowledge, such as it is, which is the result of thirty years' practice—during which time we have read and studied the works of the most celebrated agricultural writers, testing their doctrines by actual experiments—which have often led to disappointment and loss;—and now, near the close of our career, it is a pleasure and relaxation to endeavour to give to others what to ourselves would have been invaluable at the beginning of our agricultural experiments: yet we are not too old to learn, and are fully aware that every year tends to correct errors, and to suggest improvements in the cultivation of the soil.

To return to our sowing of Tares. It is of great consequence that the seed be good, and of the genuine winter Tare, of which there are several varieties. It is best to save as much seed every year as is required for the next sowing. A careful farmer will take care to have some to spare for this purpose; and if his seed degenerates, or is of an inferior variety, he will look amongst the crops of his neighbours, or elsewhere, to be sure of having good seed. The nature of his soil must be taken into consideration, as some soils are more favourable to the growth of Tares than others; but with good tillage they will succeed in soils of very different qualities, provided these are properly prepared and well manured. It is more profitable to have one acre of Tares which grow luxuriantly and cover the ground, than many acres which give but a moderate crop, and allow the weeds to spring up in the intervals. No crop cleans the land better, especially those soils which are subject to be overrun with Charlock, or wild Mustard. If this troublesome weed be watched, and the Tares cut or fed off before the seed of the Charlock is fully formed, this weed is not only destroyed, but increases the fodder, without any injury to the cattle or sheep. If fresh seed is brought to the surface when the land is ploughed again for Turnips, the weeds will be destroyed in the hoeing of this crop, and none will probably appear in the next Corn crop. In land which has been badly cultivated, and ploughed with a very shallow furrow, for fear of "bringing up Charlock," as the old farmers say, this is the most effectual mode of destroying it: but it requires patience and perseverance to do so effectually.

In some favourable situations, where the harvest is early, the land may be ploughed and sown with Stubble, or Eddish Turnips, as they are called, and these will give good feed for sheep at the end of winter; but if the soil be heavy and wet in winter, it is better to plough it in small round stitches, or ridge it, as is done in Essex, to let the frost penetrate the ground as much as possible. There is no tillage like a frosty winter.—M.

OBSERVATIONS ON THE NEW SYSTEM OF POTTING PLANTS.

By Wm. Wood; at Messrs. Henderson's Nursery.

No. II.

In the remarks, to which the following are intended as a sequel, an opinion was offered that the present test of superior cultivation is "the greatest amount of constitutional vigour within a limited period;" and as this, when attained, can but be regarded as a primary step towards an ultimate object, it may with equal certainty be affirmed that the highest purpose of cultivation is a constitutional vigour, combined with a uniform development of bloom. In attempting to define the means generally adopted for the attainment of this, it will be of interest to glance at the principles or conditions upon which such results depend.

The present modes of potting may be considered as two distinct mechanical operations. The first, from the simplicity and uniformity of its process, has been termed a Progressive and Accumulative system; and the second, from its necessary exposure to successive seasons of excitement and repose, may not unaptly be designated an Alternate or Restrictive system. The leading feature of the former (the Accumulative) is found in its leading to a maturity of growth, without the aid of intermediate shifts, by removing plants, in their youngest state, to pots having due proportion in size to their ultimate vigour and fertility. The latter, or Restrictive system, is well characterized by its dependence for the same end upon the ordinary practice of shifting gradually from smaller to larger pots.

That there should exist many doubts as to the practicability of the first method, is not surprising; since it is totally opposed to general practice, not being a gradual process of repeated and protracted efforts, but an application of first principles towards producing an immediate effect. Each system is not less opposite in its mechanical details than in its natural tendencies; the Accumulative being an immediate application of large quantities of soil, bearing due proportion to a perfect development of parts, and so approaching natural conditions, while the Restrictive or frequent shifting system is the successive application of materials proportionate to the existing vigour of the plant in its various stages of growth.

The value of the Accumulative mode of cultivation will be more readily understood by tracing its connexion with

those principles of Horticulture on which the most perfect vegetable growth depends.

The only natural mode of perpetuating the constitutional vigour of a species is by reproduction from seed; and it is strictly in harmony with this law of Nature that the various modes of propagation and cultivation are to be viewed. Thence it follows, that in proportion as the means employed for the multiplication of plants are artificial in their character, will be the premature exhaustion of the individual parts thus multiplied; in other words, if, in the propagation of any plant by *cuttings*, the latter be taken from a specimen which is already partially exhausted by excessive development of its parts, or by excess of bloom, the parts thus detached will partake of the impaired vigour of the parent. And upon the same principle, a plant which has been in the first instance derived from its parent stock as a *layer*, will possess less constitutional energy than others derived from the same source as cuttings, in consequence of the layer already approaching its final maturity more nearly than the latter.

The conclusions to be derived from the foregoing remarks are, that the several organs of a *seed*, a *cutting*, and a *layer*, are each endowed with a principle of vital energy varying in power from a seed downwards. It may further be stated, that the vital functions of plants are diminished in force in proportion as the primary development of their parts is prematurely hardened or matured, whether that arises from excess or deficiency of the elements which sustain them. Much that is superior in cultivation is known to depend upon the skilful application of materials adapted to the variations of local influence and after-management. In support of a progressive and accumulative system of cultivation, the following principles may be offered, apart from those minor evidences which every successful routine of practice supplies.

1st. "For the maintenance of a plant in health, it is indispensable that the supply of fluid by the roots should be continued and uninterrupted*."

2d. "The smallest leaf at the extremity of a branch of a lofty tree must assist in setting in action the absorbing power of roots, at whatever distance from the other organs those roots act. If this reciprocal action is not maintained without interruption, and if anything occurs to check it during the period of vegetation, the plant will suffer in proportion to the amount of interruption.†"

From these statements, it appears that whatever tends to protract or suspend the reciprocal action of the organs of plants, will, in proportion, impair their vital energy; and it is the fitness of the accumulative system to secure a continued supply of those fluids which are essentially necessary for mature growth in plants, that constitutes its superiority over other modes of cultivation. This advantage is obtained by transferring plants, in their young and excitable state, to large masses of soil, of a texture and quality adapted to their growth, and so mechanically arranged as to enable their tender organs progressively to assimilate their food without being liable to excess of moisture, or to be retarded in their after-growth.

A strong argument against the fitness of the restrictive system of shifting of plants, to attain simultaneous and accumulative vigour, is found in the tendency of that system to reverse the laws of Nature in regard to the formation and disposition of roots. This is an evil inseparable from the ordinary modes of cultivation. The natural function of roots being the absorption of food through the medium of their extremities or *spongiosities*, it is plain that their capability of answering this important end will be in proportion to the facility afforded them of extending and ramifying in search of the elementary substances required for their respective organs. In admitting this view of the subject, it will probably be found that the amount of food thus obtained will be commensurate with the diffusion of the roots over a given surface.

These opinions are strengthened by their coincidence with the physiological fact, that "roots augment in diameter simultaneously with the stem, and under the influence of exactly the same causes‡." From this law an important inference is to be drawn in favour of the present argument; namely, that as an inverted or horizontal position of the stems and branches is calculated to diminish vigour and dispose to precocious fertility, so similar effects will attend an inverted or circular direction of the roots, by limiting their expansive movement, and lessening their exposure to the indispensable influence of atmospheric agency.

But it may be said that cultivators can avert such an unnatural position of the roots, by reshifting previous to those organs being too far advanced; to which it will be sufficient to reply, that such a mode of transferring plants previously to their being tolerably established, would not only be opposite to successful practice, but attended by a risk with which few practitioners would venture to incur. That plants of slow and rigid habit (and others proportionately) should be fairly established in their respective stages of growth, previously to being further excited, is sufficiently well known; and to attempt an opposite course would not only endanger the flowers, but tend to frustrate the principal objects of cultivation.—From *Paxton's Magazine of Botany*.

THE CLOVER DODDER.

I HAVE carefully examined this *Cuscuta*, but cannot yet say precisely whether it should be considered distinct from *C. epithymum* or not. I have no specimen, recent or dried, of the latter at hand, and so cannot institute any direct comparison, and the figure in English Botany is

* "Lindley's Principles of Horticulture," p. 32.
† "Theory of Horticulture," p. 50.
‡ "Lindley's Theory of Vital Actions."

not to be depended on for such a purpose. I do not consider any of the descriptions of *C. epithymum* which I can refer to sufficiently detailed to enable me to judge from them. From what I recollect of this plant, it is much smaller, and has a general tinge of red, which our plant does not possess; but these are doubtful characters. The essential characters of two species so closely allied, and unfurnished with leaves, must be taken from minute differences in the parts of the flower, and it is impossible to speak very decidedly how far these may be permanent without seeing the two together in a fresh state. I find one character in the flower of both this and *C. europæa*, which appears to me to have been hitherto imperfectly noted; and I shall take the liberty of directing the attention of future observers to it. The flowers have been described as furnished with "scales," seated on the corolla, and opposite to the stamens. But instead of distinct scales, I find a continuous corona adherent to the base of the corolla, but perfectly free above throughout its entire circuit. This corona has scale-like laciniae, or teeth, seated before the stamens, and it is these which have been described as distinct scales. Perhaps a very rude and imperfect sketch may convey an idea of this corona as it occurs in the two species here alluded to.

Opened flower and scales of *Cuscuta europæa*.

Opened flower and scales of *Cuscuta trifolii*.

I observe, also, on opening and extending the corolla on a flat surface, that the corona ruptures readily at the base of each lacinia, creating a suspicion (for I can urge no more) that it may possibly be formed by the cohesion of subordinate parts (abortive stamens?), which thus alternate with the stamens, instead of being opposite to them. These parts are very small, and their relation may be easily overlooked; as we see by the figure and description of *C. europæa* in English Botany, where that species is represented as having no scales at all.—J. S. Henslow, Hitcham, Suffolk, Sept. 13, 1843.

AMMONIA.

THE observations of Mr. Lawes on the value of Ammonia as manure, in last week's *Chronicle*, are very interesting, and in several respects I entertain the same opinions; some of his statements, however, appear more questionable, so that without further evidence I think we should hardly be justified in adopting his conclusions, and giving up the old theories which have hitherto been received. Mr. Lawes considers that it is more important to supply plants with Phosphates than with nitrogen, and in this I cordially agree with him, but when he seems to think Ammonia of little or no value as manure except indirectly, I feel hardly prepared to follow him. It is pretty generally considered that plants must derive the nitrogen which they contain, either from Ammonia or some other compound containing it, and that they cannot assimilate it direct from the air; if this be the case, it is evident that they cannot form azotised matters unless they are supplied with Ammonia, or some other compound containing nitrogen, either from the air or from the soil. Now the quantity of nitrogen which can be supplied in this way to plants is by no means large; if therefore the supply of it can be increased in moderation, the means of forming azotised matters, and consequently one of the means of luxuriant growth, will be supplied to plants. On examination, it appears, that the great majority of the operations of culture, amongst other things, facilitate the absorption and retention of Ammonia and the compounds of nitrogen.

In studying the action of inorganic manures, it is necessary to consider their action in several points of view: their chemical effects must be distinguished from those which are merely mechanical, and the chemical nature of the soil must be known, that the chemical effects of the manure may be ascertained. In adding, for example, to certain soils lime or other bases, we give to the soil the power of assisting in the transformation of Ammonia into nitric acid. We may merely add potash; but by so doing we give to the soil the power of fixing a quantity of nitrogen, as nitric acid, and thus enrich the soil by indirect means. The nature of the soil is of very great importance in examining the action of saline manures: we apply various salts of Ammonia, and carefully measure the produce obtained by the use of each; but we forget that the salts may be decomposed before they reach the roots of the growing plants, and that, by the ordinary processes of double decomposition, the salts we apply may be completely changed in the soil.

On soils rich in azotised matters, containing Ammonia or salts of nitric acid in considerable quantity, it would not be reasonable to expect benefit from the use of ammoniacal manures; but in soils not of this description I believe they will always be found of value; how much of the benefit derived from them is due to the acid they contain is a separate question, but I am convinced that

the Ammonia itself is of great value. If the sulphuric acid of sulphate of Ammonia is the most important ingredient of that salt, then sulphate of Ammonia would produce but little effect on soils containing much sulphuric acid; whilst the contrary, I believe, is the fact. The comparative effect produced by different salts of Ammonia varies much, and appears to depend principally on the nature of the soil. I have recently seen the muriate producing larger crops than either the sulphate or the phosphate, when applied to Wheat and Potatoes. Whilst speaking of the effects produced by Ammonia, I may mention a curious fact which I lately observed, and which bears upon the subject. I found that plants of Tobacco manured with salts of Ammonia contained, in proportion, a far larger quantity of potash than similar plants grown in the same soil, but not manured with Ammonia. It is, I think, evident, that the salts of Ammonia increased the vigour of the plants, and enabled them to absorb from the soil, a larger quantity of potash than they could otherwise have done. The effects of guano are certainly not wholly due to the Ammonia which it contains; a great part is no doubt due to the presence of phosphates, but I have generally found that the best guano was that which was richest in Ammonia.

Mr. Lawes asks, "What proof have we that plants are unable to supply themselves with Ammonia from sources unknown to us?—and how far may the increase of crops by the addition of substances containing Ammonia be attributed to that element?" To prove that we know all the sources of nitrogen is of course impossible; we know that plants may obtain it, both from the soil and from the air, but they may obtain it in a manner that we are still unacquainted with, though it certainly appears more than probable that they can and do obtain it from Ammonia and nitric acid—sources which are quite sufficient to account for the quantity they commonly contain. The fact that rotten dung is far superior to fresh dung, does not appear to me to prove that the Ammonia lost during its putrefaction was useless, but rather that the nitrogen in the rotten dung is in a state which plants can assimilate, whilst in fresh dung is less capable of being absorbed by them.* I do not for a moment suppose that plants would grow if deprived of earthy phosphates and bases, but supplied with Ammonia, any more than that they would flourish without light; but I believe that a source of nitrogen is as essential to plants as a supply of phosphates. The best of all manures are those which supply both phosphates and Ammonia. Farm-yard manure is of this description. It is a question well worthy of consideration, whether plants do not derive a very notable quantity of earthy matter from the air. I need not mention the great distance to which sea-salt is carried by the wind, but I cannot help suspecting that a greater quantity of solid matter is carried about in the air than is commonly supposed.

I hope these hurried remarks will elicit further observations from those who have practical experience in the action of manures.—E. Solly.

AMATEUR'S GARDEN.—No. XLI.

WERE I desired to point out what I consider the greatest defects in garden scenery, I should have very little hesitation in enumerating deep and irregular raw-edgings to the walks, as the first defect; walks and borders deficient in gravel or soil, as the second; and tall, clumsy box-edgings, as the third. In my estimation, deep and irregular edgings are a most intolerable deformity, and yet, to such an extent does this deformity prevail, that of all the gardens I ever visited, I could not name half-a-dozen that are free from it. At this place, though the walks have been all made within the last five years, the edgings are so irregular, that in one place they are from three to four inches deep, while, perhaps within a few yards in the same walk, the grass is below the level of the gravel. I do not attribute any fault, in this respect, to my predecessor, because the irregularity is not greater than may be noticed in most other gardens, but I merely point it out as an instance of bad taste, in an otherwise highly kept garden. Now, the first operation in the way of improvement which I shall undertake this autumn, will be to have all these edgings properly levelled, and in doing this I shall have all the grass taken up two feet wide from the walk on both sides, and then make them perfectly level, allowing for the grass, when laid down again, to be not more than one inch above the level of the gravel. I shall then have this grass rolled once a week through the winter by a heavy roller, so that in the spring, when I dress the edgings off before trimming the walks, they will not be more than half an inch in height,—and after they have been once properly formed and cut, I shall never, if I can possibly avoid it, allow them to show a raw edge again,—at least, not more so than is necessary to keep the lines and curvatures of the walks as true and regular as possible.

Foreigners, when viewing the gardens of this country, are always pleased with the beauty of our close-cut lawns and gravel-walks, and I believe it is not assuming too much to say, they are the finest in the world. Flattering, however, as this fact is to British vanity, I believe it has been a prolific source of carelessness, in leading us to be satisfied with what our walks and lawns are, instead of making them what they ought to be. When the walks contain sufficient gravel to form a good path, and yet the edgings are too deep, they may be made to slope gradually towards the walk; but this is not a good plan where it can be avoided, as the middle of the walk should always be as high as the adjoining grass, if not a little

* That the vapours given out by fermenting dung increase vegetation, is proved by the luxuriant manner in which plants in the vicinity of dunghills grow.

Refuse Sulphates as Manure.—At a manufactory on my farm I have large quantities of the sulphate refuse from the manufacture of chlorine, and I have tried a variety of experiments for the purpose of making it useful for Agriculture, but without success, and I do not think that it will ever be of much value. It proves most beneficial when mixed with lime, to precipitate the manganese, and then turned over repeatedly with a quantity of rich earth for some months.—*J. B. Lawes.*

Transplanting.—As the season for transplanting is now fast approaching, I beg to warn those who are not proficient in its nature, of the necessity of endeavouring as much as possible to select soils that will be suitable to the plants that are to be removed; for instance, in removing ornamental trees, or in planting out specimen plants, or in making an Arboretum, it is necessary to suit the soil to the different kinds of plants. When plants are put into a soil altogether contrary to their nature, they become unhealthy, linger, and often die. Those who plant late in the spring, if the season be dry, ought to water frequently, and give the plants every encouragement that they possibly can. It reflects much credit on a gardener to have handsome and well-grown specimens under his care, and it is a convincing proof of good management. This can be easily effected by proper attention being paid to the plants, such as staking, pruning, and watering if required; and I would again particularly request the attention of gentlemen and gardeners about to transplant, to bear in mind that the principal thing in growing trees and plants to perfection, is to plant them in the soils they require. In transplanting great care is required, and it is very beneficial to the plant to spread out its roots properly, and in some cases to lightly prune them. Although these few observations are simple, yet I am sorry that they are not more particularly attended to, for by such attention in a few years the grower would be amply repaid for his trouble.—*Timothy.*

PROCEEDINGS OF SOCIETIES.

YORKSHIRE LAND-DRAINING ASSOCIATION.

UPON the occasion of the Richmond Agricultural Show last week a meeting was held at the King's Head Inn, Richmond, on Friday, the 29th ult., for the proposition of this association, and was attended by many influential landed proprietors of the county, and others desirous of forwarding the object in view, among whom were the Right Hon. the Earl of Zetland, Marmaduke Wyvill, Esq., Col. Arden, R. M. Jaques, Esq., T. Charge, Esq., James Smith, Esq. (Deanston), L. Hartley, Esq., &c. &c. On the motion of the Earl of Zetland, seconded by R. M. Jaques, Esq., Mr. Charnock was requested to open the business by explaining to the meeting the objects of the association, and the progress made in its introduction. In compliance with this request, Mr. Charnock briefly recapitulated the leading features of the undertaking, whereby it is proposed to combine, for their mutual benefit, the agricultural and the mining interest; and he expressed a firm conviction that from the great redundancy of money, for which there lacked employment, it required only that associations like the present should be submitted, under proper auspices, to insure the confidence of the capitalist, whose surplus we might then see securely employed in the profitable and permanent improvement of the soil. Mr. Smith (of Deanston), gave his fullest concurrence to the project; and in a very able address, entered at some length into the merits of the plan, showing the usefulness and practicability of such associations, the establishment of which would, he said, be peculiarly opportune at the present moment, when the necessity for agricultural advancement was manifest not only to the owner, but also to the occupier of the soil, whose practical improvements were retarded only by the want of those additional means which would thus be placed within his reach on easy and equitable terms. Mr. Smith also pointed out the advantages which would result from the drainage being conducted under the systematic operations of such an association, which would be in a position to apply the first practical and scientific skill to the several works under its charge, and thereby to guarantee the most effective drainage at the lowest cost. He then proceeded to show the progressive character of the undertaking, which obviated the necessity for any large outlay in extensive works or premises at the outset, and, in conclusion, took occasion to refer to the meeting the great moral and national good which might be confidently looked for from the extensive and regular employment which such associations would be the means of securing to the able-bodied labouring population of the rural districts. A conversation then ensued, in which Col. Arden remarked upon the tedious and expensive forms attending the requisite application to the court under Mr. Pusey's recent act enabling tenants for life to obtain money by way of mortgage and a rent-charge on the land, for draining their estates, and he trusted that, ere long, these difficulties would be removed. As a proof of these impediments, Marmaduke Wyvill, Esq., stated that he believed there had only been one instance in which that act had been made available, and he thought that, as emanating from the present meeting, it would be no suitable opportunity to express the hope that some less intricate measure would be provided. Mr. Bailey Denton observed that this association, and all that might be formed after this precedent, would perhaps be the best mediums which, under existing circumstances, could be devised for facilitating the preliminaries of the act referred to; for that, while their executive committees and advising officers would forward by every means the interest of the applicants: yet they would, at the same time, exercise a wholesome discretion until some amendment might be obtained, possibly by the introduction of suitable provisions in the proposed General Drainage Bill. Mr. Charnock thought that one reason why Mr. Pusey's act had not been more generally taken advantage of was the reluctance on the part of individuals to advance money on mortgage which should be repaid by instalments; whereas in the operations of our association such transactions would be in every respect compatible with the interest of all parties. After some further discussion on several points of detail—the making of tiles, and the security for advances, the appointment of the provisional committee was confirmed, with power to add to their number, and a recommendation to inquire into the nature of the security which can be given by parties employing the association, and to report the result of such investigation on the earliest occasion, for general satisfaction. The following gentlemen constitute the committee:—Provisional Committee—Godfrey Wentworth, Esq., Woolley Park, Wakefield; R. M. Jaques, Esq., Easby Abbey, Richmond; James Smith, Esq. (Deanston), 8, Whitehall-place; J. Brakenridge, Esq., Bretton Park, Wakefield; T. Bradley, Esq., Richmond; Chr. Bradley, Esq., Richmond; J. Bailey Denton, Esq., Gray's Inn square and Southampton. Mr. Edwin Green, Havercroft, Barnsley; assisted by Messrs. Blanchard, Richardson, and Gutch, of York, the solicitors to the association, and by Mr. Charnock, of Wakefield, the Hon. Sec., with power to add to their number.

ROYAL CALEDONIAN HORTICULTURAL SOCIETY.

Sept. 7.—This was the Autumn General Meeting. The competition in fruits was good; and the same may be said of the Dahlias and Carnations. The following prizes were awarded:—For the best three sorts of *Peaches*, the Silver Medal was voted to Mr. P. Crockett, gr to Colonel Ferguson, for Noblesse, Twyford, and Bellegarde. 2, Mr. R. Gardiner, gr to the Earl of Stair, for Royal George, Noblesse, and Galande. Two sorts of *Nectarines*, Silver Medal, Mr. J. Young, gr to Mrs. H. N. Ferguson, for Elruge and Duc de Tello; 2, Mr. A. Smith, gr to W. Forbes, Esq. M.P., for Elruge and Roman. Three sorts of *Grapes*, exclusive of Muscat, Hamburg, and Frontignan, silver medal, Mr. J. Gow, gr to Count de Flahault, for Souffle Black, Chasselas de Roi, and White Muscadine; an extra premium was awarded to Mr. J. Addison, gr to the Earl of Wemyss, for Flame-coloured Tokay, Royal Sweetwater, and

White Muscadine. For clusters of Muscat of Alexandria Grape, one premium was voted to Mr. J. Young, and another to Mr. J. Weir, gr to Lord Douglas. For large and finely-swelled bunches of Black Hamburg Grapes two prizes were also given, one to Mr. Gardiner and the other to Mr. Crockett. For Frontignans there were likewise two premiums—to Mr. Crockett and Mr. Addison. Best-grown *Pine-Apple*, exclusive of Queen, Mr. Weir, for Black Jamaica; and for the finest Queen the silver medal was given to Mr. A. Temple, gr to O. T. Bruce, Esq. Best *Moorpark Apples*: the silver medal was voted to Mr. J. Thomson, gr to W. Keith, Esq.; 2, Mr. Gardiner; an extra premium was awarded to Mr. J. Robertson, gr to Lord Gray. *Greengage Plums*, Mr. W. Sharpe, gr to Sir J. S. Richardson, Bart. *Melons*, silver medal, Mr. Gardiner, for Watson Wall, a green-fleshed variety; 2, Mr. Smith, for another green-fleshed sort, called Edinburgh Prize Melon. Heaviest dozen of *Jargonelle Peaches*, 1, Mr. J. Lyall, gr to Sir J. Hope, Bart; and a premium was also voted to Mr. Lyall, for producing the best three sorts of *Summer Peaches*, the kinds being Citron des Carmes, Summer Bon Chretien, and Green Pear of Pinkie. Basket of *Elton Strawberries*, Mr. D. White, gr to R. B. W. Ramsay, Esq. *Brace of Cucumbers*, 1, Mr. W. Martin, for Long smooth green; 2, Mr. Young, for Hurst's Walker's Improved. The show of *Carnations* and *Picotees* was large and fine. 12 *Carnations*, flakes or bizarres, 1, Mr. Young, for Marquess of Granby, Hogg's Champion, Ely's Lady Ely, Miltiades, Rumford's Gameboy, Foster's Duke of Wellington, Pearson's Enchanter, Manchester Rival, Ely's Lord Milton, White's Mrs White, Ely's Mayor of Ripon, and Berringer's Hope; 2, Mr. P. Thomson, gr to W. H. Vere, Esq.; 3, Mr. R. Macdonald, gr to Lord Willoughby de Eresby. *Six Picotees*, 1, Mr. Young, for Lord John Russell, Sharp's Duke of Wellington, Morris's Mary, Sharp's Nymph of the Nore, Ely's Grace Darling, and Ely's Mrs Bentley; 2, Mr. J. Niven, gr to Miss Broughton; 3, Mr. D. Foulis, gr to J. Tytler, Esq. *Choice Hollyhocks*: premiums were awarded to Mr. Foulis and Mr. Addison; the best, however, were from Polten Gardens, but found inadmissible on account of the regulations not being complied with. **DAHLIAS: NURSERYMEN**—1, Messrs T. and W. Handsyde, for Lee's Bloomsbury, Sir Robert Sale, Lady Harland, Marquess of Lansdowne, Admiral Stopford, Beauty of the Plain, Mrs Shelley, Lady Sale, Essex Triumph, Coronation, Prince Albert, Burnham Hero, Argo, Metella, Princess Royal, Novelty, Marquess of Lothian, Bridesmaid, Admirable, and Perpetual Grand. **DEALERS**—2, Mr. J. Finlayson; 3, Messrs J. Dickson and Sons. **PRACTICAL GARDENERS**—1, Mr. Thomson, for President of the West, Duchess of Richmond, Westbury Rival, Mrs Shelley, Beauty of the Plain, Stella, Pickwick, Prince of Wales, Bishop of Winchester, Marchioness of Lansdowne, Sir Robert Sale, Array, Phoenix, Antagonist, Burnham Hero, Lady Cowper, Marquess of Lothian, and Admirable; 2, Mr. Young; 3, Mr. W. Thom, gr to Capt. M. Innes; 4, Mr. Sharpe. **AMATEUR CULTIVATORS**—1, Mr. A. Ambrose, for Argo, Windsor Rival, Phenomenon, Virgil, Competitor, Essex Triumph, Pickwick, Sharpe's Sir John Stuart Richardson, Indispensable, Yellow Defiance, Walter's Unique, and Pamplin's Bloomsbury; 2, Mr. A. Symington; 3, Mr. A. Munro, West Holm. The silver medal offered for the best *Seedling Dahlia* was voted to Mr. W. Sharpe, gr to Pittfour Castle, for the seedling raised by him in 1842, and named "Sir John Stuart Richardson." A collection of fine Dahlias was sent by Messrs Dickson and Co., including more than 100 different blooms. Messrs J. Dickson and Sons exhibited a number of plants in pots. From the garden of Sir J. G. Craig was a collection of well-grown specimens of the newer sorts of *Fuchsia*, particularly *F. racemiflora*, *racemiflora elegans*, *St. Clare*, *Curtisii*, *ignescens*, and *Brockmanni*. There was a flowering specimen of *Brugmansia sanguinea*, from General Robertson's garden; also *Yucca filamentosa* and *conica*, from the garden of Capt. Falconer. French and African Marigolds, and China Asters, were sent from the garden of W. Waddell, Esq.; and from Messrs Purdie and Merrills were specimens of *Ilum lanceifolium* and *Erica Irbiana*. From Inch House gardens was the curious small fruit of *Cucumis Anguria*, or Gooseberry Gourd. A collection of seedling *Calceolarias* were sent from Maryfield. Very large samples of *Strasburgh Out* ns from the gardens of D. Anderson, Esq. and of Lord Mackenzie, and excellent *Celery* from the garden of R. W. Royds, Esq.

COUNTRY SHOWS.

Farquhar, gar, Millbank; 2, do., Mr. G. Cardno, gar, Cornhill; *Seedling Fuchsia*, Mr. R. Farquhar. 1, *Stocks*, Mr. G. Cardno; 2, do., Mr. J. Wood, gar, Logie Elphinstone; 3, do., Mr. W. Knowles, gar, Lessendrum. 1, *Cockcombs*, Mr. T. Darling, gar to Lady Grant; 2, do., Mr. F. Deans, gar, Union Grove; 3, do., Mr. G. Cardno. *Picotees*, 1, Mr. J. Booth, gar, Caral Road; 2, do., Mr. A. Mackie, gar, Arbuthnot; 3, do., C. Runcy, Esq. *Dahlias*, 1, Mr. A. Mackie; 2, do., Mr. W. Joss, gar, Banchory House; 3, do., Mr. A. Mackie. *Asters*, 1, Mr. A. Mackie; 2, do., C. Runcy, Esq.; 3, do., Mr. J. Fowle, gar to G. Shurra Gibb, Esq.; 4, do., Mr. J. Davie, gar, Raemoir. *Marigolds*, 1, Mr. J. Simpson, gar, Elmhill; 2, do., Mr. A. Mackie; 3, do., Mr. J. Simpson, gar. Mr. J. Mathewson, gar, Links. *Heaths*, 1, Mr. W. Gallow, gar, Scotston. *Grapes*, 1, Mr. J. Esson, gar, Aberdeen; 2, do., Mr. J. Wood. *Peaches* and *Nectarines*, 1, 2, and 3, Mr. N. Glennie, gar, Fintray House. *Melon*, 1, Mr. J. Gray, gar, Murtle; 2, do., Mr. A. Mitchell, gar, Pitcair; 3, do., Mr. A. Mackie; 4, do., Mr. G. Cardno; 5, do., Mr. F. Deans. *Peas*, 1, Mr. A. Brown, gar, Heathcot; 2, do., Mr. S. Farquhar, gar, Echt House. *Dessert Apples*, 1, Mr. A. Grant, gar to J. Hadden, Esq.; 2, do., Mr. R. Donald, gar, Woodside; 3, do., Mr. S. Farquhar; 4, do., Mr. R. Donald. 1, *Plums*, Mr. N. Glennie; 2, do., Mr. G. Gammie, gar, Drum; 3, do., Mr. J. Gray. 1, *Grafted Geams*, Mr. S. Farquhar; 2, do., Mr. J. Wood; 3, do., Mr. S. Farquhar. 1, *Gooseberries*, (quart), Mr. R. Donald; 2, do., Mr. J. Mavor; 3, do., Mr. T. Robertson, gar, Hargate; 4, do., Mr. J. Wattle, gar, Newfield; 5, do., Mr. T. Robertson. 1, *Gooseberries*, (12 largest and heaviest), Mr. R. Donald; 2, do., Mr. G. Anderson, gar, Gooseberry bank; 3, do., Mr. J. Wood; 4, do., Mr. T. Robertson. 1 and 2, *Appricots*, Mr. J. Wood. 1, 2, and 3, *Seedling Gooseberries*, Mr. A. Brown. 1, *Greenhouse Plants*, Mr. T. Darling; 2, do., Mr. R. Farquhar. 1, *Border Flower*, Mr. J. Mathewson; 2, do., Mr. P. Simpson, gar, Sunnybank. 1, Extra Prize, Mr. J. Mavor; 2, do., Mr. R. Farquhar.—*Aberdeen Journal.*

Anglesey Horticultural Society, Sept. 1.—The second and last Show for the year took place in the exhibition room, at Beaumaris, and was numerously attended. **LIST OF PRIZES.**—*Store Plants*, 1, *Russelia juncea*, H. Beaver, Esq.; 2, *Achimenes longiflora*, Sir R. W. Bulkeley; 3, *Vinca alba*, H. Beaver, Esq. *Greenhouse Plants*, 1, *Chironia frutescens*, O. F. Meyrick, Esq.; 2, *Oxalis Bowiei*, the Lord Bishop of Bangor; 3, *Helichrysum proflerum*, H. Beaver, Esq. *Tender Annuals*, 1, *Globe Amaranthus*, Sir R. W. Bulkeley; 2, Egg-plant, Lord Bishop of Bangor. *Hardy Annuals*, 1, *Brachycome ibidifolia*, H. Beaver, Esq.; 2, *Phlox Drummondii*, O. F. Meyrick, Esq. *Hardy Herbaceous*, 1, *Statice Wilkenoviana*, O. F. Meyrick, Esq.; 2, *Iranca appendiculata*, O. F. Meyrick, Esq. *Half-hardy Shrubs*, 1, *Solva salicifolia*, Hon. Colonel D. Pennant; 2, *Fuchsia fulgens*, Lord Bishop of Bangor. *Dahlias*, 10 blooms, 1, Mr. J. Jones; 2, H. Beaver, Esq.; 3, Hon. Col. D. Pennant; 4, Lord Bishop of Bangor; 5, O. F. Meyrick, Esq. *Bouquet or Design*, 1, Sir R. W. Bulkeley; 2, H. Beaver, Esq. *Three Pelargoniums in Pots, to be named*, 1, H. Beaver, Esq.; 2, Sir R. W. Bulkeley. *Two Pelargoniums in Pots, to be named*, 1 and 2, H. Beaver, Esq. *Ericas in Pots, to be named*, 1, H. Beaver, Esq.; 2, O. F. Meyrick, Esq. *Balsams*, 1, Hon. Colonel D. Pennant; 2, Sir R. W. Bulkeley; 3, Hon. Col. D. Pennant. *Cockcombs*, 1, Hon. Col. D. Pennant; 2, Sir R. W. Bulkeley; 3, Lord Bishop of Bangor. **FRUIT.**—*Best Basket*, 1, Sir R. W. Bulkeley; 2, Hon. Col. D. Pen-

nant. *Best Basket, exclusive of Pines and Grapes*, 1, Sir R. W. Bulkeley; 2, Lord Bishop of Bangor. *Pines*, 1, Sir R. W. Bulkeley, (Monseratt); 2, R. Thomas, Esq., (Black Jamaica); 3, Hon. Col. D. Pennant, (Monseratt). *Melons*, 1, Sir R. W. Bulkeley; 2 and 3, Lord Bishop of Bangor; 4, Hon. Col. D. Pennant. *Cherries*, 1, R. Thomas, Esq.; 2, Hon. Col. D. Pennant. *Figs*, 1, Hon. Col. D. Pennant; 2, None exhibited. *Grapes, white*, 1, H. Beaver, Esq.; 2, Sir R. W. Bulkeley; 3, R. Thomas Esq. *Grapes, black*, 1, R. Thomas, Esq.; 2, Sir R. W. Bulkeley; 3, R. Thomas, Esq. *Peaches*, 1, Sir R. W. Bulkeley. *Plums*, 1, Hon. Col. D. Pennant; 2, Major H. Ford. *Dessert Peas*, 1, J. Wyatt, Esq.; 2, D. Roberts; 3, J. Hughes. *Dessert Apples*, 1, Hon. Col. D. Pennant; 2, Sir R. W. Bulkeley; 3, J. Wyatt, Esq. *Culinary Apples*, 1 and 2, Mrs. M. Parry; 3, R. Thomas, Esq. **VEGETABLES.**—*Cucumbers*, 1, Lord Bishop of Bangor; 2, R. Thomas, Esq.; 3, Sir R. W. Bulkeley. *Celery*, 1, R. Thomas, Esq.; 2, Rev. J. W. Trevor; 3, O. F. Meyrick, Esq. *Broccoli*, 1, Major H. Ford; 2, J. Williams, Esq. *French Beans*, 100, 1, Sir R. W. Bulkeley; 2, Hon. Col. D. Pennant. *Leitner, two heads*, 1, J. Wyatt, Esq.; 2, Rev. D. Williams. *Carrots, bundle of six*, 1 and 2, F. Jacques, Esq. *Onions*, 1, J. Williams, Esq.; 2, Hon. Col. D. Pennant; 3, Sir R. W. Bulkeley. *Leeks*, 1, Rev. J. W. Trevor; 2, Rev. Dr. Williams. *Beet Root*, 1, J. Williams, Esq.; 2, J. Wyatt, Esq. *Parsnips*, 1, Rev. J. W. Trevor; 2, Rev. Dr. Williams.—*Carnarvon Herald.*

Arbroath Horticultural Society, Sept. 12.—This was the last meeting for the season. The following is a list of prizes:—*2 Carnations*, Bizarres, 1, Mr. Lyon, Wild's Perfection, Duke of Leeds; 2, Mr. Walker, Duke of Devonshire, Duke of Lancaster; 3, Lieut. Lyall, R.N. *2 Flakes*, 1, Mr. Lyon, Beauty of Woodhouse, Hepworth's Elizabeth; 2, Mr. Walker, Waterhouse Superb, Chadwick's Lucette; 3, Lieut. Lyall. *2 Picotees*, 1, Mr. Lyon, Lord John Russell, Isabella; 2, Lieut. Lyall; 3, Mr. J. Baillie. *Variety of 10 Picotees and Carnations*, 1, Mr. Lyon, Hepworth's Elizabeth, Peach Blossom, Bizarre, Lord Kinnaird, Madame Vestris Seedling; Miss Mally, Duke of Leeds, Beauty of Woodhouse, Lord John Russell, Wilde's Perfection; 2, Mr. Walker, Duke of Devonshire, Ely's Sir Rowland Hill, Hutton's Patriarch, Prince Leopold, Caroline, Major Cartwright, Beauty of Cradley, Martin's Goldfinch, Venus, Maid of Orleans. 6 *Dahlias*, 1, Mr. A. Whamand, Prince of Wales, Phoenix, Rouge et Noir, Admirable, Phenomenon, Bloomsbury (Lee's); 2, Mr. Sturrock; 3, Mr. Mitchell. *12 Best*, 1, Mr. W. Black; 2, Mr. A. Whamand, Phenomenon, Bloomsbury (Lee's), Scarlet Defiance, Phoenix, Rouge et Noir, Duke of Cornwall, Lady Cowper, Admirable, Metella, Maria. *18 Best*, 1, Mr. W. Black; 2, Mr. J. Milne; 3, Mr. A. Duncan. *30 Best*, 1, Mr. W. Black; 2, Mr. A. Duncan. *4 Hollyhocks*, 1, Mr. C. Black; 2, Mr. C. Moir. *2 Cockcombs*, 1, Mr. G. Jarran; 2, Mr. C. Black; 3, Mr. Sturrock. *2 Balsams*, 1, Mr. Sturrock; 2, Mr. C. Black; 3, Mr. Sturrock. *8 Hardy Annuals*, 1, Mr. A. Duncan; 2, Mr. C. Black; 3, Mr. J. Gunn. *4 Marygolds, French*, 1, Mr. J. Milne; 2, Mr. Lyon; 3, Dr. Traill. *3 African*, 1, Mr. A. Duncan; 2, Mr. C. Black; 3, Mr. H. Black. *6 Asters*, 1, Mr. G. Jarran; 2, Mr. A. Duncan; 3, Mr. G. Jarran. *4 Fuchsias*, 1, Mr. Walker, Venus vitrix, transparent grandis, mirabilis; 2, Mr. Cuthbert, elegans superba, Venus vitrix, Monypenny mirabilis; 3, Mr. Baillie. *10 Best*, 1, Mr. Baillie, Standishii, invincibile, insignis, mirabilis, conspicua, transparentis, fulgens, racemiflora, arborea, magnifica; 2, Mr. Cuthbert, elegans superba, magnifica, Venus vitrix, Youellii, Meteor, Gem, insignis, Standishii, mirabilis; 3, Mr. Walker. *6 Stocks*, 1, Mr. Jarran; 2, Mr. Gibson; 3, Mr. Lyon. *12 Best*, 1, Lieut. Lyall; 2, Mr. J. Milne; 3, Mr. J. Bain. *6 Verbenas*, 1, Mr. G. Jarran; 2, Mr. W. Black; 3, Mr. J. Bain. *Herbaceous Plants*, *12 Best*, 1, Mr. G. Jarran; 2, Mr. W. Black; 3, Mr. J. Gunn. *4 Pelonias*, 1, Mr. C. Black; 2, Mr. A. Duncan. *4 Phloxes*, 1, Mr. G. Jarran; 2, Mr. A. Duncan. *6 Pansies*, 1, Mr. A. Whamand, Gunn's Admirable, Robespierre, Miss Stainforth, Gunn's Alpha, Gunn's Sir R. Peel, Waverley; 2, Mr. J. Gunn, Prince Albert, Curion, Gunn's Admirable, Columbus, Sir R. Peel, Eliza; 3, Mr. J. Baillie. *12 Best*, 1, Mr. A. Whamand, Miss Stainforth, Gunn's Brilliant, Gunn's admirable, Waverley, Amulet, Seedling not named, Gunn's Sir R. Peel, Alpha, Challenger, Contender, Premier, and Rival Queen; 2, Mr. J. Gunn, Aurantia, Eliza, Curion, Amulet, Inogene, Prince Albert, Seedling, Gunn's Columbus, Alpha, Caender, Sir R. Peel, and Admirable. *18 Best*, Mr. A. Whamand, Mirror, Waverley, Aurantia, Amulet, Whamand, No. 1, Walker's Seedling, Miss Stainforth, Jupiter, Robespierre, Jesse, Duke of Marlboro', Gunn's Challenger, Admirable, Premier, Alpha, Sir R. Peel, and Contender. *2 Seedling*, 1, Mr. J. Gunn, Eliza, Defiance, Aurantia, Black Knight, Amulet, Prince Albert, Lady Fuller, Belzoni, Gunn's Mary Queen of Scots, Alpha, Challenger, Brilliant, Premier, Columbus, Perfection, Sir W. Wallace, Rival Queen, Advocate; 3, Mr. J. Milne. **Specimen Plant for beauty and variety**, 1, Mr. J. Baillie, for Gesnera zebрина; 2, Mr. C. Black; 3, Mr. Smith. *6 Greenhouse Plants*, 1, Mr. G. Jarran; 2, Mr. Smith. *Grapes*, largest bunch ripe, 1, Mr. G. Jarran; 2, Mr. C. Black. *Best Flavoured*, not less than 100, 1, Mr. C. Black; 2, Mr. G. Jarran. *Best variety of ripe do.*, Mr. C. Black. *6 Nectarines*, 1, Mr. C. Black. *4 Peaches* from open wall, 1, Mr. C. Moir; 2, Mr. G. Jarran. *6 Plums*, Green Gage, 1, Mr. C. Moir; 2, Mr. J. Bain; 3, Mr. G. Jarran. *6 Dessert Apples*, 1, Mr. C. Black; 2, Mr. A. Duncan; 3, Mr. G. Jarran. *6 Winter*, Mr. A. Duncan. *6 Largest*, 1, Mr. C. Moir; 2, Mr. G. Jarran. *Best Variety*, 1, Mr. G. Jarran; 2, Mr. A. Duncan. *Peas*, largest Jargonelles, 1, Mr. G. Jarran; 2, Mr. J. Cameron. *Best Flavoured*, 1, Mr. G. Jarran; 2, Mr. C. Black. *6 Best*, excluding Jargonelles, Mr. G. Jarran. *Best Variety*, 1, Mr. G. Jarran; 2, Mr. A. Duncan. *20 Morello Cherries*, 1, Mr. C. Moir; 2, Mr. J. Bain; 3, Mr. A. Millar. *Melon*, 1, Mr. C. Moir; 2 and 3, Mr. A. Duncan. *Gooseberries*, pint Red, 1, Mr. G. Jarran; 2, Mr. C. Moir; 3, Mr. C. Black. *Pint Yellow*, 1, Mr. R. Oakenhead; 2, Mr. C. Black; 3, Mr. A. Duncan. *Pint Green*, Mr. C. Black; 2, Mr. W. Smith; 3, Mr. G. Jarran. *Currants*, pint Red, 1, Mr. C. Black; 2, Mr. W. Smith; 3, Mr. Lyon. *Pint White*, 1, Mr. C. Black; 2, Mr. C. Moir; 3, Mr. A. Duncan. *Raspberries*, pint, 1, Mr. J. Bain; 2, Mr. J. Cameron. *Celery*, 2 heads Red, Mr. A. Duncan. *White*, 1, Mr. J. Milne; 2, Mr. A. Duncan. *6 Keeping Onions*, 1, Mr. G. Jarran; 2, Mr. C. Black; 3, Mr. J. Bain. *2 roots of Beet*, 1, Mr. J. Milne; 2, Mr. C. Black; 3, Mr. A. Duncan. *3 Carrots*, 1, Mr. J. Milne; 2, Mr. A. Millar; 3, Mr. J. Bain. *Brace of Pickling Cabbages*, Mr. C. Black. *Largest Brace of any kind*, 1, Mr. C. Black; 2, Mr. A. Millar. *Largest Brace of Savoy*, 1, Mr. A. Millar; 2, Mr. A. Laird; 3, Mr. C. Black. *Brace of Greens*, 1, Mr. C. Black; 2, Mr. A. Millar; 3, Mr. Mitchell. *Brace of Parsnips*, 1, Mr. C. Moir; 2, Mr. Lyon; 3, Mr. A. Duncan. *Brace of Cauliflowers*, 1, Mr. G. Jarran; 2, Mr. C. Black; 3, Mr. J. Milne. *Basket of ripe Fruit*, Mr. G. Jonan. **EXTRA PRIZES.**—*Carnations*, Bizarres, Mr. Walker, Duke of Devonshire. *Best Flake*, Hepworth's Elizabeth. *Best Picotee*, Mr. Walker. *Crimson Dahlias*, Mr. A. Duncan, for Burnham Hero. *Ross or Lilac*, Mr. J. Milne, Marquess of Lansdowne. *White or Edged*, Mr. A. Duncan. *Scarlet*, Mr. A. Duncan. *Lee's Bloomsbury*. *Yellow or Orange*, Mr. A. Duncan. *Yellow Climax*. *Purple Puce or Dark*, Mr. W. Black. *Rouge et Noir*. *Stock*, Mr. C. Black. *Aster*, Mr. G. Jarran. *Pansy*, Mr. J. Gunn. **EXTRA PRIZES** were also awarded to Mr. Jarran, for a Collection of very fine Stocks, strong and well grown; and Mr. Laird, for a Dish of beautiful Strawberries.

Aylesbury Annual Floral and Horticultural Show, Sept. 21.—This was for Dahlias, Flowers, Fruits, &c. Dennis' Perfection, 2, Dr Scholfield. Single specimen of ditto, 1 Dr Scholfield. Vivid, 2, H. Cooke, Esq., Rising Sun. Balsam, 1, Mr. Shelcock; 2, Mr. Crowcroft. Cockscomb, 1, Mr. Bennett; 2, Dr. Dymond. Stock, 1, Mr. Foster; 2, J. L. Lamotte, Esq. Collection of Verbena, Earl Spencer; 2, Mrs. Milan. Collection of Petunias, Mr. Appleby. 24 Pansies, Mr. Atkinson; 12 ditto, Mr. Quanton; 12 seedling ditto, Mr. Barker. Annual, P. D. Cooke, Esq., Rhodanthem Manglesii; 2, P. D. Cooke, Esq., Lupinus versicolor. 6 Hollyhocks, Miss Jackson. Fruits:—Pine, Mr. Shelcock; 2, Mr. Flintham. White Grapes, Dr. Dymond; 2, R. K. Dawson, Esq.; Black do., C. T. Wood, Esq.; 2, W. Chadwick, Esq. Melon, Mrs. Milan; 2, T. Dyson, Esq. Peaches, C. T. Wood, Esq. Cherries, Mr. Shelcock; 2, Mr. Woodward. Raspberries, Dr. Dymond; 2, Mr. Wragg. Strawberries, Lady Cooke; 2, H. Machin, Esq. Gooseberries, Mr. Ridley; 2, Mr. Haigh. Currants, R. K. Dawson, Esq.; 2, Earl Spencer. 6 Pears, P. D. Cooke, Esq.; 2, Mrs. Milan. Dessert Apples, Mr. Crowcroft; 2, Mrs. Milan. Baking do., Mrs. Milan; 2, Mr. Crowcroft. EXTRA PRIZES:—Pan of 24 Pinks, Mr. C. Simonite. Pan of Carnations, Mrs. Spence. Grapes, Mr. Shelcock.—Doncaster Gazette.

Dorking Horticultural Society, August 29.—The third and last Meeting for the present year was held this day. Fruit was the principal object of exhibition, and taking the unfavourable season into account, the display was respectable, although by no means equal to that of former years. Melons, Peaches, and Grapes, in particular, were inferior. But if the fruit did not equal, the flowers surpassed the usual average—an improvement which must principally be ascribed to the introduction of the new Achimenes, most of the species having been produced in high perfection. The collections of Fuchsias contained many of the newest varieties, and among those exhibited for competition there were several well-grown plants. Some of the single specimens were likewise excellently cultivated, particularly Lisianthus Russellianus, which was an admirable plant. Of the Prize Dahlias (which we omit, because they were not all named), none were particularly deserving of remark, except a stand of 24 from Mr. Jackson, of Kingston, among which were some of the newest and best sorts in cultivation. In the evening the members of the Society and their friends, nearly sixty in number, dined in the Exhibition-room. Prizes were awarded as follows:—Pine-Apples, 1, Envile, Mr. J. Apted, gr to the Countess of Warwick; 2, Queen, Mr. J. Gadd, market-gr; 3, Welbeck Seedling, Mr. Hislop, gr to Col. Howard. Melons, 1, George the IV., Mr. Truelove, gr to the Misses Carbonell; 2, ditto, Mr. Whiting, gr to H. T. Hope, Esq.; 3, Masulipatam, Mr. Aited; 4, Cabul, Mr. Goodhew, gr to J. B. Hankey, Esq.; 5, George the IV., Mr. Ivery, market-gr. Grapes, Best Bunch, 1, Black Hamburg, Mr. Goodhew; 2, White Muscat, Mr. Hislop; 3, Black Prince, Mr. Heritage, gr to the Right Hon. H. Goulburn; 4, Syrian, Mr. Apted; 5, Black Hamburg, Mr. J. Gadd; 6, White Muscadine, Mr. Whiting. 9 Peaches, 1, Mr. Roland, gr to David Barclay, Esq.; 2, Mr. Broadbridge, gr to the Countess of Rothes; 3, Mr. Goodhew; 4, Mr. Hislop; 5, Mr. Ivery. 9 Nectarines, 1, Mr. Goodhew; 2, Mr. Hislop; 3, Mr. Ivery; 4, Mr. Roland; 5, Mr. Broadbridge. 9 Pears, 1, Jargonelle, Mr. Heritage; 2, ditto, Mr. Chandler, gr to J. W. Freshfield, Esq.; 3, ditto, Mr. Goodhew; 4, ditto, Mr. Truelove. 12 Plums, 1, Washington, Mr. Haben, gr to the Duke of Norfolk; 2, Green Gage, Mr. Heritage; 3, ditto, Mr. Broadbridge; 4, Denyer's Victoria, Mr. Ivery. 12 Apples, 1, Kerry Pippin, Mr. Ivery; 2, Red Juneating, Mr. Heritage; 3, Mr. Apted. 2 lbs. of Filberts, 1, Mr. Whiting; 2, Mr. Ivery; 3, Mr. Truelove; 4, Mr. Heritage; 5, Mr. Broadbridge. Celery, six heads, 1, Mr. Chandler; 2, Mr. Truelove; 3, Mr. J. Briggs, gr to C. C. Deacon, Esq.; 4, Mrs. Charrington; 5, Mr. Crocher, gr to W. Price, Esq.; 6, Mr. Broadbridge. Best two Cockscombs, 1, Mr. Reid; 2, Mr. Whiting. Two Balsams, 1, Mr. Whiting. EXTRA PRIZES:—Mr. R. Gadd, market-gr, for a collection of Fuchsias; Mr. Reid, for Figs, and for a collection of six Plants; Mr. J. Scott, gr to W. Clayton, Esq., for Thunbergias; Mr. Haben, for Morello Cherries; Rev. A. Burmester, for Mulberries.

Dundee and Broughty Ferrie Dahlia Competition, Sept. 20.—This was a bet between three of the leading amateurs in Dundee and Broughty Ferrie on the one side, and an equal number from the Carse of Gowrie on the other. Each were required to produce six blooms of different varieties. Victory was declared in favour of the Carse cultivators by a very great superiority; the six flowers in the stand of Mr. A. Ambrose counted within less than two points of the aggregate value of all those of his rivals. This is the second victory gained in succession by the Carse amateurs over the same opponents. There was also decided on the same day, a prize of ten shillings, which was given by Mr. Laird, Nurseryman, Dundee, for the best 12 different blooms, and open to practical gardeners and amateurs. Five of the former and two of the latter produced the requisite number. The prize was awarded to Mr. Ambrose, who exhibited Sharpe's Sir John Stewart Richardson, Dodd's Prince of Wales, President of the West, Yellow Climax, Beauty of the Plain, Bridesmaid, Essex Triumph, Yellow Defiance, Le Grand Baudine, Pickwick, Maria, and the Empress of the Whites. Mr. Sharpe's seedling of 1842, named Sir John Stewart Richardson, which was exhibited in the stand of the winner, is a good Dahlia, the colour of which resembles the Duchess of Richmond, but is much darker, and never fails to produce very large and superior blooms. All who have seen it pronounce it to be a first-class flower.

Durham Florists' Show, August 28.—At this Annual Show of Carnations and Picotees, prizes were awarded as follows:—Carnations, Mr. W. Thompson, jun., 1, 2 and 3, with Lady Ridley, Sherwood's Corinthus, and Miss Laura. H. J. Marshall, Esq., 4 and 5, with Bellerophon, and Paul Pry. Picotees, Mr. Marshall, 1, 2, 3, 4, and 5, with Plenipotentiary, Dr. Horner, Mrs. Horner, Duchess of Kent, and Lady Ely. Several Seedling Picotees were shown by Mr. W. Thompson, jun., which obtained prizes and were named respectively, Thompson's Victory, John Bright, Mayor of Durham, Beauty of the Leazes, Beauty of the North, &c. &c. Prizes were also awarded for the following Dahlias shown by Mr. T. Nicholson:—viz., Lee's Bloomsbury, Duke of Richmond, Pickwick, Brook's Champion, and Yellow Defiance. The room was tastefully decorated by a collection of Dahlias, and other flowers furnished by various members of the Society. Mr. J. Wells delivered a lecture on the culture of the Carnation, Picotee, &c., which was highly gratifying to a numerous company.

East Lothian Horticultural Society, Sept. 21.—This was the third Exhibition for the season. The following prizes were awarded:—Seedling Dahlia, raised in the country, 1842 and 1843, Mr. M. Biel; 2, Mr. A. Kinghorn, gr to Sir R. Houston. 12 ditto, sorts, Mr. J. Addison, gr to the Right Hon. the Earl of Wemyss; 2, Mr. W. Thom, gr to Capt. M. Innes. 6 ditto, sorts, Mr. Thom; 2, Mr. Addison. 12 China Asters, sorts, Mr. Kinghorn; 2, Mr. Thom. 8 Hollyhocks, sorts, Mr. W. Rentoul, gr to J. Balfour, Esq.; 2, Mr. Addison. 6 Marygolds, French and African, Mr. Rentoul; 2, Mr. Kinghorn. 12 Stocks, Mr. C. Anderson, gr to Sir T. B. Hepburn, Bart, M.P.; 2, Mr. Addison. 3 Fuchsias, sorts (in pots), Mr. Ren-

toul; 2, Mr. Kinghorn. 3 Cape Heaths, sorts (in pots), Mr. Addison; 2, Mr. Rentoul. 3 Tender Exotics, Mr. Addison; 2, Mr. Rentoul. 12 Hardy Herbaceous plants, sorts, Mr. Addison; 2, Mr. Kinghorn. 2 Cockscombs (in pots), Mr. R. Hamilton, gr to Sir D. Kinloch, Bart; 2, Mr. Anderson. 2 bunches Hamburg Grapes, heaviest and highest coloured, Mr. Rentoul; 2, Mr. Anderson. 2 bunches Grapes, (any other variety), heaviest and best flavoured, Mr. T. Fleming, gr to J. S. Hay, Esq.; 2, Mr. T. Allan, gr to Mrs. Martin. 12 Plums, (3 sorts, exclusive of Green Gage), Mr. Addison; 2, Mr. Hamilton. 12 Green Gage Plums, Mr. A. Calder, gr to G. Shigo, Esq.; 2, Mr. J. Street, gr to Mrs. H. N. Ferguson. 6 Pigs, Mr. D. Mitchell, gr to the Right Hon. Lord Elcho. 6 Peaches, (open air), Mr. A. Ramsay, gr to Sir D. Baird, Bart; 2, Mr. Hamilton. 6 Nectarines, (open air), Mr. Mitchell; 2, Mr. Calder. 6 Peaches, (from underground), Mr. W. Henderson, gr to J. Aitchison, Esq.; 2, Mr. Kinghorn. 6 Nectarines, (from underground), Mr. Kinghorn. 6 Apricots, Mr. Kinghorn; 2, Mr. A. Shearer. 1 Green-fleshed Melon, Mr. Hamilton; 2, Mr. Fleming. 1 Melon, any other sort, Mr. Hamilton; 2, Mr. D. Cleghorn. 1 Quart of Gooseberries, Mr. A. M'Lean, gr to J. Ainslie, Esq.; 2, Mr. Calder. Bouquet, Mr. A. Shearer, gr to the Most Noble the Marquess of Tweeddale. 6 Summer Dessert Apples, sorts, Mr. Kinghorn; 2, Mr. P. Allan. 6 Baking Apples, weight, Mr. W. Ogilvie; 2, Mr. Anderson. 6 Jargonelle Pears, weight, Mr. Addison; 2, Mr. Rentoul. 6 Pears, of other varieties, sorts, Mr. A. M'Lean; 2, Mr. P. Allan. 3 Cauliflowers, Mr. W. Henderson; 2, Mr. Addison. 2 Red Beet, Mr. Henderson; 2, Mr. Thom. 3 Carrots, Mr. W. Ogilvie; 2, Mr. Anderson. 6 Onions, Mr. Kinghorn; 2, Mr. Calder. Competed for by AMATEURS only:—6 Dahlias, Mr. W. Martin; 2, Mr. D. Cleghorn. 3 Onions, Mr. Martin; 2, Mr. Ogilvie. 6 Dessert Apples, Mr. W. Ogilvie; 2, Mr. D. Cleghorn. SWEETSTAKES, open to all the members:—9 Dahlias, Mr. Addison; 2, Mr. Thom. For exhibition:—Messrs. Dickson and Co., were nearly 100 excellent Dahlias, a number entirely new kinds, and Striped French Marygolds; from Mr. T. Dods, were Hollyhocks; from Mr. Kinghorn, were Cape Heaths, Helichrysums, Fuchsias, &c.; from Mr. Martin, were Brace Cucumbers and Seedling Dahlias, &c.

Eccleston Floral and Horticultural Show, Sept. 15.—This was the last Exhibition for the season. An Amateur's prize for 6 Phloxes, 1, Mr J. Downie, for omniflora, Richardsonii, Reevesii, cordata grandiflora, superba, and Brown's No. 4; 2, Mr Hogg. An Amateur's prize for 4 Pentstemons, 1, Mr D. White, Murrayana, fruticosa, gentianoides coccinea, and campanulata; 2, Mr Thom. Grand Dahlia Sweepstakes, open to the whole of Scotland: five prizes were awarded, namely, 1, Mr Thompson; 2, Mr Thom; 3, Mr Downie; 4, Mr Young; 5, Mr White. Names of Dahlias which gained the first prize: Bishop of Winchester, Phenomenon, Pickwick, Array, Princess Royal, Yellow Climax, Lady Cooper, Mrs Shelley, Prince of Wales, Beauty of the Plain, Duchess of Richmond, Antagonist, Westbury Rival, Lady Harland, Marques of Lansdowne, Hodges' Competitor, Essex Triumph, President of the West. Names of Dahlias which gained the second: Metella, Rouge et Noir, Attila, Pickwick, Sir Robert Sale, Northern Beauty, Bishop of Winchester, Lee's Bloomsbury, Stella, Prince of Wales, President of the West, Marques of Lothian, Lady Harland, Indispensable, Yellow Climax, Grace Darling, Burnham Hero, Low's Conservative. The following articles were sent for exhibition:—From Messrs Dickson and Co., 3 cases of Dahlias and 1 case of French Marrygolds. From Messrs Handasyde were 120 blooms of Dahlias. From Mr Gourlay, gr to the Right Hon. the Dowager Countess of Glasgow, was a fine case of 24 Dahlias. From Mr Thomson, a seedling Apricot, of fine flavour, named Keith's Early Moorpark. From Mr W. Sharpe, were 6 blooms of his seedling Dahlia of 1842, named Sir John Stewart Richardson, resembling in colour the "Duchess of Richmond," but in every respect superior. Mr Turnbull sent his seedling variegated Dahlia, named Sir David Willie. From Messrs J. Dickson and Sons, was 1 case of Dahlias, 1 case of Tender Exotics, and a collection of Hollyhocks. From Mr Stirling was a bloom of Magnolia grandiflora. From the Orphans' Hospital was a case of Dahlias. Mr Symington sent a collection of very fine Dahlias.

Nottingham Floral and Horticultural Society, Sept. 20.—This was the last Show for the present season for the exhibition of Dahlias, Stove, Greenhouse, Herbaceous Plants, and specimens of Fruit and Vegetables. The Dahlias were very scarce, in consequence of their having been attacked by an insect (which is general this year), called the "Thrip," which entirely destroys both the shape and the colour of the flowers: those exhibited were, however, good. A collection of Autumnal Roses and Seedling Verbenas, from Mr Pearson's, of Chilwell, were greatly admired.—DAHLIAS: First dealer's pan of 24 blooms, Mr Edwards, for Bridesmaid, Climax, Yellow Climax, Cox's Defiance, Dodd's Prince of Wales, Queen of Beauties, Phenomenon, Hudson's Princess Royal, Maria, Nicholas Nickleby, Andrew Hofer, Rouge et Noir, Metella, Duke of Cornwall, Lady Harland, Lord Sandon, Captivator, Ploughboy, Gypsy Maid, Duchess of Richmond, Indispensable, Pickwick, Windmill-hill Rival, Lewisham Rival. Practical Floral and Horticultural Society of Ireland, Sept. 22.—At this Dahlia Show the competition was keenly contested, and the Dahlias were excellent. The following was the award of prizes:—1, The Downshire Cup, for the best 36 flowers classified, Mr. D. Levingston. Mr. Levingston having won this cup on two former occasions, it now becomes his property; 2, Mr. Bridgeford. *Best Twenty-four*, 1, Mr. Campbell; 2, G. Rathborne, Esq.; 3, Mr. D. Levingston. *Best Twelve*, 1, Mr. Bridgeford; 2, Mr. Campbell; 3, S. G. Rathborne, Esq. *Best Six*, 1, Mr. Levingston; 2, Mr. Campbell. There were some very fine specimens of *Dahlia Blooms*, not for competition, exhibited by Mr. Baggarty and by Mr. Hodgens. The boxes which were exhibited by Mr. Davis (in the competing class) were much admired, as well as a box of beautiful seedlings by the same grower.—*Farmers' Gazette*.

Royal Horticultural Society of Perthshire, August 25.—This the Autumn Show displayed a rich appearance of Flowers and Vegetables, but the backwardness of the season affected the Fruit department considerably. From Invermay, we observed a specimen of *Corylus avellana*, Common Hazel, with curiously variegated leaves, discovered by Colonel Murray Belshes, in the romantic den of Invermay some years ago. From Scone were *C. coccinea*—*Calceolarias*, *Fuchsias*, *Erythrina laurifolia*, *Angelonia Gardneriana*. From Kilmarnock were *Heaths*, viz., *Erica retorta*, *E. Irbiana*, *E. ferruginea*, *E. infundibuliformis*, and *Ichneumonulata*. From Drummond Castle was a tray of beautiful Tree Carnations. Mr. Bisset, from Methven Castle, gained the first prize for Cauliflowers. From Pitlochry were several beautifully grown Fuchsias, and a good seedling Dahlia of the first class, named Sir J. S. Richardson; also a specimen of *Heracleum giganteum*, above 12 feet high. The Premiums were awarded as follows:—*Flowers*.—*Pelargoniums*, Six, different, one truss of each, 1, Mr. Kide; 2, Mr. Clark; 3, Mr. Sadler. *Seedling*, 1, Mr. Bisset; 2, Mr. M'Donald; 3, Mr. Bisset. *Carnation Bizzars*, Three Flowers, 1, Mr. Kide; 2, Mr. M'Donald; 3, Mr. Spalding. *Seedling*, Mr. Bisset. *Flake*, Three Flowers, 1, Mr. Kide; 2, Mr. M'Donald; 3, Mr. Bisset. *Seedling*, Mr. Bisset. *Picotees*, Three Flowers, different, 1, Mr. Spalding; 2, Mr. Duncan; 3, Mr. M'Donald. *Seedling*, 1 and 2, Mr. Spalding; 3, Mr. Kide. *Dahlia*, Double, Twelve, different, 1, Mr. Sharpe; 2, Mr. Sadler; 3, Mr. Duncan. *Seedling*, One Flower, 1, 2, and 3, Mr. Sharpe. *Variety of Twenty*, 1, Mr. M'Donald; 2, Mr. Sharpe. *By Amateur Members*, Six, different, 1, Mr. Wilson; 2, Mr. Ross; 3, Mr. Ambrose. *Hardy Biennial and Perennial Herbaceous Plants*, 1, Mr. Bisset; 2, Mr. M'Donald; 3, Mr. Sharpe. *Tender Biennial and Perennial Herbaceous Plants*, Mr. Sharpe. *Phloxes*, Six, different, 1, Mr. Bisset; 2, Mr. M'Donald; 3, Mr. Dodds. *Bouquet of Flowers*, the most tastefully put up, 1, Mr. Sadler; 2, Mr. Bisset; 3, Mr. Lony. *Hollyhocks*, Twelve, Mr. M'Donald; 2, Mr.

Arnot; 3, Mr. Dodds. *Roses*, China, Six, Mr. M'Donald; 2, Mr. Sharpe; 3, Mr. Bisset. *Stocks*, Double, The best variety of Six, 1, Mr. Sadler; 2, Mr. Carstairs; 3, Mr. Aitken. *China Asters*, Six, 1, Mr. Sharpe; 2, Mr. Dodds. *Lobelia*, Four Varieties, 1, Mr. Sharpe; 2, Mr. Carstairs. *Verbenas*, Six, 1, Mr. Sharpe; 2, Mr. M'Donald; 3, Mr. Dodds. *One in Pot*, Mr. Dodds. *Cockscombs*, Three, 1, Mr. Dodds; 2, Mr. Sadler. *Greenhouse, or Frame Shrubby Plants*, in Pots, Three, 1, Mr. Robertson; 2, Mr. Sharpe; 3, Mr. Lony. *FRUIT AND VEGETABLES*.—*Appricots*, Moorpark, Six, 1, Mr. Robertson; 2, Mr. Arnot. *Any other sort*, Six, 1, Mr. Willocks; 2, Mr. Aitken; 3, Mr. Dodds. *Peaches*, from Open Wall, without fire-heat, Six, 1, Mr. Robertson; 2, Mr. Sharpe. *From Hothouse*, Six, 1, Mr. Dodds; 2, Mr. Robertson; 3, Mr. Arnot. *Nectarines*, from Hothouse, Six, 1, Mr. Robertson; 2, Mr. Dodds; 3, Mr. Kide. *Grapes*, Muscat, Two bunches, 1, Mr. Sadler; 2, Mr. Duncan; 3, Mr. Arnot. *Black Hamburgh*, Two bunches, 1, Mr. Robertson; 2, Mr. Aitken; 3, Mr. Sharpe. *Frontignan Grizzly*, Two bunches, 1, Mr. Robertson; 2, Mr. Dodds; 3, Mr. Duncan. *Pine Apple*, The largest and best flavoured, Mr. Dodds. *Melon*, Green-fleshed, 1, Mr. Dodds; 2, Mr. Sadler; 3, Mr. Kide. *Any other sort*, Mr. Carstairs. *Figs*, Six, 1, Mr. Sadler; 2, Mr. Clark. *Cherries*, Mayduke, Sixty, 1, Mr. Bisset; 2, Mr. Dodds; 3, Mr. M'Donald. *Morello*, Sixty, 1, Mr. Dodds; 2, Mr. M'Donald; 3, Mr. Carstairs. *Plums*, Six, 1, Mr. Dodds; 2, Mr. Carstairs. *Pears*, Six, 1, Mr. Sharpe; 2, Mr. Bisset; 3, Mr. Sadler. *Apples*, Table, Six of one sort, 1, Mr. Robertson; 2, Mr. M'Donald; 3, Mr. Aitken. *Heaviest six*, 1, [Mr. M'Donald]; 2, Mr. Robertson. *Currents*, White, Best quart, 1, Mr. M'Donald; 2, Mr. Clark; 3, Mr. Dodds. *Gooseberries*, Red, Best quart, 1, Mr. Robertson; 2, Mr. Willocks; 3, Mr. Bisset. *Green*, 1, Mr. Clark; 2, Mr. Sharpe; 3, Mr. Duncan. *Yellow*, Quart, 1, Mr. Duncan; 2, Mr. Bisset. *Cauliflowers*, Best couple, 1, Mr. Bisset; 2, Mr. M'Donald; 3, Mr. Lony. *Onions*, Six, autumn-sown, 1, Mr. Dodds; 2, Mr. Aitken; 3, Mr. Sharpe. *Best six*, spring sown, 1, Mr. Clark; 2, Mr. Sharpe; 3, Mr. Dodds. *Carrots*, Largest six, 1, Mr. Carstairs; 2, Mr. Sadler; 3, Mr. Lony. *Beet roots*, Brace, 1, Mr. M'Donald; 2, Mr. Dodds; 3, Mr. Sadler. *Celery*, Two heads, 1, Mr. M'Donald; 2, Mr. Dodds. *Cabbage*, Pickling, Best brace, 1, Mr. Dodds; 2, Mr. M'Donald; 3, Mr. Arnot. *Late*, Brace, 1, Mr. Sadler; 2, Mr. Arnot; 3, Mr. Sharpe. The greatest number of First Honorary Prizes, Mr. M'Donald. The *Silver Medal*, presented by Colonel Murray Belshes to the most successful competitor in FRUITS, gained by Mr. Robertson.—*Perth Constitutional*.

Royal Horticultural Society of Cornwall, Sept. 12.—This was the thirty-eighth exhibition, and the last for the year. On the centre table there were a few plants worthy of notice, comprising several *Catsetums*, a good specimen of *Cattleya Loddigesii*, and a very beautiful *Brassia verrucosa*. The show of Dahlias was very extensive, and comprised some of the choicest varieties of all colours. Mr. Pontey obtained the silver medal for the best show of Flowers, of which he had an excellent collection, especially of Dahlias. Among these we observed *Achimenes grandiflora*, *Achimenes longiflora*, *Curcuma Roscoeana*, *Combretum purpureum*, *Ixora crocata*, *Bignonia Chamberlaynii*, *Euphorbia Rogerii*, *Crocea saligna*, *Galphimia splendens*, *Plumbago rosea*, *Lilium lancifolium rubrum*, *Petunias*, &c., &c. Among the Dahlias were Essex Triumph, Antagonist, Mrs. Shelley, Confidence, Conservative, Suffolk Hero, Rouge et Noir, Admirable, Indispensable, Bridesmaid, Dowager Lady Cooper, Argo, Northern Beauty, Perpetual Grand, Sir Robert Sale, Nicholas Nickleby, Princess Royal, Pickwick, Pamplin's Bloomshury, Marquess of Lansdowne, Wheeler's Maria, &c., &c., with a large collection of Cut Flowers of various kinds, such as Marigolds, African and French Verbenas, Roses, &c., &c. Mr. Rickard who obtained the bronze medal, had a beautiful display of Dahlias, Verbenas, Pentstemons, Fuchsias, Lobelias, and Salvias. Mr. Rendle had a good show of hardy shrubs, comprising Roses, Hollyhocks, Dahlias, and Asters. Messrs. Veitch, who received an extra bronze medal, showed a few flowers of Dahlias. Mr. Paul had a fine display of Miscellaneous Flowers, consisting of Roses, Dahlias, Petunias, Verbenas, Pentstemons, Fuchsias, Calceolarias, &c. The Prizes:—*Fruit*.—*Collection of Dessert Apples*, three of each sort, 66 sorts, the Silver Medal, 1, Mr. J. Bishop; 2, 78 sorts, Mr. J. Coplin. *Pine Apple*, Black Jamaica, 1, J. Vivian, Esq.; 2, New Providence, G. C. Fox, Esq. *Melon*, 1, King's Own Green Flesh, J. Vivian, Esq.; 2, Beach Wood, Mrs. Sampson. *Grapes*, Black Hamburgh, Sir C. Lemon, Bart., M.P. *Peaches*, 1, Royal Charlotte, J. Vivian, Esq.; 2, Millet's Mignonne, Rev. C. Rogers. *Dish of ditto*, of sorts, 1, French Megna, Smith's Newington, Montaubon, Violet Hatve, Ford's seedling, Noblesse, Admirable, Red Magdalene, Royal George, J. Vivian, Esq.; 2, Royal George, Double Montagne, Millet's Mignonne, Red Magdalene, Tête de Venus, G. C. Fox, Esq. *Nectarines*, 1, Elrige, Sir C. Lemon, Bart., M.P.; 2, Duc de Tallo, G. C. Fox, Esq. *Collection of Dessert Pears*, two of each sort, 22 sorts, 1, Sir C. Lemon, Bart., M.P.; 2, Mr. S. Treseder. *Six ripe Dessert ditto*, 1, Jargonelle, Mrs. Sampson; 2, Grey Katharine, G. C. Fox, Esq. *Twelve ripe Dessert Apples*, 1, Ribstone Pippin, G. C. Fox, Esq.; 2, Blanchette Pippin, J. Vivian, Esq.; 3, Pippin, Mr. J. Coplin; 4, Blanchette Pippin, J. Vivian, Esq.; 5, Quarantine, Rev. Canon Rogers. *Dish of Cherries*, Morello, Mrs. Sampson. *Twelve Plums*, Green Gage, J. Vivian, Esq. *Dish of ditto*, of sorts, Orleans, Green Gage, Nectarine, La Delicieuse, J. Vivian, Esq. *Dish of Exotic Fruit*, 1, Citrons, G. C. Fox, Esq.; 2, Oranges, J. S. Enys, Esq. *EXTRA*.—*Currents*, Dutch White, J. S. Enys, Esq. *Peaches*, Grosse Mignonne, Sir C. Lemon, Bart., M.P. *Large collection of Apples*, of sorts, *Oxylobium squalens*, *Maxillaria racemosa*, of *Stove Plants*, *Oxylobium squalens*, *Maxillaria racemosa*, *Miltonia spectabilis*, *Niphoa oblonga*, *Achimenes longiflora*, *Ruellia splendens* and *oblongiflora*, *Gesnera bulbosa*, Sir C. Lemon, Bart., M.P. *Single Specimen of do.*, *Brassia verrucosa*, Sir C. Lemon, Bart., M.P. *Collection of Greenhouse Plants*, Sir C. Lemon, Bart., M.P. *Collection of Greenhouse Plants*, *Epacris grandiflora*, *Lechenaultia formosa*, *Struthiola erecta*, *Erica retorta*, *ampullacea*, *vestita rosea*, and *elegans*, *Primula sinensis*, *alba flore pleno*, *Primula sinensis*, *rubra flore pleno*, *Hoya carnosa*, *Fuchsia arborea nova*, *Fuchsia Blanche*, *Fuchsia Enchantress*, *Statie puberula*, *Petunia splendens*, W. M. Tweedy, Esq. *Named Climbing do.*, *Bignonia grandiflora*, G. C. Fox, Esq. *Six Roses*, *Jaune Desprez*, *Microphylla*, *Yellow China*, Fox's Carolina, Fox's Anna Maria, *Indica carnescent*, R. W. Fox, Esq. *Six Fuchsias*, 1, Money penny, arborea, conspicua, insignis, Victoria, Buistii, racemiflora, W. M. Tweedy, Esq.; 2, Conspicua, Youellii, cordifolia, Princessa, Grovhillii, Seedling, J. S. Enys, Esq. *Four Salvias*, *Chamedryoides*, *lutea coccinea*, *patens*, *involuta*, J. Vivian, Esq. *Collection of Phloxes*, *penduliflora cordata grandiflora*, *alba splendens*, *Youngii*, *Drummondii*, *latifolia*, *splendens*, *amurensis*, Mr. J. Rickard. *Collection of Hollyhocks*, J. S. Enys, Esq. *Collection of Larkspurs*, J. S. Enys, Esq. *Collection of Marigolds*, Mr. Rawlings. *Collection of Asters*, (German or China), 1, W. Daubuz, Esq.; 2, J. Vivian, Esq. *Collection of Pentstemons*, Sir C. Lemon, Bart., M.P. *Collection of Annuals*, J. S. Enys, Esq. *Collection of Perennials*, 1, J. Vivian, Esq.; 2, Sir C. Lemon, Bart., M.P. *Miscellaneous Collection of Ornamental Plants in flower*, *Catsetum Claveringi*, *Struthiola erecta*, *Catsetum tridentatum*, *Celosia*, *Achimenes coccinea*, *Lychnis Bungeana*, *Cattleya Harrisonii*, *Erica colorans*, *Verbena*, *Zygopetalum Mackaili*, *Fuchsia Victoria*, *conspicua*, *formosa elegans*, *Rosa indica carnescent*, *Achimenes grandiflora*, *Epidendrum ciliatum*, *Verbena* (Queen), *Ruellia ciliata*, *Rochea falcata*, *Galphimia splendens*, G. C. Fox, Esq. *24 Dahlias dissimilar blooms* (Hope, Uxbridge, Magnet, Scarlet Defiance, Lewisham Rival, Nicholas Nickleby, Lee's Bloomshury, Fanny Keynes, Rouge et Noir, Lady Cooper, Walter's Unique, Twyford Perfection, Indispensable, Wheeler's Maria, Beauty of the Plain, Grace Darling, Prince Albert, Prince of Wales, Princess Royal, Marquis of Lansdowne, Egyptian Prince, Burnham Hero, Widnall's Eclipse, Bridesmaid, Array), G. Royal Horticultural Society of Ireland, Sept. 14.—This was the Autumnal Fruit and Flower Show of this Society. The Dahlias, which were the principal source of attraction at this Show, were good. The fruit was also excellent. There were some fine Melons and Peaches, from the gardens of the Earl of Charlemount, and some good Grapes, from those of the Chief Secretary, and Vegetables, in particular, were good. From the College Botanic Garden were some beautiful plants; and among them a few Palms, the Bourbon and the Australian (Lantana horbonica and Corypha Australis); also some well-grown Heaths, viz.: Erica retorta; E. retorta major, and E. Macnabiana; fine specimens of Liliun lancifolium, Statice Dicksonii, and a variety of Zygopetalum Mackaili. From the Glasnevin Botanic Gardens were some good specimens of Australian and Cape plants, such as Proteas, Dryandras, Grevilleas, &c., also a basket containing the following Orchidaceous plants:—Stanhopea eburnea, Vanda multiflora, Cattleya violacea, Catasatum tridentatum and Zygopetalum Mackaili, a fine plant of Statice Dicksonii, and Brugmansia Weymaniana. From the garden of Isaac M. D'Olier, Esq., were specimens of the following stove plants:—Allamanda cathartica, with numerous fine yellow blossoms; Aeschynanthus grandiflorus, Gesnera Harrisonii, Stephanotus floribundus, Ixora arborea, Amaryllis costata, and the following Orchidaceous plants:—Brassia maculata, Oncidium papilio, Cypripedium insigne, Epidendrum cochleatum, Angraecum maculatum. From Messrs. Keefe were some beautiful exotics, and in one of these baskets we noticed Gesnera zebra splendens, Hedychium flavescens, Oncidium papilio and flexuosum, and a basket of Heaths. Messrs. Briggford and Son, whose Dahlias on this occasion won the Arran Prize, sent in a number of fine exotics, and amongst them a basket containing the following Fuchsias, viz.:—Saint Clare, tricolor, formosa elegans, Venus victrix, sanguinea, and transparent. We also observed the double white Brugmansia. From Messrs. Barnes were some fine Pelargoniums. DAHLIAS.—We shall merely name the kinds which were placed in the two best boxes, that of Mr. Bridgeford, which won the Arran prize (10 guineas), and that of Mr. Campbell, which was highly commended. Mr. Bridgeford's Box: Striped, Tricolor, alba purpurea, Madam de Shaunenfeld, Marquess de Shaunenfeld, Yellow, Climax, Argo, Aurantia, Victory (Widnall's), Scarlet, Bloomsbury, Danecroft Rival, Defiance, Tournament, Crimson, Perpetual grand, Col. Baker, Virgil, Competitor, Purple, Conservative, Sir R. Sale, Indispensable, Pickwick, Rose, Maria Lady Cooper, Mrs. Shelley, Rose Unique, Lilac, Liberty, Lady Hartland, King (Girling's), Hon. Miss Abbott, Tipped, Conqueror of the World, Surprise (Oakley's), Bridesmaid, Princess Royal, White, Poole's White, Bianca, Antagonist, Mrs. Richardson. Mr. Campbell's Box:—Striped, Souvenir de gard, Purplea alba, Sultana, Pavoniana, Yellow, Mary, Yellow Climax, Rival Yellow, Prince of Wales, Scarlet, Bloomsbury, Danecroft Rival, Duke of Wellington, Tournament, Crimson, Coronation, Perpetual grand, Burnham Hero, Triumph, Purple, Emperor of China, Bang-up, Conservative, Ploughboy, Rose, Eximia, Thiers, Mrs. Shelley, Admirable, Lilac, Imogene, Liberty, Lady Middleton, Lady Harland, Tipped, Reine d'Or, Duchess of Richmond, Princess Royal, Favourite, White, Antagonist, County of Arran, Bianca, Snow-flake, Mr. Walthew and Messrs. Barnes also exhibited Dahlias, which were deserving of notice.—*Dublin Farmers' Gazette.*

Cripps; 2, Mr. Hooker. 24 Dahlias, 1, Mr. Mitchell; 2, Mr. Seale. (Not grown by Nurserymen). Roses, 12 varieties, 1, Earl Abergavenny; 2, F. Perkins, Esq. Balsam, 1, D. Salomons, Esq.; 2, Mr. Churchill. Fuchsia fulgens, or its varieties, Dr. Thomson. Fuchsia of other sorts, Mrs. Fenning. Seedling do., Mr. Churchill. Stocks, eight varieties cut, Mr. Mercer. Pinckies, 12 varieties cut, 1, Mr. Seale; 2, Lady Maria Meade. Zinnias, six varieties cut, Lady Maria Meade. Hollyhocks, 12 varieties cut, 1, Mr. W. Mercer; 2, A. Pott, Esq. 12 Dahlias, 1, Marquis of Camden; 2, F. Perkins, Esq.; 3, Lady Maria Meade. Lupins, six varieties cut, Mr. G. Bennett. 12 Asters, 1, Mr. Hooker; 2, J. Delves, Esq. 12 African Margyolds, Mrs. Lucas. 12 French Do., Lord de Lisle. Petunias, three varieties in pots, Dr. Thomson. Annuals, three pots, 1, Lady Maria Meade; 2, D. Salomons, Esq. Three Stove or Greenhouse Plants, 1, Mr. Cattell; 2, Mr. T. Cripps. Hardy Pot Plant, F. Perkins, Esq. New Annual, not previously exhibited in the room, Mr. T. Cripps. Cut Flowers, collection of Stove or Greenhouse, 1, Mrs. Lucas; 2, Mrs. J. Fisher. Varieties from Flower-garden, 1, Mr. Hooker; 2, Mrs. Lucas. FRUITS: Grapes, bunch of Black, 1, Mrs. Lucas; 2, D. Salomons, Esq. Bunch of White, 1, Mrs. Lucas; 2, J. Delves, Esq. Melon, 1, Mr. Churchill; 2, Arthur Pott, Esq.; 3, Miss Sheppard. 12 Peaches, 1, Earl Delaware; 2, Lord de Lisle. 12 Nectarines, Lord de Lisle. 12 Apricots, 1, Mrs. Lucas; 2, Lord de Lisle. 12 Greengages, F. Perkins, Esq. 12 other Plums, Hon. P. Ashburnham. 24 Strawberries, 1, A. Pott, Esq. 2, Earl Delaware. 24 Raspberries, 1, Mrs. Lucas; 2, Mr. Churchill. 36 Cherries, 1, Mrs. Barclay; 2, Earl Delaware. 24 Gooseberries, 1, Mr. Bell; 2, Earl of Abergavenny. Currants, 24 bunches of Red, Lord de Lisle. 24 bunches of White, Mrs. Barclay. 24 bunches of Black, Capt. Blunt. Figs, six Black, Mr. J. Creasy. 24 Mulberries, Lord de Lisle. 12 Pears, Rev. W. W. Stevens. Ornamental Basket of Dessert Fruit, confined to six sorts, Mrs. Lucas. VEGETABLES.—Brace of Cucumbers, 1, Earl Delaware; 2, D. Salomons, Esq. Peas, 36 Pods, A. Akers, Esq. French Beans, 36 Pods, Earl Delaware. Three Cauliflowers, Earl of Abergavenny. Three Lettuces, 1, Mr. Churchill; 2, Hon. P. Ashburnham. 12 Kidney Potatoes, Mrs. Barclay. 12 other sorts, A. Akers, Esq. Six Carrots, D. Salomons, Esq. Six Parsneps, Hon. P. Ashburnham. Six Turnips, Earl of Abergavenny. Six Onions, Mr. E. J. Strange. Six Artichokes, Earl Delaware. EXTRA.—Hollyhock, Mrs. Allnutt. Cockscumb, 1, Mrs. J. Fisher; 2, F. Perkins, Esq. Stove and Greenhouse Plants, A. Pott, Esq. Cherries, Mr. J. Creasy. Basket of Dessert Fruit, F. Perkins, Esq. Vegetable Marrow, Mrs. J. Fisher. Celery, Mr. E. J. Strange.—*Sussex Agricultural Express.*

Wingham Horticultural and Floral Society, Sept. 7.—This was the Autumn Exhibition. The weather was very fine, the show superior, and the attendance numerous. The following is a list of the prizes:—FLOWERS.—Best three Fuchsias, magnifica, racemiflora, Chandlerii, J. Godfrey, Esq.; one ditto, Curtisii, J. Godfrey, Esq.; three Petunias, picta, Victoria, Seedling, Mr. Sankey; three Balsams, Mr. Sankey; three Cockscombs, D. Denne, Esq.; Climbing Plant, Combretrum purpureum, Mrs. Gregory; bulb, Hemantthus coccineus, Lady Montresor; three Greenhouse Plants, Siphocampylus bicolor, Cassia corymbosa, Pimelea decussata, Mr. Sankey; 2, Cassia corymbosa, Bouvardia triphylla, Lotus niger, Mr. Sankey; Greenhouse Plant, Lychnis Bungeana, Mr. Sankey; Stove Plant, Vinca rosea, Marchioness Cunningham; 12 Dahlias, 1, Widnall's Queen, Marquess Lansdowne, Lady Ann Murray, Maria, P. of Wales, Mrs. Shelley, Beauty of the Plain, Essex Triumph, Antagonist, Competitor, Phenomenon, Pickwick, Rev. J. G. Hodgson; 2, Dowager Lady Cowper, Bloomsbury, (Lee's) Highgate Rival, Marquess Lothian, Pickwick, Lady Middleton, Defiance, Burnham Hero, Beauty of the Plain, Metella, Le Grand Baudin, Princess Royal, Rev. C. Oxenden; 6 Dahlias, Maria, Mrs. Shelley, P. of Wales, Lady Ann Murray, Essex Triumph, Antagonist, Rev. J. G. Hodgson; 2, Pickwick, Widnall's Queen, Hope, Andrew Hofer, Argo, President of the West, Mr. G. Denne; yellow ditto, P. of Wales, Rev. J. G. Hodgson; purple ditto, Pickwick, Rev. C. Bayley; crimson ditto, President of the West, Mr. G. Denne; rose ditto, Dowager Lady Cooper, Rev. C. Oxenden; maroon or dark ditto, Essex Triumph, Rev. J. G. Hodgson; scarlet ditto, Lee's Bloomsbury, Captain Swann; lilac ditto, Mrs. Shelley, Rev. C. Bayley; white ditto, Virgin Queen, Mr. Sankey; orange or buff ditto, Marquess Lansdowne, Mr. Sladden; edged or tipped ditto, Lady Dartmouth, Mr. G. Denne; Dahlia in any stand, Queen, Rev. J. G. Hodgson; Seedling Dahlia, Rose tipped, Mr. G. Denne; 6 African Margyolds, Mr. J. Minter; 12 double French ditto, Mr. D. Deverson; 12 double Asters, 1, Lady Montresor; 2, Mr. D. Deverson; 12 Zinnias, 1, Rev. C. Bayley; 2, Mrs. Hudson; 12 Annuals, 1, Phlox Drummondii, P. D. superba, Zinnia elegans, Salpiglossia picta, Branching Larkspur, Coreopsis tinctoria, Godetia vinosa, Malva zebrina, Bartonia aurea, Clarkia pulchella, Lobelia gracilis, Indian Pink, Mr. Sankey; 2, Godetia rubicunda, Dwarf Larkspur, Lupinus elegans, Malva zebrina, Ageratum mexicanum, Carthamus tinctorius, Prince of Wales Stock, Zinnia elegans coccinea; Bartonia aurea, Globe Anaranthus, Chrysanthemum aureum, China Aster, Rev. C. Bayley; 12 Hardy Perennials, Phlox tardiflora, P. corymbiflora alba, P. ditto, purpurea, Lobelia splendens, Pentstemon gentianoides, P. coccinea, P. rosea, P. campanulata, Stachys speciosa, Antirrhinum grandiflorum, A. Hendersonii, Linaria dalmatica, Mr. Sankey; 2, Phlox Wheelerii, P. amena, Lobelia fulgens, Phyteuma. Rudbeckia fulgida, Antir-

rhinum, Linaria dalmatica, Pentstemon gentianoides, Aster, Geum coccineum, Potentilla Hopwoodiana, Dracoccephalum speciosum, Rev. C. Bayley; 6 Stocks, Mr. G. Denne; Floral Decor, Mrs. Hudson; Bouquet (tender), J. Godfrey, Esq.; Bouquet, (haray) S. M. Hilton, Esq. FRUIT.—Best Melon, Egyptian green flesh, Lady Montresor; bunch of Grapes (with fire), Black Hamburg, D. Denne, Esq.; white ditto (with fire), Muscat of Alexandria, Sir B. Bridges, Bart.; bunch of Grapes (without fire), Black Hamburg, J. Godfrey, Esq.; white ditto (without fire), Frontignan, J. Godfrey, Esq.; collection of Grapes, Black Hamburg, Frontignan, Muscadine, Black Frontignan, Sweet Water, Claret, J. Godfrey, Esq.; 8 Pigs, White Ischia, Rev. T. A. Mudlow; 6 Peaches, 1, Red Magdalen, J. Godfrey, Esq.; 2, Early Admirable, Mr. J. Elgar; 6 Nectarines, 1, Violette Hative, Marchioness Coynningham; 2, Elruge, Mr. Couzens; 12 Plums (wall), 1, Washington, Mr. J. Elgar; 2, (wall), Victoria, Mr. J. Elgar. 12 Plums (not wall), Magnum Bonum, Sir B. Bridges, Bart.; 2, (not wall), Diamond, Mr. D. Deverson. Pound of Cherries, large Morillo, Marchioness Coynningham. 8 Pears (wall), 1, Jargonelle, J. Cooper, Esq.; 2, (wall), Jargonelle, S. M. Hilton, Esq. 8 Pears (not wall), Williams' Bon Chrétien, Mr. D. Deverson; 2 (not wall), Flemish Beauty, Mrs. Hudson. 8 dessert Apples, 1, Golden Pippin, J. Dadds, Esq.; 2, Kerry Pippin, Mr. J. Elgar. 6 kitchen Apples, 1 Fair Maid of Wishford; 2, White Hawthornden, Lady Montresor. Pound of Filberts, D. Denne, Esq. Pound of Cob Nuts, D. Denne, Esq. Half pound of white Currants, White Dutch, Mr. J. Elgar. Half pound red Currants, Red Dutch, Marchioness Coynningham. Basket of FRUIT.—Peaches two sorts, Nectarines one sort, Cherries one, Figs one, Currants two, Gooseberries two, Nuts and Filberts two, Strawberries two, Raspberries one, Mulberries one, Plums five, Pears five, Apples six, Grapes and Cranberries two, Mr. J. Elgar. VEGETABLES.—Pint of Peas, Wrinkled Marrow, Lady Montresor; six Onions, Mr. D. Deverson; six roots Celery, Solid Red, Mr. Sankey; six Carrots, Mr. Couzens; Cabbage, Wellington, Lady Montresor, Lettuce, Mr. D. Deverson; 12 kidney Potatoes, 1, Ash-leaved, Captain Swann; 2, Ash-leaved, Mr. G. Denne; 12 round Potatoes, 1, Early Shaw, Mr. Couzens; 2, Shaw, Mr. J. Crothall; brace of Cucumbers, Weedon's Frame, Captain Swann; basket of Vegetables, Mr. D. Deverson. EXTRAS RECOMMENDED, Melon, Mr. Slater; Peach, Mr. Couzens; Plums (for growth), Mr. J. Elgar; Succulents, Mr. Sankey; Device, Mrs. Hudson. NURSERYMEN'S PRIZE:—Best 24 Dahlias, Duchess of Richmond, Metella, Pickwick, Hope, Charles XII., Admiral Stopford, Rouge et Noir, Eclipse, Phenomenon, Essex Triumph, Antagonist, Andrew Hofer, Dowager, Lady Cooper, Bernard's Rival Queen, Marquess of Lansdowne, Lee's Bloomsbury, Hudson's Princess Royal, President of the West, Lady Middleton, Maid of Bath, Burnham Hero, Mrs. Shelley, Purple Perfection, Mr. Philpot, Aldington.

Woolton Floral, Horticultural, and Agricultural Meeting, Sept. 12.—This was the Autumn Show of Dahlias, Fruits, Vegetables, &c. The following prizes were awarded:—DAHLIAS, &c.—24 blooms, 1, Mr. Green, gr to Mr. T. Rawson; 2, Mrs. Preston. Best 18; 1, Mr. Manly, gr to Mr. W. Rotherham; 2, Mr. Hurst, gr to Mr. R. W. Preston; 3, Mr. T. Rawson. Best 12, 1, Mr. W. Rotherham; 2, Mr. R. W. Preston. Seedling, Mr. R. W. Preston. Stove Plant in flower, 1, Messrs. Davies; 2, Mr. Hislop, gr to Mr. J. Ashton; 3, Mr. Hislop, gr to Mr. H. Ashton. Greenhouse Plant, 1, Messrs. Davies; 2, Mrs. Foster; 3 and 4, Mr. Hogg, gr to Mr. W. Shand. Pelargoniums, Mrs. Foster. Ericas, 1, Messrs. Davis; 2, Mr. Hill, gr to Mr. R. Alison. Flower Device, Mr. H. Ashton. Cut Flowers, 1, Mr. W. Shand; 2, Mr. R. W. Preston. Basket of Plants, 1, Mrs. Foster; 2, Mr. Makinson, gr to Mr. R. Procter. Calceolarias, two prizes, Mrs. Foster. Pansies, 1, Mr. W. Rotherham; 2, and Seedling, Mr. R. Alison. Orchidaceous Plant, Mr. J. Ashton. Collection of Roses, 1, Mr. Houlgrave, gr to Mr. Ambrose Lacey; 2, Mrs. Foster. Ornament for the tent, Mr. T. Wainwright. Fruits: Black Grapes, 1, Mr. W. Shand; 2, Mr. Ambrose Lacey. White, 1, Mrs. Foster; 2, Mr. J. T. Lamb. Peaches, Mr. Hurst, gr to Mr. R. Willis. Extra Prizes, Mr. W. Rotherham and Mr. J. Penlington. Nectarines, Mr. Leech, gr to Mr. Gilgions; Extra, Mr. W. Rotherham. Cherries, Mrs. Ashton and H. Ashton. Strawberries and Raspberries, Mr. H. Ashton. Plums, Messrs. J. Penlington and R. Procter. Dessert Apples, Mr. Simms, gr to Mr. G. Yates. Baking ditto, Mr. T. Plythian. Pears, 1, Mr. T. Rawson; 2, Mr. Hodgitt, gr to Mr. J. Cross-thwaite. Melon, Mr. R. Alison. Gooseberries, 1, Mr. R. Alison; 2, Mrs. Foster. Currants, 1, Mr. W. Gilgions; 2, Mrs. Ashton; Extra, Mr. H. Ashton. Figs, Mr. R. Willis. VEGETABLES: In this department the prizes were divided amongst most of the parties above-named.—*Liverpool Standard.*

Youghal Horticultural Society, Sept. 6.—The following Prizes were awarded:—To Mr. M. Murphy, gr to Earl of Huntingdon, for Cockscombs, Melons, Pears, Currants, Celery, Cabbage, and Shallots. To Mr. G. Coghlan, gr to R. Smith, Esq., for Dahlias, German Stocks, Cockscombs, Rhodochiton volubile, Alstroemeria aurea, Gladiolus, Gloxinia rubra, Coreopsis, vars., Salvia patens, Balsams, African Marygold, Grapes, Beet, Potatoes, white Carrots, and Nuts. To Mr. M. Keane, gr to F. E. Currey, Esq., for Fuchsia fulgens, Diplacus puniceus, Hydrangea in pot, Shaddock Tree, Erica Bowiciana, Verbenas in variety, best collection of Cut Flowers, Melon (Green Flesh), do. (Red Flesh), Nectarines, Parsnips, Onions, and Shallots. To Mr. P. Quirke, gr to J. Kelly, jun., Esq., Fuchsia corymbiflora, fulgens, Plumbago, Erica ampullacea, and Gladiolus. To Mr. T. Joyce, gr to C. Unacke, Esq., for Cucumbers and Artichokes. To Mr. J. Walsh, gr to E. O'Dell, Esq., for Magnolia. To Mr. J. Lyons, gr to Mrs. Unacke, for Seedling Carnations, Potatoes, Cabbage, and Plums. To Mr. J. Curtin, gr to T. John, Esq., for Nerium splendens and Heliotrope. To Mr. R. Roche, gr to E. C. Giles, Esq., for best collection of Dahlias, best collection of Fuchsias, best single Fuchsia, Rosa odorata, Impatiens, and stand of Cut Flowers. To Mr. J. Casey, gr to W. Moore, Esq., for Grapes, (White Frontignan), Gooseberries, Currants, White Raspberries, Cherries, Dessert Apples, Kitchen Apples, Broccoli, Cauliflowers, Lettuce, Peas, Beans, Kidney Beans, Achimenes longiflora, Passiflora princeps, Erythrina crista-galli, (luna Asters, second collection of Dahlias, Pinks and Picotees, and Roses. To Mr. Edward Gwynne, gr to Mrs. Marsden, for Cinerarias and Spinach. To Mr. L. White, gr to Dr. Green, for best Kidney Potatoes and Seedling Onions. To Mr. J. Dawley, gr to T. Seward, Esq., for best collection of Balsams, Nerium splendens, American Aloe, and Grapes. To Mr. J. Power, gr to Mrs. Green, for Seedling Dahlias and Myrtles. To Mr. E. Donoghue, gr to Rev. P. S. Smyth, for Grapes, (Hamburg), do. Grizzly Frontignan, Peaches, Jargonelle Pears, Apples, Turnips, Amaryllis belladonna, and Hoya carnosa. To Mr. T. Kinnealy, gr to the Convent, for Cactus (Yellow) and Chinese Rose. To Mr. W. Carty, Market Gardener, for Cabbage and Garlic. To Mr. R. Morgan, Market Gardener, for Carrots and Red Cabbage.—*Cork Constitution.*

[N.B.—We will endeavour to publish the remainder of our Country Shows next week.]

MISCELLANEOUS.

Italian Fire-Fly in Norfolk.—I wish, through the medium of your valuable publication, to make known a circumstance which, as far as I can learn, has been hitherto unnoticed in England. On going into my greenhouse between seven and eight o'clock in the evening of the 22nd of August, I was surprised at perceiving a glimmering light amongst the Vines, which, on further observation, I discovered to proceed from a "Lucciola," or Italian Fire-fly, with whose habits and appearance a long residence in Italy has rendered me familiar. Although the windows of the greenhouse were always open till within

an hour of sunset, so that every facility was offered for its escape, the little stranger regularly became visible after dark for ten or twelve evenings in succession, and was seen by many of the inhabitants of Swaffham, whose curiosity attracted them to the spot. I can only account for this circumstance by having lately received from Italy five or six Orange-trees, the roots of which, being encased in balls of mould, might have afforded a shelter to the insect in its chrysalis state, subsequently developed into active existence by the heat of the greenhouse. May I beg to be informed, through the pages of the "Annals," if the appearance of this insect in England be hitherto unrecorded? and any light which can be thrown on the subject will greatly oblige, *John Dugmore, jun.—Annals of Natural History.*

Mr. Fortune.—As we were going to press letters reached us from this gentleman, dated Hong-Kong, July 27, and we hasten to acquaint his friends with his safety and good health.

Swan River Vegetation.—CONVOLVULACEÆ.—We have two species of *Convolvulus* on the alluvial banks of our rivers, the seeds of which are sought after by the bronze-winged pigeons, at one season; and we have Brown's *Calystegia sepium*, a beautiful plant, with us only found in salt marshes, about Australind, the Vasse, &c. In our late journey to the south I saw it in flower, in great perfection, near the mouth of the Sabina river; the flowers a beautiful rose colour, with five broad white stripes. This plant certainly comes very near the *Convolvulus sepium* of Linnæus, but I think it may be distinguished from it as a species by its more slender habit, and from its only growing in salt marshes. *Wilsonia humilis* is plentiful near the Vasse inlet, and we have several species of *Cuscuta*.—*Drummond, in the Inquirer.*

Reviews.

The Orchidaceæ of Mexico and Guatemala. By James Bateman, Esq., F.R.S. Imperial folio. Ridgway. Parts VII. and VIII.

At length we have before us the conclusion of this, the most magnificent Botanical Work in the English language. The Part now produced is inferior to none of its predecessors in the beauty of its illustrations, and is, moreover, enriched with some valuable observations of a general kind on various subjects connected with Orchidaceous plants, their habits, and cultivation.

Among the more remarkable of the plants whose portraits are now given, we find *Lælia superbiens*, *Sobralia macrantha*, and *Barkeria spectabilis*; the former drawn from dried, the latter from living specimens, and a charming species of *Epidendrum*, from Mexico, called *Erubescens*, of which living plants did, and possibly still do, exist at Paris. Of this Mr. Bateman speaks in the following manner:—

"Stems probably short, and bearing but few ovate-lanceolate acuminate leaves, two or three inches long. Panicle terminal, usually compound, and sometimes rising to the height of a foot and a half, bearing a multitude of large flowers, supposed to be of a rosy hue throughout. Pedicels longer than the flowers. Sepals nearly an inch long, oval-lanceolate, much narrower than the spatulate petals. Lip about the same length as the sepals, united to the column of its apex, and three-lobed, the lateral lobes being short and rounded, and not half the size of the intermediate one, which is kidney-shaped, and half an inch long. Cultivators will be disappointed to learn that this superb *Epidendrum* is at present known only by dried specimens belonging to the Royal Herbarium at Munich. The flowers, although faded, still retain a rosy tint; and, when fresh, could scarcely have been arrayed in less attractive hues than those in which Miss Drake has ventured to portray them; but whatever their precise colouring may have been, there can be no doubt that the species to which they belong may take rank among the very finest plants of its tribe. It was accordingly made a special object in the instructions of the various collectors who have been sent from time to time to ransack the forest treasures of Oaxaca; but neither Hartweg nor Ross (who closely followed Karwinski's steps,) succeeded in discovering its retreat. Signor Galleotti was more fortunate, but the plants which he transmitted to Paris have, it is to be feared, entirely perished. But let us hope that as this species, independently of its beauty, belongs to a section of the genus which is usually of the easiest growth, renewed exertions will be made to introduce it into our stoves." To this we may add our own testimony as to the plant being the finest thing of the sort in Mexico.

Speaking of *Sobralia macrantha*, of which there is a splendid figure, Mr. Bateman observes, upon the authority of Mr. Skinner, that "in the situations where the plant attains the highest degree of luxuriance, its roots are frequently overflowed with water for two or three months together—in the rainy season, of course. Cultivators will, therefore, do well to bear this singular fact in mind, and approximate their treatment as closely as circumstances will permit. All *Sobralias* require a season of rest, which is readily obtained by merely removing them from a warm and humid house to one that is cool and dry."

Upon *Coryanthes macrantha* are the following judicious remarks:—"In Mr. Rucker's collection no genus appears to succeed more perfectly than *Coryanthes*, although in others its cultivation is attended with much difficulty and vexation; but by noting its peculiarities, such frequent disappointments may, perhaps, be avoided. The supplies of heat and moisture require to be most carefully regulated, for if either be permitted to continue in excess, the plants will quickly perish;—on the other hand, a cold or dry atmosphere is always prejudicial. Suspension in the air, which is usually adopted with so much advantage in cases where the flower-scapes are pendulous, is here unsuitable;

and if on a block of wood, is certainly fatal. Another danger to weakly plants is their proneness to make a succession of attempts to flower, which, although abortive, are still persisted in until death ensues from sheer exhaustion. To meet cases of this description it is advisable to remove the flower-stems as they appear, until the plants have gathered strength enough to support them without risk of injury. *C. macrantha* is, perhaps, the more robust; as it is certainly the most wonderful species of the genus; it may, indeed, be questioned whether the whole tribe of Orchidaceæ can offer anything more unaccountable or extraordinary than its huge elaborate flowers, which are so unlike aught that is ordinarily met with in the vegetable world as to be not unfrequently regarded rather as examples of the modeller's skill than of the plastic powers of Nature. When flowers of this species were first shown to the natives of Trinidad—albeit accustomed to the wonders of a tropical Flora—they would not be persuaded that no imposition was intended; even a sight of the plant itself flourishing in the botanic garden scarcely removed their suspicions."

Those who are familiar with the author's lively style will recognise in the following clever sketch of the oddity of Orchidaceæ even more than his usual talent for popular description. We only wish we could add to the extract a charming device, invented by Lady Grey of Groby, to illustrate their fantastical peculiarities:—

"But will the rarity of Orchidaceæ, or the care and attention they require, suffice to explain the strange power of fascination which they are felt to possess? Or is it to be accounted for by the beauty, the fragrance, or the durability of their flowers? or by the presence of all these qualities combined? No: other plants might be mentioned as rare, and as difficult of culture, and scarcely inferior to them in personal charms, and yet they could never boast of the train of admirers that has lately been attracted round these mighty vegetable enchanters. In what, then, does the secret of their spell consist? We have sought for it in vain in every source from which floral pleasure ordinarily springs, in all that constitutes the charm of other plants! Neither can the question be disposed of by looking merely to the end for which Orchidaceæ were designed, and which we believe to have been solely to afford us high and innocent enjoyment; but it is the means to that end,—the secret of that power which we are now so anxious to arrive at. Something it must clearly be that forms not only the pride of Orchidaceæ, but which at once distinguishes them from every other tribe—and where is a character so marked and so peculiar to be found? Where but in the marvellous structure, the grotesque conformation, and imitative character of their flowers? Yes; here we have that which is more than sufficient to explain all the wonder and admiration they have excited, and here, then, we may safely affirm the seat of their magic influence resides. It now, therefore, only remains for us to prove that the attributes with which we have invested them, and from which we believe their interest to be derived, are neither idly nor fancifully ascribed to them; and this, we apprehend, we shall have but little difficulty in effecting."

"Accustomed as we are to look upon the animal and vegetable kingdoms as altogether distinct, our astonishment may be well awakened, when we see the various forms of the one appropriated by the flowers of the other, and yet such encroachments are but a part of the liberties which these Orchidaceæ are perpetually taking; for, as if it were too simple a matter to imitate the works of Nature only, they mimic, absolutely mimic, the productions of Art! But not contented to rest even here, they display a restless faculty of invention fully equal to their powers of imitation, and after having, like Shakspeare, 'exhausted worlds,' like him, too, they seem to have 'imagined new;' and thus we find their flowers exhibiting a variety of strange and unearthly objects, such as bear no resemblance to created things, nor yet to any of the works of man. Such a host of examples of their freaks in all these departments are on record that we scarcely know where to commence our selection. Perhaps, however, it may be well to take first a few of the more prominent cases in which they have adopted as their models sundry kinds of insects, birds, beasts, fishes, and reptiles.¹ We will begin, then, with the insects, not only because they are the class most frequently imitated, but because we may draw a portion of our illustrations from the meadows and pastures of our own country, where, at the proper season, flies, bees, drones, and spiders,² may be seen, which really present us with very striking likenesses of the originals. From the Tropics we have grasshoppers, mosquitoes, dragon-flies, moths, &c., &c.,³ in the greatest variety, and we have also the gorgeous vegetable butterfly of Trinidad, whose blossoms, poised at the extremity of their long elastic scapes, wanton gaily in the wind, and seem impatient of that fixture by which they are differentiated in kind from the flower-shaped Psyche, that flutters with free wing above them."⁴ We come next to the birds, from which the Orchidaceæ borrowed their swans, eagles, doves, and pelicans;⁵ to say nothing of a large assortment of wings, feathers, beaks, and bills.⁶ From the beasts they have not copied quite so freely as from the birds, yet resemblances may be traced to tigers, leopards, lynxes, bulls, rams, and monkeys, and even to man himself.⁷ In the catalogue of reptiles we find an endless variety of snakes, lizards, toads, and frogs.⁸ Of shells, likewise, there are many kinds.⁹ Then follows a mixed multitude of masks, cowls, hoods, caps, and helmets; swords, spurs, crests, pikes, arrows, and lances; whiskers, eyelashes, beards, bristles, tails, horns, and teeth; combs, slippers, buckets, trowels, pouches, saddles, &c., &c.¹⁰ Nor is this mimicking propensity confined to the flowers alone, being equally conspicuous in their leaves and pseudo-bulbs, which have

been likened to Onions, Cucumbers, Bamboos, and Palms; tongues and mouse-tails; hooks, whips, and straps; swords and needles, &c., &c. Of some the leaves are inscribed with Arabic characters, of others the roots are cased in coral."¹¹

We trust on future occasions to present our readers with further extracts from this most entertaining book, which is quite a mine of genuine wit, as well as of science and sound practical information. For the present, we must conclude with our sincere congratulations to the author upon so happy a termination to his labours.

¹ Our examples will be principally drawn from South America, for owing to the much greater conformity in the blossoms of the Orchidaceæ of the Old World, the cases in which strange figures and animal likenesses occur, are not nearly so numerous as in the new. Among the more remarkable of the Orientals we may mention *Vanda peduncularis*, *Renanthera arachnites*, and *Phalaenopsis amabilis*, the latter bears a most striking resemblance to a downy white moth—hence the name, and flowered in the year 1837 for the first time in Europe, in the rich collection of Messrs. Rolisson, of Tooting. It is figured in the *Herbarium Ambolense* of Rumphius, and this worthy man hardly knowing what to make of the insect and animal mockers of which this *Phalaenopsis* and others of its tribe are guilty, quotes the opinion of a contemporary botanist, who seems to be convinced that all suchlike Orchidaceæ spring "vel ex putridis quorundam animalium cadaveribus in quibus vis quedam seminalis latet vel ex ipsius animalium seminibus quæ in montibus, vel pratis coeunt; atque pro ejus argumento dicit in *Satyrium* (meaning all Orchidaceæ) floribus detegi speciem istius animalis ex cujus semine in terra putrefacto hoc *Satyrium* excrevit vel istius insecti quod plerumque ex cadavere cujusdam animalis prodit."—Rumph. Herb. Amb. vi. 98.

² E.g., flies in *Ophrys muscifera*; bees in *O. apifera*; drones in *O. fucifera*; spiders in *O. aranifera*. A remarkable circumstance connected with *O. muscifera* has twice occurred in the garden of the Rev. T. Butt, of Trentham, whose devotion to the Orchidaceæ of Europe and North America is fully equal to that of some of his contemporaries for those of the Torrid Zone. The flowers of *O. muscifera* bear, it is well known, a striking resemblance to a certain (and that an uncommon) species of fly; and some years since one of this description was observed by Mr. Butt to settle for days together on a blossom of the unconscious plant, no doubt under the impression that it was enjoying the society of one of its own kind. For several summers afterwards, although the Orchid continued to flower, the fly was nowhere to be seen; last year, however, it was again observed at its post, where it remained as before for several days in succession.

³ The columns of many of the *Catasetums* and other genera make excellent "Grasshoppers." Mosquitoes are born by *Trichoceros antennifera* or "Flor de Mosquito" of the Peruvians; "Dragon flies," by *Renanthera arachnites*; "Moths," by *Phalaenopsis amabilis*, &c. &c. Insect-like antennæ are also conspicuous in the flowers of *Restrepia antennifera*, and an unpublished Mexican *Epidendrum*, *E. antenniferum* (Lindl. MSS.), discovered by Mr. Henchman; the genera *Myanthus* of Lindley, and *Myoxanthus* of Poeppig and Endlicher (though now abolished), were also founded, as their names imply, on the resemblance of their flowers to different kinds of flies.

⁴ Coleridge's "Aids to Reflection." The Butterfly plant of Trinidad is the now well-known *Oncidium papilio*; it had not flowered in this country at the time the "Aids to Reflection" were written, otherwise we might have supposed it to have been in the eye of the "Ancient Mariner" when he penned the passage we have quoted.

⁵ Swans are found in both the species of *Cycnoches*, doves in *Peristeria elata*, Pelicans in the unimported Mexican *Cypripedium*, (*C. irapeanum*, La Llave) which from the great resemblance of its flowers to the bird of that name, is styled by the natives "Flor de Pelicano." As to the Eagles, they have not come under the cognizance of any professed botanist. But a fine Orchidaceæ, which has been imported from Jamaica by that zealous collector, Mr. Horsfall of Liverpool, is always spoken of as the "spread eagle" by the inhabitants of that island. Unfortunately the plant has hitherto refused to flower, and therefore we have had no opportunity of judging how far it deserves this title.

⁶ The column in most Orchidaceous plants has its wings and beak infinitely diversified in structure. Feathers are not so plentiful, but they may be seen in great beauty in the various species of *Ornithocephalus*, all of which are quite birds in miniature. *Psittacoglossum atratum*, an unimported Mexican plant, has a black tongue like a parrot, and La Llave named it accordingly.

⁷ The skins of the tiger and the leopard are rivalled by the petals of such plants as *Stanhopea tigrina*, *Bulbophyllum leopardinum*, &c.; the "fox-lyncea" of HERNANDEZ is so called from its lynx-like eyes and teeth; *Dendrobium taurinum* has much of the bull about its face; and various *Cataccta*—*C. semipartum*, especially—grin like the ugliest monkey. *Aceras anthropomorpha*, the Man-orchis, is a well known plant. Even extinct animals do not always escape, a geologist would instantly recognise the head of a *Dinotherium* in the flowers of *Masdevallia intractata*.

⁸ *Pleurothallis ophioccephala* has a strong resemblance to a serpent's head, and *Pholidota imbricata* an equally strong resemblance to a rattle-snake's tail. Lizards occur in *Pleurothallis saurocephala* and *Epidendrum lacertinum*, and frogs in *Epidendrum raniferum*.

⁹ *Zygopetalum cochleare*, *Epidendrum cochleatum*, and *Pholidota conchoides*, afford as pretty specimens as any; *Pleurothallis chitonoides* is also a little gem of its kind.

¹⁰ The genera *Coryanthes*, *Corycium*, *Bonatea*, *Pelexia*, &c., all derive their names from caps and helmets, which they yield abundantly. For hideous masks we must look to *Mormodes atropurpurea*; for cowls to *Monachanthus* (now *Catasetum*) *discolor* and *viridis*; swords and pikes and other weapons of war are supplied in quantities innumerable by the various and complicated forms of the lip. *Epidendrum selligerum*, and many more, are provided with good saddles, and a host of *Saccolabia* and allied genera carry large bags and pouches.

¹¹ Onions in *Oncidium cebolleta*; Cucumbers in *Dendrobium cucumeroides*; Bamboos in *Arundina bambusifolia*; Palms in *Agave palmiforme*; tongues and mouse-tails in *Dendrobium linguiforme* and *D. myosurus*; hooks in *Arpophyllum spicatum*; whips in *Maxillaria* (now *Senticaria*) *flagellifera*, straps in *Pleurothallis strupifolia*; needles in *Epidendrum aciculare*, swords, *punsim*. The name of *Grammatophyllum scriptum* proclaims its peculiarities (somewhat tautologically); *Corallorhiza* also,

CALENDAR OF OPERATIONS for the ensuing week.

THAT Cape Heaths have been planted out in summer, and even protected in the open ground during several winters, we have sufficient evidence to prove, in some late volumes of the "Gardeners' Magazine." Mr. M'Nab, of the Edinburgh Botanic Garden, has been in the habit of turning out his overgrown specimen and other duplicate plants of Heaths for many years past, and splendid masses they make annually in front of the houses. This enabled him to mark the comparative hardness of a great number of sorts, the result of which is given in his excellent pamphlet on the Heath. His pupils have carried the system into other parts of the kingdom. Many gardeners have followed their example, and large beds of young Heaths are to be seen planted out every summer in the London nurseries, and in every instance the plants thus treated appear in better health and vigour than those grown in pots. Therefore what I advocate, and what I am carrying out in practice, have few claims to novelty, further than taking up the thing more systematically, for purposes of regular flower-gardening, and I have no doubts as to the result; let but one gardener in each county take up the subject, and the tide would soon flow into the right channel, in a few years,

even without enlarging much on the beauties and diversity of forms in this inimitable race. You never heard of any one who knew anything at all about plants but admired Heaths, and would be the first tribe they would cultivate, had it not been for the difficulty of growing them well in pots. There is, indeed, a good deal of skill and attention necessary to grow them well in pots, and failures even occur with the best gardeners occasionally, but all these vanish under the system I propose. Verbenas and Petunias are much more difficult to keep over winter than Heaths, provided they are *never potted*. This is the whole secret in the business, and no argument is necessary to prove the additional interest and gaiety their introduction would impart to our flower-gardens, to say nothing about the novelty of the thing. The subject, therefore, involves but two points for our consideration, viz., the expense of purchase and the after-management. A selection of sorts is of less moment, as every nurseryman who grows them can furnish a list of names to flower at any particular season of the year, or in succession through all the summer and autumn months. The best way to buy small Heaths, to begin with, is to offer a nurseryman no more than a dozen for them, leaving the sorts to be selected by himself, as it often happens that he has scores of some really fine sorts that he would be glad to part with on very reasonable terms, and at the same time be short of some inferior sorts that you might order, and therefore ask a good price for them; this is always my own plan, and I know enough of the trade to say that it is the safest way, when you have an honest man to deal with. They charge 9s. per dozen for good plants of common bedding Pelargoniums, ready to plant out in May, and for 12s. a dozen you may buy hundreds of such Heaths as I recommend to begin with, always taking them as young as you can get them; indeed, I would prefer them taken out of their store-pots in April or May, divide them, and grow them the first season in a nursery bed, out of pots, in the reserve-garden; and I am surprised that the nurserymen do not plant out long frames of them at this stage, where they might remain until they got too crowded; it is the *only true way* of preparing them for the one-shift system. Some of these common Heaths will seed freely, and may be reared from seeds as easily as the common Rhododendrons, and when the plants get large and bushy the lower shoots may be layered like those of other plants; and these layers are by far the best plants for the flower-garden, as they never require potting; besides, they will all graft and inarch as easily as other plants, but the more tender ones must be worked in this way, so that between one way or another there is no great fear of getting up a good stock of these beautiful plants. I have already given an epitome of their winter culture, and shall enlarge on it soon.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

PINERY.—With respect to the growth of Pines in peat, one of our best English gardeners writes me thus: "I will venture to predict that Pines will not do in this country in peat alone. I have never yet been able to procure any such as I have seen used for that purpose round Paris and other parts of France. Their peat is rich beyond description; of a greasy soapy nature, and also contains abundance of silver-sand. I have Queens now growing and fruiting beautifully turned out in an open pit (how is it treated?), and it is my intention in another season to cultivate the whole I have on that plan, as it saves a great deal of labour," &c. &c. I hope soon to be able to give the routine of culture, out of pots, for the whole year round. Meantime, see that the late rains have not endangered the heat of the linings, and that no sudden changes are risked before winter.

VINERY.—A gentleman who called here last week told me that he had seen a place in East Suffolk—celebrated for taking the first prizes for Cucumbers all over the kingdom—where every lap between the glass was putted, Vineries and all: that he thought this very injudicious, and that a contrary plan was recommended last year in the *Chronicle*. I replied that we have every lap putted here, down to the common land-glass, and that the *Chronicle* did not recommend open laps, but instance a case where Grapes had been kept to a late period, notwithstanding the disadvantages of open laps; and that we might learn from this the advantage of giving air at all times to our late Grapes, whether we used fires to expel damp or not.

PITS. for Asparagus, Sea-kale, and Rhubarb will now be in use where these things are wanted early; but any dark place will do for the Rhubarb and Sea-kale, and I believe this is the best way to force Sea-kale until after Christmas; the saving of dung and labour will meet the cost of rearing plants for that purpose; besides, the Sea-kale is so much sweeter and easier to manage in the dead of winter.

Out-door Department.

It would require a large book to contain a mere sketch of the "operations" that are now in contemplation in our Kitchen-gardens; every Pear-tree that has thrown out strong breast-wood for the last year or two with plenty of blossoms and little fruit may now or soon be carefully taken up, but on no consideration whatever is the foundation of the border to be disturbed to trace down roots if you cannot pull them up—a bad practice, however; cut them off at once, and reduce one or two of the *weakest* and *strongest* branches of the head to correspond; train out the remaining roots at full length, and throw six or nine inches of good earth over them, and if they look stunted next summer, water them well. Again, if your tree is a stunted, half-starved one, take it up also, and if the roots are sound give them fresh soil, and reduce the head two-thirds, otherwise throw it away, and you will judge yourself for all the intermediate degrees, but let there be no wavering about the extreme points. All other fruit-trees are to be dealt with after the same manner, and not only once in a life-time, but as often as the symptoms appear. Then comes the trenching and making of new borders—what a deal of work is involved in the mere name of the thing! It is easy enough to fill up paper talking about such things, but the spade must take the place of the pen if the work is to be done in earnest.

CROPS.—See that the wet or frost does not injure your Endive-plants, and if your Cauliflower and autumn Broccoli come into use too fast, take up some of them, and put them in by the heels somewhere in the shade, where you can throw a mat or something over them if frost sets in before you want them. After the first frost or so is over there is not so much danger for some time about young or succulent crops. All the Lettuce-plants that are to stand the winter out-of-doors should be now or very soon in the ground; perhaps the winter Spinach had better be thinned out a little more, the late fine weather made them fill up the rows more than usual. See also that the winter Onions are not eaten by slugs or snails, and have some soot kept dry in one of the sheds to dust over among young plants, in or out of frames; this will have the effect of keeping off these creatures.

ORCHARD.—It is always a good plan to have a few young trees of all the best sorts of fruit in reserve ready to fill up vacancies. Let your stock of trees be ever so full or promising, there is no saying how soon failures may happen, and a few young trees will not take up much room, especially if you keep transplanting them every second or third year; and if they bear a few fruit so much the better, as you will then be sure what they are before you remove them to their final situation. Young Peach and Apricot-trees should be thus nursed before they are planted against the walls after you get them from the nurseryman, and this having been a very good season for the growth of these trees, no one who is not already provided, should neglect the opportunity of buying in a few young trees to be nursed under his own eye a few years before they are wanted on the walls, &c.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

STOVE.—As soon as a wet day or coarse weather stops out-door work, every pot in the stove or any other house ought to be well cleaned with a scrubbing-brush and water, in some of the sheds; besides the look of the thing, there is nothing more injurious to plants in confinement than the rank unwholesome vapour arising from dirty pots, after the fires are commenced. At this Michaelmas scrubbing, the balls should be first turned out to see if the drainage is perfect, and if worms have got into the pots get them out as soon as the pots are cleaned, stir the surface of the soil, and add a little fresh to it of the same kind. If the plants are free from insects, the walls whitewashed, and the heating apparatus in good order, I should say you are in a good condition to face the winter. Stove-plants require very little water now if the weather is dull, and the atmosphere of the houses ought to be kept rather dry than otherwise.

GREENHOUSE.—Let all the greenhouse plants be also cleaned, pots and all, before they are set on the new-cleaned shelves, and let the lights be down all day, and half down through the night, unless rain or frost prevents it. With any new pots without holes in the bottom, there need be no wet under the pots for the winter, thus saving the roots and shelves also.

CONSERVATORY.—If the Orange-trees or any plants kept permanently in this house have not been looked over of late, no time should now be lost in getting every leaf and pot as clean as may be, and also the surface of the borders. As this house will now be kept more close, nothing inside can be too clean or sweet. Beaumontia grandiflora will grow freely in a well-managed conservatory, but not flower without more heat at the roots, and as it is of the same natural order (Apocynaceae), as the Allamanda and Echites, I see no reason why these should not be inarched on it as soon as it is long enough to reach near the top of the house. I would have the top sashes of all conservatories, large or small, fixed down; nothing but a blind adherence to old rules could have sanctioned the prevailing system; and what can be more beautiful than a conservatory with climbers streaming along in graceful festoons over the pillars, rafters, bars? &c. &c.

PAULOVIA IMPERIALIS.—The flower-cup or calyx of the blossom I examined was like a downy Acorn-cup, without any tooth, which puzzled me much. I have since received another calyx, and a good pencil sketch from Miss Wray, and they correspond exactly with Dr. Siebold's figure, so that my doubts were premature.

COLD PITS.—A multitude of Greenhouse-plants would do better in cold pits for the next two months than in the best greenhouse in the country; even turf-pits, with boarded frames and asphaltic coverings to be put on in rainy or frosty weather, are far better for these sort of plants as long as the thermometer shows no more than nine or ten degrees of frost.

FLOWER-GARDEN.—All showy beds near the windows, and half-hardy plants against walls, &c., ought to be protected from frost as long as practicable; it is too soon yet to disturb the flower-garden with removing large shrubs, &c., but high time to plant all the early Tulips, Narcissus, and such bulbs for flowering early next spring; also any herbaceous plants for the same purpose.—D. Beaton, *Shrubland Park Gardens, Ipswich*.

State of the Weather near London for the week ending Oct. 12, 1843, as observed at the Horticultural Garden, Chiswick.

Oct.		BAROMETER.			THERMOMETER.			Wind.	Rain.

REPORT ON COVENT-GARDEN MARKET.

For the Week ending Oct. 13, 1843.

THERE has been a good supply of both Fruit and Vegetables during the week; but trade is rather dull. The weather has also been cold and wet for two or three days past, which will no doubt have an effect upon the market. Pines are not very plentiful, but are of good quality; they are selling at from 4s. to 6s. per lb. Black Hamburgh Grapes still continue to be of good quality, and quite sufficient to meet the demand; a few Muscats are still to be seen in the market, and bring from 4s. to 6s. per lb. Plums, fit for table, are becoming every day scarcer; a few of the Golden Drop are to be met with, and are offered at from 1s. to 2s. per punnet. Damsons are not so plentiful as last week, and are selling at from 3s. to 4s. per half-sieve. Peaches are getting rather scarcer, but are of excellent quality, and still sufficient to meet the demand. Figs continue to bring about the same prices as last week. Apples are not very plentiful. Pears are selling at from 3s. to 5s. per half-sieve. Melons are becoming rather scarce. Spanish ones are still brought to the market, but not in large quantities. These are selling at from 4s. to 6s. each. There is little difference in the price of Cucumbers from that of last week. Cabbages and Turnips are good and plentiful. Carrots continue to improve in quality, and realise nearly the same prices as last week. Endive is selling at from 1s. to 1s. 6d. per score. Shallots are sufficient to meet the demand, and bring from 6d. to 9d. per lb. Cut Flowers are chiefly composed of Erica mammosa pallida, verticillata, gracilis, and vestita purpurea, Pentstemon gentianoides, Gladiolus pinnatifidus, Primula sinensis, Amaryllis belladonna, Zinnias, Camellias, Fuchsias, Scarlet Pelargoniums, Calceolarias, Verbenas, China and perpetual Roses.

PRICES, SATURDAY, October 14, 1843.—FRUITS:—

Pine Apple, per lb., 4s to 6s	Lemons, per doz. 6d to 8s
Grapes, hothouse, per lb., 2s to 4s	per 100, 3s to 12s
Portugal, per lb., 1s to 1s 6d	Cucumbers, per brace, 4d to 2d
Peaches, per dozen, 4s to 5s	Gherkins, per 1000, 5s to 7s
Figs, per doz., 2s to 6s	Green Capicums, per 100, 1s 6d to 2s 6d
Melons, each, 1s 6d to 4s	Red ————— 6s to 8s
" Dutch, each, 1s to 2s 6d	Almonds, per peck, 7s
" Spanish, each, 4s to 6s	Sweet Almonds, per lb., 3s
Plums, per punnet, 1s to 2s	Nuts, per bushel —
" Golden Drop, per pun., 2s	— Braz 1, 16s
Damsons, per sv., 3s to 4s	— Hazel, 3s to 4s
Apples, dessert, p. bush, 4s to 8s	— Barcelona, 22s
Apples, Kitchen, p. bush, 2s 6d to 5s 6d	— Cob, 12s
Pears, per half-sieve, 3s to 5s	Filberts, English, p 100lbs., 45s to 60s
Oranges, per dozen, 1s 6d to 3s	Marberries, per hf. sv., 3s to 4s
— per 100, 18s to 30s	Tomatoes, per hf. sv., 2s to 3s 6d.

VEGETABLES.

Cabbages, per doz., 6d to 1s	Onions, Spring p. doz. bch., 1s 6d to 2s
Greens, per doz. 2s to 2s 6d	— Large, per bushel, 2s to 3s
Cauliflowers, per dozen, 4s to 6s	— Spanish, per doz., 1s to 2s
Beans, Kidney, per hf. sieve, 1s 6d to 2s	— pickling, p. hf. sv., 3s 6d to 4s 6d
Scarlet, per hf. sv., 1s to 1s 6d	Shallots, per lb., 6d to 1s
Potatoes, per ton, 50s to 75s	Chills, per 100, 1s to 2s
— per cwt., 2s 6d to 3s 6d	Lettuce, Cabb. p. score, 9d to 1s
— per bushel, 1s 6d to 2s	— Cos, per score, 6d to 1s 6d
— Kidney, p. bush., 2s to 3s 6d	Celery, per bun., 6d to 1s
Artichokes, green, per doz., 1s 6d to 2s	Mushrooms, per pottle, 1s 6d to 2s
Vegetable Marrows, per doz., 6d to 1s	Wallnuts, per bushel, shelled, 16s to 20s
Turnips, per doz. bunches, 1s to 2s	Small Salads, per punnet, 9d to 1s
Red Beet, per dozen, 9d to 1s	Sweet Basil, per doz. bunches, 2s to 3s
Horseradish, per bundle, 1s to 2s	Watercress, per doz. am. bun., 3s to 4s
Radish, spring, p. doz. hands, 6d to 1s	Parsley, per doz. bunches, 1s 6d to 2s
Turnip, p. doz. bunch, 9d to 1s	Tarragon, per bun., 2d to 3d
Carrots, p. doz. bun., 2s to 3s	Endive, per score, 1s to 1s 6d
Spinach, per sieve, 9d to 1s	— per doz. bunches, 1s to 2s
Leeks, per doz. bun., 1s to 2s	Marjoram, green, p. doz. bun., 1s 6d to 2s
Garlic, per lb., 6d to 8d	Chervil, per punnet, 2d to 3d

Notices to Correspondents.

MR. PAXTON'S COTTAGER'S CALENDAR.—At the earnest solicitation of many of our Subscribers, we have determined on reprinting Mr. Paxton's "Cottager's Calendar." It will be ready in a day or two, in the form of a small volume, for general distribution, price 3d. each copy, and may be ordered of all booksellers. Gentlemen wishing to distribute copies among their cottage tenants, may have them delivered in any part of London, by remitting a post-office order to this office, at the rate of 5s. for every 25 copies. We shall feel obliged by those gentlemen who wish for a large supply giving their orders at once, that the number printed may be regulated accordingly.

BACK NUMBERS OF THE GARDENERS' CHRONICLE.—We are so often applied to for particular Numbers of the *Gardeners' Chronicle*, to complete sets, and so many are now out of print, that we think it will save all parties trouble if we publish a list of the Numbers which may still be had. Any Subscriber who will forward to our publisher Post-office stamps, equivalent in value to as many Numbers as are required, shall have them sent. Those Subscribers who are very anxious to complete their sets should write at once, as we have very few copies of some of the Numbers. 1841: 1, 6, 8, 13, 14, 15, 16, 17, 18, 20, 22, 23, 24, 25, 27, 28, 29, 30, 31, 32, 34, 49.

1842: 4, 6, 8, 10, 11, 12, 13, 16, 18, 30, 42, 50, 51, 52.
1843: 1, 5, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40.

MANURE.—*Pons Ælii.*—You may apply gas-water to your lawns now, but it will act more beneficially if you delay it till April. Perhaps it would be as well to do both.—*W. K.*—The best manure for the lower part of Hampstead, where the soil is stiff, upon a yellow clay, and in the summer becomes quite hard and cracks, is an abundant dressing of old plaster and lime rubbish.—*S. W.*—Throw into a heap all refuse vegetables, grass-cuttings, cinder-siftings of the house, and moisten them with gas-water. Leave them in small heaps, and in three months they will be excellent. Also form a compost heap of any refuse soil, and add to it the contents of all the cesspools and similar places belonging to the house, especially the fluid animal secretions. Let this remain a few months, and you will have a great additional supply of powerful manure. If these are not enough, buy a little Potter's Guano, or Superphosphate of Lime. Soot is an excellent ingredient in a compost heap.

HEATING.—*A Subscriber.*—You may work your two houses with one boiler, but it must be a good one. It does not much matter what its construction is, but it should at least be a No. 2, and not a small one. There is no objection to your carrying the pipes through one end of your Vine-border, provided you tunnel the distance; that is to say, inclose the pipes in a good casing of brickwork; otherwise you will lose heat to an inconvenient degree.—*W. Litlington.*—Mills's book on the Melon will give you full information. You will also find a good kind of pit figured in the last part of the Proceedings of the Horticultural Society; and we shall publish something of the kind presently. But, unless you have hot dung at unlimited command, you will find it much cheaper and better to use hot-water gutters. All booksellers supply all books.—*A Subscriber* may make one pipe answer the purpose of a flow and return-pipe, in which case it should be at least three inches in diameter, and enter the trough at the bottom. But it is not an arrangement to be recommended. We have no experience with Welsh's circular flue-tiles; but if they are very hard they are not likely to answer. We have stated on more than one occasion that the lower half of an old flue, well cemented inside, makes a good hot-water trough. We should think a common brewing copper will heat your water as well as anything else; but if you do not take care, it will be over-powerful for so small a length of guttering.—*Junius.*—Your plan is ingenious, and at present we see no objection to it. We will, however, consider it further.—*W. H.*—We see no reason why you should incur the expense of iron pipes. Such hot water troughs as have been mentioned and represented lately, worked with a Rogers's boiler, will answer any purpose; and by placing your boiler in the shed you may carry such heating troughs into the greenhouse and stop off the circulation when you do not want heat. The White Sweetwater, Chasselas Musqué, for white, and the Black Hamburgh, are among the most useful Grapes you can have. Do not use smoke flues if you can avoid it.

CROPPING.—*T. L.*—In the climate of England it is too late to sow any crop for winter food after the middle of August. After early Potatoes, on light soils, Spurrey may be sown, which will be eaten by cows and sheep, and probably by goats; also, in winter, Stubble Turnips may succeed, if sown immediately after harvest. We would not recommend Potatoes to be raised two years in succession, on the same ground. On very rich land one bushel of Wheat might suffice to produce a good crop, dibbled in at nine inches, two seeds in each hole; the plan of hoeing in Wheat is good, on some soils which will bear treading; but so little as one bushel of seed per acre could not be distributed regularly. You had better use a little more seed, than risk the loss of a crop. *M.*

WHEAT.—*K. C. A.*—Dig or trench your ground well, and clear it of root weeds; then spread at the rate of 2 cwt. of guano, mixed with five or six bushels of fine coal-ashes, over the surface, and rake it in. Draw drills four inches deep, nine inches apart, and sow your Wheat in these, covering the seed well—one and a half bushel per acre of good plump seed. If your ground is loose and mellow, roll it, or tread over the drills to make it firm. If very stiff, let it remain in the rough state. In March sow the same quantity of guano and ashes as top-dressing. Hoe and clear the intervals between the drills several times, while the Wheat is tillering. If the plants stand nearer than six inches in the rows, thin them out. You ought thus to have a crop of good Wheat, at least seven or eight quarters per acre. We presume a good depth of mould over the clay subsoil, and this well drained. *M.*

MUMMY WHEAT.—*Violet.*—The Wheat grown from seeds said to be taken from Egyptian mummy-cases is similar to the modern Egyptian Wheat.

VINES.—*A Subscriber.*—The following are varieties suitable for a Viney, formed in three divisions, to be forced in succession, and for which ten Vines are required:—For the first division, Black Hamburgh, Royal Muscadine, and Black Prince; for the second, Black Hamburgh, White Frontignan, Chasselas Musqué, and Black Frontignan; for the third, Charlesworth Tokay, and Black or Oldacre's St. Peters. The Black Hamburgh and Royal Muscadine are the best varieties for growing in pots, to train down the rafters; and these can be procured by any nurseryman near London.

PEACH TREES.—*E. S.*—Your Peaches shed their flowers from one of two causes; either the trees are forced too fast, or from want of ventilation the flowers are not fertilised. From what you say, we conclude the latter to be the true reason. Vines and Peaches do not agree very well.

PEAR TREES.—*Amateur.*—You may head back your Pear-tree in spring, and engraft it with Marie Louise, which is an excellent Pear, and will come almost immediately into bearing.

STRAWBERRY PLANTS.—*J. L.*—Do not dig between your Strawberry plants at all. The plan is part of the same barbarous system of gardening which directs Strawberry-leaves to be cut off.

MAGNOLIAS.—*W. H. H.*—Your layer of a Magnolia, which has struck root, had better remain attached to the parent plant until spring; when it may be separated, carefully taken up, and planted in a southern aspect.

CINERARIAS.—*A. A.*—You may sow your Cineraria seeds in spring, in shallow pans, filled with light sandy soil; then place them in a slight bottom-heat, and water them sparingly until they begin to grow. They may be obtained in any seed-shop.

MIGNONETTE.—*Daphne.*—All you have to do, in order to grow Mignonette in winter, is to keep the pots in pits from which

severe frost is excluded, and which you can ventilate freely at all times when the weather is moderate. Your plants draw because they have too much heat, and too little air and light.

IXIAS.—*E. G.*—These bulbs should be kept in a dry place until the season for potting them arrives, which will be about the beginning of November. The soil best adapted for them is a sandy peat mixed with a little loam. After potting they may be kept in a cool, airy situation; and as soon as they begin to grow they may be watered freely.

FUCHSIAS.—*Tyro.*—Keep these plants as quiet as you can in winter by withholding water and keeping them cool. They must not, however, become absolutely dry. You will find some information about the laws of Gardens in former Numbers; but we cannot offer legal opinions.—*A Young Gardener.*—Procure the following 12 sorts:—Thompson's formosa elegans, robustum, Venus Victrix, conspicua arborea, reflexa, tricolor, Standish's Colossus and Attractor, Smith's Queen Victoria, and Coralina, Money-penny, and splendens.*

ROSES.—*G.*—Wait till spring before you plant out Bourbon and China Roses.—*A Widow Lady.*—Six climbing Roses may be Amadis (crimson), Elegans (crimson purple striped), Gracilis (bright rosy red), Ruga (pale flesh), Queen of the Belgians (creamy white), and Inermis (bright rose). Some of the Nurserymen have the Rose called Pestina, under the name of the Scarlet Four Seasons.

DAHLIAS.—*A two Years' Subscriber.*—The colours of the Dahlias in your list have already been given: a further description is unnecessary, as they are all fine flowers, blooms of which are seen in the best stands. Chari Millers we are not acquainted with.

IVY.—*G. W. F.*—We do not know of any positive proof that the stem-roots of the ivy afford it nourishment; the general opinion is that they do not. If they do, it can only be in a small and inconsiderable degree. To prove that, cut off an Ivy-plant above the ground. It is in no sense of the word a parasite.

GRAPES.—*F. A. J. H.*—Your Vines, producing bunches almost totally abortive, must have been starved at the time of flowering.—*Limerick.*—A degree of heat proper for the White Frontignan will perfectly suit the Chasselas Musqué. This sort, though perfectly distinct from the White Frontignan, bears more resemblance to it than to any other.

PEARS.—*W. H. H.*—The following Pears will succeed against a stable wall with a N.W. aspect:—Jargonelle, Marie Louise, Hacon's Incomparable, and Danmore.

NUTS.—*H. J. H.*—These may be preserved for a considerable length of time in new flower-pots, and a slight sprinkling of salt will prevent them from becoming mouldy. When filled, the pots should be inverted on a layer of dry sand.

KIDNEY-BEANS.—*Live and Learn.*—The roots of the Scarlet Runner Kidney-Bean are fleshy and perennial, and if preserved over winter, like a Dahlia, will give you an earlier crop next year than seed. The Dwarf Kidney-Bean is an annual, and cannot be so preserved. One of the best of them, for an early crop, is the Negro; the Early Dun is also very good.

INSECTS.—*J. B. F.*—The insect attacking your Pirs is too well known. It is the *Hydurgus piniperda*. The best and only palliative, for remedy we know none, is to break off the dying ends and burn them. *Pinus ponderosa* is extremely subject to its attacks. By a little management your Deodara may be made to recover its leader.—*G. S. Wintle.*—We had supposed the house-fly to have been dead before the Chelifer cancrorides had attached itself to it, because we did not think it capable of seizing hold of a live and active fly. Your observations show, however, that we were in error; and we must own that we cannot satisfactorily account for the Chelifer being found where you discovered them. This insect, in houses, frequents old wood work, hiding between the joints of the boards; is sometimes found in and upon old books, and may also be occasionally seen in neglected collections of dried plants, insects, &c.—*S.*

MEALY BUG.—*Wm.*—This insect is very difficult to get rid of, when once established; therefore, you must persevere with patience in the application of soap-suds, as this is a means of destroying it; it is very doubtful whether frost may have any effect on it.

BOOKS.—*Alquis.*—"Selby on Forest-trees" is the best we have; but unfortunately it is very dear. There are many others, but we cannot recommend them as being exactly what can be wished. "Billington on Planting" would probably suit you.

AMERICAN PLANTS.—*Tyro.*—If your materials are good, one third loam and two thirds peat will form a good mixture. But American plants will grow well in peat alone, if of good quality. In a wet situation they will be contented with six or nine inches of soil of good quality; in dry places a foot or 15 inches are required.

LAWN.—*Rural Chemistry.*—If you water your lawn well with gas-water and water you will kill the moss, and improve the grass. Do not be alarmed if you should seem to have killed your grass also, for that will recover. But this will be of no permanent advantage unless you keep the lawn mowed, for it seems clear that its soil is exhausted. For this purpose you may employ repeated and gentle dressings of Guano, largely mixed with ashes, after the grass begins to grow next spring.

ANGLE-MEASURING.—*Ignoramus.*—In order to ascertain the angles of elevation formed by the roofs of Forcing-houses, various methods are adopted. That by calculation requires a knowledge of trigonometry. By means of a Gunter's scale and a pair of compasses, the pitch or elevation of roofs may, however, be found easily as follows:—Draw a horizontal line, and from the end of this another at right angles by a square or otherwise; on the former set off as many equal parts, say half inches, as the house is feet in width, between where the under side of the rafter touches the front wall-plate and the back wall; and on the other as many of such parts as the back wall is feet in height, measured from a point on a level with the front wall-plate, to the under side of the rafter at top. A line drawn between the points marking the above measures will form the slanting side of a triangle, corresponding with the pitch, or elevation of the roof. It only remains to ascertain the number of degrees which the angle contains. With the distance of 60° from a line of chords, marked on Gunter's scale, place one foot of the compasses in the angular point, and with the other describe an arc, intersecting the lines representing the base and roof; the distance between these lines at the points of intersection by this arc will extend from the beginning of the line of chords to the number of degrees which the angle contains, or in other words, to the number of degrees of elevation. Or a simpler way is the following:—Describe the triangle ABC, on which let A C represent the width, and B C the height of the back wall above the front wall-plate. Then $\angle A$ place the instrument called a protractor, with its middle line at A, and the line A B will intersect on the protractor the angle required. If you want further information we must refer you to the Village Schoolmaster.

SWALLOW.—I do not know whether it is exactly within your province to prescribe a cure for Swallow-nest building, but I observe you admit sundry entertaining scraps of Natural History, and perhaps one of your correspondents may be able to tell me how I can prevent the Martins building under the eaves of the roof. One or two I should not object to, being fond of birds, but the numbers make such a dirt on the windows (to say nothing of the sparrows they bring, not willingly, forsooth, but they come and pillage their nests) as to be quite intolerable. Simply destroying the nest does not answer, for they build again immediately.—*S. W.*

PONDS.—*Alquis.*—There are no means of keeping down weeds in ponds, except very frequent cutting them. By perseverance they may be got rid of in this way, but in no other. It is of no use to cut them only once in two years.

HONEY.—*Robin Hood* requests to be informed of the best method of preserving honey after it has been run from the comb.

MISCELLANEOUS.—*J. A., Limerick.*—Write direct to the newsman who supplies you, and desire him to use a paper sufficiently large to cover the whole of the print.—*G. J. Tate.*

An *Aristolochia*, but the species cannot be determined without information as to its native country and a much better specimen.—*E. G.* had better apply to the nurserymen who advertise Fuchsias; they will no doubt supply her.—*An Inquirer.*—1, *Lasiopetalum quercifolium*; 2, *Malva cretana*; 3, *Solidago serotina*.—*W. S. W.*—4, *Hibiscus syriacus*, var. *purpureus*; 5, Ditto, var. *variegata*; 6, *Linaria cymbalaria*; the rest indeterminate.—*Bedfordensis.*—1, *Centaurea solstitialis*; 2, *Helminthia achioides*.—*A Subscriber.*—The best guard to your Geraniums in the open ground during winter is a deep covering of sand or coal-ashes, placed over them in the form of a cone, so as to throw off the wet. Cut them down as late as you possibly can. We give up the English names in recommending plants, because they are applied vaguely, and plants cannot be bought with so much certainty by their English as their Latin names.—*R. K. W.*—*Verbascum Blattaria*.—*J. Mitchell, jun.*—Thanks.—*H. E. B.*—*Crocus nudiflorus* and *Ceterach officinarum*.—*W. Alders.*—The *Brassia* is a distinct variety of *B. Lawranceana*, but we think nothing more.—*S. W.*—Tiling cannot be preserved from moss, except by scraping, or by washing it over with cement water or lime whitening—which you would hardly like to do. What can you have better than a *Laurustinus*, or an *Arbutus*, or a *Pyracantha*, or a *Rhododendron*? The Botanical questions next week.—*A. M.*—It is impossible to say what your Gourd is without seeing it. There is nothing remarkable in the size you speak of. The *Potiron jaune* often weighs much above 120 lbs.—*H. W. B.*—Your Pear marked A is not generally known, even among Pear growers. It is sometimes called by a name which sounds something like *Gratioli*; but this is a synonyme of the *Summer Bon Chrétien*, from which the fruit in question differs widely, more especially as regards superior flavour. One cultivator near London has been in possession of it for some time, and others are now obtaining it—an excellent fruit. B. Napoleon; C. Autumn Bergamot. Apples:—No. 5, Scarlet Crofton; 7, Norfolk Beaufin; 9, 14, Ribstone Pippin; 12, French Crab; 15, 16, Court of Wick; 17, Golden Harvey; 18, Dutch Mignonne.—*J. Abell.*—*Ceanothus azureus* (Common Spruce Fir). We must really refer you, along with *Croydon*, &c., to our notice on this subject, p. 522.—*W. W. W.*—*Crataegus oxyantha punicea*, C. o. *rosea major*, and C. o. *rosea superba*, are all names for the same variety.—*J. H. B.* will find directions for building a pit to keep Pelargoniums, Fuchsias, &c. during winter, in *Amateurs' Garden*, p. 693.—*A Widow Lady.*—*Amaryllis belladonna*, *Clethra alnifolia*. A list of Hardy Roses was given at p. 633 of this year. Your bed of Fuchsias may be removed with advantage in spring.—*Alfred.*—Your seedling Pear is large and handsome, like a fine Gansel's Bergamot; but we regret that, owing to the puncture of a wasp, it is so decayed that no opinion can be formed of its flavour.—*Croydon.*—Your Pear called *Duchesse d'Angoulême* is not that variety, and is unknown. Apple No. 2, Scarlet Crofton; 3, King of the Pippins.—*A. G.*—*Psidium Cattleianum*. All hardy Heaths are pretty, and equally suited for beds. Consult any Catalogue.—*G. S.*—Your seedling Apples are like the old Nonpareil in shape, with tender, almost melting flesh; but not sufficiently rich to be recommended.—*K. R. B.*—Your seedling Apple resembles a small *Queening*, in appearance, and its flavour is something like that variety; it can scarcely rank as first rate.—*A. Z.*—1, *Beurré de Capiaumont*; 2, *Easter Beurré*; 3, *Calebasse*; 4, *Glout Morceau*; 5, *Passe Colmar*; 6, *Beurré Rance*; 7, *Rouse Lench*; Apple; No. 10, *Gravenstein*; 11, *Myopium parvifolium*; *Lythrum virgatum*.—*Albert.*—1 and 3, *Marie Louise*; 2, *Williams's Bon Chrétien*; 5, *Easter Bergamot*; 14, *Beurré Diel*; 15, *Unknown*, apparently worthless. Apples—6, *Probably Gloria Mundi*; 8, *Bedfordshire Foundling*; 9, *Airistron*; 11, *Margat*; 12, *Downton*.—*F. D. R.*—1, *Royal Russet*; 3, *Hollandbury*; 4, *Adams' Pearmain*; 5, *Old Nonpareil*; 6, *London Pippin*; 7, *Dutch Mignonne*; 8, *Golden Pippin*; 9, *Dutch Mignonne*; 10, *Sam Young*; 12, very green, perhaps *Blenheim Pippin*; 13, *Fearn's Pippin*. Pear, No. 1, *Beurré Rance*.—*A Surrey Subscriber.*—1, *Brown Beurré*; 4, *Beurré Diel*; 5, *Easter Beurré*; 6, *Chamontel*; 7, *Bishop's Thumb*; 9, *Easter Beurré*; 10, *Glout Morceau*; 11, *Marie Louise*. The other specimens are imperfect.—*A Constant Reader.*—*Linosyris vulgaris*.—*V. R. W.*—*Chrysosplenium oppositifolium*; *Geranium lucidum*; 1, *Jungermannia asplenoides*; 2, *Hypnum triquetrum*; 3, *Hypnum purum*; 4, *Polytrichum juniperinum*; 5, *Polytrichum undulatum*; 6, *Polytrichum commune*; 7, *Dicranum scoparium*; 8, *Hypnum splendens*; 9 and 10, *Hypnum striatum*; 11, *Hypnum proliferum*; 12, *Hypnum undulatum*.—*A Subscriber.*—Uncommon plants can rarely be named by an inspection of nothing but the leaf. Flowers are indispensable.—*W. H.*—1, *Chironia linifolia*; 2, some *Cassia*. The *Oxalis* has nothing to distinguish it from *O. Bowiei*.—*A Regular Subscriber.*—*Aristolochia Macquii*.—*Daphne.*—No one ever thinks of cultivating the Medlar. It is allowed to grow wild and take care of itself. Have you ever kept your Medlars for a few weeks after they have fallen? Try whether they will not get into the ripe state. Any of the Tea-scented Roses will answer your purpose. The present volume of the *Chronicle* is the third. The previous volumes can only be had occasionally.—*T. G.*—We shall be particularly obliged by the paper and analysis you are so kind as to offer.—*Gutierrez.*—Send Nos. 38, 44, and 47, for 1841, and 2, 5, 15 for 1842, with your address, and we will remit you 6d each.

SEEDLING FLOWERS' FLOWERS.

FUCHSIAS.—*E. H. F.*—Your seedling No. 1 is a flower of great substance, and well formed, but the sepals do not expand sufficiently; the colours are very deep, but rather dull; it forms a distinct variety. The other three seedlings are inferior to No. 1 in size and form, but precisely the same in colour, so that any person possessing the first would not require the others.—*J. S. J.*—No. 1 is not equal to many of our old and common varieties. No. 2 is a well-formed flower, of good and distinct colours, but in this variety the corolla is short, and the sepals not expanding much, but a small portion of it is visible. No. 4 is a large and showy flower, but the sepals are disproportionately large and narrow, and do not appear to open well.—*W. H. H.*—The seedling named *Holmes' Queen Adela* is a large, showy flower; tube smooth, of a bright carmine, and the sepals tipped with green; the corolla, which is large, is of a crimson purple; the foliage is rather large, but if it proves a prolific bloomer it will form a good and showy variety.—*E. B.*—The seedling you have sent is faulty in not having a greater contrast of colour between the corolla and the tube; and from the division of the corolla unfolding, the flower is deprived of the elegant and compact appearance which it is desirable to see; otherwise the flower is large, brilliant, and showy, and if a prolific bloomer and good habit it will make a striking object in a collection.

PETUNIAS.—*M. R.*—Your seedling No. 25 is quite a novelty; it is a beautiful, distinct, and desirable variety; the colour is a soft, decided blue, perfectly free from any intermixture of a rose or purple tinge, mottled with white; the quality of the blue approaches that of the *Achimenes longiflora*; it will be an acceptable addition to this beautiful class.

VERBENAS.—*M. R.*—Your sweet-scented seedling, No. 105, is the best we have seen of its colour—bright blue lilac; the flower is large, smooth, and glossy, and perfectly free from crumple.—*E. H. Fuller.*—No. 1, purple rose, good, but not differing from others already out. 2, brilliant, rich purple, with a white eye; the best of its colour we have seen. 3, delicate pink; clear and good. 4, rosy purple; clear and steady in colour; a good variety. These flowers are characterised by having the colours very clean, not dirty or uncertain, as it frequently happens. The flowers are rather small, but this may arise from want of better cultivation.—*J. Newman.*

No. 1 is a large and fine flower, very much resembling the *Phlox Drummondii*. 2, lilac; good in colour, with large flowers; and 3, rosy lilac, is a flower of the same character; they are three good varieties.*

DAHLIAS.—*Rev. C. Fawcett.*—*Rob Roy* is a very fine flower; the petals are well formed, of good substance, and well arranged; the centre is good, but a little depressed, and a greater depth of petal would be desirable; the colour is good, being a deep red, with a tinge of crimson. *Fanchon*, white tipped with lilac, being a seedling of 1842, is small; it is pretty, and tipped with great regularity, but we fear the centre, in the earlier part of the season, would show the disk, as it is a year rather deficient in petals.—*Geo. Towers.*—Your flowers arrived in wretched condition; the purple seedling is common in colour, and we should think not worth preserving; the deep crimson has a fine petal, of good substance, but every specimen had a large, yellow disk. The condition of the blooms prevents our saying more about them.*

As usual, a host of letters have arrived too late for answers this week.

Errata.—In Mr. Latter's Advertisement of New Black Spine Cucumber, inserted Oct. 7th, the diameter should be 1½ instead of 12 inches; price 5s. per packet.

NEWS OF THE WEEK.

OUR Irish news this week supplies us with our chief topic of interest. On Saturday last the Government issued a proclamation forbidding the Repeal meeting announced to take place at Clontarf on the next day, ordering all magistrates and officers to assist in its effectual dispersion, and threatening all who attended it with prosecution. Previous to this, the Lord Lieutenant and the Lord Chancellor had been ordered to return to their posts, fresh troops had been despatched to Ireland, and extensive military preparations had been made in Dublin to give effect to the proclamation. The Committee of the Repeal Association met immediately after the Proclamation appeared, and issued a counter manifesto, declaring that as the resolution of Government had been so long delayed, it would be impossible to give the proper notice to the people, but calling upon the Repealers to return to their own dwellings, and not to run the risk of a collision. Great efforts were made to prevent the assembling of the people, and messengers were despatched by Mr. O'Connell to all the towns and villages which were expected to send their contingent to the gathering. On Sunday morning, however, immense crowds, ignorant of the proceedings of the previous evening, came into Dublin, and the streets were filled with groups anxiously reading Mr. O'Connell's proclamation. The road to Clontarf was covered with troops, and bore the appearance of a campaign, while thousands of persons proceeded towards Clontarf, to see the military display and apparently influenced only by feelings of curiosity. Notwithstanding the excitement of the scene, the whole passed off without the least accident or disturbance; and before dark the people had quietly dispersed, and the troops had returned to barracks. On Monday the Repeal Association held its weekly meeting, at which Mr. O'Connell counselled obedience to the law, and declared that he would obey even the semblance of authority. The dinner which was to have followed the meeting at Clontarf took place in Dublin on Monday evening. Mr. O'Connell again counselled order and submission, but said that Ireland would never compromise or accept an instalment of Repeal, and that justice could be obtained only from a local legislature. No subsequent proceedings have been adopted on the part of Government, with the exception of further reinforcements of troops, and no announcement of their future policy has yet been made.—The Revenue returns for the year ending Oct. 10, have been published this week. They show an increase in the year of 4,076,346*l.*, and an increase in the quarter of 1,565,931*l.* The increase in the year is attributable to the Income tax and the Miscellaneous department, which includes the money obtained from China. These are the only two branches of the ordinary revenue which give an increase for the year; but in the returns for the quarter, the Excise shows an increase of 240,515*l.*; the Stamps, 18,886*l.*; the Taxes, 16,663*l.*; the Crown Lands, 7,500*l.* The main source of increase, however, is the Income-tax, which shows an increase for the last quarter of not less than 1,734,060*l.* The Customs, on the other hand, exhibit a decrease of 414,469*l.*, and the Post-office a decrease of 8,000*l.*, on the quarter, as compared with the corresponding quarter of last year.—The arrival of Col. Malcolm with the ratification of the Chinese treaty has put us in possession of news from China to the 29th July, and from Calcutta to the 10th August. The treaty has been duly signed by the Emperor, and a tariff agreed upon, by which an important reduction is made in the duties on British commodities. The new system of trade was to commence at Canton on the 27th July, and from that day the monopoly of the Hong merchants was to cease. From India we have little news, the regular Overland Mail not having arrived. The accounts brought by Col. Malcolm merely state that the troops in Scinde have suffered severely from the extreme heat, and that the enemy appear to be still unsubdued. Several officers have died of the prevailing fever, and it was feared that the mortality would increase when the present inundations have subsided.

Home News.

Court.—Her Majesty and Prince Albert, the Prince of Wales and the Princesses continue at Windsor Castle,

and are quite well. The Queen has taken her usual walking exercise during the week, and on Tuesday rode out in the Park on horseback, accompanied by Prince Albert. Her Majesty and the Prince also rode on horseback on Wednesday in the Riding-school. On Tuesday morning Prince Albert shot over the preserves in the Great Park. His Imperial Highness the Grand Duke Michael of Russia returned to town from Windsor on Saturday, and took his departure on Wednesday on a visit to Scotland. His Serene Highness the Prince of Hohenlohe Langenbourg left the Castle on Monday for Witley Court, on a visit to the Queen Dowager. Viscount Hawarden has been succeeded by the Earl of Warwick as the Lord in Waiting, and Capt. Duncombe has been succeeded by Mr. Ormsby Gore, as the Groom in Waiting on Her Majesty. The Queen has been pleased to appoint the Marchioness of Douro to be one of the Ladies of the Bedchamber in Ordinary to her Majesty, in the room of the Duchess of Norfolk, resigned, who has been appointed Extra Lady of the Bedchamber to her Majesty. The following personages have arrived at Windsor during the week, on a visit to her Majesty:—Prince Bariatsky, Count Woronzow and Son, the Earl of Devon, the Earl and Countess Delawarr, the Ladies Elizabeth and Mary West, the Chancellor of the Exchequer, the Belgian Minister, and Madame Van de Weyer. The Duchess of Cambridge, and the Duke and Duchess of Mecklenburgh Strelitz, are expected to arrive at Hanover at the close of the month, and to remain in that Capital for several weeks. It is uncertain whether the Duke of Cambridge will accompany the Duchess, as His Royal Highness intends shortly to return to this country.

The Revenue.—The Revenue returns for the year and quarter ending Oct. 10, were published on Wednesday. The total revenue for the year is 49,346,273*l.*, which, compared with 45,269,927*l.*, the revenue of the corresponding year, ending Oct., 1842, shows an increase of 4,076,346*l.* This increase is occasioned by the produce of the Income-tax, which has been augmented by 4,738,213*l.*, and the miscellaneous receipts (including money from China,) 1,071,435*l.* To this must be added repayment of advances, 135,141*l.*, making a total increase of 5,944,789*l.* Against this is to be set a decrease in the Customs of 1,136,155*l.*; Excise, 338,522*l.*; Stamps, 83,607*l.*; Taxes, 89,647*l.*; Post Office, 1000*l.*; Crown lands, 14,500*l.*; Imprest and other monies, 205,012*l.*; making a total decrease of 1,868,443*l.*, which, being deducted from the above increase of 5,944,789*l.*, gives as above, a total increase on the year of 4,076,346*l.* The returns for the quarter show an increase of 1,565,931*l.* On the Excise there is an increase of 240,515*l.*; Stamps, 18,886*l.*; Taxes, 16,663*l.*; Property-tax, 1,734,060*l.*; Crown lands, 7,500*l.*; to which must be added, Repayment of Advances, 50,721*l.*; making a total of 2,068,345*l.* On the other hand, there is a decrease in the Customs of 414,469*l.*; Post Office, 8000*l.*; Miscellaneous, 3,180*l.*; Imprest and other monies, 76,765*l.*; making a total of 502,414*l.*, which, being deducted from the above increase of 2,068,345*l.*, gives a total increase on the quarter of 1,565,931*l.*

The Navy.—The following are the Officers of the Royal Yacht who have been promoted in honour of her Majesty's recent marine excursions:—Lieut. George Snell, to be Commander; Mates Robert Coote and F. P. Warren, to be Lieutenants; Assistant-Surgeon H. R. Banks, to be Surgeon; Second Master Fox, to be Master.

The Army.—A new chako for the Infantry has recently been introduced, which has been much criticised in Military circles. It is now stated that the projected cap is likely to be abandoned, as the Duke of Wellington has submitted to the Queen that another cap be substituted, and her Majesty has been pleased to accede to his Grace's recommendation.

New Commissions.—The Queen has been pleased to direct letters patent to be passed under the Great Seal, appointing the Right Hon. T. Frankland Lewis, the Hon. Robert Henry Clive, and William Cripps, Esq., her Majesty's Commissioners for inquiring into the present state of the laws, as administered in South Wales, which regulate the turnpike roads; and also into the circumstances which have led to the recent acts of violence and outrage in certain districts of that country; G. Kettily Richards, Esq., to be Secretary to the Commission. The Queen has also been pleased to appoint James Pennethorne, Esq., her Majesty's Commissioner for making a special inquiry into the execution of the original contracts for building certain of the Union Workhouses in Ireland.

Foreign.

FRANCE.—Some curiosity has been excited by an attempt which has been made in some of the churches in Paris to get up a *neuvaine* in favour of Henry V. It appears that a paper to that effect was distributed in the churches by the partisans of the exiled family, to such as were supposed to be trustworthy. Attention having at last been drawn to the matter, the papers were seized, and found to be in the form of a prayer to the Virgin, St. Michael, and the tutelary saints of France, to "succour the young King in the arduous combat he has to sustain."—According to the *National*, Marshal Soult has formally announced his determination to quit the Ministry before the opening of next session, and his colleagues now consider him no longer as part of the Administration. Papers are as usual sent to be signed by him from the War-office, but no documents of a political nature are transmitted to him. These are directly addressed to M. Guizot, who is regarded as the real President of the Ministry.—Several confidential agents of Queen Christina had left Paris for Madrid, to be present at the opening of the Cortes on the 15th inst. Her Majesty, it appears, will proceed to Spain

the moment a vote of the Cortes shall have proclaimed the downfall of Espartero. The Cabinet of the Tuileries was likewise awaiting that decision to accredit an ambassador to Madrid.—The *Journal des Débats* states that the French Government has just ordered M. Napoleon Garella, a young engineer of the Mining Department, and M. Courtines, a member of that of the Ponts et Chaussées, to proceed to the Isthmus of Panama, and seek for the best direction to be given to a canal of communication between the Atlantic and Pacific Oceans.—The papers state that since the arrival of the ex-President of Hayti in Paris, it has been ascertained that, instead of having placed, as has been previously stated, immense sums in the Spanish and English funds, he has, on the contrary, but a very small property. It is even said that M. Barrot, the new Minister to St. Domingo, has received instructions to endeavour, after having obtained compliance with the demands of France, to procure a pension for the ex-President.—The French diplomatic and consular establishments for China are to embark at Brest towards the latter end of the present month. The weather has become exceedingly stormy in Paris, but remains very mild, although the season is so far advanced, that the removal of the orange-trees which have decorated the gardens of the Tuileries and of the Luxembourg to their winter quarters, has commenced. The returns of the slaves emancipated in the French colonies in 1842, published by the Minister of Marine, show that their number amounted in that year to 766, viz., 286 at Martinique, 160 at Guadeloupe, 12 in Guiana, and 308 at Bourbon. The whole number of slaves emancipated between 1830 and 1841 had been 39,819, making in all 40,585.—The *Presse* states, that the engineer superintending the naval works at Cherbourg, had succeeded in raising the hull of the vessel laden with stones, which the English sank between the piers of the harbour, when they took it in 1758.—A mutiny broke out in the French frigate *Uranie*, on her voyage to the Marquesas. It appears that in the night of the 19th May, as the *Uranie* was proceeding from Teneriffe to Goree, the wedges of the carronades were taken away. M. Bruat, the captain, had the presumed authors of this offence arrested. One of them endeavoured to excite the other prisoners to revolt; but on the same day a Council of Justice was held on board, and this commencement of insubordination was on the instant put down by legal means. In the report from Rio of the 12th July, M. Bruat announces that the example had produced its fruits, and that discipline was completely re-established on board the *Uranie*.

SPAIN.—The Madrid journals and letters of the 2d contain no intelligence of any moment. The capital was quiet, but the authorities were still on the watch, and their precautions were to continue until the meeting of the Cortes. Affairs were assuming an aspect more favourable to the new Government. The results of the elections were considered highly satisfactory by the Ministerialists. Fifteen thousand electors of the Asturias are stated to have voted for the Count de Toreno, the news of whose death arrived only after the elections, and for M. Montes, the late Minister of Finance, who is likely to enjoy great influence in the approaching Cortes. Accounts so satisfactory had been received from Catalonia and Aragon, that the journals supporting the Government confidently announce the approaching pacification of those provinces. Despatches from Barcelona of the 26th ult. announce that, after their defeat at San Andres, the insurgents had separated into three columns, the one under Ametler, the other under Martel, and the third commanded by Riera. The first had retreated on Girona, the second upon the camp of Tarragona, and Riera on Barcelona. This last was dispersed on its way, and the chief, made a prisoner of by Prim, was sentenced to be shot. On the 1st and 2d the citadel of Montjuich and the fort of Pio fired on the fortified points in the city of Barcelona occupied by the insurgents, which on the 2d ceased to reply. The insurgents, however, made an attempt to storm the citadel on the 7th, but were repulsed with loss. An outbreak took place at Granada on the 5th, but was repressed, and the city declared in a state of siege. Almeria has also risen against the Government.

PORTUGAL.—We have accounts from Lisbon to the 4th, on which day the Queen set out for the Alemtejo, in spite of the remonstrances of her Ministers to dissuade her from undertaking the journey. Many opinions had been set on foot concerning the motive of this unexpected visit, but that which has gained most credit is, that it has been suggested by the numerous complaints and representations received from the manufacturers in relation to the pending treaty between this country and Great Britain. The proprietors of various establishments in Oporto have held a meeting for the purpose of petitioning the Queen to break off the convention, and to recall the Duke of Palmella from his mission to London.

HOLLAND.—Accounts from Amsterdam of the 9th announce that his Majesty has given 3,000 florins to the Society for Procuring Employment for Distressed Workmen, and that King William Frederick has given 2,000 florins for the same charitable purpose. On Wednesday week the Dutch and Belgian Commissioners for fixing the frontier line between the two kingdoms met in the town-hall of Maestricht, to exchange the ratification of the convention concluded in August last. The ratifications were forwarded on the following day to Brussels and the Hague.

GERMANY.—The *Augsburg Gazette* of the 3d states that the five great Powers have agreed as to the necessity of marrying the Queen of Spain to the eldest son of Don Carlos, but that the Courts of London and Paris are not willing to give the Prince a higher title than that of husband of the Queen; whilst the Conservative Courts wish to maintain the Prince's absolute right on the abdication of Don

Carlos. It is believed that the Conservative Powers will yield on this point, as the rights of the two parties would be consolidated by marriage, and become united in their children.—The papers state that it would be impossible to give an idea of the impression produced at Munich by the despatches announcing the revolution at Athens, and that the journey of the Prince Luitpold to Greece has been postponed in consequence.—The Prussian Government having determined to put down gambling in the funds, the Minister of Justice has submitted to the Council of State a bill, declaring that all fictitious operations in national or foreign stocks, and particularly all sales or purchases for the end of the month, are to be considered null and void; that no parties, consequently, shall be bound to pay the difference, and that if any suit on the subject be brought before the tribunals, not only shall the applicant be nonsuited, but both parties punished, if possible, by a fine proportioned to the sum at stake. It is said that the Earl of Westmoreland will shortly return from his embassy at Berlin, and that his lordship's successor will be Sir Hamilton Seymour, our minister at Brussels.—The Sardinian minister at the Court of Austria has made a formal demand of the hand of the Archduchess Maria Carolina, daughter of the Archduke Reynier, viceroy of Italy, for the Prince of Savoy Carignan, Prince Royal of Sardinia. The ceremony of the betrothment is expected to take place very shortly.—A letter from Nuremberg, dated Sept. 25, states, that a public meeting was held on the preceding day, for the purpose of forming a society against extravagance in living and dress. Nearly 200 persons were present, many of whom were merchants. The assembly was addressed by M. Binder, the burgo-master, who dwelt on the utility of such institutions, and remarked that similar ones existed in France and Germany, and were attended with excellent results.

GREECE.—The *Augsburg Gazette* of the 5th inst. states that a protest against the late revolution in Greece may be expected to be made by the Emperor of Russia, which would no doubt produce difficulties similar to those which arose on the Servian question. Accounts from Athens of the 22d ult. state that the greatest tranquillity prevails in the capital, and the constitution has been proclaimed in the provinces with the utmost order. The place in front of the Palace has now assumed the name of "Constitution," and in the temple of Theseus a column is erecting upon which will be placed the names of all the leaders in the revolution. Rear-Admiral Canaris entered the Piræus on the 17th, with the Greek squadron, and took the oath of allegiance. On the 19th the Council of Ministers were engaged in making choice of the delegates, and a proclamation has been issued exhorting the nation to appoint their delegates for the 13th November, the day on which the National Assembly is to meet.

SWITZERLAND.—A letter from Coire, in the Canton of the Grisons, of the 18th ult., says:—"On Tuesday morning the mountain of Calanda suddenly gave way, with a dull noise which lasted some minutes, and soon after it was perceived that a number of crevices had taken place in the mountain longitudinally. Since then several large pieces of rock have fallen down, and some of them into the village of Felsberg. The Government engineer, M. Leccana, was immediately sent to inspect the place, and make a report. He has declared that the mountain was continually though slowly coming down, and that at no distant period the whole of the village of Felsberg must be destroyed by it. The Government at once ordered measures to be taken for facilitating the emigration of the inhabitants, who are about 500 in number. A new village is about to be founded for them beyond the Rhine."

RUSSIA.—A paragraph has appeared in the German and French papers stating that an attempt was made on the life of the Emperor of Russia at Posen on the 19th ult. Several versions of the report have been current, which may all be summed up to the effect that a shot or shots had been fired at a carriage containing some aides-de-camp of the Emperor, for whom the shot was intended. It is stated in one account that some persons pretend to have heard the report, and in others that some slugs have been found in the road, flattened evidently by collision with the opposite wall. But the affair is now explained by the announcement that the Prussian authorities having made strict search, discovered that a footman seated behind a carriage which conveyed a part of the Emperor's suite, in passing through an obscure street in Posen, drew a musket from under his cloak and fired it. This was the foundation of the statement of a conspiracy organized by some members of the French propaganda to assassinate the Emperor.

INDIA AND CHINA.—Accounts have been received from Calcutta to the 10th August, and from China to the 29th July by the *Ackbar* steamer, belonging to the East India Company, which was dispatched from Hong Kong direct to Suez, with Colonel Malcolm, the bearer of the treaty just entered into between this country and the Emperor of China, the ratifications of which were exchanged on the 24th July. The Colonel did not reach Alexandria in time for the Oriental, which was compelled by her contract to leave for the second time without the Indian mail. Colonel Malcolm, however, obtained a passage from Alexandria to Malta by the steam frigate *Geyser*, and arrived there before the Oriental came in with the mails from the Levant, and from thence he is now on his passage home in the latter vessel. The China advices contain a full detail of the particulars respecting the ratification of the treaty with China, and the measures which the Plenipotentiary had adopted to secure order among the European residents, and the conditions upon which trade is to be carried on. The Chinese Government and Sir H. Pottinger had issued proclamations, specifying the new regulations for the tariff mutually

agreed upon. The Imperial Commissioners in their proclamation announce the anxiety of their Sovereign "to cherish tenderly men from afar," and declare that the "weapons of war shall be for ever laid aside, and joy and profit be the perpetual lot of all, and neither slight nor few will be the advantages reaped by the merchants alike of China and foreign countries." Sir H. Pottinger, in announcing the conclusion of the negotiations, informs his fellow-countrymen, in plain terms, that he is determined to stand no trifling; and that upon any "well-grounded representation that the provisions of the commercial treaty have been evaded, he will adopt the most stringent and decided measures against the offending parties, and where his present powers may not fully authorise and sanction such measures as may seem to him fitting, he will respectfully trust that the Legislature of Great Britain will hold him indemnified for adopting them in an emergency directly compromising the national honour, dignity, and good faith, in the estimation of the Government of China and all other nations." By the tariff a great and important reduction has been made in the duties levied on almost all the most important commodities sent from this country to China, and a most beneficial effect is anticipated from the change. Both in China and in this country the tariff has been received with general approbation, and great commendations are bestowed upon Sir H. Pottinger by the local press of India for the ability he has shown in conducting the negotiations. The new system of trade was to commence at Canton on the 27th July, and from that day the Hongmerchants' monopoly and Consol charges would cease. The other four ports, Amoy, Fuchow-foo, Ningpo, and Shanghai, which, according to the treaty, are to be resorted to by British vessels, could not be declared open until an Imperial edict to that effect should be received from the Cabinet of Peking. The edict was expected at Canton early in September, and in the meantime consular officers would be appointed and arrangements made, so that there might be no unnecessary delay in the commencement of trade. Mr. G. Tradesant Lay had been temporarily appointed Her Majesty's Consul at Canton; Mr. R. Thom, Interpreter; and Messrs. Meadows and Meredith, as clerks in the Consular-office.—The intelligence from India, by way of Calcutta, does not entirely supply the long interval which has elapsed since our last advices. It was brought by the Peninsular and Oriental Company's steamer Hindostan, which left Calcutta on 10th August, with 108 passengers, and arrived at Suez on the 11th ult. Nothing had been heard of the Bombay mail at Alexandria on the 27th ult. The steamer which was expected to convey it is the Victoria, which is described as being very small, and of little power; and as the passengers by the Hindostan report that the monsoon had not at all subsided in violence, some apprehensions for her safety are expressed. Up to the 9th August nothing of consequence had taken place in Scinde—the most important fact being, that the troops were suffering extremely from the heat and ill-health, with the prospect of an aggravation of their sufferings when the present inundations shall have subsided. The enemy appeared to be still unsubdued, and to hover about in a threatening way, but to be little anxious to come to a collision for the present. The party that moved out against Shere Mahommed suffered severely from the extreme heat of the sun, as did also those that remained in Hyderabad, and Capt. Blood's battery in moving up from Sehwan lost nine European gunners in that short march. Sir C. Napier's report exhibits a total loss from this cause, in two days, of one officer and fifty European soldiers. The nature of these attacks appears to have been most sudden, those men who had led intemperate lives being the most predisposed to them; they were in more cases struck down unexpectedly, and seldom survived above a few hours. The last death recorded among the officers is that of Lieut. Pottinger of the 15th Bombay Native Infantry.—The Cabool Relief Fund Committee met on the 5th June, at Kurnaul, and propositions for the final distribution of the fund were considered. It is proposed that permanent annuities be granted to the widows of European officers, warrant and non-commissioned officers, and privates, with an additional allowance to those who have children, and to married persons according to the degree of their physical disablement. The amount at the disposal of the fund is about 300,000 rupees, or, inclusive of the amount at the disposal of the Bombay Committee, 350,000 rupees.

UNITED STATES.—The New York packet-ship Hibernia, which sailed on the 19th ult., has arrived at Liverpool, after a fine run of 18 days. She brings intelligence three days later than that by the Queen of the West and the Stephen Whitney, which had previously arrived. The first meeting of the delegates from every part of the Union to the Great National Repeal Convention took place on the 20th, when Mr. Robert Tyler was appointed President, and various other Officers were elected. The Boston papers state that the British steamer North America, from St. John's, had grounded on the north side of Governor's Island. She had not sustained material injury, and was expected to be got off next tide. By an arrival from Mexico on the 18th ult., intelligence was received of a contemplated renewal of hostilities between Mexico and Yucatan. The Yucatan Commissioners had returned with the news that no treaty had been concluded, the commission was dissolved, and the Mexican Commissioners had returned to Vera Cruz. It appears that the anger excited by Mr. Dickens's "American Notes" is far surpassed by that since produced by his "Martin Chuzzlewit," and the popular indignation seems to have equally fallen on Judge Haliburton for his "Attaché, or Sam Slick in England." The papers argue that the position of

the latter ought to have prevented him from indulging in disagreeable reflections towards their republic; and as a member of the bench in a neighbouring province, they warn him that he must confine his opinions to his own jurisdiction, or if he wanders within that of Judge "Lynch," he will do so at the risk of being arraigned at his bar.

WEST INDIES.—The following are additional particulars of the calamitous fire at Kingston, announced briefly last week. It broke out shortly after mid-day on Saturday, Aug. 26, near the furnace-room of James's foundry, close to the sea, and having traversed the whole of these extensive premises with amazing rapidity, the flames soon caught the adjoining saw-mills and lumber-yard of Messrs. Da Costa and Maxwell, which in less than half an hour were one mass of flames, with the solitary exception of the high chimney-stalk, which stood uninjured during the whole fire. At this time, and indeed up till 4 o'clock, the sea-breeze blew very high, thereby rendering it impossible for the city engines, even if they had been in serviceable order, to have had any effect in extinguishing the flames; consequently, in a very short time they had crossed Harbour-street, and ignited the range of houses on each side of Foster-lane, crossing Water-lane, and extending as high up as Thames-street in that direction; from thence, the breeze blowing in a N.W. direction, the flames extended into Golden-street, proceeding up that street nearly as far as Lombard-street, missing in their course only two edifices of any moment, the one the extensive Methodist Chapel in Thames-street, the other the new Baths, which were only preserved by the extraordinary efforts made to preserve them from taking fire, by means of keeping the roof constantly wet. From this the fire extended up Maiden and Rosemary lanes, crossing Lombard-street; about which time (nearly 3 o'clock) the sparks and pieces of flaming shingle which had been carried aloft, and driven by the force of the breeze over a number of streets, fell first upon the old Athenæum in Law's-street, which was soon reduced to ashes; and thus commenced a new and separate conflagration, if possible the more disastrous, from the greater value of the residences in that quarter. This continued till dusk, comprising both sides of East-street, with the lanes adjoining between Law's-street and East Queen-street, extending along the latter street as far as Mark-lane, during which the sugar-house very narrowly escaped. If it had ignited, it must inevitably have led to the destruction not only of the Roman Catholic Chapel, and the Commissariat Office, but of the Surrey Gaol, immediately behind, which was several times on fire from the sparks, rendering it necessary that the prisoners should be removed. From East Queen-street, the fire still moving in a N.W. direction travelled up nearly another division on the west side of East-street, and one division of Duke-street on both sides, extending as high as Sutton-street, adjoining the Parade, where the land-breeze by that time beginning to come down, the conflagration in that direction was checked, though unhappily not before reducing to bare walls the French Roman Catholic Chapel in that street, as well as the whole range of valuable buildings adjoining and opposite. At this stage, however, the change in the direction of the wind, which saved the upper part of the town, began to threaten destruction to the commercial part; and the original branch of the fire, which had latterly somewhat abated above Lombard-street, now began to travel downwards, taking the east side of Hanover-street, and both sides of Rum-lane, which had formerly escaped, and for several hours after nightfall the whole of the lower part of the town was in the most imminent danger. Providentially, however, the land-wind gradually subsided towards midnight, or nothing could have prevented the conflagration extending to Harbour and Port Royal-streets, where the destruction must have been appalling, and by the aid of the military, both from New Castle and the barracks in town, and several naval detachments from Port Royal, whose services are much extolled, the ravages were prevented extending downwards, the flames, however, continuing to issue from these parts with great brilliancy up to nearly day-break on Sunday morning. Several serious accidents, and some deaths ensued, and the value of property consumed is estimated at from 200,000*l.* to 300,000*l.* It is said that the black population rendered little or no assistance, observing, "Get those who ordered our pigs to be killed to put out your fire," and they were obstinately ignorant as to salt-water extinguishing fire. There was no proof of its originating wilfully, but the Mayor had offered 1,000*l.* for discovery.—The Bishop of Newfoundland has been translated to the Bishopric of Jamaica and the Bahama islands, so that the diocese of Newfoundland becomes vacant. From Bermuda we learn that the fatal epidemic still continues to prevail in that group of islands. Captain Sir H. Chamberlain, Bart., of the Artillery, who succeeded Lieut.-Colonel Arabin in August last, Lieutenant and Adjutant Jenkin, of the Engineers, nine gunners and drivers of the Artillery, and 37 privates, out of a company of only about 70 Sappers and Miners, have died, and about 120 of the reserve battalion of the 20th Reg. of the line at present serving on the station. It has been equally fatal in private families, and labour is suspended.

CAPE OF GOOD HOPE.—Cape papers to the 26th July are chiefly occupied with the results of the mission of Colonel Cloete to the Boer settlers in the vicinity of Port Natal. He was instructed to announce to them the determination of the British Government to adopt Natal as a British colony, and to place it under British laws and rule. The commissioner was received with every demonstration of aversion and hostility. But the most singular feature of the affair was, that the Boer women were thrust into the foreground upon the occasion, and proceeded at once to repudiate British connection and dominion, as

well as to exhibit a long roll of grievances before the commissioner, which they compelled him to listen to, until at length, losing all patience, he escaped by force of arms and limbs, for so it is described, and returned to Cape Town. A body of troops and artillery, 200 strong, were immediately ordered for embarkation to Port Natal, whilst by land a corps of cavalry was despatched to the borders to observe the movements of the Boers on the other side of the Orange river. These precautions, it was thought, might probably prevent any outbreak, and induce the Boers to submit peaceably at last.

CITY.

Money Market, Friday.—Consols for account closed at 95½; Reduced Three per Cents., 94½ to 95; New Three-and-Half per Cents., 102½; Exchequer Bills, 63s. to 64s., and 62s. to 63s. prem.

Metropolis and its Vicinity.

The Grand Duke Michael.—On Saturday his Imperial Highness visited Buckingham Palace and the Royal mews, after which he proceeded to the Bank of England, the Tower, and the Thames Tunnel. In the evening Baron Brunnov gave an entertainment to the Grand Duke, at which a large party of the nobility, Foreign ministers, &c. were present. On Sunday morning his Imperial Highness attended divine service at the Russian Chapel in Welbeck Street, after which he paid a visit to Sir Robert Peel, and inspected the collection of paintings in his gallery at Whitehall. In the evening the Grand Duke dined with Baron Brunnov. On Monday his Imperial Highness went to Woolwich, for the purpose of inspecting the Royal Arsenal in all its departments. After visiting the storehouses and laboratory, he visited the convict-ship and the saw-mills, and then proceeded to inspect the Royal Military Academy and the exercises of the Horse Artillery. His Imperial Highness dined and slept at Lord Bloomfield's; and on Tuesday inspected a portion of the barracks and stables, the riding-school, the hospital, the grand depot, and finally proceeded to the Marshes, where a display of artillery and rocket practice took place. His Imperial Highness quitted Woolwich about five o'clock, and visited Greenwich Hospital on his route to town. The Grand Duke's visit to Newmarket, to see the Cesarewitch Stakes run for, was postponed in consequence of other engagements. On Wednesday evening his Imperial Highness left town by the Birmingham Railway for Lancaster, from whence he will proceed by Carlisle to Glasgow. It is understood that after visiting the principal objects of interest in that city, his Imperial Highness will go to Buchanan Castle, on a visit to the Duke of Montrose, and afterwards return by Edinburgh to Newcastle and Durham, and will most probably visit en route the Duke of Northumberland at Alnwick, and the Marquess of Londonderry at Wynyard Park. His Imperial Highness, on arriving at Darlington, will proceed by railway to York to see the Minister, and afterwards go to Leeds and Hull. He will then proceed to Chatsworth on a visit to the Duke of Devonshire, and from thence to Drayton Manor, on a visit to Sir R. Peel. It is expected that he will then honour the Dowager Countess of Pembroke with his company at Wilton House, near Salisbury; and make a brief visit to the Marquess of Ailesbury, at Tottenham Park. His Imperial Highness is expected to return to Mivart's on the 27th or 28th inst. H. R. H. Prince Alexander of the Netherlands will most probably join his uncle in Scotland.

The Stoddart and Conolly Mission.—A meeting was held on Wednesday for the purpose of taking leave of the Rev. Dr. Woolf, before setting out on his intended expedition to Bokhara to ascertain the fate, or obtain the release of, Col. Stoddart and Capt. Conolly. Gen. Sir J. Bryant presided. Capt. Grover addressed the meeting at great length, after which Dr. Woolf expressed his belief that not only both the officers, but many other Englishmen, were now alive and prisoners at Bokhara, since he had received a letter from Mr. Steele, saying that his son was there in slavery, and another from Mr. Balfour, of Aberdeen, to the effect that his brother, a surgeon, was also there. It was his intention to set out next Saturday, first to Malta, then to Constantinople, and then onwards to Bokhara, having been provided by the Foreign Office with despatches for the Ambassadors and Col. Shiel. On the motion of Mr. Buckingham, the thanks of the meeting were then given to Dr. Woolf for his statement, accompanied by their wishes for the success of his mission. Dr. Burnes, brother of the late Sir Alex. Burnes, in supporting this resolution, said he believed that the total amount required for the expedition was 500*l.*, of which about 300*l.* had already been subscribed. A vote of thanks was also passed to Capt. Grover, who stated that several British officers had volunteered to accompany Dr. Woolf had it been found needful, and amongst others Col. Edward Napier. Capt. Moorsom then proposed the thanks of the meeting to the gallant Chairman, who briefly acknowledged the courtesy with an expression of regret that Government had not aided them in the promotion of the mission.

Mexican Bonds.—A meeting of the holders of Mexican stock, convened by the committee of the South American bondholders, was held on Friday to consider the best means of protecting their interests. The chair was taken by Mr. G. R. Robinson, who for fourteen years has acted as chairman of the committee. It appeared from the statements of the different speakers, that an issue of bonds in excess to the amount of nearly a million sterling had been made by Messrs. Linardi, the agents of Mexico in this country, in direct violation of an agreement with the Mexican Government, and in contravention of the decree of the 29th of July, 1839, in which it was

provided that the issue of new bonds should be limited to the amount of the old bonds and the arrears of interest; that it was not intended that the bondholders or the public should be made acquainted with the surreptitious issue, by which from 800,000*l.* to 900,000*l.* were added to the debt; and that the agents had applied a portion of the funds set apart for the payment of the dividends for the purpose of paying their own commission. It appeared also that the Mexican Minister had condemned the conduct of the agents, and had shown, by a public statement of the accounts, that there would have been sufficient, and 14,500*l.* to spare, if the creation of new bonds had been confined to the legitimate amount, after paying the October dividends in full. The meeting was very numerously attended, as the whole proceedings had attracted much attention for some time past, and resolutions were unanimously adopted, expressing dissatisfaction with the irregular conduct of the Mexican Government, and the surreptitious issue of stock. Strong disapprobation was expressed with the conduct of the London Agency, a desire made known that it should be placed in other hands, and a recommendation was finally passed that the bondholders should cut off the April and October coupons, so as to make all their bonds saleable alike in the market.

The City Election.—Numerous meetings of the friends of the two candidates, Mr. Baring and Mr. Pattison, have been held this week in different parts of the Metropolis. The proceedings and the speeches were of the usual character; and both parties express themselves confident of success. On Thursday evening a meeting to assist the election of Mr. Pattison and promote the cause of free trade generally, was held in Covent-garden Theatre, under the auspices of the Anti-Corn-Law League. The Theatre was crowded in every part, and the doors were surrounded by numbers of persons who were unable to find room. Mr. C. P. Villiers presided, and the meeting was addressed by Mr. Cobden, Mr. Bright, and Mr. W. J. Fox.

Election of Lord Mayor.—On Tuesday, a Common Hall was held to receive the official announcement of the state of the poll. The Sheriffs reported that the choice of the Livery had fallen upon Ald. Magnay and the present Lord Mayor, when the Recorder announced that the Aldermen had selected Ald. Magnay, who was forthwith invested with the insignia of office. A vote of thanks was then given to the late Sheriffs and Lord Mayor for their conduct during their year of official duty.

Launch of the Worcester Frigate.—This frigate, of 50 guns, was launched at Deptford on Tuesday, in the presence of a great concourse of spectators. Miss Hill, daughter of Sir John Hill, the superintendent of the yard, performed the ceremony of naming, and the launch took place without any accident. The Worcester has been many years on the stocks, her keel having been laid down as far back as 1819. She was launched to make room for building a new war-steamer, to be called the Terrible.

The Savoy Chapel.—This ancient chapel, the property of the Crown, and maintained by the revenues of the Duchy of Lancaster, is now undergoing a complete restoration at the expense of her Majesty. The architectural department has been intrusted to Mr. Sydney Smirke, who has restored a very beautiful altar screen, originally designed by Sir Reginald Bray, in the time of Henry VII. The old carved roof, which consists partly of emblems of the Plantagenets in succession down to the last of the Tudors, and partly of devices emblematic of our Saviour's Passion, has been renovated and emblazoned under the superintendence of Mr. Willement. In addition to these improvements, her Majesty has determined to add a new organ by Mr. Bishop. The works are all completed with the exception of a new stained window over the altar, which Mr. Willement has designed to harmonise with the architecture of the fabric. The Savoy Chapel is one of the historical buildings of the metropolis. Within its walls the Savoy Conference finally settled the Book of Common Prayer, the preface to the Liturgy was written there, and it is said that there is an old authority to show that in this chapel the Liturgy was first publicly read. Here also, in days of yore, many of the Bishops were from time to time consecrated, and among them Wilson, Bishop of Sodor and Man, by Archbishop Sharpe, in 1698. The chapel, according to Pennant, was restored and royally endowed by Henry VII., under his will, dated 1508. This endowment is still kept up, the incumbent receiving an annual fee by Royal warrant. The chapel will be reopened on the 29th inst., before which it is expected her Majesty will make an inspection of the alterations and improvements.

St. Stephen's, Walbrook.—Another stormy meeting of the parishioners and members of the select vestry of this parish took place on Friday, but without producing a more satisfactory result than the numerous preceding meetings. A long discussion ensued on the legality of the meeting, and Ald. Gibbs objected to its constitution. He said he was amenable only to the select vestry, and to them he was willing to render a statement, in order that the accounts under his controul might be passed. He was willing to stand the fiat of their decision; and, having laid the accounts before them, they might post them at Charing-cross if they thought proper. He was prepared to render an account of his trust to the select vestry, who alone had the power to pass it. All he asked was that it might be done in a legal way. He was under certain responsibilities from which that meeting could not absolve him. There were many householders present who were not vestrymen, and others who were not householders, who could have no business there. When the accounts came before the parish they would be truly astonished. He did not acknowledge the legality of that meeting, and therefore he should not produce them. He was ready to conform to the law, but it was too much for those who

were loaded with responsibility to be goaded on by those who had none, to do an illegal act. He should be glad to quit office to-morrow, and he certainly would do so at Easter next. Another long discussion here arose, without arriving at any satisfactory conclusion, and at length, as neither party would give way, or agree to an adjourned meeting, it was settled that the select vestry and the parishioners should quit the church simultaneously, without any reference to their future proceedings. Another meeting took place on Thursday, but Ald. Gibbs did not attend. A parishioner, Mr. Flight, offered to advance, without interest, the requisite sum for the repairs of the church; and after much desultory discussion the vestry adjourned to the 26th inst.

The Parks.—The police have received orders to prevent the continuance of Sunday preaching in the parks. Not one of these preachers appeared in St. James's-park on Sunday, except a person styled by himself on his cards "C. Acherley, Esq.," who was busily employed distributing puffs, printed on pink paper, of his "asthmatic lamp, or air flame magnet to breath."—According to the Police Reports in the daily papers, containing the statements of the keepers of Hyde-park, it appears there is an average number of 50 persons, of both sexes and all ages, who have no other shelter by night than what the trees and hollows in the embankments afford. The majority of them are young girls between the ages of 14 and 17, most of whom have been brought up from the country by the soldiers and abandoned. They may be found huddled together at night in the parks; and there are many men and girls whose faces are quite familiar to the park-keepers from the time they have thus existed. One poor man—a Spanish refugee—has been there for months; and, judging from his winter preparation of old matting and straw in a hollow part of one of the pits, he appears to contemplate passing many months more in the same locality. One reason why the park is so overrun with houseless persons is, that the police are taken off at 10 o'clock, and do not come on duty till 8 next morning; and also because the duties of the park-keepers are limited principally to Kensington-gardens.

Bishopsgate Ward Schools.—On Wednesday morning a distribution was made of 5*s.* each to 30 boys who produced specimens of fair writing, bestowed as an "Old School-fellow's Gift," by the Hon. John Wells, formerly a boy of the ward school, and now Speaker of the House of Assembly in the island of Grenada. The money was distributed in the presence of the clergy, the treasurer and others, in compliance with the directions of Mr. Wells, who is now 65 years of age, and after expressing his thankfulness to God for his great goodness, declares that "he feels a pride in having worn the garb of green, and the star of his profession, the lackered badge of the school, on his breast, greater than if he had ancestors of noble blood," and adds, "let the master tell the boys how by honest industry they may acquire wealth, honour, and respect."

The Murder of Mr. Westwood.—It was lately announced by the daily papers that a convict recently sentenced had given important information respecting the murder of Mr. Westwood, and that a police-inspector had been entrusted with the prosecution of the affair. The *Observer* contradicts this rumour, and states that the murderer of Westwood escaped immediately to America, leaving his children to starve in his house, which was but a door or two distant from that of his victim. It also states as an extraordinary circumstance connected with the murderer after his arrival in America, that a young man who had emigrated to that country, and to whom the murderer was personally known, hunted him out, and threatened to arrest and take him back to England, unless he immediately handed over to him half the watches and other property which were the fruits of the murder. The murderer yielded to this demand, and gave up what was required.

Fires.—The most serious fire which has occurred in London since the destruction of St. Olave's church, broke out at two o'clock on Wednesday morning, in the densely inhabited neighbourhood of St. Martin's-court, between St. Martin's-lane and Leicester-square, and has not only proved destructive in its consequences, but has been attended with the loss of three lives. It broke out on the premises of Mr. Labram, a boot and shoe-maker, at a shop called the Noah's Ark, and the alarm was no sooner given than the inmates discovered that the back and lower part of the premises were in flames, and that all escape, except by the windows or roof, was cut off. Mr. Labram and his family escaped at the windows, and by scrambling along the leads got in at the windows of the adjoining house, occupied by Mr. Batsford, comb-maker. In the upper part of the house were a Mr. and Mrs. Pollock, who, with their two children and brother-in-law, lodged on the second floor. As soon as they were made aware of their danger, Mr. Pollock and his brother-in-law got upon the roof, in order to ascertain the best means of effecting an escape with the wife and children, but in the meantime the fire had made such rapid progress that the bed-room was already enveloped in the flames, and they could not get back; although they heard the screams of the mother and her children for assistance, which it was impossible for them even to attempt without sharing the same fate. Before the engines could arrive, the houses of Mr. King, hairdresser, on the same side of the court, of Mr. Akerman, the confectioner, and of Mr. Dalton, the comb-maker, on the opposite side, had taken fire, and were burning with a rapidity which threatened the destruction of the whole court. The flames spread right across from one side to the other, forming one burning mass. It is stated that some of the persons who came to assist previously to the arrival of the firemen, injudiciously broke out the panels of the doors, and, by admitting a current of

air, caused the flames to extend through the premises with the greater rapidity. The fire had thus got such a hold upon the four houses, that when the engines arrived it was found useless to attempt anything beyond preventing the destruction of the surrounding houses. In this they succeeded, notwithstanding the closeness and crowded character of the neighbourhood. In addition to the lives already lost, it is feared that a fourth death may follow; as a little boy, the son of Mr. King, in attempting to get along the leads to the next house, rolled off upon the pavement, and is at present in Charing-cross Hospital in a dangerous state. Nothing is known as to the origin of the fire, although there is no doubt that it commenced in Mr. Labram's house. Some of the neighbours state that they observed a smell of fire as early as seven o'clock in the evening; and it is therefore probable that the fire had been smouldering for a long time before it burst out.

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, Sept. 30th, was as follows:—West Districts, 143; North Districts, 190; Central Districts, 184; East Districts, 270; South Districts, 256; Total, 1043 (males, 544; females, 499). Weekly average for the last five years, 903 (461 males, 442 females); and for the last five summers, 846.

Provincial News.

Bolton.—On Friday night an attempt was made to set fire to the cotton-mill of Messrs. Ainsworth and Crompton, in Little Bolton. It appears that the incendiaries had thrown a piece of burning cotton waste through the ventilator of one of the lower windows, where it burnt away without doing any damage. On the previous day a quantity of cotton was lying at the place where the fire was thrown; but it had fortunately been removed before the mill was closed, and thus the intention of the parties was frustrated. There have been two or three attempts of the kind within a very short period.

Carmarthen.—A special commission for the trial of the prisoners concerned in the recent outbreaks in South Wales has been forwarded from London this week. The commission nominates Baron Parke, Baron Gurney, and Mr. Justice Cresswell, as the judges. It has been considered advisable that the trials of the rioters shall take place at a distance from the principal scene of the disturbances, and it is accordingly arranged to be held at Cardiff, in Glamorganshire. The day named for the first sitting of the commission is Saturday, the 21st inst.—On Friday two men, David and James Evans, were arrested and lodged in Carmarthen gaol, for having, on the 30th Sept., broken into the house of a farmer named Thomas, assaulting and demanding 40*s.* from him. Upon his information the prisoners were arrested. Their associates were determined upon revenge; and at an early hour on Saturday morning the farm-house of Thomas, in the parish of Llanfangel, Rhos-y-Cwm, was surrounded by hundreds of persons, set fire to, and burned to the ground. The infuriated mob encircled the house with guards, so as to prevent the approach of any one to extinguish the fire. Whilst they so remained, they employed themselves in hooting and firing shots. There seems to be a general anticipation that the approaching hiving-time in November, when farm servants are changed, will lead to extensive information of the recent outrages being given. On Monday a meeting was held at Llechryd, about three miles from Cardigan, which was attended by 1200 persons, while from 800 to 1000 more were collected outside the building. An address to her Majesty was adopted, expressive of the loyalty of the people, and their determination to use their utmost power to preserve the peace in this part of her Majesty's dominions. It was also resolved that the weir which was so obnoxious to the people shall be removed. It is to be purchased from the proprietor, and early next year it was promised to the meeting by Mr. Lloyd Williams, on the part of the landholders, that all cause for complaint, as far as this grievance is concerned, should be put an end to. The result was very satisfactory, for the poor, who felt themselves injured by the weir, perceiving the inclination on the part of the gentry to gratify their wishes, insisted upon drawing home in their carriage Mr. Lloyd Williams, the chairman of the meeting, with Mr. Lloyd, the proprietor, and Mr. Gower, the lessee of the weir.

Derby.—A melancholy accident happened on Wednesday evening to Sir Henry Wilmot, Bart., who was thrown from his horse on returning from the meeting of the South Derbyshire Agricultural Association at Swarkestone, at which he had presided. The right collar-bone was fractured, and there is reason to believe that there is concussion of the brain. Sir Henry was conveyed to the King's Head, Derby, where he still remains in great danger.

Falmouth.—The 11th annual exhibition of the Royal Cornwall Polytechnic Society commenced on the 3d, and continued for three days. Sir Charles Lemon presided at the meetings, and alluded to the success which had attended the recent introduction into Tresavean mine of the man machine for the descent and ascent of miners, towards the expense of which 500*l.* were given in aid by the Polytechnic Society, which first started the idea, and gave many prizes for various plans proposed prior to the one now in operation, which will shortly be constructed in many other mines, and particularly in the deep ones. The number of visitors attending the exhibition much exceeded that of any previous year.

Frampton.—In the will of Miss Ann Wicks, late of Cheltenham, the following legacies occur:—after desiring to be buried in the chancel of Frampton church, 500*l.* for a monument to be erected to her memory; 1,000*l.* for communion plate for Frampton church; 50*l.* for a cloth for

the communion table; 500*l.* to improve the church; 500*l.* to rail in the churchyard; 100*l.* to the vicar for preaching her funeral sermon. The interest of her bank stock, which is considerable, she directs to be distributed on her birthday annually to the aged poor of Frampton. This will has been contested by the relatives of deceased; but, by a recent decision, Sir H. Jenner Fust has admitted the will and granted administration.

Ilford.—The Bishop of Exeter has addressed a letter to the *Times*, in reference to the statement ascribed to the vicar of Great Ilford, "that the Bishop of Exeter, although he does not himself practise it, sanctions the clergy in crossing themselves on approaching the communion table." The bishop contradicts this statement, adding "I do not know, nor have I heard, nor have I any reason to believe, that any one of the clergy of this diocese has adopted this practice. If any of them have adopted, or shall adopt it, he acts on his own responsibility, without the slightest right to claim any sanction from me."

Liverpool.—The annual meeting of the Liverpool Agricultural Society took place on the 5th. The exhibition was respectably attended, and the show of cattle was considered excellent in point of quality, but not quite so numerous as on former occasions. The dinner in the evening was attended by about 250 persons. Lord Stanley in the chair. After the usual toasts his Lordship proposed "Success to the Association," in a speech of great length, of which even the following is but a summary. "I will not," he said, "offer any observations on the stock exhibited, but will make a few remarks on two subjects—primary and elementary importance in the science—for science it has now become—of agriculture, and without which all other improvements are comparatively worthless. I would call your attention to the vast importance of regular, effectual, thorough draining of the soil in the first instance and as the foundation of all improvement. Now, it is quite true that agriculture is not capable of that indefinite extension by which the manufacturing industry of this country has, in its rapid progress, astonished the world; but it is equally true that agriculture is capable of vast extension and improvement. The surface of your soil indeed is limited, and the capacities of your soil are limited also, but in a much less degree than is generally supposed. I speak with perfect confidence when I say that of the great bulk of the land of this country, the immense majority is capable of returning a large amount of profit upon a very large, an enormously large, outlay of capital judiciously expended on it; and, considering the condition of this country, considering the constantly and rapidly increasing population of this country, it is not only our interest, but it is our positive duty to exert ourselves and to apply the best energies, not of our limbs and sinews alone, but of our minds and intelligence, to those means whereby the soil may be rendered more capable of supporting its increased and increasing millions. My father and myself, in the course of the last two or three years, have, for ourselves and tenants, put under ground nearer 3,000,000 than 2,500,000 tiles, which I think may be taken as a pretty fair indication of our belief in the success of the great experiment we have undertaken. And, having done this, I will add that every month that passes over my head convinces me that so far from having done enough, we have but made a beginning and effected only a very small portion of that which it is our bounden duty, but still more our abundant interest, to do. In 1841, my father was about to inclose in the park at Knowsley a tract of land about 80 statute acres in extent, 20 of which consisted of strong clay land, with a very retentive sub-soil, and the remaining 60 I have from boyhood known as the favourite resort of snipes and wild ducks, but good for nothing else. In the course of the first year the 60 acres maintained during the summer six horses and no other animal whatever, and on the 20 acres there was a crop of very poor hay. You will admit, then, that a more unpromising subject for an experiment could hardly be selected than land in this state; indeed, I may say that in the process of breaking it up we had in some places to dig the plough-horses out more than once, while there was part of it on which we never could get the plough at all. In 1841, that land was broken up and drained; the whole of it was drained, and the 20 acres of stiff soil was carefully sub-soiled. This land, which was not worth 10*s.* the statute acre when taken in hand, was in 1842 in turnips, and we fed for five months and fattened for the butcher 80 beasts and 300 sheep off that land, upon which the year before we had to dig out the plough-horses, and in addition to all this we carted from it 350 tons of turnips to the farm-yard. In the present year that land has borne a very fair, I might almost say a heavy crop of barley and oats. It is now worth 30*s.* an acre; the outlay in breaking it up, levelling old fences, and laying tiles and slate soles having been 7*l.* 10*s.* per statute acre, giving a return of 20*s.* for every 150*s.* of outlay, or a permanent interest to the landlord of 14 per cent. on the money expended in draining land of so unpromising a character. In the same year we took into our own hands a farm which had been abandoned by the tenant as being, in fact, comparatively worthless. It was distant from the other spot about 12 or 13 miles, and the soil was of a totally different character. There was a field of 22 acres, which, being of a very porous sandy soil, admitted of the drains being cut at a greater distance from each other. It was drained at an expense of 2*l.* per statute acre, and the first year we fed off half the land 180 sheep, and the turnips on the remaining half we carted to the farm-yard. The consequence has been that the land, by an outlay of 2*l.*, is increased 10*s.* per acre permanently to the landlord; and at least 10*s.* more to the tenant. Gentlemen will say these are very expensive operations, and farmers cannot conduct them. Perhaps they can-

not, unless they have confidence in their landlords, or unless they have the security of a long lease. I will go further, and say that I would much rather the tenant were not at the original expense of this outlay; because by having the whole of the improvement conducted by one hand and under one management, there is security given that the work shall be performed not with a view to the temporary but the permanent interest of the estate; and although I am quite aware that the tenant cannot afford the outlay of say 6*l.* or 7*l.* per acre in thorough-draining, yet I am quite certain if this work were done by the landlord, there is no tenant, be his lease long or short, who would not be able to pay interest on the outlay at the rate of 5 per cent. I myself know instances in which I will venture to say the result of the first year's draining has been an increase to the tenant of 10, 15, and even 20 bushels of wheat on the large acre, and only taking that at the rate of 7*s.* the bushel, I leave you to calculate for yourselves how much profit they would derive from an expenditure which in no case could exceed 15*l.* or 16*l.* on the large acre at the outset. I would also observe that the system of draining, to whatever extent it may be carried, must depend on the co-operation of a number of parties. It is of comparatively little importance to have the field well drained, if the ditches into which the drains run are not well cleaned out too, and a sufficient outfall secured for the water. And for the purpose of securing larger general outfalls, the co-operation of many landlords and many tenants is required. But I wish to impress on you that with respect to the smaller watercourses which are not less important, it is not only your mutual duty but your mutual interest, as farmers and tenants on neighbouring properties, to watch over each and all; to see that each and all perform for each and all the common duty of keeping the ditches on their own farms open. In this matter you have a common interest, you have the power of enforcing a common duty, and it is a subject not to be lost sight of by the practical working farmers of the country. This leads me to another subject on which I would say a word or two—with respect to fences and the laying out of farms. I am no advocate for the destruction of hedges or of hedge-row timber. In a country so flat and exposed as this, it is not ornament but protection that is offered by that hedge-row timber. I am also aware that the size of fields on a farm must bear some proportion to the size of the farm itself, while the size of a farm must bear some proportion to the capital of the farmer who occupies it; and with the full conviction in my own mind of the superior advantages and economy of large farms, I, for one, as a landlord, should be prepared to say that I would forego particular advantages, rather than remove from a farm an industrious tenant who, to the best of his abilities, was exerting himself to do his duty. But although I am not an advocate for clearing the country by the destruction of hedge-row timber, there are some bounds to be set to the number and still more to the direction of fences; and I am perfectly satisfied no agriculture can be successfully conducted, when the bulk of farms is divided into fields of two, three, three-quarters, and even one-quarter of an acre each. The very space that is lost by these fences, running in every direction but the straight one, constituting an enormous part of the land, and yielding no profit but doing a great deal of mischief, is no unimportant consideration. The other day I called for a practical return of the quantity of land which had been gained in 290 acres by the mere removal of fences and laying fields together; and to what do you suppose it amounted? Upon 290 acres there was an actual increase of available land to the extent of 22 statute acres, or 7 per cent. of the whole surface of the soil. But the loss of ground is not the only or the greatest evil. In this country we have a multiplicity of old rotten cops and disused marl pits, harbouring vermin—although, as a sportsman, I must also allow they harbour game, and for that reason I would not otherwise do away with them; but all these things, depend on it, most materially interfere with the due circulation of the air and exclude the sun, so that not only in the point of quantity is the crop inferior and much later in point of time, but it is absolutely impossible that it should ripen simultaneously; hence part of it is cut ripe and part unripe, and the grain when brought to market fetches a low price. I have no doubt in the world, and I believe it may be practically proved, that by thoroughly draining land you may not only increase the produce, but accelerate the period of your harvest by a fortnight or ten days at least; and those who consider how variable and uncertain our climate is, and how apt the farmer is to be caught in the midst of the harvest by cold blighting winds and bad weather, must appreciate the great advantage to him of getting in his crops in the middle of August instead of the beginning of September. There are many who can testify to this having actually occurred in their own experience. In the course of last spring the farmer of drained land could get on it ten days or a fortnight before his neighbour could put a horse on his land, at a time when the most successful farming operations should commence. I am sure you will all forgive me for troubling you with these details; there are many other topics which I should have wished to bring under your notice; but this is the main maxim I wished to impress upon you—this is no time for the farmer to remain with his hands behind his back, and going on just as his father or grandfather did before him. Fresh demands are coming upon him; all classes in this stirring age are active and competing, and it will not do for the farmers to be less active, less energetic, less intelligent, or applying less science to the cultivation of the soil, than all other classes are actually striving to apply in their various avocations of active industry. It is of great importance to the farmer that his

operations should be conducted economically. When I say economically, I do not mean without the expenditure of money, because very often a judicious expenditure of capital will in the end prove most economical; but I do mean that in his time, in his cultivation, in his labour, whether manual or horse labour, whatever it be, he ought to direct all the energies of his mind to turn the labour and capital he employs to the best and most beneficial results. I do not, for example, consider it economy for a farmer in the month of September, to be pottering for three weeks over a field, because he would rather finish the harvest at his leisure with the help of his son, instead of employing additional assistance. The probability is that such a farmer loses property largely by shedding, and certainly he exposes all to the chance of bad weather. I don't call it economical for a man to be lumbering after an old wooden plough because he won't buy an iron one, putting three or four horses and two men where a pair of horses and one man would do. If farmers think they can carry on their business in this style from one generation to another without change, they are quite mistaken, and they will soon find it out to their cost; but with a judicious expenditure of capital, which I am satisfied the soil can well repay, with the application of science, with a good understanding between landlord and tenant, I don't hesitate to say, that so far from being exhausted, the productive powers of the soil are capable of an increase which would astonish those who have not carefully examined the facts in their own immediate neighbourhoods." Several other toasts and speeches followed, but the only one which calls for especial notice was that in acknowledgment of the toast of "Liberal Landlords and Industrious Tenants." Mr. Neilson, in responding to the toast, said he held his farm under the Earl of Derby, upon whose kindness and consideration as a landlord he passed several encomiums. He strongly recommended draining, sub-soiling, and the throwing of several small fields into one. He had himself thrown no fewer than 14 fields into one, and by so doing, he had gained 10 headlands, and saved 20*s.* every time the land was ploughed. He contended that the horses were less sworn at by a sulky ploughman, and that the animals were less pulled by the bit when the fields were spacious than when they were small, and when there were many turnings to be made at the headlands. He also recommended the keeping of cattle within doors, because when fed in the house, they gave more milk and made three times the quantity of manure, which was all saved. He further recommended the use of liquid manure. He coincided with the chairman in believing that there had been a material improvement in agriculture within the last fifteen years, but so far as his observations went, he had noticed that this improvement took place on those farms upon which the landlords had come forward with a liberal hand, and he hesitated not to say that, with some exceptions, the landlords were more deserving of a great portion of that blame which had been cast upon the agricultural classes than the tenants themselves. When they looked at the condition of a farm on a tenant first entering into occupation, they beheld him labouring under many disadvantages—such, for instance, as the smallness of the fields, the immense width of ditches, the growth of hedge-row timber, the rack-rents from year to year, the want of a legalised document of possession, or a lease for five or ten years containing clauses protective of the landlord but not of the tenant, and, in many instances, totally restrictive of cultivation. Circumstances of this kind were not likely to induce the tenant to expend his money in property which was not his own, and of which his tenure was so uncertain when it depended on the will of another. But far be it from him to deprecate that noble system of confidence which had enabled estates to be handed down from generation to generation, and where a liberal patronage had been extended which afforded security, and was not easily disturbed, and of which they had so many instances on the property of a nobleman in that neighbourhood, where this liberal system had been in existence for a period of 200 years. He appealed to the many present. He contended that seven years was not a sufficient time to enable a man to repay himself for his outlay in the way of improvements without doing an injustice to the land during the latter part of his lease. The farmer should be given time. He should be given a long lease. He would fairly stretch out his hand and make extensive improvements, when he saw that he might possibly be able to transmit the benefits arising therefrom to his family. Much had been done in this respect, but much more might be done. There was a "tide in the affairs" of agriculture as in everything else. It belonged to the landlords to make the first advance, inasmuch as they were component parts of the system. They should enlarge the privileges of their tenants, exhibit an example of liberality, and not think themselves disgraced by putting their shoulders to the wheel. On the other hand, the tenant should shake off his lethargy; and in this way, if both parties did their duty, England would be as independent of other countries for the production of her food as she was for their manufactures in times of peace, or their arms in those of war."

Oxford.—The Rev. Dr. Wynter, President of St. John's College, was unanimously re-elected, on the 6th inst., Vice-Chancellor of the University for the ensuing year on the nomination of the Duke of Wellington as Chancellor. Dr. Wynter then, in a brief speech, reviewed the events of the past year, making honourable mention of the late Dean Ireland whose benefactions to the University are well known, and alluding to the deaths of the late President of Corpus and the Principal of St. Edmund Hall. In concluding his address he said, that he ab-

stained at this particular moment from touching upon any events connected with the internal government of the University, relying upon a favourable construction being put upon his acts, and requesting a continuance of the good feeling and co-operation he had experienced. The usual oaths having been administered, the following heads of houses were nominated Pro-Vice-Chancellors:—Dr. Marsham, Warden of Merton; Rev. Dr. Hawkins, Provost of Oriel; Rev. Dr. Symonds, Warden of Wadham; and the Rev. Dr. Plumptre, Master of University. The delegates of appeal in the case of *M'Mullen v. Hampden* were sworn in on Wednesday in the University Court, after which the Proctor for the Regius Professor of Divinity delivered his appeal against the decision of the Assessor, admitting the plaintiff's libel. The Court was then adjourned till the 25th inst. A vacancy has occurred in the Vinerian Professorship of Common Law by the death of the Rev. P. Williams, D.C.L., formerly Fellow of New College. Dr. Williams was elected Vinerian Professor in 1824. The appointment of his successor rests with the members of Convocation.

Rochester.—The Bishop of Rochester commenced the triennial visitation of his diocese on Monday. After alluding to the "Tracts for the Times," and expressing his disagreement with most of their doctrines, particularly those relating to the sacraments, the invocation of saints and prayers for the dead, on which points he thought the writers were in serious error, his Lordship proceeded to remark on some of the ceremonies which the writers of the Tracts and other persons in the Church were anxious to revive. In these enlightened days he could not have conceived that the adoption of the surplice during the delivery of the sermon should have occasioned so much controversy, and have engendered so much ill feeling. It had always been the custom for the preacher to wear the surplice, and in many country parish churches the same course was pursued as a matter of convenience. For some years he held a curacy in the diocese of Lincoln, and his invariable practice during the whole of that time was to wear the surplice in the pulpit in preference to the academical gown. It was an indifferent thing in itself; but, considering the temper of the times and the unsettled state of the Church, he thought it most advisable, when the congregation objected to preaching in the surplice, to pay some respect to their prejudices, and abandon the practice, so that they might not be apprehensive of any danger. He trusted that so trifling a question would never be allowed to vex and irritate the minds of congregations, much less become a badge of party distinction. The position of the reading-desk in churches had also become matter for discussion. The Rubric directed that morning and evening prayer should be said in the usual place, except differently ordered by the Ordinary. There was no rule to induce the minister to turn to the north or the south, or to any other point of the compass. The only direction given was that he should place himself in that position on which he would be most easily understood by the congregation. Turning the back to the congregation involved the Popish notion of praying for and not with the people. The form of the desk had also been disputed. He regretted that such trifling should occupy the minds of the clergy; at the same time, he was bound to state that he rejoiced in the exertion that were being made for the restoration of our ecclesiastical edifices. Psalmody was another subject on which he wished to say a few words. Various alterations had been made, and into some churches unauthorised and objectionable versions of psalms and hymns had been introduced. It was impossible for the people to join in that part of the Church service unless they had those books in their possession, and that could scarcely be expected. He would recommend that from henceforth a return should be made to the new version of the Psalms of David, as found in the Book of Common Prayer, for which the Church had made especial provision. In some places offence had been taken at the practice of bowing to the altar on entering and leaving the church. He himself had certainly never been in the habit of following this practice, still he did not see anything objectionable in it. If it proved a satisfaction to any pious mind, he would certainly not say a word to discourage it. The duty of daily service in our parish churches had been much insisted on of late. There could be little doubt that the practice was productive of much good when carried out, but in most cases it was utterly impracticable and incompatible with the discharge of the parochial duties to which every clergyman should devote a large portion of his time and attention. In large and populous towns the revival of the custom might be attended with success. On this subject he would make no request, but would leave the question as it stood in the Rubric. Strict obedience to the rule would be found impossible, and had never been insisted on. At the same time he was anxious to impress upon the clergy the necessity of a regular observance of saints' days and the other holydays of the Church. The weekly offertory and the prayer for the Church militant had provoked much discussion. He would recommend the clergy to adhere closely to the practice which had prevailed so long. The remark of the Archbishop of Canterbury in which he deprecated the use of obsolete customs, which to the ignorant might have the appearance of novelties, and occasion dissatisfaction and dissension, he fully agreed with, and was anxious to press it upon the attention of the clergy of his diocese. In conclusion, his Lordship exhorted the clergy to approve themselves faithful ministers, and there would be no necessity for superstitious observances, or for the novelties of unauthorised and self-appointed reformers of the Church.

Shepperton.—The South-West Middlesex Agricultural Society held their meeting in this place on Friday. It

was numerously attended, and no less than 68 ploughs were on the ground. Colonel Wood, M.P., presided at the dinner, after which the prizes for ploughing, haybinding, consisting of sums of money, ranging from 5*l.* to 1*l.*, and others from 2*l.* 10*s.* to 10*s.*, were distributed to the successful competitors.

Teignmouth.—The Churchwarden of the parish of West Teignmouth has addressed a letter to the Bishop of Exeter, informing him "that a large number of the parishioners of that parish are decidedly opposed to the Offertory, that such is the hostility shown to it, that a great part of the congregation have actually left the church, and that there is great cause to fear that if the observance be continued, the church will be entirely forsaken." To this the bishop has replied in a long letter, from which the following is an extract:—"The law, by which your minister is bound to regulate his ministrations, requires him to read some portion of the Offertory whenever any part of the Communion Service is read, whether the Holy Sacrament be administered or not, and he is no more at liberty to omit this portion of that service, than any other. For the same reason, I have no more right 'to command the discontinuance of the Offertory' (as you suggest) than I have to forbid the sermon."

Whitehaven.—The colliers' strike may be considered at an end; nearly all the men have returned to their work after signing a pledge not to belong to the union, and the troops sent to maintain order have returned to Carlisle.

Windsor and Eton.—On Monday, Her Majesty and Prince Albert strolled through the slopes, across the Home Park, to the new dog-kennel and aviary, and from thence through the dairy, to the new Royal gardens at Frogmore. The Queen and Prince, who were plainly attired and unattended, promenaded for nearly an hour in the gardens, the workmen being unconscious of their presence. Her Majesty and the Prince then walked through the private shrubberies, and paid a visit to the Duchess of Kent at Frogmore House, returning to the Castle through the new plantations in the Home Park. When midway between the kennel and the Castle, a heavy shower set in, the rain descending in torrents, and Her Majesty and the Prince were completely drenched.—It is stated by a Reading paper that the whole line of road, from the entrance of the Long-walk to the double gates, will shortly be railed in; and that horsemen and carriages will not be permitted, as heretofore, to travel on the turf, or between the trees.—Prince Albert's annual prize of 50*l.*, for the promotion of the study of modern languages at Eton, was adjudged on Saturday by M. Tasche and Dr. Bernays, as follows:—French and German: first prize, 35*l.* in money, to be received on leaving school, awarded to Whymper; second prize, 5*l.* in books, to Marsh. The following were selected as having greatly distinguished themselves:—Richards, Beaumont, Stratton, Dugdale, and Duckworth. German (only): prize of 5*l.* in books, Marsh; 2, Richards; 3, Whymper; 4, Dugdale; 5, Beaumont; 6, Stratton.—French (only): books to the value of 5*l.*, 1, Whymper; 2, Stratton; 3, Peel; 4, Beaumont; 5, Franks; Boileau and Sir M. S. Stewart bracketed as equal. There were twenty-two candidates for the French prizes, and eighteen for the German.

Railways.—The following are the returns for the past week:—Birmingham and Derby, 1,576*l.*; Birmingham and Gloucester, 2,205*l.*; Eastern Counties, 2,969*l.*; Edinburgh and Glasgow, 2,587*l.*; Great Western, 14,654*l.*; Grand Junction, 8,285*l.*; Glasgow, Paisley, and Ayr, 1,957*l.*; Great North of England, 1,544*l.*; Hull and Selby, 1,216*l.*; London and Birmingham, 17,705*l.*; South Western, 6,897*l.*; Blackwall, 935*l.*; Greenwich, 814*l.*; Brighton, 5,155*l.*; Croydon, 909*l.*; Liverpool and Manchester, 4,503*l.*; Manchester and Leeds, 5,535*l.*; Midland Counties, 3,070*l.*; Manchester and Birmingham, 3,532*l.*; Northern and Eastern, 1,701*l.*; North Midland, 5,071*l.*; South-Eastern and Dover, 4,829*l.*; Sheffield and Manchester, 558*l.*; and York and North Midland, 1,998*l.*—It is fully expected that the Dover Railway will be opened throughout before the end of next month. On Friday, another blast of simultaneous explosions from twenty-five batteries took place upon the Cliff, at the end of the Abbot's tunnel, two miles from Dover. Upwards of 3,600*lbs.* of gunpowder were exploded.—The movement of troops, occasioned by the Repeal agitation in Ireland, the Rebeccaite in Wales, and the Free-Church rioters in Scotland, has been beneficial to the railways. On the Grand Junction line, soldiers are carried from Birmingham to Liverpool at the rate of from 9*s.* to 10*s.* a head, so that the conveyance of a regiment of 800 men, such as the 34th, which arrived at Liverpool on Friday week, must have cost little less than 400*l.* from Birmingham, and perhaps half as much from Weedon to that place.—The *Journal des Chemins de Fer* says: "An inventor announces that he has found a composition which will reduce to a mere trifle the price of rails for railroads. He replaces the iron by a combination of Kaolin clay (that used for making pottery and china) with a certain metallic substance, which gives a body so hard as to wear out iron, without being injured by it in turn. One hundred kilogrammes of this substance would cost less than 15*f.*, and would furnish 2½ metres of rail. The Kaolin clay is abundant in France, and the Valley of the Somme contains immense quantities of it." The Paris papers also state that a trial of an immense machine for cutting railroads, named by the inventor, Mr. Cochrane, a native of the United States, "The Railway Excavator," was made a few days ago in the premises of Messrs. Varrall and Co., engine and machine-makers, in the Avenue Trudaine. A large heap of earth and stones was placed at one extremity of the yard, and the machine having been set to work by means of a steam-engine of 20-horse power forming part of it, the greater part was cut through and

the rubbish thrown aside in a few minutes. Several scientific gentlemen, who were present, expressed their surprise at the tremendous power of the machine. Mr. Cochrane stated that the heap of earth was not of a sufficiently firm nature to afford proper resistance to the cutting part of the instrument. When the opposing body was weighty and strong, the powers of the machine were, he remarked, infinitely better tested. One of these machines is now in use on the Eastern Counties Railroad.—The following is an extract from a Frankfort paper: "Some time ago, several papers stated that our townsman, Philip Wagner, had so far finished his electro-magnetic locomotive for railways, as that a perfectly successful result remained no longer doubtful. This was correct; and at present he has completed it at the workshops of the Taunus railway. Next month, as we understand from good authority, a scientific commission, appointed by the German Diet, will examine and try it, for the purpose of reporting to the Diet, whether the engine is entitled to the national premium of 100,000 florins which the Diet promised for this important invention. Persons well acquainted with Mr. Wagner entertain not the slightest doubt that he has completely solved this great problem, which has engaged the scientific world, all over Europe, for so many years."

IRELAND.

Dublin.—On the afternoon of Saturday the following proclamation was issued at Dublin by the Lord Lieutenant and Council of Ireland:—"Whereas it has been publicly announced that a meeting is to take place at or near Clontarf, on Sunday, the 8th of October inst., for the alleged purpose of petitioning Parliament for a repeal of the Legislative Union between Great Britain and Ireland: And whereas advertisements and placards have been printed and extensively circulated, calling on those persons who propose to attend the said meeting on horseback to meet and form in procession, and to march to the said meeting in military order and array: And whereas meetings of large numbers of persons have already been held in different parts of Ireland, under the like pretence, at several of which meetings language of a seditious and inflammatory nature has been addressed to the persons there assembled, calculated and intended to excite discontent and disaffection in the minds of her Majesty's subjects, and to bring into hatred and contempt the Government and constitution of the country, as by law established: And whereas at some of the said meetings such seditious and inflammatory language has been used by persons who have signified their intention of being present at, and taking part in, the said meeting so announced to be held at or near Clontarf: And whereas the said intended meeting is calculated to excite reasonable and well-grounded apprehension that the motives and objects of the persons to be assembled thereat are not the fair legal exercise of constitutional rights and privileges, but to bring into hatred and contempt the government and constitution of the United Kingdom as by law established, and to accomplish alterations in the laws and constitution of the realm by intimidation and the demonstration of physical force:—Now we, the Lord-Lieutenant, by and with the advice of her Majesty's Privy Council, being satisfied that the said intended meeting so proposed to be held at or near Clontarf, as aforesaid, can only tend to serve the ends of factious and seditious persons, and to the violation of the public peace, do hereby strictly caution and forewarn all persons whatsoever, that they do abstain from attendance at the said meeting: and we hereby give notice, that if, in defiance of this our proclamation, the said meeting shall take place, all persons attending the same shall be proceeded against according to law. And we do hereby order and enjoin all magistrates and officers entrusted with the preservation of the public peace, and others whom it may concern, to be aiding and assisting in the execution of the law in preventing the said meeting, and in the effectual dispersion and suppression of the same, and in the detection and prosecution of those who, after this notice, shall offend in the respects aforesaid. Given at the Council Chamber in Dublin, this 7th day of October, 1843.—Edward B. Sugden, C., Donoughmore, Eliot, F. Blackburne, E. Blakeney, Fred. Shaw, T. B. C. Smith."—Various collateral circumstances concurred in proving that this determination of the Irish Government had been formed after the most mature consideration, and that they had neglected no means to insure its efficiency. Lord De Grey and the Lord Chancellor arrived on Friday, having been ordered back to their posts at a few hours' notice; a sudden stop was put to Lord Cardigan's leave of absence from his regiment; the 34th Foot were embarked on Friday at Liverpool, and further reinforcements were expected from Scotland. The managing committee of the Repeal Association assembled immediately after the Lord Lieutenant's proclamation appeared. Mr. O'Connell presided, and dictated the following counter-proclamation, as it is termed in the Repeal organs. It was issued at six o'clock in the evening, in large placards, with the Irish crown and harp at the top:—"Whereas, there has appeared, under the signatures of 'E. B. Sugden, C., Donoughmore, Eliot, F. Blackburne, E. Blakeney, Fred. Shaw, T. B. C. Smith,' a paper being, or purporting to be, a proclamation, drawn up in very loose and inaccurate terms, and manifestly misrepresenting known facts; the objects of which appear to be, to prevent the public meeting intended to be held to-morrow, the 8th instant, at Clontarf, to petition Parliament for the Repeal of the baleful and destructive measure of the Legislative Union. And whereas such proclamation has not appeared until late in the afternoon of this Saturday, the 7th, so that it is utterly impossible that the knowledge of its existence could be communicated in

the usual official channels, or by the post, in time to have its contents known to the persons intending to meet at Clontarf for the purpose of petitioning, as aforesaid, whereby ill-disposed persons may have an opportunity, under cover of said proclamation, to provoke breaches of the peace, or to commit violence on persons intending to proceed peaceably and legally to the said meeting. We, therefore, the Committee of the Loyal National Repeal Association, do most earnestly request and entreat that all well-disposed persons will, immediately on receiving this intimation, repair to their own dwellings, and not place themselves in peril of any collision, or of receiving any ill treatment whatsoever. And we do further inform all such persons that, without yielding in anything to the unfounded allegations in said alleged proclamation, we deem it prudent and wise, and, above all things, humane, to declare that the said meeting is abandoned, and is not to be held. Signed, by order, Daniel O'Connell, Chairman of the Committee; T. M. Ray, Secretary. Saturday, 7th Oct., 1843, 3 o'clock, P.M." In the evening Mr. Steele left town to disperse several thousand persons who were to bivouac on Tara Hill during the night, with the intention of marching to Dublin next day to attend the meeting. Messengers were sent off by the Repeal Association, in post-chaises, to Kells, Drogheda, and other places, to prevent the attendance of the people. On Sunday morning, however, immense crowds of Repealers came flocking in, ignorant of the proclamation issued by Government on the preceding evening. Although it rained heavily, the streets in all directions were occupied by groups, anxiously reading the proclamation of Mr. O'Connell, which seemed to be more extensively placarded than that of the Government. The greatest excitement prevailed, more especially as the city was filled with troops, three war steamers having arrived during the preceding night with portions of the 34th and 87th Irish Fusiliers. The guns at the forts were ready for action, and the guards were doubled. The road to Clontarf bore all the indications of a formidable military campaign. The 11th Hussars, commanded by Lord Cardigan, the 5th Dragoon Guards, the 60th Rifles, the 5th Fusiliers, and the 54th Foot, were marching along to the place fixed for the meeting; and a park of artillery, consisting of eight field-pieces, in two divisions of four each, were driven along at a rapid pace. They were speedily followed by large bodies of constabulary, who took up their stations separately from the Queen's troops, who were stationed along the main road which runs along the sea-shore. Every species of vehicle was put in requisition by parties anxious to view the scene of operations. Thousands of equestrians and pedestrians moved towards Clontarf to see the military display, but there was no manifestation of public feeling whatever. The vast crowds appeared influenced only by a feeling of curiosity. There was neither cheering nor groaning; and the multitudes along the line conducted themselves in an orderly and peaceable manner. The troops on the ground also behaved with great good humour, and presented no obstacle to the people passing and repassing. About 4 o'clock, Mr. Steele, who had been occupied all day in inducing the people to depart from Clontarf, returned towards town, followed by a great number of cars and a considerable body of pedestrians. There was no cheering, or noise of any kind. The voice of Mr. Steele, who bore a small green branch in his hand, was alone heard, calling out quietly, but emphatically, "Home, home!" and the people, in all directions, readily obeyed the command. Shortly before six—it being then nearly dark—the various regiments and the artillery returned to town, and moved on towards their respective barracks. On Monday the Repeal Association held their weekly meeting at Calvert's Theatre, instead of the Corn Exchange, in order to accommodate the Repealers who had come over from Manchester and Liverpool. After several sympathisers from Liverpool, Manchester, and Staley-bridge had been presented in due form, several sums were handed in as "proclamation money," the parties stating that it was contributed on account of the proclamation of Saturday. Mr. O'Connell then addressed the meeting. He said he never, in the course of a long and eventful life, rose to address a public assembly with a stronger, a more awful feeling of responsibility than at the present moment. At the same time he never addressed a meeting with a more confident feeling of personal firmness. He would say at once, it was not the fault of the English Government that there was not a massacre. He did not hesitate to repeat it; and if he were to go to the scaffold to-morrow—(Voices, "No, no, no, never.")—if he were to go to the scaffold, he would not hesitate to say, that if the Government had intended to entrap the people into a massacre, they would not have acted otherwise than they did. Such folly and absurdity had pervaded their entire conduct respecting the Repeal agitation, of giving rise to that which, but for his interference, might have ended—and probably would have ended—in a massacre. He there proclaimed to all Ireland that there was but one safety—one hope—of gaining Repeal, and that consisted in the most perfect obedience to everything that had the shape or form of legal authority. They should not question whether the authority was exactly legal. He did not question the legality of the proclamation. He called upon them to obey anything in the shape of legal authority; for resistance would not be legitimate, until the form and law of authority was done away with, and the open and red hand of violence was distinctly raised. This had not happened—he was convinced it never would happen. He called upon the people to obey anything which looked like legal authority—to yield—to give way—to let the illegal authority demonstrate itself; and so long as it called itself legal, he told the people of Ireland, if they wished for safety, and above all, for Repeal,

they would obey it. Having first proclaimed that obedience should be observed, he would next declare his thorough conviction that the conduct of the Government was calculated to produce a massacre of the innocent people. He was not accusing them of any intention to do it; but he would demonstrate from facts that they had escaped the hour of that crime, and that innocent men escaped slaughter, by the accident of his having been in Dublin to explain to the people the line of conduct which they should follow. He would give dates. For nearly three weeks the Government were apprised of the meeting. It had been advertised for more than a fortnight, and they were quite apprised of it. For more than a week they were determined to take the step which they had taken. They had everything arranged, and two regiments were upon their passage, which were settled to arrive there the morning of the meeting, and were therefore determined to want them. They could want them for one purpose only; and what he complained of was, that they did not let the people know that they intended to put down the meeting, nor signify to the leaders of the people the necessity of warning them against falling into such danger. They had for ten months past promoted and countenanced similar meetings, at Mullaghmast, Connemara, Loughrea, Waterford, Tara, Donnybrook, and other places. All these meetings had taken place. They knew who had attended them; their names were ostentatiously proclaimed. Was there a proclamation, or the smallest hint given, of their illegality? Was any magistrate, any policeman, sent to caution them? In fact, with the most perfect knowledge of Government these meetings took place. The meeting at Clontarf was peculiarly circumstanced. If there were any meeting which had a superior distinctness and legality about it than another, it was that meeting. The others were called by a requisition of laymen and clergymen, the laymen being more numerous; but the requisition for the Clontarf meeting was not signed by any man but a Roman Catholic clergyman, so that it was marked, as it were, with tranquillity. The Government were in Dublin upon Friday. It was the day upon which the *Gazette* should appear, and was the legitimate day for a proclamation. He would, therefore, ask the British Ministry how, in the name of common sense, they could account for passing by Friday? If they had issued the proclamation upon that day, they would have sent down to the different localities, and told the people to obey it; but they did not do it until Saturday, at so late an hour, that the people had only a few hours of light to enable them to read it. The proceedings of the Repeal Association should still go on; and if it were proclaimed down, he would be the first person to go to the association; but he would not oppose the law. He would obey even the semblance of authority. He then declared his intention of having simultaneous meetings throughout Ireland after prayers on a Sunday (the day he would not yet select), to petition against the insult and assault upon national rights which had taken place. He would see whether the Government would suppress those meetings, as they had done the "monster meeting." He concluded by again calling upon the people to be tranquil, orderly, submissive, and peaceful. A resolution, expressive of the determination of the people, proposed by Mr. O'Connell, and seconded by Captain Seaver, was carried. Mr. M. O'Callaghan proposed a vote of confidence in Daniel O'Connell, which was carried by acclamation. Mr. O'Connell then announced the week's rent at 1,105*l.* 3*s.* 1*d.* On Monday evening the Repeal dinner, which was to have followed the meeting at Clontarf, took place in the Rotunda, all the rooms in that vast building, the most spacious for public accommodation in this city, being devoted to the entertainment. The doors were opened at five o'clock, when the rush was tremendous. All the tickets were disposed of early in the day, upwards of 2000 having been issued. The papers of both parties agree that nothing like it, as a popular demonstration, had taken place in Dublin before the issuing of the government proclamation. Hundreds were obliged to stand, and the heat was extreme. Mr. O'Connell presided, dressed in the robes of Lord Mayor. The first toasts proposed were the Queen and Royal family. The next was—"The people the source of legitimate power." Mr. O'Connell then proposed—"Repeal of the Union." He said that Ireland would never compromise—that she would never accept of an instalment of the Repeal—that justice could be obtained from a local legislature alone. In reference to the recent conduct of the Irish administration, he observed that some people in England, looking to their acts, would say that he had bribed them; but even if he had, they had not vicious ingenuity enough to serve him half so well as they had done. Then it was said that in case the union was repealed, the Catholics would take ascendancy; but that supposition was absurd and futile. The Catholics had been three times in power, and they, unlike their Protestant brethren, refused to persecute at all. Let them produce one instance of persecution on the part of the Catholics, and he would give up the cause of Ireland; and they might readily know that he would not make such an offer, unless he knew it was impossible to meet it. It was said that if the union was repealed the House of Lords would be Catholic. That was ridiculous; for twenty to one would be Protestant, and they would have, besides, Protestant England and Scotland at their back, and then they would have an equal share in the selection of the House of Commons. He had entered too much on the subject for an after-dinner speech, but his mind was filled with Repeal. He did not want the Repeal without the assent of a large portion of his Protestant fellow-countrymen. He was working for them as well as for the Catholics. He would have no distinction. Liberty to all was what he required, and that was what was meant by the

Repeal of the Union." Mr. O'Connell, in proposing the next toast, which was the last upon the list, took occasion to exhort his hearers upon the necessity of maintaining a peaceable demeanour, and yielding implicit obedience to the laws, at a crisis so vital to the country as the present. He implored of them to show their devotion to the cause of their country by acting towards their antagonists in a spirit of forbearance and good feeling. More important considerations were at stake in the present contest than even in the struggle for emancipation. They would forego all excitement, and should approach the consideration of the great national question of Ireland with calm and dispassionate minds. Simultaneous meetings would, he trusted, be held all over the country, for the purpose of entreating her Majesty to dismiss from office the men to whom the executive powers were now entrusted. Six or seven millions of signatures should be procured to petitions begging that Lord de Grey might be sent to mind his oxen—that Lord Eliot might be permitted to go where he liked for his own diversion—that Mr. Lucas should get directions to proceed to Monaghan—that Brewster, Smith, and the rest of them, should be sent to mind their own business, and not to meddle with theirs, and that the people of Ireland should be sent to College-green to make laws for themselves. Meantime his motto was "Peace, order, tranquillity, and resolution." The company gave three cheers for "The Queen and Old Ireland," and three for Mr. O'Connell; after which they quietly dispersed.—The Association met again on Thursday; and was the least numerously attended meeting of any that has taken place since the commencement of the Agitation. Mr. O'Connell said that his object was to remove, as much as possible, irritation from the public mind. When that should be effected, he would have simultaneous meetings in every parish in Ireland, to petition the Queen for the dismissal of ministers. He entreated the people to submit to everything which has even the semblance of legal authority. If they would only continue peaceable, he was certain of obtaining the Repeal of the Union. He said he had heard a report that the issuing of the proclamation was not the act of the Cabinet, but a thing determined on by Wellington, Sugden, and Lord de Grey, who met together on Tuesday or Wednesday last, and remained in consultation for four hours. It was intended to take the people of Ireland by surprise, and to attack them when they were unarmed. He might be blamed for shrinking, but his courage consisted in keeping others out of danger; he was careless what might occur to himself. He concluded by moving—That an address to the Irish people be prepared, calling upon them to persevere in their exertions for repeal, but without violence, force, or tumult of any kind, and without resistance to any legal authority.

Waterford.—The first provincial demonstration in reference to the Government proclamation took place in this city on Sunday, within a few hours after the manifesto had been received. The Rev. Mr. D'Arcy presided, and resolutions were adopted expressive of unbounded confidence in Mr. O'Connell, and a readiness to follow the course prescribed by him at the present crisis. The corporation met on the next day, the mayor in the chair, and adopted resolutions "solemnly protesting against any infraction of their legal rights to meet to petition Parliament, upon the assumption that the public peace would be disturbed,—an assumption disproved by the experience of similar meetings, and by the alacrity with which the meeting to have been holden at Clontarf was abandoned; and declaring their deliberate intention to continue their support to Mr. O'Connell in the same constitutional course which has characterised the Repeal movement under his guidance."

SCOTLAND.

Cromarty.—The Ross-shire papers state that the riot at Resolis has been followed by the rescue of the female prisoner, who was lodged in the gaol of Cromarty on Thursday week. Although the prison was surrounded till nearly daybreak by a mob, no attempt at rescue was then made. On the following night, however, some hundreds of men and women made their appearance in the town, armed with stones and bludgeons, with which they commenced an attack on the gaol, and eventually succeeded in battering down the door, and in liberating the woman, who was carried off amidst yells and hurraing. The previous outrages in Rosskeen, Logie, and Resolis, on the adherents and ministers of the Church, have alarmed the authorities; and, accordingly, the Sheriff has applied for military aid to the Lord Advocate. This application has been promptly replied to, and a detachment of the 87th Irish Fusiliers, consisting of 150 men, arrived at Invergordon, from Leith, on Wednesday. The Lord Lieutenant and Sheriff went to Invergordon on Tuesday week, to arrange measures for the prevention of further riots, the establishment of the deposed ministers in their parishes, and the apprehension of the offenders.

Stirling.—On Wednesday, Allan Mair, an old man in his 84th year, convicted at the last Stirling Circuit before Lord Moncrieff of the wilful murder of his wife, by beating her to death with some heavy substance, was executed in front of the Court-house. The execution was attended by circumstances which have produced a painful sensation through the whole of this part of Scotland. The old man protested his innocence to the last, and died uttering horrible imprecations on the witnesses at the trial.

Inverness.—The annual gathering at Inverness commenced on Wednesday week. Prince Alexander of the Netherlands accompanied the Duke and Duchess of Richmond from Gordon Castle, and was induced to prolong his sojourn in the Highlands, in order to be present on this occasion, as he was so much gratified with the Braemar

gathering when staying with the Duke of Leeds, at Mar Lodge. The attendance of the aristocracy connected with Scotland exceeded the meeting last year; and at the dinner, on Thursday, above 80 noblemen and gentlemen were present. On Wednesday and Thursday the competition for prizes for the athletic sports peculiar to the North took place, viz., throwing the hammer, jumping a height and distance, tossing the cabbar, putting the stone, foot racing, dancing, and playing on the bagpipes, pibrochs, strathspeys, &c., for which the contention was most spirited. There was a rifle sweepstakes, in which Prince Alexander, Baron Sleet, the Marquess of Douro, Lord Lovat, Mr. Russell, Mr. Cluny Macpherson, Captain Ross, Lord Gifford, and Mr. Grant entered. The contest was regulated at four shots each, at a distance of 100 yards. Baron Sleet, Aide-de-Camp to the Prince, was the successful competitor, the shooting being as follows:—His Royal Highness, four shots, 11½ inches; Baron Sleet, 10½; and Mr. Russell, 11; so that the stakes were gained by only ¾.

Law.

Law of Landlord and Tenant.—The history of a case (*Smith v. Marrable*), which was decided last Hilary Term, affords an example of the law in regard to the use and occupation of houses, which it may be useful to record in a connected form. It was an action for use and occupation to recover the balance of five weeks' rental of a furnished house. The defendant pleaded the general issue. At the trial before Lord Abinger, an agreement in writing was proved as follows:—"Brighton, September 14th, 1842. Mr John Smith, of No 24, St James's-street, agrees to let, and Sir Thomas Marrable agrees to take the house, No 5, Brunswick-place, at the rate of eight guineas per week, for five or six weeks, at the option of the said Sir Thomas Marrable. Signed Thomas Marrable, John Smith. The rent to commence on the 15th of September. T. M., J. S." Defendant entered on the occupation of the house under this agreement on Friday, Sept. 16, 1842, and on the following day defendant's wife informed plaintiff that the house was infested with bugs, and a person was sent by plaintiff to try and get rid of them, but Lady Marrable not finding the means used for that purpose successful, wrote to the plaintiff's wife as follows:—"No. 5, Brunswick-place, September 19, 1842. Lady Marrable informs Mrs Smith, that it is her determination to leave the house in Brunswick-place as soon as she can take another, paying a week's rent, as all the bedrooms occupied but one are so infested with bugs, that it is quite impossible to remain." On the completion of the week, defendant sent the key to plaintiff and removed into another house. The judge told the jury that in point of law the house must be taken to have been let on the implied condition that it was fit for habitation, and that if they thought defendant had left the house on account of the nuisance being so intolerable as to make it uncomfortable to live in it any longer, they ought to find for defendant; but if they were of opinion he had left merely because he preferred another residence, and made the bugs an excuse for leaving plaintiff's house, then they ought to find a verdict for plaintiff. The jury found for defendant. In Hilary Term, Mr. Hayward moved for a new trial on the ground of misdirection, and of the improper reception of evidence. The second ground was supported by technical argument only. The first amounted to this:—the nuisance complained of by defendant is no defence to the action, which was founded on a written agreement, and if it really existed should have been made the subject of a cross action. Mr. Baron Parke, in giving judgment, said:—"The first question is whether, in point of law, every person who lets a house must be taken to have done so under an implied condition that it is in a habitable state. Now there is a case of *Edwards v. Etherington, Ry. & Moo.*, 258, which is very nearly in point. That was an action of assumpsit for use and occupation, against a tenant from year to year, who had quitted without notice; and the defence was, that the premises were, by reason of their dilapidated state, useless to defendant, and unfit to reside in. Lord Tenenden held that to be a good defence, and told the jury that "Slight circumstances would not suffice, but that such serious reasons might exist as would justify a tenant in quitting at any time, and that it was for them to say whether in that case any such did exist." A new trial was afterwards moved for, on the ground of misdirection; and the Court of Queen's Bench refused to disturb the verdict. There is also a case of *Collins v. Barrow, 1 Moo. & Rob.*, 112, in which a party who had taken a house under a written agreement, by which he was to occupy it for three years, had quitted at the expiration of six months without any notice, and the landlord had brought an action for use and occupation, to recover the rent accruing after that time. The defence was, the house was unfit for occupation on account of insufficient drainage; and Mr. Baron Bayley said, "I do not see that the fact of the tenancy in this case being under a written agreement is material. In any case the tenant is bound to pay rent during the time for which he has contracted, unless he satisfies the jury that, under the circumstances, he was justified in quitting. I think, however, that in point of law he will be free from his obligation to reside on the premises, if he makes out, to the satisfaction of the jury, that the premises were noxious and unwholesome to reside in, and that this state arose from no default of his own." These cases quite warrant the position, that a tenant may immediately relinquish his tenancy of a house which is incumbered with a nuisance of so serious a nature as to make it uncomfortable and unfit to live in. There was no contract in this case on plaintiff's part, that the house was free from the nuisance; the contract was by defendant, that he would take the house of plaintiff at a certain rent, and then the law attaches a condition that the house shall be in such a fit state as for the description of house might be reasonably expected. In this view the other judges concurred, Lord Abinger saying:—"I am glad that authorities have been found to support this defence, though, for my own part, I think the case one which common sense alone should enable us to decide. A man who lets a ready-furnished house, does so on implied condition or obligation, that it is in a fit state for occupation. Suppose the defendant had discovered the fact, that previous tenants had quitted the house in consequence of a person having recently died there of the plague, would not the law have justified him in leaving as soon as he discovered the fact? I entertain no doubt on the subject; and in this case I only wonder that defendant remained so long, and gave the landlord so much opportunity of trying to remove the nuisance." The Court was against Mr. Hayward on the second ground also, and the rule, therefore, was refused. This judgment applies to an unfurnished as well as to a furnished house.

SPORTING.

NEWMARKET SECOND OCTOBER MEETING.—**MONDAY.**—*Handicap Sweepstakes* of 20 sovs each, for three yr-olds, &c. T.Y.C. 4 subs. Mr Watt's Pine Apple, 3 yrs, 7st 13lbs, beat Lord Exeter's Franklin, 3 yrs, 7st 4lbs, and Mr Phillimore's Syntaxina, 5 yrs, 8st 7lbs. 50l. for three-year-olds, 7st 7lbs; four years, 8st 7lbs; five years, six and aged, 8st 12lbs. A.F. Mr John Day's St. Lawrence, 6 yrs, beat Lord Verulam's Robert de Gorham, 4 yrs; Colonel Peel's Garry Owen, 6 yrs; Mr Pettit's St. Francis, aged; Mr F. Clarke's Priscilla Tomboy, 4 yrs; and Mr Chaplin's Parade, 4 yrs. *Sweepstakes* of 10 sovs each, for two-yr-olds, 6st 7lbs; three, 8st 4lbs; four, 8st 12lbs; five, &c., 9st 2lbs. T.Y.C. Winner to be sold for 200, &c. 7 subs. Lord G. Bentinck's Prince of Wales, 2 yrs, beat Mr Watson's f by Achmet, out of Mismomer, 2 yrs; Colonel Peel's Cameleon, 5 yrs; and 3 others who were not placed. *Fifty pounds*, for two yr-olds; colts, 8st 7lbs; and fillies, 8st 5lbs. T.Y.C. Mr Goodman's Running Rein beat by 3 lengths the Duke of Rutland's Crenoline, Lord

Verulam's f by Liverpool, out of Crocard, and 8 others who were not placed; but the Duke of Rutland claimed the race, on the ground that the winner was three years old, and not entitled to run for a two-year-old plate. After the race, Running Rein was backed for the Derby at 1,000 to 25. *Sweepstakes* of 100 sovs each, h ft, 8st 7lbs, each D.M. (3 subs.) Sir R. Bulkeley's Bishop of Romford's colt, beat Duke of Rutland's Minotaur cleverly by a length. *Matches.*—Lord Stradbroke's Jeremy Diddler, 8st 8lbs, beat by a neck Sir R. W. MARK LANE, FRIDAY, OCTOBER 13.—The arrivals of all descriptions of Corn have been small during the week, and the few samples of Wheat fresh up for this morning's market realise the prices of Monday last: the demand for Foreign is limited, and its value unaltered. Barley, Peas, and Beans, are taken off freely at our late quotations. There is an improved inquiry for new Oats, and old must be noted as dearer.

BRITISH, PER IMPERIAL QUARTER.			
Wheat, Essex, Kent, and Suffolk	White	44 to 55	Red 44 to 51
Norfolk, Lincolnshire, and Yorkshire	White	47 to 52	White 47 to 52

SMOKE PREVENTED AND VENTILATION EFFECTED, BY SPONTANEOUS ACTION.

MR. JEAKES, 51, Great Russell-street, Russell-square, Sole Agent in London for the Sale of DAY'S PATENT WIND-GUARD, by the use of which he guarantees to Cure all Chimneys Smoking from Wind, and also to prevent downward currents; it is admirably adapted for the Ventilation of Apartments of every description; also of Ships, Stables, Dairies, and Larders, as it ensures a constant change of air; and all its parts being fixtures, it is free from noise and not liable to derangement; it also offers no impediment to sweeping. Price for general use, 30s.; larger size, 45s.; larger sizes, especially adapted for ventilation, 60s. and upwards. To be had at 51, Great Russell-street, where it may be seen in action. The attention of Architects, Builders, and the trade in general, is especially invited.

ROWLAND'S ODONTO, or PEARL DENTIFRICE.

A Vegetable White Powder, prepared from Oriental Herbs of the most Delicacious Odour and Sweetness, and free from any mineral or pernicious ingredient—it eradicates Tartar from the Teeth, removes decayed spots, preserves the Enamel, and fixes the Teeth firmly in their sockets, rendering them beautifully white. Being an anti-scurbutic, it eradicates Scurvy from the Gums; strengthens, braces, and renders them of a healthy red; it removes unpleasant tastes from the mouth, which often remain after fevers, taking medicine, &c., and imparts a delightful fragrance to the breath.—Price 2s. 9d. per box, duty included.

ROWLAND'S ALSANA EXTRACT immediately relieves the most violent Toothache, Gum-boils, Swelled Face, &c.; it is also an excellent Stomachic, in cases of Flatulency, Spasmodic Affections, &c., and gives instantaneous relief.—Price 2s. 9d., 4s. 6d., and 10s. 6d. per bottle.

NOTICE.—A. ROWLAND & SON, 20, HATTON-GARDEN, LONDON, is engraved on the Government Stamp, which is pasted on each article; also printed, in red, on the wrapper of the latter. Sold by them, and by Chemists and Perfumers.

TO GARDENERS, FLORISTS, AND OTHERS.

THE ADVERTISER having a large quantity of Box now in good order for transplanting, wishes to meet with the above persons who have the following plants to exchange with him:—viz., Roses, Pinks, Picotees, Carnations, Auriculas, and Geraniums. Should this meet the eye of any person wishing for further particulars, apply to F. F., at Mr. Street's, Bookseller, 11, Serle-street, Lincoln's Inn Fields.

TO NURSERYMEN, GENTLEMEN'S GARDENERS, &c.

THE ADVERTISER wishes to meet with a competent Person to join him as Partner in taking one of the oldest established Nursery and Seed Establishments in the vicinity of London. The present is a most eligible opportunity for any person desirous of entering the Trade. Further information given by addressing a line to A. F., care of Messrs. PROTHROCK and MORRIS, Leytonstone.

A VACANCY has occurred in a London Seed-house for an active respectable young man of good address, and well acquainted with the business, who will be required to travel. Applications to be addressed to A. B. C., 48, Coleman-street, City.

WANT PLACES.—All Letters to be post-paid.

AS HEAD-GARDENER.—A Gentleman who is about to part with his Gardener, would recommend him to any nobleman or gentleman requiring the services of an Active Steady married Man, aged 36, who has served in first-rate establishments, and has had good practical experience in every branch of his profession.—Direct to A. B., Mr. Wood's, Hyde, Middlesex.

AS GARDENER.—A middle-aged married Man, without family, who understands his business and the care of land, and whose character will bear the strictest inquiry.—Direct to T. W., Post-office, care of Mr. Lloyd, No. 1, Dorcas Terrace, Hammersmith.

AS GARDENER.—A single Man, 34 years of age, who has an excellent knowledge of the business in all its branches, having been under the tuition of Gardeners in large establishments in Cheshire and Lancashire. Can have 4 years' character from the gentleman he last served.—Address G. O., care of Mr. J. HAMILTON, Gardener, Thornfield, near Stockport.

AS GARDENER.—In a single or double-handed place, a married Man, aged 38, who has a thorough knowledge of practical Gardening; could take the management of a small Farm, with Stock and Poultry; his Wife is capable of managing a Dairy. Has just left a Situation filled by him 17 years, owing to his late employer leaving for the Continent. Can have a good sound recommendation for ability and integrity. Apply to GEORGE ADAMS, Send by Ripley, Surrey.

AS GARDENER.—A married Man, aged 30, who has been brought up to the profession from childhood, and who perfectly understands the whole routine of Forcing, Kitchen and Flower Garden, with the management of Woods, Plantations, and the Nursery. In regard to character for sobriety, integrity, and industry, every satisfaction will be given.—Direct to A. B., care of Mr. H. WATSON, Gardener, Alnwick.

AS GARDENER.—A married Man, aged 29, who has had great experience in Forcing, in all its branches, and Horticultural productions; with the management of Kitchen and Flower-Garden, Forcing of Flowers, &c. The highest testimonials can be obtained respecting character and abilities from his former employers.—Address, S. J., Post-office, Bedale, York.

AS GARDENER and FORESTER.—A middle-aged single Man, who has had considerable experience in every branch of his profession. Would not object to superintend any Farming department, if upon a moderate scale.—Direct to J. P. C., Olive Mount, Wavertree, Liverpool.

Printed by Messrs. BRADSHAW and EVANS, Lombard-street, Fleet-street, in the Precinct of Whitefriars, in the City of London, and Published by them at the Office, 3, CHARLES-STREET, COVENT-GARDEN, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, October 15, 1849.

SG. Large Silver Gilt Do.	4 0 0
GB. Gold Banksian Do.	7 0 0
GK. Gold Knightian Do.	10 0 0
LG. Large Gold Do.	20 0 0

Exhibitors to whom any of these shall be awarded, can exchange them one for another, or may receive their value in money, or in plate. In case an Exhibitor shall receive a First Prize in any one Letter, he shall not be entitled to receive any other Medal in the same Letter, except in CC, DD, and EE.

CLASS I.—FLOWERS; for which Nurserymen and Private Growers exhibit independently of each other.

A. Pelargoniums, in collections of 12 new and first-rate varieties, cultivated with superior skill, in pots of 24 to a cast. GB—SG—LS—SK.

B. Pelargoniums, in collections of 12 varieties, in pots of 12 to a cast. SG—LS—SK.

N.B. Persons exhibiting in B cannot also exhibit in C.

C. Pelargoniums, in collections of 6 varieties, in pots of 8 to a cast. LS—SB.

D. Rhododendrons, in pots; not fewer than 6 plants in 6 varieties. LS—SK—SB.

E. Roses, in pots; Amateurs to show in collections of 12, Nurserymen in collections of 25, distinct varieties. GB—SG—LS.

N.B. It is the wish of the Society in a future season, to require Roses to be shown exclusively in pots; and not to allow cut specimens to be exhibited at all.

F. Moss Roses in loose bunches, so as to exhibit, as far as possible, the habit of the variety; in 12 varieties. SK—SB—C.

G. Other Roses, exhibited as in the last letter, and in 50 varieties. LS—SK—SB—C.

N.B. No one who exhibits in this letter can also compete for the following.

H. Other Roses, exhibited as in the letter F, and in 25 varieties, SK—SB—C.

N.B. Higher medals than those here offered for Roses cannot be given by the Judges. And if Roses are brought for exhibition without attention to the regulations here explained, they will not be allowed to be placed on the tables.

I. Cape Heaths, in collections of 20 distinct varieties. GB—SG—LS.

N.B. It is expected that the same plant shall not be exhibited on more than one occasion.

K. Cape Heaths, in collections of 6 distinct varieties. SG—LS—SK.

N.B. No person who shows in I will be allowed to exhibit also in K.

L. Calceolarias, in sizes; in pots of 12 to the cast. LS—SK—SB.

M. Carnations, in pans of 24 distinct varieties. LS—SK—SB.

N. Picotees, in pans of 24 distinct varieties. LS—SK—SB.

O. Pinks, in pans of 24 distinct varieties. SK—SB.

CLASS II.—FLOWERS; for which all persons are admitted to equal competition.

P. Stove or Greenhouse Plants, in collections of 30 plants. GK—GB—SG—LS.

N.B. Heaths, Calceolarias, Fuchsias, Greenhouse Azaleas, Rhododendrons, Orchidaceae, Cacti, and Pelargoniums, to be excluded from P, Q, and R.

Q. Stove or Greenhouse plants, in collections of 15 plants. GB—SG—LS.

N.B. Persons exhibiting in P not to compete in Q also.

R. Stove or Greenhouse plants, in collections of 6 distinct species, SG—LS—SK.

N.B. Persons exhibiting in P or Q will not be allowed to compete in R also.

S. Greenhouse Azaleas, in 12 distinct varieties. GB—SG—LS.

T. Greenhouse Azaleas, in 6 distinct varieties. SG—LS.

N.B. No one can show in both classes of Azaleas.

U. Stove or Greenhouse climbers, in collections of 6 species. SG—SK.

V. Exotic Orchidaceae, in collections of not fewer than 20 species. LG—GK—GB.

N.B. Exhibitors cannot show in more than one of the classes, V, W, and X.

W. Exotic Orchidaceae, in collections of not fewer than 6 species. GK—GB—SG.

X. Exotic Orchidaceae in single specimens. SG—LS—SK.

Y. Plants in glass cases, grown on Mr. Ward's plan. SG—LS—SK.

N.B. It is highly desirable that these cases be made with a movable door, so as to prevent the condensation of the water on the inner face of the glass during the time of exhibition.

Z. Distinct varieties of Tall Cacti in flower. GB—SG—LS.

N.B. The GB and SG Medals are not to be given if fewer than six varieties are exhibited.

AA. Fuchsias in collections of 12 distinct varieties. LS—SK.

BB. Cinerarias, in pots, in collections of 12 distinct varieties. SK—SB.

CC. Single Specimens of new or extremely rare ornamental plants. SG—LS—SK—SB—C.

N.B. These Medals will be awarded by the Society's Officers, and not by the usual Judges. Exhibitors will particularly observe that none but new or rare plants can be exhibited under this letter. Nothing will be regarded as new which has been exhibited in the Gardens in a previous season.

DD. Miscellaneous subjects. SK—SB—C.

N.B. Cockscorns, Heartsease, Hydrangeas, and cut flowers, are altogether excluded from exhibition. Exhibitors under this head will not be thereby entitled to a pass ticket.

EE. Seedling Florist's flowers. SK—SB—C.

N.B. Every seedling must be shown singly, and must be marked with the name it is to bear. The same seedling cannot gain a prize more than once in the season. Pelargoniums are to be shown in pots, and not in a cut state. No person will be allowed to exhibit more than five seedlings at each meeting. Exhibitors under this head will not be thereby entitled to a pass ticket.

IN ADDITION to any medals assigned to the classes I, P, Q, and W, the SK and SB medals are offered for the two collections in those classes which shall be best named by the Exhibitor.

N.B. The Society's officers, who will make this award, will be guided in their judgment by a consideration not only of the correctness of the names, but of the accuracy of the spelling, and the neatness of the writing.

CLASS III.—FRUIT; for which Market Gardeners, Fruiterers, or persons in the habit of regularly supply-

ing the market, and private growers, exhibit independently of each other.

N.B. All fruit must be FULLY ripe and WELL-COLOURED; if the contrary it will be disqualified.

FF. Miscellaneous collections of fruit, consisting of at least three different kinds, Peaches and Nectarines being considered as only one kind. GK—GB—LS.

N.B. Cucumbers, Gourds, and similar Kitchen Garden produce, are excluded from this letter.

GG. Grapes. SG—LS—SK—SB.

HH. Pine-Apples. SG—LS—SK—SB.

II. Peaches or Nectarines, in dishes of six specimens. SK—SB.

KK. Other kinds of fruit. SK—SB—C.

JUDGES.—The Judges have the power of increasing or diminishing the number and value of the Silver Medals offered by the Society for particular objects, and also of conferring Silver Medals or Certificates in cases not contemplated in these regulations, if they think it necessary to do so.

The Judges are also required to bear in mind that the Society's Medals are offered less for new and curious objects, than for fine specimens of Horticultural skill, the design of the Council in instituting these meetings being not so much to encourage the collector as to reward the skilful Gardener; they are also not to make any award in cases where the objects exhibited do not appear worthy of a Medal; otherwise a bad single exhibition might obtain a prize, merely because there is no better exhibition of the same class to oppose it.

Copies of the above list may be obtained at 21, Regent-street, upon application to the Secretary.

FIRE-BALL GERANIUMS.

W. MILLER offers this new sort of SCARLET

GERANIUM for sale, with a satisfaction that its beautiful dark velvety flowers, dwarf habit, and glossy, smooth, green foliage, will make it a good addition to every Greenhouse and flower-garden, and please every purchaser. It was taken to the June Show at Chiswick, and much admired. Plants will shortly be ready to send out, at 5s. each, post free. The usual trade allowance when three or more are taken.—Providence Nursery, Ramsgate, October, 19, 1843.

FINE CAPE ERICAS (HEATHS), EPACRISSES, &c.

J. AND J. FAIRBURN beg leave most respectfully to solicit the attention of Gentlemen desirous of forming new, or of extending their present Collections of these much-admired tribes of Plants to their Stock, which are in the finest health and vigour possible, and from its extent they are enabled to offer any quantity upon the following advantageous terms:—

	£ s. d.
100 fine flowering plants, including 80 Ericas and 20 Epacrissees, of the best and most esteemed kinds	7 0 0
75 do. do. including 60 Ericas and 15 Epacrissees	6 0 0
50 do. do. " 40 Ericas and 10 Epacrissees	5 0 0
25 do. do. " 20 Ericas and 5 Epacrissees	3 0 0
12 do. do. " Choice Ericas	2 2 0

J. and J. F. take leave to acquaint Cultivators of Fuchsias and Verbenas that their collections contain the best and most esteemed varieties. All orders they may be favoured with packed with the greatest care, and delivered free in London.

P.S.—A remittance or reference required from unknown correspondents.—Nurseries, Clapham, near London, Oct. 20, 1843.

ROSES.

H. LANE AND SON beg to announce that their

CATALOGUE OF ROSES for 1843-44 is just published, and will be forwarded as usual, free, to all their former patrons, and to others on application, inclosing a 2d. postage stamp to the Nurseries, Great Berkhamstead, Herts; also at Mrs. JOHNSTONE'S, Covent-garden Market, and at Mr. NUTTING'S, 46, Cheapside, London.

H. LANE AND SON flatter themselves they need not assure those Ladies and Gentlemen who have heretofore favoured them with their orders that the utmost reliance may be placed in having their future commands executed in the best possible manner and on the most liberal terms; at the same time they would take this opportunity of assuring those who may for the first time entrust them with their commands that the same principles which have hitherto been their guide will in no instance be deviated from.

H. L. AND SON would further beg to observe that they have many thousands of ROSES in pots exclusively for Greenhouse culture and early forcing, and that their general stock of Roses, in point of extent and growth, is second to none in the kingdom.

Great Berkhamstead, Herts, Oct. 20, 1843.

HYACINTHS AND OTHER BULBS.

HUMPHREYS' COMPOUND, applicable to all Greenhouse Plants, to Hyacinths and other Bulbs, and to promote the germination of Seeds. Sold in bottles 1s. 9d. each, by FLANAGAN & SON, Mansion-house-street; HURST & McMULLEN, Leadenhall-street; W. CLARK, Bishopsgate-Within; GORDON, THOMPSON, and BASKETT, Fenchurch-street; GRIMLEY and Co., Covent Garden; BATT and RUTLEY, 412, Strand; CHARLWOOD, Tavistock-row; W. J. NUTTING, 46, Cheapside; G. LAWRENCE, 18, Piccadilly; JOHN KERNAN, Great Russell-street, Covent Garden; LOCKHART, 156, Cheapside; SHUTTLEWORTH, Pantheon; MINIER, ADAMS, and NASH, 63, Strand; THATCHER and SON, Islington; THOMAS WATKINSON, Market-place, Manchester; and other leading SEEDSMEN in town and country. Wholesale Agents, DAVY, MACKMURDO, and Co., 100, Upper-Thames-street, London.

CHOICE PANSIES.

Metcalfe's Dr. Horner and Miss Chaplin, 10s. 6d. each; Forsyth's Hamlet, 3s. 6d.; Ellitson's Wanderer & Miss Carvill, 3s. 6d. each.

JOHN FORSYTH begs to observe that there will be no disappointment to those who grow the above Pansies, as they have been pronounced first-rate kinds by several of the most eminent Judges in the kingdom. "Dr. Horner" and "Miss Chaplin" were purchased of Mr. Metcalfe, gardener to — Chaplin, Esq., Tathwell Hall, near Louth. Blooms of "Miss Chaplin" were submitted to Professor LINDLEY, and favourably noted by him in the *Gardeners' Chronicle* of July 8, under the signature of "A Lover of Pansies," No. 5. A bloom of "Dr. Horner" took the First Prize at Louth, Sept., 1842; notwithstanding the great competition for Seedlings. At Louth, July, 1843, it gained the First Prize; also at Horncastle, in July last, it was awarded an Extra Prize, and pronounced the best Black Pansy yet out.

From the entire approbation of such a distinguished Florist as Dr. Horner, of Hull, (who pronounces it the best dark Pansy in existence) no further proof is necessary; otherwise, Mr. D. Smith, Curator of Hull Botanic Garden, Hull, observes, "there would be no mistake to challenge England to produce its equal." The principal florists in and about Louth might be referred to as to the very superior qualities of "Dr. Horner" and "Miss Chaplin" — "Hamlet" is a large noble flower of great substance. "Wanderer" and "Miss Carvill," two choice Pansies purchased of Messrs. Ellitson, Thorngumbald; colour, shape, and substance good. N.B.—On the receipt of a post-office order for 30s., good plants will be forwarded while the limited stock lasts. Mr. G. Charlwood, 14, Tavistock-row, Covent-garden, will also supply the above. This Advertisement will not be repeated.

Anlaby, near Hull, Oct. 12, 1843.

UNDER THE PATRONAGE OF THE QUEEN.
KENSINGTON NURSERIES.

MESSRS. RICHARD FORREST AND Co. beg respectfully to inform the Nobility, Gentry, and the Public that their collection of **DUTCH ROOTS** has been imported this season in very fine condition, and Catalogues may be had on application. They beg leave also to direct attention to their superior assortment of **FRUIT-TREES** and other General Stock in their different Nurseries, which never were finer than this season. The collection of Camellias and other Greenhouse Plants are also very fine, with several very large well-grown specimens of *Statice macrophylla*, in the Stove, with many other interesting new plants.—General Catalogues may be had on application.
[This Advertisement was intended to appear on Oct. 14.]

NORLAND NURSERY, NOTTING HILL, LONDON.

R. E. GOWER takes this opportunity of offering an assortment of **DUTCH BULBS** which are particularly good, fine plants of *Araucaria Braziliensis*, two to three feet; one year transplanted *Beach* at 4s. per 1000; one year do. *Portugal Laurels* at 35s. per 1000; *Seedling Evergreen Oaks*, fine, at 6s. per 100. Trained *Fruit-trees*, *Flower* and *Garden* seeds of the best sorts, among which he has a small quantity of *Cormack's Prince Albert Pea*, the earliest *Pea* grown at 2s. 6d. per quart. *Russia mats*, &c.

DUTCH HYACINTHS for Forcing, 4s. per dozen; Best do., for Glasses, 6d. to 1s. each. Double Roman and Paper-white *Narcissus*, 4s. per dozen; Single and Double *Duc Van Thol Tulips*, 2s. per dozen. Also *Crocus*, *Iris*, *Jonquils*, *Narcissus*, *Anemones*, and *Ranunculus*, of which priced List may be had free, per post, from **A. CORBETT'S** Italian and Foreign Warehouse, 18, Pall Mall.

THOMAS CRIPPS, NURSERYMAN, Tunbridge Wells, Kent, respectfully begs to direct attention to his splendid collection of **ROSES**, comprising every novelty worthy of notice; and which are offered at the following prices, the selection being left to T. C.:

	per doz.	per 100
Fine Standards	30s.	10l. 0s.
Half Standards	12s.	4l. 0s.
Do. do. fine	18s.	6l. 0s.
Do. do. very superior ..	24s.	7l. 10s.
Dwarf Roses	6s.	1l. 10s.
Do. do. fine	12s.	3l. 15s.
Do. do. very superior ..	18s.	5l. 10s.

Plants of the new Cloth of Gold Rose, if ordered early, will be sent out in November at 21s. each. If purchasers will favour T. C. with a list of the sorts they already possess, no duplicates shall be sent.

"PELOPS" AND "EVERTON," two of the best **PANSIES** in cultivation—raised in 1843 by **THOS. O'GRADY, Esq.**, Grove House, West Derby, near Liverpool.

JOHN LUCAS, Gardener to Mr. O'GRADY, begs leave to say he is enabled, by permission, to let out the above new and distinct variety of **PANSY** for general cultivation at 10s. the pair. The stock of both is limited.

NEW DAHLIAS.

SPARY'S LADY ANTHEMUS AND AURANTIA.

E. SPARY begs leave respectfully to announce to his Friends and the Trade in general that he intends sending out the above seedlings in dry roots, should the roots raise satisfactorily. Descriptions, &c. will appear in a future Advertisement. As the stock is limited, early application is respectfully solicited, to prevent disappointment.—**Hungerford, Oct. 17, 1843.**

CHRYSANTHEMUMS.

CHANDLER AND SONS, Vauxhall Nursery, London, having a large stock of Young Plants, well budded, and now in a good state for sending away, of this beautiful Autumnal Flower, can supply good plants in pots at 12s. per dozen, and larger plants at 18s. per dozen. C. and Sons' Collection, including many new sorts, will be in full flower during the ensuing month.

C. and Sons have also a fine Stock of Evergreens and Fruit-trees which they can offer at moderate prices.

WOODLANDS NURSERY, MARESFIELD, NEAR UCKFIELD, SUSSEX.

WM. WOOD AND SON beg leave to inform their Friends and Amateurs that their immense stock of **ROSES** is this season particularly fine; and in consequence of the increasing taste for the culture of *Roses* in pots, W. W. & Son have made it their study to grow a very large quantity in the open ground of those sorts best adapted for potting, and which may now be removed with great safety; they are grown expressly for this purpose on short stems, varying from one to two feet, and will be supplied at 18s. per dozen, or 5l. per 100, the selection being left to W. W. & Son. Plants presented with each order, to compensate for cost of carriage.

W. W. & Son have just published a Supplementary List of Greenhouse Plants (comprising many novelties), which will be sent gratis, on application; together with their Catalogue of *Roses*, *American*, *Evergreen* and *Flowering Shrubs*, *Ornamental*, *Forest*, and *Fruit-trees*, *Greenhouse*, *Hothouse*, and *Herbaceous* Plants, and *Florists' flowers*.—**Woodlands, Oct. 18.**

TO CARNATION AND PICOTEE GROWERS.

OPEN TO ALL ENGLAND.

TWO SILVER CUPS, value THREE GUINEAS each, will be given by **Mr. J. F. WOOD, Florist**, of the Coppice, near Nottingham, during the Summer of 1844.

One, for the Best Stand of Ten dissimilar **CARNATIONS**, two in each Class; and One for the Best Stand of **TEN PICOTEEs**, consisting of two heavy-edged and two light-edged Red; two heavy-edged and two light-edged Purple, and one heavy-edged and one light-edged Rose.

Entrance, 5s. each. The Entrances to be divided between the Second and Third Pans. Further Particulars will be given in a future Advertisement.

TULIPS, RANUNCULUSES, HYACINTHS, &c.

H. GROOM, Clapham Rise, near London (removed from Walworth, by APPOINTMENT FLORIST TO HER MAJESTY, respectfully informs the Nobility and Gentry, that his Bulb Catalogue for this autumn is ready, and will be forwarded by post on application. He begs to state that he has a large stock of the beautiful New Lily (*Lilium lancifolium*) and a fine collection of *Auriculas*, which he can supply at very moderate prices.

FINE NAMED TULIPS.—The Subscriber having a large supply of fine bulbs of the above popular flower, begs to offer them upon the following very moderate terms, viz.: 100 sorts by name for 5l.; 50 sorts by name for 2l. 10s., which will comprise portions of *Bizarres*, *Roses*, and *Byblymens*, and will be found worthy the attention of the amateur and practical florist.—**WILLIAM MAY, Hope Nursery, Leeming-lane, Bedale, Yorkshire, Oct. 20, 1843.**

CARNATIONS, PICOTEEs, AND PINKs.

MESSRS. N. AND B. NORMAN'S CATALOGUE of Show varieties, with which they have gained 29 Prizes this season, can be had on pre-paid application.—**Bull-fields, Woolwich.**

HOLLYHOCKS, HARDY HERBACEOUS PLANTS, &c.

WILLIAM MAY begs to state that he is provided with a supply of the above plants of select quality. The *Hollyhocks* are of his own stock, which he has been selecting for the last 21 years, and are of every shade of colour. The *Herbaceous plants* have also been carefully collected, and are of the most showy varieties, comprising the most popular Generas in present cultivation, such as *Phloxes*, *Pentstemons*, *Aconitums*, *Anemones*, *Delphiniums*, *Campanulas*, *Lupinus*, *Oenothera*, &c.

The *Hollyhocks* in collections of 100 plants for 40s.; 50 plants, 20s.; 25 plants, 11s. The *Herbaceous plants*, 100 sorts correctly named for 42s.; 50 sorts, 25s., of W. M.'s selecting, including package. *Hollyhock seed* saved from best double flowers, 200 seeds for 2s. 6d.; 500 seeds for 5s.; *Pansy seed* saved from best prize flowers, in 2s. 6d. and 5s. packets.

N.B.—To those friends who received their *Hollyhock plants* late last year, W. M. begs to state that any they may have lost in consequence, he will be glad to replace free of charge. A remittance or reference from unknown correspondents is solicited.—**Hope Nurseries, Leeming-lane, Bedale, Yorkshire, Oct. 20, 1843.**

TO GROWERS OF PANSIES.

JAMES MAY begs to call particular attention to his extensive collection of this favourite flower. He is now cultivating nearly 600 varieties by name, and his stock being remarkably healthy this season he can strongly recommend them; this being the most favourable time for transplanting to ensure a fine spring and summer bloom; 12 Extra fine varieties, including his 4 Superb Seedlings which were so much admired all through the season, viz., *Espartero*, *Donna Elidia*, *Optime*, and *Ellen*, for 25s.; 12 Extra fine 15s.; which can be sent per post free; 30 Superb varieties, 21s. Any of the older varieties, 7s. 6d. per dozen, or 50 pairs correctly named for 30s., package included. Early orders are respectfully solicited for his Superb *Pansy Seed*, as the crop is short this season, at the following prices, 2s. 6d., 5s. to 10s. per packet. MAY's *Crimson Superb Sweet William*, 1s. per packet. J. M. has only a few packets of the true *Prolific Egyptian Mummy Wheat* at the following prices: 25 grains for 20s., or 50 for 30s., sent post free with directions for planting, &c. &c. A remittance respectfully requested from unknown correspondents.—**Pansy Nursery, Tottenham, London.**

JOHN WHITLEY, Silcoates Nursery, near Wakefield, begs respectfully to offer the following articles, at the very low prices affixed.

.. <i>Iveryana</i>	

A remittance or reference from unknown correspondents will be required.—**Wakefield, October 20, 1843.**

AUTUMN OF 1843 AND SPRING OF 1844.
Established in the Year 1728.

JOHN WEBBER begs to draw the attention of Noblemen and Gentlemen Planters, and the Trade, to his Stock of **FOREST TREES, EVERGREEN SHRUBS, &c.**, which he offers on the most reasonable terms, and are this season of the very best description, comprising upwards of 600,000 *Larch*, *Scotch*, and *Spruce Firs*, from 2ft. to 4ft.; 200,000 *Ash*, from 2ft. to 5ft.; 100,000 *English Elms*, from 4ft. to 10ft. in height, besides a number of *Beach*, *Birch*, *Spanish Chestnuts*, *Oaks*, *Alder*, *Hazel*, *Privet*, and numerous other articles, priced Catalogues of which will be forwarded on application. Three Million of **THORNs**, from one to five years' old. Planting done by contract to any extent.—**Nurseries, Merriott, near Crewkerne, Somersetshire.**

MESSRS. CORMACK & Co. respectfully announce to those persons who intend planting this season that they may be supplied from their extensive Nurseries, New Cross, near London, (where persons are conveyed, through the medium of the Croydon Railway, in ten minutes from the terminus at London-bridge,) with **FRUIT and FOREST TREES, FLOWERING SHRUBS, EVERGREENS, AMERICAN PLANTS, &c.**, to any extent, and at considerably reduced prices, the land being required for other purposes.

N.B.—Fine Weeping *Elms*, Weeping *Ash*, and *Robinia inermis*; also handsome *Pineasters*, 5 to 6 feet; *Arbutus*, 4 to 5 feet; *Cypress*, 4 to 5 feet; *Irish Yews*, 4 to 5 feet; and *China Arbor Vitae*, 4 to 5 feet—which can be removed with balls of earth, so as to insure their safety.

PINE PLANTS.

PERSONS in want of **PINE PLANTS** have an opportunity to choose, from an extensive stock, Plants of all sizes, from *Suckers* to those in *Fruit*, at low prices. Warranted free from all insects, well rooted, and healthy. Apply by letter, or on the premises, to **WILLIAM DAVIS, Green-street, Marlborough, (Chester), Oct. 20, 1843.**

THOMAS BROWN begs to acquaint the Growers of **PANSIES** that strong Plants of his fine collection are now ready for sending out, including several novelties not before offered for sale; also, an extensive collection of **PINKs** (comprising all the established Show-flowers), **CARNATIONS, PICOTEEs, TULIPS, &c.**—**Slough Nursery, Oct. 20, 1843.**

HORTICULTURAL SOCIETY OF LONDON.

The Council of this Society being desirous of ascertaining the correct addresses of the Corresponding Members resident in Great Britain and Ireland, have directed the following List to be published, in the hope that all those who see their names in it will immediately inform the Secretary, by letter, 21, Regent-st., whether their addresses are correctly given; or that their friends, in their absence, will do so for them. As it is supposed that some of the persons in this list are dead, the Secretary would also be obliged by any information that can be given him on that point.

Thompson, George, gr to the Earl Fitzwilliam, Wentworth House, Yorkshire

Towers, George John, Esq., Pinckney's Green, near Maidenhead

WM. HEALE AND SON, NURSERYMEN, &c., beg most respectfully to acquaint the Public and Trade in general that they have still a large stock, both Standards, Dwarf, and Trained, of their celebrated **HYBRID PLUM**, raised between the Greengage and Orleans. And as their circular of last season respecting it was limited to their immediate connexion, they now call the attention of the public to the following particulars: colour yellow, inclining to russet next the sun, size of a modern Apricot, possesses the flavour of the Greengage, with the prolific habits of the Orleans, and bears abundantly either as a standard or trained, constituting a most important addition to our hardy fruits, and ought to be grown in all collections. Fine three-year-old trees, 3s. 6d. each; do. trained, 5s. each.

Nurseries, Calne and Devizes, Oct. 18, 1843.

THE BRITISH QUEEN AND PRINCE ALBERT PEAS.

W. J. CORMACK AND CO. beg to announce to their Friends and the Public that they have harvested the above two New Varieties, and will be obliged by early orders, as the stock is limited. They will be sent out, as last spring, in packages, bearing the name of the firm, price 3s. 6d. per quart. The usual allowance to the trade.

N.B.—"CORMACK'S Early Kent Peas," 14s. per bushel. Newc. 1843, and Bedford Conservatory, Covent Garden, Oct. 20

TO NOBLEMEN, GENTLEMEN, NURSERYMEN, PUBLIC GENTLEMEN, and other Public Companies engaged in Planting.

MESSRS. PROTHEROE AND MORRIS beg to announce that they are instructed by the Executrix of the late Mr. JOHN MITCHELL, to submit to public competition, on the premises, Albion Road, Stoke Newington, on MONDAY, Oct. 23, 1843, and following days, at 11 o'clock each day, without reserve, the VALUABLE NURSERY STOCK, consisting of Fruit and Forest Trees, Evergreens, American Plants, Deciduous and Ornamental Shrubs of every variety, in considerable quantities. Also a bed of Choice Tulips, consisting of 90 rows, which will be sold in lots to suit purchasers. An excellent Tulip Cabinet, a quantity of Wood, &c.

N.B.—The above ground is proverbial for its magnificent evergreens, and their safe removal, the mould adhering to their roots. The lots will be arranged for the convenience of large and small purchasers. May be viewed a week prior to sale. Catalogues, is. each, returnable to purchasers, may be had on the premises; of the principal Seedsmen; and of the Auctioneers, American Nursery, Leytonstone.

TO GENTLEMEN, NURSERYMEN, and Others.

MESSRS. PROTHEROE AND MORRIS will submit to public competition by Auction, on the premises, Chapel Nursery, Battersea Fields, near the Nine Elms, and about eight minutes walk from the terminus of the Southampton Railway, on WEDNESDAY, Nov. 1st, 1843, and following day, at 1 o'clock, by order of Messrs. SHILLER, about 15,000 ROSES, consisting of Moss, Red and White Provence, De Meaux, and Song, a collection of about 200 of the most beautiful and approved varieties. Also, a quantity of EVERGREENS and SHRUBS. The collection of Roses are particularly worthy the attention of Gentlemen, Nurserymen, and others. The lots will be arranged for the convenience of large and small purchasers. May be viewed a week prior to the sale. Catalogues may be had of the principal Seedsmen; on the premises; and of the Auctioneers, Leytonstone.

TO NOBLEMEN, GENTLEMEN, Nurserymen, Directors of Public Gardens, Cemeteries, and other public Companies, engaged in Planting.

MESSRS. PROTHEROE AND MORRIS are instructed by the Proprietors to submit to Public Competition, on the premises, the Kensington Home Nursery, fronting the Great West Road, on MONDAY, 6th November, 1843, and following days, at 1 o'clock each day, the varied and interesting NURSERY STOCK OF ORNAMENTAL TREES AND SHRUBS well known to the attention of Gentlemen who intend planting this autumn, and consists of large Magnolias, of sorts including the fine specimen of Magnolia conopsea, Cedar of Lebanon, Fan Yews, Pinus cembra, with a very extensive Collection of Evergreens of every description. This ground is proverbial for the fineness of its specimens and their safe removal, being of a loamy and adhesive nature; but is now required for building purposes. May be viewed a week before the sale, and Catalogues had of all the principal Seedsmen, and of the Auctioneers, Leytonstone.

Messrs. PROTHEROE AND CO. take this opportunity of inviting to an inspection of their general Stock in their other Nurseries, in the Gloucester-road, within five minutes' walk of their home-grounds.

DERBY.—TO NOBLEMEN, GENTLEMEN, NURSERYMEN, and Others, intending to plant.

MESSRS. WILSON AND SADLER beg, through this medium, to communicate that, in consequence of the expiration of the Lease of one of their Nurseries at Christmas next, they will have to offer by Public Auction, on TUESDAY and WEDNESDAY, the 7th and 8th of November next, the following valuable NURSERY STOCK:—

1,000 English Oaks, 1 to 2½ ft.	300 Weymouth Pines, 3 ft.
726 Canada grafted Elms, from 4 to 10 ft.	9,000 Privet, from 6 inches to 1 ft.
331 Canada Elms, this summer budded	150 Ornamental Thorns
468 Broad-leaved Common Elms	35 Canada Service Trees
100 Devonshire Elms, 4 to 6 ft.	25 Snowy Mesquites
100 Mountain Elms, 4 to 6 ft.	10,000 Hollies, from 1 to 4 ft.
511 Elms, various varieties, 4 to 6 ft.	Silver and Gold Striped ditto
456 Common Beech, from 1½ to 3 ft.	20,000 Common Laurels, from 1½ to 3 ft.
200 Purple Beech, various sizes	2,000 Portugal Laurels
50 Striped leaved Beech	1,500 Fine Standard Apples, fine sorts
982 Birch, various sorts, from 2 to 5 ft.	1,000 Dwarf Apples
850 Spanish Chesnuts, from 2 to 6 ft.	600 Standard Pears
250 Horse Chesnuts, from 2 to 10 ft.	300 Dwarf ditto, trained and untrained
150 Hornbeam, from 2 to 4 ft.	1,400 One-year Pears, fine sorts
968 Mountain Ash, from 2 to 6 ft.	100 Plums, Standards
750 Alders, from 1 to 3½ ft.	200 Dwarf Plums, kinds, fine
620 Area Theophrasti, from 1½ to 4 ft.	1,400 Common Plums, budded
900 Sycamores, from 2 to 10 ft.	1,500 Mussil Plum budded with Apricots
900 Larch, from 1½ to 4 ft.	300 Standard Cherries
900 Poplars, of various sorts, from 5 to 8 ft.	200 Dwarf ditto
750 Hazels	300 Damsons
900 Willows, French, Weeping, and others of the newest kinds	300 Fruit-bearing Almonds
980 Spruce Firs, from 12 in. to 2 ft.	400 Dwarf Peaches
900 Scotch Firs, from 1 to 3 ft.	200 Dwarf and Standard Apricots, &c.
900 Silver Firs, small, from 4 to 9 inches	115,000 Seedling Oaks
	24,000 Seedling Crabs
	3,000 Seedling Hornbeam
	3,000 Seedling Birch
	10,000 Seedling Ash
	10,000 Sycamore
	2,000 Horse Chesnuts, &c. &c.
	2,000 Strong Crab Stocks, budded

N.B.—All the above are in Lots. Messrs. W. and S. respectfully invite attention to the valuable above enumerated, which will be put up in lots to suit purchasers, and sold without reserve. The convenience of rich fruit being sent by the Derby Station case adjoining, capable of holding any quantity of Nurserymen to forward articles to any of the kingdom in a few hours. The sale will commence the day precisely at Eleven. The Stock may be viewed on application to the Foreman at the Nurseries, or at the Seed Warehouse, Upside, Derby.

TO NOBLEMEN, GENTLEMEN, HORTICULTURISTS, &c.
MESSRS. MUMFORD AND CASEBOW have the honour to announce that they are instructed by Sir THOMAS HARE, Bart., unreservedly to sell by Public Auction, on the Premises, STOW HALL, near Downham Market, Norfolk, on WEDNESDAY, the 1st of November, 1843, at 11 for 12 o'clock precisely, the WOODWORK, FRAMING, and SASHES of all the following valuable and superior HORTICULTURAL ERECTIONS, viz., a Vinery, 40 feet long by 17½ broad; do., 32½ feet long by 17½ feet broad; 2 Peach-houses, each 35½ feet long by 15 feet broad; 4 Pine Pits, each 36½ ft long by 13½ ft broad; 19 Cucumber and Melon Boxes and Lights, of the usual size; 11 do. do., brick pit, sashes and frames, ditto; 40 Hand Glasses (new). And the FIRE RANGES in connexion with the above, the whole of which were constructed regardless of expense, in the most substantial manner, and are in excellent repair. Will be divided into convenient lots, and further particulars may be had, and permission to view the same, on application to Mr. CARTER, the Farming Steward; or of the Auctioneers, Downham Market. Downham Market, Oct. 19, 1843.

VICTORIA PARK.—TO Market Gardeners, and Others.—By order of the Honourable Commissioners of Her Majesty's Woods and Forests. To be sold by Auction by Mr. J. KING, on MONDAY, October 23, and following day, at 11 o'clock each day, on the premises, Wick Lane, Hackney, held by Mrs. Roberts, Stock consisting of Two fine strong Draught Horses, a capital Light Market Waggon, two Market Carts, 140 Cucumber Boxes and Lights, 200 Hand-glasses, Tools, a quantity of Seeds, &c. The Crops comprise a valuable stock of Radford's Early Rhubarb, Horse-radish, Celery, Red Cabbage, Coleworts, &c. &c. May be viewed, and Catalogues had on the premises, at the White Horse, Covent Garden; Cheshire Cheese, Spitalfields Market; Golden Lion, Borough Market; and of the Auctioneer, Hackney Road.

TO FRUITERS and GREENGROCERS.—To be Sold, the LEASE and GOODWILL of an old-established BUSINESS, with a connexion, including some of the highest families. The House is held for 32 years, free of rent, and the situation is near one of the best squares at the west end. The present Proprietor has carried on the business for 20 years. No one need apply who cannot command at least 1,000l. Particulars to Principals only, on personal application to Messrs. FOSTER and SON, 15, Greek-street, Soho-square.

TO NURSERYMEN, FLORISTS, GARDENERS, and Others.
TO BE LET OR SOLD, with immediate possession, all that well-known NURSERY-GROUND and GARDEN, situate at Battersea and Elizabeth-street South, Pimlico, with the Stock, valuable Business and Connexion, belonging to the late Mr. JOHN ROGERS. The above Property and Trade is the result of long-continued industry, and from its immediate contiguity to the Palaces, Belgrave-square, and a vast number of other newly-erected residences of the Nobility and Gentry, presents an opportunity to any active Proprietor of commencing Business on terms singularly advantageous, and is capable of almost indefinite improvement. For particulars apply to Mr. JONES, 6, Eccleston-street; or to Messrs. PROTHEROE & MORRIS, American Nursery, Leytonstone.

TO LET.—About SEVEN ACRES OF NURSERY GROUND, near London; or the Lease (twelve years and a half unexpired) to be sold. For particulars apply to Messrs. PROTHEROE & MORRIS, American Nursery, Leytonstone, Essex.

HOT-WATER APPARATUS FOR HEATING HORTICULTURAL BUILDINGS, DWELLING-HOUSES, CHURCHES, and MANUFACTORIES, upon improved principles, and at very moderate charges, erected by DANIEL and EDWARD BAILEY, 272, HOLBORN.

D. and E. BAILEY having devoted much time to the consideration of this subject, and had much experience in the erection of apparatus for the above-mentioned purposes, have, by improvements suggested in their practice, rendered their mode of heating not only very efficient, but very simple, and have combined durability in the apparatus with economy in the charge. They have erected apparatus in England, Scotland, and Ireland, for many noblemen and gentlemen, and have had the honour to be employed by the Horticultural Society of London, in executing the works of their splendid Conservatory, lately erected at Chiswick.

D. and E. BAILEY also construct in metal all descriptions of Horticultural Buildings and Sashes, and invite noblemen, gentlemen, and the public to an inspection of their various drawings and models, at 272, Holborn, where they have the opportunity of exhibiting, amongst other metal works, an extremely complete and convenient kitchen apparatus, or range, adapted for the continued supply of hot water, and an arrangement of the oven more complete than has hitherto been brought before the public.

D. and E. BAILEY were the first to introduce metallic curvilinear houses to horticulturists, and can refer to the Conservatory attached to the Pantheon as one of their works, besides many others in this country and on the Continent.

D. and E. BAILEY have prepared a quantity of the Galvanic Plant Protectors, which are now ready for immediate delivery; they beg to introduce to public notice a new Trough Pipe, for Orchidaceous or other Houses where vapour is constantly, or at intervals required, and which may be seen at their Manufactory.

RENDLE'S TANK SYSTEM OF HEATING.
STEPHENSON AND CO., 61, Gracechurch-street, London, Inventors of the IMPROVED CONICAL and DOUBLE CYLINDRICAL BOILERS, having been much engaged in heating buildings upon the above system with Tanks of various materials, solicit the attention of scientific Horticulturists to an Iron Tank now fitting up on their premises, which offers most decided advantages over every other article hitherto employed for the same purpose. These tanks which are ornamental in appearance can be made from 10 to 100 feet long and of any width and depth, and can be connected or disconnected by any working Gardener without the slightest difficulty, thus affording the opportunity to persons in remote districts of employing this much approved method of heating without the assistance of Engineers. The Tanks can be applied to Boilers and Pipes already fixed, and from the present low price of Iron will be found cheaper than of any other material. Mr. RENDLE, of Plymouth, has kindly undertaken to receive orders and furnish information to any persons in his neighbourhood, and prices for any size will be forwarded upon application to S. and Co.

GUANO ON SALE,
BY THE IMPORTERS,
ANTHONY GIBBS & SONS, LONDON;
GIBBS, BRIGHT, & CO., LIVERPOOL AND BRISTOL.

TO MARKET GARDENERS and FARMERS.
MANURES.—BOAST AND CO. are now ready to supply their PATENT INORGANIC MANURES, which are separately prepared for each variety of produce, after having ascertained by Chemical analysis what substances are necessary to the growth of each crop; they are therefore infinitely more certain and efficacious in their effects than any Manure yet adopted. Separate Manures are prepared for Hops, Grass, Wheat, &c. by the use of which Wheat may be grown every year on the same land, and in various advantages to the Farmer and without injury to the soil, and in other respects greatly improved. Prospectuses, containing full particulars, may be obtained, or will be forwarded (post free) on application at the Manufactory, Bow, Middlesex.

GUANO MANURE.—Guano, (Peruvian), Potter's Guano, Alexander's, Clarke's, Poitevin's, and Watson's Composts. Also Nitrates, Soda, and Potash and Gypsum may be had of MARK FOTHERGILL, 40, Upper Thames-street.

GUANO ON SALE.—Any Quantity of this valuable Manure can be had from the bonded stores of the Importer either in London or Liverpool, on application to COTESWORTH, POWELL, and PRYOR, St. Helen's Place, London; EDWARDS, DANSON, and Co., Liverpool; and WILLIAM J. MYERS and Co., Importers, Liverpool.

J. B. LAWES'S PATENT MANURES, composed of Super Phosphate of Lime, Phosphate of Ammonia, Silicate of Potash, &c., are now for sale at his Factory, Deptford-creek, London, price 4s. 6d. per bushel. These substances can be had separately; the Super Phosphate of Lime alone is recommended for fixing the Ammonia of Dung-heaps, Cesspools, Gas Liquor, &c. Price 4s. 6d. per bushel.

WHEAT-SOWING.
POTTER'S GUANO.—The superiority of this powerful MANURE being now completely established, it is only necessary to inform the public that a material reduction has been made in the price, and that it may be obtained either at the Works or of Mr. POTTER'S Agents, who have testimonials of its efficacy.—23, Upper Fore-street, Lambeth, London.
Mr. MARK FOTHERGILL, 40, Upper Thames-street, Sole London Agent.

* * * Nurserymen required as Agents in all the principal towns.

AGRICULTURAL GEOLOGY.—IMPROVEMENT OF SOILS, &c.

This day is published, 8vo., 7s. 6d. cloth,
THE APPLICATION of GEOLOGY to AGRICULTURE, and to the Improvement and Valuation of Land; with the Nature and Properties of Soils, and the Principles of Cultivation. By NICHOLAS WHITLEY, Land-Surveyor.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

FARMING IN LANCASHIRE.
Just published, 12mo., 4s., cloth,

SOME REMARKS on LANCASHIRE FARMING, and Various Subjects connected with the Agriculture of the Country; with a few Suggestions for Remedying some of its Defects. By COLONEL LAW RAWSTORNE.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

COMPLETION OF MR. BATEMAN'S SPLENDID WORK.
THE ORCHIDACEÆ of MEXICO and GUATEMALA. The Publisher respectfully informs the Nobility and Gentry, subscribers to the above splendid Work, that Parts VII. and VIII., completing it, are now ready for delivery. A few copies only remain unsold of the small impressions taken, which may be had by early application, price 2l. 2s. each part.
JAMES RIDGWAY, Piccadilly.

HINTS FOR THE FORMATION OF READING SOCIETIES. The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature the choice of all the most valuable works in the various languages; and that of extending the choice of new books to the entire productions of the press. It is especially adapted to provincial readers, as by a small annual subscription the perusal of all the new works as they appear may be obtained: Country booksellers may adopt the plan with very considerable advantage to their various branches of business.—To be had gratis, and post free, of SAUNDERS & OULEY, publishers, Conduit-street; of whom may be had gratis and post free,

A NEW LIST OF THE REDUNDANT COPIES OF NEW PUBLICATIONS in History, Biography, Memoirs, Travels, Novels, &c., withdrawn from Saunders and Ouley's extensive library, Conduit-street, Hanover-square.

CLIMATE.—A Medical Gentleman, who was some time since led to visit the Tropics for health, having arranged a pleasant temperature with a free circulation of pure air throughout a large house, with some peculiar advantages, wishes to receive two or three invalids who would be benefited by protection from the severities of this climate, so constantly prejudicial in cases of weak lungs, rheumatism, and most varying disorders.—36, Bedford-square, London.

EDWARD BECK invites the attention of Horticulturists to the different articles manufactured by him in SLATE. They may be seen in use at WORTON COTTAGE, ISLEWORTH, upon application to the Gardener.—Sundays excepted.

SMOKE PREVENTED AND VENTILATION EFFECTED, BY SPONTANEOUS ACTION.

MR. JEAKES, 51, Great Russell-street, Russell-square, Sole Agent in London for the Sale of DAY'S PATENT WIND-GUARD, by the use of which he guarantees to cure all Chimneys Smoking from Wind, and also to prevent downward currents; it is admirably adapted for the Ventilation of Apartments of every description, also of Ships, Stables, Dairies, and Larders, as it ensures a constant change of air; and all its parts being fixtures, it is free from noise and not liable to derangement; it also offers no impediment to sweeping. Price for general use, 3 s. larger size, 4s.; larger sizes, especially adapted for ventilation, 6s. and upwards. To be had at 51, Great Russell-street, where it may be seen in action. The attention of Architects, Builders, and the trade in general, is especially invited.

NOW READY,
BERDOE'S WINTER VENTILATING AND REALLY WATERPROOF WRAPPER SHOOTING JACKETS, &c. in great variety, new and much approved styles. Five years' extensive trial, a constantly increasing sale, the general and cordial recommendation of those who have adopted them, and a host of imitations of these gentlemanly and established garments, furnish the best evidence of their efficiency and value. An inspection is confidently invited, also of an extensive assortment of first-rate materials and garments for the coming season, guaranteed to exclude any description or continuance of rain whatever.—Made only by W. BERDOE, Tailor, Waterproofer, &c., 69, Cornhill, (North side).

ROWLAND'S MACASSAR OIL.—Under the Special Patronage of Her Most Gracious Majesty the QUEEN, the Royal Family, and the several Courts of Europe. This Oil is universally acknowledged to be the ONLY ARTICLES that will effectually produce and restore Hair, prevent it from falling off or turning grey, free it from scurf and dandruff, and will render it delightfully soft and flexible. It will also preserve the coiffure in the heated atmosphere of crowded assemblies. CAUTION.—Much pernicious trash is now offered for sale as "MACASSAR OIL;" it is therefore of great importance to purchasers to see that the words "ROWLAND'S MACASSAR OIL" are engraven on the wrapper. All others are "CRASS IMITATIONS." The Proprietor's Signature is also engraven on the wrapper, thus:—A. ROWLAND & SON, 20, HATTON GARDEN, LONDON; Countersigned "ALEX. ROWLAND." Price 3s. 6d.—7s. Family Bottles (equal to four small), 10s. 6d., and double that size 21s. per bottle. Ask for "Rowland's Macassar Oil." Sold by them, and by Chemists and Perfumers.

BURBIDGE AND HEALY'S NEW PLAN FOR BOILERS AND SETTING,

FOR WARMING HOTHOUSES, GREENHOUSES, CHURCHES
AND PUBLIC BUILDINGS, NURSERIES, &c. &c.

Registered under 6 & 7 Vic., c. 65.

A. Section of Boiler and Furnace.

B. Plan of do.

C. Elevation of Sylvester's Patent air-tight Sliding Doors.

D. Elevation of Boiler, with Sylvester's Patent ribbed Surfaces.

Further explanation and particulars may be obtained of the
Proprietors, 130, Fleet-street, London.

RURAL CHEMISTRY.

Now ready, price 4s. 6d.,
By EDWARD SOLLY, Esq., Jun., F.R.S.,
Experimental Chemist to the Horticultural Society of London,
Hon. Mem. of the Royal Agricultural Society, and Lecturer
on Chemistry, at the Royal Institution.
&c. &c. &c.

Extracts from the Introduction:—
“A knowledge of the chemical composition of soils and the various substances employed as manures enables us to comprehend the mode in which the latter act; and a knowledge of the nature of those substances which plants require, points out the best and most economical methods of restoring to the soil, by manures, those substances which plants remove from it.”

“If the farmer knows what it is that gives the fertilizing powers to manure, and is aware of the nature of those substances, he will soon learn the best method of preserving and using them: he will then understand how to make the most of the various sources of manure at his disposal, and he will be enabled readily to save much, that, for the want of such knowledge, would otherwise be lost.”

FAMILIAR ASTRONOMY. By GEORGE DARLEY,
A.B., Author of A System of Popular Geometry,—Com-
panion to the Popular Geometry,—a System of Popular Algebra,
—and a System of Popular Trigonometry. 12mo, with Engrav-
ings, 5s. cloth lettered.

“There is a vast deal of astronomical information conveyed in
a most winning and unassuming manner in this delightful little
volume, which, not less for the novelty of its plan than the extent
of its intelligence, reflects infinite credit on the taste and talents
of its projector and editor, Mr. Darley.”—*Sum.*

TAYLOR and WALTON, Booksellers and Publishers to University
College, 28, Upper Gower-street.

BUTTER MADE IN TEN MINUTES

BY THE NEWLY-INVENTED CHURN.
REGISTERED ACCORDING TO ACT OF PARLIAMENT.
This Act imposes a penalty of from 5*l.* to 20*l.*, for each imita-
tion, piracy, or selling, recoverable by the proprietors before a
magistrate, or by civil action. Half the penalty will be given to
any person informing the proprietors of any infringement. The
words of the Act are “No person or persons shall copy or alter
any design, either by adding to, or subtracting from,” &c.
ATTWOOD, WIMBLE, & WARNER, MANUFACTURERS, LEWES,
SUSSEX.

This CHURN being made entirely of Block Tin, the necessary
degree of temperature can be given to the cream, by placing it
in a pan of cold or hot water, which ensures the butter coming
in 10 or 12 minutes. The simplicity of its construction, and the
facility with which it may be cleaned, are no inconsiderable
advantages over those now in common use. The great advan-
tages of this Churn will be found in the winter; but in the heat
of summer placing the Churn in cold water will be the means of
hardening the Butter.

Sizes	No. 1	2	and 3
Churn from	7 to 8 lbs.	13 to 15 lbs.	26 to 28 lbs.
Price, carriage paid	7s.	10s.	14s.
to London.	25s.	35s.	42s.

Metal Pans for Churns to stand in, 4s. 6d., 6s., and 7s. Larger
sizes made to order.

To be seen in London, at WRIGHT'S Range Warehouse, No. 3,
Arthur-street, near the Monument; RIGBY'S Brush Warehouse,
No. 80, Gracechurch-street; LIVERMORE and SON, Ironmongers,
No. 30, Oxford-street; BENHAM, 19, Wigmore-street, Cavendish-
square. Export Agents, BARNES & Co., 109, Fenchurch-street.

DRESS COATS, Superfine cloth, 30s. to 40s.; extra
quality, 50s.; Frock-coats, silk facings, 35s. to 45s.; di o,
silk velvet collar and silk facings, 50s.; Waterproof Wrappers,
10s. 6d. to 21s.; fashionable York and Chesterfield ditto, 16s. to
25s.; Waistcoats, 5s. to 8s. 6d.; Silk, Satin, and Kerseymer, 11s.
to 14s.; Trousers, 8s. 6d. to 12s. 6d.; stout Doeskin and Kersey-
mere, 16s. to 25s.; Shooting Jackets, 10s. 6d.; Boys' and Youths'
Tunic and Hussar Suits, 30s.; a Suit of Superfine Black Cloth,
37. 3s.; best quality, 5*l.*—At FISHER and Co.'s, 31, King William-
street, City, 10 doors from London-bridge.

FINEST CARNATIONS and PICOTEEES.
YOUELL AND CO. beg to refer the readers of the *Gardeners' Chronicle* to their Extensive List, with Prices, of the above highly-esteemed Flowers, which appeared on the Advertising pages, 706 and 707, of this Paper, of the 14th inst., and will be found to contain every variety worthy of cultivation.
 Great Yarmouth Nursery, Oct. 19, 1843.

The Gardeners' Chronicle.

SATURDAY, OCTOBER 21, 1843.

MEETINGS FOR THE TWO FOLLOWING WEEKS.
 Friday, November 3 . . . Botanical . . . 8 P.M.

For the last few years the striking discoveries of some Chemists, aided by the rhetorical flourishes of others, have so dazzled the world that men have been induced to look to Chemistry for every possible and impossible result. A few pounds of some saline ingredient were to restore fertility to exhausted land, and to cover our moors with teeming crops. We are not sure, indeed, that the farmer was not to scatter abundance around him from his waistcoat pocket as he rode across his fields. At all events the gardener was to substitute his snuff-box for the dung-cart; manure, like wine, was to be bottled up for use, and dealers were to sell it by the dozen, not the ton. The very absurdity of these exaggerations made them current, and gained for them a belief which would have been refused to more sober statements. Now, however, the hot fit is going off, it is to be hoped that it will not be followed by an access of cold.

Let us not be misunderstood. No one can possibly form a higher estimate of the importance of Chemistry to the arts of cultivation. The opinions upon the subject that have been from time to time expressed in these columns are daily strengthened; and we entertain no doubt that a road to most important discoveries in all that concerns the artificial management of crops will in time result from the manifold researches now in progress among Chemists. But favourable opinions like these must not make us blind to the mischief likely to arise from the anticipations of a heated imagination, or from a blind and ignorant reliance upon forces and forms of matter, the true connection of which with vegetation is only just beginning to be understood; or from neglecting that which is most important, solid, and well ascertained, in a feverish chase after an object to which science has still to give true form and proportions. It is like quitting the open country to follow the stag through a London fog.

Such, nevertheless, has happened, wherever the certain but unobtrusive truths of Vegetable Physiology have been postponed to the bright scintillations of Vegetable Chemistry. When Professor Liebig made his inconsiderate attack upon Vegetable Physiologists, he carried with him many thoughtless and uninformed persons, and led them to undervalue that important branch of knowledge. But truth is silently regaining her empire, and people are now beginning to discover that whatever aid Chemistry may hereafter give them, they must look for immediate and sure assistance to the well-ascertained facts of Vegetable Physiology, whose value cannot be destroyed or even diminished, although they may be enhanced, by future discoveries. They have also no doubt discovered that chemical experiments are not very easily made unless by those who have more experience than the generality of either gardeners or farmers, and that although it is the latter who will eventually put in practice the results of exact chemical investigation, yet that until those results shall have been obtained it is safer to content themselves with experiments of another kind.

People have doubtless been in some degree led of late to direct their attention so exclusively to chemical inquiries, under the idea that the path of Vegetable Chemistry is scarcely trodden, and therefore far more likely to lead at once to important discoveries than Vegetable Physiology, which has for so many years been the subject of careful observation. But there can hardly be a greater error. Vegetable Physiology abounds in questions which it is most important to solve, and in which the aid of Chemistry is unneeded; and, above all things, do the well-ascertained laws of vegetable growth want correct application to practice. He must know very little of gardening, or rural affairs either, who fancies that all possible perfection has been arrived at in the cultivation of any one crop, exclusive of what Chemistry may be able to effect. On the contrary, we entertain no doubt that the next ten years will witness as great an advance in this respect as the last have done—provided the improved education of the rising generation takes a right direction, and leads to the careful study of Vegetable Physiology, and, above all, if those who are intrusted with the practical details of cultivation will learn to think and act a little for themselves.

An instructive instance of this is afforded by Mr. Wood's remarks on potting, of which we to-day

publish the completion, along with a capital paper on *Salvias* by the same cultivator. These papers cannot be said to depend upon any new facts, but are founded upon a novel and better method of applying well-known facts to practice. The main principles in his method of management are:—1. *That plants while growing are to be kept growing without interruption*; 2. *That the effect of this is to augment (or accumulate) their power of development in a quasi geometrical ratio*. The mode of carrying out these principles is regulated, on the one hand, by a skilful selection of materials, of which the quantity, together with their nutritive and mechanical nature, is well suited to the object of cultivation; and on the other, by taking care that the influence of the sun and atmosphere shall balance the power of absorption which plants, under given circumstances, may be able to exercise. For a detailed explanation of the mode employed to effect these objects we refer to the papers themselves. At a very early opportunity we shall offer some further observations upon the views of Mr. Wood, and the consequences that are likely to grow out of them. For the present, it will be sufficient to state that they are perfect in theory, and unobjectionable in practice, in every instance where fine plants are more valued than the space they occupy.

THERE is an old opinion, founded on a want of discrimination with regard to the nature of soils, that much ploughing is detrimental to the land—some farmers call it “ploughing the heart out of it.” while, on the other hand, it is the practice of many farmers to plough five or six times as a preparation for Wheat sowing. It is evident that both opinions cannot be true in all cases, yet there is seldom a maxim generally adopted in any one district which has not some reasonable foundation. The error is, that every farmer who has no guide but his own practice and that of his forefathers or predecessors in his farm, and who inquires no further than what has been found useful, or the reverse, is satisfied with a single experiment—if he make any at all. When you converse with a plain, good, industrious farmer, who has worked hard, paid his rent regularly, and brought up a family—than whom there is not a more respectable member of society—and you propose to him to do something which you think an improvement on his practice—for example, to plough deeper, to drain heavy lands in which there are no visible springs, to sow a quick-growing crop on the land which he intends as a fallow—he will probably answer to each proposal, “I once tried this scheme, but shall never do it again. I was induced to plough a field much deeper than it ever had been. I sowed it with Wheat after a good mucking—and what was the consequence? my Wheat was choked with Charlock and all sorts of weeds, although the land was as clean as a garden before seed-time. I had not half a crop of Wheat, and it cost me ever so much for several years to get my field clean again. No more deep ploughing on my land, I assure you. I plough my fallows and cross-plough them as often as I can, but take care not to break the pan which the sole of the plough has made.” All this might be perfectly true; and yet this very land, once cleared of its weeds—the seeds of which may have lain buried for ages without losing their power of vegetation, when brought within reach of the external air and dews—might produce much better crops than it ever did before, and bear a much more profitable course or rotation.

We tried the experiment of deep ploughing with exactly the same result as that of the above-quoted farmer; but we did not come to the same conclusion: we saw immediately that the deep ploughing should have preceded the fallow crop, and not the Wheat; but we made the best of a bad bargain: we had every plant of Charlock weeded out as it came up. This weeding cost 25s. per acre; but instead of having a deficient crop of Wheat, we had much above an average of good clean Corn. As the land was well stirred, and partly sown with Tares, and partly with Swedish Turnips and Mangold Wurzel, in the next season, with a sufficient quantity of manure, the weeds were eradicated, and this field is improved at least 25 per cent. in value by an operation which in the mind of an unreflecting farmer would have been pronounced to be decidedly detrimental to the land, and not to be recommended as an example. Here we see the advantage of a little science and reflection; in trying experiments we should never be disheartened, unless the result entirely contradicts our expectations, and it is evident that we have miscalculated the consequences. One deep ploughing preceded by a slight scarifying to destroy surface weeds, and followed by a deep stirring with a heavy implement—such as Biddle's or Lord Ducie's Scarifier, another cross-ploughing and harrowing, and picking out and burning the weeds, will generally prepare the land for manuring and final ploughing in good time to sow a cleansing crop—such as roots which require repeated hoeing. The next crop may be spring Wheat, Barley, or Oats, according to the fertility of

the soil in which Clover or artificial grasses may be sown, to be followed by Wheat, unless Wheat was sown after the roots, in which case Beans may be substituted. This is the usual process on good mellow Wheat land which has been drained, if necessary. In the old method of ploughing, the furrow-slice was often turned over and over several times, without being pulverised or the roots of the weeds being disturbed. If a dry season followed, the clods dried through and through, the roots were killed, and it was called an excellent fallow; for the first heavy rain made the clods crumble, and the land looked free and mellow. But in a moist summer the land was never thoroughly cleansed; the harrows destroyed some annual weeds, but docks and thistles remained in abundance, as might be seen in the next crop, which was usually Wheat. The introduction of scarifiers and deep-stirring implements, such as the subsoil-plough, has caused a great revolution in the practice of husbandry. So many ploughings are not thought necessary on Wheat land; and fallows, except as a preparation for roots the same year, are almost excluded, except occasionally on the stiffest wettest soils which have not been thoroughly drained.

Many young and amateur farmers who are zealous in introducing improvements in Agriculture, will be surprised to hear that there is nothing new in these improved practices. They have been detailed in books for half a century and more; and in the Agricultural reports of the counties in England, published under the sanction of the Board of Agriculture, in the beginning of this century, there is scarcely one in which the most improved practices of the present day are not described and recommended. Every one interested in Agriculture read them, but very few put them in practice. The old plodding farmer had no idea of altering his old ways. The landed proprietor recommended his bailiff to try the new plans; something was attempted, but ignorance and prejudice and sometimes conceit were the cause of failures and losses. The zeal cooled, and the old methods were thought the safest after all. Intelligent farmers were precluded from adopting or even trying new methods, by absurd restrictions in their leases, sometimes forcing them to follow a disadvantageous rotation, and sometimes forbidding the cultivation of profitable crops, such as Potatoes, for fear of exhausting the land. As well might Wheat and Oats be prohibited, for they are both great exhausters. There is a new spirit arisen, which has been diffused and greatly promoted by the exertions of the Royal Agricultural Society of England. If this Society will only let the practical farmer know what methods have already been proved to be right; what soils are suited to each different mode of cultivation; will show how sound theory and practice may confirm each other, and, collecting well-planned experiments and their results, will show how they tend to increase our knowledge of Agriculture, it will do more good to the nation than the soldiers or diplomatists who by their sword or negotiations should have added whole provinces to the Queen's dominions.—M.

OBSERVATIONS ON THE NEW SYSTEM OF POTTING PLANTS.

By Wm. Wood; at Messrs. Henderson's Nursery.

No. III.

THE principal difficulty in adopting the system now recommended will be found in a proper application of large proportions of soil in the process of potting; a difficulty which at first sight may appear really insurmountable to those who are but partially acquainted with the systematic modes employed by experienced cultivators.

The principle involved in the application of large proportions of materials in the process of potting may be defined as follows:—“All powers and qualities, whether mechanical or chemical, are enhanced by the accumulation of numbers; that is to say, each part or parcel of a mass is raised to a higher value or intensity, when it forms one of a heap, than when left to itself; and the more complete and immediate the correspondence of parts, one with another, the more will this enhancement be accelerated.” This principle is not urged as being merely applicable to the practical operation in favour of which it is now adduced, but is also applicable to all other modes of culture, however modified in their nature. The law remains the same, although its effects may be varied by the conditions under which it operates.

As the processes of potting need not be restricted to the application of soils in the proportions mentioned in a previous paper, nor are of absolute importance to the attainment of fine growth; it may be necessary to advert to the precautions considered essential to success in cultivation generally.

1st. A proper selection of soil is indispensable, in the first instance. It is probably to the facilities possessed by some cultivators more than others for obtaining a suitable material, that the heavy mode of shifting is due, rather than to any original combination or previous preparation. It has only recently been proved that some kinds of peat in general use are greatly deficient in texture and quality, while that in which pure decomposed vegetable matter greatly preponderates, in a pulverised state, is preferred.

The superiority of such a material is generally to be tested by the absence of all extraneous matter; and not unfrequently it is found quite free from sand. Perhaps the most simple and efficient plan of improving the texture of soils, without the aid of additional material, is simply by separating the close or binding portion, as follows:—Place the compost in a sieve of two-eighths of an inch in the wire-work, which by being partially moved will permit the loose portion of the soil (as the least valuable) to pass through, and the remaining portion when modified (if requisite) by being entirely passed through a sieve of a medium size, will be more uniform in its texture, and favourable to an equable circulation of moisture. This process may be varied for any quality of soil, either for the purpose of attaining luxuriant growth, or for the first potting of young stock.

2d. Suitable proportions and arrangement of material in the process of potting are also essential to superior cultivation, particularly when young and tender plants are transferred from small to large pots. A rule of proportions has already been given. The two most general and fatal errors in potting are, first, in so placing the large potsherd (or other material) over the bottom hole of the pot, as to admit a very imperfect passage for the superfluous moisture; and secondly, a very partial intermediate drainage, or even its entire omission. A portion of porous material placed immediately upon the lower drainage prevents the soil from filling up the interstices of the potsherds beneath, and modifies the fluctuations of temperature to which plants may be exposed. Its coarser texture, moreover, prevents the soil above from remaining saturated in extreme cases of exposure. Next to the quality of soil the success of cultivation will much depend upon the quantity and arrangement of its parts.

3d. A due exposure to atmospheric and solar agency is indispensable to the successful co-operation of other influences employed in the process of cultivation. The distinct agencies upon the mutual action of which the successful management of plants depend are, first, those to which they are subjected in the process of potting, &c., viz., the organic and chemical substances; and, secondly, those which act upon their external surfaces, as light, air, heat, &c., each affecting to a certain extent the whole vegetable system. Atmospheric and solar influence should be so modified as to balance the power of absorption to which plants are exposed; in other words, the intensity of the former should, as a general rule, be in proportion to the amount of material used in the process of potting, regulated at the same time by conditions of growth, situation, &c.

"An error in first principles can be rectified by no after-application of scientific rules." There is ample evidence to prove, that it is "the elementary conditions of an organised being, which favour the ultimate development of its parts."

It has been a subject of surprise to some, that the system whose merits have been advocated has not been practised at an earlier period than the present. Perhaps the talismanic influence of *custom*, and the "ten thousand" daily determinations to reduce the "majestic proportions of Nature" to the pigmy restrictions of art, are not the only obstacles which science has had to remove. The deductions of reason, and the investigations of truth, have long ago proved that every operation in art is limited in its effect, in proportion as it recedes from the laws which Nature has prescribed for the same end; and in appealing to the result of superior cultivation, or the records of professional practice, it will be found that every instance of pre-eminent success will prove to have been invariably an approximation towards an accumulative system of cultivation.

I have been asked what is the probable period for which specimen plants of mature growth may be cultivated with success. The ultimate object of cultivation is the attainment of the greatest constitutional vigour, with a uniform development of bloom; it is consequently evident that the more nearly such a result is attained, the more exhausted will be the vital energies of the plant—a development of bloom being matured or ultimate function of vegetable life.

The renovation of such plants will depend upon the skilful appliance of those remedial operations which Nature points out.

The first means employed is the early and entire removal of decayed blossoms; and secondly, a removal (by pruning) of those portions of the plant which are partially exhausted by the production of bloom, at least so far as the proportions of the plant will permit. By thus limiting its circulation, the energies of a plant will again be excited by the accumulation of its sap, which, aided by a partial cessation of watering, and a closer and higher temperature, by a few degrees, will serve to unfold its power in the development of buds.

Two instances occur in the Pine-apple-Place establishment, which serve to show that even renewed shifts to other pots is not necessary in all cases of plants in large pots. The first is illustrated by the plant *Zichya coccinea* (formerly *Kennedya*), which forms the cut in a previous part of this Paper. The specimen was grown in a large 16 pot, and bloomed profusely in the summer of 1842. Its consequent exhaustion appeared to preclude the possibility of the plant being again excited into renewed bloom. After removing the exhausted blossoms, the plant remained unpotted, and again so far recovered its vigour as afterwards to be purchased for a Continental exhibition in the ensuing season.

In a second instance, a plant of *Gloxinia rubra* was transferred in the spring of 1842 to a large 16 pot, the compost being nearly equal parts of dry decomposed manure and peat. The same season it formed a luxuriant

specimen, extending two feet in diameter. After blooming, the plant remained dormant in the same pot; and in the present spring, it was replaced in the same material and pot, having been in a dry state nearly five months. At this time it is still more exuberant in growth than in the previous season, extending three feet in diameter and nine feet in circumference.

Such are a few of the features that characterise the best mode of cultivation yet known; and, whatever may be the merit of other systems, in which, by a skilful application of artificial means, mature growth may be attained by successive efforts, it may be confidently affirmed that the noblest specimens have been obtained by an application of the principles adverted to in the foregoing statements.

In conclusion, the merits of each system are of peculiar value. The restrictive mode of cultivation is perfect in its application to the objects of commerce. The accumulative system is an approximation to that state of things in Nature, which, as the manifestation of Creative power, is perfect in its parts and in its design.

WHEAT SPLITTING.

THE leading article of the *Gardeners' Chronicle*, Sept. 23, contains a letter, signed "Archdale Palmer," on the produce of a single grain of Wheat; the return from this single grain was 22,000: this beats the forty-fold Potatoes all to nothing, and may certainly be called the greatest discovery that ever took place in farming, provided it can be made use of at a moderate expense. I have been requested by a gentleman interested in such matters, to make some calculations as to the probable cost of planting an acre upon this principle. I am no farmer myself, therefore my calculations will apply only to manual labour and expense. But as this experiment is in print, there is no difficulty in examining what the result was.

Mr. Palmer sowed a single grain of Wheat in July, 1842; the day is not mentioned, and the most important points for a farmer to know are left out. In August the first produce of this grain made four plants, three weeks after; they were again separated, and made 12 plants; separated again in September into 32 plants; in November these were separated into 48 plants, and planted out in the open ground; the letter does not say whether in a garden or in a field, but that they occupied 11 yards long by 1 yard wide, being the 440th part of an acre, consequently 440 seeds were sufficient to plant an acre. In August, 1843, 10 of the 48 plants died, but the remaining 38 plants produced 22,000 grains, which weighed 2½ lbs.

The farmer holds his land by the acre, and the average produced from a good field of Wheat is about 30 bushels to the acre. Now let me see what Mr. Palmer gained beyond what the farmer gets upon the old system, 2½ lbs. to every grain sown, that is, to 440 grains for an acre 18 bushels and 12 pounds. Add to this one-third taken by the birds, making 24 bushels; add also one-fifth for dead plants, which makes 29 bushels and 12 pounds to the acre: the farmer has saved 1½ bushel by the experiment, provided he did not lose a plant of what he planted out.

But I think this experiment is well worth a farmer's trial; it may be greatly improved upon by a practical man after the first year's result, and may be very advantageous to poor people who have children going idle. A poor man having one acre of Wheat every year, his wife and children would perform the operation, and the two bushels and a half would keep them in bread during the time they were doing it.

I am aware that my scale of expense will startle the farmer in the first instance, because I shall be liberal in giving him plenty of time to perform the work in; another thing, he must observe that it is made for able-bodied labourers at 2s. per day. The idea of using pots of any size I discard at once, without a single remark.

The first thing the farmer has to do is to provide a suitable piece of ground for a nursery for his plants—the nearer the field where he is to plant them out for good the better; the space required ought to be about 40 feet by 30 feet, divided in four feet beds, for the convenience of getting at the plants with ease from each side; the ground ought to be well manured and well dug.

I would not wish to confine the farmer to the exact number of seeds, but let him sow the ounce at once, as there will be failures of course.

The expense, according to my view, is this:—

	£	s.	d.
Sowing one ounce of seed	0	0	2
Parting and planting the first produce into 1760 plants	0	1	0
Parting and planting 1760 plants into 5280 "	0	3	0
Parting and planting 5280 " into 10,560 "	0	6	0
Parting and planting out into the field 10,560 plants into 21,120 "	0	12	0
	£1	2	2

This calculation shows a loss of 3s. 8d. beyond what the farmer has under the present system.

But there is something else wanted: how is he to guide his planters to plant at 18 inches apart? to remedy this want he can make a light wooden harrow, with the bars set at the distance required, with a little roller, say six inches in diameter in front, and a wooden tooth or iron in each bar at the other end; this is to make a mark for the workmen to plant in. Lines are too expensive for such a purpose.*

Now if the farmer finds that it is beneficial to follow the plan now sketched out for him, I will put him on a cheaper method to perform the operation, if done on a large scale, that is, to do it with boys from 12 to 14 years of age, who

* This machine may be drawn by a small pony; this harrow loses one mark in every turn after the first, as it must return with the off tooth in the last mark.

would be glad to be employed at any price; but the wages I mean to put down for them are 3s. per week.

If done by boys at 3s. per week:—

	£	s.	d.
Sowing one ounce of seed	0	0	2
Planting and parting the produce, one day 1760 plants	0	0	6
Planting and parting 1760 plants into 5280, two days	0	1	0
Planting and parting 5280 plants into 10,560, four days	0	2	0
Planting and parting 10,560 plants into 21,120, and planting them out in the field for good	0	8	0
	£0	11	8

This scale is given upon the supposition that the farmer might be inclined to plant four or five acres, or any number he likes; and an old experienced labourer should be put as a head to keep them in order.

Some of your farming contributors may doubt my scale for boys if put in print; but if I was their master, they would do double the work put down for them. About the month of March, 1813, a young man of the name of John G., who was brought up as a gardener at Lord Aberdeen's, Haddo House, and was some time in the nurseries at Aberdeen, came up and got employment in B.'s nursery at R.; this was in the time of the war, and men were scarce, and wages high. Mr. B. came by one day and said, "How do they plant seedlings in your nurseries?" "They dib them, sir," said John. "And what do they give?" "Five-pence a thousand." "Very well, John, I will give you five-pence a thousand; I have a great many to plant, and you may begin as soon as you like." John could plant 10,000 Larches in a day himself; but he thought of another scheme. He saw a lot of boys at play in a field at—; he went out and stood looking at them for some time to see who was the nimblest among them; he pitched upon six, and told them he would give them 3s. per week if they would come and work for him. They came, and in three or four hours he taught them to plant, and at the end of the week they were perfect masters of their work. John brought in a bill to B. on the Saturday night of five or six pounds. Mr. B. in astonishment declared he could not plant the number in that time. "If you do not believe me," said John, "you may count them." B. examined the ground, and paid him, but said he never was so caught before in any transaction he ever had to do with. John worked with me for a twelve-month, and he used to boast that he saved more money in B.'s nursery in a week than all the young men employed did in two years. Now these were Cockney boys, and I see no reason why country boys could not do the same. —*Dingwell.*

In connexion with this subject we subjoin four statements from practical workmen, who all agree that pots are an unnecessary expense.

No. I.—Experiment on $\frac{1}{4}$ of an acre. Extended ratio for 1 acre.			
July, 1 Grain sown, multiplied by 440	440	Grains sown.	
Aug. beginning, 4 Plants, " "	1760	Plants.	
Aug. end, 12 " " "	5280	"	
Sept., 32 " " "	14,080	"	
Nov., 48 " " "	21,120	"	
		Hours. Min.	
July Sowing	440 Grains	0	20

Nearly 13 days 1 hour—or 13½ days may be allowed.

	£	s.	d.
Of this 13½ days may be reckoned for women and boys, occupied in taking up and dividing the plants, at 1s. per day	0	4	6
Men, 9 days at 2s. per day	0	18	0
	£1	2	6

It would appear from this estimate that 18s. 6d., the saving in seed, is short of the expense incurred to the extent of 4s.; whilst the expense of superintending the labour would be greater than is required for sowing. It also appears that in Mr. Archdale Palmer's small, and doubtless carefully-conducted experiment, 10 plants out of the 48 died; this is a large proportion, leaving more than $\frac{1}{2}$ of the ground blank, whilst the return of produce does not warrant the supposition that the remainder would make up for such deficiency; 2½ lbs is not 20 bushels per acre; and if to this be added $\frac{1}{4}$, stated to be destroyed by birds, still the amount would not equal an average crop.

The expense of labour more than balances the value of seed saved; and

The produce is deficient more than the quantity required to sow an acre in the usual way.

No. II.—In the following calculation the allowance for labour is at the rate of 2d. per hour for a fair man's labour by the day. It is also supposed that the ground is prepared ready for sowing, &c.

	£	s.	d.
To plant an acre of Wheat, the plants to stand one foot apart, 305 grains are to be sown, about the middle of July, six inches apart each way in the open ground, the labour for which would be half an hour	0	0	1
The same taken up and divided about the middle of August (much, as regards the time, depending on the state of the weather), and averaging a division of 4 times to each grain, or 1220 plants; to be planted at six inches apart (planting, on an average, 10 plants a minute), two hours' labour	0	0	4
Taking up and dividing the same	0	0	4
The same again taken up and divided, about the middle of September, and averaging a division of 3 times, or 3660 plants, and still planted six inches apart	0	1	0
Taking up and dividing the above	0	1	0
	£0	2	9

Carried forward 0 2 9

Brought forward	£0	2	9
The same taken up and again divided, about the middle of October, and averaging a division of 3 times, or 10,980 plants, and again planted as before, 6 inches apart	0	3	0
Taking up and dividing the same	0	3	0
The same plants again taken up and divided, about the beginning of March, and averaging a division of 4 times, or 43,920 plants, the plants to be placed at one foot apart at this planting each way	0	12	0
Taking up and dividing the same	0	12	0
Total for planting an acre of Wheat, one foot apart	£1	12	9

No. III.—To plant an acre of Wheat, the plants to stand one foot and a half apart, 227 grains must be sown, about the middle of July, six inches apart—

The labour for which would be half an hour, at 2d. per hour	£	s.	d.
	0	0	1
The same taken up and divided in August, averaging a division of 4 times, or 908 plants—labour for planting, one hour and a half	0	0	3
Taking up and dividing the same	0	0	3
The same taken up and divided in September, averaging a division of 3 times, or 2724 plants, still planted six inches apart—labour for planting	0	0	9
Taking up and dividing the same	0	0	9
The same taken up and divided in October, averaging a division of 3 times, or 8172 plants, and planted at six inches apart—labour for planting	0	2	3
Taking up and dividing the same	0	2	3
The same again taken up and divided, about the beginning of March, and averaging a division of 4 times, or 32,670 plants, which are to be planted one foot and a half apart—labour for planting	0	9	0
Taking up and dividing the same	0	9	0
Total for planting an acre of Wheat at 1 ft. 6 in. apart	£1	4	7

No. IV.—In my opinion the only way of executing this plan is to dibble in the seed, 2 grains in a hole, about 4 inches from each other, the plants to be taken up when they are in a proper state, and divided into five, which would be as many on an average at that time as could skilfully be made, and then planted out at once, where they are to remain, thus getting rid of all the intermediate dividings. The number of grains of Wheat required for one rood would be 42,240, which would not exceed one pint at farthest, as I have ascertained by actually counting that quantity; and consequently, a pint of Wheat will plant 21,120 holes.

If each hole thus gives five plants on an average, which may be reasonably expected, there would be at the disposal of the farmer, 105,600 plants, a quantity sufficient to plant five acres, at 17½ inches apart.

If farmers were to adopt a system of this kind, there is little doubt but it would soon gain ground in the country. Seed for five acres, sown in the usual way, would cost about 4s. 12s. 6d.; whereas, one pint of Wheat would only cost about one penny. The plants may be taken up, separated, and planted again by 50 people in one day;—25 taking up, dividing, and supplying 25 planters, allowing each to plant 4,221 per day, and this might be wholly done by boys and girls at 6d. per day; consequently, the farmer's saving, exclusive of the original cost of dibbling the rood, would be 37s. 5d. per every five acres, as thus—

Cost of seed-Wheat for five acres	£4	12s.	6d.
Cost of one pint of seed-Wheat	£0	0s.	1d.
Dibbling a quarter of an acre	0	0	0
Taking up and planting	1	5	0
	£3	7	5

FAMILIAR BOTANY.—No. XVII.

THE WATER FLANNEL.—A friend put into my hand the other day a yard or two of what seemed a coarse kind of flannel, gray on one side, greenish on the other, and a full quarter of an inch thick. It had been thrown up by the river Trent, and washed ashore in vast sheets. Those who had seen it pronounced it a manufactured article, and so it was, but by the hand of Nature. It brought to mind a similar production, of which some acres had been discovered in Berkshire about three years since, when it was said that clothing had been made from it by the country people, who took it for a sort of cotton wadding, fallen from heaven.

When this substance is handled it is harsh to the touch, although composed of finest threads. To the naked eye it presents no character by which it may be known from any coarse and loosely woven cloth. The microscope reveals its nature. It is then found to consist of myriads of jointed threads, whose joints are compressed alternately sideways and vertically; they are here and there transparent, but for the most part opaque, and rough to the eye. The white side is more opaque than the other, and more unexamined; but if a little muriatic acid be added to the water in which the fragments of Water Flannel float, copious bubbles of air appear, which are much increased in quantity by the application of the heat of a spirit-lamp. By degrees they disappear. They were bubbles of carbonic acid, extricated by the action of the muriatic acid on a coating of carbonate of lime, with which the plant is more or less completely invested. If, after this operation, the threads are again examined, the contents of the joints become visible; in the green parts of the Flannel they are filled with an irregular mass of green matter, in the white part with myriads of globules, intermixed with a shapeless substance. The globules are the seeds. If a little iodine is then given to the flannel, it is readily absorbed, and the contents, shapeless matter, globules, and all, become deep violet, showing that all this substance is starch.

Hence it appears that the Water Flannel is a microscopical plant, composed of jointed threads, secreting carbonate of lime on their surface, and forming seeds composed of starch within them. And when we consider that the joints are smaller than the eye can detect, while each contains from 50 to 100 seeds, it may easily be conceived with what rapidity such a plant is multiplied.

Besides which, as their contents consist to a great extent of starch, the most readily organizable of all vegetable materials, the means of growth with which the plant is provided are far more ample than anything we know of in the higher orders of the Vegetable kingdom.

This curious substance has of late years attracted the attention of people in various parts of England, and the inquiries that have been made of naturalists have been so incorrectly answered, that it is full time to put an end to the mistakes about it. In the year 1840, the Royal Agricultural Society submitted specimens of it to the Librarian of the Linnean Society and the Secretary of the Royal Dublin Society. Mr. Don declared it to be the *Oscillatoria corium*—one of the half-animal, half-vegetable productions which form entangled layers in the bottom of streams in the colder parts of England. But it is difficult to conceive what could have given rise to this statement; for the Water Flannel has no one of the peculiarities of *Oscillatoria corium*, which, moreover, is glossy and slimy. Mr. Hardyman reported it to be a water-plant called *Conferva sordida*, or, as he called it (*Hibernicæ*), a kind of fresh-water sea-weed; and he was nearly, though not quite, right; for it is a true *Conferva*. *C. sordida*, however, differs; has another colour, and a silkiness which is rendered impossible in this plant by the carbonate of lime that clothes it. Another authority assured the Linnean Society that the Water Flannel is the *Conferva fluviatilis* of Linnaeus, a more extraordinary error than that of Mr. Don. I happen to know that, in two of these cases, the observers had the real Water Flannel submitted to them, for portions of it were placed in my hands at the same time; and there is little reason to doubt that the specimens laid before the Linnean Society were the same.

The Water Flannel is really the *Conferva crispa* of Dillwyn, or the *C. capillaris* of Linnaeus, known for years for the singular property it has of forming beds of rough, entangled, curling threads.

And for what purposes, we may ask, is this small plant intended? Is it for food for man or animals, or for decorating the waters in which it grows, or for adding to wealth or comfort in any way? It is hard to answer selfish questions of this sort. That it has its use we may rest assured; but whether for us or our fellow-creatures it is scarcely within my province to determine. I may, however, suggest, that it, like all such agents, is probably one of the great means of moving the hidden springs of the natural world.—It swarms in waters, where it floats and grows with inconceivable rapidity. What does it grow on, unless the decaying matter in which all water abounds, and which tends to pollute it? It is therefore a purifier of the streams.—It is cast by the waters on the meadows, and carries with every 1000 lbs. weight of it, 400 lbs. and upwards of carbonate of lime, 200 lbs. of carbon, with at least 15 lbs. of the air called nitrogen. These are manures which the Water-Flannel rescues from the flood to increase the vigour and abundance of the land.—But it is also the nest of insects and animalcules, which wander amidst its trackless fields and feed upon its produce. Surely these are uses enough without a hacknied appeal to the admiration of what are called inquiring minds.

But it may be that nature intends such plants for higher purposes. One quarter of its weight consists of starch and azotised substance; that is to say, of the nutritious matter that gives bread its value. Why, then, might not the Water-Flannel be converted into food in times of scarcity? It would certainly be far better than the bread of bark and straw which has been sometimes used.—R. E.

TO OBTAIN FLOWERING PLANTS OF SALVIA SPLENDENS IN THE MONTHS OF MARCH AND APRIL.

THE small lateral shoots from large specimens of indifferent vigour, and which were previously bloomed the current season, were formed as cuttings in the last week of October, and struck in store pots of 12 each, within a span-roofed box, resting within two inches of a hot flue, in a propagating-house. When in a suitable state for potting off, pots of small and large 48 size were prepared by placing an inverted thumb-pot over the cavity of each as drainage (or circulating medium,) and around each small pot were added, up to its level, portions of half-decomposed manure in a thoroughly dried and coarse state, pressed close.

A struck cutting from the store pot was then inserted in each, and in many instances a flake of the dried manure was placed immediately over the cavity of the small inverted pot, upon which each cutting, with its detached portion of roots, &c. generally rested.

The compost used was two parts of yellow loam, with a third portion of the same dried manure reduced through a sieve of two-eighths of an inch wide in the wire—a small quantity of sand being added. The first situation in which they were placed when potted off was within the span-roofed box or frame in which they were struck, from whence, when fully established, they were removed for a short period upon the pit of an Orchidaceous-house; and from this position they were finally transferred to the south end of a span-roofed stove, which was also employed in the spring as a Forcing-house. This structure was heated by an ordinary flue running round the house, which being in an exposed situation, required a high temperature during winter, and consequently the atmosphere was dry. The plants were placed upon an elevated shelf against the south front glass, and also upon the platform beneath, over the flue, which was covered with sphagnum and surfaced with sand in order to counteract the intense heat by copious watering.

In addition to the potted cuttings, the same process was applied to larger plants, the whole of which had pre-

viously bloomed in an indifferent state of growth. The latter were cut back a short time previous to the operation, in order to accumulate their sap as far as their lateral growth permitted. The only difference observed with the shifted plants was, a great reduction of the soil in which they had been previously grown, and the inverted pot used for internal circulation (or drainage) was proportionate in size to the large twenty-fours or sixteens to which the plants were removed; the quantity of dried manure employed was also in proportion. The larger specimens, including the whole of the shifted plants, were excited to growth by being placed upon a bed of tan previous to their final removal to the stove. Being, as before stated, exposed to a high temperature and ungenial atmosphere, humidity was maintained by frequent syringings, &c. at appropriate hours.

The above mode of potting was adopted apart from any previous knowledge of its application or probable effect. In the instance of the potted cuttings nothing short of a failure was anticipated, from the extremely rapid circulation which was expected to follow; and on this account the plants excited little interest until their uniform and exuberant growth proved, satisfactorily, that the proportions, arrangement, and quality of the materials used in the process of potting, had answered the great end always sought for in high cultivation—namely, a uniform circulation of moisture.

The appearance of the plants during the progress of their growth, especially of the cuttings in 48 sized pots, up to the season of bloom, was luxuriant and uniform in the highest degree, indicating the vigour of seedlings rather than of cuttings, and even led to an inquiry whether they were not some new species! During March and April they presented a very interesting appearance, with their long brilliant spikes of orange-scarlet, mingling at that season with other gay productions of the forcing-house, but surpassing them all for elegance and beauty.

I conceive that the principles involved in the foregoing instance of successful cultivation, with portions of plants previously exhausted by blossoming, afford conclusive evidence in favour of opinions advanced elsewhere, namely, that—

1st—The vigour of plants is in proportion to the excitability of their organs.

2nd—A progressive and accumulative system of cultivation is alone capable of obtaining the greatest possible effects, from any proportionate amount of agency to which plants are exposed.

3d—The greatest possible effects in cultivation do not in any case depend upon the presence or absence of any single element of support, nor upon any given amount of material or agency, but in the judicious combination of all the materials or agencies which are essential.

4th—An adaptation of those agencies to the progressive stages of growth in plants is essential, if the best possible effects of cultivation are to be obtained.

5th—The subserviency of the highest given amount of material to the legitimate object of cultivation will be the nearest test of an ultimate effect.

6th—The best result produced by an inferior amount of material is only an approximate effect.

7th—The greatest extent of healthy development in the organs of plants is equal to an ultimate effect in growth.

8th—The subserviency of the greatest extent of growth to an uniform development of flower-buds is equal to an ultimate effect in bloom, which is the highest object of cultivation.

ENTOMOLOGY.—No. XLIX.

ASPIDOTUS CONCHIFORMIS (*The Apple-tree Mussel Scale, or Dry Scale*).—Upon the trunks and branches of Apple and Pear-trees there are found two species of Scale-insects, the former of which we will now describe and figure. They are so small, and partake so completely of the substance, colour, and character of the bark, that an unpractised eye would not suspect they were the production and habitation of an insect, and I believe that some allied species attached to the Ash and other trees have been mistaken, even by philosophers, for Lichens, &c.

The little animals sticking to the bark of the Apple-trees are so similar to Mussel-shells, that Geoffroy called them "*Le Kermes en ecaille de moule*," but instead of giving them an appropriate scientific name, he designated them as the *Chermes arborum-linearis*. Gmelin has in some measure supplied the deficiency, by describing them under the name of *Coccus conchiformis*; but if he had applied the term of *Mytiliformis*, Mussel-shaped, it would have been more significant. These scales do not lie in one direction, as others generally do, with their heads downward, for some of the Apple-tree Scales are placed vertically, others obliquely, and many have a transverse direction (fig. 1), and sometimes they are crowded together in immense multitudes in every possible position, even lying one over another. The scales are hard, dark, and shining; they are exceedingly like a minute Mussel-shell, but rather more elongated; they are slightly curved, transversely wrinkled, rounded at the tail, and attenuated at the head, which is semi-cylindric, less opaque, and of a rusty colour (fig. 2). These adhere firmly to the bark, having the margins broad beneath and woolly (fig. 3), and when dislodged, the space they had covered appears white. Within the shell is found a fleshy-green female, occupying part of the cavity towards the tapering extremity (fig. 4), the hinder space being entirely filled with white oval eggs, amounting sometimes to 50 or more (fig. 5); they are rather larger than in most species I think, and produce little white flat Cocci, with two antennae and six legs; they are lively and run about for several days, but having fixed themselves then grow, and by degrees become

very different creatures to what they were immediately after their birth.

On opening the Scale and taking out the female, I found that she was not attached to the shield, and that consequently this Mussel-scale is not a true Coccus, but an Aspidiotus; it was a fat yellow-green maggot, nearly orbicular, very convex, shining, with distinct transverse striae, indicating the abdominal segment; a pale brown line was visible down the back, from the alimentary canal, shining through the thin and transparent skin (fig. 6). I looked in vain for a rostrum in the only female I could find alive, and I was equally unable to detect any legs or eyes; indeed, it seems very doubtful whether the latter are possessed by any of the female Coccidae in their adult state, although they are very distinct, but very minute when they are first hatched.

A contributor to the "Gardeners' Magazine" says, "A scale of a brown colour, pointed at both ends, and less than half the size of a seed of common Flax, abounds in the North of Cambridgeshire, on the branchlets of old Apple-trees, and in unlading the trees in autumn of their ruddy riches, here and there an Apple occurs to whose rind one or more of these scales firmly adhere, and where it must have become fixed before the Apple's growth was finished; as when the scale is removed, a slight depression in the rind of the Apple is perceptible." The same scale, it is said, is very prevalent in Cheshire on the Pear-trees, where it is considered to be injurious to the fruit, as by clinging to the rind it prevents the fruit from swelling to its full size. It is asserted that Peaches, Apricots, Plums, &c., suffer from the attacks of the Mussel-scale, and if young Ribston-pippins, and some varieties of Pears be planted near any other Apple or Pear-tree that already supports these insects, they will speedily migrate to them. The same observer says, "I believe this disease is mostly, if not entirely, confined to wall-fruit in the open air, standards not affording them sufficient warmth and shelter during our winters especially in Scotland, where they have been very abundant and very troublesome. They attach themselves to the bark, and by means of their rostrum they soon exhaust a branch so completely of its sap, that it withers and dies." Mr. Ingpen recommends "two or three applications in the spring, at intervals of one or two weeks, of strong lime-water with a brush, and a dusting of quicklime before the branches get dry; or a washing of soft soap and water, using also the powdered lime," which is perfectly harmless to vegetable life.

Although it is generally trained trees that are most attacked by the Mussel-scales, I have seen standards so covered with them, that they were completely hide-bound it might be said, so that it was impossible for the trees to increase in size. I doubt not that the best plan for getting rid of these Scales is to scrape the bark with a wooden knife, so as to bruise and crush the females without lacerating the tree, and immediately after to wash over the trunk and branches with some gas-tar. If any other mixture should be preferred, the best season for applying it will be in May, when the young ones are creeping from under the scales, and are easily destroyed; but they are so minute that it will be necessary to use a magnifying-glass to ascertain when they are hatched and in motion.—*Ruricola*.

AMATEUR'S GARDEN.—No. XLII.

THE frosts have at length settled the flowers for the season, and the falling leaves warn us that winter is at hand. If greenhouse plants were housed before the frost began, they will now require but little attention except to give them plenty of air and keep them as hardy as possible. Some of the most forward of the Cinerarias which are now showing bloom will require to be repotted, and probably some of the earliest potted young plants of Calceolarias and Pelargoniums would be the better for a little more pot-room. From this time to the other side of Christmas you can scarcely keep your Pelargoniums too dry, so long as they do not flag, and young plants of kinds that do not bloom freely should be rather cramped for pot-room. The buds of the earliest Chrysanthemums are now swelling fast, and where they promise to bloom freely it will be as well to thin the blooms out a little, and that without delay. The plants must be well supplied with moisture, and if a little weak liquid manure is given to them occasionally it will be of service—however, let it be weak, for it is wrong to give plants strong manure or gross food at a time when there is not sufficient light to elaborate the juices properly. Plants in frames cannot have too much air or be kept too cold, so long as they are not frosted; but above all things keep them free from rain and from becoming wet in any way.

In the flower-garden the principal work will be to get the beds cleared of the old plants, and prepared ready for planting with Tulips, Hyacinths, Ranunculuses, &c., &c. In clearing the old plants away, roots of Salvia patens, Lobelias, Dahlias, and the like, may be stowed in a dry shed or cellar, and covered with dry tan, ashes, or leaf-mould, until the spring. It is not advisable to keep Bulbs

of Tigridias dry through the winter, as they seldom get sufficiently ripened in this country, and to dry a bulb that is not fully ripe is certainly injurious to it. For some years I have made it a rule to place these bulbs under the greenhouse stage, and I have invariably succeeded in keeping them better than when I used to dry them off. Where there is convenience and a little heat—if bottom-heat all the better—it is a good plan to pot a quantity of the best scarlet and variegated Pelargoniums, and shorten in the branches to where they are pretty well ripened. These, if forced for a few weeks, to make them form young shoots an inch long, and then hardened off in the greenhouse until spring, will make beautiful dwarf bushy plants for bedding out, and will bloom more profusely than young luxuriant plants. In the *Chronicle* of last year, Mr. Gordon recommended Pelargoniums and such like strong-growing plants to be preserved through the winter in large boxes in layers of dry peat, and then to place the boxes in some dry room or cellar; and doubtless this is an excellent plan for a great number of things. The plants may be taken out of the boxes, and potted towards the end of March, and will make pretty plants for planting out in May.

Trenching and all kinds of new ground work must be proceeded with as fast as possible, so as to get all alterations completed before the new year.—*W. P. Ayres, Brooklands*.

LIST OF FLOWERING PLANTS FOR FORCING.

As the readers of the *Chronicle* have shown much interest of late in Flower-forcing, I beg to submit a list, with a few hasty remarks thereon, which may serve to refresh the memory of those who are preparing for a winter campaign of this kind; and, in the first place, the subject naturally divides itself into three heads: viz., 1st, tribes which naturally bloom through winter; 2d, retarded autumn flowers; 3d, early forcing. This subject is yet in its infancy, if we consider the eligibility of many plants, which have either been introduced, or brought into public notice afresh, within the last few years. Mr. Beaton has, I perceive, fairly caught the mania, and has done much towards drawing attention to the subject; I hope he will continue his labours on this head, as he is both able, and has the opportunity, to advance the branch of gardening. I will now submit my enumeration of kinds as they occur to me, and I hope that critics, instead of railing at me, will employ their time in adding to or correcting the lists, as, under present circumstances, it is evident that such lists must be somewhat imperfect. If the subject proves interesting to the readers of the *Chronicle*, I shall be induced, as the long winter nights come on, to continue observations of a practical nature on the various subjects contained therein, as far as my experience has reached.

| 25 Blebias, F N | 50 Justicia salicifolia, F R |

Abbreviations used:—F, forced flowers; R, retarded summer or autumn flowers; N, natural season of flowering.

Most or all of the above list possess capabilities for blooming through winter or the dull season—say from the beginning of November to the end of March, after which flowers are easily obtained. For many of them a cool pit or frame would suffice: for others, a common dung frame; and hence the small amateur may indulge in flower-forcing as well as his more wealthy neighbour. For the generality of plants in this list, however, something more complete is wanted, and one grand desideratum is, to secure a permanent bottom-heat of 80° to 85°. The next grand point is abundance of light—at least a roof capable of receiving all that the season affords; and these, with a perfect command of atmosphere and moisture, constitute the three great requisites. However, much may be done during summer previous to the forcing of any given tribe; and one of the principal maxims may be illustrated by the old country saying, viz., "Early to bed, early to rise." If thorough justice could be done to the subject, I am persuaded that many things should be forced into wood slightly in the previous spring; in fact, take the old Provens and Moss Rose for instance: if these must be obtained by Christmas, they ought to be accelerated as early in the previous spring as the beginning of March, in some comfortable pit, with, if possible, a small amount of bottom-heat. These plants, with proper management, ought to be turning yellow in the leaf by the early part of September, and by the end of that month should be removed to the coldest situation the garden affords; in fact, behind some north wall, to gather the principle of excitability.—*R. Errington*.

HOME CORRESPONDENCE.

Planting.—I read in the *Chronicle* of the 16th and of the 30th September letters on the subject of Planting. In the former was one article, signed "W. H. Humphreys, Vicar's Cross Nursery;" in the latter were two—the first was headed "Planting," the last was signed "Quercus." The sentiments conveyed in the one signed "Quercus" are so much at variance with those of the two others, that I beg to call attention to their contents. But it is necessary first to observe, that what I say on the subject of Plantations are not to be considered as objects of individual but of national importance; for the planter, in 19 cases out of 20, does not benefit by his plantations in the way of profit, although he may rejoice in his work because he feels that he is doing good to his country and to those that come after him. This, I think, is true patriotism! Now if this is so, I cannot concur in the opinion of "Quercus," nor do I think it of equal value with that of Mr. Humphreys, who, writing from a Nursery, is interested in that on which he writes, and, with experience on his side, avows, by his signature, his readiness to stand by his statements—nay, more, he recommends the system which he finds profitable, after having practised it for a period of 27 years on a large plantation of 450 acres. The other letter, headed "Planting," is in strict accordance with Mr. Humphreys' report; and he heartily rejoices in that which he personally visited and examined. Now it is necessary that "Quercus" should bring forward some testimony to support his views similar to that which Mr. Humphreys and "R. S. L." have done, and point out some plantations formed of the same extent, or at least of similar age, where investigation might be made; so that those who may be disposed to plant might decide what method to adopt. The plantations of Dr. Thackeray are specified as evidence of the system approved of by Mr. Humphreys, after examination, and by the planter, "R. S. L.," on the same conviction, viz., ocular demonstration. Nerquis (the scene of these plantations) is, I believe, not 15 miles from Chester, and therefore can easily be visited. Now, let "Quercus" point out plantations of the same age and extent in any district and at the same elevation, 800 feet above the level of the sea; so that gentlemen desirous to serve their country and adorn it by plantations may visit each, and then decide which course they ought to follow. I shall be gratified if I find even a single individual has been led by these remarks to make personal investigation into so important a matter, in order that he may decide whether he should prune, as Dr. Thackeray has done, or only occasionally, as recommended by "Quercus." I think that Dr. Thackeray, in employing his means so largely in ornamenting the mountains near him, is conferring a benefit on his country, and setting an example well worthy imitation.—*Pro bono Publico*.

Large Egg.—Mr. J. Cook, of Garstang, has a duck of the common species that produced an egg on Monday last, Oct. 9, 1843, which weighed four ounces and a quarter.—*Facile*.

Heating.—Wanting to get a great quantity of damp or dry heat, as the case may be, I have built a vertical tank or an intended warm wall round a small forcing-house, and while it is drying I should feel greatly obliged by a word of information and advice from any of your correspondents as to the best plan to be adopted should my own scheme fail in operation. After various inquiries as to the merits and demerits of all manner of cements, and from fear of any insecure plastered affair, I determined from my aggregate of information to adopt the following plan, executed by the best workmen and with the best materials. I used a kind of soapy-working stone-mortar, made from what in Norfolk we call Heydon Lime—they say that this lime will set under water; it is used in all water-works, and its qualities are much talked of. On a capital foundation laid in this mortar I had 12-inch pavements, (having been thoroughly soaked in water;) placed horizontally; upon these are set, edgewise, other 12-inch pavements, two deep, and 5½ inches apart; at the back of these are laid hard white bricks on edge, (also perfectly saturated with water,) with a half-inch cavity between the pavements and brick-work, which is filled with grouting. All this was very carefully and slowly done with the aforesaid mortar; and which, supported all ways, I expect will form a perfectly solid mass to contain the water. My boiler allows me 18 or 20 inches in depth, which, by 5½ inches in width, gives me a great body of water for heating. The question I want to ask is, whether you think this plan will stand moderately hot, for it will not be boiling, water? If not, what would you recommend to make the sides impervious to hot water? Will the water form a sufficient deposit to stop the pores? Do you think that the hot water acting upon the mortar will act as a solvent to it? Is there any chemical solution that would saturate and harden so as to stop leakage should it occur? Would you paint the joints with any particular cement? I at first thought of your recommendation of Francis and Co., No. 2 cement, oiled and turpentine, but all the practical men say that this kind of casing will not stand satisfactorily, or near so well as my plan will do. There is Rock Park Cement—and I thought of some kind of grease mixed with the lime, &c. &c., or perhaps, as I have heard, Naphtha-varnish might be tried for the inside; but I have my doubts as to the efficacy of these. I shall be thankful for any suggestion; and should my plan succeed, or should I adopt any other, I shall be glad to propagate through your *Chronicle* any particulars or information I can give respecting it. In your "Home Correspondence" Mr. W. Hurst of Warrington mentions "heating by earthen pipes;" would you, or would he, be kind enough to inform me with what material they are jointed, or how the joints are put

together, as this is a most important point of inquiry in so good and cheap a plan.—*W.B.H.* [As these points interest a great many persons, instead of answering them ourselves we refer them to the kind assistance of our correspondents. We can only say that, as far as our experience at present goes, good cement, without sand, quickly and skilfully applied, will stand all the heat communicated by a hot-water apparatus. With regard to earthen pipes, they are about to be employed in the garden of the Horticultural Society, jointed with cement, by way of experiment. The pipes there employed are two feet long, of the red earth from which common chimney-pots are made, and formed with a shoulder at the smaller end, so that when they are fitted together, the edge of one rests upon the shoulder of the other. We cannot conceive that such an apparatus as *W.B.H.* has constructed can fail of holding water. What we do not perceive is how, by its means, heat is to be made damp or dry at pleasure; the walls will probably be always damp enough to affect the air of the house, though they will not leak.]

Clover Dodder.—In your last Number, Professor Henslow has pointed out a character in the flowers of the species of *Cuscuta* which he supposes to have been hitherto imperfectly noted. I would, however, refer Professor Henslow and your readers to Mr. Babington's Paper on the Structure of "*Cuscuta europæa*," in Vol. XVIII. of the "*Linnæan Transactions*," in which the character of the scales and their accompanying corona are fully described, and figures of the corona in the various species of *Cuscuta* are given. These figures, and the descriptions of the species, were copied into the "*Phytologist*" for July, 1842. It is also to Mr. Babington, in conjunction with Mr. G. S. Gibson, of Saffron Walden, that we are indebted for the past notice of the Clover Dodder, which Mr. Babington described and named in the February Number of the "*Phytologist*" of the present year.—*E. Lankester.*

Speculative Manures.—It has struck me that prussiate of potash ought to be a very powerful manure—of course I do not suppose that so expensive an article could be used except in flower cultivation, but I think it worth trying in that; it has all the elements which, according to Liebig, are the most necessary for the growth of plants. There are many plants, particularly bulbs, which are very difficult to manure in any way, and I think it probable that by trying some of these organico-chemical compounds, we may find the means of promoting their growth without the risk of killing them, which there certainly is from applying manure. Did you ever hear of watering Orchidaceous Epiphytes with soap and water? I have experienced great benefit from it in New South Wales.—*J. F. Bidwill.*

New Food for Sheep.—Whilst I was at Geneva in the autumn of 1837, I observed every one collecting carefully the fruit of the Horse-chestnut, and on inquiry I learnt that the butchers and holders of grazing-stock bought it readily at a certain price per bushel. I inquired of my butcher, who himself kept a very extensive grazing-farm, and he told me it was given to those sheep in particular that were fattening. The Horse-chestnuts were well crushed; something in the way, so I understood, that Apples are, previous to cider being made. They are crushed or cut up in a machine kept solely, in Switzerland, for that purpose; then about two pounds' weight is given to each sheep morning and evening. Sheep eat it greedily; it must be portioned out to them, as too much would disagree with them, it being of a very heating nature. The butcher told me that it gave an excellent rich flavour to the meat. The Geneva mutton is noted for being as highly flavoured as any in England or Wales.—*F. D., Elysée.*

The Coreless Pear.—I send a sample of Pears, pretty largely grown in the lower part of Kent, and known as the Coreless Pear. It is known in Covent Garden by that name. It is a good bearer, generally, but the fruit is extremely liable to be shaken down by the wind. The merit of the Pear consists in its being the best baking Pear in Christendom: baked in a slack oven till soft, or till slightly—very slightly—dried, it makes quite a sweetmeat. In this country, where baked Apples are sometimes the only out-of-doors ripe fruit, it deserves to be known.—*Este.* [The Coreless Pear which we have cultivated under that name is of a reddish russet-brown colour. It is frequently destitute of seeds, but always contains the cells. The flesh is apt to decay at the core: or, if this does not take place, as it softens it becomes mealy—at least this was found to be the case in 1836. The specimens received are yet hard, and may be different. They certainly bake well in the manner described.]

Something Remarkable.—A short time ago a person was cutting down an Ash-tree in the neighbourhood of Rutland, and having observed an excrescence on the trunk, proceeded to cut it off with an axe, when he was surprised to find a quantity of moss in the centre, which had every appearance of having been the nest of a wren. On taking out the moss from the hollow of the tree, a large toad crawled from the middle of it. The reptile seemed very lively at the first, but in a few minutes became sickly and powerless, but did not die. The excrescence was twelve feet from the ground when the tree was growing, and on examining the timber there appeared to be twenty years' growth round the hollow part.—*Facile.*

Melon Seeds.—It is a common test of the excellence of Cucumber and Melon seeds, to place them for a few minutes in water, and reject all that float as being bad. To what degree may this test be relied on? I will confine myself to Melon-seeds. A few years ago I had some of these sent me from Egypt, they all floated when tested as above, and yet I found not one in ten bad on actual expe-

rience. A few days since I thus tried some seeds fresh from the fruit; they almost all sunk; I threw away those that floated, and dried the rest. Accidentally mixing some more untried seed with these, I subjected the whole to a fresh trial, and was much surprised to find that they all (with the exception of some half-dozen seeds) floated. They had all, however, so much the appearance of good sound seeds, and were saved from fruit so healthy and fine, that I kept them, nothing doubting but that like my Egyptian seeds, they would prove good after all. But here is a case of the same seeds tried twice within three weeks, sinking in one case and floating in the other. I should be much gratified to see an explanation of this, if it be of sufficient general interest to deserve notice.—*A. Z.*

Spirits of Tar.—As requested, I beg to state the result of my experiments with Spirits of Tar, to preserve Peas and Beans from the attacks of Pheasants. As soon as my first crops of Peas and Beans began to break through the soil, they were, as usual, voraciously attacked by the Pheasants. I procured some Spirits of Tar, and having diluted it with water in the proportion of one gallon of the Spirit to 24 gallons of water, I poured it over the rows of Peas and Beans with a watering-pot and rose: the Pheasants never touched them afterwards. I should add that the solution appeared rather too strong for the Beans, as some of them turned black after the application, although they afterwards shot up three or four stalks to a root. I do not think that the Spirit acts as a manure; on the contrary, I purposely watered only half of my second crop, and I observed that for some time after those watered had a sickly yellow appearance, and did not grow so fast or look so well as those left unwatered, although they produced equally as good a result. Finding my first crop of Dwarf French Beans to come up very sickly, I examined the roots and found the cotyledons full of a small species of maggot. Thinking that the Spirit of Tar might do good, when I sowed again, before covering in the rows, I watered them with a strong solution of it, and the result was that they came up very strong and healthy, and the produce was enormous; whilst the first crop gradually dwindled away, and died a premature death.—*J. W. C.*

Turnips.—I have sent you a Swede Turnip, being a fair sample from a 7 acre field of poor strong Loam, which was thoroughly drained in the spring, 4 yards apart and 30 inches deep, with tiles and stones. The Swedes were sown early in May, the land was in a very rough state, having only received one ploughing and harrowing. No farm-yard manure was used, but 4 cwt. of Guano and 1 sack of common salt were distributed broadcast per acre. The mildew attacked them about a fortnight ago, and since that time they have grown but little. They were drilled on the ridge 27 inches apart, and about 9 inches between each Turnip; the intermediate ones were thinned out by hand, so as to have them at uniform distances. It may be stated that this crop is the wonder of the neighbourhood, on account of its being produced on land hitherto considered far too poor to grow either Swedes or Barley. The last year's crop was Wheat, and of course in common rotation the present would have been a fallow. The expense of manuring, cartage, labour, and sowing, was 55s. per acre, and I apprehend the crop will be from 25 to 30 tons per acre,—but this will be exactly stated when sold and weighed. About 20 other acres, similarly treated, have produced abundant crops of Oats, Potatoes, and Yellow Bullock Turnips, on land which (before drainage) only yielded last year 6 sacks and 2 bushels of Oats per acre.—*J. M.* [This was a green topped Swede Turnip, having considerable resemblance to the variety raised by Mr. Skirving, and was of a globular shape, with a clear smooth skin, quite free from carbuncle or rust. Its greatest diameter was about 7½ inches; it was very firm and compact, and weighed 5½ lbs. without either top or tail.]

Bees.—Mr. John Richmond, of Scorton near Garstang, took a hive of Bees on the 26th September, 1843, the combs and honey of which weighed 92 lbs. The Bees were only put into the hive on June 12, 1843.—*Facile.*

Observations made at the Lytham Agricultural Association, Oct. 3, 1843.—Mr. Lauder, of Salwick Hall, surpassed all competitors for the greatest length of drainage; the extent of his draining measured 22 miles. On the whole of Mr. Clifton's estate, 182,615 yards or 103 miles of draining have been last year completed. This is a further proof of what M. Saul has stated at p. 519, respecting peat drains. Here men of experience are adopting what Mr. Smith condemns, because they find it just the reverse of Mr. Smith's opinion; perhaps the peat here is of a different texture to any Mr. Smith has had the opportunity of seeing. Lytham is about 20 miles from Nateby, and in the county of Lanark. This meeting has surpassed any other in this part of the country. A Mr. Fair has introduced a new kind of draining turf, called tile turf. It appears from the description he gives, to be well calculated for draining purposes, and to be more available and permanent than the wedge-form turf. Mr. Ward, of Westby Hall, gained the first prize for Beans grown on land which previously to being drained was of a swampy wet nature, and scarcely worth 10s. an acre. The Beans this year grew six feet in height. Mr. Ashcroft, of Halsall, near Ormskirk, had some Bokhara Clover, which he sowed in the middle of April and mowed at the end of last August; this plant emits a rich aroma, and is much used, it is said, in the adulteration of green tea. Some ears of the Egyptian Wheat which Mr. Ashcroft showed, attracted great curiosity; they were the produce of a few seeds which had been inclosed with an Egyptian mummy 3000 years ago. The ears have a few awns on the upper end, and are very open and distant between the grains. The seed has been in his possession three years and this year he has reaped three sheaves of the corn.

Mr. Fair stated the powers of various manures, and some results of experiments tried on land at Lytham—the crop was Turnips. Upon two statute perches tilled with farm-yard manure he had obtained 55 stone of Turnips, and 15 stone of tops: the same quantity of land where guano had been used produced 47½ stone of Turnips, and 20 stone 6 lbs of tops. He wished to call their attention to the following facts regarding the difference between farm-yard manure and guano: farm-yard manure produced more Turnips—the most valuable part, but guano more tops; with gallaxoide (??) he had 51 stone 3 lbs of Turnips, and 19 stone 8 lbs of tops; nitrate of soda, 39 stone 7 lbs, and 20 stone of tops; with compost, a mixture in which Moss coping formed a part, he had 49 stone 7 lbs of Turnips, and 42 stone of tops. From these results he was of opinion that farm-yard manure was the best.—*Facile.*

Weeds in Ponds.—In answer to "*Aliquis*," p. 721, you say "there are no means of keeping down Weeds in ponds except very frequent cutting them." This is very true, and the most simple thing you can make use of to cut them with is a pair of swans. At this place, three years back, the lake was so crowded with weeds that it was almost impossible to get a boat across it, but a pair of swans were turned upon it, and they with their broods in the following summer so completely routed the weeds, that the water at the present time is as free from them as could possibly be desired. It is considered, I believe, that five swans will eat as much grass as a horse, and as aquatic weeds are more natural to them than grass, it is easy to conceive how soon a quantity of them will rid a large pond of weeds. I mention this fact, knowing it will be of use, and from the conviction that it is not generally known, at least I was ignorant of it until I came to reside here.—*W. P. Ayres, Brooklands.*

Snails.—I have found decaying blooms of Sunflower to be the best traps for Snails.—*C.*

The Grey Wagtail.—I am inclined to think the following anecdote of one of the feathered race may not be unacceptable to some of your readers whose tastes agree with my own, and if so, I certainly owe some return which I am quite willing to pay. The bird in question is the *Motacilla boarula*, the Grey Wagtail:—"Before I had left my bed on the morning of the 28th ult., I heard a continuous knocking, which at first I attributed to the servants, and thought nothing particular of it; but hearing it again repeated as I was dressing, I went out of the room to ascertain whence it proceeded, when I immediately found by the sound, that it was the noise of rapping outside a window. Was, then, some one knocking for admission? Soon I discovered my visitor, in the aforesaid pretty little bird. Tap, tap, tap, went its bill against the glass of a window over the staircase; and then it retired a little way up the tiling of a roof which slopes down by the side of the window, and shortly came back again, sometimes flying lightly against the upper panes. I learnt from the servants, that this was the second morning of its visit; and one of them remarked, 'Poor thing! it is terrifying itself sadly.' There was some reason for this expression; for, in truth, if one may use such language in Ornithology, the elegant little creature looked sadly careworn, having really an appearance of over-anxiety about it; its neck, in particular, being very thin and pinched. Why and wherefore I cannot say, unless with a correspondent of the '*Zoologist*,' last August, I believe that the poor bird is a disconsolate widower, and seeing himself in the glass, 'mistakes his own mould of form for the person of his lost mate.' In this manner his emaciated appearance would be accounted for; but I fear me, the facts of the present case are against so romantic an explanation; for, to this window there is no blind (as there was in the other instance,) to show to the bird the beautiful plumage of his consort or himself. And I should rather be inclined to agree with Mr. Doubleday, in another number of the same periodical (No. V., for June,) who remarks, in reference to a similar instance, that he has no doubt the bird fancies it sees insects, a much more vulgar thought. But I cannot feel quite satisfied with this explanation. For why should the bird in so many places make the same mistake? (for we have four separate instances of the same kind,) and why persist so continually in a useless search when it might find plenty elsewhere? Has the bird been to school and learnt "*Non sine sudore dulcis est cibus*?" There is one circumstance, especially, which militates against this supposition, viz., that several wagtails of the common pied kind (*M. Yarrellii*, till lately supposed the same with *M. alba* of Linnaeus,) have been on the roof at the same time with Monsieur Boarula, and even have come down to the window-sill to see what engaged his attention, but none of them have made the least attempt to peck at the supposed insects: and yet there were young birds, too, among them, (readily known by the straw-colour tint of the white parts), and surely some of these were likely to fall into the same error—or in all likelihood they would have imitated, like all young things, the action of their elders, if this were not, as it appears to me must be the case, some peculiarity of the species. I have thought the glass may have the appearance of water to the bird, and in the morning, when covered inside with dew, this would not be altogether a delusion, and that this might be the attraction, but the same objections lie against this explanation as against the other. I am bound in fairness to state that the window is rather spotted with dirt, which may look like insects, but then it would look the same to the other wagtails. I would have had the window cleaned before this, to see if the cleansing of the panes would make any difference, but the window is very difficult to get at on the outside, neither will it open, that I might try to tempt my visitor to walk in. This was my

first acquaintance with *Boarula*—at least, I had never before distinguished him from his near relative, the common yellow wagtail, (*M. flava* or *Rayi*); but since Yarrell's book on British Birds has been published, nobody has any excuse for being ignorant of any of the family. I was at first doubtful as to the species, chiefly because there are no signs of the black gorget on the throat, which I imagined could scarcely have disappeared so early in the autumn, though Yarrell states it to be lost in the winter. But I have now had so many opportunities of observing that I am perfectly satisfied as to the species. It allows me to approach within a couple of yards when I stand on the top stair nearly opposite the window; and out of doors I can look down upon it with a small telescope from a bank above, and thence I perceive the size and plumage of the bird is that of *Boarula* decidedly. The bright yellow on the upper tail-coverts is particularly striking, and the same colour is also very rich underneath. The throat and breast are a sort of dull buff. It is a larger bird than Ray's wagtail, and seems very nearly if not quite equal to its pied congeners. I need only further mention that it paid a visit to another window yesterday (Sunday), where, however, it did not remain long. It is quite our constant guest, and I should say half an hour scarcely ever elapses from sunrise to sunset without our hearing the tapping of this feathered angel. It may annoy some people, but to me it shall be ever welcome; though I must fain confess it would be still more welcome if its visits were more like what those of other angels are said to be, "few and far between." I have traced it down to the village, but I never see more than this one solitary individual of its kind, perched on a stone by the water's edge, or running into the shallow stream to refresh itself for another flight to its favourite window. In conclusion, I will again state what I said before, that I cannot but regard the habit as arising from some curious peculiarity belonging to this species. And if any one interested in the above account can suggest any way of discovering the object or instinct of the bird it will give me pleasure to try it. I think I must contrive to have the window washed. If your readers should be inclined to consult the "Zoologist" for particulars of the like instances I have alluded to, I may tell them it is published monthly by Van Voorst, of Paternoster Row, price 1s.; and they will find it full of like entertaining information.—*S. Warrford*.

Wood Pavement.—Some time since I addressed you on the subject of wood-pavement, and I regret very much that none of your numerous correspondents and readers could prevail on themselves to take the question up. It was at that time one of much interest, and I may say excitement. The excitement, I trust, has abated; but the interest which attaches to it, I am convinced, never can, so long as our great metropolis and the great towns of the kingdom continue to be what they are,—the Emporiums of the world! It struck me that your columns would not be an unfitting vehicle of any information that might be offered; and, amongst your numerous friends I could not doubt there were many of science and ability, to deal with the subject in a manner worthy of its importance; but nothing was elicited. I was quite in earnest, however, in all that I then said, and have given my mind most unremittingly to the subject ever since—with what effect remains yet to be proved. I have a plan of wood-pavement (perfectly novel, I believe, in its construction), simple, and I should say cheap, from the facilities it offers in laying down, and its lasting properties; and withal, so secure to the passenger and traffic, that I think it can hardly fail of recommending itself to universal adoption: if I may so express myself, it must establish the principle. There is no dowelling, or rebating, or mortising; yet there is compactness that nothing can disengage, with solidity, durability, security, impermeability, applicability, facility, and every other ty (tie) that can be requisite for its purpose; and most readily will I communicate on the subject with any company or individual disposed to embark on the experiment.—*H. R., Essex*.

Mildew.—I do not doubt the statement at p. 694 respecting the difference in "*Aecidium Berberidis*, and species of *Uredo* or *Puccinia*." But I expect it will be seen, by the enclosed, that the Barberry is subject to what is commonly called Mildew; and as Mildew is contagious, I see no reason why the common belief which I stated does not solve the problem that "*Barberry blights Corn*," I may observe that there are doubts (what doubts?) respecting the real cause of Mildew; however, it is generally understood to be a parasitical fungus, and some believe it is more contagious to Peach and Nectarine trees having rough leaves, than smooth ones. In the "*Caledonian Hort. Memoirs*," my father mentions the Noblesse as an instance of the latter. That, however, is not always the case; I have known that Peach infested with the pest almost as bad as the Red Magdalen, which is very subject to Mildew.—*J. Wighton*. [Our worthy correspondent has furnished an admirable example of the way in which false arguments are made to seem genuine. He sends some Barberry leaves covered with a fungus of the genus *Erysiphe*, calls them Mildewed, says that Mildew is contagious, and therefore infers that Wheat may be Mildewed by contact with a Barberry. But the Mildew of Wheat is not produced by a superficial fungus like an *Erysiphe*, but by an intestinal fungus of the genus *Puccinia*, and consequently to place such leaves among Wheat is not very likely to Mildew it. We really wonder that sensible men should not see the folly of this sort of argumentation.]

FOREIGN CORRESPONDENCE.

Anger, in the Island of Java, June 16, 1843.—We anchored abreast of the little town or village of Anger this afternoon, and went on shore in one of the native canoes,

of which a great number were now alongside, full of the varied animal and vegetable productions of the island for sale. In rowing through amongst these boats, I was much struck and amazed with their varied contents; they seemed to be of all grades, some only having a few Bananas, Cocoa-nuts, sweet Potatoes, and Yams, to trade with; while others added to these Pine-apples, Oranges, Shaddocks, fowls; white, grey, and jet-black monkeys, squirrels, musk deer (the small Javanese kind), minas, parrots, Java sparrows, and many other articles, forming on the whole a very motley group to tempt those on board. As we rowed through them and neared the shore, the Cocoa-nut and Banana trees, which are growing in great numbers all along the coast here, formed a striking contrast with our European vegetation, and reminded us that here we were in a tropical region, in the land of the East, the climate of the sun. A splendid Banyan-tree (*Ficus indica*), having the flag-staff upon its top, is growing close by the pier or landing-place, and has a very pretty appearance. The Government authorities have some very handsome shrubs and trees growing in their gardens, the principal of which are the double Pomegranate, the Barbadoes Flower-fence (*Poinciana pulcherrima*), *Jatropha multifida*, covered with its scarlet blossoms, and forming quite a tree, several kinds of *Justicia*, *Ixora coccinea*, *I. rosea*, and *Michelia champaca*, full of its sweet-scented yellow blossoms. I also observed a curious little water plant indigenous to Java, growing in the garden at the Fort, named *Pistia stratiotes*. The hills which form a half-circle round the plain on which Anger is built are covered with a most luxuriant vegetation, and present to the eye a number of views of great beauty. The little town or village is much scattered, having the houses built open and airy, a condition which is absolutely indispensable to the comfort and health of the inhabitants in a warm country like this. Here and there amongst the houses we observed Cocoa-nut and Plantain trees growing, as well as several other kinds, planted for the purpose of affording shade. The roads or avenues are very broad, straight, and generally at right angles near the town; some of them have hedges of the Coral tree (*Erythrina*), and others have only fences made of earth and turfed over, presenting the appearance of our common turf dykes. The Teak tree (*Tectona grandis*), and the *Casuarina equisetifolia*, with various other trees, are planted at regular distances in the fences, and the *Casuarina* particularly has a most graceful appearance. The prickly Pear (*Opuntia vulgaris*), was also growing, and forming fences in some places. The principal article of agricultural produce is Rice, which is grown in great quantities, particularly in the low marshy districts; and here, as in China, the water is conveyed from the heights to irrigate the crops when necessary. The Paddy fields are perfectly level, and if not naturally so, are carefully levelled and surrounded by embankments to retain the water. Indian Corn, Sugar-cane, sweet Potatoes, and Yams, are also grown in great quantities upon the island. The Buffalo is used in the plough, and for various other agricultural purposes, but forming an opinion from the specimens of ploughing which came under my observation, they are far behind the English in this respect; the plough was shallow, crooked, and very much below our standard of good workmanship. In our rambles we met hundreds of the natives coming towards the village from the fields, loaded with paddy, which they carry across their shoulders on a Bamboo-cane, in the same manner as the Chinese appear in the prints with their loads of tea-chests. The Bamboo, which grows in great quantities all over the woods, seems to be used for a variety of purposes: all the bridges which I saw were constructed with it; it made the roofs of the houses, ladders, doolies—a kind of sedan chair for conveying persons of rank from place to place—and formed the little masts for the boats. I was much amused at the mode which the natives took to cool themselves, several times during our ramble, in the heat of the day, when the thermometer in the shade stood at 90°, and when it was probably 130° in the sun. By the sides of the streams or wells of water, which were scattered all over the plains, ladders, made from the shell of the Cocoa-nut, with a handle of Bamboo, were left, seemingly for the public good. These the natives filled with water several times, and poured over their heads and naked bodies; immediately afterwards, covering themselves with their *kubaya*—or slight covering, which is commonly worn round their waist—they walked away seemingly much refreshed. As the Captain watered the ship at Anger, many of the passengers stoutly maintained afterwards that the water tasted strongly of the greasy skin of the Javanese; it is needless to say that this was purely imaginary. The fruits commonly grown on the island, besides those already mentioned, are Mangosteen, Mangoes, Guavas, Sour Sop (*Anona muricata*), Tamarinds, and the Papaw Tree. The Cocoa-nut trees are, in some instances, notched at regular distances on the stem, by which the natives walk up with great ease to cut down the fruit. These trees are quite unlike their representatives in the stoves in England, where they rarely form a woody stem. In Java, the stems are woody, having a tuft of leaves on the top, in many instances 40 feet from the ground. Coffee is grown in great quantities, and forms an article of commerce. Cinnamon, Chocolate, and Pepper, are also grown on the island. I had an opportunity of seeing the operation of husking or cleaning the Coffee-beans. This is done in a machine driven round by a buffalo; the machine rolls or presses and ploughs up the beans alternately, by which means the outer covering is broken off; the beans are then picked and sorted by the natives. The fruit of the Areca is much used by the natives, and vulgarly called the Betel-nut, from being rolled up in the leaves of Piper Betel, and carried in a box like a snuff-box. They chew this nut,

which turns their teeth quite black, and gives them a curious appearance to Europeans; but they consider this as a mark of beauty. Many beautiful well-known plants grow all along the shore, as well as upon the hills. *Vinca rosea* covers whole acres of ground in company with *Ipomoea pes-caprae* upon the beach; *Asclepias gigantea* was also very abundant; a species of *Lawsonia*, *Guaiacum officinale*, Screw-pine, and various other things, which I had seen a little farther up the coast. But the most beautiful plant which I saw in my rambles was a species of *Dendrobium*, very near *D. secundum*, with deep purple flowers; it was growing on a tree fully exposed to the sun and covered with blossoms.—*R. F.*

PROCEEDINGS OF SOCIETIES.

HORTICULTURAL SOCIETY.

Oct. 17.—*R. W. Barchard, Esq.*, in the chair. From Mr. Robertson, gr to Mrs. Lawrence, were *Erica hyemalis*, and *Solandra*, the former richly covered with flowers; a fine specimen of *Zygopetalum rostratum*, with large white labellum, striped with purple, making a good contrast with the darker upper petals. Plants of the curious *Polystachya macrantha*, and *Saccolabium denticulatum*, the latter growing on a block of wood, and having a fine healthy dark green foliage, and a cluster of small white-fimbriated flowers. From the same collection were *Oncidium ciliatum* and *Suttoni*; the latter with a spike of bright yellow blossoms; *Galeandra Baueri*, which has kept blooming since the middle of August; *Tetranema mexicanum*, very useful, on account of its blooming at this season of the year, when flowers are so desirable; and *Hippeastrum aulicum*, with large dark red flowers; and a large specimen of *Sedum Sieboldii*, a pretty plant, with drooping branches, which terminate in fine masses of flowers. A Banksian medal was awarded for *Erica Solandra*, *Zygopetalum rostratum*, *Saccolabium denticulatum*, and *Tetranema mexicanum*. Messrs. Lucombe and Co., of Exeter, sent an excellent plant of *Cymbidium giganteum*; this, a native of the East Indies, with large flowers, striped with a tawny brown, and said to be very fragrant, is supposed to be the first specimen of the species that has been seen in flower in this country; along with it was a long yellow-flowered *Lobelia*, of no beauty. A Banksian medal was awarded for the former. From the Rev. G. R. Rasleigh was an *Anthoecis*, having a tall panicle of small yellow star-like flowers, striped with brown; it did not possess beauty enough to render it worthy of cultivation; its seeds had been sent to Mr. Rasleigh from Swan River. Mr. J. W. Dawson sent a well-grown plant of *Erica Banksii*, with beautiful dark-green foliage, long greenish white corolla, and dark-brown stamens; for this a certificate was awarded. From Messrs. Veitch and Son, of Exeter, was a shrivelled specimen of *Poilechos purpureus*; it had arrived in bad condition, owing to its being packed in dry cotton, which in that state absorbs all the moisture of leaves and flowers. The best way of transmitting specimens of cut plants to a distance, is to wrap them up in damp coarse brown paper, which will preserve their beauty for a considerable length of time; or if cotton is used it should at all events be well damped and separated from the plants by folds of paper. The plant from which this specimen was cut, is said to have been only a few months old, and not more than two feet high, with no fewer than 10 spikes of bloom, besides the one that was sent. Mr. J. Murray, gr to the Marquess of Bath, sent a Queen Pine-apple, measuring 9½ inches in length, and 6 inches in diameter; the number of pips was 10, and it weighed 6½ lbs.; it was a remarkably handsome fruit, well swelled, and with a very small crown; a Banksian medal was awarded for it. Mr. J. Roberts, gr to Matthew Wilson, Esq., exhibited two magnificent bunches of Muscat of Alexandria Grapes, which weighed respectively 2lbs. 2oz., and 2lbs. 9oz.; also a very large bunch of the white Nice, weighing no less than 5lbs. 7oz.; for these a Knightian medal was awarded. From Mr. T. Latter, gr to Capt. Aplin, were two good but ill-coloured bunches of Black Hamburg Grapes, weighing 2lbs. and 1lb. 15oz.; and two excellent bunches of Muscats, which weighed 1lb. 14oz., and 1lb. 10oz.; a Banksian medal was awarded for the Muscats. Mr. Scott, gr to Sir G. Staunton, Bart., sent fruit of the purple Guava, *Psidium Cattleianum*, from a plant which has produced fruit in abundance since June; also fruit of the *Passiflora quadrangularis*, which measured 9ins. long by 5½ inches in diameter, and weighed 3lbs; together with fruit of the Akee tree, *Blighia sapida*, and of the Laurel-leaved Granadilla, or Water Lemon—the *Pomme de Liane* of the French. This plant is a native of the West Indies, and not very frequently seen in this country; the pulp, which is inclosed within a very pretty orange-coloured rind, marked with green spots, is what is eatable, it is rather acid to the taste, and agreeable in hot countries. A certificate was awarded for the *Blighia sapida*. From Mr. Osborn, of Fulham, was a cut specimen from North America of *Shepherdia argentea*, covered with clusters of pretty dark red berries, like those of the *Pyracantha*, which were said to have arrived to only about one third their usual size when ripe. The tree from which this specimen was taken is stated to be 25 feet high, and about the same in breadth, quite covered with fruit; it never bears fruit in this country, because all the plants here are male. When the females shall have been procured from North America, they will be most valuable hardy shrubs. From John Beadnell, Esq., came a beautiful new, hardy Pear, resembling that called the Trout, or Forelle, with white spots upon a warm red ground. It was stated to be perfectly hardy, proved of first-rate quality, and received a Banksian Medal, a rare reward for seedling fruits of this class. From the gardens of the Society were plants of *Fuchsia Chandlerii* and *racemiflora*, a species of *Cestrum* that had been imported from Guatemala by Mr. Skinner, with dark green foliage and bright orange flowers, and a very pretty autumn plant; also the beautiful *Mittonia candida* and *Oncidium sanguineum*, with the following plants, viz., *Fabiana imbricata*, *Mahernia incisa*, *Phylloladus asplenifolius*, *Berberis actinacantha*, and *Fuchsia globosa*, which were placed in Brown's patent pots about the beginning of June, and were fully exposed to the sun, along with other plants in the common pots. These were growing beautifully; the foliage was perfectly green and healthy, and the plants had never lost a leaf. The great advantage in the double pots is, that plants placed in them in very hot weather, and exposed to the sun, only require watering, on an average, once, where those in the common pots require it three times; there must not, however, be any water admitted into the cavity in the side of the pots, as from their porous nature the water passes through and keeps the soil too damp. They seem to answer for all kinds of plants very well, but require more drainage than the common pot, in order to guard against excess of moisture. There were likewise specimens of the *Elmish Beauty*, which is a very good late standard Pear, *Louise Bonne* (of Jersey) an excellent Pear, and quite different from the old *Louise Bonne*, *Belle et Bonne*, which grows large and handsome in a warm season and very useful; also the *Styman*, *Double Phillips*, *Boyle Farm Wilding*, *Urbaniste*, *Neil*; and the *Sackel*, both from a wall, and from a standard; the specimens from the wall were nearly twice as large as those from the standard. This Pear is of excellent quality, but has two faults, viz., it is small, and a bad keeper. There were also the *Wormsley Pippin* Apple, the *King of the Pippins*, a very good dessert Apple, *No Core*, *Hollandbury*, *Mère de Menage*, a large firm kitchen Apple, and *Transparent*, which is very singular, on account of its milk-white colour.

AGRICULTURAL AND HORTICULTURAL SOCIETY OF INDIA.

At a late monthly meeting a correspondence relative to a remarkable variety of *Caoutchouc*, termed *Gutta percha* or *Gutta tuban*, was read. These papers, which were submitted by Dr. Mouat, consist of a communication from Dr. W. Montgomerie, at Singapore, to the Medical Board, forwarding specimens of the substance, with a detail of its properties, and the probable uses to which it may be applied; and a communication from Dr. Mouat to the Secretary of the Agricultural Society, giving the result of his experimental observations as to the chemical nature, &c. of the *Caoutchouc*. Dr. Mouat states that, from an extended series of experiments, he imagines the substance to be a variety of *Caoutchouc*, possessing some properties differing from those of the ordinary kind found in the market. He then gives the

F. Fraser. GARDENERS', Mr R. Forster, gr to Rev. W. Wilson. 6 *Achimenes*, 1, Mr F. Fraser; 2, Mr J. Monk; 3, Mr J. Kyle. 6 *Balsams*, 1, Mr R. Forster; 2, Mr B. Daly, gr to P. R. Bedwell, Esq. 6 *Cockscombs*, 1, Mr W. Hills. 2, Messrs R. M'Pherson and Son, Nurserymen, 3, Mr G. Hatcher, gr to R. F. Reynolds, Esq. 6 *Fuchsias*, 1, Mr F. Fraser; 2, Mr J. Black, gr to C. T. Holcombe, Esq.; 3, Mr S. Gad. AMATEURS', 1, Mr R. Poole; 2, Mr J. Brock. *Single Fuchsia*, Mr R. Poole. *Nosegay*, Mr J. Kyle. The collection of *Fuchsias* was numerous, and was much admired. A Bouquet of flowers, done in wax, excited much attention. Mrs. W. Garvie. *Cut Flowers*, two boxes, equally rare, had each a first prize, viz., Mr S. Gad and Mr J. Kyle; 3, Mr W. Chalmers. *German Asters*, 1, Messrs R. M'Pherson and Son; 2, Mr W. House, gr to W. S. Fry, Esq.; 3, Mr G. Taber, gr to Dr. Tabrum. 12 *Marygolds*, 1, Mr W. House; 2, Messrs R. M'Pherson and Son; 3, Mr J. Brock. *Ferns*, Mr J. Pamplin, Nurseryman. 24 *Heartsease*, 1, Mr S. Gad; 2, Mr R. Forster. A very beautiful box of *Roses*, Messrs A. Paul and Son, Nurserymen, who also obtained 1st prize for 48 *Dahlias*, NURSERYMEN'S CLASS. 36 *Dahlias*, 1, Mr G. Smith; 2, Mr F. Fraser; 3, Mr J. Pamplin. 24 ditto, GENTLEMEN'S GARDENERS', Mr J. Rule. 12 ditto, 1, Mr W. House; 2, Mr W. Chalmers. 24 ditto, AMATEURS', Mr R. Poole. *Seedlings*, prizes to Mr G. Smith. The *Dahlias* excited much interest from the great perfection of the blossoms. The collection of Fruit was very fine. *Pines*, 1, J. Whelan, Esq.; 2, Mr J. Reynolds. *Black Grapes*, 1, Mr R. Forster; 2, Mr J. Black; 3, Mr J. Reynolds. *White Grapes*, 1, Mr B. Daly; 2, Mr J. Reynolds. *Peaches*, 1, Mr S. Wilkinson, gr to T. Q. Finnis, Esq.; 2, J. Lenox, Esq. and Mr J. Monk; 3, Mr B. Daly; also, to Mr W. Dykes. *Nectarines*, 1, Mr J. Reynolds; 2, Mr A. Alves, gr to R. Bingley, Esq. *Scarlet Melon*, 1, Mr J. Reynolds; 2, Mr G. Taber. *Cherries*, 1, Mr Forster; 2, Mr G. Taber. *Dessert Apples*, 1, Mr W. House; 2, Mr G. Taber; 3, Mr B. Daly. *Kitchen Apples*, 1, Mr S. Wilkinson; 2, Mr G. Hatcher; 3, Mr J. Reynolds; 4, Mr S. Gad. *Red Currants*, 1, Mr J. Black; 2, Mr G. Taber. *Gooseberries*, Mr A. Alves. *Plums*, 1, Mr J. Carter, for Golden Drop; 2, Mr R. Forster. *Figs*, Mr G. Hatcher. Collection of *Fruit*, 1, Mr J. Reynolds; 2, Mr Kyle; 3, Mr W. Chalmers and Mr B. Daly. *Vegetables* in collection, 1, Mr B. Daly; 2, Mr S. Wilkinson; 3, Mr J. Monk and Mr J. Carter. Ditto, AMATEURS', Mr J. Brock. *Extra Prizes*, 1, Mr W. Hills, for Globe Amaranthus; 2, Mr G. Hatcher. Six heads of *Celery*, of gigantic growth, Mr S. Wilkinson.

St. Andrews Horticultural and Floricultural Society, Sept. 13.—This was the last meeting for this season. There was a good display of Fruits, Flowers, and Vegetables. The following Prizes were awarded:—Mr A. Scott, gr to J. Lumsden, Esq., 1 *Fuchsia*, two *Fuchsias*, six *Stocks*, six *Petunias*, largest bunch of *Grapes* of any kind, (White Raisin), two *Cauliflowers*, two purple Beet, two *Parsnips*, four *Carrots*; 2, one *Dahlia*, 24 *Dahlias*, 12 self-coloured *Dahlias*, six *Calceolarias*, six hardy *Annuals*, one bunch *Frontignan Grapes*, six *Jargonelle Pears*, six *Onions*, one Swedish Turnip. Mr J. Hardie, gr to Dr. G. Cook, 1, German Green; 2, one late Cabbage, two Lettuces. Mr. A. Poustie, gr to J. Wild, Esq., 1, two *Pentstemons*, six *Carnations*, four *Picotees*, six *Asters*, 12 *Perennials*, one bunch of *Black Hamburg Grapes*, one late Cabbage, one red Cabbage, one Swedish Turnip, two Lettuces; 2, two *Fuchsias*, two *Lobelias*, six *Stocks*, four *Phloxes*, one quart of *Gooseberries*, two *Cauliflowers*. Mr. W. Connacher, gr to H. Stewart, Esq., 1, one *Dahlia*, 24 *Dahlias*, 12 self-coloured *Dahlias*, four self *Carnations*, six *Calceolarias*, six double *Hollyhocks*, four *Phloxes*, Bouquet, one bunch of *Frontignan Grapes*, six *Nectarines*, three kinds of *Plums*, six *Pears*, three kinds of *Wall Apples*, six kinds of standard *Apples*, one quart of *Gooseberries*, one quart of *Red Currants*, one Vegetable Marrow, three heads of *Celery*; 2, two *Pentstemons*, six *Asters*, 12 *Perennials*, three *Salvias*, six *Petunias*, one bunch of *Muscadine Grapes*, largest bunch of *Grapes*, (Lombardy,) largest bunch of *Black Hamburg Grapes*, six *Apricots*, brace of green *Cucumbers*, four *Carrots*, red Cabbage, one German green. Mr. W. Smith, gr to J. Small, Esq., 1, 24 varieties of *Pelargonium*, from open garden, two *Gladioli* (*cardinalis* and *psittacinus*), two *Lobelias*, six hardy *Annuals*, three *Salvias*, largest bunch of *Black Hamburg Grapes*, one bunch of *Muscadine Grapes*, one green-flesh *Melon*, six *Apricots*, six *Jargonelle Pears*, one brace of green *Cucumbers*, six *Onions*; 2, six double *Hollyhocks*, one bunch of *Black Hamburg Grapes*. AMATEURS.—Mrs. Berwick, 1, one *Dahlia*, six *Dahlias*, three *Stocks*, four kinds of *Apples*, one *Savoy*, one red Cabbage, one Swedish Turnip; 2, four double *Hollyhocks*, two *Pentstemons*, four *Onions*, one German Green. Mr. G. Cruickshank, two *Salvias*, three *Fuchsias*, two *Gladioli*, four double *Hollyhocks*, two *Pentstemons*, two *Lobelias*, one *Pelargonium* two kinds of *Pears*; 2, one *Dahlia*, six *Dahlias*, four *Jargonelle Pears*, one *Savoy*, one Swedish Turnip, four *Carrots*, two Lettuces. Dr. Cook, 1, four *Jargonelle Pears*, one German Green, two Lettuces, two Beet; 2, three *Stocks*, two kinds of *Pears*, one red Cabbage; Mr. J. Gibson, 1, four *Carrots*; 2, four kinds of *Apples*. Mr. A. Latta, 4 *Onions*. Mr. J. Walker, six *Cottagers' Dahlias*. Mr. Howie's prize for the best variety of *Fuchsia*, Mr. A. Scott. For Exhibition.—From Cambo, a collection of *Hollyhocks*, *Bizarre* and *Flake Carnations*, and varieties of *Phlox Drummondii*. From Mr. C. Howie, a collection of *Carnations* and *Picotees*, seedling *Heartsease*, silver Beet, white German *Carrots*, and *Mountain Spinach*. From Gilston, a collection of *Carnations* and *Picotees*. From Provost Playfair, a fine collection of *Dahlias*, double French *Marigolds*, *Phloxes*, and seedling *Pentstemons*. From Grangemuir, were some *Black Hamburg Grapes*, early *Ann Peaches*, and a *Cockscomb*. From Lathallan, 20 varieties of *German Stocks*, and double French *Marigolds*. From the Priory, 20 varieties of *Pelargoniums* grown in the flower-garden. From Miss Christie, six *Pelargoniums* in pots, and a beautiful plant of *Fuchsia Deansii*. From Woodburn, was a lot of excellent *Carrots*. From Mr. Cruickshank were two specimens of *Skirving's* improved purple top yellow Turnip.—*Fife Herald*.

Stitchel Horticultural Society, Sept. 20.—This was the first exhibition. There was a good variety of Flowers, particularly of *Dahlias*, and fine samples of Vegetables. The following Prizes were awarded:—4 sorts of Double *Dahlias*, 1, Mr J. Gray; 2, Mr A. Hardie; 3, Mr W. Gibb. 6 sorts of *Pansies*, 1, Mr J. Gray; 2, Mr A. Douglas. *Window Plants*, 1, Mr W. Gibb; 2, Mr R. Gray. 4 sorts of *Roses*, Mr A. Douglas. 6 *Leeks*, 1, Mr J. Gray; 2, Mr A. Hardie. 6 *Onions*, 1, Mr A. Douglas; 2, Mr J. Gray. 6 *Carrots*, 1, Mr J. Middlemas; 2, Mr T. Rae. *Cabbages*, 1, Mr P. Cairns; 2, Mr T. Wood. *Savoys*, 1, Mr T. Wood; 2, Mr G. Crencher. *Greens*, 1, Mr G. Currie; 2, Mr J. Gray. *Cauliflowers*, 1, Mr A. Douglas; 2, Mr A. Hardie. *Parsley*, Mr A. Douglas. *Nosegay*, 1, Mr D. Gray; 2, Mr A. Douglas. *Fuchsias*, 1, Mr A. Kinghorn; 2, Mr W. Rae.—*Kelso Chronicle*.

Sudbury Horticultural Society, Sept. 26.—This was the second show for the season; the Fruit and *Dahlias* were very good. Mr. Girling, who received an extra prize for *Dahlias*, showed some good flowers. Messrs. Bass and Brown exhibited a collection of *Verbenas*, *Zinnias*, and *Phlox Drummondii*, for which extra prizes were awarded; they also took the 1st prize for the 6 best *Fuchsias*, comprising *transparens*, *floribunda magna*, *pulcherrima*, *insignis*, *tricolor*, *conspicua arborea*, and *Cormackii*. R. Bevan, Esq., exhibited a beautiful specimen of *Plumbago rosea*. Messrs Dillistone showed specimens of *African Marygolds* and *Dahlias*. The hothouse *Grapes* from Sir H. Parker's and E. Stedman's, Esq., were beautiful; and those from the open wall exhibited by R. Ransom, Esq., were perfectly ripened without any assistance from glass. The *Black Grapes* and *Morello Cherries* shown by J. Sikes, Esq., considering this unfavourable season for the Vine, were remarkably fine. The prizes awarded were as follows:—*Bouquet and Hardy Plant*, 2, W. R. Bevan, Esq. *Tender Plant*, 2, R. Bevan, Esq. *Out-door white Grapes*, 1, R. Ransom, Esq. 12 *Dahlias*, and 2, 6 ditto, 2, Mr T. B. Ransom. *Potatoes*, *Pears*, *Apples*, and *Wild Flowers*, 2, Mr G. W. Fulcher. 6 *Onions*, 2, H.

Tiffen, Esq. *Red Currants*, 1, G. W. Andrews, Esq. *Black hothouse Grapes*, 2, *Melon*, 2, and *Potatoes*, 2, Sir H. Parker, Bart. *White Currants*, 1, Rev W. C. Freeland. *Sauce Apples*, 2, W. W. Humphrey, Esq. 6 *Peaches*, 2, *Nectarines*, *Greengages*, and *Bouquet*, 1, Colonel Meyrick. *In-door white Grapes*, 1; cut-door white ditto, 2; and *Hollyhocks*, 2, E. Stedman, Esq. *Out-door black Grapes*, 1, *Beet Root*, 1, *Morello Cherries*, and *Hollyhocks*, 1, J. Sikes, Esq. *Balsams*, 1, best *Fuchsia*, W. Green, Esq. 6 *Fuchsias*, 2, *Filberts*, 1, *British Plants*, 1, *Zinnias*, 1, *Potatoes*, 3, Mr Chater. 24 *Dahlias*, 2, and *African Marigolds*, 1, Messrs Dillistone. *Celery*, 2, Mrs Kemp. 24 *Dahlias*, 1, Mr Girling. *Peaches*, 1, and *Hardy Plant*, 3, N. C. Barnardiston, Esq. *Melon*, 1, and *Plums*, 3, Mr Johnson (gr at Kentwell Hall). *Nectarines*, 1, *Walnuts*, *Greengages*, and *Design*, 2, Mr Davis. 12 *Dahlias*, 1, 6 ditto, 1, and *German Asters*, 1, C. R. Bree, Esq. *Design* in flowers, 1, *Sauce Apples*, *Onions*, *Hardy Plant*, hothouse black *Grapes*, 2, *Pears*, *Pears*, and *Beet Root*,—De Tasted, Esq. *Fuchsias*, 6, *Phlox*, and *Tender Plant* Messrs Bass and Brown. *Fuchsia* 2, Mr T. Goldsmith. *Extra Prizes* were awarded to R. Ransom, Esq., for *French Beans*; Mr T. B. Ransom, *Bouquet*; Mr Fulcher, *Morello Cherries*, and basket of *Vegetables*; W. Green, Esq., *Calceolarias* and *Cockscombs*; Mr Chater, *African* and *French Marigolds*, and *Roses*; Mr Girling, collection of *Dahlias*, *German Asters*, and *Nuts*; N. C. Barnardiston, Esq., *Design* in Flowers, and a red Cabbage (which weighed upwards of 13 lbs.); B. Oliver, Esq., for a dish of last year's table *Apples*; Messrs Bass and Brown, for *Zinnias*, *Verbenas*, and *Roses*; Colonel Meyrick, for *Figs*, *Plums*, *Pears*, and *Walnuts*; Mr Davis, *Filberts*, *Plums*, *Table Apples*, *Pears*.

Tumworth Horticultural Society, Sept. 27.—The flowers were good and the company numerous. *Stone Plants*, *Achimenes* multiflora, *Ipomoea Learii*, Mr Holmes. Collection of *Greenhouse Plants*, Mr. Brammall. Pan of 24 *Dahlias*, Mr Holmes, with Andrew Hofer, Esq., *Exquisite*, *Holmes's Queen Victoria*, *Princess Royal*, Mrs. Shelley, Lady Cooper, Essex Triumph, *Perpetual Grand*, Sir R. Sale Competition, *Eclipse*, *Prince of Wales*, President of the West, Miss Abbott, King of the West, Mrs. James Richardson, Hero of Stonehenge, *Indispensable*, *White Defiance*, *Admiral Stopford*, *Widnall's Queen*, *Bedford Surprise*, and *Rose Unique*. Pan of 12 *Dahlias*, 1, Mr Holmes, with Holmes's Queen Victoria, Mrs. Shelley, Essex Triumph, *Bedford Surprise*, Lady Cooper, *Prince of Wales*, *Princess Royal*, *Eclipse*, President of the West, *White Defiance*, Smith's Sir R. Sale, and King of the West; 2, Mr Cowderoy, for Maria, Le Grand Baudine, and President of the West.

Thanet Floricultural and Horticultural Society, Sept. 12.—The last Show for the season took place at the Ranelagh Gardens. The weather was fine, and the attendance numerous. The Prizes were as follow:—OPEN TO ALL ENGLAND. 24 *Dahlias*, 7, 1, Mr Brown, Marquis of Lansdowne, *Perpetual Grand*, Le Grand, *Bedonin*, North Star, *Candidate*, Grace Darling, Competition, *Conservative*, Mrs Shelley, Essex Triumph, *Queen of Trumps*, *Springfield Rival*, *Beauty of the Plain*, *Pickwick*, *Blue Bonnet*, *Phenomenon*, *Bedford Surprise*, *Andrew Hofer*, *Metella*, Lady Ann Murray, *Admiral Stopford*, *Dodd's Prince of Wales*, *Regulator*, President of the West. 2, 4, Mr Philpot, Essex Triumph, *Hope*, *Conservative*, *Phenomenon*, President of the West, Lady Harland, *Rouge et Noir*, *Duchess of Richmond*, *Conqueror of the World*, *Pickwick*, *Argo*, *Royal Standard*, *Princess Royal*, *Catleugh's Eclipse*, *Bridesmaid*, *Scarlet Defiance*, *Rival*, *Queen*, *Purple Perfection*, Mrs. Shelley, *Marquis of Lothian*, *Maid of Bath*, *Suffolk Hero*, Lady Middleton, 3, Mr Girling, *Bridesmaid*, *Perpetual Grand*, *Widnall's Eclipse*, *Marquis of Lansdowne*, *Jehu*, *Phenomenon*, *Lewisham Rival*, *Girling's Prince of Wales*, *Grand Tournament*, *Rainbow*, *Conqueror of the Plain*, *Dodd's Prince of Wales*, *Conservative*, *Beauty of the Plain*, *Northern Beauty*, Lady Harland, *Maid of Bath*, *Springfield Purple*, *Bedford Surprise*, Lady Middleton, Competition, President of the West, Essex Triumph, *Competition*. *PLANTS GROWN IN POTS*. 3 *Fuchsias*, 1, *globosa*, *gracilis*, *Dalstonii*, 2, *fulgens*, *fulgens* multiflora, *Dalstonii*, Mr Wm. Tomson; 3 *Salvias*, *patens*, *fulgens*, *splendens*, L. C. Humfrey, Esq. 3 *Petunias*, 1, Gem, Lady Peel, *Beauty*, T. N. Harris, Esq.; 2, *Comper's* seedling *White*, 2 of *Medora*, Mr W. Tomson. 3 *Cockscombs*, Sir M. Montefiore. 3 *Balsams*, 1, Mrs Alexander; 2, L. C. Humfrey, Esq. 3 *Scarlet Pelargoniums*, J. Slater, Esq. 3 *Verbenas*, Stewart, 2 not named, T. N. Harris, Esq. 6 *Miscellaneous Plants*, 1, *Heliotropium peruvianum*, *Fuchsia conspicienda*, *Hoya carnosa*, *Nerium oleander*, *Maurandya Barclayana*, T. N. Harris, Esq.; 2, *Gesnera zebra*, G. splendens major, *Campanula garganica*, *Stapelia glandulifera*, *Lechenaultia formosa*, *Fuchsia Youellii*, L. C. Humfrey, Esq.; 3 ditto, 1, *Myrtus communis*, *Citrus aurantium*, *Salvia fulgens*, Sir R. Burton; 2, Mrs Alexander. *Cut Flowers*. 12 *Dahlias* (a silver cup value 5s.), 1, the Rev. J. G. Hodgson; 2, Mr Hills; 3, Mr Silk. 6 ditto, 1, the Rev. J. G. Hodgson; 2, Mr Silk; 3, Captain Isacke. 6 *Lemon African Marigolds*, 1, the Rev. F. V. Lockwood; 2, Mr Silk. 12 double *French ditto*, J. Sladden, Esq. 12 double *Asters*, 1, the Rev. F. V. Lockwood; 2, Mr Silver. 12 *Zinnias*, J. Sladden, Esq. *Floral Device*, an ornament, (value 2l. 12s.), an embroidered chair, carpet, and cushion, 1, Mrs Humphrey; 2, Mrs G. Hodgson. *EXTRA*. 6 *Orange African Marigolds*, 1, Mr Silk; 2, the Rev. F. V. Lockwood. A seedling *Dahlia* of 1843 (Lady St. Maur). Mr Brown; an ornamental hive of Bees, Sir Richard Burton; Specimen plant (*Lisianthus Russellianus*), Mr Cuthill. *FRUIT*. *Melon*, 1, J. Powell, Esq.; 2, L. C. Humfrey, Esq.; 3, J. P. Powell, Esq. Bunch of purple *Grapes*, to which no fire has been used, J. Slater, Esq.; bunch of white ditto, Captain Isacke; bunch of purple *Grapes* forced with fire, white ditto, J. A. Warre, Esq.; Basket of *Grapes*, 1, D. S. Price, Esq.; 2, J. A. Warre, Esq. 8 purple *Figs*, Sir M. Montefiore, 6 *Peaches*, 1, R. Crofts, Esq.; 2, Mr Moss. 6 *Nectarines*, R. Crofts, Esq. 12 *Plums*, 1, Mrs Alexander; 2, L. C. Humfrey, Esq. Pound of *Cherries*, J. C. Powell, Esq. 8 *Pears* grown against a wall, 1, Captain Isacke; 2, J. H. Boys, Esq. 8 dessert *Apples*, 1, Mr B. Austen; 2, Sir R. Burton. 6 kitchen *Apples*, 1, R. Crofts, Esq.; 2, H. Cotton, Esq. 12 *Apples* of different sorts, 1, Capt. Isacke; 2, Sir R. Burton; 3, J. H. Boys, Esq. Pound of *Filberts*, J. Sladden, Esq. Half-pound white *Currants*, Sir R. Burton; ditto red *Currants*, Lieut. Colonel Clarke. Basket of *Fruit*, 1, L. C. Humfrey, Esq.; 2, Sir R. Burton. *VEGETABLES*. Pint of *Pears* in pods, 1, Mr Hillier; 2, Miss Huchcliffe. 6 *Onions*, 1, R. Crofts, Esq.; 2, Mr Silk. 6 roots of *Celery*, 6 *Carrots*,—Prickett, Esq. *Cabbage*, Lieut. Col. Clarke. *Lettuce*, T. N. Harris, Esq. 12 kidney *Potatoes*,—Prickett, Esq. 12 round ditto, 1, Sir R. Burton; 2, T. N. Harris, Esq. Brace *Cucumbers*, 1, the Rev. J. G. Hodgson; 2, Mrs Alexander; 3, J. Slater, Esq. 6 *Parsnips*, Mr Silk. 30 pods of *French Beans*, G. Hannam, Esq. Basket of *Pot Herbs*, L. C. Humfrey, Esq. Basket, 12 sorts, of *Vegetables*, 1, Sir R. Burton; *Celery*,—Prickett, Esq.; *Carrots*, Mrs Alexander; basket of *Vegetables*, Lieut. Wells; *Filberts*, Lieut. Colonel Clarke.—*Kentish Gazette*.

Torbay Horticultural Society, Sept. 28.—This was the second exhibition, and it was numerously attended. The following is a list of the prizes. The first prize for *Tender Plants*, unprotected during the preceding winter, was carried off by a collection of *Mesembryanthemums*, *Salvias*, *Fuchsias*, *Erythrina laurifolia*, *Verbenas*, *Petunias*, *Maurandya*, and by a branch of *Olive*, taken from a standard tree that has been growing for 14 years in the open ground, together with *Citrons*, *Lemons*, *Myrtles*, &c., from the open wall, for which the mild climate of Devonshire is particularly favourable. 12 *Dahlias*, 1, M. Philipps, Esq.; 2, E. Vivian, Esq.; 8 varieties, J. Hack, Esq. *Newest and best Fuchsia*, J. Lang, Esq., with *Rpsall*, bearing St. Clare. Six *Fuchsias*, 1, M. Philipps, Esq.; 2, E. Vivian, Esq. *Roses*, 1, Mrs. Johnes; 2, Lord Sinclair. *Stone Plants* and *Bulbs*, the Rev. P. Belfield; together with many extras, for the

newest and most valuable plants; also for *Pines*, *Grapes*, and other fruit. Some fine fruit was also exhibited from Lord Clifford, R. Hadden, Esq., and S. Lang, Esq., M.D., who obtained the first prize for mixed *Grapes*, grown without fire-heat, for which the mild spring of Devonshire is peculiarly favourable. Some fine Vegetables were exhibited both from gentlemen's gardens, and by cottagers; the first prize was awarded to M. T. Hare, Esq., for a collection of 80 sorts. It is unnecessary to particularise other articles, which were not so remarkable for their novelty as for the extraordinary luxuriance of their growth. The following lines, by the laureate of Devon, were read by the chairman:—

ALL glorious bright Phoebus illumin'd Torbay,
On its grand Horticultural opening day,
When the fair and the gay were assembled at noon,
In the year '43, 22d of June;
The hall room was crammed at Webb's splendid hotel,
(All those who were there will remember it well);
So dense was the crowd children screamed with affright,
While ladies were fainting—men melted outright.
You may guess how they panted to taste the fresh air,
When they called on the chairman to vacate the chair.
He lauded the charms of the Daffy-down dillies,
The genus Orchideous and sweet Amaryllis;
Lyne's seedling Geranium extolled to the skies,
And soft-soldered the rivals who showed for the prize.
With coolness surprising proceeded to trace
The new Calceolaria's diversified grace;
When cries of "Adjourn!" in the midst of his speech,
Cut short the sweet lesson he purposed to teach.
But enough had been said to instil in the ladies
A passion for Cockscombs and gardens and gay-days.
Long, long may they flourish, the pride of our land;
May the ring of Affection encircle each hand;
And the "garden of England" continue to bloom,
Till the trumpet shall summon all earth to its doom.

Uttoseter Horticultural and Floral Society, Sept. 26.—This was the last Exhibition for the present year, and was principally for *Dahlias*, which were good and plentiful. The Fruits and Vegetables were also very good. The following is a list of the prizes:—*Dahlias*:—Pan of 24 blooms, 1, Lord Vernon; 2, Mr Holmes. Pan of 6 blooms, Mr Rogers. Jackson; 4, 17s. 6d., weight 7lbs. 12 oz., Mr T. Berry; 5, 15s., weight 7lbs. 7 oz., Mr J. Sutcliffe; 6, 12s. 6d., weight 7lbs. 5 oz., Mr F. Mather. Apples, 1, Emperor of Russia, Mr W. Jones, gr to Mrs. Bealey; 2, Imperial, Mr I. Taylor; 3, Mr P. Hilton. Pears, 1, Beauré Downs, Mr W. Jones; 2, Jargonelles, Mr T. Cross; 3, Mr I. Taylor. Grapes, Black Hamburgh, Mr W. Jones. Brace of Melons, Mr J. Smith, gr to R. Phillips, Esq. Gooseberries, Mr T. Cross. Nuts, Mr J. Smith. Cucumbers, Mr W. Jones. Blanched Celery, 1, Mr J. Smith; 2, Mr W. Jones; 3, Mr G. Jackson. French Beans and Artichokes, Mr J. Smith. Red Cabbage, 1, Mr W. Jones; 2, Mr J. Ogden; 3, Mr T. Booth. White do., Mr G. Jackson. Broccoli, 1 and 2, Mr J. Ogden. Peas, Mr J. Ogden. Tomatoes, Mr W. Jones. Silver Beet, 1, Mr T. Booth; 2, Mr J. Allen. Red do., Mr J. Smith. Parsley, 1, Mr W. Jones; 2, Mr T. Booth; 3, Mr J. Ramsbottom. Lettuce and Lettuce, Mr J. Smith. Onions, 1, Mr T. Booth; 2, Mr J. Allen. Carrots, 1, Mr J. Ogden; 2, Mr T. Booth. Kidney Potatoes and Parsnips, 1, Mr W. Jones; 2, Mr J. Allen. Round Potatoes, 1 and 2, Mr J. Allen.

Worcestershire Horticultural Society, Sept. 19.—This was the last show for this year. The following is a list of prizes:—Dahlias: Stands of 6 blooms, 1, Mr R. Francis; 2 and 3, Mr Brown; Stands of 12 blooms, 1, Mr Brown; 2, Mr Stanton; 3, Mr Moore; Stand of 18 blooms, Mr Moore; Single Blooms: Dark, 1, Admiral Stopford, Mr R. Francis; 2, Essex Triumph, Mr R. Francis; 3, Rouge et Noir, Mr Wood; Crimson, 1, President of the West, Mr Cook; 2, Essex Rival, Mr R. Francis; Purple, 1, Pickwick, Mr R. Francis; 2, Metella, Mr Brown; 3, Sir F. Johnson, Mr Stanton; Scarlet, 1, Danecroft's Rival, Mr Brown; 2, Lea's Bloomsbury, Mr Stanton; Light, 1, Lady Cooper, Mr Brown; 2, Mary Ann, Mr R. Francis; 3, Countess of Pembroke, Mr Cook; White, 1, Seedling, Mr Brown; 2, Antagonist, Mr R. Francis; Yellow and Sulphur, 1, Prince of Wales, Mr Stanton; 2, Lady Camoys, Mr Brown; 3, Argo, Mr R. Francis; Tipped, 1, Princess Royal, Mr Francis; 2, Unknown, Mr Brown; 3, Bridesmaid, Mr R. Francis; Edged and Mottled, 1, Phenomenon, Mr Stanton; 2, Sykes's Diana, Mr Brown; 3, Beauty of the Plain, Mr Cook; Rose, 1, Sir F. Johnson, Mr Brown; 2, Mrs. Shelley, Mr R. Francis; 3, Wheeler's Maria, Mr Brown; Rosy Purple, 1, Admirable, Mr Cook; 2, La Grande Banda, Mr Wood; 3, Hope, Mr Stanton. Collections, 1 and 2, Mr T. Burlingham, jun. Stove Plants, 1, Ceropegia elegans, Mr Bennett; 2, Rochea falcata, Mr Wood. Greenhouse Plants, 1, Fuchsia Venus Victorix, Mr T. Burlingham, jun.; 2, Fuchsia Laneii, Mr Wood; 3, Fuchsia St. Clare, Mr Wood. Heaths, 1, Mr T. Burlingham, jun.; 2, Mr Wood. Hardy Annuals, Zinnia elegans, Mr Wood. Cut Specimens, Verbena, Mr. Morton. German Asters, 1, Mr Biddell; 2, Mr Brown. African Marygolds, 1 and 2, Mr Cook. French Marygolds, 1, Mr Brown; 2, Mr Stanton. Cockcombs, 1, Mr Keeley; 2, Mr Bennett. Balsams, Mrs. Morton. Pines, 1 and 2, Mr Bennett. Peaches, 1, Mr Bennett; 2, Mr Cook. Nectarines, 1 and 2, Mr Bennett. Grapes: Black, 1, Earl Coventry; 2, Mr Tyler; White, 1 and 2, Earl Coventry. Cherries, 1, Mrs. Morton; 2, G. Walker, Esq. Plums, 1, G. Walker, Esq.; 2, Earl Coventry. Apples: Dessert, 1, Mr Eaton; 2, W. Lewis, Esq.; 3, G. Walker, Esq.; 4, Mr Eaton. Culinary, 1, Earl Coventry; 2, Mr Cook; 3 and 4, Mr Eaton. Pears: Dessert, 1, Earl Coventry; 2, G. Walker, Esq.; 3, Mr Bennett; Culinary, Earl Coventry. Filberts, 1, Mr Leyland; 2, Mr Tyler. Carrots, 1, Mr W. Francis; 2, Mr Keeley; 3, Mr W. Francis. Onions, 1, Earl Coventry; 2 and 3, Mrs. Morton. Celery, Red, 1, Mr Keeley; 2, Mr Stanton. Peas, 1 and 2, Mr W. Francis. Cape Broccoli, 1, Mr W. Francis; 2, Mr Tyler. Cucumbers, 1 and 2, Earl Coventry. EXTRA PRIZES: Cut Specimens, Mr W. Francis, Mr Wood; Fuchsia, Mr Cook; Figs and Peaches, Mr Bennett; Melon, Mr Keeley; Rock Melon, Mr Tyler; Grapes, White, Mrs. Morton; Grapes, Black, G. Walker, Esq.—Worcester Herald.

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

TROPEOLUM POLYPHYLLUM. Many-leaved Indian Cress. (Half-hardy Perennial) Tropæolaceæ. Octandria. Monogynia. This plant was imported by Mr. Knight, of the King's Road, Chelsea, from some part of Bolivia, or Upper Peru, about four

years since, having been gathered there by Mr. Kelly, a collector to Mr. Knight. It flowered at the Exotic Nursery, Chelsea, in the summer of 1839 or 1840, but as the plants ceased blooming rather suddenly, and as it has not again blossomed till June last, we reserved our description till it should flower more perfectly. That point having now been gained, we can publish it with greater confidence, as depicting a beautiful and meritorious plant. While it certainly does resemble *T. edule* in the flowers, it is a very different species in its habit. The stems are more numerous, very much stronger, grow with greater erectness, have to all appearance nothing of the twining character, and bear their leaves far more densely. The latter, too, have broader leaflets, which are less loosely and more regularly disposed, and are glaucous on the upper surface. By all these characteristics it is most easily distinguished; and the flowers being axillary, are, from the greater closeness of the leaves, much less scattered. They are of a deep yellow or orange colour, with a rather long spur to the calyx. From the rapid manner in which the flowers of Mr. Knight's specimens went off the first year, and the disinclination to bloom the plants have since evinced, it would seem to be a shy-flowering species. Still, these things are probably to be accounted for by the nature of the plant, and the treatment it had received. As it is a strong-growing species, the partial exposure of the tubers, as in other Tropæolums, may have exhausted the specimens too much, and thus deprived them of their natural vigour, rendering them unable to fulfil their regular functions. At any rate, this is the view we take of the matter; and should advise that the tubers of the plant be always placed beneath the surface of the soil. If planted to the depth of an inch, the specimens will no doubt be improved. This is the chief feature demanding notice in the culture of the species; as it may otherwise be managed like the rest of the genus, only it does not need so much training, having a more erect mode of growth. It is increased by cuttings of the young shoots, before they have advanced to a flowering state; and if the principal stem of a plant be cut down while young, a number of others will sprout up from the tuber, and yield an abundance of cuttings.—*Paston's Magazine of Botany*.

BARKEA SPECTABILIS. Remarkable Barkeria. (Stove Epiphyte.) Orchidaceæ. Gynandria. Monandria.—For the introduction of this species which is one of the most lovely of Orchidaceæ, cultivators are indebted to G. U. Skinner, Esq., whose exertions in stocking the country with fine plants of this charming tribe are familiar to every grower. Writing about it in the Botanical Register, Dr. Lindley remarks that, "under the name of Flor de Isabel, this plant forms one of the votive offerings of the Guatemalense. It forms a tuft of cylindrical stems about 4 or 5 inches high, each of which bears two fleshy lanceolate acute leaves, separated from each other by intervals of about an inch. The raceme rises out of some brown dry sheaths, and in the plants that have flowered bears about six most lovely nodding blossoms; but, according to Mr. Skinner, it varies in length from 3 inches to a foot, producing as many as 12 flowers in a raceme. The expanded flowers are nearly $\frac{3}{4}$ inches wide, their colour is a bright lilac; the anther is white at the base and in the middle, lilac at the edge and point, and richly marked with small blood red spots. Along its middle, below the column, are five purple lines, which pass into three elevated colourless ridges, beyond the place where the anther touches the lip. It is with Cattleyas and such beautiful plants, that this charming species is worthy to be arranged." We owe the following particulars to Mr. J. Brewster, gr. to Mrs. Wray, Oakfield, near Cheltenham:—"The plant was imported from Guatemala in July, 1841, when it immediately began to grow; and, late in autumn, it showed flower-scapes, but the season was too far advanced to bring them to perfection. It then remained dormant, and lost all its leaves, till March, 1842, when it again commenced growing, and expanded its first flowers on the 12th of June. These were shown at Chiswick in July, and continued perfect for five weeks. The temperature in which the plant was grown was never above 65°, when it could be kept under by giving air freely; while in winter it often fell below 40°. Indeed, my only object was to keep out the frost; and I invariably gave a little air whenever it could be done with safety. In the summer, the windows and doors of the Orchidaceous-house are open every day; and I am of opinion that the Orchidaceæ of Guatemala cannot be kept too cool in this country at that time, for the more air I give, the better they grow. I always, however, keep the house damp." The plant was cultivated by Mr. Brewster in an open wooden basket, filled with moss. It will likewise succeed on a block of wood. Nothing could be more perfect than Mrs. Wray's specimen; and the advantages of the summer air to the plant can hardly be over-stated.—*Paston's Magazine of Botany*.

CLOWESIA ROSA. Pink flowered Clowesia. (Stove Epiphyte.) Orchidaceæ. Gynandria Monandria.—This plant is a native of Brazil, and first flowered at Broughton Hall, near Manchester, with the Rev. Mr. Clowes, a zealous cultivator of Orchidaceæ, after whom it is named. It is very like a *Catasetum* in habit. The stems are from 2½ to 4 inches long, ovate, clothed with the remains of the bases of leaves. The leaves, which I have not seen, are said to be three, lanceolate, ovate, acuminate, and at the point twisting a little to one side. The inflorescence proceeds from the base of the stems, and consists of five or six, probably more, erect delicate white flowers tinged with pink. They are remarkable for having their petals and the end of the lip broken up at the margin into numerous delicate glandular fringes, which give them a very rich and beautiful appearance. As a genus *Clowesia* is perfectly distinct from everything previously described. Its flowers being extended a little into a chin in front, suggest its belonging to the Maxillarioid division; but its white habit and its singular apparatus of the pollen-masses oppose such an arrangement. The latter organs rest on a broad viscid gland like that of a *Catasetum*, but the part that connects the gland and pollen-masses is broad, thin, and contracted in the middle so as to resemble an hour-glass; but whether that is the usual structure, or, as we suspect, merely consequent upon the separation of the part that connects this gland and pollen-masses, we have not had an opportunity of ascertaining. Upon the whole it is probable that *Clowesia* must stand in the same division as *Catasetum*.—*Botanical Register*.

MISCELLANEOUS.

Mr. Fortune's Mission to China.—The Fellows of the Horticultural Society will be pleased to learn that this mission is proceeding satisfactorily. Mr. Fortune reached Macao about the 9th of July, but had established himself for the present at Hong Kong. Everybody to whom he had letters received him with the greatest good-will. Messrs. Dent and Co. had very liberally given him the use of their gardens; and Colonel Malcolm had most kindly taken charge of a box of plants (which has since been received, with the contents in excellent order). On the mountains a *Habenaria*, probably *H. Susanæ*, with beautiful fringed white flowers, was common; and Mr. Fortune also met with a small yellow-flowered *Cælogyne*, and *Arundina chinensis*. In the gardens he found a white *Glycine*, not so handsome as *G. sinensis*, but rather pretty, and a charming *Mussaenda*, with large white bracts and sweet-scented yellow flowers. The Lagerstræmias were most beautiful, flowering as freely as our Hawthorn, even on small plants. Above all things it is interesting to know that the difficulty of intercourse with the Chinese is rapidly wearing off. Mr. Fortune had hired boats, and landed, not only on the small islands near Macao, but also on the main land of Couloon, opposite Hong Kong, and had

never been annoyed in any way. He was preparing for a visit to the northern provinces, Hong Kong being "awfully hot" at the date of his letters.

New Public Park at Birkenhead.—The populous town of Birkenhead, which has sprung into importance, and almost into being, within the last ten years, may be regarded as a kind of suburb to Liverpool, being on the opposite or Cheshire side of the Mersey, by a cheap ferry across which it is readily connected with that great emporium of commerce. It presents more of the aspect of an Australian colony than an English district; as an immense tract of ground has been laid out in streets and roads, while buildings of all descriptions are rising in every quarter. The inhabitants are, for the most part, persons carrying on business in Liverpool, and they seem to prefer this to any of the Lancashire suburbs, on account of its greater salubrity. The Commissioners of the township have recently determined, in the same spirited manner with which they conduct all their operations, to devote a large portion of ground to the formation of a public park; and Mr. Paxton, of Chatsworth, having been applied to, has undertaken to design and superintend the execution of the entire affair. The plot of ground comprises about 180 statute acres, and is nearly a mile long and half a mile wide, in its longest and broadest parts. It is of an irregular oblong figure, with an undulated variety of slope towards Liverpool. The plan we have seen provides eight entrances; and immediately within the inclosure there will be a belt, of varied width, for terraces and villas. The central and principal portion will be laid out as a park, with a Serpentine drive all round it and across the middle; and there will be two spacious lakes in this, surrounded by a sort of ornamental park-garden. We learn that it is intended to admit the public to all this part during the day, closing it only at night. The operations have already commenced; and, when the lines of road, &c. are all marked out, the whole of the works are to be conducted with the greatest possible celerity. At present the ground is mostly of a sterile and nearly useless character, destitute of drainage, with scarcely a tree upon it; but by the aid of science and skill we have no doubt it will be rendered a really delightful place of recreation. Too much commendation can hardly be bestowed on the public body which have so nobly originated the scheme, since the day is now past when it is necessary to prove by argumentation that such things have a highly beneficial effect on the physical and moral health of a country. With this, and the park at Toxteth, also from the plans of Mr. Paxton, and rapidly approaching completion, Liverpool will, in proportion to its population, be quite as well supplied with agreeable places of free resort as the Metropolis.

A Plea for Birds.—"Many amongst us are well satisfied of the usefulness of these little fellow-labourers, whilst some are not aware of their value, and permit them to be disturbed or destroyed. For the benefit of such the following facts are stated, and every one is urged, as he values his fruit-trees and looks for a plentiful harvest, to extend to the birds the protection which they so richly merit. Let those who may still doubt, compare the orchards in Medford, Cambridge, &c. in June, with those in West Cambridge, and Lexington, where shooting and birds'-nesting are permitted. Our most intelligent orchardists are satisfied that the absence in these last-named towns of the Canker-worm, the pest which has cost so much labour and expense, and has ruined so many trees, is owing mainly to the great number of birds, which breed undisturbed in our fields and orchards. Let the mischievous loafers, of whatever age, size, condition, or colour, who roam about our fields with a musket in their hands, be dealt with according to law, or driven out like vermin, and we shall hear no more complaints that orchards are laid waste by insects, and trees destroyed by mice, &c." Facts—"The common Cuckoo is almost the only bird that feeds on the Caterpillar; he destroys them in great numbers, eating them voraciously when they are full-grown. The numbers of these destructive insects that a few Cuckoos, with their young, will destroy, is incredible."—*Connecticut Herald*. "Every Crow requires at least one pound of food a week, and nine-tenths of their food consists of worms and insects; 100 Crows then in one season destroy 4780 lbs. of worms, insects, and larvae; from this fact, some slight idea may be formed of the benefit of this much-persecuted bird to the farmer." "The Blackbird destroys a great number of grubs, &c. Last August I observed 8 or 10 blackbirds busily engaged on the grass-plot in front of my house, and the grass where they were seemed dying, as was hinted, by their mischievous operations, and the gun was suggested as the remedy. Suspecting the object of the bird's search, I turned up a piece of turf with a spade, and found it literally swarming with grubs of various sizes. I need not say that they were allowed to pursue their game undisturbed, and that the grass-plot soon regained its verdure. This is another instance of the utility of preserving birds on farms and in orchards and gardens."—*Magazine of Natural History*. "To those who seem inclined to extirpate the Blackbird, Wilson justly remarks as a balance against the damage they commit, the service they perform in the spring season, by the immense number of insects and their larvae, which they destroy as their principal food, and which are of kinds most injurious to the husbandman. Indeed, Kalm remarked, that after a great destruction made amongst these and other birds for the legal reward of 3d. per dozen, the northern states in 1749, experienced a complete loss of the grass and grain crops, which were now devoured by insects." "Up to the time of harvest, I have uniformly on dissection found their food to consist of these larvae, caterpillars, moths, and beetles, of which they devour such numbers, that but

for this providential economy the whole crop of grain, in many places, would probably be destroyed before it began to germinate. At this season to repay the gardener for the tithe of his crop, their natural due, they fail not to assist in ridding his trees, &c. of more deadly enemies, which infest them; for hours at a time they may be seen feeding on the all-despoiling Canker-worms which infest our Apple-trees and Elms."—*Nuttall's Ornithology*. "It may be safely said, that in a country so thickly settled as this, there are no birds, not even excepting the Hawks and Owls, but are vastly more useful than injurious to Man. None of them should, under any pretence, be destroyed. It is not generally known that a few only of the Hawks and Owls destroy poultry. The rough-legged Falcon may be observed the whole winter long seated on a tree watching for mice, of which it destroys great numbers. Those who shoot him, or suffer him to be shot, deserve to have their trees girdled by these vermin. The Marsh Hawk, the common Harrier, and indeed all of this family of birds that come so fearlessly to our fields and meadows, are equally harmless and useful."—*From the New England Farmer*.

Vegetable Nature of certain supposed Animals.—M. Decaisne, an eminent French Botanist, has lately come to the conclusion that certain marine productions, supposed to be animals, and called by naturalists "chalk-bearing Polypes (Polypiers calciferes), are in reality seaweeds. This view has been microscopically and chemically confirmed by M. Payen. "In comparing *Corallina officinalis* and *Halymeda officinalis* with *Chara hispida*, vulgaris, and translucens, Payen observed, that the mineral secretions agreed in their situation, and in proportion dependent on the powers of these living beings; and endeavoured to trace in the tissue of the coralline, when freed from mineral matter, a composition similar to cellulose, the principal constituent of vegetable membrane. After having dissolved from the coralline the mineral matter, by dilute hydrochloric acid, and then got rid of the excess of acid by ammonia, the whole, after being well washed in water, was placed between glasses and submitted to the microscope. On the addition of tincture of iodine and sulphuric acid, the usual results were afforded which are characteristic of vegetable tissues, and even amylaceous granules were shown to exist by the former re-agent; proving, without doubt, that the corallines above named are not polypes, but Algae, and that they belong therefore to the vegetable instead of the animal kingdom."—*Comptes Rendus*, July 3d, 1843. *London Physiological Journal*.

GARDEN MEMORANDA.

Henderson's Nursery, Pine-Apple Place.—Upon entering the stove the first object that attracted our attention was a fine plant of *Aschynanthus grandiflorus*, growing on a block of wood suspended from the roof, and producing a multitude of its pretty scarlet and orange-coloured blossoms. Another most beautiful specimen of this plant was growing in a pot, in soil consisting of peat-sand and a little leaf-mould, and had no fewer than 24 stems richly covered with flowers, both larger in size and darker in colour than those of the former, thus showing that although it may be desirable for the sake of variety to grow this plant upon a block, it will nevertheless succeed better, grow more luxuriantly, and produce finer blossoms, if it is planted in soil. A pretty plant of *Centradenia rosea*, with its gracefully drooping dark purple foliage, was growing very luxuriantly, treated on the one-shift system; as was *Ixora rosea*, which, although not so showy as *I. coccinea*, is well worthy of a place in the stove, from the circumstance of its continuing to bloom for a length of time at this season of the year, when flowers are an acquisition. An excellent plant of the beautiful *Allamanda cathartica* was just about to unfold its golden treasures, and the fine dark purple foliage of the *Dracena purpurea* contrasted well with the green of the surrounding plants. There was also in flower *Acacia kermesina*, having fine long stamens, with purple filaments and white anthers, and a graceful, rather drooping foliage; also a beautiful little plant of *Lobelia longitolla*, with its long tube and white spreading petals, while the dark red foliage of *Begonia sanguinea*, the green and yellow of *Croton variegatum*, and the pretty scarlet wax-like berries of *Rivina humilis* had a fine effect in producing a variety of pleasing tints, which accord well with this season of the year. *Stephanotus floribundus*, which is decidedly one of our best stove climbers, was trained along the rafters, and just coming into bloom; *Thunbergia Hawtayneana* was flowering beautifully, and *Convolvulus pentanthus*, which is an abundant bloomer, was just about to disclose its light blue corolla. In the forcing-house was *Franciscea latifolia*, very pretty and fragrant; a few beautiful plants of *Achimenes coccinea*, densely covered with brilliant scarlet flowers; also, a good plant of the new *A. hirsuta*, said to be an excellent bloomer; *Lettsomia splendens*, although naturally a very shy flowerer, was producing its beautiful light purple blossoms in abundance; it had been kept for some time in a small pot, which has no doubt had the effect of throwing it into bloom, by checking luxuriance, and thereby favouring the production of flower-buds; as soon as these were formed it was given a good large shift. In this house was also a good plant of *Thunbergia grandiflora*.

In the Orchidaceous house were in flower *Zygopetalum maxillare* and *rostratum*, the latter having three beautiful spikes of flowers, with large white labellum striped with purple, and having the additional advantage of being a free bloomer; a fine plant of *Epidendrum cochleatum majus* and *ciliare*, producing five spikes covered with flowers; the beautiful *Cattleya Harrisoniae* and *Maxillaria macrantha*, which has kept blooming for four months past. We also remarked *Oncidium lanceanum* and *Harrisonii*; a good specimen of *Gongora maculata*, having five long pendant spikes, richly covered with pretty spotted flowers; also a good plant of *G. atropurpurea*, blooming freely; *Myanthus deltoideus*, with curious green flowers marked with dark brown streaks, more singular than handsome. Plants of *Cycnoches lutescens* and *ventricosum* were also in bloom, likewise *Trichopilia tortilis* and *Coleogyne fimbriata*. The Heath-house was adorned with many species of that beautiful tribe; it has also lately undergone some alterations, which have the effect of showing the plants to more advantage. There were in bloom *Erica verticillata*, with whorls of brilliant scarlet; *mutabilis*, with fine purple flowers; *Bowieana*, *mammosa pallida*, *graudinosa*, with numerous small white blossoms; *vestita purpurea*, *curviflora lutea*, a beautiful yellow species; *tenuiflora* with fine delicate light-pink blossoms; *formosa*, very beautiful; *Lambertiana rosea*, richly covered with bloom; *purialis*, light pink, with dark brown stamens, which protrude beyond the corolla; and *refulgens*, very beautiful and conspicuous. The stock of Heaths in the pits was in excellent condition, and many of them were covered with bloom. In the north house were some admirable specimens of *Fuchsias*, particularly *P. conspicua arborea* and *Thompson's formosa elegans*; the latter was five feet high, trained up with a

single stem, which threw out laterals radiating in every direction, and richly covered with bloom. The spreading sepals of this variety finely showed the beautiful dark blue corolla. The show-house was chiefly filled with scarlet *Pelargoniums*; among them, however, was a good plant of *Angelonia grandiflora*, emitting the fragrance of a ripe Pine-apple. In what is termed the old Heath-house were good plants of *Russelia juncea*, *Siphocampylus betulifolius*, rather new, with red and yellow flowers, *Amaryllis Fothergilli*, beautiful dark red, and a good plant of *Sollya linearis*, which was trained circuitously on an oval-shaped trellis, and covered with pretty bright blue blossoms.

Reviews.

The London Physiological Journal is a new periodical, apparently intended as a sequel to the *Microscopical Journal*, now discontinued. The authors, Dr. Goodfellow and Mr. Edwin Quirkett, are well qualified to conduct such a periodical; and we trust they will meet with support in their undertaking; for microscopical inquiries, when directed to the solution of difficult problems in the structure of animals and plants, are not second even to Chemistry in their importance. The one is indispensable to the other, and neither can be neglected with safety. The present Number contains evidence enough of the truth of this statement in the extracts from foreign writers on the microscopical plants which cause the phenomena of fermentation and the horrible disease called *Plica Polonica*. While we thus willingly offer our testimony to the skill with which this Number of the *Physiological Journal* has been prepared, we must except a lithographic plate, the execution of which is ——— we will not say what.

The October Number of the *Journal of Agriculture and Transactions of the Highland Society* is, as usual, full of good matter. Among other things, it contains some experiments disproving the existence of excrementitious secretions by the roots of plants, and a translation of Count Gasparin's paper on the Value of Manures, an important document, to which we may return hereafter. There is also an account of Miller's Safety Reins, which we recommend our horse-driving friends to peruse.

Messrs. Paul and Son's Descriptive Catalogue of Roses is before us, and deserves to be made known. It contains not merely the prices at which the sorts are sold, but a classification and description of all the varieties, with some general and useful remarks upon each section. The lovers of Roses cannot dispense with adding this to Mr. Rivers's Catalogue, noticed at p. 648.

The Artisan is a new monthly periodical, intended for the information of those who are interested in mechanical operations. It is abundantly illustrated with good plans and sections, appears to be carefully compiled, is very cheap, and we hope will succeed, provided it confines itself to its proper sphere, and avoids interfering between men and their masters. We mention this because we fancy we see symptoms of a disposition to take the opposite course, which must of necessity lead to recrimination, and can scarcely fail of converting the journal into a party organ, which will ruin it.

Suggestions for a more General Extension of Land-draining. By John Henry Charnock. Longman. 1843. 19 pages.

THIS little pamphlet suggests a practical and extensive mode of increasing the system of thorough draining wet heavy lands. The great obstacle to this very useful and necessary operation in most cases is its expense when undertaken on a large scale; and although this expense is daily diminishing, from the application of machinery to the making of draining-tiles, and from the greater dexterity of workmen, neither landlords nor tenants are fully prepared to meet it. The former have incumbrances to provide for, or their income is regularly appropriated; or they are tenants for life, and care little for the increase of their successors' income. As Lord Stanley most judiciously observed at the late Agricultural Meeting at Liverpool, "It is well worth while to borrow money to lay out in draining." But the difficulty is to find capitalists inclined to lend; and if deeds and mortgages are required, it adds much to the expense, and the security to the lender is not always evident. Some simple law is much wanted to facilitate such loans. The object of the pamphlet before us is to prove, first, the great importance of thorough-draining in a national point of view; and not a word need be said to confirm this proposition, which none will attempt to refute. The next object is to facilitate the means of doing so more generally, for which a Land-draining Association is proposed. Without entering into the details, we will not hesitate to wish the plan may succeed; and we have no doubt but under proper management it may become equally profitable to the capitalist as a safe investment, and to the company as a profitable speculation. We would only recommend the shareholders to see that the machinery be not too expensive.—M.

Theorie der Gärtnerei, von John Lindley. (Lindley's Theory of Horticulture.) 8vo. Vienna. 1842.

(Continued from page 487.)

Page 129.—"In order to render this important subject yet more clear we subjoin a report on the labours of Edwards and Colin, derived from the pages of *Forriep's Zeitschrift*. Messrs. Edwards (a member of the Academy of Moral and Political Science) and Colin (Professor of Chemistry) read an article upon this subject before the Academy of Sciences on the 18th of April, 1837, which constitutes the third part of their *Researches upon Agricultural Physiology*. As the influence of vapour upon germination was not yet known, they considered themselves compelled to take up this subject. Their experiments have led them to the following results.

1. "In free moist air, yet considerably removed from the point of saturation, seeds did not germinate.

2. "Germination took place among the Cerealia, Summer Wheat, Winter Wheat, Barley, Oats, Rye, when placed in an atmosphere fully saturated with moisture.

3. "When placed under water they required eight times as long a period before they germinated.

4. "If the number of seeds or grains be increased, and 25 be employed instead of 5, and brought into an atmosphere saturated with moisture, without placing the experiment under a larger bell than in the last instances, germination does not take place.

5. "The same is also the case if the original number, for instance, five grains are employed, and covered with a bell much larger, in which case germination is very much retarded if not prevented.

6. "The circumstances which produce this retardation or hinderance of germination, depend on the influence of temperature upon the moisture of the air.

7. "If the temperature is low and undergoes little or no change, germination will take place as soon under a small bell as under a large one.

8. "If the temperature is higher, moderate, and changeable, the germination will be retarded under a large bell.

9. "This occurs when during the daily change the temperature increases, and the air has a tendency to depart from a state of perfect saturation, and if the space is great, the diffused vapour is in part absorbed by the seed, and the air never reaches the point of saturation.

10. "These effects probably do not proceed from the fact that the seed had not absorbed enough vapour; in a low constant temperature seeds absorb less water than in a higher, and in the first case germination takes place, and in the last it is retarded or entirely prevented.

11. "These remarkable facts are produced by the air not being sufficiently saturated with vapour to allow of the necessary application of moisture to the external membrane of the seed.

12. "In germination, two principal conditions with regard to the vapour are required to take place; first, that the seed absorb enough vapour for the function of nutrition; and second, that the external air be saturated with sufficient vapour to soften sufficiently the testa of the seed.

13. "Through the simultaneous action of water and vapour, germination constantly takes place, and earlier where the air is saturated with moisture.

14. "With regard to the application of these principles to seeds sown in different kinds of soil, the authors found that germination took place by the agency of vapour when seeds were placed in sand and clay, but in both cases the process was longer, especially in the clay, which absorbed the vapour slowly and imparted it slowly to the seeds.

15. "The same principles apply to the remaining periods of vegetation, as M.M. Colin and Edwards grew large plants in air fully saturated with moisture, as well as in air imperfectly saturated.

16. "Observations made in the West Indies, where the air is constantly moist, completely confirm these results. The fruits there are not only very fine, but the woody fibre of plants is very hard.

17. "The practical result of the whole is that vapour should be employed in hothouses to a much greater extent than it has been. In England this proceeding has already done wonders. The Vines bear tremendous great Grapes; Pine-apples weigh as much as eight pounds, and other plants flourish extraordinarily."

Page 129.—We here present a figure of Mr. Daniell's hygrometer: *a* and *b* are two glass globes, which are attached to each end of a glass tube bent in the manner represented in the figure. This tube rests upon a stand. The globe *b* is filled two-thirds with æther, which is made to boil by means of a spirit-lamp; and the air of the tube and of the globe, *a*, is expelled through a little hole in the latter, which must be hermetically sealed whilst the æther is boiling. Previous to this process a small thermometer is introduced into the tube *c*, so that its bulb may be partly immersed in the æther of the globe, *b*. Another thermometer is attached to the stem, *k*, and a piece of muslin is wound around the globe *a*.

If the hand is now applied to the globe *b*, its heat will cause the æther in the globe to boil, and a part of it will rise in the form of vapour and fill the tube and the globe, *a*. The instrument should now be brought into the open air, and the eye of the observer placed upon a level with the æther in the globe *b*, whilst a few drops of æther are dashed upon the muslin covering the globe *a*. The evaporation which takes place on the surface of *a* produces a condensation of the vapour within it and the whole tube. The consequence of this is the production of cold in the tube and globes, and the condensation of the vapour in the atmosphere upon them, which is first observed upon the globe *b* in the form of a cloudy ring. This must be accurately observed, and attention immediately paid to the height at which the mercury of the thermometer at *d* stands. This is the dew-point, and indicates the proportion of moisture contained

in the air. The more moisture there is in the atmosphere the less sinking of the temperature is required to reduce the vapour to water. The thermometer on the stand *k* exhibits the temperature of the atmosphere at the time of making the observation. If the internal thermometer has fallen only a few degrees below that of the external one, it indicates a great amount of moisture in the atmosphere, and it is probable there will be rain soon. But as the above apparatus requires great accuracy and care both in the using and observation, we recommend a plan out of "London's Suburban Horticulturist," Part II., p. 76, wherein the employment of two thermometers is made to serve the purpose of an hygrometer. The thermometers are hung close together, and the ball of one is wetted in order to observe the cold produced; and the other remains dry, to indicate the temperature of the atmosphere. The balls of both thermometers must be enveloped in a piece of silk or muslin, in order to prevent the communication of heat from the atmosphere; one of them is then supplied with pure water, which may be constantly conducted from a bottle, or other vessel, by means of a skein of silk acting as a conducting tube. The silk or muslin on the ball of the wetted thermometer and the skein require to be occasionally renewed. The greater the difference between the degrees of temperature of the wetted and dry thermometers, the greater is the need of moisture in the atmosphere.

(To be continued.)

CALENDAR OF OPERATIONS for the ensuing week.

Now that October has given the first notes of preparation for the protection of half-hardy plants of known merit, and for the trial of others which are yet of a doubtful character, we ought to discard from our minds at once any reports tending to the prejudice of this latter class while under trial, and judge of them only by positive facts brought before us. The first witness, indeed the principal one, on the side of the prosecution, is Mr. Frost, of Winterhaugh, who seems to have entertained views on this subject rather at variance with those of good judges. Now, although the Calendar for next winter term shows a heavy list of names for trial, there would be no great difficulty for those experienced in such matters to decide in their own minds the general issue beforehand, were it not that there is a disparity of opinion as to the best manner of conducting the trials, and as this is a point of very great importance, we cannot do better than discuss thus early the merits of the case, for the benefit of all concerned. In the first place, therefore, some hold an opinion that half-hardy plants ought to be guarded from the cold north winds, by protecting materials so contrived as to have the south side opened on sunny days and in favourable weather, in order, if possible, to keep up and revive the drooping spirits of the inmates. Others are of an entirely opposite opinion, and would secure their prisoners from all southern influences and expose them on all favourable opportunities to the rigours of the north; while a third party see many good qualities in both propositions, but would not run into either extremity, but rather meet each of them half way and arrange matters amicably for the general good. Without wishing to influence the mind of any one in so serious an affair I may as well say at once that I arrange myself with this latter, or half-way party; and here are my reasons: the first party act judiciously the first half of the term, by securing their plants from the cold north winds, as long as there is any chance of ripening the young wood more perfectly; and by exposing them thus to the south every ray of sun is made the best of to ripen the plants from October to January, while for the next three or four months nothing can be more injudicious than their proceedings, in as far as the rays of sun from that time stimulate the plants to grow, and are thus exposed to the vicissitudes of our variable climate. The second party act even with less judgment (at least in our opinion), by exposing their plants to the north at once, when they are in a half-ripe state in October, thus denying them the benefit, such as it is, of our short seasons, and exposing them to dangers which they are not in a condition to meet. It is true, however, that after the turn of the season, plants thus shaded on the south side are not tempted to make an early growth until the season is so far advanced as to put them out of danger. I hope you can clearly see now that we, the third party, would shelter our plants from the north from October to January, and entail on ourselves and our followers the trouble of turning the temporary screens so that the openings should, after that time, point to the north. But of course you will act according to your own judgment. The first part of the trial is over already. The leaves of *Paulownia imperialis* so ill stand the cold weather that it has turned black with two degrees of frost.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

PINERY.—After this time there is more danger from drips and over-watering than from the plants getting too dry, especially when bottom-heat is on the decline, and the pots not well filled with roots; these two causes soon tell on the black Pines. A uniform bottom-heat, if you can get it, with the atmosphere rather dry, and not much on either side of 60° in the morning, ought to be about the general run during this month.

VINERY.—For the next six weeks a practised eye can see clearly if the plants in the late Vineries have been over-cropped, even should the half of the crops be already gathered. With the best-constructed houses, and other things well managed, over-cropped Vines, or weakly ones in ill-drained borders, never carry their late crops well; the least touch or speck, and away they go, and you cannot help it. Look, again, at a healthy, vigorous, young or old Vine, under opposite circumstances, and you could hardly damp or injure its fruit, if you wished. If the sashes of the early Vineries are off, no time should now be lost in getting them on, as, if we should get cold rains, the borders inside would be chilled too much, and thus put you under disadvantages when you begin to force. All Vines that are forced should be pruned as soon as the wood is ripe.

Out-door Department.

When we get a cold day late in the spring we endure it with patience, expecting to have a fine day to-morrow; but now we can hardly enjoy a fine day in the anticipation of rough weather. This state of excitement impels us to have all our crops and plants secured and well provided for against the winter long before real danger is at hand. As soon as you hear of three or four degrees of frost you must have your mats at hand, ready to cover up with. Those who have neglected to provide these things think nothing of sending many miles for them at this critical time, while a third party is unwilling to expose their best mats yet, for fear of getting them soddened with wet, and thus rendering them of less service when there is real need for them.

CAULIFLOWER.—In a short time this will be the best flower in the garden, as country people say; and who would not prolong the succession of the best flower at this dull season?—nothing is easier than to do so with Cauliflowers; pull up a quantity of them that are now fit, or nearly fit for use, and lay them in by the heels in some moist earth in a dry shed or out-house—it is too soon yet to put them down in the cellar; then look about for a dry, well-saturated border, dung and dig it as well as you can, and the first mild day plant it all over in patches with good Cauliflower plants, ready to be sheltered with hand glasses by-and-by.

CABBAGES.—This is, perhaps, the last time that I shall write about Cabbages, and that only to say if any failures have happened in the rows already planted the spaces should now be filled up with the strongest plants you have on hand; nothing looks worse in winter than to see gaps here and there in any rows or crops of plants.

LETTUCE AND ENDIVE PLANTS may still be planted in cold frames, but the sooner the better.

ORCHARD.—Pruning may now be commenced in earnest, beginning first with the Currants, then the Gooseberries and Raspberries; this will clear a good deal of ground to be dressed and dug in fine weather. After that Apple and Pear trees, &c.; then look over the walls and cut away useless laterals and late growths on the Peach-trees; indeed, any shoot you think will not be wanted in spring had better be cut out at once, to make more room for the others, and let in the sun and air to ripen the bearing-wood for next year; the leaves of Peach-trees are of very little use after this time, and they do much harm by shading the wood; you may therefore take your knife and cut them off by handfuls, but do not strip them off, for fear of injuring the buds. No author has recommended this, but many of the best gardeners practise it regularly.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

STOVE.—There are no plants more easy to manage in winter than stove-plants, and yet an inexperienced person may injure them at this time sooner than any other tribe. Some years since I had a large house full of tropical fruit-plants, such as the Mango, Mangostan, several sorts of Eugénias, the Mammee-tree, with the Lee Chee and Long-yen, &c., and plenty of Granadillas overhead; for six long weeks we had very hard weather, and we could not get up the heat higher than 50° during that time, except in the middle of the day, and in the mornings it was often as low as 40°; but not a plant was hurt, and some of them were really improved by this treatment; however, 60° is about the lowest they ought to have this month, with rather a dry atmosphere and air on all fine days, if only to sweeten the houses now that they are so full.

GREENHOUSE.—Those who have not the advantage of cold turpits must have crowded their greenhouses to suffocation on the approach of the late frosts. Let a place be ever so small there ought to be some contrivance for sheltering half-hardy greenhouse plants late in the autumn, without crowding them into houses thus early. The Chrysanthemums and Pelargoniums ought now to occupy the best places here, and more hardy plants would be much better in pits, where rain and frost could be kept from them till the Chrysanthemums are nearly over, to make room for them in-doors.

CONSERVATORY.—"After your sweeping charge against greenhouses how do you define a conservatory?" asks a correspondent. I would rather dig an acre of ground than try to answer this question as I should like; suffice it to say, therefore, that any house, whatever its shape or size may be, where all or nearly the whole of the plants that flower on the establishment are kept during the time they are in bloom, is, in the language of gardeners, a conservatory. You cannot manage such a house any day in the year as you would a greenhouse, and here lies the difficulty in managing plants where there is but one small house. From this time till next March a conservatory must be kept close, more or less, to suit forced plants, &c., while a greenhouse cannot have too much air whenever the weather is fine.

PITS AND FRAMES.—Now is the time to pot all the Cape Iridaceæ, with others from Mexico, Chili, &c. &c.; the whole order delights in light, open soil. The stronger Gladioli, and the like, are much benefited by the addition of one-third rotten leaf-mould, the rest peat and light loam, in equal portions, with a little sand; and the more delicate sorts do better in two-thirds sandy-peat, the rest of loam and sand in equal proportions. Mrs. Loudon's beautiful book, treating on these bulbs, is indispensable to those who would excel in the cultivation of these charming plants. Tropaæolums, Hyacinths, Tulips, Narcissi, to flower late in the spring, may now be potted, and those first potted of these will now have the pots pretty well filled with roots, and may therefore be brought to a glass frame, to get up the foliage and flower-stems slowly, when a smart forcing will not much injure the bulbs.

GRAFTING HOUSE-PLANTS.—If you commit yourself in a hurry you may repent at your leisure. A few days after I said in this Calendar that *Jasminum heterophyllum* was only fit for the rubbish heap, a friend sent me a large parcel of cuttings of different species of house Jasminums, knowing I should have great difficulty to strike them by cuttings in winter. If I had taken a thought on the subject I might have had plenty of stocks of the *J. heterophyllum* to graft these cuttings on, it being one of the best of them for that purpose.

FLOWERING NEW PLANTS.—Now that the *Paulownia* has been flowered by Mrs. Wray, and the *Barringtonia speciosa*, last summer, by Mr. Dodds, gardener to Col. Baker, of Salisbury, the next plant to flower will be a *Bignoniaceæ* plant, from West Africa, in the country of the Ashantees, which may be seen in all the good collections under the name of *Spathodea campanulata*.

FLOWER-GARDEN.—People are now too busy taking up such of their flower-gardening plants as they may want another year to think of anything else at present; but I have seen some people making such a litter and confusion all over the garden, with such work, that I shall be excused for saying there is no reason for disturbing order and neatness even with this work. —D. Beaton, *Shrubland Park Gardens, Ipswich*.

State of the Weather near London for the week ending Oct. 19, 1843, as observed at the Horticultural Garden, Chiswick.

REPORT ON COVENT-GARDEN MARKET,

For the Week ending Oct. 20, 1843.

NOTWITHSTANDING the change that has taken place in the weather during the past week, the market has been well supplied with both fruits and vegetables. There has been little alteration in the prices of most articles, but trade is not very brisk. Pines are not very plentiful, but are quite sufficient to meet the demand. Black Hamburgh Grapes still continue good and plentiful; there are also a few Muscats—these are selling at nearly the same prices as last week. Among Plums we noticed the *Imperatrice* and a few of *Coe's Golden Drop*. Damsons are plentiful, well supplied, and are selling at from 3s. to 4s. per half-sieve. Peaches continue to get scarcer, but are of very good quality, and bring from 4s. to 9s. per doz. There has been little alteration in the prices of Figs. Apples are sufficient to meet the demand, but are not well ripened nor of very good quality. Pears are plentiful, and are selling at from 3s. to 8s. per half sieve. Melons are becoming rather scarce; a few Spanish ones are still brought to the market. Cucumbers have been rather scarce during the past week, and

Tomatoes have likewise been less plentiful, and are beginning to show the effect of the last two or three cold frosty nights. Cabbages and Turnips are very good and plentiful, and there has been some excellent Broccoli brought to the market during the week. Carrots are sufficient to meet the demand, and are of pretty good quality. Endive is selling at from 1s. to 1s. 6d. per score. Shallots are abundant and of excellent quality. Cut Flowers consist of Erica gracilis, Boweiana, cruenta curviflora, and incarnata; Pentstemon gentianoides coccinea, Gladiolus psittacinus, Primula sinensis, Amaryllis belladonna, Neapolitan Violets, China Asters, Zinnias, Camellias, Fuchsias, Scarlet Pelargoniums, Calceolarias, Verbenas, China and Perpetual Roses.

PRICES, SATURDAY, October 21, 1843.—FRUIT.
Pine Apple, per lb., 4s to 6s
Grapes, per lb., 2s to 4s
Portugal, per lb., 1s to 1s 6d
Peach, per doz., 1s to 1s 6d
Figs, per doz., 1s to 1s 6d
Melons, each, 1s 6d to 4s
Dutch, each, 1s to 2s 6d
Spanish, each, 1s to 2s
Plums, per punnet, 1s to 2s
Golden Drop, per pun., 2s
Damsons, per av., 3s to 4s
Apples, dessert, p. bush, 4s to 5s
Apples, Kitchen, p. bush, 3s 6d to 5s 6d
Pears, per half-sieve, 3s to 4s
Oranges, per dozen, 1s 6d to 3s
per 100, 15s to 20s

VEGETABLES.
Cabbages, per doz., 6d to 1s
Greens, per doz., 2s to 2s 6d
Cauliflowers, per dozen, 4s to 5s
Beans, Kidney, per half-sieve, 4s to 5s
Scarlet, per half-sieve, 2s to 3s
Potatoes, per ton, 50s to 75s
per cwt., 2s 6d to 4s
per bushel, 1s 6d to 2s
Kidney, p. bush, 2s to 2s 6d
Artichokes, green, per doz., 1s 6d to 2s
Vegetable Marrows, per doz., 1s to 1s 6d
Turnips, per doz. bunches, 1s to 2s
Red Beet, per dozen, 9d to 1s
Horse Radish, per bundle, 1s to 2s
Radish, spring, p. doz. bunches, 1s to 1s 6d
Turnip, p. doz. bunch, 9d to 1s
Carrots, p. doz. bunch, 2s to 3s
Spinach, per sieve, 6d to 1s
Leeks, per doz. bunch, 1s to 2s
Garlic, per lb., 6d to 8d

Notices to Correspondents.

Mr. PAXTON'S COTTAGER'S CALENDAR.—At the earnest solicitation of many of our Subscribers, we have determined on again reprinting Mr. Paxton's "Cottage's Calendar," in the form of a small volume, for general distribution, price 3d. each copy. It may be ordered of all booksellers. Gentlemen wishing to distribute copies among their cottage tenantry, may have them delivered in any part of London, by remitting a post-office order to this office, at the rate of 5s. for every 25 copies.

BACK NUMBERS OF THE GARDENERS' CHRONICLE.—We are so often applied to for particular Numbers of the *Gardeners' Chronicle*, to complete sets, and so many are now out of print, that we think it will save all parties trouble if we publish a list of the Numbers which may still be had. Any Subscriber who will forward to our publisher Post-office stamps, equivalent in value to as many Numbers as are required, shall have them sent.

1841:—1, 2, 6, 8, 13, 14, 15, 16, 17, 18, 20, 22, 23, 24, 26, 27, 28, 29, 30, 31, 32, 34, 46, 47, and 49.
1842:—4, 6, 8, 10, 11, 12, 16, 18, 28, 29, 30, 31, 32, 34, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 49, 50, 51, 52, and 53.
1843:—1, 5, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, and 41.

NAMES OF PLANTS.—We really must refer our correspondents to a notice, which was printed some time since, and seems to have been forgotten:—"We must again mention that it is not in our power to spare time for naming collections of common flowers, ill selected, and worse packed; and we would beg our correspondents not to put themselves to the expense of sending, or us to the pain of neglecting them. It is unreasonable to expect us to give up valuable time to the examination of little fragments of common plants, whose names the inquirer can obtain of the first gardener in his neighbourhood. We are most ready to afford information on such points to a reasonable extent, but there must be a limit to such inquiries. We should say that one or two plants are as many as it can generally be necessary to send at a time. In future, when heaps of plants are sent us, we trust to be excused for not noticing them at all." Our good-nature has of late induced us to deviate somewhat from the rule here laid down; and our correspondents must now blame themselves if we return to it, scrupulously. Little bits of weeds, shrivelled and broken, crowded together in Post-office covers, and florists' flowers, actually load our table. We have repeatedly declined naming florists' flowers, which are always sold with their names, and the latter should be taken care of.

HEATING.—A Constant Reader.—You will find a letter on this subject in another column.—*Junius*.—We are afraid that your plan will not be very efficient. You place the fire outside the pit lest the soil within should become too hot, and you cover the mere flue with three feet of sawdust through which a feeble heat will have great difficulty in penetrating. As a matter of economy, if the heat from the fire would be injuriously felt through three feet of sawdust, how wastefully must it escape into the air without that protection! To heat a small pit by a common fire, the best plan, perhaps, is to underarch the whole of the soil and put a fire in the cavity, with an escape into a flue at one corner. The cavity will thus be heated very much upon the plan of a baker's oven, and the soil above the arch will receive a uniform and very manageable temperature. This is much the same as Mr. Forsyth's Killogie plan. On no account use sawdust. Spent tanner's bark is in all respects far better.

FRUIT-TAKES.—S. C.—Your Jargonelle Pear-trees, trained against the wall of the house you are about to pull down, may be lopped so as to form standards; but this variety does not succeed as such, even in the south of England, except in very favourable situations. It would therefore be better to graft them next spring with some of the good hardy sorts of Pear. Though not a standard in your climate, yet Jargonelles will succeed on a wall with a northern aspect; they may be removed in autumn almost entire. This is also the proper season for lopping the Apple-trees which overshadow your garden. They will soon bear again if you pinch their shoots in the end of June.

GRAFTING VINES.—S. H.—The best method of grafting Vines is to shorten the branch or shoot at the winter pruning to the most eligible place for inserting the graft. The graft should be kept in sufficiently moist soil till the time of performing the operation, and for a week previous in the same temperature as that in which the Vines to be operated upon are growing. When such portions of the latter as are shortened for receiving the grafts have made a bit of shoot, graft as you would other fruit-trees, taking care, however, to preserve the shoot at the top in claying, and until the buds on the scion have pushed, then shorten it back. Inarching may be performed any time after the Vines have started so far as not to bleed.

HELIOPTROPIS, VERBENAS, &c.—An Old Subscriber.—The usual practice is to strike cuttings of Heliotropis, Verbenas, and Calceolarias, to be planted out in spring, about the middle of August. They are put in thus early in order that they may be well rooted before winter, and thereby rendered less liable to damp off in cold dull weather; but if you wish to preserve your old plants of Heliotropis, you may take them up, slightly prune their roots, and cut down their tops to within about six inches of the root, then put them into 48-sized pots, and place them in a cool frame, where they may remain during the winter. Fuchsias, Scarlet Pelargoniums, and Salvias, may be taken up and have their tops slightly pruned, and then they may be placed in any cool dry situation where they will be free from frost.

PHLOX DRUMMONDII.—Flora.—You may save your plants of Phlox Drummondii, which are just coming up in a pan, if you think proper; but they will not be finer nor flower much earlier than those that may be raised from seeds that shall have been sown next spring.

IPOMOEA CERCULEA, &c.—Flora.—Your plant of Ipomoea cerulea, that has reached the top of a house but not flowered, has in all probability been planted in rich soil, which has caused it to grow very luxuriantly, and favoured the formation of leaf-buds; while, on the contrary, whatever tends to check luxuriance, without impairing the health of the plant, is more favourable to the production of flower-buds. It is worth preserving; and we have seen a plant, under similar circumstances, that had its top broken off by accident, throw out laterals and flower abundantly. The Ipomoea sp. from Hartweg and J. ficifolia will perhaps flower about Christmas. Ceanothus divaricatus has not yet flowered in this country, that we are aware of. Spiraea lanceolata should flower about midsummer, and S. fissa about this season.

ORCHIDACEAE.—Orchis.—All the Peristerias are pendulous except P. elata. None of the Epidendrums are pendulous except E. aloifolium and Parkinsonianum, which is the same as salcatum. Nobody knows how Schomburgkia tubicinis is best grown.

DAHLIAS.—George Richmond may take up his Dahlias as soon as the frost kills their leaves, and dry the roots well, then put them in a box with straw or chaff, and place them in a situation free from frost: they should neither get mouldy nor too dry, and when they begin to sprout in the end of spring, cut them into sets like Potatoes, having a sprout or eye to each piece.—D. B.

PELARGONIUMS.—C.—If you will refer to page 501 you will find that instructions have been given for potting Pelargoniums. Further remarks were promised by Mr. Ayres, but as they relate principally to spring management they will be inserted at the most convenient time.

PEARS.—E. M. S.—Varieties to come in between Christmas and Easter:—Glout Moreau, Passe Colmar, Hacon's Incomparable, Fondante du Bois, Knight's Monarch, Jean de Witte, Ne Plus Meuris, Easter Beurré, and Beurré Rance.

MELONS.—Old Rags.—If you have succeeded in raising as fine Melons under oiled canvas as were ever produced under glass, you have done what has not happened elsewhere. But we are rather fanciful about Melons, and care less for their appearance than their taste. The generality of fine Melons are, in our opinion, uneatable.

STRAWBERRIES.—Austen's Scarlet Strawberry is unknown to us, and we should be much obliged by a few plants.—A. A.—Ground for Strawberries should be well trenched and manured. Good and productive varieties are, Keen's Seedling, Downton, Elton, Roseberry, Old Pine, Myatt's British Queen, Swainstone Seedling, Coul Late Scarlet, Prolific Hautbois, and Large Flat Hautbois.

FIGS.—Essex.—Protect your Fig-trees effectually from frost, and more especially the extremities of the shoots, for on these the crop that ripens is produced.

INSECTS.—A. Alves.—The slug-like caterpillars which defoliated your Cherry-tree will change to a saw-fly, named Tenthredo Ethrops, next midsummer. We cannot say to what extent the tree will suffer, and shall feel obliged by your informing us of the result, in the course of next year. R.—An Original Subscriber's Potatoes have been attacked by the wireworm, we presume. If such be the case, it is scarcely possible to free the land from them; they may, however, be reduced by sticking slices of Potato or Turnip in the ground, to which they will resort; and if these be examined daily very considerable numbers may be collected and destroyed. The lime-dressing will not touch the wireworm, it is to be feared. The Pear-tree was killed, no doubt, by the caterpillars found under the bark, and not by the tar-painting. R.—A Subscriber's Ichneumon is named Pimpla instigator, and is not uncommon in gardens. R.—J. H.'s box contained nothing but some earth and a few fibrous roots when it reached us; the box was crushed to pieces, which probably enabled the insects to escape; we are consequently unable to give the information desired. R.—Penna.—It is absolutely necessary to inclose specimens of insects when correct information is required, and none of the larvæ having been transmitted with the note, it is impossible to determine the moth whose maggots have injured the Peas; indeed, we cannot even say to what genus it may belong. R.—Italian Fire-fly.—The specimen discovered in a greenhouse in Norfolk had no doubt been introduced with the Orange-trees, as suggested by Mr. Dugmore. As we had the pleasure of seeing these extraordinary little animals in their native country last summer we will shortly illustrate their history. R. Books.—Ortolano, a Country-town Amateur.—A good many plans for flower gardens are to be found in "London's Gardeners' Magazine," and his "Encyclopædia of Gardening." There is also a great variety of patterns for parterred gardens in "James's Gardening," an old book well worth having where it can be procured.—S. B.—Lowe's "Primitæ Floræ Maderensis" is all that has appeared specially on the Flora of Madeira. The island contains nothing except plants perfectly well known. Its glory consists in its beautiful Ferns.—J. F.—The Cryptogamic volume of Smith's "English Flora" contains the most complete account we have of British Cryptogamic plants. You can obtain it separately. For price consult a bookseller.—A Humble Subscriber.—Martin Doyle's "Cyclopædia of Practical Agriculture."

BOTANY.—S. W.—The apparent omissions you mention are chiefly owing to the fluctuating opinions of botanists regarding the real importance of some of the smaller groups of plants, and the redistribution of the Vegetable Kingdom is professedly a mere sketch, requiring a good deal of working up. Juglandaceæ are near Anacardiaceæ; Monotropaceæ and Pyrolaceæ are supposed to be included in Ericaceæ; as also Cuscutaceæ in Convolvulaceæ, Illiciaceæ and Cassythaceæ in Lauraceæ. Francoaceæ stand near Crassulaceæ. Rhizophoraceæ are uncertain. Limnathaceæ are next Geraniaceæ along with Tropæolaceæ. Balsamaceæ next Platanaceæ, Aquilariaceæ by Thymelaceæ, Belvisiaceæ uncertain, as also Canelaceæ. Those orders which you cannot find in the old distribution are newly separated: but we cannot spare space or time for answering such long questions. Haloragaceæ and Cercoidaceæ are synonymous or nearly so, and Circeaceæ may merge in Onagraceæ.

SEEDS.—Deroniensis.—You may sow your seeds which you have received from the Cape of Good Hope in spring, in shallow pans filled with light sandy soil, mixed with a little peat, and place them in a gentle bottom-heat.

PLANTING.—Pro bono Publico.—Much obliged, even for your reproof, though unmerited. Will you give us your address? Although you know nothing of "Quercus," we do.

WOOLLEN RAGS.—Old Rags.—We see no objection to the application of dilute sulphuric acid, for the purpose of arresting the ammonia copiously evolved during their fermentation, and for destroying their fibrous texture; but we doubt whether it is desirable to get rid of the latter, which no doubt acts beneficially in a mechanical way. We would rather mix them with superphosphate of lime, which is very cheap, as you may see by the advertisements.

MISCELLANEOUS.—A Subscriber.—Do not prune the roots of Agapanthus, but keep them alive. If they die it is necessary to remove them carefully. The long-racemed Pavia grows and flowers so freely in all sorts of places that we cannot guess what is the matter with yours, unless the soil is wholly exhausted or swamped with water. Your Pomegranate will flower when it is old enough; it probably grows too fast. Stop its shoots in the month of August every year.—Marryatke.—The wonderful curiosity from Australia, which you fancy is a new Kennedyia (!) is Lotus tetragonolobus, an old and very common annual, which you may buy in any seed-shop under the name of the Purple winged Pea.—A Subscriber can remit

the subscription, 6s. 6d. per quarter, to the office, and he will be supplied by our own agent.—F. D.—Much obliged, but the Numbers are of no use to us.—C. L.—It is not at all usual for Southernwood to blossom in our short summers; but it often does when such hot autumns as the last occur.—R. P.—No doubt people may commit frauds in exhibiting plants in Ward's cases; and so they may in any other respect. We understand, indeed, that a well-known personage has had the good taste to show how such cheating may be managed. You had better consult him on the subject; only take care you are not found out.—S. B.—It is now too late to sow your seeds this year. Place them early in March in a gentle bottom-heat, keeping them in some very dry place in the meanwhile. We trust your Chusan seeds will prove something better than such as have reached us from that island, for we have never yet succeeded in obtaining anything beyond common European annuals and mere weeds. As the Horticultural Society has a collector in China we will not trespass on your kindness by deriving you of any of those you have received.—Econiensis.

—You can only obtain plants by inquiry amongst the nurserymen, or by special advertisement.—C. A.—Use a wooden roof for your greenhouse, and warm it by a small Stephenson's boiler, which will stand inside and requires no setting.—A Subscriber.—The best roof for a Vinery is one with wooden rafters and metal sashes; but all wood does very well.—S. W.—For a single specimen of a handsome deciduous shrub you may choose between Spiræa aræfolia, Magnolia acuminata, Æsculus macrostachya, or a Craegusa odoratissima, grafted low. Corrosive sublimate will kill moss, but the rain will wash it off the roof, and it will poison the water it mingles with.

—Perseverance in destroying its leaves will in the end effectually destroy Plantain. Your Fern is the common Polypody. We are much obliged by the paper on Wagtails, which has only been omitted for want of space. We are glad of such agreeable articles.—Great Marlow.—1, Winter Nellis; 2, Easter Beurré; 3, Passe Colmar; 4, Glout Moreau; 5, Beurré de Capiaumont; 6, Marie Louise; 6, if put in, has probably been assisted in escaping through a hole which appears in the canvass-bag.—J. R. B.—A and E, Beurré Diel; B, C, D, G, I, L, Passe Colmar; F, Double de Guerre, a stewing Pear; K appears to be Napoleon. Thanks for—E. W. B.—Apples:—15, Old Pommeroy; 16, Yorkshire Greening; 17, Yellow Ingestrie; 18, Beauty of Kent; 19, Golden Reinette; 20, Herefordshire Pearmain. Pears: 21, Perhaps Brown Beurré; 22, Messire Jean; 24, Spanish Bon Chrétien. The Apple grown at Retram House, Hampstead, is the Blenheim Pippin, 13½ in. in circumference.—J. S. W.—Your Apple is the Alexander; keeps till December, for kitchen use.—S. P. M.—A fine specimen of the Passe Colmar.—J. Kent.—Dolichos purpureus, Tropæolum Moritzianum.—D. Z.—Clethra alnifolia, Amaryllis belladonna.—W. B.—Hippeastrum pulchellum.—Vero.—Malva fragrans.—A Subscriber.—Your seedling Dahlias and Anemones may be taken out of the pots, and placed in some dry situation free from frost. If you sink your Rhododendrons 1ft. or 18ins. deeper into the soil, it will in all probability kill them; you had better cut them down.

—H. Granger is answered in the Proceedings of the Horticultural Society in to-day's Paper.—L. M. M.—Advertisements are charged as follows:—Four lines and under, 4s. Each additional line up to 20, 6d. Every five lines beyond, 2s.—T. D. R.—No. 3, King of the Pippins, 4, Holland Crab; 5, Keswick Codlin; 6, Golden Pippin; 7, French Crab; 8, Dutch Mignonette; 9, Mark's Codlin; 10, Beurré de Capiaumont.—M. B. C. N.—A, Beurré de Capiaumont; B, Doyenné Gris; D, Swan's Egg; 1, Beurré Bosc; 2, Bon Chrétien Fondant; 3, Marie Louise; 4, Bezi Vast; 6, Buchanan's Spring Beurré; 40, Scarlet Crofton; 42, Minchall Crab.—K. W.—1, Court of Wick; 4, Kirke's Lord Nelson; 10, Ribstone Pippin; 11, Stag's Nonpareil or Hicks's Fancy; 12, Gravenstein; 14, King of the Pippins; 16, Blenheim Pippin; 17, Loam's Pearmain; 18, Hollandbury; 19, Hawthornden; 21, Pomme de Neige; 22, Yellow Ingestrie; 23, Margil; 24, Crimson Queen; 25, Black Achan; 26, Bishop's Thumb; 27, Easter Beurré; 28, 37, Beurré Diel; 29, Napoleon; 30, 32, 35, Glout Moreau; 33, Passe Colmar; 34, 36, 39, Winter Nellis; 38, Louise Bonne (of Jersey); 40, Beurré de Capiaumont.—T. L. P.—Erodium cicutarium.—H. L.—On no account shift your Heaths at this season.—E. M.—If your Bulfinch's claws are long, why not cut them shorter?—J. B.—Your Begonia seems to be Evansiana; but we will examine it more particularly, and mention it again next week.—W. B.—British Champagne may be made from unripe Grapes, by the receipt already given: a little more sugar will be required, that is all. Unripe Tomatoes may be made to ripen by hanging them in a Vinery in the sun; they are, however, very inferior to those ripened in the open air while the plant is healthy. You will find "Macculloch on Wine" a useful book.—Euphemis.—No. 2 is Medicago lupulina, and No. 1 appears to be the same thing grown more vigorously; however, as it has no fruit we cannot be certain.—Will M. R., who sent the Petunia for the opinion of the Editor, forward his address to the Office?—G. S. Wintle.—Your seedling Apples are noticed, p. 721, under the initials G. S.

SEEDLING FLORISTS' FLOWERS.

DAHLIAS.—Mrs. Hedley.—The bloom of your purple seedling, sent on the 13th, arrived in better condition than those previously received. Our opinion is unaltered regarding the qualities of the flower: the centre is deficient in petals, and they also expand irregularly; every bloom sent had a large yellow disk. The dark maroon is the most promising flower. The blooms should have been sent earlier in the season.—B. F.—The bloom of your yellow seedling is rather small, and the petals appear to want substance; but as the season is past for judging these flowers, we can only recommend you to try it another season, as the centre is full and good, and the colour very desirable.

FUCHSIAS.—W. R. & S.—The seedling Fuchsia 3 43 is large and showy, but, like many we have before noticed, the colour of the corolla wants depth and a greater contrast to the tube and sepals; the latter are rather coarse, and the flower has a disagreeable twist in the tube: 4-43 is a much better flower in colour and texture, and in contrast of colour; but the difference between these and many we have seen and noticed is so trifling that we require a more decided character and novelty to recommend them to favourable notice. Argo, a richly coloured and well-formed flower, but differing very little from others we have seen; it depends much upon its habit whether it is worth cultivation.

PELARGONIUMS.—B. D.—Your seedling Pelargonium is very pretty in colour, clear and distinct, and the spot in the upper petals is firm, but the flower is deficient in form and substance.

PANSIES.—W. R. & S.—Your seedling marked 1-45 is a showy flower, with a splendid eye, but it is not sufficiently good for a show flower; the ground-colour wants uniformity, the yellow being stronger in the lip than in the side-petals; the edges of the petals, also, are too rough, and it wants substance for so large a flower.—H. C.—The most favourable point in your seedling is the stout velvety texture of the petals; in form it is very deficient; the three lower petals are too small, which destroys the circular form the outline should possess, and gives an undue preponderance to the upper petals. It cannot be of any value, as it is inferior to the dark flowers in cultivation.—C. F.—Your seedling wants substance: the colour and marking are both good, but too much like many fine varieties in cultivation. A new seedling, to recommend itself to purchasers, must possess either novelty or improvement.

PETUNIAS.—M. R.—The seedling Petunia arrived in perfect condition: it is beautifully mottled on a white ground, and differs from the variety noticed last week, in having a rosy-coloured blotch in addition to the blue; the flower is very beautiful, and

quite distinct from No. 25. They are both very ornamental and desirable varieties.*
As usual, a host of letters have arrived too late for answers this week.

NEWS OF THE WEEK.

THE Government proclamation against the Repeal Meeting at Clontarf has been followed up by proceedings against Mr. O'Connell—the leading Officers and Members of the Repeal Association—and several others who took an active part in the recent demonstrations in the provinces. On Friday last Mr. O'Connell and the other parties included in the indictments were called upon to enter into recognizances to attend in the Court of Queen's Bench on the first day of next Term, to answer the charges to be then preferred against them by the Attorney-General. These recognizances were accordingly entered into on the following day before Mr. Justice Burton, and the depositions have since been published. The principal charge is one of conspiracy, the proceedings at the Mullaghmast meeting forming the chief subject of the prosecution. The accused are charged with seditiously conspiring together to seduce the Army and Navy from their allegiance to the Throne—with conspiring to establish Courts in order to supersede the ordinary and legal Courts of Justice, and with attempting to overturn the Constitution, under the pretence of seeking for a Repeal of the Union. Mr. O'Connell, it is said, intends to defend himself in person, and Mr. Sheil and other leading advocates of the Irish bar have been engaged for the defence of the other persons charged. The Repeal Association held its usual weekly meeting on Monday, notwithstanding the rumour that Government intended to suppress it. Mr. O'Connell addressed the meeting at great length. He promised to abandon the use of the word "Saxon" as applied to Englishmen, as it was calculated to give offence; and declared that he was ready to accept a federal Parliament, to procure for themselves the management of their own local and internal affairs, leaving matters of national importance to be legislated upon by the representatives of both countries in the Imperial Parliament. He disclaimed all idea of shrinking in professing his readiness to accept these terms, for by so doing he considered that he not only took away all argument from his enemies, but followed a course to which the Association had already pledged itself, by the admission of several Catholic prelates and others who were advocates of Repeal only so far as it applied to the establishment of a federal Parliament. The people both in Dublin and the provinces continue tranquil, and the peace of the country has not been disturbed by a single outrage or act of violence. Government, however, continue to strengthen the military force and to increase the fortifications of the capital.

In France public attention is chiefly taken up with the affairs of Ireland, and it is neither uninteresting nor unimportant to observe the comments of the various journals on the late events. Their opinions are of course given in accordance with their different political views, but all seem to consider that the progress of the Repeal agitation has received an important check.—From Spain we have accounts of the festivities in honour of the birthday of the young Queen, and of the preparations for the approaching meeting of the Cortes. The session is to be opened by a simple ordinance without any speech from the throne, in order to avoid the necessity of an address in reply and to remove all delay or obstacle to the proclamation of the Queen's majority. The affairs of Barcelona continue in the same state, but in the other insurgent cities the prospects of the Government appear to have improved.—In Portugal an attempt has been made to get up another insurrection in the absence of the Queen on a provincial tour, but the conspiracy was soon discovered, and the affair appears to be considered of slight importance.—From the United States we have the particulars of a remarkable speech delivered by Mr. Webster at the agricultural meeting at Rochester, in which he dwelt at length on the commercial relations with Great Britain, and indignantly denounced the doctrine of Repudiation. This speech has caused a great sensation in America, and will be read with interest in this country.

Home News.

COURT.—The Queen and Prince Albert remain at Windsor Castle, and are quite well. On Sunday her Majesty and the Prince attended divine service in the Private Chapel of the Castle; in the forenoon they took their accustomed early walk, and in the afternoon walked in the new plantations of the Home Park. On Monday morning the Queen and the Prince took their usual promenade in the grounds round the Castle, accompanied by the Princess of Hohenlohe Langenbourg; in the afternoon her Majesty and Prince Albert rode in carriages to Rapley, near Bagshot. The saddle-horses had been sent to Swinley, and the Royal party on arriving at Swinley quitted the carriages and rode on horseback round the grounds. The Queen and the Prince, attended by their suite, afterwards returned in carriages to the Castle. On Tuesday her Majesty did not leave the Castle, but the Prince rode out on horseback in the morning. On Wednesday morning Prince Albert hunted with his harriers for the first time

this season. The meet was at Mr. Mason's farm, at Upton. The Prince had two excellent runs, and returned to the Castle to luncheon. In the afternoon her Majesty and the Prince took exercise on horseback in the riding-school. On Thursday morning they walked out in the pleasure-grounds; the Prince afterwards shot over the preserves in the Great Park, and in the afternoon the Queen and Prince took equestrian exercise in the riding-school. Her Majesty and Prince Albert intend to honour the University of Cambridge with a visit on Wednesday next. The visitors to her Majesty this week have been Sir H. Wheatley and Col. Malcolm. Sir Wm. Follett, the Solicitor-General, arrived at the Castle on Wednesday morning, and after an audience of her Majesty immediately returned to town. His Serene Highness the Prince of Hohenlohe Langenbourg arrived in town on Saturday from Witley Court, the residence of the Queen Dowager. His Serene Highness visited the Pantechnicon, and afterwards proceeded by the Great Western Railway to Windsor Castle, on a visit to the Queen. Her Royal Highness the Duchess of Gloucester has left Woburn Abbey, the seat of the Duke of Bedford, on a visit to the Queen Dowager at Witley Court. The Marchionesses of Westmeath and Ely have been appointed first and second extra Ladies of the Bedchamber to her Majesty the Queen Dowager.—His Royal Highness Prince Alexander of the Netherlands is expected to return to Mivart's Hotel at the close of the ensuing week, from the North. After attending the annual gathering at Inverness, his Royal Highness went to Drumlanrig Castle, on a visit to the Duke of Buccleuch, where he remained several days, and then proceeded by Edinburgh to Alnwick Castle, the seat of the Duke of Northumberland. The Prince will proceed from thence to Worcestershire, on a visit to the Queen Dowager.

Arrival of the Duke de Bordeaux.—His Royal Highness arrived in this country on Friday from Germany, having landed at Hull on that day from Hamburg, travelling under the title of Count Chambord. His Royal Highness during his brief sojourn at Hull was treated with every mark of respect. On leaving for York on the Hull and Selby railway, Mr. Broadley, M.P., and several directors of the company, the French Consul, &c., were at the terminus, and showed his Royal Highness every attention. The Prince remained until Sunday at York, and during the previous day was engaged in going over the Minster. Afterwards he visited the Castle and Museum, and went to the theatre in the evening. On Sunday his Royal Highness and the noblemen of his suite attended mass at the Roman Catholic chapel, and then departed for Durham, on their way to Scotland. It was remarked that on the Duke's carriage there was not any heraldic emblazonment of the Bourbon arms, but merely the initial "H.," surmounted by a regal crown. His Royal Highness arrived at Durham in the evening, and stayed there for the night. On Monday morning his Royal Highness visited the Cathedral, and afterwards left for Sunderland by railway to witness the mining operations in that district, and thence proceeded to Newcastle and Edinburgh, where he arrived on Thursday. The Prince was cordially received in the Scottish capital, in which he passed his youthful days of exile, having left it at 10 years of age. If the weather permits, his Royal Highness, it is understood, will make a tour in the Highlands, and then visit the principal towns of England prior to his arrival in London. The Prince is of fair complexion, not above middle stature, bears a striking resemblance in his features to Louis XVI., and has the appearance of being beyond his actual age. He was born the 29th September, 1820, and consequently has only attained the 24th year of his age. In 1830, he quitted France with Charles X. and the other members of the Royal family. He still shows some stiffness in his leg, the result of his accident two years ago. His Royal Highness on Sunday attended Divine service in the Catholic Chapel in Edinburgh. His Royal Highness is expected at Alton Towers, on a visit to the Earl of Shrewsbury, on the 4th of November, where several distinguished personages have been invited to meet him.

The Grand Duke Michael.—His Imperial Highness and suite arrived at Lancaster on Thursday evening. His Highness was received at the terminus by Baron Brunow, who had preceded the Grand Duke. After breakfast, relays of horses were ordered, when his Imperial Highness and Baron Brunow resumed the journey to Carlisle, where they dined, and remained for the night. On the following morning the Grand Duke and party left for Glasgow, and passed through that city in the evening on their way to Buchanan House, the seat of the Duke of Montrose. On Saturday his Imperial Highness, accompanied by the Duke and Duchess of Montrose, Baron Brunow, and the visitors at the castle, went to Loch Lomond, "the pride of the Scottish lakes" as it has been frequently called. The Duke's pleasure boats were in attendance, the boatmen being attired in the picturesque costume peculiar to the country, and composed on this occasion of the Graham tartan.

The Church.—The death of the Bishop of Lichfield has created a vacancy on the Episcopal Bench. It is rumoured that either the Rev. Dr. French, Master of Jesus College, Cambridge, or the Rev. Dr. Wynter, Vice-Chancellor of Oxford, will be his successor. The canonry in St. Paul's Cathedral, which became vacant by the decease of the Rev. J. Tate, has been conferred on the Rev. Thomas Dale, Vicar of St. Bride's. The preferment until the present time was worth 2300*l.* per annum, but its revenue under the Church Reform Bills is now reduced to 1000*l.* per annum. Prebendal stalls in the cathedrals of Llandaff and Wells, and the vicarage of Penmark, Glamorganshire, have become vacant by the death of the Rev. Dr. Casberd. The Provost and Fellows of Oriel College,

Oxford, have presented the Rev. Mr. Eden to the vicarage of St. Mary, Oxford, with the chapelry of Littlemore, vacant by the resignation of the Rev. Mr. Newman.

The Army.—The Queen has been pleased to confirm the finding of a recent Court-martial at Chatham, sentencing Lieut. John Piper, of the 26th Cameronian Regiment, to be cashiered for being drunk and absent from duty, and for having obtained from the paymaster of the Invalid Depot at Fort Pitt the sum of 40*l.*, or thereabout, stating it to be for the use of the 26th Regiment, and signing a receipt to that purport, whereas he had no authority to receive such money from the Colonel of the regiment.—On Sunday a notice was issued by the Lords and other Commissioners of Chelsea Hospital announcing that any out-pensioners who may hereafter attend any meetings for the purpose of effecting a Repeal of the Union will be liable to the loss of their pensions.

Parliamentary Movements.—The election for London will take place this day, and the result will be formally declared on Monday. The Hon. E. Bouverie, second son of the Earl of Radnor, has come forward as a candidate for Kendal, in the Liberal interest. Lord Morpeth was applied to by the electors, but declined. It is not known whether any Conservative candidate will come forward.

Order of St. Michael and St. George.—His Excellency the Hon. Patrick Stewart has been privately made a Knight Grand Cross of this Order, at the Palace of Malta, by the Senior Grand Cross, Sir A. Randon, who was specially appointed for the purpose by the Queen.

Armorial Bearings.—According to a recent decision, the impression of a thistle on a common pencil-case, with the motto "Dinna forget," is chargeable as armorial bearings when used, and subjects the party to a duty of 2*l.* 8*s.*

Foreign.

FRANCE.—The proclamation of the Lord Lieutenant of Ireland prohibiting the intended great meeting at Clontarf is the chief and almost exclusive topic of comment in the Paris journals. The *Journal des Débats*, which stands the first in importance, professing to forget its own quarrel with Mr. O'Connell, thus gives its opinion:—"The English journals already reproach O'Connell severely with shamelessly giving way after so much threatening and provocation on his part, and it must be allowed that they have ample scope for doing so. Mr. O'Connell, who is as good a lawyer as any one, seemed lately to comprehend that he was placing himself more and more within the power of the law, and his reiterated protestations of respect for the constitution sufficiently testified his apprehensions. As long as he did nothing but talk, he was allowed to go on—he was acting legally, the people having the right of meeting to petition. But lately the furthest limits of the law were attained, and the Government considered that they were overleaped. The proclamation of the council contains, as may be perceived, all the elements of an indictment. If we make this remark, it is because it is probable that the measures taken against Mr. O'Connell will not stop there, and that the Government will have him prosecuted personally before the ordinary tribunals. A thousand complications might arise from this event. In all cases, convinced as we are that the repeal of the union is an insane dream, and that the immense disproportion of forces renders desperate every attempt at a struggle on the part of Ireland against England, we cannot remember but as a fortunate event anything that may stop both in the path in which they are proceeding. In whatever manner the English Government may succeed in restoring material order in Ireland, it must not suppose that it can re-establish moral order there by force. It may put down an insurrection by arms, but it will not extinguish by such means the agitation that lies at the bottom of men's hearts. It is impossible for Ireland to remain in her present state, and we have frequently severely censured Mr. O'Connell for the blindness which was leading him onward in a path the most fatal to the cause which he pretended to be so anxious to serve." The *Globe*, Ministerial paper, speaks in favour of the measures of Government. It says:—"We were right in saying that the farce which was being performed by O'Connell in Ireland was drawing to its conclusion. The English Government has found that the joke was kept up too long, and has cut short the juggling tricks of which the unfortunate Irish have been the victims. Apparently O'Connell has not yet recruited his army of three millions of repealers, and no less a force was sufficient to enable him to make a resistance. Consequently he has fled at the first attack of the Ministry. It remains to be seen whether he will not personally have an account to settle with the Government." The *Constitutionnel* is the least violent of the Opposition papers:—"The English Ministry has at length taken a decisive step relative to Ireland. The determination of the Lord Lieutenant is exceedingly grave. It is well known what respect English statesmen profess for the right of all citizens to meet and deliberate on public affairs. The danger must have appeared exceedingly manifest, or the political interest exceedingly pressing, to induce Sir R. Peel, after having allowed O'Connell to go on up to the present time, to act in so energetic a manner. The coolness with which O'Connell took the matter, and his immediate obedience to an order he declares to be illegal, are the objects of the remarks of the English press. It declares that O'Connell is at bottom delighted with what has happened, and that the proclamation extricates him from the impossibilities which each day were increasing on his path. It is certain, that, notwithstanding his inexhaustible fecundity, the agitator had come almost to the end of his expressions, and that the new theme thus given him will vary a little the repertory of his speeches before the Corn Ex-

change auditory. But the difficulty for O'Connell will always be to pass from words to acts, from speeches to effects, and this difficulty remains the same." The *National* affects to believe that the vigour of the English Government has resulted from the advice given to Queen Victoria by Louis Philippe, at their late meeting at Eu! The *Courrier Français* takes a view more favourable to the Irish agitation than many of the other papers, and regards Mr. O'Connell rather as a moderator than an agitator. The *Presse*, whose anti-English feeling is so well known, writes in the same style:—"This commencement of hostilities between Ireland and the English Government has all the character of the crisis of 1831. Then, as now also, Mr. O'Connell advised the people to submit, assuring them that the agitation for Repeal would be renewed under some other form. O'Connell only changed the direction of his guns. Will the struggle which has commenced like that of 1831, finish in the same way as that did? This is a question which we will not take upon ourselves to answer. We must not forget, however, that there is not less excitement in England than in Ireland. In the one country there was a determination to proceed to extremes in the way of repression, in the other men were resolved to display an energetic and terrible defence." The news from China is another subject of comment, and most of the papers anticipate immense advantages to France from the opening of the Chinese market. The *Moniteur* contains the official returns of the indirect taxes during the nine months of the present year ending on the 30th ult., put forward apparently in comparison with the revenue returns of this country ending on the 10th inst. The total receipts amount to 557,993,000*fr.* (or nearly 22,284,000*l.* sterling), and exhibit an increase, as compared with the receipts of the corresponding period of 1841, of 35,652,000*fr.*, and over those for 1842 of 10,280,000*fr.* The augmentation in the last three months of 1843 was 7,267,000*fr.* over those of 1841, and 3,355,000*fr.* over 1842. The receipts of the registry duties figure in these returns for 153,982,000*fr.*, the stamp duties for 25,612,000*fr.*; the Customs for 78,921,000*fr.*; the import duties on colonial sugars, 27,146,000*fr.*; on foreign sugars, 5,145,000*fr.*; on domestic sugars, 4,902,000*fr.*; duties on salt, 43,945,000*fr.*; on liquors, 71,704,000*fr.*; on public carriages, inland navigation, &c., 28,043,000*fr.*; on the sale of tobacco, 77,093,000*fr.*; of gunpowder, 3,614,000*fr.*; postage of letters, 33,653,000*fr.*; mail coaches, 1,531,000*fr.*; mail packets, 732,000*fr.* The augmentation bore principally on the registry duties, customs, sugars, liquors, tobacco, postage, and stamps; and the items on which there was a falling off were the duties on foreign sugars, salt, gunpowder, mail coaches, and domestic sugar. The receipts per quarter were—1st quarter, 183,190,000*fr.*; 2d quarter, 187,184,000*fr.*; and 3d quarter, 186,719,000*fr.*;—showing an excess in the latter of 3,529,000*fr.* over those of the first; and a diminution, as compared with the second, of 465,000*fr.* The tendency of this publication would be to create the belief that prosperity was constantly increasing in France. Nevertheless it is stated that extreme distress presses upon most of the manufacturing and commercial establishments of the country.—The Duke d'Aumale left Paris on Saturday, for Italy. After visiting Turin, Genoa, Leghorn, Florence, Rome, and Naples, he is to proceed to Malta, whence he will repair to Africa and assume the command of the province of Constantina.—Details of the trial and acquittal, at the assizes of Laval, of the ultra-Liberal Deputy, M. Ledru Rollin, who lately volunteered to pay a visit of sympathy to Mr. O'Connell, fill many a column of the Opposition prints, which also bestow great attention on an article of the *Bien Public*, a journal recently established at Macon by M. de Lamartine, for the diffusion of his opinions and the promotion of his political views. In this article he exhorts his new allies of the Democratic party to silence their discord and unite to subvert the Cabinet in the next session, on the questions of extension of the electoral franchise and the fortifications of Paris.—The Council General of Corsica passed a resolution on the 9th inst., to the effect of repealing the law which banished from France the family of Napoleon, improving the harbour of Bastia, and establishing a military port in the gulf of Ajaccio.—A superb block of Carrara marble arrived a few days ago at the Palais de l'Institut, in Paris. It is destined for a statue of the Queen of England, for the Museum at Versailles or the Château d'Eu.—The *Journal du Havre* publishes the following notice from M. Prevost, notary to the society:—"The shareholders of the society established for the salvage of the *Télémaque* are informed that the question is now completely terminated. The cargo is deposited on the quay of Quilleboeuf—it consists of 52 pieces of timber. A considerable number of barrels had also been shipped in the *Télémaque*, the remnants of which only were found, and it is evident from inspection of them that they contained nothing but tallow and oil. Until the 23d of September the hull of the vessel was encumbered with sand. Several apertures, which were purposely made, gave a passage to the current, and the high tides at the close of the month sufficed to clear it entirely. Then the most minute search was made, and a certainty was acquired that the opinion relative to the existence of treasure on board the *Télémaque* had been altogether chimerical. A shapeless hull is all that remains of the vessel. The maritime authorities intend shortly to order the sale of the cargo and remnants of the vessel, and the shareholders will be informed of the amount of the proceeds."

SPAIN.—We have accounts from Madrid to the 10th, on which day the birthday of the young Queen was celebrated with enthusiasm. Her Majesty laid the foundation-stone of the Palace of the Cortes, and re-

viewed the troops of the garrison. At night the Capital was illuminated. M. Aguilar, the Minister of Spain in Lisbon, had been superseded: the Government charged him with having evinced too much apathy in the diplomatic negotiations which led to the conclusion of a treaty of commerce between England and Portugal. The Ministry were neglecting nothing to insure the opening of the session on the 15th inst. Circular letters had been sent to all the deputies, requesting them to repair forthwith to Madrid, to enable the Congress to be constituted with the least possible delay. The session is to be opened by a simple ordinance, without any speech from the throne. The Cabinet considered that a speech would necessarily be followed by the presentation and discussion of an address, and was anxious to avoid all obstacle or procrastination to the proclamation of the majority of the Queen. Each Minister will confine himself to lay before the Cortes an *exposé* of his administration since the installation of the provisional Government, and the Chambers, once constituted, will proceed to declare the Queen of age. The elections were almost everywhere terminated. Barcelona and Girona had made no returns; those of the Balearic and Canary Islands had not yet arrived; and Burgos, Lerida, and Salamanca, will have to proceed with new elections. According to Ministerial calculations, out of the 187 deputies elected there were 30 whose opinions were not known, 60 Moderados, between 60 and 70 belonging to the Progresista party, 30 partisans of Don Francisco, Centralists, Republicans, &c. The Chamber, composed of 249 members, seldom reckoned more than 180 present, so that the Parliamentary party expect to obtain a considerable majority. The Barcelona journals state that no change had taken place in the situation of affairs there. The Junta had notified to the French Consul that it might be at any moment compelled to prevent anybody from entering or leaving the town, and that all strangers must therefore quit it within twenty-four hours. The foreign Consuls had, in consequence, removed to Barceloneta. Barcelona had been reduced to a dreadful state since the failure of the insurgents in their assault upon the citadel, in which they lost 80 men killed and 160 wounded. Immediately afterwards Montjuich and the citadel opened a simultaneous fire upon the city, and in a few hours did more damage than heretofore after firing as many days. On the 4th the rebel Governor of Atarazanas presented himself before General Sanz, at Gracia, with 40 men belonging to his garrison. Horse flesh was becoming scarce and dear in Barcelona, and all the cats had been devoured. On the 5th the Junta ordered the door of every house in the place to be constantly left open, for the purpose of affording a ready refuge to passers-by from the cannon-balls and shells of Montjuich and the citadel. In consequence of this order the patulea had commenced plundering all the richly-furnished houses. The insurgents had barricaded and cut dry ditches across every street, and the hospitals and barracks were filled with sick, for whom there were no doctors or medicines. Order had been restored at Granada and Almeria. The latter was occupied on the 5th without any opposition by the Government troops. General Concha arrived before Saragossa on the evening of the 5th. Troops were to leave the capital to reinforce the army of Arragon, where the insurgents, it appears, are not so much discouraged as described by the French telegraph. The *Espectador* states that a corps of 6000 men was already organized in Saragossa, and that the moment when double that number should be under arms, the Centralists were determined to commence offensive operations in Castile. The funeral of Count Toreno had been celebrated at Madrid with considerable pomp in the Church del Carmen. The Bishops of Valencia and Cordova officiated on the occasion. The pall was held by the Dukes of Osuna and Hijor, and all the nobility and the *élite* of the society of Madrid attended the ceremony.

PORTUGAL.—The Lady Mary Wood steamer brings advices from Gibraltar to the 9th, and from Lisbon to the 12th instant. This packet was detained a day by the unusual occurrence of a fog of such density at Gibraltar that it was impossible to see at the distance of a few yards; it lasted for full 20 hours—from 3 o'clock on the Sunday to 11 A.M. on Monday—and several small craft were injured by running foul of each other. At Lisbon the absence of the Queen and her leading Ministers had been seized by the Septembrists to set on foot a new revolution. Attempts had been made to corrupt the army, and some officers detected in tampering with the soldiers had been placed under arrest in the Castle. The merchants of Lisbon were hopeless of a favourable result to the tariff negotiations, and the clearing of goods at the Custom-house, which had been in a great degree suspended for a month, was now resumed. Lord Aberdeen's retiring to the north of Scotland was held to be very significant of the failure of the Duke of Palmella's mission. The Queen and Princes are in excellent health, and continue to be enthusiastically received everywhere throughout their journey in the *Alentejo*, notwithstanding a good deal of dissatisfaction manifested on the part of those who have been called upon to contribute towards the mending of the roads by which the Royal *cortège* had to pass. It appears that this new impost, which is characterised as a voluntary donation, has been enforced and refused in many instances.

GERMANY.—The camp of the 10th corps of the German confederacy, near Luneburg, was dispersed on the 9th inst., after manœuvres and evolutions as well as military music, on a scale of unusual grandeur, had been performed during more than a fortnight, to the satisfaction of all the illustrious persons assembled there. The King of Hanover, who returned from Luneburg on the 9th inst., had distributed a considerable number of deco-

rations of the Guelphic Order of Knighthood to the officers at the camp, among whom are mentioned his Serene Highness the Duke of Holstein Augustenburgh, heir apparent to the Duchy of Holstein, the question of whose succession seems at present to form one of the leading topics in the political circles on the Continent.—Considerable excitement prevails in Bohemia, in consequence of a report having been circulated that since the return of Prince Metternich the question of a modification of the commercial tariff had been again raised, and it was even added that a new tariff was about to be published. The uncertainty prevailing on the subject had created a considerable stagnation in all commercial transactions. The warehouses were filled with goods, and no buyers to be found. It was feared that a crisis was about to take place amongst the manufacturers.—Letters from Vienna state that Count Sambuy, the Sardinian Ambassador at the Imperial Court, in a private audience, had formally demanded the hand of the Archduchess Maria Carolina (born February 6, 1821), on behalf of his Royal Highness Prince Eugene Emanuel, of Sardinia Carignan (born April 14, 1816), and that the betrothment will take place in the course of this month.—In the kingdom of Saxony no less than 154 periodical publications appear daily, weekly, and monthly; of which two are in the Slavonic language, two in French, one in English, and the rest in German. At Leipzig alone the number issued is 76.—We learn from Carlsruhe that the prosecution against M. Haber for his participation in the duel between M. de Werefkin and M. de Gaeler, has been brought to a trial. He was accused of having provoked the duel, but of this charge he was acquitted. A sentence of imprisonment for four days for taking measures to facilitate the flight of M. de Werefkin, in case he survived the rencontre, was, however, pronounced upon him.—The King of Prussia has presented to Mr. Britton a "Gold Medal of Merit," as a compliment for his numerous literary works on antiquities and the fine arts; but principally in acknowledgment for his "Dictionary of the Architecture and Archaeology of the Middle Ages."

ITALY.—Advices from Leghorn of the 6th inst. state that the Military Commission sitting at Bologna had already pronounced several sentences, none of which, however, had been carried into execution. An insurgent band had made its appearance near Ancona, and a report was current that serious attempts at insurrection had been made in Naples, Sicily, and the Abruzzi. The disturbances in the latter had even assumed an alarming aspect. In Sardinia and Piedmont the public mind was much agitated. A number of arrests had taken place, and the palace of King Charles Albert had been placed in a formidable state of defence. The Pope left Rome on the 2d for Castel Gandolfo, where he intended to reside a few weeks. Previous to his departure his Holiness had ordered the execution of a clergyman, named Abbo, who had been capitally convicted of the murder of his nephew. He was executed on the 4th in the Castle of San Angelo, in presence of the garrison. A strange report has appeared in the papers of an attempt to assassinate the Pope. It is said that a revolutionary physician had demanded an audience of the Pope, and on being refused admittance fired a pistol in the court of the Vatican, when he was immediately arrested. A loaded pistol was found on him.

GREECE.—Letters from Athens of the 30th ult. state that tranquillity prevailed through the country, and that everywhere the people were preparing for the elections, which were to commence on the 1st inst. The 30th being the birthday of King Otho, a grand *Te Deum*, at which his Majesty assisted, was chanted in the Cathedral Church. The English and French Ministers, the only diplomatists present at the ceremony, were loudly cheered by the people. The British ship *Indus* and the Vesuvius steamer had arrived at the Piræus. The Princess of Oldenburg, the Queen's sister, had embarked for Germany.

RUSSIA.—Accounts from Warsaw state that the excitement caused by the rumoured attempt on the Emperor of Russia, and of which he was first informed by Count Dohna, Aide-de-Camp General of the King of Prussia, who had attended him to Warsaw, had afforded much amusement to the Emperor, and that during his whole stay in the Polish capital he had always driven at a slow pace, through the crowded streets in an open carriage, notwithstanding the inclemency of the weather. A Polish officer at Warsaw, who had followed the example of his countrymen at Paris in endeavouring to spread and illustrate the report, was the same evening sent to Siberia. The papers state that the numerous bodies of troops at present assembled at Warsaw and the neighbourhood are about to return to their cantonments. Some will remain to form the garrison of Warsaw; the others will be sent to join the army in the south. The late events in Servia, the crisis which is imminent in Moldavia, the revolt expected in Bosnia, and the revolution in Greece, are all calculated to induce the Emperor Nicholas to concentrate imposing forces in the countries of the Lower Danube. Letters from Tiflis of the 10th ult. state that General Neidhar, Governor of the Transcaucasian provinces, had received despatches of a most alarming nature from General Budburg, commanding the Russian forces on the Circassian coast, announcing, it was said, amongst other facts, the surprise and capture by the Circassians of a Russian fortress on the Black Sea.

TURKEY AND PERSIA.—The Levant mail which has arrived this week, brings dates from Constantinople of the 27th ult., Alexandria, 26th, Smyrna, 29th, and Malte, 5th inst. On the 20th ult. the Sultan repaired in state to the medical school of the Galata Serai, and was present at an examination of sixteen of the pupils, the first who had completed their studies in this establishment, and, in addition to their diplomas, were invested, each of them, with

the green velvet mantle of honour, worn by medical men in Turkey. According to the testimony of competent judges, they had made considerable proficiency in chemistry, anatomy, &c., under the instruction of European professors, the foundation for their studies having been laid by a knowledge of the French language. From Malta we learn that the *Medea* was in readiness to convey to the Xanthus the scientific expedition under Mr. Fellowes. Several officers belonging to the flag-ship have been appointed by the Admiral to join it. The *Medea* will probably lay all the time at Macri; but, as the unhealthy season is now over, it is hoped that the expedition will not be attended with any loss of life, as was the case on the last occasion.

INDIA.—Lieut. Crawford, one of the passengers wrecked in the *Memnon* steamer, has sent an account of the accident to the *Times*, from which we extract the following:—"We left Bombay on the 20th of July, with the south-west monsoon blowing strong; the direct passage across was attempted for the first two days, when the ship's course was altered to the southward, and we had a very good run for the season of the year. On the 1st of August at noon we were somewhere between 80 and 90 miles eastward of Cape Guardafui, it blowing a strong gale of wind at the time. About 11 o'clock, P.M., I heard the officer of the watch come below and report that the ship was just ashore. I had but just time to get on deck before the ship struck, and she instantly became a total wreck. The masts were cut away, and the hull having forged very close ashore, an officer of the ship managed to get to land in one of the cutters, but the line he carried with him parted, and the communication was consequently lost. Everybody else remained by the wreck until daylight, when a hawser was got on shore and made fast by the party there, and all the crew and passengers safely landed, to the number of 160, with about 16 days' bread and some arms and ammunition. Some papers, I see, talk about cases of treasure having been saved: I do not believe there was any treasure on board—certainly none came ashore. The mails were entirely lost. A particular account of our adventures would occupy too much space of your valuable paper. We managed to get to a place called Huloolah, some 40 miles from the place of the wreck, where we lived on very short allowance until the 17th of August, when Captain Powell got an Arab boat to attempt the voyage to Aden, sending in her the first lieutenant, a midshipman, and three of the *Memnon*'s crew. He permitted any passengers to go in her who chose to run the risk of such a voyage, and of this offer five of the passengers, including myself, availed ourselves. We sailed on the 17th, and after a rather hazardous passage reached Aden on the 25th. I should mention that whilst working to the westward along the African coast, on the 23d of August, we fell in with and boarded the wreck of the ship *Captain Cook*, of Scarborough, laden with coal. She was ashore, and the crew had been taken off some days before by a brig and carried to Aden. On our arrival at Aden, Capt. Haines, the Political Agent, immediately despatched assistance to the rest of the crew left at Huloolah. The *Hindostan* arriving at Aden on the 3d September, Lieutenant Southey and myself availed ourselves of the opportunity, and came on in her to Suez, leaving the other passengers to await the arrival of the ensuing Bombay steamer, which unfortunately is still due. The following is a list of passengers on board the *Memnon*:—Miss Dalzell; Lieut. E. W. Agar, 3d Bombay Native Infantry; remained with the crew at Huloolah. Lieut. J. Duncan, Bengal Native Infantry; Lieut. Leeson, Bombay Grenadiers; Mr. Garrett, midshipman, came in the boat to Aden, and remained there. Lieut. Southey, 48th Madras Native Infantry; Lieut. Crawford, Bombay Engineers, came in the boat to Aden, and took a passage in the *Hindostan* to Suez."

CHINA.—Our private letters mention that the barracks in Hong Kong had proved to be extremely unhealthy, both to officers and men, and were reported to be condemned by Lord Saltoun. Several murders had been committed on the coast. A small vessel, supposed to have a valuable cargo on board, had been attacked by pirates, and the passengers had been murdered. An English doctor was among the victims. It is believed that this vessel was taken by collusion between the pirates and crew.

UNITED STATES.—The Royal mail steamer *Caledonia* arrived at Liverpool on Tuesday, after a very stormy voyage of 16 days from Boston, which she left on the 1st inst. During the greater part of the voyage strong gales and squally weather, with heavy head seas, have prevailed, and continued up to her reaching the Mersey. The long-expected Repeal meeting of delegates from the several states of the union has at length been convened in New York, and proved a failure. During their session advices were received of the adjournment of Parliament, without having done anything to conciliate Mr. O'Connell or his followers. This afforded the convention an opportunity to denounce the Queen for her remarks respecting Irish affairs; and this is all they did except publishing an address and appointing a national committee of five, with power to call another convention whenever, in their opinion, it became necessary. On the 19th, 20th, and 21st inst., the fair of the New York State Agricultural Society was held at Rochester, and was probably the most interesting exhibition of the kind ever witnessed in America. The number of persons present has been variously estimated at from 20,000 to 30,000. Among them were Ex-President Van Buren, Ex-Governor Seward, Governor Bouck, of New York, the Hon. Daniel Webster, &c. Mr. Webster addressed the meeting at great length, indignantly denouncing the doctrine of Repudiation. He also adverted to the subject of a liberal commercial policy with England, which he had previously dis-

cussed at Baltimore—expressed a wish to see the English Corn-laws relaxed, so as to admit of United States' produce—and dwelt with satisfaction upon the new and extending "provision" trade with Great Britain, the result of the altered tariff in this country. In regard to Repudiation, Mr. Webster said, "Among those States which had contracted debts abroad is that of Pennsylvania, the richest state in the union in my judgment, perhaps I ought to except New York, but taking her mineral, commercial, and agricultural facilities into consideration, I don't know on the face of the earth, excepting England, a richer state than the state of Pennsylvania. ('Take off her debt,' said Governor Seward.) My friend Governor Seward says 'Take off her debt. Her debt! What can be the debt of a state like Pennsylvania, that she should not be able to pay it—that she cannot pay it, if she will but take from her pocket the money that she has in it; England's debt is ingrafted upon her very soil; she is bound down to the very earth by it; and it will affect England and Englishmen to the 50th generation. But the debt of Pennsylvania—the debt of Illinois—the debt of any state in this Union, amounts not to a sixpence in comparison. Let us be Americans—but let us avoid, as we despise, the character of an acknowledged insolvent community. What importance is it what other nations say of us, or what they think of us, if they can nevertheless say, 'You don't pay your debts?' Now, gentlemen, I belong to Massachusetts; but if I belonged to a deeply indebted state, I'd work these ten fingers to their stumps—I'd hold plough, I'd drive plough, I'd do both, before it should be said of the state to which I belonged that she did not pay her debts. That's the true principle; let us act upon it; let us 'go it' to its full extent. If it costs us our comforts, let us sacrifice our comforts; if it costs us our farms, let us mortgage our farms. But don't let it be said by the proud capitalists of England, 'You don't pay your debts.' You republican Governments don't pay your debts.' Let us say to them, 'We will pay them—we will pay them to the uttermost farthing.' That's my firm conviction of what we ought to do. That's my opinion, and water can't drown, fire can't burn it out of me. If America owes a debt, let her pay it—let her pay it. What I have is ready for the sacrifice. What you have I know would be ready for the sacrifice. At any rate, and at any sacrifice, don't let it be said on the Exchanges of London or Paris, don't let it be said in any one of the proud monarchies of Europe—'America owes, and can't or won't pay.' God forbid! Let us pay—let us pay. Let us say to them, 'Produce your bond, and take your money, principal and interest. Add it all up, and take your money.' Let us say to them, 'We are not your slaves; we are not paupers; we will not be your debtors; we will pay: produce your bond—here is your money—take it.' (This was followed by repeated and deafening cheers.) And until that is done, my friends, you and I cannot feel as if we could draw a free breath. I don't want to be indebted to the capitalists of Europe; if we owe them anything, let them produce their bill. If my professional earnings are of any worth—if they are wanted—if my farm is wanted—if the conveniences of life for myself, for my wife and children, are wanted, so far as I am concerned, so far as America is concerned, come and take them. That's the right ground to take, and let us take it. In the north and south, in the east and west, if there live any who are descended from the fathers of the revolution—any in whose veins runs a drop of their blood, and in whose hearts lives a particle of their proud spirit—let them rise up and say, that if we owe Europe, Europe shall be paid. I wish to breathe the breath of an independent man. A citizen of a proud and honoured country, I abhor the idea that my daily happiness is to be marred by the consciousness that anything disgraceful hangs on the country or any part of it. Let us, gentlemen, be proud of our country, but let us preserve for that country the character of a just and debt-paying nation. Let it never be said among the nations of Europe that the United States of America—the nation that had its birth in the glorious scenes of '76—the country of Washington—the example and great type of all modern republics cannot or will not pay its debts?"—The 59th annual convention of the Episcopal Church had been held at New York, and had been the occasion of much altercation between the High Church and Evangelical Clergy on the subject of Puseyism. Something like a charge of heterodoxy and irregularity was preferred against Bishop Onderdout, but it fell to the ground. The sittings of the Convention were stormy in the extreme. There had been a terrific storm in Florida, which had destroyed a considerable part of the town of Port Leon in that state. Fourteen lives were lost, and property to the amount of 250,000 dollars destroyed by this catastrophe. The excitement of the state elections had subsided. Mr. Macready, who made his *début* at the Park Theatre, New York, in the character of *Macbeth*, had been most enthusiastically received, and the critics are loud in his praise. Mr. Horsley Palmer, the well-known merchant of London, who arrived at New York by the last packet, is said to have determined to settle in the United States. A new and important movement has taken place in Philadelphia in relation to the Oregon territory. The Sessions Court-house has been filled to hear Mr. P. A. Browne enlarge upon the American claim to the Oregon; and he so convinced the citizens of its justice that they passed resolutions calling on the United States Government "to remove all foreigners who had taken possession of lands," and organised a committee of respectable citizens to correspond with other committees in all the states and cities, so as to produce united and powerful action on the United States Government, to take possession of Oregon without delay.—The Canadian Parliament was to meet in Kingston on the

28th inst. The forests of Beauharnois have been ravaged by a dreadful fire, extending many miles, and destroying numerous houses and farms. There had been a riot at St. Pie, Lower Canada, owing to some Baptist missionaries having been attacked by the Catholic population. Forty rioters were arrested, and peace restored. Five thousand men are now employed in enlarging the Welland Canal. The Court-house at Ottawa, with all the public documents, has been destroyed. It was rumoured that the British North American fleet is to assemble at Halifax, where 21 men-of-war are expected.

Parliament.

HOUSE OF LORDS.

Thursday.—This being the day to which Parliament stood prorogued, both houses met *pro forma*, the Commons being represented by the principal clerks and officers of the house. Shortly after two o'clock the Lord Chancellor, the Earl of Liverpool, and Earl Delawarr, took their seats in front of the throne as Lords Commissioners. The Lord Chancellor then directed Mr. Pulman, Deputy Usher of the Black Rod, to summon the Commons to hear her Majesty's Royal Commission for the further prorogation of Parliament read. In a few minutes Mr. Ley and the officers of the Commons appeared at the bar, when the letters patent having been read by the clerk at the table, the Lord Chancellor, in the usual form and words, declared, in the name of her Majesty, that the present parliament stands prorogued until Tuesday, the 14th November next. The ceremony only occupied a few minutes; there was not a single member of either house present except the three Lords Commissioners. The Chancellor did not use the words "then to meet for the dispatch of divers urgent and important affairs," consequently there will be another adjournment on the 14th Nov.

CITY.

Money Market, Friday.—Consols have advanced to 95½ for money and the Account; Reduced Three per Cents., 94½; New Three-and-Half per Cents., 102½; Bank Stock, 179-80; Exchequer Bills, 63s. to 65s., and 62s. to 64s. prem.

Metropolis and its Vicinity.

The Weather.—The weather during the last week has undergone a material change, and winter has every appearance of having thus early commenced. On Saturday the wind which had for some days been west and south-west changed to north-west, and the temperature, as the day advanced, gradually became colder. At day-break on Sunday a heavy fog pervaded the atmosphere, by which the sun was obscured, the coldness increasing, and the thermometer varying from 33° to 44°, with the wind due north. At twelve o'clock the thermometer stood at 32°, and shortly afterwards a sharp frost commenced, during which the mercury rapidly fell, and by three o'clock stood as low as 24°. So intense has been the frost at night during the week, that the ponds round town have been coated with ice of considerable thickness. So early a commencement of frost has not been known for many years, and is taken as a presage of an early and severe winter.

Court of Aldermen.—At a Court held on Tuesday, Mr. Thos. Challis was announced, and formally introduced as the newly-elected alderman of Cripplegate Ward, and took his seat in the court accordingly. Mr. S. R. Goodman was elected clerk to the Lord Mayor in the room of Mr. Hobler, resigned. The Court then resolved, in consideration of Mr. Hobler's having filled the office for 55 years, that a yearly pension of 640*l.*, being the full amount of his salary, be paid to Mr. Hobler for life. At the Court of Common Council on the same day, the present Lord Mayor (Humphrey) was appointed Governor of the Irish Society, in the room of the late Sir M. Wood.—The scrutiny of the voters at the late election of an Alderman for Bread-street Ward concluded on Wednesday, after having continued for several days, during which the number of votes disallowed on both sides was so considerable, that the Lord Mayor expressed his belief that the affair at its conclusion would afford a counterpart of the famous Kilkenny cats, which fought until nothing but their tails were left. On Wednesday, the counsel on the part of Mr. Lawrence declared that it would be useless to pursue the inquiry any further; as, were the scrutiny to be protracted to the utmost length, the termination would most likely leave Mr. Hughes in a majority of one or perhaps two votes. Under these circumstances, therefore, they would withdraw from the contest, with the understanding that Mr. Lawrence should not be prejudiced by so doing in any step he might be yet advised to take. Serjeant Bompas agreed to the proposed terms on behalf of Mr. Hughes, and the Recorder then stated that the termination of the scrutiny left the number of votes as follows:—Mr. Hughes, 32; Mr. Lawrence, 30; majority for Mr. Hughes, 2. Mr. Hughes was therefore formally announced by the Lord Mayor to be duly elected Alderman of Bread-street Ward.

City Election.—On Monday, the Sheriffs made the usual proclamation in Guildhall of the issuing of a new writ for the election of a member for London in the room of Sir M. Wood. The nomination took place yesterday, and the polling commences this day. At the nomination yesterday the sheriffs declared the show of hands to be in favour of Mr. Pattison, and Mr. Baring demanded a poll. The result will be announced on Monday.

Royal Mail Steam-Packet Company.—In conformity with the desire expressed at the last annual meeting that the directors should present a six months' report, a general meeting of the shareholders took place last week. The report commenced by regretting the loss of the *Solway*, by which the captain and 34 other persons perished; and which, from inquiry, was attributed to an error in the calculation of the navigator. Certain modifications of the scheme of routes had been approved by the Admiralty, effecting a further curtailment of steaming opera-

tions, and a reduction of expenditure; but as the modifications did not take effect till June, the result would be communicated at the next meeting. The disbursements and receipts for the half-year left a balance applicable to wear and tear and insurance, of 34,341. 15s. 7d. Much reduction in expenditure had taken place, and was still progressing. The payment of the last call had enabled the directors to reduce the debt to 120,000. The whole of the vessels were now in a state of thorough repair and effectiveness. The directors were of opinion that, as the routes of the steamers comprised fewer places than formerly, there would in future be much less ground for apprehending misfortunes; and, under these circumstances, they proposed that on the termination of the present year, or as the policies expire, the Company should set aside a fund of five per cent. to meet this contingency. The receipts for the March and June quarters from the Government were 120,000, and from freight and passage money 38,048. 14s. 7d., which together make 158,048. 14s. 7d. After a discussion respecting the loss of the Solway and other matters, the report was adopted.

The Great Northern Steam Ship.—An experimental trip to test the powers of this vessel took place last week. She left her moorings at Blackwall with the tide against her, and proceeded down the river to Greenhithe, where she altered her course, and returned with her best speed to her original moorings. This vessel has very extraordinary powers, so far as trips in the river can justify an estimate of her qualifications, and furnishes an additional proof of the value of Mr. Smith's screw-propeller. The Great Northern is a sailing ship, and the engine and the screw are only auxiliary aids to assist her passage when sails and wind fail. The machinery consequently takes up much less space than in ordinary steamers. The rate of steaming was 7½ knots an hour against tide, which was computed at 2½ knots against her, making her steaming ten knots an hour through the water; with 700 tons of coals on board—a great rate of speed when the large size of the vessel is considered. Her sailing powers are said to be considerable, and twelve knots an hour is her computed rate of performance. Among the company on board were many gentlemen connected with the shipping interests, and others of scientific reputation, among whom were the Bishop of Norwich, Sir F. Collier, and Mr. Lloyd, who attended on the part of the Government, and several naval officers.

Meeting of West India Proprietors.—A preliminary meeting of persons interested in the West India colonies was held on Friday, Mr. Hankey in the chair, to commence a subscription for the purpose of assisting the sufferers by the late fire at Kingston. Mr. Burge, agent for Jamaica, said that at the Colonial-office, and through many private sources, the dreadful calamities occasioned by the fire, as published in the papers of this city, were fully confirmed, and he urged the necessity of instant relief. Trade, agriculture, and commerce in the West Indies were too much depressed to expect ample relief to be afforded there to the sufferers, and an appeal to the British public had been resolved upon. After many statements as to the losses occasioned, a series of resolutions was passed to carry out the object for which the meeting was called, and a subscription opened.

Death of the Bishop of Lichfield.—We have to record the death of Dr. Bowstead, Bishop of Lichfield and Coventry, who, after a lingering and painful illness, expired on Wednesday last at Clifton, where his Lordship had resided for some weeks for the benefit of his health. It is well known that for a considerable period the Right Rev. Prelate had, from severe indisposition, been unable to discharge the duties of his bishopric, and the Bishop of Hereford was, at the last ordination for the diocese, obliged to officiate for him. It was only within the last fortnight that his friends despaired of his recovery, although disease had made destructive inroads on a naturally strong constitution. Dr. Bowstead was the son of the late Mr. W. Bowstead, of Beckbank, Great Salkeld, Cumberland, and was born in 1801. He early distinguished himself at Cambridge, and in 1824 was second Wrangler and Smith's Prizeman, and was afterwards Fellow and Tutor of Corpus. He was considered one of the most distinguished scholars on that foundation, and since his elevation to the Bench he has maintained a high character in promoting the interests of his diocese. His efforts to extend church-building in the manufacturing districts gained for him the admiration of the laity and clergy. In politics he was a Whig, and strongly adverse to the tractarian doctrines recently introduced into the church. He was consecrated Bishop of Sodor and Man in 1838; and on the death of Dr. Butler in 1840, was translated to the see of Lichfield and Coventry. For some time he was prebendary of Salisbury.

University College.—On Monday the College Session commenced in the faculty of Arts and Laws. There was a numerous attendance of visitors and students in the theatre, where an introductory address was delivered by Professor Brooke on natural philosophy. Two Flaherty scholarships are to be awarded this session, the one to the most proficient in classics, and the other in natural philosophy and mathematics.

Westminster School.—It is announced that the *Phormio* of Terence will be acted by the Westminster boys as usual this year, with the Prologue and Epilogue on the second and third night.

St. Stephen's, Walbrook.—Another meeting of the vestry took place on Thursday, followed by another adjournment. The Rector, Dr. Croly, declined to take the chair, not from any doubt of the justice of the case on the part of the parishioners, but because he had ascertained from the Bishop of the diocese that these repeated adjournments were not within the spirit of the law. It

was ultimately resolved that three persons from each of the two united parishes, together with the vestry clerks, should wait upon Alderman Gibbs, in order, if possible, to see the parish deeds, and thus ascertain the trusts.

The National Society.—Four exhibitions are at present vacant in the National Society's College (St. Mark's), Chelsea, the election for which is fixed for the 26th inst. The following gentlemen have been appointed examiners of the candidates:—Rev. A. Thurtell, Rev. G. Maddison, and Rev. J. Hailstone.

Nelson Column.—The masonry of the Nelson column was completed on Monday, after which the stonemasons had a substantial repast of roast beef. It appears that the arrangements are not sufficiently complete to allow the statue to be placed on the summit this day (being the anniversary of the battle of Trafalgar), and that it cannot be raised before next week. A notice has also been issued announcing that the Dinner proposed to be given to the Greenwich Pensioners on the completion of the Monument is postponed in consequence of the season being now so far advanced, and the works still incomplete; and that the intended entertainment will not take place till the 2d of April next, being the anniversary of the battle of Copenhagen.

Capture of a Sturgeon.—On Monday evening the largest sturgeon ever captured in the Thames, above bridge, was taken, after many hours of arduous labour, in Mr. Hutton's mill-pond, Battersea-fields. It had been seen in the pond since Saturday, but the depth of water prevented its dimensions being ascertained. On Monday, however, the water was let off into the river, and the pond was left almost dry. There could not have been less than 300 people assembled to witness the capture. After several attempts to shoot it by guns and pistols, the sturgeon was at last struck with the harpoon, and landed near the mill. It was 9 feet 6 inches in length, from the snout to the tip of the tail; 3 feet 10 inches in girth, and weighed 280 lbs.

Inquests.—On Saturday an inquest was held by Mr. Wakley on the body of Mr. George Gibson, official assignee in bankruptcy, aged 57, who committed suicide at his residence in Blandford-square. Witnesses deposed that he was found hanging to the bed-post by a silk pocket-handkerchief, and quite dead; that he had been for six months under medical treatment, and that his mind had become affected in consequence of the failure of some building speculations in the Isle of Wight. After some discussion, the jury returned a verdict that he destroyed himself, being at the time in an unsound state of mind. —On Monday an inquest was held on the body of Lady Alice Palmer, who died suddenly at her house in Hanover-terrace, Regent's-park, on Saturday. The evidence showed that death was the result of natural causes, and the jury returned a verdict accordingly. —The jury, at the adjourned inquest on Mrs. Pollock and her two children, who lost their lives in the late fire in St. Martin's-court, returned the following verdict:—"That the deceased persons lost their lives by fire, which appeared to have originated on the premises of Mr. Labram; and the jury cannot separate without expressing their approval of the conduct of the firemen and police on the occasion; and they regret that so great a thoroughfare should be suffered to remain in so narrow and dangerous a state, as a similar occurrence might be attended with more awful consequences." —On Wednesday an inquest which had been four times adjourned was held at Woolwich, on the body of Mrs. Mary Prevost, wife of a hairdresser, residing at No. 101, St. Martin's-lane, Charing-cross, whose death was alleged to have been caused by the ill-treatment of her husband and children. The sister of deceased stated that she had been confined in a cellar in St. Martin's-lane, where there was no window, but only an iron grating, that she had often been beaten by her children, and neglected both in food and clothing. The medical and other evidence proved the same facts, and the landlady of the house at Woolwich to which deceased had been removed, deposed that she was allowed only toast-and-water and tea, and had no medical attendance. After a long inquiry, the Coroner announced that the jury had come to the verdict that deceased had died from natural causes; but at the same time expressed their opinion that the conduct of Mr. Prevost and his daughters had been disgraceful and criminal in the extreme, and had the medical evidence been a little more positive in all probability he and some of his family would have been sent from that place to prison. The whole of the blame attached to him; and it was painful to reflect that he had made his daughters subject to a public censure. As it was, they would leave the room without anyone feeling compassion for them. He fully concurred in the verdict and the sentiments the jury had desired him to express.

Westminster Bridge.—This bridge was closed on Monday for repairs, as far as regards the carriage-way, by order of the Commissioners of Woods and Forests. It is expected that it will remain closed at least two months. The traffic is now transferred principally to Waterloo-bridge, and the receipts for tolls at this bridge will be increased at least ten-fold during the repairing of Westminster-bridge.

Embankment of the Thames.—On Monday the Earl of Lincoln, accompanied by Mr. Brunel and Mr. Cubitt, inspected the Middlesex side of the river, from Vauxhall-bridge to Battersea-bridge, to ascertain the most eligible plan for the embankment of the river. Mr. Brunel was provided with the levels and plans that he had lately made at the request of Government. There will be a carriage-road alongside the river from Battersea-bridge to the two Houses of Parliament.

Woolwich.—A court-martial was held on Monday in the mess-room of the Marine Barracks for the trial of a drummer called Hurbert, of the Chatham division, charged

with stealing the uniform of Capt. Johns, R.M., together with the M.S. of a work written by the Captain, entitled "Chronicles of Victory," and deserting when on duty at the Dockyard. The prisoner was found guilty, and received corporal punishment to the extent of 150 lashes, and when fit to leave the hospital will be discharged the service, in accordance with the sentence of the court-martial.

Mortality of the Metropolis.—The number of deaths registered in the week ending Saturday, October 7, was as follows:—West Districts, 170; North Districts, 152; Central Districts, 234; East Districts, 237; South Districts, 263; Total, 1056 (males, 541; females, 515). Weekly average for the last five years, 903 (461 males, 499 females); and for the last five autumns 908.

Provincial News.

Abergavenny.—Another advance in the price of iron took place last week, and the demand continues to increase. In consequence of the improvement in the trade, more employment is afforded to the workmen, who are not restricted, as they were some time back, to a certain portion of work. It is expected that when the details of the treaty with China become more developed, the low import-duty upon iron will cause a great exportation of that metal to the Celestial Empire, and that a further increase in the quantity made as well as an advance in price may be anticipated.

Bedford.—A melancholy accident happened on Sunday week at Stevington, in this county. Mrs. Anderson, of Oakley, with Mr. and Miss Inskip, attended Divine service at Stevington Church on that day, and on re-crossing the Ouse, which was between the church and Mr. Anderson's house, the boat was swamped, through the unusual strength of the current and wind. The clergyman (Rev. J. Wing) was administering the Sacrament at the time, when he heard the cries, and with the communicants hastened to the river. On their way they met a young gentleman who had the conduct of the party, and who stated that during the squall, in pulling against the current, the boat had swamped, Mrs. Anderson, Mr. and Miss Inskip had sunk and he himself had escaped with difficulty. On reaching the bank of the river, they found that the boat was sunk, and the bodies hidden in deep water. Every exertion was made to bring them up, and they were all taken to Mr. Anderson's house within an hour and a quarter after the catastrophe. Six or seven medical men attended from Bedford to try means of resuscitation, but to no purpose. Mr. Inskip exhibited signs of life when he was brought on shore, but animation could not be restored. He was a respectable farmer near this town, and with his daughter was on a visit to Mr. Anderson, the steward of the Duke of Bedford.

Birmingham.—A paragraph has appeared in the local papers announcing the sudden disappearance of the Rev. Mr. Barrett, of this town. The *Morning Chronicle* states that the fact appears simply to be this, that the rev. gentleman is in pecuniary difficulties, arising from his becoming surety for a party, and that this is the reason of his temporary absence from his parish.

Bristol.—The local papers state that within the past week the only coach that has been left on the road from Bristol to London (the Prince of Wales) ceased running. The railroad has now, therefore, no kind of opposition.

Carmarthen.—It was announced last week that the special commission will be opened at Cardiff on the 21st inst. From a variety of circumstances, however, it has been found necessary to postpone the day, and Thursday the 25th has been definitely fixed on for the trials to commence. Although named as one of the judges in the commission, Baron Parke will not accompany Baron Gurney and Mr. Justice Cresswell. The two latter judges will alone undertake the duties of the commission.—The accounts this week afford but an indifferent prospect of a return to tranquillity. They include an attempt to deprive a magistrate of life, the demolition of a toll-gate, and the destruction of property by fire. Two of these outrages were perpetrated by the same gang: they destroyed first the toll-gate of Bwlchtrap, near St. Clear, which was formerly torn down, but had recently been again erected, and is now a second time destroyed. On tearing down the gates, the mob proceeded to the residence of Mr. Beynam, a magistrate. It was supposed that he was at home and asleep, and the rioters fired into his bed-room: fortunately, however, Mr. Beynam was absent, and on searching his room, next morning, several slugs were found in it. This outrage was committed not more than 10 or 12 miles from Carmarthen, and in the immediate neighbourhood of a cavalry station. In addition to the above, on Thursday night the haggard of a humble farmer at Llandovery, named Thomas, was set on fire and completely destroyed. The farmer, it is said, had made himself obnoxious in his neighbourhood, by sending one of his tenants a "notice to quit." A large body of the London police have arrived from town, and have been distributed in different parts of the country. On Friday a meeting of the parishioners of Parcel Maws was held on the summit of Mynydd Pysgodlwn, a mountain about 10 miles westward of Swansea, for the purpose of "taking into consideration the expediency of petitioning the Legislature for the re-enactment of the old poor-law, the removal of the rural police, and for the repeal of other popular grievances." Mr. Jenkins read a letter he had received from Dr. Bowring, expressing a determination to bring the subject of Welsh grievances before Parliament, if the Welsh people would furnish him with a list of those things which they conceived to be oppressive and unjust. After a long discussion, the following resolutions were unanimously passed:—"1. That a petition be drawn up and presented to the justices

at the quarter-sessions, praying them to abolish the rural police force in this district; and that a committee be appointed to draw up such petition and carry it into effect. 2. That this meeting is of opinion that the new poor-law has disappointed the expectations of the rate-payers; and that its unjust and demoralizing provisions have materially contributed to promote the present discontent. 3. That a committee be formed with the view of bringing before the public the grievances of which we complain, and to take such measures as may to them appear necessary for petitioning Parliament, as soon as it reassembles, to institute a strict inquiry into the causes of the discontent at present prevailing throughout an extensive portion of South Wales, and to devise the means for its removal. 4. That this committee consist of — persons from each parish or parcel of a parish, and that it be an instruction to such committee forthwith to prepare a form of inquiry, embracing the several subjects of rents, tithes, poor and highway rates, with such other additional heads of inquiry relating to the grievances of the people as to such committee may seem necessary." The meeting gave three cheers for the Queen, and quietly separated, having lasted upwards of three hours. The proceedings were entirely conducted in Welsh.

Cambridge.—The greatest excitement has been occasioned in this town by the announcement of her Majesty's intended visit. Professor Whewell, Master of Trinity and Vice-Chancellor, on Tuesday issued the following announcement:—"The Vice-Chancellor has the high gratification of announcing to the members of the University, that it is the intention of her most Gracious Majesty the Queen and his Royal Highness Prince Albert to honour the University with a visit on Wednesday, the 25th inst. The Vice-Chancellor is persuaded that there will be in all members of the University a wish to testify their deep gratitude for this act of Royal favour and condescension, their dutiful and devoted affection towards her Majesty, and their zealous desire that the Royal visitors may derive unmingled satisfaction from their visit." On Wednesday, Professor Whewell, the Rev. Dr. French, and the Rev. Mr. Birkett, were appointed a Syndicate, "to make arrangements for the reception of her Majesty and Prince Albert in the Senate House." The Royal visitors are expected on Wednesday, the 25th, on which occasion the Duke of Northumberland, Chancellor of the University, the Lord Chancellor, as High Steward, the Vice-Chancellor, the Heads of Houses, and the Masters of Arts in residence, will receive them in state, and conduct them to the lodge of Trinity College, which is now preparing for their reception. An inclined platform, covered with cloth, will be placed over the steps immediately at the entrance of the front gate at Trinity, from whence the paved way up to the door of the lodge will be similarly covered for her Majesty's accommodation. The Lodge is, by the charter of Henry the Eighth, who originally endowed this College, the residence of the Sovereign on the occasion of any Royal visit, and is always made use of, according to a provision in the charter, by the Judges of Assize. When Queen Elizabeth, however, visited Cambridge, she stopped at King's College. On Thursday the Senate-house will present a very splendid and interesting appearance. The front seats in the galleries will be occupied by ladies, and platforms will also be erected in front of the gallery opposite to the throne, and beneath in the body of the building. On this occasion the Chancellor will confer the honorary degree of Doctor of Laws on Prince Albert. In the evening the Vice-Chancellor will entertain the Royal party in state, and all the Colleges, as well as the town, will be lit up. In the grounds of St. John's College, as well as in the adjacent ones of Trinity, displays of fireworks will take place. The preparations for illuminating Trinity have already commenced. During the course of Thursday her Majesty will visit the Fitzwilliam Museum, King's Chapel, Trinity Chapel, and a few of the Colleges and public buildings. The Royal visitors will make but a short stay at Cambridge, and will leave, it is said, on Friday, for Wimpole, the seat of the Earl of Hardwicke.

Chester.—The institution in this city for educating the daughters of clergymen officiating in the diocese, and for training up other young females as governesses, is to be opened early in January. The Bishop of Chester has accepted the office of patron, and has interested himself in its establishment. The school will be under the direction of a clergyman and two governesses, who will be elected in November.

Chichester.—On Sunday morning last, at the cathedral of this city, an Italian gentleman named Vignati, who had been for two years a priest in the Roman Catholic communion, and about five years ago left that Church and professed Protestant principles, made a public recantation of the Roman Catholic doctrines. The form of recantation was the same as that used by the Bishop of London on a similar occasion about three years ago. The Dean of Chichester preached a sermon on the occasion, and the cathedral was uncommonly crowded, the novel circumstance having attracted many Dissenters and others who do not usually attend the cathedral.

Deal.—In consequence of the strong winds which have prevailed during the last week, it has been found impossible to place the New Iron Beacon upon the Goodwin. The weather having proved adverse, the Lords of the Admiralty have expressed their opinion that the season is too far advanced safely and properly to plant it. Next spring, by the direction of the Trinity Board, it will be planted at the eastern end of the Goodwin, on the south side of the Swath-way into Trinity Bay.

Doncaster.—On Saturday an anti-corn law meeting was held in this town, and attended by nearly 1000 persons, Mr. T. Johnson, the Deputy-Mayor, in the chair. Mr. Bright, Mr. Cobden, Earl Fitzwilliam, and others,

addressed the meeting, and resolutions in favour of a total repeal were carried.

Hull.—The Raymond, Captain M'Kay, from Macao, is expected daily to arrive here, having been spoken in the Downs on the 8th inst. This vessel has on board about 8300 chests of tea, which are to be delivered here—being the first cargo of tea from China to this port.

Leicester.—Messenger, the farmer at Gaddesby, who had been committed to the county gaol, charged with the murder of a young man in his employ, was released on bail under a Judge's order on Tuesday week. The particulars of the case appeared in this Paper when the examination took place.

Liverpool.—A robbery, which for dexterity strongly resembles that committed upon the person of Mr. Blake-more, M.P., and upon which was founded one of the charges brought against Anderson at the late assizes, took place on Saturday last. A young man, clerk in the house of Finlay and Co., was sent to draw a considerable sum of money at the Branch Bank of England. He received 200*l.* in notes and the remainder in gold. The notes consisted of a 100*l.* note, and ten of 10*l.* each. Having counted the paper, he carefully put it into the right-hand pocket of his coat, and kept his left hand upon it for fear of accident whilst he counted some gold upon the counter. As he was thus employed, one of the sovereigns accidentally slipped upon the floor. He stooped to pick it up, and momentarily withdrew the left hand from the pocket in which the notes had been placed; during that short period the money was abstracted from his pocket. He immediately discovered the theft, but could not identify the party who had robbed him, as there were about thirty persons round the counter at the time. Information was immediately sent to the police-office, but no tidings of the thief have yet been received.

Merthyr.—On Saturday week, as the cashier of the Aberdare Iron-works was returning from the bank in this town with money to pay the workmen, he was stopped by three armed men and robbed of 2,000*l.* The police immediately set out in pursuit, and succeeded in recovering the money and capturing the robbers, who have been committed for trial.

Nottingham.—On Sunday week, while Archdeacon Wilkins was preaching in St. Mary's Church, a fall was heard in the south aisle, and a cry was raised that the church was falling. A rush was instantly made to the doors; several persons were severely injured, and some limbs were broken. At length, when about two-thirds of the congregation had made their escape, sufficient order was restored to enable the Archdeacon to make himself heard, and to inform the assembly that the sole cause of the alarm had been the sudden fall of an umbrella not far from the left of him; but that, as the minds of all were too much agitated to resume with any composure the duties in which they had been engaged, he would only observe, that if any possible and real danger could have been apprehended, as far as the tower of the church was concerned, now that every precaution and support had been given it, he would not have hazarded the safety of any individual, nor would he have permitted his own family to incur the risk, nor have braved it in his own person. The church, however, has been closed until a thorough repair has taken place, and in the meantime divine service is performed by the Archdeacon at Stenton.

Portsmouth.—During the last few days the Lords of the Admiralty have received accounts from Singapore, containing intelligence of the loss of one of her Majesty's frigates, the Samarang, 26 guns, Commander Sir E. Belcher, off the Island of Borneo. The circumstances attending her loss are reported to be as follows:—The Samarang was launched at Portsmouth in 1822, and was last year fitted up as a surveying ship in order to make a survey of the Chinese Seas. In the course of last spring she sailed from Portsmouth, and arrived at Singapore on the 22nd of June. On the 28th of that month she proceeded to the river Burrawak, off the Island of Borneo. On the 17th of July she had gained about 40 miles up the river, when the master, Mr. Lozey, left her in one of the galleys, accompanied by another officer and a party of seamen, for the purpose of taking soundings along the coast. The ship was under weigh at the time, and was making but slow progress, when suddenly the ebb tide, which runs remarkably strong, carried her on a sunken coral rock, which she struck with considerable violence. For a few minutes she kept upright, and then partly slipped off the rock and fell over on her beam ends, when she instantly filled, and it was only by the greatest exertion that the crew could save themselves; in fact, many of them as the ship rolled over were precipitated into the water, and no doubt would have perished but for others who caught hold of them as they made their appearance on the surface. Having reached the shore which was not far distant, they commenced saving from the ship as the tide permitted as much provision as they could get at, and the arms which they needed in order to protect themselves from the natives. An order was instantly sent by the Captain, Sir E. Belcher, to Singapore for assistance, and in the subsequent day every means were resorted to to save the vessel. Her guns were thrown overboard and her masts cut away, but it had not the slightest effect. When the mails left Singapore she remained in the same position, and it was very possible that she would become a total wreck. The following is an extract of a letter dated Singapore, August 3, which furnishes some additional facts:—"The wreck at high water is covered by four feet of water, and we fear she is bilged, as she is lying completely on her side. Her Majesty's ships Harlequin and Wanderer have since arrived from Singapore for the purpose of attempting to raise her, which it is feared will prove ineffectual, although Sir E. Belcher entertains

sanguine hopes. There were 32 valuable chronometers, an immense number of mathematical and scientific instruments, and several rare surveys and charts on board of her, which were estimated at about 32,000*l.*, all of which are lost. We have dragged several of them out of the sunken ship, but find them perfectly useless, and not worth repairing. Sir E. Belcher and several of the officers have taken up their quarters at the British Consul's residence at Borneo, and the crew are living at a small settlement about 3 miles off, and on half allowance."

Southampton.—The Iberia steamer left this port on Saturday for Constantinople, with a full cargo of Manchester goods, to the value of 60,000*l.*, and 27 passengers; among whom was the Rev. Dr. Wolff, on his journey to Bokhara. He arrived here by railway, accompanied by Lady Georgiana, his son, and Capt. Grover, who, after witnessing his embarkation, returned to London. Dr. Wolff was visited on board the Iberia by several of the most distinguished families of this place and its environs. From the number of arrivals of private steamers on Saturday, upwards of 3000 letters were received at the post-office here from Spain, France, and the Channel Islands.

Wakefield.—On Friday Dr. Sleigh paid a visit to this town in the expectation of meeting Messrs. Cobden and Bright, and discussing with them the various questions connected with the corn-laws. He addressed the inhabitants in the Corn-Exchange, declaring that the repeal of the corn-laws would throw at least two millions of agricultural labourers out of employment, and proposing an address to the Queen on the subject. Mr. J. Murray then moved an amendment for the abolition of all monopolies. The meeting divided twice, and the chairman at length decided that the amendment was carried.

Windsor.—About two or three years since, Prince Albert purchased of the executors of the Duke of Gloucester a large tract of land extending over several thousands of acres, consisting principally of heath land, in the vicinity of Bagshot, with a farm attached, known as the Rapley Farm. Upon this extensive property it is the intention of his Royal Highness to try the experiment of breeding and rearing the black cock. The cocks which were presented to the Prince by the Duke of Hamilton about two months ago, have been sent to the preserves at Bagshot, where there is every probability that the experiment of rearing and breeding them will be as successful as can be desired. They were bred by the Duke of Hamilton upon his estate in the Isle of Arran. It is the intention of Prince Albert to inclose and cultivate a considerable portion of his property in the neighbourhood of Bagshot.

Railways.—The following are the returns for the past week:—London and Birmingham, 17,532*l.*; Great Western, 14,888*l.*; South-Western, 6,848*l.*; South-Eastern, 4,775*l.*; Eastern Counties, 2,917*l.*; North Midland, 4,897*l.*; York and North Midland, 2,064*l.*; Greenwich, 675*l.*; Croydon, 491*l.*; Brighton, 5,046*l.*; Blackwall, 849*l.*; Hull and Selby, 1,054*l.*; Midland Counties, 3,529*l.*; Grand Junction, 9,006*l.*; Paris and Rouen, 5,124*l.*; Paris and Orleans, 5,702*l.*—A special general meeting of the Eastern Counties Company was held last week, for the purpose of adopting measures for an application to Parliament in the next session, for an Act to construct an extension of the Eastern Counties Railway from Colchester, by Hadleigh and Bury, to Thetford, and thence from Brandon to Norwich, with a branch from Hadleigh to Ipswich, and for raising the necessary capital. The report gave a summary of the negotiations entered into by the directors, and concluded with a resolution, that the Board be authorised to apply to Parliament for an Act to assist an application for enabling an extension of either the Eastern Counties or the Northern and Eastern lines, as they might determine on. After some discussion this resolution was passed. The next business submitted to the meeting was the report of the recent negotiations for a permanent amalgamation of the Northern and Eastern Railways, a measure which was thought the more desirable, since it would terminate all future Parliamentary contests, competition in traffic, and waste of capital. The terms on which the amalgamation was to be carried out would consist in the Northern and Eastern line being leased in perpetuity to the Eastern Counties Company, the latter to pay yearly the sum of 47,500*l.*, or such sum as might be required to cover 5 per cent. on the capital and all the liabilities of the Northern and Eastern Company; but if the interest on borrowed money should be lowered under the present rates, the same to be carried to the divisible fund. Further, that after allowing to the Eastern Counties 132*l.* out of the gross receipts, and the working expenses having been divided, the surplus profit to be apportioned between the two Companies in the ratio of two-thirds to the Eastern Counties and one-third to the Northern and Eastern, the working expenses to be guaranteed by the Eastern Counties Company not to exceed 40 per cent. for the first, 37 per cent. for the second, and 36 per cent. ever afterwards—the interest on capital expended by either line to be guaranteed at the rate of 5 per cent., the amalgamated Company to be governed by eighteen directors, of whom twelve shall be directors of the Eastern Counties and six of the Northern and Eastern. The Chairman stated that these propositions would be laid before special meetings of the two Companies during the ensuing months for their approval.—On Sunday last some person placed a plank across the line on the railway near Twyford, for the purpose of upsetting the mail train, but his attempt was providentially frustrated by the discovery of the object by a policeman on duty. It is understood that a man in the employ of Mr. Cotterell, of Ruscombe, as shepherd, is in custody on the

charge.—An accident occurred on Tuesday night on the Dover Railway, whereby the driver of the train which reaches the London terminus at a quarter past 10 o'clock, lost his life. It seems that, in leaning over the engine carriage, he overbalanced himself, and fell under the wheels. One leg was torn off at the upper part of the thigh, and the other above the instep. He was conveyed to town, and immediately removed on a stretcher to Guy's Hospital, where he shortly afterwards expired. While the inquest on his body was sitting, the mutilated body of another man, named Postans, was brought to the hospital. It appears that deceased was a coach-trimmer, and being engaged on the railway just as the fast Brighton train from London had passed the station, he attempted to cross the line, when the "banking" engine, which always follows the train to assist it up the New Cross incline, struck him down, and both wheels passed over him. Both legs were separated from the trunk below the knees, and one arm was cut off. Although the poor fellow was alive when he was brought to the hospital, the house surgeon at once declared that it was quite impossible he could recover, and he died in the course of the evening.—On Tuesday morning, as the first train from London was approaching the Clayton tunnel on the Brighton Railway the tubes of the boiler burst. The breaks were immediately put on, and the train was stopped. The engineer endeavoured to proceed to Brighton to procure assistance, but the escape of water was so great that it put out the fires, and the engine was left in the middle of the tunnel. The alarm signals were immediately hoisted, and every precaution taken to prevent the possibility of an accident by collision with the other trains. A pilot engine soon arrived, and dragged the train and damaged engine in safety to Brighton.—A few days since, as a Twyford constable was conveying a prisoner from that place to Abingdon gaol by the Great Western Railway, the prisoner, shortly after he started, and while the train was proceeding at the rate of upwards of 30 miles an hour, suddenly leaped from the carriage, tumbling head over heels into the road. The constable immediately jumped out after him. Those in the train who witnessed the proceeding imagined that both must have been inevitably killed. Extraordinary, however, as it may appear, neither were in the least injured, and the prisoner was again captured by the constable, who walked along the line to the next station with his prisoner, and proceeded thence to his place of destination.

IRELAND.

Dublin.—On Friday evening Mr. Kemmis, the Crown solicitor, addressed a note to Mr. O'Connell, stating that a charge of conspiracy and other misdemeanours having been brought against him, and informations to that effect having been sworn before Mr. Justice Burton, he requested to know when it would be convenient to enter into recognizances to attend on the first day of next term in the Court of Queen's Bench, to answer the charges that would then be preferred against him by her Majesty's Attorney-General. Shortly before 12 o'clock on Saturday Mr. Justice Burton left his house in Stephen's-green, and proceeded to the Queen's Bench Chamber, where, after disposing of a few motions, he remained for about an hour, in expectation of being waited on by some of the persons against whom informations had been sworn, for the purpose of entering into recognizances. None of them appearing, the Judge retired, having first directed the Clerk to the Crown to notify to any of the parties who might subsequently present themselves that he had returned to his residence, and would there remain to receive the necessary bail until half-past 3 o'clock. Mr. Kemmis had an interview with Mr. O'Connell on Saturday morning, at which Mr. O'Connell expressed his willingness to comply with the request, but demanded that he should first be supplied with a copy of the informations. This request, on consideration, not having been complied with, at 2 o'clock Mr. O'Connell received a second note from Mr. Kemmis, stating that his presence would be required at the house of Mr. Justice Burton at 3 o'clock, to enter into the necessary recognizances, should he not in the meantime hear to the contrary. At a quarter before 3 o'clock, Mr. O'Connell, accompanied by his sons John and Daniel, Mr. Jeremiah Dunne, and Mr. Cornelius M'Loughlin, and followed by several other friends, arrived at the residence of Mr. Justice Burton. On entering the drawing-room, Mr. O'Connell, who is said to have looked dejected and pale, proceeded to examine the collection of paintings for which the learned Judge's residence is remarkable, and which he continued to inspect with apparent interest until 3 o'clock, when Mr. Kemmis and Mr. Bourne, the Clerk of the Crown, arrived. The entire party, consisting of about 30 persons, (many of whom, including Mr. O'Connell and his two sons, wore prominently on their breasts the Repeal button,) were then conducted down stairs to the Judge's library. Mr. O'Connell, on entering, shook hands with his Lordship, and the recognizances having been read over by him, he took the necessary oath and subscribed them. Mr. John O'Connell having done so likewise, they acknowledged themselves bound in 1000*l.* each to abide their trial on the charges preferred against them, which are conspiracy, sedition, and illegally assembling. The sureties, Mr. Jeremiah Dunne (merchant), of No. 14, Fitzwilliam-square; and Mr. Cornelius M'Loughlin, of 14, Fitzwilliam-place, acknowledged themselves bound in 500*l.* each for Mr. O'Connell, and in 500*l.* each for Mr. John O'Connell, to abide their trial as aforesaid. Mr. O'Connell having again shaken hands with the learned Judge, retired. He was loudly cheered in his exit from the house by the persons who had followed his carriage from Merrion-square. Mr. Pierce Mahony, just as Mr. O'Con-

nell was retiring, complained that the depositions on which Mr. O'Connell was held to bail were not furnished to him, and handed in a notice to that effect. Mr. Kemmis said that now that the parties had given bail for their appearance, they were entitled by the statute to copies of the depositions, and as a matter of course they should have them. A list of the names of the persons to be prosecuted was also delivered to Mr. Mahony. From this it appears that the proceedings at Mullaghmast form the subject of the prosecution against Mr. O'Connell, Mr. Ray, Dr. Grey, and Mr. Steele. The speeches delivered at the dinner at the same meeting form the subject of a separate prosecution against Mr. O'Connell, Mr. John O'Connell, Dr. Grey, Mr. Ray, Mr. Steele, and Mr. Barrett of the *Pilot* newspaper. In addition to the foregoing, the whole of the above parties, together with the Rev. Mr. Tierney, the Rev. Mr. Tyrrell, and Mr. C. G. Duffey, Editor of the *Nation* newspaper, are charged with being "members" of the Repeal Association. The principal charge is one of conspiracy, but distributed under various heads. The accused are to be tried for seditiously and malignantly conspiring to and with each other to seduce her Majesty's subjects in the army and navy from their allegiance to the throne—with conspiring to establish courts in order to supersede the Courts of Justice, as established by law, and with an attempt to overturn the constitution as established, under pretence of seeking for a Repeal of the Legislative Union. At four o'clock the following letter from Mr. O'Connell was published in a third edition of the *Weekly Freeman*:—"To the People of Ireland.—Merrion-square, 14th of October, 1843.—Beloved Fellow-Countrymen—I announce to you that which you will hear from other quarters, namely, that I have given this day bail to answer to a charge of 'conspiracy and other misdemeanours' the first day of next term. I make this announcement in order to conjure the people, one and all, to observe the strictest and most perfect tranquillity. Any attempt to disturb the public peace may be most disastrous—certainly would be criminal and mischievous. Attend, then, beloved countrymen, to me. Be not tempted by anybody to break the peace, to violate the law, or to be guilty of any tumult or disturbance. The slightest crime against order or the public peace may ruin our beautiful and otherwise triumphant cause. If you will, during this crisis, follow my advice, and act as I entreat you to do, patiently, quietly, legally, I think I can pledge myself to you that the period is not distant when our revered Sovereign will open the Irish Parliament in College-green. Every attempt of our enemies to disturb the progress of Repeal hitherto has had a direct contrary effect. This attempt will also fail, unless it be assisted by any misconduct on the part of the people. Be tranquil, then, and we shall be triumphant. I have the honour to be your ever faithful servant, D. O'Connell." On Monday afternoon bail was entered into for the following persons, against whom informations were sworn on Friday evening before Mr. Justice Burton. The recognizances were, 500*l.* for each of the parties accused, and two sureties in 250*l.* each. It will be observed by the names that the town council have completely identified themselves with the movement. For Dr. Gray—Alderman Gardiner and Town-Councillor M'Clelland. For Mr. Duffy—Alderman Grace and Town-Councillor O'Brien. For the Rev. Mr. Tyrrell—Thomas Carroll and Sir R. Fraser. For Mr. Ray—Town-Councillor O'Brien and Mr. J. Kelch. For Mr. Barrett—The Lord Mayor elect; Alderman Roney. For the Reverend Mr. Tierney—Alderman M'Kenna; William M'Guinness. For Mr. Steele—Alderman Roney; Town-Councillor M'Kenna. The Repeal Association met on Monday as usual; the meeting was greatly crowded, and was attended by an inspector of police, who took notes of the proceedings. Mr. J. A. O'Neil, of Runoneen Castle, took the chair and spoke at great length, and concluded by entreating the Association and Repealers generally to abandon the use of the word "Saxon" as applied to Englishmen, as the phrase had made many enemies for their cause. Mr. O'Connell then addressed the meeting. In reference, he said, to the remarks of the chairman, he would promise that for the future he, and he trusted the Association also, would give up the use of the word "Saxon," as it was calculated to give offence. When they first used the term (and it should be recollected that the only phrase in Irish to express the word Englishman was "Sassenach"), Lord Stanley was very angry, and they used it ten times more on that account at the time. The use of it was subsequently revived when they were branded as aliens in language, in blood, and religion, by Lord Lyndhurst, and it had been pretty freely applied ever since; but he now promised that for the future the word should not pass his lips, or if it inadvertently fell from him at any time he would immediately retract it. Having denied that the people were obnoxious to the charge of disloyalty, but, on the contrary, entitled to the greatest praise for their strict obedience to the laws, Mr. O'Connell came to the topic of a federal Parliament. In the Corporation debate on Repeal, he had declared his willingness to accept a federal Parliament, and instanced Canada, where such a Parliament had done much good. Since then many persons had joined that Association who went no further than a federal union, and he had lately received a letter from a gentleman of high distinction in England on the subject, in which his attention was directed to two points, concerning which the writer believed it to be of the greatest importance that the people of England should have correct information before they would join generally, or extensively, with that Association. The first point was, that it should be shown to the people of England that Irishmen in seeking for the restoration of a Parliament to their country, strove only to procure for themselves the manage-

ment of their own local and internal affairs, leaving matters of national importance to both countries to be legislated upon by the representatives from both countries in the Imperial Legislature. The next point was that Englishmen should be satisfied that as they co-operated with Irishmen, so Irishmen should assist Englishmen in their struggle to obtain a full, fair, and free representation. He (Mr. O'Connell) would meet such propositions in the spirit in which they were put forward, and he told that gentleman that, if a sufficient number of the English people came forward, there would be no difficulty in arranging Repeal on the definite points mentioned by him. Let him not be taunted with shrinking when he accepted these terms, for by doing so they not only took away all argument from their enemies, but merely followed a course to which the Association was already pledged by the admission of the Catholic Bishop of Killaloe and other gentlemen on the same terms. After accusing the Conservative press of inciting the people to violence, he proceeded to inculcate the necessity of peace and good temper. The change of which they were on the eve must be bloodless and sinless. He had ascertained by a series of monster meetings that the people were peaceable and determined to obey the law. Acting on the advice of Grattan—who declared that Repeal was impossible—the national voice was clearly ascertained to be in favour of it. He had ascertained that voice so far in peace and quietness, and if the proclamation had not been issued he should have gone on as quietly to the end. He had been told the day before that he should be prevented from addressing that meeting to-day, but he replied that "that could not be," because he was the auxiliary of the Government in preaching peace. If the Government were to interfere with him in that room, would it not be said that, having failed to irritate the people by the Clontarf proclamation, they wanted to do so by arresting the man who preached peace. Therefore he was there to preach peace. Having cautioned the people against Ribbonism, he read a letter signed by Mr. Sturge, of Birmingham, in which the Repealers of that locality expressed their astonishment at the step taken by Government in reference to the Clontarf meeting. He moved that this letter be referred to a committee, in order that they might propose an answer, declaring their delight and gratitude at this movement of the men of Birmingham, and denying that they have ever desired the dismemberment of the Empire, although they would never give up their exertions to obtain a local Legislature. A great number of subscriptions were then handed in as "proclamation money," and Mr. O'Connell announced the rent for the week to be 1,232*l.* 13*s.* 6*d.* The meeting then adjourned to Monday, in the New Conciliation Hall.—Mr. O'Connell did not open his "arbitration court" on Thursday at Rathmines according to appointment, and, as the warrants or official notifications from the Corn Exchange have not yet been printed, it is supposed that he has abandoned the intention. It is now confidently stated among the Repealers that an agitation is to be commenced forthwith for demanding a Federal Union, which they say will have the support of Mr. Smith O'Brien, M.P., Mr. Sharman Crawford, Mr. David R. Ross, and Lord Clement. Mr. Sturge is to have the management of the movement in England, and after a little time it is expected that Mr. O'Connell will abandon "Repeal and nothing but Repeal." Mr. Sturge arrived in Dublin on Wednesday, and after an interview with Mr. O'Connell, set off for Bangor, in the County Down, to consult with Mr. Sharman Crawford and arrange the preliminaries of the movement.—The depositions of the Government reporter, on which the warrants were issued, have been published this week, but they contain little more than what has already appeared in this Paper in the accounts of the different Repeal meetings within the last few weeks.—The Government continue to make additions to the military force. The Scotch Greys have been ordered to Ireland, and are hourly expected, and the 24th Foot, from Glasgow, are on their way. When those two regiments arrive, the military force in Ireland, added to the constabulary, who have received a military training, will amount to upwards of 30,000. Orders have been issued to supply the ancient Birmingham Tower, in Dublin Castle, with provisions to the same extent as the country forts and garrisons. Orders have also been issued to convert the new stables in the Upper Castle-yard into barracks.—It is mentioned as a curious circumstance attendant upon the late visit of the sympathising Repealers to Dublin from the north of England, that amongst them was one, named Bryan or Gilligan, for whom the police has been long on the look out. He is charged with having been one of a party, who, in 1837, attacked and murdered Mr. Geo. Fawcett, of the Queen's county, as he was going upon the occasion of a parliamentary election to vote for Sir C. Coote and the Hon. Mr. Vesey. He was seen about the Corn Exchange on Monday, and identified by a man on whose evidence one of the party was convicted and transported, and immediately taken into custody. He has been transmitted to Maryborough gaol to abide his trial.

Limerick.—The trial of the prisoners charged with the murder of the Rev. Charles Dawson has engaged the attention of Judge Jackson and two juries at the adjourned assizes in this city. The prosecution was instituted by the Crown against two men for the murder of Mr. Dawson, at Ballinacarriga, perpetrated at so distant a period as eight years since, when he was walking on a farm that had shortly before fallen into his possession, but which some of the occupiers on the land feared they would be removed from. Mr. Dawson was there murdered in noonday, on the 1st June, 1835, by three men in female disguise, who fired two shots into his body, and battered his lifeless remains with stones. The prisoners on trial were Patrick Lynch and Edward Conway; the former one of a

family located on the lands of Ballinacarriga, and Conway, a stout able man, their farm-servant. The indictment was prepared, and the line of prosecution arranged by Mr. Barrington, Crown solicitor, and Mr. Bennett, Q.C., conducted the trial. The clothes of Mr. Dawson were produced by a policeman, and the marks of blood were yet visible, the perforation of a bullet, and parts of the dress evidently burnt from powder. When the case for the Crown had nearly closed, one of the jurors became sick on the second day, and a medical gentleman deposed that to remain in court would endanger his life. At this advanced stage of the proceedings, the judge and lawyers agreed there was no alternative but to discharge the jury altogether and recommence the whole trial. The court sat again on the third day; the long panel was again called over, and a new jury sworn to try the two prisoners, who were again arraigned for the same murder, and pleaded not guilty. The prosecution for the Crown only concluded on Friday evening at six o'clock, when Mr. Coppinger opened the case for the defence, and at nine o'clock the court adjourned. On Saturday the case concluded, and the jury were locked up, but they could not agree. At a late hour of the night, the judge, finding it impossible to expect a verdict from them, and also that they were suffering from their confinement without his having the power to order them refreshments, consented at their urgent request, to discharge them. The prisoners, however, will be kept in custody and be tried before a third jury.

Mallow.—A meeting was held in this town on the 15th to consider the announcement of Mr. O'Connell's arrest, the Rev. Mr. Collins in the chair. About ten thousand persons are said to have been present. The following resolutions were unanimously agreed to:—"That the right to petition is the common birth-right of every British subject—a right co-existent with the security of the throne and the integrity of the British constitution; and that we are firmly determined to exercise this right in petitioning for the Repeal of the Act of the Union." "That in the present crisis, we will cheerfully submit to the counsels of our beloved Liberator, Daniel O'Connell, in whose integrity and wisdom we place the most unbounded confidence." Counsellor O'Hea being then called for, spoke for nearly an hour amid great applause. He desired the people to follow to the letter Mr. O'Connell's advice, to keep their enemies in the wrong by keeping the law; and promised them that persecution or prosecution, imprisonment, or otherwise, Mr. O'Connell was sure to succeed, and the moral, peaceable, religious, temperate people of Ireland would soon be legislating for themselves. The meeting then broke up, giving three cheers for the Queen, three more for Mr. O'Connell, three for Repeal, and three for the Protestant Counsellor O'Hea.

SCOTLAND.

Edinburgh.—The musical festival in this city, for which great preparations had been made, began on Tuesday and terminated on Saturday of last week. It was on a much smaller scale than those of Norwich and Birmingham in respect both to the choral and instrumental band, but it went off well, although there was apparently a deficiency of strength in the department of solo-singers. The principal singers were Miss Birch, Mrs. Shaw, and Mr. Phillips, who were very favourably received. The programme of the performances was arranged by Sir Henry Bishop, but it did not exhibit a single novelty, it having been, doubtless, found impossible to prepare sufficiently for the performance of any new work at such a distance from the metropolis, and by a body of performers collected from a variety of quarters. The music was well performed, and gave great satisfaction, but the number of visitors were inadequate to produce a successful result; and it is said that the receipts will be far from defraying the expenditure. On Friday morning a public breakfast was given to Sir H. Bishop, and was numerously attended. At the performance in the evening the Duke de Bordeaux honoured the company with his presence, and was received with every mark of respect. His Royal Highness remained until the conclusion of the programme, and was almost the first to rise when our national anthem is heard in Weber's "Jubilee" overture.

Perth.—The local papers state that the plans for Trinity College to be erected on the estate of Cairnies, about eight miles north-west of Perth, have been finally approved of, and that the buildings will be commenced in the spring. The plan is in the English collegiate style of architecture, and is designed by Mr. Henderson. The buildings when completed will form a spacious quadrangle, with a bell-tower and chapel separate. The west front is to contain the entrance gate and residences for the warden, sub-wardens, and tutors; the north is to contain the class-rooms and dormitory; and the east the hall and library; the south front is to be an open cloister. It is proposed to execute only the portion of the building necessary for opening the school department, and the theological part of the institution will not be in operation for some time. The college will contain about 250 boys, who are to reside within the building, as at Eton, and to be otherwise educated as in that college. The building is to be constructed of a fine durable stone which is found in great abundance on the property.

Glasgow.—We lately noticed the departure of several ships from this port and Greenock on a secret expedition to an island in the African seas, where by an accidental discovery immense beds of superior Guano have been found, which are supposed likely to confer fortunes on all who may be successful in discovering them. We learn by the *Greenock Advertiser* that the discovery is due to the supercargo of an American ship which had been trading in Turtle Bay, on the coast of Africa, in the autumn of 1841. On his return to Boston he happened to see in

one of the papers an account of the character and properties of Guano as a manure, and the high price it was bringing at every market where its uses were known. The description of the article reminded him of immense masses of a particular looking matter he had seen while ashore on that island, and accordingly he published a short account of his observations on the subject in an American Journal. About eighteen months ago a copy of that Journal fell into the hands of the master of a Liverpool vessel, then about to sail from that port for St. Helena for a cargo of captured negroes for the West Indies. The captain resolved on his way to pay a visit to the said island, which he accordingly accomplished, and procured samples of the Guano, which were forwarded forthwith from St. Helena to his father, a merchant in Liverpool. No time was lost in fitting out two ships for the island, under secret instructions. One of them succeeded in discovering the island, and got a full cargo of excellent Guano, which was lately discharged at Liverpool; but the other ship could not find it, and returned empty. The services of the captain of the successful ship have been secured by a Glasgow house, and four vessels have already sailed from the Clyde, with sealed instructions for the island. The captain states that he personally travelled over great beds of Guano, in some places fifteen feet deep, and that there is apparently as much as will serve the present generation for all agricultural purposes.

Cromarty.—On Saturday additional constables were sworn in, and a second meeting of the county gentlemen was held, attended by the Lord-Lieutenant, the Convener, Sheriffs, &c. Immediately after the meeting broke up, the authorities proceeded to Resolis with a body of troops, for the purpose of introducing the minister of that parish to his pastoral charge and manse. The soldiers remained behind at the ferry-house, about two miles from the church, and the Sheriff accompanied the minister. About sixty persons were present, and no opposition was offered. In the afternoon three more rioters were apprehended at Jemimaville, and lodged in Dingwall gaol. The principal ringleaders are, it is said, still at large, some of them having left the district.

Greenock.—A firm at Greenock have recently erected large and commodious premises close to their mills, in which the whole manual labour of wetting the flour, braking and chaffing the dough, and forming the biscuits, is superseded by machinery, driven by a shaft from the mills. The machines in operation are, a large revolving pan, wherein the flour is mixed with water into dough, which is carried to a table where there are two rollers, between which it is drawn backward and forward till it comes to the proper consistency. These rollers, which are raised and lowered by a screw, bring the dough to the requisite thickness prior to its removal to a patent machine for cutting it into the biscuit form. After going through this process, the biscuits are put into the ovens, and are finally removed to the oven heads, which are covered with iron kiln plates, for the purpose of being thoroughly dried. The quantity of biscuits manufactured daily is about three tons; the number of workmen is 10.—On Wednesday evening, during the height of the storm, as the British Queen steamer was at the tail of the bank, on her passage across from Greenock to Helensburgh, it was found that she was making so much water as to render a continuance of the voyage dangerous, and she was immediately put about for Greenock harbour. All the passengers and crew were landed in safety, and in a moment or two the vessel sunk. The cause of the accident is supposed to have been her striking against a small rock.

THEATRICALS.

DRURY-LANE.—On Wednesday night, an English version of Donizetti's opera of "La Favorite" was produced at this theatre with complete success, to which the admirable manner in which it was placed upon the stage in no small degree contributed. The subject of this opera is taken from Spanish history. Leonora de Guzman was the "favourite" mistress of Alfonso the Eleventh, King of Castile and Arragon, who, to marry her, wished to repudiate his Queen. The "favourite," not content with her royal lover, had fallen in love with a young novice of a convent, to whom she concealed her name and station. The novice, Ferdinand, having no vocation for the church, obtains a commission in the Army by means of his unknown admirer, and after a time returns a victorious soldier. As a reward for his services, he solicits the hand of the lady he loved, whom the King discovers to be Leonora. He grants the request; but the youth discovers the real character of his promised bride, and rejects her hand at the altar. In the last act they are found inmates, without knowing it, of the same convent. They meet accidentally, and a scene of love and agony is terminated by Leonora's death. This, it must be evident, is not a subject altogether suitable to an English audience. The heroine's character does not excite the least interest in her favour; and therefore, though the piece is a vehicle for splendid spectacle and pretty music, yet it fails to have any effect on the feelings and sympathies of the audience. The music indicates, in many places, a change for the better in Donizetti's style. It was very efficiently sung, and the opera was better acted than is usually the case with musical dramas on an English stage. The principal characters were sustained by Mr. Templeton, Miss Romer, and Mr. Leffler, who were called before the curtain at the close and very warmly received. An incidental ballet was introduced in the second act, which was worthy of the Italian Opera-house. It included a *pas de trois* by Mdle. Galby, Miss C. Webster, and Madame Giubilei; a Spanish castanet dance by Madame Petit Stephan and M. Coralli; and a *pas de deux* by Carlotta Grisi and Petipa—all of which were both applauded and *encored*, so that the ballet was

actually danced twice over. The scenery (by Messrs Grieve) was extremely interesting, the last in particular, the monastery and cloisters by moonlight, was of surpassing beauty. A new farce, in one act, by Mr. Morton, called "My Wife's Come," afterwards kept the house in a state of great hilarity during its performance. It was capitally acted by Mr. Harley, Mr. Meadows, Mrs. Stirling, and Mrs. A. Wigan, and was completely successful.

COVENT GARDEN.—Mr. Wallack, the lessee of this theatre, has published an announcement, stating that he has been obliged to close the theatre after a season of one fortnight's duration, and that he has made arrangements for commencing a new season under an entirely new arrangement. He states that his attempts to cater for the public amusement have been "constantly thwarted and crippled principally by those who should have been the first to aid and forward his views." It appears, from the daily papers that the actors have either declined to play in the various dramas proposed by the manager for representation, or have so performed their parts that success was impossible. After several failures it was at last suggested that some of Shakespeare's tragedies might be performed with advantage; but as each of the three principal actors deemed himself best entitled to the prominent characters, there were serious doubts whether Shakespeare could be performed, until a compromise was proposed and agreed to by the contending parties, namely, that *Othello*, *Julius Caesar*, *King John*, and *Macbeth* should be played, and the principal characters alternately sustained by Messrs. Vandenhoff, Anderson, and Phelps. It is even said that the right of precedence in the choice of characters was decided by lot. At all events, it was imagined the matter had been arranged amicably until *Macbeth* came to be performed, when Mr. Vandenhoff positively refused to play second to any man. The hope of reconciling matters was thus at an end, and the manager resolved to bring the season to a close. The public, in the meantime, seem to have given no encouragement to the alternation of Shakespeare's characters, for the audience was insufficient to pay expenses.

Miscellaneous.

Rebecca in 1727.—It appears from Seyer's "Memoirs of Bristol" that, about the latter end of February, 1726-7, a petition was sent to Parliament complaining of the badness of the roads about that city, and praying relief, and provision for keeping them in good repair. In consequence of this an Act of Parliament, 13th Geo. I., 1727, was obtained, and turnpikes were first erected there about Midsummer, and tolls collected for many days. But the country people showed a violent hostility to the measure, and great disturbances ensued, and the gates were soon cut down and demolished, chiefly by the colliers, who would not suffer coal to be brought there; whereupon the Mayor had the city supplied from Swansea, which, when the colliers perceived, they brought their coals as usual. Soldiers assisted at the gates to take the toll, but the next night, after the soldiers were withdrawn, the gates were all cut down a second time, by persons disguised in women's apparel and high-crowned hats.

Antiquities of Ceylon.—A discovery of great historical importance was lately made by a gentleman at Manaar. In digging under the foundation of a very old house, some Roman bricks of a flat form were found, and, in sifting the rubbish, a gold ring, marked ANN. PLOC. (our types cannot imitate the exact characters), turned up, of ancient manufacture, quite plain, and of a shape similar to those in the British Museum, which are said to have been worn by Roman knights. Now, we know from Pliny that the farmer of the duties in the Red Sea, Annius Plocanias, was carried by a storm to the coast of Ceylon in the year 50 B.C.; he was of the equestrian order, and there seems little reason to doubt of the ring having belonged to him. It is much time-worn, or rather injured by the effects of damp and corrosion.—*Ceylon Herald*, July 4.

Indian Mission.—When the last packet left New York for Liverpool, a deputation of chiefs and warriors from one of the tribes of Indians located on the lands at the head of Lake Superior was in that city on their way to the Court of Queen Victoria, to lay before their Royal mistress certain grievances under which their people are labouring. The following account of them is from the *New York Inquirer*:—"These veritable and rugged sons of the forest, with the wives of their two principal chiefs, come fully equipped and appointed with all the paraphernalia of war, hunting, travelling wigwam, &c. The venerable patriarch at the head of the deputation is nearly seventy years of age, being the oldest warrior of his tribe, and having fought upon the frontiers during the war between Great Britain and the United States, both his warriors and himself have enjoyed the highest favour and confidence of the British Government. A difference having existed for some time between the Chippewas and the Upper Canadians, those warriors have been delegated to lay their grievances before the Queen in person. Their locality is at the head of Lake Superior, the most remote and isolated of any of the tribes of American Indians. It was a party of this tribe that accompanied Captain Back in part of his celebrated expedition to the North Pole in search of his friend Captain Ross. Having never lived near the shore of the lake, every object connected with civilization is a matter of great curiosity to them. Their interpreter says that their astonishment upon beholding a steam-boat for the first time was unbounded; and that in descending the locks of the Erie canal they went through a variety of heathen ceremonies to propitiate the Evil Spirit, who they firmly believed had an agency in causing the waters to sink or rise over hills and valleys. What their wonder will be in witnessing the scenes of a play, or the wonderful exploits of the circus-riders, remains to be

known. They are certainly objects of great interest, and in fact the only Indians from that remote region of country that have ever been among us, or that in all probability ever will visit these parts again."

The Royal Visit to Cambridge.—It is curious in connexion with the Queen's intended visit to the University of Cambridge on Wednesday next, to refer to the details of Queen Elizabeth's visit in 1563. On that occasion, tragedies, orations, disputations, and other academical exercises were recited before her Majesty. The list of Honorary Degrees then conferred comprises many distinguished names in the history of their age and country. The following are copied correctly from the University annals of the time:—Thomas Howard, Duke of Norfolk; Edward Vere, Earl of Oxforde; Ambrose Dudley, Earl of Warwick; Edward Manners, Earl of Rutland; Thomas Ratclif, Earl of Sussex; Robert Dudley, Earl of Leicester; Edward Clinton, Lord High Admiral; William Howard, Lord Chamberlain; Henry Carew, Lord Hunsden; Sir William Cecil, Secretary; Sir Francis Knolls, Vice Chamberlain. Thomas Henage, John Ashley, Richard Bartue, William Cooke, Edmond Cooke, Esquires. Historians differ as to the unanimity which prevailed amongst the learned doctors of the University, on account of the political and religious acerbities which other leading circumstances of those changing times gave rise to; but Fuller states with regard to this royal visit, that "acts being ended, degrees conferred, university officers well rewarded, and all persons pleased, her Majesty went on her progress, and the scholars returned to their studies." Fuller relates, however, the following circumstance, which, besides being somewhat characteristic of her Majesty, proves also, that although she was very well pleased, as well as the University in general, there was one person and a very distinguished one at that time and afterwards, who was far from being equally so. This was the celebrated Thomas Cartwright. Fuller says—"He (Cartwright), and Thomas Preston, then Fellow of King's College, afterwards Master of Trinity Hall, were appointed two of the four disputants in the Philosophy Act before the Queen. Cartwright had dealt most with the Muses, Preston with the Graces, adorning his learning with comely carriage, graceful gesture, and pleasing pronunciation. Cartwright disputed like a great, Preston like a gentle scholar, being a handsome man; and the Queen (upon parity of deserts) always preferred propenseness of person in conferring her favours. Hereupon with her looks, words, and deeds, she favoured Preston, calling him her scholar, as appears by his epitaph in Trinity Hall chappell, which thus beginneth—

"Conderis hoc tumulo Thoma Prestone scholarem
Quem dixit Princeps Elizabetha suum."

Inasmuch for his good disputing and excellent acting in the tragedy of "Dido," she bestowed on him a pension of 20lib. a year, whilst Cartwright received neither reward nor commendation, whereof he not only complained to his inward friends in Trinity College, but also after her Majesty's neglect of him, began to invade into divers opinions against her ecclesiastical government. But Mr. Cartwright's followers, who lay the foundation of his disaffection in the discipline established in his conscience, not carnal discontentment, credit not the relation. Adding, moreover, that the Queen did highly commend though not reward him. But soon after he went beyond the seas, and after his travel returned a bitter enemy to the hierarchy." Queen Elizabeth herself on this occasion delivered a Latin oration before the assembled members of the University, in the Senate House.

Diplomacy in China.—We copy the following amusing story from the *Standard* of Thursday, which it published on the alleged authority of a letter from a Naval Officer:—"At 5 P.M. the Captains in full-dress (thermometer 100) met at Government House; all the troops, officials, and public being present to witness the ratification of the treaty of peace, which was done in great form, under salutes from the forts and ships. The Chinese did not seem to care about it, but it was some comfort to us to find that they felt the heat as much as we did; but when dinner came the scene was different. We sat down in white jackets, about fifty. The Commissioners appeared quite at their ease. They drank an enormous quantity of wine; chatted, laughed, and finished every glass, turning it over to show it was empty, and helping themselves from the decanters. Old Keying, the Chief Commissioner, must have taken 50 large glasses of wine at least. When dinner was removed, the Queen and Emperor of China were drunk in one toast, with three times three. We then drank to Keying's health, who would not be done out of his glass, but drank too. He then gave us a Chinese song—such noises. What do you think of the Emperor's uncle singing a song? After this he called upon the Governor, Sir H. Pottinger, who gave us an English song, when Wang, the second Commissioner, gave us another Chinese one, and called on another Englishman, and then the old Tartar General, whose performance surpasses all description: such a collection of noises I never heard before. He then called on Lord Saltoun, who gave us a jolly song, when old Keying commenced again: and so passed the evening till near 11 o'clock, the old fellows taking wine enough for six at least, and walking off pretty steady."

Lord Rosse's Telescope.—We have already, on more than one occasion, noticed the gigantic telescope now constructing by the Earl of Rosse. The Rev. Dr. Robinson, the astronomer of Armagh, thus describes it:—"The speculum, which weighs three tons, has been ground to figure, and can be polished in a day. The tube, partly a cubic chamber where the mirror is fixed, and partly a cylinder of inch-deal, strongly hooped, and eight feet diameter at its centre, is complete. The massive centres

on which the telescope is to turn are in their place, and the apparatus which supports the speculum, which is of wire, and of great weight, is also complete. The telescope is not to be turned to any part of the sky, but limited to a range of half an hour on each side of the meridian, through which its motion will be given by powerful clock-work, independent of the observer. For this purpose it stands between two pieces of masonry of Gothic architecture, which harmonises well with the castle. One of these pillars will sustain the galleries for the observer, and the other the clockwork and other machinery, one of which is finished, and the other nearly completed. An extremely elegant arrangement of counterpoises is intended to balance the enormous mass, so that a comparatively slight force only will be required to elevate or depress it, much of which is also completed, and Lord Rosse considers that a couple of months will be sufficient to have the instrument fit for trial. The arrangements will not permit the examination of an object at any time, but only when near the meridian, when objects are best seen. So large a telescope will always require the most favourable circumstances of air, &c. and there will always be enough of objects at any given time to employ it fully. The aperture is six feet, and the focal length fifty-two feet."

March of Intellect.—There is no knowing how far our American friends are to carry the science of music; but the following quotation from the *New-York Herald* shows that it can be put to uses which Mozart and Haydn did not dream of in their philosophy:—"Mr. Russell, the Vocalist.—The attempt of this distinguished vocalist to give the text scenes of "Richard III." through the medium of song was triumphantly successful on Thursday night, and his success has emboldened him to proceed still further with these singular adaptations. We perceive he will give Cato's soliloquy on the immortality of the soul at his next concert, in the same fashion." The *Morning Chronicle* suggests, as a subject for Mr. Russell's next adaptation, the American President's Message.

Law.

POLICE.—UNION HALL.—Thursday having been appointed for resuming the inquiry into the alleged charges against Mr. Isaac Bridgeman, minister of St. John's Chapel, Walworth, and John Bridgeman, his son, of stealing a leaden coffin and the remains of the late Mr. T. G. Tawney, the Court from an early hour in the day was very much crowded, although the case did not come on until after three o'clock. Mr. Clarkson, counsel for Mr. Tawney's family, on entering the Court said, that since he was last there, the Secretary of State had recommended her Majesty's pardon to any of the accomplices concerned in the disinterment of the remains, except the person who actually broke open the tomb. At present he was not prepared with further evidence against the prisoner, but from disclosures recently made he had reason to believe that testimony would be produced on a future occasion, implicating another party in the offence. He, however, pledged himself that the final hearing should take place before the next sessions, in order that the charge might undergo investigation before another tribunal, in the event of a committal; but, under the circumstances, he would not produce further evidence unless it was again adjourned, and he hoped, therefore, that it might be allowed to stand over for that purpose. Mr. Bodkin, on behalf of defendants, opposed the application, on the ground that frequent adjournments had taken place, to which he made no objection, anxious that every opportunity should be afforded Mr. Tawney of producing all the evidence he could to establish the charge, if he was in a condition to do so. Now, however, as sufficient time had been given for the purpose, he trusted the magistrate would pronounce his decision. With respect to the free pardon alluded to, that would have nothing to do with the magistrate's decision. Counsel then contended that the evidence adduced did not affect the elder defendant, but that if the magistrate entertained any doubt on that point, he would prefer, on the part of his client, that the case should be sent before another tribunal, in order to give him an opportunity of proving his innocence of the charge. Mr. Cottingham said, that upon the testimony already adduced against defendants, he should not commit them for felony, but for misdemeanour, and that in the event of further evidence being adduced, it would not exclude complainant from applying to a Judge, and obtaining a further postponement. The magistrate made some remarks on the evidence adduced against the elder defendant, and said that there were strong reasons for believing that he was cognizant of what took place in the burial-ground attached to his own chapel on the night of the 6th September; he therefore held both defendants to bail to answer the charge at the ensuing sessions of the Central Criminal Court.

BOW-STREET.—On Thursday *Anthony Willett*, a person of respectable appearance, was charged with feloniously forging a bill of exchange, by altering the sum from 4l. 10s. to 14l. 10s., with intent to defraud Mr. Thomas Tiltman, fruiterer, of Tavistock-row, Covent-garden. The prosecutor stated that on the 30th May last, prisoner, with whom he had had some dealings, called upon him at his stand in Covent-garden market, and asked him to accept a bill of 4l. 10s., which he said he thought would balance their accounts. Prosecutor considered he did not owe him so much, but consented to accept the bill. Prisoner then produced a stamp with the figures 4l. 10s. written in the corner, but nothing else upon it. In that state prosecutor took it to the shop of Mr. Solomon, when he wrote his acceptance across it, and immediately returned it to prisoner. He did not at the time examine the stamp, and heard nothing more of prisoner or the bill till the early part of September, when he received a letter from Mr. Crocker, a solicitor, demanding payment of a bill of 14l. 10s., drawn by prisoner, and purporting to have been accepted by prosecutor on the 28th May. Knowing that he had not accepted any bill for such an amount, he called on Mr. Crocker, and was there shown the bill in question, which he at once identified as the same he had accepted for 4l. 10s., but a figure of 1 had subsequently been placed before the 4, and the body filled up with the word "fourteen." Mr. Solomon, a fruiterer in Covent-garden, said he recollected prosecutor calling at his shop on the 30th May for the purpose of accepting a bill; whilst he was writing witness stood by his side, and distinctly saw the sum of 4l. 10s. in figures upon the stamp. Mr. J. Wallis, of Cursitor-street, Chancery-lane, proved receiving the bill from prisoner on the 31st May; it was sent to him in a note, with a request that he would discount it. He said he wanted the money to take up a 15l. bill, which was due that day. He accordingly sent him a check for 14l., and subsequently paid the bill to a person of the name of Marks. Mr. Henry Crocker, solicitor, produced the bill, which had been placed in his hands by Mr. Marks, and upon which he had issued a writ against prosecutor for the recovery of the amount. A police constable apprehended the prisoner on Wednesday evening at 15, St. Andrew's-hill, Thames-street, when told the nature of the charge against him said it was altogether a mistake, and that he should be able to prove the bill was accepted for 14l. 10s. In answer to the charge, prisoner said that prosecutor accepted the bill as it there appeared, that he did so for the purpose of meeting another bill of a similar amount, and that the prosecutor would willingly have accepted for a much

larger amount had he wished it. Mr. Twyford said he should leave a jury to decide that question, and committed the prisoner to Newgate for trial.

SPORTING.

NEWMARKET.—FRIDAY.—*Hamicap Sweepstakes*, of 15 sovs each, 10 ft. for 2-year-olds and 3-year-olds. T.Y.C. 5 subs. Mr Newton's f by Rococo, out of Fama's dam, 3 yrs, 6 st 7 lbs, beat Mr Ongley's Queen of the Gipsies, 3 yrs, 8 st 7 lbs, Mr Sadler's Decisive, 3 yrs, 8 st 4 lbs, and Duke of Richmond's Cornopaeon, 3 yrs, 8 st 7 lbs. — *The Prendergast Stakes*, of 50 sovs. each, h ft. for two-year-olds, colts 8 st 7 lbs, and fillies 8 st 5 lbs. T.Y.C. 27 subs. Mr Herbert's Antler, by Defence or Venison, beat Lord Orford's Boots, bro to Barmad; Col. Peel's Zenobia, by Slane; Mr Wreford's c by Camel, out of Wadastra; Col. Peel's f by Slane, out of Seakale; and Lord G. Bentinck's The Devil to Pay. — *Matches.*—Lord Exeter's Wee Pet, 8 st 7 lbs, beat Duke of Bedford's Minotaur, 8 st. D.M. 200, h ft. Won by a head. — Lord Exeter's Celia, 8 st, beat Duke of Bedford's Oakley, 8 st 7 lbs. 200, h ft. T.Y.C. Won by a head. — Lord Exeter's Allena, 6 st 4 lbs, beat Duke of Bedford's Currycomb, 8 st 10 lbs. — Colonel Peel's I-am-not-aware, 8 st 2 lbs, beat by a neck Lord Glasgow's Give-him-a-Name, 8 st 7 lbs. 100. T.M.M.—Colonel Anson's Marquess, 3 yrs, 8 st 7 lbs, beat by a neck Duke of Beaufort's c by Liverpool out of Retamosa, 2 yrs, 7 st 7 lbs. — Colonel Peel's I-am-not-aware, beat in a canter Lord Glasgow's Give-him-a-Name, 8 st each. T.Y.C. 50.—Mr Pyne's Mania 8 st 2 lbs, received ft from Duke of Bedford's Edmund of Langley, 8 st 2 lbs. D.M. 200, &c.—Lord G. Bentinck's All-round-my-Hat, 8 st 4 lbs, received ft from Lord Glasgow's c by Velocipede, out of Amulet, 8 st 7 lbs. T.Y.C. 200.—Colonel Peel's Garry Owen received 50 sovs ft from Duke of Bedford's Oakley, 8 st 7 lbs each. T.Y.C. 150, h ft.—Lord Stradbroke's Euenus, 3 yrs, received ft from Lord Exeter's Saros, 4 yrs, 8 st 5 lbs each. D.M. 200, h ft.

SATURDAY.—Matches.—1000 sovs; 8 st each. A.F. Lord G. Bentinck's Captain Cook beat Mr Sainsbury's Chotornian, who made the running, but was passed at the bushes, and beaten in a canter by 15 lengths.—25 sovs. R.M. Lord Miltown's Birdeen, 6 st 4 lbs, beat the Duke of Richmond's The Currier, 8 st 11 lbs.—300, h ft. Criterion Course. Mr Gregory's Barricade, 8 st 7 lbs, received ft from Lord Glasgow's f by Muley Moloch, out of his Actæon mare, 8 st 7 lbs.

MARK LANE, FRIDAY, OCTOBER 20.—We have been but moderately supplied with English Wheat during the week, and observe no alteration in its value; the demand for free foreign continues very limited at Monday's prices.

BRITISH, PER IMPERIAL QUARTER.				S. S.

GAZETTE OF THE WEEK.

BANKRUPTS.—W. H. Frearson, Wood-street, Cheapside, sewing-cotton manufacturer.—W. Dickinson, Abbey-hill, Buxley, Kent, merchant.—R. Sharpe, Chelmsford, Essex, draper.—J. Wood, Coleman-street, tobacconist.—R. T. Abbott and A. T. Tebbitt, Birmingham, wholesale tea-dealers.—A. Gordon, W. Cartwright, and J. Blackett, Manchester, machine-makers.—B. Brain, Romney-street, Pentonville, steel and copper-plate printer.—J. Whipple, Crown-street, Finsbury, stay-manufacturer.—J. G. West, High-street, Wandsworth, grocer.

BIRTHS.—On the 18th inst., the Viscountess Parker, of a son and heir.—On the 18th inst., in Armagh, the Lady Lieutenant Macdonald, of the 54th Regiment, of a daughter.

MARRIAGES.—On the 18th inst., at Wadworth, James Clarke Ross, Capt. R.N., to Ann, eldest daughter of Thomas Coulman, Esq., of Whitgift-hall, DEATHS.—On the 18th inst., at Stapleton, near Bristol, aged 73, John Foster, Esq., the author of "Peacocks," and other works.—Last week, the Rev. T. A. Parkinson, minister of Denmark Hill Chapel, Canterbury, and a zealous prize-man for the last ten years.—In Paris, on Tuesday week, Thomas Bean, Esq., of Liverpool, greatly respected in that town as the Editor and proprietor of the *Liverpool Albion*.

WANTED AN ACTIVE LAD, 18 to 20 years of age, who can clean a Horse, work well in the Garden, and make himself generally useful. Wages (Beer included), 5s. per week, and Board. Also half-employment for a useful labourer in the Garden. Apply before eleven, at No. 1, Bath-place, Dalston.

WANT PLACES.—All Letters to be post-paid.

A S GARDENER.—A single Man, aged 28; has a thorough knowledge of the greenhouse, vinery, wall-trees, early forcing, flower and kitchen garden, and the care of land and stock; can have a good character from the Gentleman he has just left.—Direct to A. B., at Mr. Dove's, Black Stock Nursery, Highbury Vale, Islington.

A S GARDENER.—A married Man, aged 30, who perfectly understands plants, the forcing department, framing, the flower and kitchen-garden, &c.; he has filled two Situations as Head Gardener; high wages are not an object, provided the situation be a comfortable one; he can have an undeniable character.—Direct to E. T., at Mr. Clarke's, No. 4, Park-place, Clapham, Surrey.

A S GARDENER.—A respectable young Man, aged 27; has a practical knowledge of the flower and kitchen garden; understands the pruning of Wall-trees, &c.; likewise understands the management of Cows; has no objection to make himself generally useful, can have a good character from his last Situation.—Direct to C. C., at Mr. English's, Baker, Greenwich, Kent.

A S GARDENER.—A single young Man who perfectly understands his business in all its branches, and has lived in some of the first-rate Situations in the country, and can be well recommended from the same.—Direct to J. R., Fulham Nursery, Middlesex.

TO NURSERYMEN AND Others.

THE Advertiser is the son of a Nurseryman, and is desirous of engaging himself in some respectable firm as PROPAGATOR or PLANT-FORMER; he possesses a good knowledge of Plants, Propagation, and Plant Management; can travel if required, having a good trade connexion, and can be highly recommended.—Direct to A. B., at Messrs. Hurst and M'Mullen's, 6, Leadenhall-street.

TO NOBLEMEN, GENTLEMEN, FARMERS, and GRAZERS.

A S FARM-BAILIFF, in any county in England.—A young Man, a native of Cumberland, where he has been brought up to Farming and Grazing, and is acquainted with the thorough-drainage system, subsoil and trench-ploughing, and with most of the modern improvements in Agriculture; he would be able to give respectable references, and produce sufficient testimonials as to character, capabilities, &c.—Direct to A. L., Post-office, Brampton, Cumberland.

Printed by Messrs. BRADBURY and EVANS, Lombard-street, Fleet-street, in the Precinct of Whitefriars, in the City of London, and Published by them at the Office, 3, CHARLTON-STREET, COVENT GARDEN, in the County of Middlesex, where all Advertisements and Communications are to be addressed to the Editor.—Saturday, October 21, 1843.

THE GARDENERS' CHRONICLE.

A STAMPED NEWSPAPER OF RURAL ECONOMY AND GENERAL NEWS.

THE HORTICULTURAL PART EDITED BY PROFESSOR LINDLEY.

No. 43—1843.

SATURDAY, OCTOBER 28.

PRICE 6d.

INDEX OF THE PRINCIPAL HORTICULTURAL SUBJECTS IN THE LAST NUMBER.

Amateur's Garden, No. XLII.	736 a
Anger, a small town in the island of Java; produce, &c. of that part described.	738 a
Artisan, a new monthly periodical, rev.	742 c
Ash-tree, toad discovered in centre of.	757 a
Aspidius conchiformis, or Apple-tree Mistle Scale, described.	755 c
Barberry, mildew on leaves of; its effect upon corn.	738 a
Barker, a spectable.	741 c
Bees, hive of, great weight of comb and honey in.	737 b
Birds, of use to destroy grubs, &c.	742 a
Birkenhead, new public parks at, remarks on.	742 a
Books, remarks on.	741 b
Botany, remarks on.	741 b
Catalogue, descriptive, of Roses, Paul & Sons, rev.	742 c
Chemistry, some new discoveries in, effects of.	733 a
Clover Dodder, remarks on.	737 a
Cow-worm, a rosea.	741 c
Dahlia, to keep through the winter.	741 b
Egg, large size of.	741 b
Farming, remarks on.	737 b
Figs, treatment of.	744 b
Fortune, Mr., his mission to China, remarks on.	741 c
Grey wagtail, curious anecdote respecting.	737 b
Heating, remarks on.	739 c
— new plan for houses and settings, Burbridge and Healy's adv.	732 a
Heliotropium, Verbena, &c., winter treatment of.	744 a
Henderson's Nursery, Pine-apple pines, noticed.	742 b
Horse (chevreaux), as food for sheep, remarks on.	737 a
Insects, remarks on.	741 b
Japanica caerulea, &c., remarks on flowering of.	744 b
Journal of Agriculture and Transactions of the Highland Society, rev.	742 c
London Physiological Journal, rev.	742 b
Lytton Agricultural Association; account of observations made at.	737 b
Mauve, penicillate, prussiate of potash, remarks on.	737 a
Melons grown under oiled canvas, remarks on.	744 b
Melon seeds, remarks on testing them, by of.	737 a
Pamphlet for more general extension of Lind drawing, by J. H. Cl. Brock, rev.	742 c
Pear, a, coreless, described.	737 a
Pear-trees, remarks on Jargonille as a standard.	744 a
Pears, varieties to come in between Christmas and Easter, list of.	744 b
Peristria, P. didendrum, &c., remarks on habits of.	744 b
Phlox, D. ummunda, to sow the seed of; remarks on.	741 b
Physiology, vegetable, important, remarks on.	733 a
Plants, flowering, for forcing, list of.	736 b
Planting, remarks on.	739 c
Portulaca, observations on the new system of.	733 c
Salvia splendens, to obtain flowers, plants of, in March and April.	735 b
Seed, from Cape of Good Hope, treatment of.	744 b
Snow, blossoms of Sunflower a trap for.	737 c
Straighten, to prepare ground for, list of productive kinds.	744 b
Tar, sprays of, to preserve Pears, &c. from phagants; its effect on French Beans.	737 b
Theory of Horticulture, Lindley's, rev.	742 c
Tr. pedunculatum, polyphyllum.	741 b
Tu. m. p. m. a specimen grown on a field sown with guano and salt.	737 b
Vines, to graft, directions for.	744 a
Water, flame, described.	735 a
Weeds in ponds, to destroy.	737 c
Wheat, sprouting, remarks on; opinions of practical workers on conducting tables showing expenses of.	734 b
Wood pavement, improvement in construction of.	739 a
Woolen rags, dilute sulphuric acid, to arrest ammonia during fermentation of.	744 b

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.—MEETING AT SOUTHAMPTON.—Principal Day of the Show, Thursday, July 25, 1844.—A General Meeting of the Members will be held at Southampton on Friday, July 26, 1844, at 12 o'clock precisely. The Prizes are open to general competition. Forms of Certificate to be procured on application to the Secretary, 12, Hanover-square, London. All Certificates for implements must be returned, filled up, to the Secretary, on or before the 1st May, and all other Certificates by the 1st June; the Council having decided that in no case whatever shall any Certificate be received after those dates respectively.

PRIZES FOR IMPROVING THE BREED OF CATTLE.—1844.
Short-horns.—CLASS I. To the owner of the best Bull calved previously to the 1st January, 1842, 30*l.*; to the owner of the second-best do. do., 15*l.*—2. To the owner of the best Bull calved since the 1st January, 1842, and more than one year old, 20*l.*—3. To the owner of the best Cow in milk, 15*l.*—4. To the owner of the best in-calf Heifer, not exceeding three years old, 15*l.*—5. To the owner of the best yearling Heifer, 10*l.*

Herefords.—CLASS I. To the owner of the best Bull calved previously to the 1st January, 1842, 30*l.*; to the owner of the second-best do. do., 15*l.*—2. To the owner of the best Bull calved since the 1st January, 1842, and more than one year old, 20*l.*—3. To the owner of the best Cow in milk, 15*l.*—4. To the owner of the best in-calf Heifer, not exceeding three years old, 15*l.*—5. To the owner of the best yearling Heifer, 10*l.*

Downs.—CLASS I. To the owner of the best Bull calved previously to the 1st January, 1842, 30*l.*; to the owner of the second-best do. do., 15*l.*—2. To the owner of the best Bull calved since the 1st January, 1842, and more than one year old, 20*l.*—3. To the owner of the best Cow in milk, 15*l.*—4. To the owner of the best in-calf Heifer, not exceeding three years old, 15*l.*—5. To the owner of the best yearling Heifer, 10*l.*

Cattle of the Channel Islands Breed.—CLASS I. To the owner of the best Bull calved previously to the 1st January, 1843, 15*l.*—2. To the owner of the best Bull calved since the 1st January, 1843, and more than one year old, 10*l.*—3. To the owner of the best Cow in milk, 10*l.*—4. To the owner of the best in-calf Heifer, not exceeding two years old, 10*l.*—5. To the owner of the best yearling Heifer, 7*l.*

Cattle of any Breed, or Cross, (not qualified to compete in the foregoing classes).—CLASS I. To the owner of the best Bull calved previously to the 1st January, 1842, 30*l.*; to the owner of the second-best do. do., 15*l.*—2. To the owner of the best Bull calved since the 1st January, 1842, and more than one year old, 20*l.*—3. To the owner of the best Cow in milk, 15*l.*—4. To the owner of the best in-calf Heifer, not exceeding three years old, 15*l.*—5. To the owner of the best yearling Heifer, 10*l.*

CLASS 1. To the owner of the best Stallion for agricultural purposes, of four years old and upwards, 30*l.*; to the owner of the second-best do. do., 20*l.*—2. To the owner of the best two years old ditto, foaled since the 1st January, 1842, 15*l.*—3. To the owner of the best Cart Mare and foal, for agricultural purposes, 20*l.*; to the owner of the second-best do., 10*l.*—4. To the owner of the best two years old Filly, 10*l.*—5. To the owner of the best thorough-bred Stallion, which shall have served mares at a price not exceeding three guineas (and with a groom's fee of not more than five shillings, in the season of 1844, 30*l.*

HORSES.
CLASS 1. To the owner of the best Stallion for agricultural purposes, of four years old and upwards, 30*l.*; to the owner of the second-best do. do., 20*l.*—2. To the owner of the best two years old ditto, foaled since the 1st January, 1842, 15*l.*—3. To the owner of the best Cart Mare and foal, for agricultural purposes, 20*l.*; to the owner of the second-best do., 10*l.*—4. To the owner of the best two years old Filly, 10*l.*—5. To the owner of the best thorough-bred Stallion, which shall have served mares at a price not exceeding three guineas (and with a groom's fee of not more than five shillings, in the season of 1844, 30*l.*

PRIZES FOR IMPROVING THE BREED OF SHEEP.—1844.
Leicesters.—CLASS I. To the owner of the best Shearling Ram, 30*l.*; to the owner of the second-best do. do., 15*l.*—2. To the owner of the best Ram of any other age, 30*l.*; to the owner of the second-best do. do., 15*l.*—3. To the owner of the best pen of Five Shearling Ewes, 10*l.*; to the owner of the second-best do. do., 5*l.*

South Down Sheep.—CLASS I. To the owner of the best Shearling Ram, 30*l.*; to the owner of the second-best do. do., 15*l.*—2. To the owner of the best Ram of any other age, 30*l.*; to the owner of the second-best do. do., 15*l.*—3. To the owner of the best pen of Five Shearling Ewes, 10*l.*; to the owner of the second-best do. do., 5*l.*

Long-Woolled Sheep.—(Not qualified to compete as Leicesters.)—CLASS I. To the owner of the best Shearling Ram, 30*l.*; to the owner of the second-best do. do., 15*l.*—2. To the owner of the best Ram of any other age, 30*l.*; to the owner of the second-best do. do., 15*l.*—3. To the owner of the best pen of Five Shearling Ewes, 10*l.*; to the owner of the second-best do. do., 5*l.*

Short-Woolled Sheep (not qualified to compete as South Downs).—CLASS I. To the owner of the best Shearling Ram, 20*l.*—2. To the owner of the best Ram of any other age, 20*l.*—3. To the owner of the best pen of five Shearling Ewes, 10*l.*

PIGS.

CLASS 1.—To the owner of the best Boar of a large breed, 10*l.*; to the owner of the second-best ditto ditto, 5*l.*—2. To the owner of the best Boar of a small breed, 10*l.*; to the owner of the second-best ditto ditto, 5*l.*—3. To the owner of the best breeding Sow of a large breed, 10*l.*—4. To the owner of the best breeding Sow of a small breed, 10*l.*—5. To the owner of the best pen of three breeding Sow Pigs, of the same litter, above four and under nine months old, 10*l.*

AGRICULTURAL IMPLEMENTS.

A Sum not exceeding Three Hundred Sovereigns.

EXTRA STOCK, ROOTS, AND SEEDS.

For extra stock of any kind, not shown for any of the above prizes, and for Roots, Seeds, &c., prizes may be awarded and apportioned by the committee and judges, to an amount not exceeding in the whole 50*l.*

ANY NEW IMPLEMENT.

For the invention of any new Agricultural Implement, such sum as the Society may think proper to award.

SEED-WHEAT AND BARLEY.

I. Fifteen Sovereigns, or a Piece of Plate of that value, will be given to the Exhibitor, at the Meeting at Southampton, of the best 14 bushels of White Wheat, of the harvest of 1843, and grown by himself.

II. Fifteen Sovereigns, or a Piece of Plate of that value, will be given to the Exhibitor, at the Meeting at Southampton, of the best 14 bushels of Red Wheat, of the harvest of 1843, and grown by himself.

III. Ten Sovereigns, or a Piece of Plate of that value, will be given to the Exhibitor, at the Meeting at Southampton, of the best 14 bushels of Spring Wheat, of the harvest of 1843, and grown by himself.

IV. Ten Sovereigns, or a Piece of Plate of that value, will be given to the Exhibitor, at the Meeting at Southampton, of the best 14 bushels of Barley for malting, of the harvest of 1843, and grown by himself.

V. Ten Sovereigns, or a Piece of Plate of that value, will be given to the Exhibitor, at the Meeting at Southampton, of the best 14 bushels of Barley for general purposes, of the harvest of 1843, and grown by himself.

Competitors are requested to send with their Wheat or Barley, specimens, fairly taken, of the same in the ear, with the whole of the straw, in a sheaf not less than one foot in diameter, and with the roots attached.

Twelve bushels of the Wheat or Barley will be sealed up by the stewards, and one of the remaining bushels of each variety will be exhibited as a sample to the public; the other being kept for comparison with the produce of the next year. At the General Meeting in December, 1845, the prizes will be awarded.]

The two best samples of each of these three classes of Wheat or Barley, without at that time distinguishing, in any of the cases, between the comparative merits of either sample, will be selected by the judges appointed for the Meeting at Southampton; and will be sown, under the direction of the Society, (the Winter Wheats in the autumn of 1844, and the Spring Wheat not earlier than the 1st of March, 1845,) by four farmers, who will make their report, upon which the prizes will be awarded, provided there be sufficient merit in any of the samples. Ten Sovereigns will be given at the Meeting at Southampton to each Exhibitor whose Wheat has been selected for trial, and 5*l.* Sovereigns for Barley.

** No variety which has been selected for trial at any previous show shall be qualified to compete.

ESSAYS AND REPORTS ON VARIOUS SUBJECTS.

Prizes for 1844.—PRIZE ESSAYS.

1. Water Meadows and Upland Pastures.—Twenty Sovereigns, or a Piece of Plate of that value, will be given for the best Account of the Comparative Value of Water Meadows and Uplands generally for Cattle, Sheep, and Horses, but especially for Milch Cows. Competitors will be required to state the following particulars in reference to the trials instituted for the purpose of obtaining practical results on this subject:—1. The nature of the soil and its state of drainage to be described; and equal portions of upland and water meadow to be selected. 2. Equal numbers of cows of the same age and breed (not less than four in number) to be separately fed in pairs, on each different kind of grass, and to be changed once from one kind of grass to the other; and the quantity, as well as the quality, of the milk from such cows to be ascertained by the lactometer. 3. If made into hay, the quantity of each sort produced on the land, and the quantity, as well as quality, of the milk which has been produced, to be ascertained in a similar manner. 4. The value of spring food and grass, whether in rowen or pasture. 5. The same conditions to be applicable to the feeding of sheep-stock; stating the numbers which the same quantity of each land has separately maintained during a certain period; and whether or not subject to the rot by the flooding. 6. In regard to irrigating the land, the primary cost whether of catch-water or flow-meadow, of its formation, and the annual expense of management, including the repair of sluices; together with the former and present rent or value. Competitors are also requested to state, as far as their observation may have extended, the comparative value of the grasses of water-meadows and uplands, when cut into hay, and consumed as fodder.

2. Influence of Climate.—Twenty Sovereigns or a Piece of Plate of that value, will be given for the best Essay on the Influence of Climate upon Cultivation within the limits of Great Britain and Ireland. There being good reason to suppose that the discordant practices of farming in different districts may be partly attributed to the influence of climate, competitors for this prize must endeavour to describe those practices, and to trace them to the variation of climate. Under the term climate must be included the degree of cold or heat, moisture or drought, arising whether from latitude, elevation, neighbourhood to or distance from the sea, &c. Variation in practice may be looked for in the management of artificial and natural Grass, the growth of root-crops, the depth of ploughing, the time of sowing, the choice of white crops, &c.

3. Indications of Fertility or Barrenness.—Fifty Sovereigns, or a Piece of Plate of that value, will be given for the best Essay on the Indications which are practical guides in judging of the Fertility or Barrenness of the Soil. Many attempts having been made to explain the productiveness of the soil by chemical or physical causes, without any decided result, it appears desirable to assist the researches of natural philosophers by making them acquainted with those obvious signs, whether of colour, consistence, or vegetation, by which surveyors and farmers are enabled to give at once a practical opinion upon the probable nature of land which they inspect.

4. Agriculture of Norfolk.—Fifty Sovereigns, or a Piece of Plate of that value, will be given for the best Report on the present state of the Agriculture of the County of Norfolk.—stating the ordinary course of cropping adopted in the different soils of the county; the breeds of Cattle, Sheep, and Pigs most generally bred or fed within it; the state of its drainage; the implements used; the number of Horses or other Cattle employed in the different operations of Husbandry; the tenure on which the Farms are generally held; the wages of labour; the average amount of the Poor's-rate; and whether any and what alterations and im-

provements have been made in the system of Agriculture pursued within it since the Report made to the Board of Agriculture by Arthur Young, which was published in the year 1844, and by Nathaniel Kent, which was published in the year 1796.

5. Agriculture of Cheshire.—Fifty Sovereigns, or a Piece of Plate of that value, will be given for the best Report on the present state of the Agriculture of the County of Cheshire, stating the ordinary course of cropping adopted in the different soils of the county; the breeds of Cattle, Sheep, and Pigs most generally bred or fed within it; the state of its drainage; the implements used; the number of Horses or other Cattle employed in the different operations of Husbandry; the tenure on which the Farms are generally held; the wages of labour; the average amount of the Poor's-rate; and whether any and what alterations and improvements have been made in the system of Agriculture pursued within it since the Report made to the Board of Agriculture by Henry H. Land, which was published in the year 1808.

6. Agriculture of Essex.—Fifty Sovereigns, or a Piece of Plate of that value, will be given for the best Report on the present State of the Agriculture of the County of Essex, stating the ordinary course of cropping adopted in the different soils of the county; the breeds of Cattle, Sheep, and Pigs most generally bred or fed within it; the state of its drainage; the implements used; the number of Horses or other Cattle employed in the different operations of Husbandry; the tenure on which the Farms are generally held; the wages of labour; the average amount of the Poor's-rate; and whether any and what alterations and improvements have been made in the system of Agriculture pursued within it since the Report made to the Board of Agriculture by Arthur Young, the Secretary to the Board, which was published in the years 1807 and 1813.

7. Agriculture of Wiltshire.—Fifty Sovereigns, or a Piece of Plate of that value, will be given for the best Report on the present State of the Agriculture of the County of Wilt, stating the ordinary course of cropping adopted in the different soils of the county; the breeds of Cattle, Sheep, and Pigs, most generally bred or fed within it; the state of its drainage; the implements used; the number of Horses or other cattle employed in the different operations of Husbandry; the tenure on which the Farms are generally held; the wages of labour; the average amount of the Poor's-rate; and whether any and what alterations and improvements have been made in the system of Agriculture pursued within it since the Report made to the Board of Agriculture by Thomas Davis, which was published in the year 1811.

8. Improvements by Warping, &c.—Twenty Sovereigns, or a Piece of Plate of that value, will be given for the best account of Improvements made by Artificial Deposits of Soil from the Sea or Tide-rivers, and the subsequent Cultivation of the land.

9. Keeping Farm-Horses.—Twenty Sovereigns, or a Piece of Plate of that value, will be given for the best account of the way of keeping Farm-Horses in good condition, both in Winter and Summer. Competitors must state—1. The quantity of food given, and the average cost of such food. 2. The work performed by the horses. 3. The length of time they have been kept on the food described. 4. Whether kept in yards, stables, or pastures.

10. Any Agricultural Subject.—Twenty Sovereigns, or a Piece of Plate of that value, will be given for the best Essay on any Agricultural subject.—These Essays must be sent to the Secretary, at 12, Hanover Square, London, on or before March 1st, 1844.

Rules of Competition for Prize Essays.—1. That all information contained in Prize Essays shall be founded on experience or observation, and not on simple references to books, or to authorities. 2. That all essays, specimens, or other documents, must be accompanied by a letter, containing their names and addresses, with a motto sealed up, to correspond with the one inserted on the Essay. 4. That the Society shall have the power to publish the whole or any part of the Essays which gain the prizes; and the other Essays will be returned on the application of the writers. 5. That the Society is not bound to give an award, unless they consider one of the Essays worthy of a prize. 6. That, in all reports of experiments, the expenses shall be accurately detailed, that only the immaterial weights and measures are those by which calculations are to be made; that prizes may be taken either in money or plate, at the option of the successful candidates; and that no prize be given for any Essay which has already appeared in print.

Notice.—It is requested that all communications addressed to the Society, of experiments on land—whether of draining, liming, manuring, or other operation—be accompanied with the cost of such operation, with the value of the land to rent previous and subsequent thereto, and an analysis of the soil upon which such experiments have taken place; or a specimen of the soil to be analysed, by persons employed by the Society, it is also further requested that, in communications relative to experiments on land in foreign countries, the measures be stated in English values. Those members who have tried subsoil-ploughing, whether successfully or otherwise, are requested to communicate the result to the Secretary, in the hope that, by comparison of the statements, some judgment may be arrived at as to the soils and situations which are, or are not suited for this operation.

By order of the Council, JAMES HUDSON, Secretary.

LIVERPOOL BOTANIC GARDEN.—The Horticultural Exhibitions for the year 1844 will take place on Friday, May 25; Friday, June 28; and Friday, August 25; when the sum of TWO HUNDRED AND SEVENTY POUNDS will be distributed in Premiums. For further particulars, apply to Mr. SHEPHERD, Curator, at the Garden.

JOSEPH DICKINSON, M.D., Honorary Secretary.
Botanic Garden, Liverpool, Sept. 22, 1843.

TULIPS.

H. GROOM, Clapham Rise, near London, (removed from Walworth; by APPOINTMENT, FLORIST TO HER MAJESTY, begs to remind the Nobility, Gentry, and Amateurs, that this is the season for making up their collections of TULIPS preparatory to planting next month. He therefore recommends that an early application be made, as it not unfrequently happens that gentlemen are unable to obtain the kinds they require, from not applying sufficiently early. His Catalogue of Bulbs will be forwarded by post, on application.—Oct. 28, 1843.

HYACINTHS AND OTHER BULBS.

HUMPHREYS' COMPOUND, applicable to all Greenhouse Plants, to Hyacinths and other Bulbs, and to promote the germination of Seeds. Sold in bottles 1*s.* 9*d.* each, by FLANAGAN & SON, Mansion-house street, HURST & McMULLEN, Leadenhall street, W. CLARK, Bishopsgate-Walk; GORDON, Thompson, and BASKETT, Fenchurch-street; GRIMLEY and CO., Covent Garden; BATT and RUTLEY, 412, Strand; CHARLWOOD, Tavistock-row; W. J. NITTING, 46, Cheapside; G. LAWRENCE, 18, Piccadilly; JOHN KENNAN, Great Russell-street, Covent Garden; LOCKHART, 156, Chancery; SHUTTLEWORTH, Pantleion, MINIER, ADAMS, and NASH, 63, Strand; THOMAS and SON, 1, Bishopsgate; THOMAS WATKINSON, Market-place, Manchester; P. LAWSON and SON, Edinburgh; and other leading SEEDSMEN in town and country. Wholesale Agents, DAVY, MACMURDO, and Co., 100, Upper-Thames-street, London.

FASTOLFF RASPBERRY.

YOUELL AND CO. are now executing orders for the above excellent RASPBERRY, unequalled for the extraordinary size of its fruit and richness of flavour. For further particulars, see their Advertisement in this Paper of the 7th inst.; Prices, as follows:—

Packages containing 100 Canes	£ s d
" " 50 "	2 5 0
" " 25 "	1 5 0
" " 12 1/2 "	0 14 0

Package included. The usual discount to the Trade, when not less than 200 are ordered.

ARRIVAL OF DUTCH HYACINTHS AND OTHER BULBS.

YOUELL AND CO. beg respectfully to announce they have received from Haarlem their annual importation of the above in most excellent condition, adapted either for Glasses, Forcing, or open-border culture. Prices as follows:—

Fine Single or Double Show Hyacinths	6s. per doz.
Red, Blue, White, or Yellow	
Extra fine Ditto	9s. to 12s.
Extra fine, and very superior Ditto	18s. "

The selection being left to YOUELL & CO.

Catalogues may be had on application.

ARAUCHARIA IMBRICATA, fine 4-year old plants, 8 to 10 inches, 10/- per 100, or 30s. per dozen.

Great Yarmouth Nursery, Oct. 26, 1843.

A. J. STEWART begs most respectfully to inform his Patrons and Friends, that he has a good stock of healthy GERANIUMS, consisting of Beauty of Saltillo, Stewartii, Mrs. Lawrence, Princess de Joinville, Sir Robert Peel, Tasso, Dido, Sapphire, Nestor, Amyntor, Favorite, Prince of Wales, Constellation, Cicero, Lyne's Princess Royal, Stewart's Princess Alice, Glory of the West, Lord of the Isles, Wizard, Evadne, Mars, Count D'Orsay, Lady Sale, Beauty of Essex, Oberon, Carulea, Hermione, Pride of Surrey, Orange Perfection, Royal Adelaide, Morning Star, Mercury, Emperor Superb, Iris, Queen Philippa, Richardsonii, Sunrise, Isabella, Thunderer, Madame Rachel, Hannah, Selina, Jenner's Boadicea, Royal George, Lord Chancellor, and many others.

His Collections of FUCHSIAS, VERBENAS, PETUNIAS, CHRYSANTHEMUMS (well budded), and DAHLIAS, include nearly every variety worthy of cultivation; and of the latter he has to offer fine ground roots of Mrs. James Richardson, Todd's Lady Sale, Beauty of Sussex, Blanche Shelley, Sir R. Sale, Antagonist, Bianca, Thomson's Vivid, Oakley's Surprise, Milton, Dewar's Imogene, Fanny Waugh, Hero of Stonehenge, Colonel Baker, Confidence, Rival Yellow, Duke of Wellington, Rainbow, Mrs. Shelley, Competitor, &c.

A. J. S. flatters himself that his assortment of CAMELIAS is too well known, as comprising all the most rare and choice kinds, to need comment, further than that the plants are this season remarkably fine and vigorous.

A. J. S. takes this opportunity of announcing that his DUTCH FLOWER ROOTS are particularly firm and large; also that he has plenty of very superior DWARF TRAINED FRUIT-TREES, warranted true to name; STANDARD and DWARF ROSES of the most approved sorts, EVERGREENS, FLOWERING SHRUBS, &c. The whole at extremely moderate prices.—Saltillo Nurseries, near Windsor.

PELAGONIUM.—"BASKET'S EXQUISITE."

J. HALLY, NURSERYMAN and FLORIST, Blackheath, Kent, begs to inform his Friends that he has the above now ready for sale, at 21s. each, with the usual allowance to the Trade. It was raised by Mr. BASKET, Gardener to H.R.H. the Princess Sophia Matilda of Gloucester, and gained the first prize for Seedling Pelargoniums at the West Kent Horticultural Society's June show, 1843; it was also shown and universally admired at the June Exhibitions both at Chiswick and Regent's Park. The following character is given of the above in the *Gardeners' Chronicle* of July 1, "Notices to Correspondents":—"J. H. B.—The large Seedling is a very showy variety: the flowers are large; it thrives finely, and will form a fine object in the Greenhouse," &c. "The colour is clear; the upper petals are well covered, with but little feathering visible; the under petals are broad and round, and the flower altogether of a good shape."

Also a few plants will be ready by the middle of November of that good and beautiful CINERARIA, "PIPER'S PRINCESS ROYAL," which obtained a Certificate of Merit, although then a miserably small specimen with only two or three blooms expanded, at the June Show at Chiswick; also the first prize for Cinerarias at the Regent's Park Show, on the 28th June.—(See *Gardeners' Chronicle* for June 24 and July 1.) It has a fine full crimson centre, petals broad and well shaped, pure white broadly tipped with purple, the colours distinctly defined, so as to form a ring on the expanded flower, which is very sweet-scented and possesses the best properties. In consequence of the very limited stock of the above, and the orders already received, the Advertiser will be able this autumn only to supply the trade at 10s. 6d. each.

Also at the same time CINERARIA SUBCERULEA—a delicate white tipped with azure: plant of very fine robust habit. 5s. each.

FINE CAPE ERICAS (HEATHS), EPACRISSES, &c.

J. AND J. FAIRBAIRN beg leave most respectfully to solicit the attention of Gentlemen desirous of forming new, or of extending their present Collections of these much-admired tribes of Plants to their Stock, which are in the finest health and vigour possible, and from its extent they are enabled to offer any quantity upon the following advantageous terms:—

100 fine flowering plants, including 80 Ericas and 20 Epacrissees, of the best and most esteemed kinds	£ s d
75 do. do. including 60 Ericas and 15 Epacrissees	7 0 0
50 do. do. " 40 Ericas and 10 Epacrissees	5 0 0
25 do. do. " 20 Ericas and 5 Epacrissees	3 0 0
12 do. do. " Choice Ericas	2 2 0

J. and J. F. take leave to acquaint Cultivators of Fuchsias and Verbenas that their collections contain the best and most esteemed varieties. All orders they may be favoured with packed with the greatest care, and delivered free in London.

P.S.—A remittance or reference required from unknown correspondents.—Nurseries, Clapham, near London, Oct. 27, 1843.

FINE NAMED TULIPS.—The Subscriber having a large supply of fine bulbs of the above popular flower, begs to offer them upon the following very moderate terms, viz.: 100 sorts by name for 5/-; 50 sorts by name for 2/- 10s., which will comprise portions of Bizarres, Roses, and Byblemens, and will be found worthy the attention of the amateur and practical florist.—WILLIAM MAY, Hope Nursery, Leeming-lane, Bedale, Yorkshire, Oct. 27, 1843.

TULIPS, &c.

JOHN SLATER, FLORIST, Chapel-lane, Cheetham Hill, near Manchester, begs to call the attention of Amateurs to his large and well-selected collection of TULIPS, AURICULAS, POLYANTHUSES, CARNATIONS, and PICOTEES. Catalogues of which may be had on prepaid application.

J. S. requests a comparison of his prices of CARNATIONS and PICOTEES, &c. with those which have been so highly spoken of by the Editor of a contemporary Publication in one of his Leading Articles, as well as twice in his notices to Correspondents (one not being sufficient), which will be found in many instances from 50 to 250 per cent. less in price, and all of which, at the time of layering, were in colour.

J. S. has published a descriptive Catalogue of TULIPS, price 2s., which may be had of Messrs. ORR and Co., London.

EARLY DOUBLE AND SINGLE TULIPS.

MARNOCK AND MANLEY have selected with great care, within the last few years, Fifty Varieties of Early Double Tulips, by name, 1 bulb of each, 1/- Fifty Varieties of Early Single Tulips, 1 bulb of each, 1/- Fine Dutch Bulbs of every description at moderate prices.—Nursery, Hackney, Oct. 24, 1843.

Holton Nursery, near Halesworth, Suffolk.

E. REDNALL begs to inform his Friends and Planters generally, that his CATALOGUE OF CHOICE SHRUBS AND AMERICAN PLANTS is now ready, and may be had on prepaid application at his Nursery, as above, or his residence at Stowmarket.

DUTCH FLOWER ROOTS.—P. E. ERHARD, of the firm of J. D. Zocher and Voorhelm Schneevogt, begs most respectfully to inform his friends and the public generally, that he has a fine Collection of all kinds of DUTCH FLOWER ROOTS, under which are all the best and new double and single Hyacinths, a large Assortment of Early Tulips, and a large Quantity of fine Roots of *Glaucolus floribundus*, *Lilium superbum*, English and Spanish Iris, *Narcissus*, *Jonquils*, *Anemones*, *Ranunculus*, *Amaryllis*, *Snowdrops*, and *Crocuses*, in many Varieties, &c., &c. Depot, 350, Strand, corner of Burleigh-street.

DUTCH HYACINTHS for Forcing, 4s. per dozen: Best do., for Glasses, 6d. to 1s. each. Double Roman and Paper-white *Narcissus*, 4s. per dozen; Single and Double Duc Van Thol Tulips, 2s. per dozen. Also *Crocus*, *Iris*, *Jonquils*, *Narcissus*, *Anemones*, and *Ranunculus*, of which priced List may be had free, per post, from A. CORBETT'S Italian and Foreign Warehouse, 18, Pall Mall.

UNDER THE PATRONAGE OF THE QUEEN.

KENSINGTON NURSERIES.

MESSRS. RICHARD FORREST AND Co. beg respectfully to inform the Nobility, Gentry, and the Public that their collection of DUTCH ROOTS has been imported this season in very fine condition, and Catalogues may be had on application. They beg leave also to direct attention to their superior assortment of FRUIT-TREES and other General Stock in their different Nurseries, which never were finer than this season. The collection of Camellias and other Greenhouse Plants are also very fine, with several very large well-grown specimens of *Statiche macrophylla*, in the Stove, with many other interesting new plants.—General Catalogues may be had on application.

BRUGMANSIA SPE. NOVA.

THOS. BRIDGFORD AND SON, Spa Field Nursery, Ball's Bridge, Dublin, having a fine stock of the above plant, which will prove a valuable addition to the Greenhouse, from its propensity to flower in plants at 12 to 18 inches high. It is perfectly distinct from all of the species. Strong established plants are now ready for sending out at 10s. 6d. each. Thos. B. and Son have also a fine specimen plant of the same, with three flowers now expanded; it is three feet high, well furnished, which they will dispose of. B. Spe.—Plant flowers abundantly on small specimens; flowers about the same length as those of *B. suaveolens*, with the calyx full half the length of the corolla, both white; flowers highly perfumed; the rim of the corolla is divided into five long points; rim and calyx much reflexed, which, with the long calyx, give the plant a decided character; the throat of the corolla is of a beautiful greenish white colour.

Answer to "J. C. L." *Gardeners' Gazette*, May 28th, 1842:—"If your Brugmansia retains its large spathaceous calyx, it must be new. *Floiaopodia* is the name given to *B. coccinea*. We are not acquainted with the present species. It does retain its large spathaceous calyx.—J. C. L."

A plant having been sent by us to Mr. Low, Clapton, with seven flowers expanded, to be by him exhibited at the Chiswick Horticultural Show in August, 1843, the flowers of which were injured in its transmission, consequently was not exhibited; it has since flowered with Mr. Low, and is noticed in "Paxton's Botanical Magazine" for September, 1843. The seeds of the above Species were received by J. C. Lyons, Esq., Ladiston, Westmeath, from Chili, from whom we received our plant.

The Double White Brugmansia, noticed by DR. LINDLEY in the *Gardeners' Chronicle*, September 16th, 1843. Seeds of which were also received from Chili by "J. C. L.," along with B. Spe. Nova, plants of which T. B. and Son will have ready to send out in May, 1844. 48, Lower Sackville-street, Dublin.

THOMAS (RIPPS), NURSERYMAN, Tunbridge Wells, Kent, respectfully begs to direct attention to his splendid collection of ROSES, comprising every novelty worthy of notice; and which are offered at the following prices, the selection being left to T. C.:—

	per doz.	per 100
Fine Standards	30s. or 10/-	0s.
Half Standards	12s.	4/- 0s.
Do. do. fine	18s.	6/- 0s.
Do. do. very superior	24s.	7/- 10s.
Dwarf Roses	6s.	1/- 10s.
Do. do. fine	12s.	3/- 15s.
Do. do. very superior	18s.	5/- 10s.

Plants of the new Cloth of Gold Rose, if ordered early, will be sent out in November at 21s. each. If purchasers will favour T. C. with a list of the sorts they already possess, no duplicates shall be sent.

ROSES.

H. LANE AND SON beg to announce that their CATALOGUE OF ROSES for 1843-44 is just published, and will be forwarded as usual, free, to all their former patrons, and to others on application, inclosing a 2d. postage stamp to the Nurseries, Great Berkhamstead, Herts; also at Mrs. JOHNSTONE'S, Covent-garden Market, and at Mr. NUTTING'S, 46, Cheapside, London.

H. LANE and Son flatter themselves they need not assure those Ladies and Gentlemen who have heretofore favoured them with their orders that the utmost reliance may be placed in having their future commands executed in the best possible manner and on the most liberal terms; at the same time they would take this opportunity of assuring those who may for the first time entrust them with their commands that the same principles which have hitherto been their guide will in no instance be deviated from.

H. L. and Son would further beg to observe that they have many thousands of ROSES in pots exclusively for Greenhouse culture and early forcing, and that their general stock of Roses, in point of extent and growth, is second to none in the kingdom. Great Berkhamstead, Herts, Oct. 27, 1843.

"PELOPS" AND "EVERTON," two of the best FANSIES in cultivation—raised in 1843 by THOS. O'GRADY, Esq., Grove House, West Derby, near Liverpool.

JOHN LUCAS, Gardener to Mr. O'GRADY, begs leave to say he is enabled, by permission, to let out the above new and distinct variety of PANSY for general cultivation at 10s. the pair. The stock of both is limited.

CHRYSANTHEMUMS.

CHANDLER AND SONS, Vauxhall Nursery, London, having a large stock of Young Plants, well budded, and now in a good state for sending away, of this beautiful Autumnal Flower, can supply good plants in pots at 12s. per dozen, and larger plants at 18s. per dozen. C. and S. S. Collection, including many new sorts, will be in full flower during the ensuing month.

C. and S. S. have also a fine Stock of Evergreens and Fruit-trees which they can offer at moderate prices.

FINEST CARNATIONS and PICOTEES.

YOUELL AND CO. beg to refer the readers of the *Gardeners' Chronicle* to their Extensive List, with Prices, of the above highly-esteemed Flowers, which appeared on the Advertising pages, 706 and 707, of this Paper, of the 14th inst., and will be found to contain every variety worthy of cultivation. Great Yarmouth Nursery, Oct. 26, 1843.

CARNATIONS, PICOTEES, AND PINKS.

MESSRS. N. AND B. NORMAN'S CATALOGUE OF Show varieties, with which they have gained 23 Prizes this season, can be had on pre-paid application.—Bull-fields, Woolwich.

HOLLYHOCKS, HARDY HERBACEOUS PLANTS, &c.

WILLIAM MAY begs to state that he is provided with a supply of the above plants of select quality. The Hollyhocks are of his own stock, which he has been selecting for the last 21 years, and are of every shade of colour. The Herbaceous plants have also been carefully collected, and are of the most showy varieties, comprising the most popular Genera in present cultivation, such as *Phloxes*, *Pentstemons*, *Aconitums*, *Anemones*, *Delphiniums*, *Campanulas*, *Lupinus*, *Oenothera*, &c.

The Hollyhocks in collections of 100 plants for 40s.; 50 plants, 20s.; 35 plants, 11s. The Herbaceous plants, 100 sorts correctly named for 42s.; 50 sorts, 25s., of W. M.'s selecting, including package. Hollyhock seed saved from best double flowers, 200 seeds for 2s. 6d.; 500 seeds for 5s.; Pansy seed saved from best prize flowers, in 2s. 6d. and 5s. packets.

N.B.—To those friends who received their Hollyhock plants late last year, W. M. begs to state that any they may have lost in consequence, he will be glad to replace free of charge. A remittance or reference from unknown correspondents is solicited.—Hope Nurseries, Leeming-lane, Bedale, Yorkshire, Oct. 27, 1843.

HOLLYHOCKS.

J. KITLEY, Lyncombe Vale Nursery, Bath, begs to inform the Public that he is now ready to send out his much-admired Collection of SEEDLING HOLLYHOCKS, 18 blooms of which won the silver goblet given by A. Lawrence, Esq., and the first of 24 blooms in the Society's prizes at the Victoria Park, and also an extra prize at the Bristol and Clifton Show. The best selected, and named, 1/- 1s., the second-best do., 12s., the third do., 6s. per dozen.

J. K. has now ready fine healthy plants of his SEEDLING PANSY, "Lyncombe Vale Rival," at 5s. each; (see this Paper of the 6th May, 1843.) Also his SEEDLING CACTUS (*speciosa superba*), 10s. 6d. per plant; (see this Paper of 17th June, 1843.) Orders received at Mr. NUTTING'S, Seedsman, 46, Cheapside, London, and at the Nursery, as above. A remittance from unknown correspondents will be expected.

FIRE-BALL GERANIUMS.

W. MILLER offers this new sort of SCARLET GERANIUM for sale, with a satisfaction that its beautiful dark velvety flowers, dwarf habit, and glossy, smooth, green foliage, will make it a good addition to every Greenhouse and flower-garden, and please every purchaser. It was taken to the June Show at Chiswick, and much admired. Plants will shortly be ready to send out, at 5s. each, post free. The usual trade allowance when three or more are taken.—Providence Nursery, Ramsgate, October 27, 1843.

THOMAS BROWN begs to acquaint the Growers of PANSIES that strong Plants of his fine collection are now ready for sending out, including several novelties not before offered for sale; also, an extensive collection of PINKS (comprising all the established Show-flowers), CARNATIONS, PICOTEES, TULIPS, &c., &c.—Slough Nursery, Oct. 27, 1843.

MYATT'S NEW SEEDLING STRAWBERRY.

J. AND W. MYATT are now ready to send out their NEW STRAWBERRY, the DEPTFORD PINE, the fruit of which has been exhibited at the London Horticultural Society, and a Banksian Medal awarded. It has also been submitted to Professor LINDLEY, for whose opinion see *Gardeners' Chronicle*, No. 26, p. 447. It is a most prolific bearer, exhibiting at the same time a profusion of fine fruit and bloom on the same truss. Price, Deptford Pine, 2/- 10s.; British Queen, 1/-, and Eliza, 10s. per 100.—Manor Farm, Deptford, Oct. 27, 1843.

W. M. HEALE AND SON, NURSERYMEN, &c., beg most respectfully to acquaint the Public and Trade in general that they have still a large stock, both Standards, Dwarf, and Trained, of their celebrated HYBRID PLUM, raised between the Greengage and Orleans. And as their circular of last season respecting it was limited to their immediate connexion, they now call the attention of the public to the following particulars: colour yellow, inclining to russet next the sun, size of a modern Apple, possesses the flavour of the Greengage, with the prolific habits of the Orleans, and bears abundantly either as a standard or trained, constituting a most important addition to our hardy fruits, and ought to be grown in all collections. Fine three-year-old trees, 3s. 6d. each; do. trained, 5s. each. Nurseries, Calne and Devizes, Oct. 27, 1843.

SHILLING'S NEW EARLY GROTTA PEA.

J. AND S. SHILLING have succeeded in raising the above Pea. The Early Frame Pea, impregnated with the Grotto or Oyster Marrow, which they with confidence recommend to the Public generally, being quite as early, and nearly double the size of any early Pea in cultivation. Quite hardy, will stand the winter well, and a good Bearer; the Pod large and long. They would particularly recommend it to the attention of Market Gardeners.

Price 3s. per Quart; 10s. per Gallon; 17s. 6d. per Peck; 30s. per Half-bushel; 2/- 10s. per Bushel. They have likewise a few Packets of Calceolaria Standishii Seed, at 5s. per packet; sent free by post, on the receipt of Postage-stamps, or a Post-office Order.

London Agents: Messrs. FIELD and CHILD, Seedsman, 119, Lower Thames-street, London; Messrs. W. and T. NOBLE, Seedsman, 152, Fleet-street, London.

J. and S. SHILLING, Nurserymen, Northampton, Odiham, Hants, Oct. 27, 1843.

THE BRITISH QUEEN AND PRINCE ALBERT PEAS.

W. J. CORMACK AND CO. beg to announce to their Friends and the Public that they have harvested the above two New Varieties, and will be obliged by early orders, as the stock is limited. They will be sent out, as last spring, in packages, bearing the name of the firm, price 3s. 6d. per quart. The usual allowance to the trade.

N.B.—"Cormack's Early Kent Peas," 14s. per bushel. Newcross, and Bedford Conservatory, Covent Garden, Oct. 27.

W. M. STIDOLPH, NURSERYMAN, near the Plough Inn, Bromley Common, Kent, 2 1/2 miles from Bromley, begs to acquaint Gentlemen, Gardeners, and Planters, that he has for sale 2000 good LAURELS, from 3 to 5 feet and upwards, that will remove with good roots and a ball of earth; 100 PURPLE BEECH, 4 to 7 feet; IRISH IVY, 7 to 8 feet; 5000 TRANSPLANTED ASH, 4 to 6 feet; and a quantity of Horse Chestnuts, English Elms, Mountain Ash, &c. &c., from 12 to 16 feet.

ON SALE, as under, fine healthy well-furnished Plants, twice transplanted, and very suitable for planting as Game Cover, 20,000 EVERGREEN PRIVET, 24 to 36 inches high, at 20s. per 1000. 12,000 COMMON LAUREL, 18 to 24 inches high, at 50s. per 1000—will be delivered at Liverpool or Whitehaven, free of charge.—Apply to DAVID CREDIE, Nurseryman, Gatehouse, N.B.

ROOTS OF NEW DAHLIAS for sale, which gained prizes at Teddington and Kingston Exhibitions:—Twickenham Rival; yellow, tipped with red, beautiful round petals; a superb show-flower.

Ground Roots, each	£ s. d.
Pot do. „	5 0 0
	2 10 0

Gaines' Princess Alice; clear white, beautiful form, well up in the centre; constant show-flower. Ground Roots, 5s. each.

May be obtained of N. GAINES, Florist, Surrey Lane, Battersea; also his list of first-rate Pelargoniums, Pansies, Calceolarias, Fuchsias, Verbenas, Auriculas, Cinerarias, Chrysanthemums, &c., which contain many seedlings and new varieties not before offered to the public.

The Gardeners' Chronicle.

SATURDAY, OCTOBER 28, 1843.

MEETINGS FOR THE TWO FOLLOWING WEEKS.

Wednesday, Nov. 1, Society of Arts.	8 P.M.
Friday, Nov. 3, Botanical	8 P.M.
Tuesday, Nov. 7, Linnean	8 P.M.
„ „ Horticultural	2 P.M.

THE first step which a gardener should take in order to determine the best method of cultivating a plant is to make himself perfect master of its structure and natural habits. When he has ascertained what Nature has intended the plant to do, and what means she has furnished it with to accomplish the ends for which it is destined, then, and not till then, will he be able to judge correctly of the way in which it may be treated under the artificial circumstances of a garden. Then, too, he may know how far it is possible to alter its nature in order to render it more subservient to his purposes. One would think this to be a truth which there is no disputing, and we do not imagine any one hardy enough altogether to deny it; and yet it is practically neglected every day.

We dare not ask a farmer whether he perfectly comprehends the natural habits of Wheat; and a gardener would probably be affronted if the same inquiry were made of him as regards a Strawberry plant. Nevertheless we will undertake that nine-tenths of both farmers and gardeners have never considered the exact mode of growth of either the one or the other of these common plants. "It is impossible not to understand what is daily before our eyes," would probably be the gentlest answer we should receive. However, let us see what the fact is as regards the Strawberry. It is not long since we were obliged to explain circumstantially the reason why the leaves of the Strawberry plant should not be cut off in the autumn, according to a barbarous practice which exists in many parts of the country. The endless questions put to us on that occasion afford the most conclusive proof that the real nature of the plant, so far as its leaves are concerned, was not at all comprehended. Now we are asked why we object to the custom of digging between the rows of Strawberry plants, classing that too among barbarous practices; and this shows that the questioners have also not considered the manner of growth of this common herb.

A Strawberry plant consists of a very short stem, seated just at the surface of the ground, covered with leaves, and throwing out from its lower end long slender woody perennial roots, which divide into a multitude of branches. The stem itself consists of a soft centre, with a woody outside, over which is the bark, which bears the leaves. The soft centre is a very large pith, and the Strawberry stem is in fact not essentially different from the branch of a tree, one year old, with all its joints so contracted as to touch each other. The pith is a great receptacle of organic matter; it is the source whence the leaves and fruit are fed in the spring and early summer; its starchy and gummy contents may be observed at this time of year, by any one who will cut it across and touch it with iodine; the gum will then become brown, the starch violet, and the woody matter will remain of a clear yellow. The roots extend to a considerable distance from the stem, branching in all directions in search of food, and increasing in number as the stem increases in age. Their object is to obtain unorganised food from the soil, especially water, of which we know the Strawberry to be greedy. When undisturbed they live for a long time, and are at all times ready to answer the demands made upon them by the leaves and fruit.

This is the natural state of things with the Strawberry. We are aware that some persons believe that the roots are only annual, and that the Strawberry-stem itself becomes hard and lifeless after the first season; but these are so evidently mistakes—as any one may satisfy himself by a little examination of the plant—that it seems almost unnecessary to notice them further: the only evidence we need offer in opposition to these views is to be found in those Strawberry-beds which are allowed to remain for twenty years and more without replanting, and without any

deterioration of the produce. The stem of the Strawberry, no doubt, perishes—and so do the roots, after a time; but by no means after the first season; and, so far as the roots are concerned, not till after even many seasons, if they are allowed to remain undisturbed. Mr. Knight long since exposed the error of supposing the Strawberry roots to be annual productions only. "I deny," said he, "their being annual productions only; and I contend that whenever they are found wholly lifeless round the surface of the mould of pots, as they often are after unfavourable winters, the growth and produce of the plants in the succeeding year will be much diminished." Nothing can be more true, as those Gardeners found to their cost, who, in the winter of 1837-8, allowed their Strawberry-plants in pots to be exposed to the severe frost: the flowers of all such plants became "blind."

Such being, as we conceive, the true nature of a Strawberry-plant, it is obvious that the roots should be preserved. If we ask what advantage is gained by destroying them—as necessarily happens by digging among them, for they are very long rooted—the answer, and the only answer, is, that the soil near the Strawberry-plants becomes so hard after a season's gathering, that it is unfit for their support. This may be, in some places; but if so, it would be better to loosen the ground with forks as soon as the crop is gathered, when the destruction of a few roots would be of less consequence, than to break it up and destroy a large proportion of the roots in winter or late in autumn.

No possible advantage can be derived from destroying the Strawberry-roots, whatever may be gained by loosening the soil in which they grow. But the disadvantages of destroying them are serious. These roots contain within them organizable matter in considerable quantity; as soon as their growth is renewed in spring, they extend by the assistance of that substance, which enables them to form their spongelets, and to advance into the earth in search of water, &c., which they immediately convey to the stem, while all the organizable matter in that stem is expended, as Nature intends, in the nourishment of new leaves and fruit. But if the roots are wholly destroyed, then the organizable matter in the stem must be directed downwards for the formation of more roots, and of course the supply intended for the leaves and fruit is diminished in proportion to the quantity of roots which the stem has to form; for it must always be remembered that roots cannot be organised out of nothing. The Strawberry-stem, which is intended to form leaves and fruit only, cannot have its power diverted to the formation of roots without diminishing the vigour of the leaves and fruit.

A much-valued correspondent says that he is well acquainted with the practice of market-gardeners, and has often regretted to see, in the process of digging between the rows, the number of healthy root-fibres that were destroyed; nevertheless that his theorizing has been sadly puzzled by the handsome crops that followed the operation. But it does not appear to us that this fact affects the question so much as he supposes. We have not to consider whether good crops are obtained in spite of this partial destruction of roots, but whether better crops would not follow its discontinuance. That Nature has a wonderful power of repairing her losses is well known; that this power should be assigned to plants in a greater degree than to animals is one of the most admirable manifestations of Divine Wisdom: for without it the Vegetable Kingdom would disappear from the face of the earth. But it does not exactly follow that, because plants have a wonderful power of resisting the effects of mutilation, they should be called upon to exercise it needlessly. Moreover, it is to be recollected that in market-gardens the cultivation of the Strawberry is much higher than in private grounds; that the soil is extremely deep and rich, the vital energies of the plants excessive, and that all the vegetable functions are in such a state of excitability, that the loss of a portion of the roots—for after all, but a small portion is destroyed there—is of far less importance than in the majority of private gardens.

HOWEVER useful and interesting it may be to the scientific Agriculturist to have extremely accurate and minute analyses of different soils with the view of discovering the efficient causes of fertility, the real practical farmer is only interested in the ultimate results of scientific researches. These, however, have not yet been satisfactorily explained. Theories have been suggested, which may be founded on fact or may be erroneous, for all that has yet been proved; and until it shall have been satisfactorily shown that certain specific ingredients in a soil are either indispensable to the growth and maturity of certain plants, or at least greatly assist in rearing them in perfection, the practical farmer will not vary his usual operations for the sake of mere experiment; and if he did, so many circumstances may concur in rendering an experiment apparently successful in one case, or

defeating expectation in another, that the safe plan is to adhere to those principles which universal experience has proved to be sound. With respect to fertility, no man who has the least practical knowledge of Agriculture will deny that the best soils all possess certain mechanical as well as chemical properties, and that the former seem fully as important, if not more so, than the latter. These mechanical properties may be ascertained by persons the most ignorant of chemical science. The first of these is porosity: without pores in the soil no vegetation can go on. If the pores are too large and numerous to retain moisture in dry weather, we have a barren sand; we need only take some of this soil in our hands and we see and feel that the water will filter through it so fast, that, unless there be a constant renovation of it, all moisture must soon be gone. Yet even such barren sands may be rendered productive by irrigation; grass will grow, if there is a constant and regular supply of moisture, even in pounded glass. The roots of the grass will produce a greater continuance of moisture, and in time fill up so many of the pores, as to correct the barrenness. This is a fact which many can vouch for, who have converted the loose old beds of rivers, composed of round pebbles and sharp sand, into rich water meadows. In southern climates water is all that is necessary to make any soil productive. The heat of a tropical sun supplies all the stimulus required for perfect vegetation. Hence the great ingenuity displayed, and the vast labour employed, to raise water, without which the most fertile plains are soon converted into deserts. But water alone will not produce the most useful products of the earth; something more is required, and this is organic matter, which, by its decomposition and subsequent recombination, affords all the substances usually found in plants. Some soils contain a considerable store of this organic matter, preserved by a wise law of nature in a dormant state, if we may so call it, requiring only light, air, heat, and moisture to call forth its latent energies, and to enable it to supply the elements of vegetable growth.

Organic matter, however it may have been formed, does not seem to constitute any of the original minerals of which the earth is composed. We can generally trace it to some probable origin, and conclude that it once formed part of some vegetable or animal which had life, and of which it is the dead remains. All soils which contain much organic matter intimately blended with different earths appear to have been deposited from suspension in water, and consequently consist of very small particles, whatever be the nature of the earths, or the proportions in which they are mixed. If these particles are very minute, and, with water, form a thick mud, which dries into a hard clod, it requires to be made sufficiently porous to allow the roots of plants to strike into them, or else, however rich be its composition, no perfect vegetation can take place: but in these soils there is generally such a portion of minute crystals insoluble in water, which are only kept suspended by the viscosity of the other substances, that, when they are examined with a good magnifying glass, they show sufficient pores for the transmission of moisture and the expansion of the minute fibres of the roots. Such soils are eminently fruitful, so long as the organic matter is not exhausted. This is often for a long period, especially when the rich soil is deep, and fresh portions are brought to the surface by deep ploughing or trenching. It may be that in such soils an able chemist will detect minute portions of various mineral substances, and to these he may in part ascribe some portion of the fertility; but unless it be shown that the absence of these, or a different proportion in other similar soils, has a decided influence on the fertility, may we not, till we have further light thrown on the subject, conclude that these minerals are there accidentally—not necessarily?

Experience has long proved that no soil which has a certain texture, neither too stiff nor too loose, and which contains organic matter in that state in which it is easily decomposed by exposure to the atmosphere, has ever been found unfruitful; and that where there is sterility there is always an evident cause visible in the texture, in the want or superabundance of moisture, or in the admixture of some mineral injurious to vegetation—unless it be from a total and absolute want of organic matter, in which case every farmer knows the remedy, and gives ample manuring. It is but seldom that land with a good texture, and without excess of water or noxious minerals, is entirely barren. It may have been exhausted, it may have been left untill—by ordinary tillage and sufficient manuring never fail to make it productive.

Experience has taught that the most fertile soils may be exhausted, and that repeated crops of the same kind of produce will exhaust it faster than if a variety of plants succeed each other. But it also teaches that judicious cropping and manuring will perpetuate the fertility. It is proved that the exhaustion of the organic matter is not the only reason of a falling off of the crops when the same plants recur too often.

When science shall have fully determined the cause, and shown the easiest remedy, it will have rendered a most essential service to Agriculture. Let men of science keep this steadily in view; let them make experiments, first in their laboratory, then in the fields, to establish their conclusions, and they will be entitled to the lasting gratitude of all practical agriculturists. At present science has not yet thrown much light on the subject, and the various theories which have been proposed to solve this problem have scarcely a sufficient foundation in certain experience to be received without hesitation, however eminent the authors may be by their deep knowledge and accurate investigation of the nature and combination of the various elemental substances which may be found on the surface of the earth.

This is by no means said to disparage science—far from it; it is to make science and practice go hand in hand; to prevent uncertain theories being received, and by their failure throwing a discredit on science. It is to render the result of scientific experiments certain before any new practice is recommended. With all the expense incurred in the trial of various substances recommended as substitutes for the common manure which is made in the farm-yard, none, except ground bones, which have the sanction of long experience, on light gravelly soils, have yet obtained the general confidence of practical men. The interests of commerce and of individuals have exaggerated the virtues of various manures, which have been imported at a great expense. The results have been so various and uncertain that the practical farmer waits for further evidence before he lays out his money at a venture, and in the meantime is content to apply the means which he knows will fertilize his land, because they have been tested by long experience.—M.

THE author of one of the estimates of the expense of Wheat-splitting, published last week, has sent the following correction of his observations:—In the calculation No. 3, for planting an acre of Wheat, it should have been stated that the plants were to be planted one foot by one foot six inches apart, and not one ft. six in. each way; and at the end it should have been mentioned that an allowance of about 10 per cent. (about one half of that stated by Mr. Palmer) from the entire number was made for replanting, an expense which seems unavoidable in such cases, for Mr. Palmer in his very careful experiment in pots had a failure of 20 per cent. after the final planting out; therefore, before any fair criterion can be formed, less than 10 per cent. cannot be calculated upon for failure, after planting, when the plants are placed at such a great distance apart; for if failures were allowed to remain, the loss of ground would be very great.

NOTES ON CUSCUTA TRIFOLII OF BABINGTON.

THIS apparently new pest to the Agriculturist, and about which so much has lately been said in the *Gardeners' Chronicle*, has made its way into the Isle of Wight. My attention was first drawn to it last summer by Mr. Robert Gibbs, an intelligent farmer at Thorley, near Yarmouth, who begged some information of me as to the name and properties of a plant which he designated as a kind of Vine* without leaves, and which he complained had overrun and greatly injured a field of Clover immediately adjoining the farm. On going to the spot, I found large patches, of many feet in diameter, quite matted with a Cuscuta, which I am almost ashamed to say I hastily pronounced to be the greater Dodder (*C. europæa*), a species very abundant in one locality on the wild top near Kerne, a farm about half-way between Brading and Newchurch, where it was pointed out to me two or three years since by my friend Dr. T. B. Salter, of this town, though previously noticed as a native of the Isle of Wight by Mr. Joseph Woods, many years ago, in Turner and Dillwyn's "Botanists' Guide," and found by that gentleman at Lake, near Sandown, where I have often sought it unsuccessfully. I may here observe, parenthetically, that the Hop is a most universal and profusely abundant inhabitant of this island, and I am persuaded is equally with the Red Currant (*Ribes rubrum*) truly and aboriginally indigenous here, occurring copiously in our moist hedges and deep boggy thickets, and occasionally substituted by the poorer classes for the cultivated plant in their domestic brewings, for which I am told it answers extremely well. But to resume our subject of the Clover Dodder. This erroneous conclusion of mine, to which I was led by the stouter stems of the plant, and their paler colour as compared with those of *C. epithymum* (a species from which scarcely a patch of Furze in any part of the island is entirely free, and which on our larger heaths and commons often infests that shrub as it were with entangled skeins of scarlet silk), prevented my paying more attention to the subject till again called to it by the notices of this new Cuscuta, in the "Phytologist," Numbers xix. and xxi., pages 412 and 466, when it was too late to obtain specimens. But last week, being again

at Yarmouth, I was informed by Mr. George Gibbs, brother of Mr. R. Gibbs, that the Dodder had appeared in another field of the same farm very remote from the first stated. Thither I immediately repaired, and found it occupying a spot of very limited extent, but still in flower (Oct. 12); nor were any seed-vessels yet formed. Having furnished myself with flowering specimens of *C. epithymum* from a neighbouring common, I proceeded to examine their relative character, of which the following imperfect sketch is the result, not being able to compare the capsules and seeds of each species together:—Even with the disadvantage of operating on dried specimens only, Mr. Babington has displayed his usual tact for discrimination in most correctly assigning the characters of his presumed new species, as far as it was possible for him to ascertain them under those circumstances; nor to his diagnostic formula (*Phytol.*, No. xxi., p. 467) have I anything at present to add; it perfectly agreeing with my fresh specimens. The calyx, as Mr. Babington remarks, either quite equals, or very nearly so, the corolla in length; the segments are narrower, or more subanceolate, than in *C. epithymum*; the tube of the calyx larger, and perhaps rather less deeply cleft than in that, colourless, or slightly tinged with green only. In *C. epithymum* the calyx is mostly purplish, though occasionally also devoid of colour, and variable in its relative length to the corolla; as in some of the flowers in the specimens before me, the calyx-points nearly touch the opening segments of the latter, though in general coming much short of them. The corolla of the Clover Dodder is evidently more terete, or inclining to cylindrical, than in *C. epithymum*; the segment less abruptly acuminate or more tapered, and very acute. The flowers in all my specimens of *C. trifolii* are manifestly larger (nearly, I should say, half as large again), and of a purer white, than in the other; the clusters fewer flowered and less globose, the stems in general stouter and paler red or yellow; hence the cause, as before mentioned, of my mistaking it for *C. europæa* rather than for our smaller *C. epithymum**. I do not find any material difference in the scales in the throat of the corolla, though they may perhaps be somewhat more deeply cleft in the Dodder of the Clover, as suggested by the Editor of the "Phytologist"; these scales are, however, very irregularly laciniated in both, as regards the depth, number, and direction of the segments. The styles and stamens appear precisely similar in each; but I think none of the flowers in the specimens before me of *Cuscuta Trifolii* are four-cleft, which is commonly the case with some on every example of *C. epithymum*. I hope next year to be enabled more fully to investigate this important subject, by an examination of the Dodder in all stages of its growth, and to obtain, if possible, some information as to the date of its first appearance in the island.

Towards a settlement of the question,—whether the Clover and Furze Dodder be distinct species or not, further examinations of the plants in seed is necessary. I am inclined to Mr. Babington's opinion, that it is probably specifically different from *C. epithymum*; and I ground my view not only on the characters just assigned, which may be liable to variation from soil or the nature of the plants on which the parasite grows, but from the extreme unlikelihood that a species of so rare occurrence in most parts of England, and very abundant in this island, should so far and so suddenly change its habits, as all at once to seize upon and infest, with still increasing pertinacity, a cultivated plant of yet more extensive distribution; for which, till within a recent period, it was never observed to evince any predilection. In other words, were the Clover Dodder and the Maidenhairt of our Isle of Wight commons, one and the same species, would our Agriculturists have so long remained in happy ignorance of the mischief already caused to their Clover crops by the introduction—no doubt from abroad—of the former rapacious parasite? Unless measures are taken to prevent the further spread of this pernicious annual, the evil threatens to become more serious, because more universal, than has been the dissemination in our corn-fields of the gaudy but notorious Poverty weed,† (*Melampyrum arvense*, Linn.) which, from negligence in keeping the land clean, has been suffered to creep nearly across the entire breadth of the southern part of the island wherever the land partakes of a calcareous nature, the absence of lime appearing to be a barrier to its progress onward. As the plant is annual, comes up strong, and pulls up easily, I am persuaded that it might be completely kept under, if not entirely eradicated, by setting women to weed it out before the Wheat comes into ear. At present the plant is suffered to grow up and ripen its seeds with the crop; these are partly shaken out in mowing or reaping, to come up when the land is next laid down for Wheat, the rest gathered in with the sheaves are threshed out with the grain, which they most resemble in size and colour, and having the same specific gravity, cannot be separated by winnowing to the great detriment of the

* I presume the same error is committed by Bertoloni in "Fl. Ital.," where he says, speaking of *C. europæa*, "Hæc stirps postis pratorum est, in quibus serunt Trifolia, aut Medicaginem sativam L.;" and then goes on to propose a remedy, which it behoves our farmers to attend to in time: "Abscinde, et projice, antequam perficiat semen, si vis destruere et purgare pratum." Which sensible advice may, for the benefit of those country gentlemen, be laconically Englished,—“Cut and carry before it seeds, and so save your crops.”

† The vernacular name here for *Cuscuta epithymum*.

‡ The honour of having conferred this undesirable ornament to our Wheat fields is traditionally imputed to Spain, and the Island of Jersey, which last place is certainly and happily exempt from its presence. My own opinion is that we are probably indebted to Norfolk for the specious plague, it having been imported with Seed-Wheat from that county—one of the few in England known to produce it.

latter, to which, when made into bread, these seeds impart a hot unpleasant flavour, and communicate a blue colour to the flower, besides depreciating the marketable value of the grain so contaminated. I apprehend the good husbandry of Norfolk must now have banished the *Melampyrum* from the arable land to the adjoining banks, its natural and legitimate place of growth, and where it can do no harm whatever. Bulky and prolific as this weed is, it is yet doubtless one of the easiest to subdue, provided the attempt at extirpation be made at a proper season, and with the requisite care.

In conclusion, I may remark that the present summer has been very unfavourable to the growth of those filiform parasites, the Cuscutæ, at least in this island, where they have been much less abundant than usual. From reference to the works of many continental Botanists, there seems reason to conclude that our Clover Dodder has as often, if not oftener, been passed by for *C. europæa*, or for *C. epithymum*, since, judging from my own specimens, the lately-introduced stranger unites to structural affinity with the latter the larger size and general aspect of the former.—W. A. Bromfield, Ryde.

THE ACCUMULATIVE SYSTEM OF POTTING.

THE principal instances which led to a recognition of the practicability of applying larger portions of material in the process of potting, and so of superseding the ordinary mode of shifting from small to larger pots, were in the cultivation of *Schizanthus retusus* and the Garden Balsam, the growth of the latter having been deferred until so late a period, that no hope was entertained of flowering it under ordinary management.

It is well known that uniform success in the culture of *Schizanthus retusus* is, up to the present time, attended with a difficulty which nothing but a correct knowledge and application of proper soils to the various physiological differences in the organs of plants can overcome. At the period to which this statement refers, (1829 and 30), the plant in question was of recent introduction, and in many instances baffled the endeavours of cultivators in their attempts to obtain mature growth. There was no particular difficulty in its early management, that is to say, from the seedling state up to its removal from sixty sized pots, the cause of which may be assigned to the increased temperature to which it would for that period be exposed, and which would maintain an excitability equal to the amount of light, heat and moisture to which it was subjected. It was on its removal to a lower temperature, and exposure to an increased action of chemical agency by heavier quantities of soil in shifting to larger pots that its tendency to resist the ordinary rules of cultivation was manifested, whatever the position or variation of treatment it otherwise received. At this period I had imbibed (as one result of self-taught practice) an erroneous opinion as to the qualities and effects of heath-mould; and the practice I had adopted of using a portion of that material in almost every instance of cultivation is still brought to mind, by its unfavourable results upon all plants whose quick growth requires such materials *only* as favour a rapid circulation, so as to enable the organs of the plant to assimilate as much food as the excitability of those organs demands.

The effects which generally followed the removal of *Schizanthus retusus* to heavier masses of soil were, in the instances which fell under my observation, a sudden stoppage in growth and a collapsed state of the parts; and these symptoms generally succeeded the waterings usually required after a long exposure to sun-heat, which had caused a full absorption of the previous supply of moisture; and in all cases the results were aggravated or fatal, in proportion to the fluctuating influences of a low and clouded atmosphere, and *vice versa*. The material then employed, and under which such effects followed, was a mixture of loam, peat, highly decomposed leaf-mould (the latter giving the appearance of loose black garden soil), and a portion of sand. The two first were wholly destitute of fibre, and the third was in such a state of decomposition as to leave no traces of organic remains; consequently the texture of the compost was such that the application of water served only to increase its retentive and binding effect. Having sustained repeated losses, I in vain consulted, for a remedy or practical reason, those who had experienced similar failures; and though I found instances of greater success up to a certain point, yet no consistent reason could be assigned why plants of a finer growth should be subject to the same fatality as others. At that time I was unable to detect the cause, by seeing the necessity, when plants approached maturity, of adapting the materials employed in their cultivation to their constitutional character or habits.

These unsatisfactory results naturally led to consulting Nature through the medium of her own works, and as her own interpreter. Having accidentally observed the difference between two plants of the same size, one of which had grown in the compost before alluded to, and the other in fibrous sandy loam with a little leaf-mould, and that the latter far exceeded the former in the healthy expansion of its leaves, I could not fail to connect the difference in their appearance with the opposite combination of material used in their growth.

I have already stated that the compost previously used was destitute of vegetable matter in a partially decomposed and friable state. Not having within reach such materials as appeared essential for the object in view, I resolved upon the nearest approximation to them.

For some time previous to this experiment I had adopted successfully the practice of using coarse flakes of half-decomposed manure in a thoroughly dried and friable

* Vine is a common term in the Isle of Wight and South of England generally for any twining or scandent plant; thus, *Clematis Vitalba* is called Bed-vine, or corruptly Bedwine, *Tamus communis*, Wild Vine, &c. &c.

unbroken state, as a substratum over the bottom drainage, in the cultivation of many ornamental plants, whose structure enabled them to assimilate food from gross vegetable matter; and from a recollection that however luxuriant were the growth of such plants, and however powerful their absorbent functions, the material alluded to never became so far decomposed as to lose its organic remains, but retained its friable and partially dried state when again exposed, after the completion of a season's growth, I adopted in the present instance the same material, when sufficiently reduced through a sieve, as a valuable substitute, in part, for leaf-mould. The proportions of materials were now as follows:—Two parts selected from the fibrous portion attached to patches of grass, upon a heap of close marly loam, with a nearly equal quantity of the artificial leaf-mould and wood-ashes (the two latter in a partially dried state); a portion of white sand was added. By thus substituting for the retentive qualities of the former mixture one with a very different mechanical texture, I was ultimately enabled to transfer plants from 60-sized pots to 16 and 12-size, with perfect success. And as a proof of the superior effect which this preparation exerted over others of an opposite nature, it will be as well to add that the loam was naturally so adhesive as to form a crust over the surface daily, after watering, and for some time required attention to its removal, in order to admit the united agency of sun and air.

It was now most interesting to observe the graceful and expansive growth, manifesting a healthy circulation derived from genial food, and still more so to see the enlargement of the glandiferous organs, which ornamented its stems, the unusual development of which induced me to regard them as significant symbols of health, and also as organs of respiration which Nature had designed as a means whereby the plant is enabled to balance its own excitability and power of absorption, and the fluctuating influences of atmospheric and solar agency.

The principle involved in the foregoing instances of cultivation may be given as follows, namely:—

An accurate acquaintance with the physiological or organic structure of plants, is of essential importance to a knowledge of the nature, extent, and application of the agencies which sustain them.—William Wood.

AMATEUR'S GARDEN.—No. XLIII.

To relieve the nakedness of the Flower Garden occasioned by the destruction of the half-hardy plants, and also to render it a little gay and interesting through the dull winter months, I have lately been selecting a quantity of dwarf evergreen shrubs, which are either remarkable for early flowering, as *Rhododendron dauricum* and *Daphne Mezereum*; for their fruit, as *Gaultheria procumbens*, and the different kinds of *Cotoneaster*; for the variegation of their foliage, as in many varieties of *Euonymus*, *Buxus*, and *Ilex*; or for neat and elegant habit, as in *Erica*, *Juniperus*, *Mahonia*, &c., &c. These I intend to cultivate in pots; and at this season, when the garden is cleared of summer flowers, I shall fill the middle of the beds with these plants, and plant the margins with *Aconites*, *Snowdrops*, *Crocuses*, *Anemones*, early *Tulips*, and other spring-flowering plants. In this manner I hope to make the Flower Garden unusually gay at a very early season, and next autumn, when I have had more time to mature my plans, I hope to have hundreds of early flowering *Chrysanthemums*, dwarf plants not more than a foot high, which, intermixed with the shrubs, will render the Flower Garden gay up to Christmas, or in mild seasons, with a slight protection on frosty nights, up to the end of January. Subjoined is a list of the shrubs on purpose to effect this desideratum with. None of them are expensive, but all are beautiful and of easy cultivation.

<i>Andromeda polifolia</i>	<i>Polygala chamaebuxus</i>
.. <i>grandiflora</i>	<i>Daphne mezereum</i>
<i>Erica mediterranea</i>	.. <i>flore-albo</i>
.. <i>australis</i>	.. <i>autumnale</i>
.. <i>carnea</i>	.. <i>cneorum</i>
.. <i>herbacea</i>	<i>Kalmia glauca</i>
.. <i>hibernica</i>	.. <i>angustifolia</i>
<i>Rhododendron dauricum</i>	.. <i>rubra</i>
.. <i>atrovirens</i>	.. <i>nitida</i>
.. <i>chamaecistus</i>	.. <i>nana</i>
.. <i>rhodora</i>	<i>Mahonia, or Berberis</i>
.. <i>ferruginea</i>	.. <i>fascicularis</i>
.. <i>hirsutum</i>	.. <i>Aquifolium</i>
.. <i>ponticum variegatum</i>	.. <i>nervosa</i>
<i>Ledum palustre</i>	.. <i>repens</i>
.. <i>decumbens</i>	<i>Gaultheria Shallon</i>
.. <i>latifolium</i>	.. <i>procumbens</i>
.. <i>globosum</i>	<i>Ribes sanguineum</i>
<i>Cotoneaster microphylla</i>	.. <i>glutinosum</i>
.. <i>buxifolia</i>	.. <i>malvacum</i>
.. <i>marginata</i>	.. <i>atro-rubens</i>
	.. <i>Beatonii</i>

The following plants are remarkable for the variegation of their foliage:—

<i>Euonymus japonicus</i>	<i>Vaccinium Vitis Idæa</i>
.. <i>foliis argenteis</i>	<i>Rhamnus alaternus</i>
.. <i>aureis</i>	.. <i>foliis aureis</i>
<i>Aucuba japonica</i>	.. <i>argenteis</i> [gata
<i>Buxus arborescens</i>	.. <i>angustifolia varie-</i>
.. <i>argentea</i>	<i>Ilex Aquifolium albo marginata</i>
.. <i>aurea</i>	.. <i>albo picta</i>
.. <i>marginata</i>	.. <i>aureo picta</i>
<i>Juniperus Sabina</i>	.. <i>ferox argentea</i>
.. <i>prostrata</i>	.. <i>aurea</i>
.. <i>variegata</i>	

It is necessary in selecting the plants to have them dwarf, and as perfect in form as possible. Where expense is not an object, a number of *Azaleas* and hybrid *Rhododendrons* might be forced a little under glass, and would add much to the gaiety of the garden in April and May.—W. P. Ayres, Brooklands.

A TANK HOUSE.

So much has been said on the Tank system of late, that I am induced to lay before my brother gardeners and the public, plans and section of a pit I have lately altered and put up for Lord Doneraile, principally for the growth of Pines. It answers that purpose very well at present, and I have no doubt of its giving every satisfaction. From the few hints I saw in the *Chronicle* last summer about Mr. Rendle's Tank system, I liked the idea much, and about last February I wrote to Mr. R., saying what I had intended for bottom-heat before I read of his Tank, and asked his opinion: he wrote me not to go on with my intentions, but wait for his treatise, which would explain the matter. Accordingly I waited until it came before the public—I might here mention, that about this time twelve months I got by a private letter from Mr. Beaton his opinion and plan for gutters instead of flues, which I put up in our Pinery, where I have Vines also; these have succeeded quite to my satisfaction. The smoke from the boiler is used in the back flue, and has nearly as good a heat as if there was no boiler to serve first. At the boilers is a shaft, to throw the smoke into by dampers when not wanted in the house. I beg to be excused for deviating thus far from my first intention of explaining my new pit only, all of which I hope may be understood, and be of service to others that may intend to follow this mode of heating; and as Mr. Beaton intends writing on this subject, I consider the more it is explained the better. All that I can add at present is, that I have had my fruiting Pines turned out of their pots into the bed since the beginning of August, and they appear to be doing as well as could be wished. My bed keeps a uniform heat of from 80° to 84°. As I had it ready for the plants a month before I thought well to remove them, I had the opportunity of proving the heat by plunging a thermometer in it, and at six inches deep the heat was 90°, and by adding to the fire I found I could raise it to 90° or 100° if I wished. My Fruiting-bed is prepared as near as possible according to Mr. Rendle's recommendation, except the addition of short lead-pipes at about every four feet along the back, to convey water down to the slates amongst the brick-rubbish. This causes a damp heat, and by capillary attraction must damp the soil; my plunging material for succession-plants is coarse river-sand mixed with peat-mould, which I find good. My boiler is one of Stephenson's third size. The bottom of my Tank is of flags laid in common mortar; the joints were at first left quite open, but I afterwards filled them up with roman cement. The sides and divisions are three bricks laid flat in cement, the whole inside is then plastered over with cement about three quarters of an inch thick, and the top is covered close

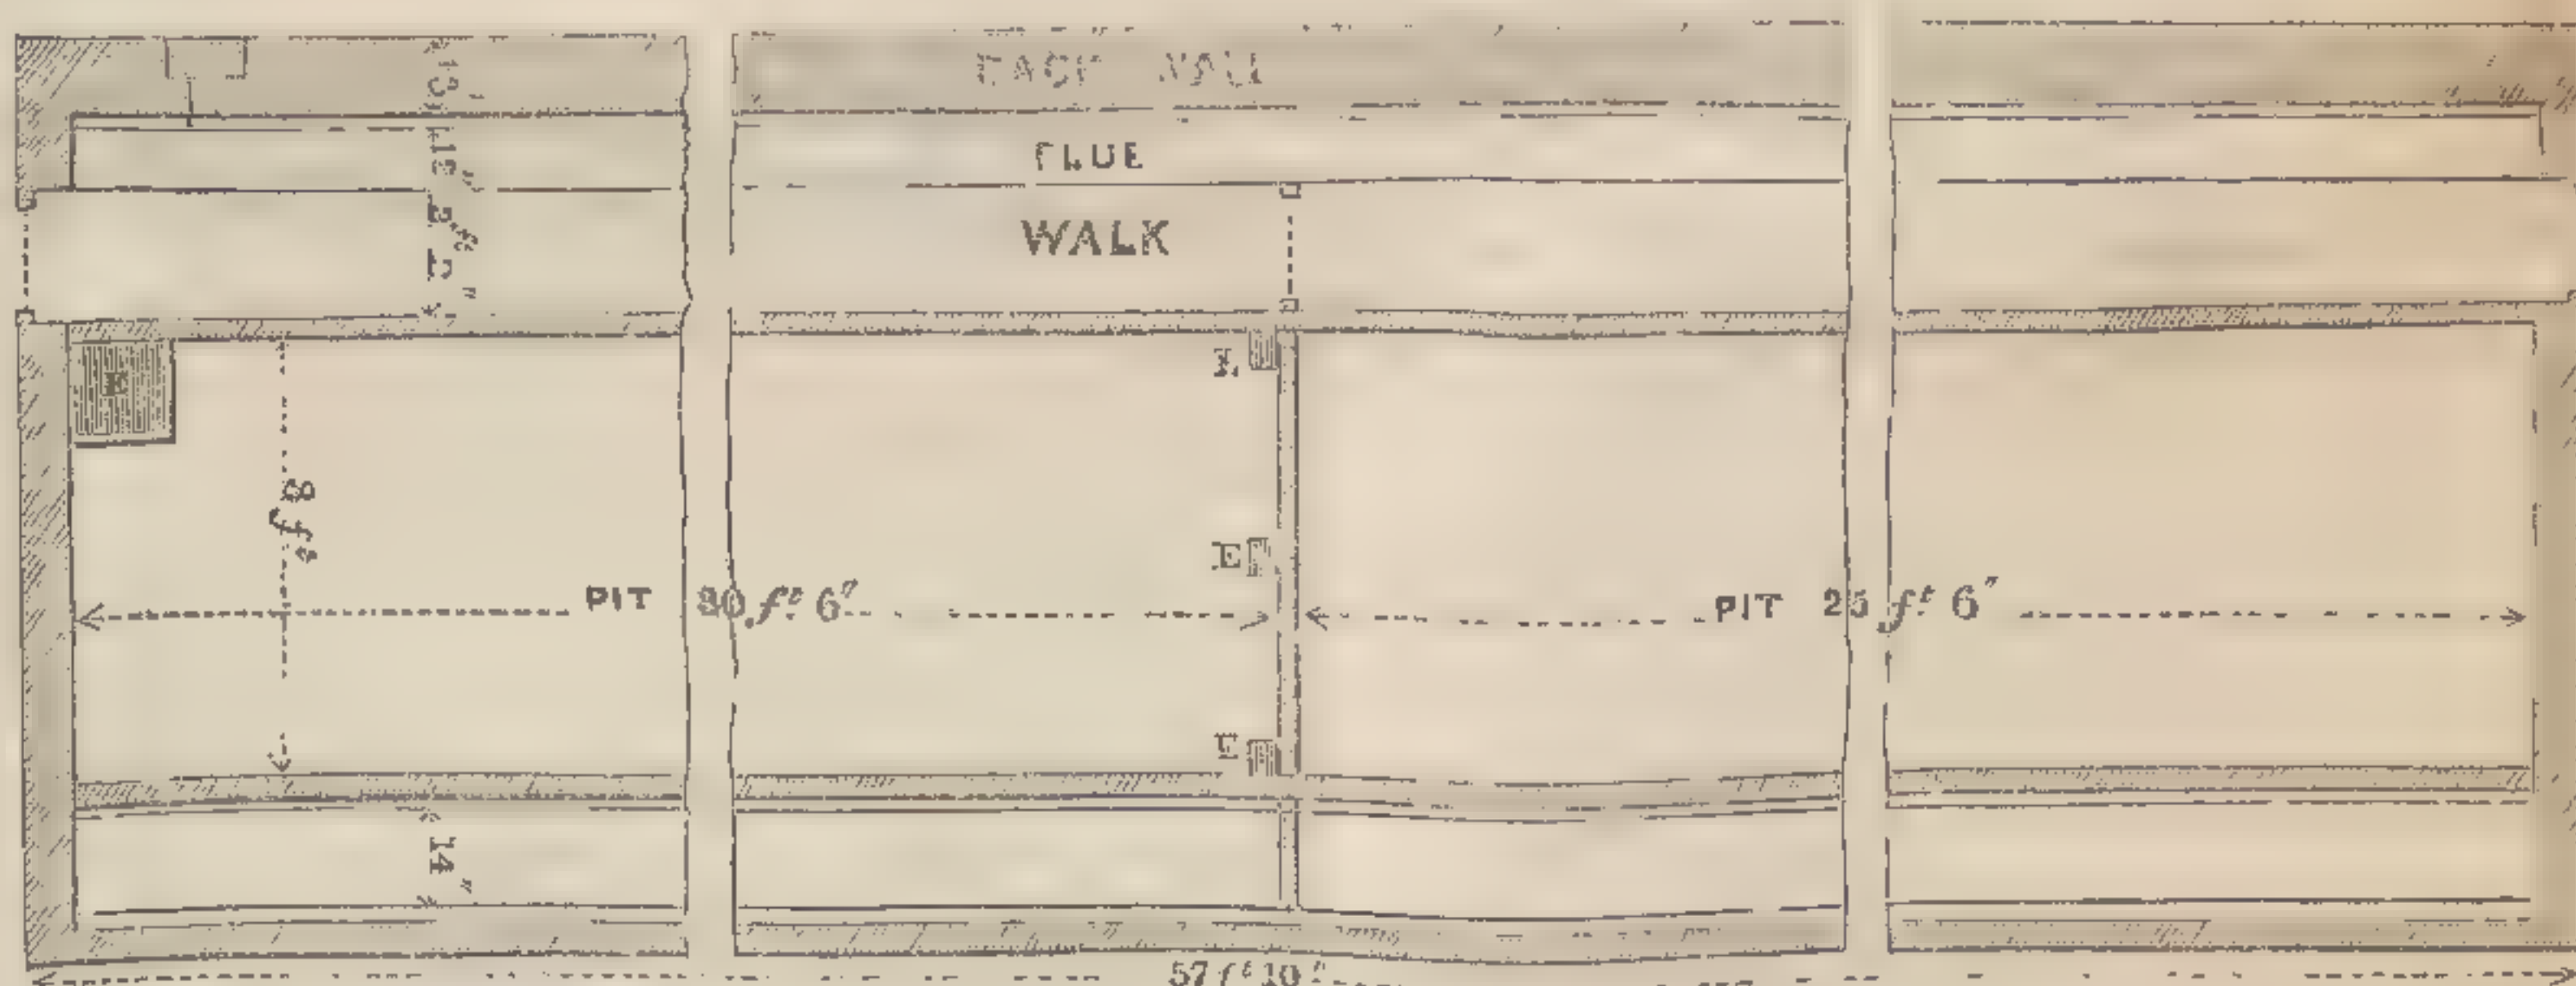

with slates one and a half inch thick. The sides of the bed are all formed with brickwork, and the gutters with brick on edge, laid and plastered with cement, and covered with common slates; on the top are movable slates that can be taken off for steam, as occasion may require; on the back flue are boxes with Cucumbers trained over the back walk; the smoke can also be let off from the boiler into the back flue, when required, by a damper in the upright shaft; and in addition to this, the fireplace is connected with the back flue in case of severe weather, or at any time the heat from the boiler may be found insufficient. I find the Tank efficient and simple, and I have no doubt this is more to the purpose, and cheaper, than the wide gutters proposed in the *Chronicle*. Messrs. Veitch's (of Exeter) system of heating, seems nearly on the same principle as this. I am certain it must work well, and I am sure that this mode of heating will become general after a time, as this heat is so regular and congenial to the plants.—John Hayeroff, Doneraile Gardens, Sept. 31, 1843.

A, represents the boiler.
B, flow and return gutters.
C, Sluices made of zinc three by nine inches.
D, Return pipe.
E, covers over the sluices with boxes the depth of the bed.

N. B.—The sluices in the middle of the bed I open by a bit of strong wire riveted into the zinc sluice; after the water has traversed the gutters it is turned into the tank at the first sluice from the return-pipe, and if not wanted in the gutters it enters the tank at the flow-pipe, all the other sluices being down, those other sluices are used to regulate the heat in either bed or gutters as required.

Section from A to B.

HOME CORRESPONDENCE.

Gardening on Peat-Bogs.—I was wondering, when I was reading the communication of your correspondent "Quercus," when he was telling you about the new kail-yard that he had a hand in makin', gif he was an auld prentice o' mine, for he described the situation o' the garden I hae worked in for mony a year, for it was formed chiefly out o' a "sandy bank" and a "quagmire;" for before we commenced makin' the garden, its lower part was a place where the wild duck was sometimes shot while floating on the surface o' the water, and as he says, there were mony "antiques" in and about it, such as arrow-heads made out o' grey quartz, and spoons out o' clay slate, besides quercus, and queras, and queghs, and other queer auld warld things, and the auld Oak rungs were lang enough and broad enough to mak brigs for kintra burns; and as he wants to ken the result o' the

experience o' those wha hae gardened on peat, I for one will be ready to gin it as far as my experience goes. The peat in part o' the garden in which I hae earned my bread for mony a day is sixteen feet deep, and I hae had Celery and Cauliflower, sic as he describes himsel', and the dwarf Marrowfats grew gigantically, and at this present hour the stems o' the Jerusalem Artichokes are upwards o' ten feet high, and the shoots o' the Raspberry are not far ahint them, and if some wild beasts were let loose among them, it would somewhat resemble the jungles o' Hindostan. Noo it is a pity that such a gude material as peat is not within the reach o' "Quercus," for I am convinced that it would be a great benefit for his cawk and his clay, for in my lifetime I hae had a little practice wi' baith; mony a happy hour hae I spent among the moors and mosses o' Berkshire, looking for the white-blossomed Heather; and I hae gathered the Teasel on the

chalky roadsides o' Hampshire, and I hae often thought that the nation sustained an annual loss frae the great quantity o' humus that is carried away wi' the floods o' winter and summer frae the peat-bogs and other places where peat has accumulated, and also from the incalculable quantity o' carbonic acid gas that lies dormant in the chalky districts o' England. Noo, we are informed by folk that should ken weel about kintra affairs, that in weel-drained land the mair organic matter there is in the soil the warmer it is; and if the soil can be better warmed than it is at present, nae doubt some o' our crops will be sooner ready, and others will produce mair; and if mair carbonic acid gas and humus were added to the soil, there is nae saying how big some things would grow. But Liebig says that a' the carbonic acid gas that plants require is derived from the atmosphere; but it is generally allowed that it is the means o' strengthening the timbers o' vegetation, by supplying it wi' carbon; but plants in general are none the worse o' a wee thing o' it at their roots besides what they may get frae the atmosphere, and then they are sure o't, for we are whiles ready to imagine that one cause produces an effect that is, maybe, brought about by a great number o' causes; so it might not be the best thing at a' times to trust ower muckle to the atmosphere in supplying the wants o' our vegetable productions, for plants soon turn unco dwylie when they want carbon, just something like bones that hae been steeped in muriatic acid, one may turn them round his finger. But I am wandering awa frae peat. But although peat may hae mony gude qualities, care should be taken baith respecting the quantity and the quality that is used; some will lay it on their ground as thick as if they were going to mak an American garden, and to plant it wi' a' the hardy species of Erica, and if it be but partly decomposed, and containing a mixture o' the seeds o' Polygonum aviculare and Rumex acetosella, there will soon be an outcry about the evil properties o' peat, and no ae word about their own ignorance; but peat should commonly be rejected when Cryptogamic Botanists can tell whether the thess o' mosses that compose the peat hae double teeth or single teeth, or nae teeth ava. Noo there is mony a part o' England that would be a great deal the better o' a mixture o' humus and carbonic acid gas, and as for the former, there may be plenty o' it had in the shires o' Lincoln, Northampton, Huntingdon, Norfolk, and Cambridge, besides what may be had in the northern counties o' England; and as for the latter, there is nae scarcity o' it in the shires o' Berks and Bedford, Hants, Wilts, and Dorset, besides mony other places that might be mentioned; the green sand o' Surrey, the weald clay o' Kent, and the red sand o' Somersetshire, the greywacke o' Wales, and the soils o' other geological formation, might be all greatly improved by them; but some will be asking—How are we to obtain them? Nae doubt some places will hae to wait a wee; but a time will come when they will be more spread over the kintra: there are already existing coal railways and ice railways, and the time will arrive when there will be peat railway trains and chalk railway trains, conveying these useful materials to where they are wanted, and it may turn out in the end to be far better to use the inexhaustible treasures of our own land in improving the soil and its produce than sending learned men awa to Spain to look for food for British plants, or even bringing henpen across the Atlantic; but these are subjects on which aye like me maun speak warily, and leave it for others to judge who have had mair experience in the matter than—*A Muirland Gardener.*

Orchard Curiosity.—(High Bentham, Yorkshire).—There is now growing in the orchard of Mr. Richard Ray an Apple-tree in full bloom, being the second time this season; two Apples also of the first crop are still hanging; and what, perhaps, may add a little to the rarity is, Mr. Ray has in his possession, from the same tree, fruit of the last year's growth in a state of preservation.—*Facile.*

Swallows.—A friend of mine, who some years ago had the same quarrel with house martins as your correspondent "S. W.," found that he could effectually counteract their building speculations by rubbing the corners of his windows, &c. with soap. A thin coating of soft soap, besides being offensive in its smell, renders the foundation too slippery for the swallows to build upon; but soap will remove paint, and may be otherwise objectionable. It is, however, the only remedy that I have ever met with. Whatever plan your friend may adopt, I do hope he will allow the swallows as much accommodation as he possibly can. They are eminently useful. In gathering their "appointed food," they certainly keep within bounds insect tribes, whose grubs would prove a terrible scourge both to garden and field. But even were the swallow useless—which none of God's creatures are, who would not love the confiding cheerful bird that nestles under our roofs, as if assured of a welcome? For my part, I should be glad if "S. W." or any other W. of your acquaintance could tell me how I may induce swallows to build with me. In a house which I occupied some years ago, I had a nest in my bed-room window. The old lady who was tenant before me sent to say, that she hoped I would not eject "her swallows." They lived and multiplied unmolested, and rewarded me for my protection by awakening me betimes every morning by their blithesome and business-like twittering. In all nations indeed the swallow has ever been, and must be, an especial favourite; inseparably associated as its presence is with sunny skies, and all that is loveliest and most interesting in creation. Virgil, it is true, accuses it of devouring bees, but every one knows that to be impossible. And Anacreon complains of its disturbing his late and maudlin slumbers. But in what joyous and loving strains has it been sung by other poets of every time and tongue! Above and beyond them all, "the

sweet singer of Israel," alluding to it in one of his noblest Psalms, tells us, that "even in the Courts of the Most High the swallow found a nest for herself where she might lay her young."—*A Subscriber.*

Planting.—In a late Number is an article by a correspondent with a Greek signature, on the subject of Planting, which in many respects is highly gratifying, and cannot fail to yield pleasure to any mind anxious to see the barren wastes of our country clothed and ornamented with thriving plantations. Had I accompanied your correspondent in his morning's ride, my gratification would probably have equalled his. At the same time I should have been rather cautious in attributing so much of the pleasing result to an operation which I have seen so much reason to deprecate and condemn, but which our Greek-named friend seems to consider is essential to success—I mean "Pruning;" nevertheless, according to the description given of the mode of operation pursued by Dr. Thackeray, it is much more rational and far less injurious than the wholesale haggling too much practised and recommended by others. Many apparently plausible things have been said and written in favour of pruning which, when attempted to be carried into practice, have resulted only in mischief: some I well remember followed on the publication of Pontey's "Forest Pruner." It may be remembered that in several of the articles I have sent you in deprecation of pruning, I at once admitted that, so far as merely giving a direction to a young tree, the practice is commendable, but no further, and no instrument at all beyond a knife should ever be applied with that view. I also feel no objection to the practice of Mr. Thackeray's woodman in leaving the strongest shoot, although its direction may not be perpendicular; in a thriving tree it will soon assume the upright. My only fear is, and my only reason for writing this is, to caution planters against carrying the practice too far by continuing it after it should be entirely laid aside; for there is a mistaken tendency that way, far too prevalent among us. There seems a discrepancy in your correspondent's description of the original poverty of the soil and the luxuriance of the vegetation; that, however, it is not my business to reconcile; but, are we to infer that it arises from the judicious management of the woods?—*Quercus.*

One-Shift System of Potting.—Having been particularly interested in this system of potting, I procured in the spring some plants of the following kinds, viz., *Ericas*, *Dillwynias*, *Boronias*, *Epacrises*, and *Lachnæas*. A friend being anxious to ascertain the progress the roots had made, induced me to turn some of the plants out of their pots, when I found that scarcely any roots had spread laterally through the ball of earth, but that they had run down vertically; and clung with the greatest tenacity to the sides of the inverted part, and even had penetrated through the hole in its bottom, so much so as almost to have filled the pot; and yet the plants are healthy. As I am not the only one interested in this fact, perhaps Mr. Wood, who has written so much recently on the system, will be kind enough to give his opinion on the point.—*C.*

Hops.—I inclose for your examination a specimen of another *usus*, the male and female Hop on the same plant. This was found in a Hop-ground at Farnham, and was brought me this morning by Mr. Lance, of Blackwater.—*Atlas.*

Begonia Evansiana: Hardy.—I send you herewith a leaf and flower of one of my plants which has been growing now for several years in the open ground, from which I have never removed it. It has blossomed much better this year than it ever did; the flowers are larger and of a much deeper colour than those of the parent plant, which I keep in the greenhouse in winter, and in my parlour in summer, till the leaves and stems fall off.—*J. B., Killanley Glebe, Ballina.*

Bees.—The accounts of Bees in your Paper are curious and interesting. I beg to give you a fact mentioned to me a few days ago by a neighbour. His Bees did not swarm all this year, (nor did mine,) but seemed quite inactive, spreading themselves out on the hive and the wall against which it stood. He rightly judged that there was no further room for their labours in their hive; and he placed beside it a new hive, to which they almost immediately resorted, and in which they built largely. After the lapse of a month or more, conceiving they had completely established themselves in their new hive, he removed it to a distant stand, secure of a new colony. After some days, seeing no resort of Bees attending it, he raised the hive, and found to his astonishment, that not a single Bee was there!—though there was a fine supply of wax, and the greater part filled with excellent honey.—*J. B., Killanley Glebe, Ballina.*

Bokhara Clover.—The seed I send with this note came into my possession about eighteen months ago, having been given to me by a friend, who stated it to be Cabool Lucerne. I sowed it in April, 1842; it grew to about three feet high in the autumn, but showed no seed. I cut it, dried it, and gave it to my horses; they ate it equally well dry as green. In January, 1843, I gave it a good coat of ashes, and let it stand for seed; about the beginning of August it had grown to ten feet high, and was covered with the white flower I now send you; and in the end of September part of the seed was ripe, when I cut it and beat it out by the hand. Having procured a quantity of Cabool Lucerne seed from the Botanical Garden at Saharunpoor, and also from the India House, I was much surprised to find it totally different from what I had first obtained from my friend, having shown a flower precisely the same as our English Lucerne. I send you some of the stalks with the flower, and also the seed in them. The stubble appears to be dead, but I do not intend to meddle

with it till after next spring.—*J. L.*—[This is the *Melilotus leucantha*, or Bokhara Clover.]

Dodder.—If left to itself is likely to become a formidable pest, but may be much easier destroyed by an application of undiluted gas-water, or a solution of salt strong enough to destroy vitality in seeds or vegetation for the time being, than by burning or other methods recommended.—*I. M. S.*

Luminous Plants.—Since my last communication I have obtained some specimens of *Schistostega pennata* from the herbarium of my friend, Mr. Edwin Quekett. I have in vain looked for crystals in the structure of this moss. Mr. Quekett says in a note, "I cannot find any crystals, nor do the plants look at all sparkling to the eye, which they would do even after being dried, if their luminous character depended on the facets of the crystals reflecting light." Professor Lloyd was probably misled by some of the particles of rock or sand on which these plants grow having got under the field of his microscope. In the specimens I have examined, it is difficult to form an opinion with regard to the explanation of the phenomenon as given by Unger, as the fructification is quite dry. The want of any luminous character in the dried specimens is quite consistent with Unger's statement, that it arises from the vesicular character of the fruit at a particular period of its growth.—*E. Lankester.*

Plans for Flower-Gardens.—There having been some inquiries respecting books containing plans of gardens, I think it may be of service to state that "Loudon's Gardener's Magazine" for the present year contains 15 plans for Flower-gardens, viz., in the numbers for February, April, May, June, July, August, September, and October. There is also some information respecting planting them. In the "Suburban Gardener" there are 7 plans for Flower-gardens, besides many for small ones, and much discussion on the subject. In the "Arboretum Britannicum" of the same author will be found plans for Rosariums, American Gardens, Ericetums, &c.—*W. Ambrose, Gardener to Thomas Mashiter, Esq., Hornchurch.*

Rats.—I have to thank an "Irishman" for his recipe for "attracting" these vermin, but he appears to have overlooked my peculiar case, which was, that I no sooner destroyed one set than another quickly succeeded to commit the same depredations, from the facility afforded them by the drain running through the garden. My object was not so much to destroy as to keep them out, and I think I have quite succeeded in my wishes by adopting the following plan:—At each end of the drain we placed what is here called a "Rat" or "Stink" trap, as it answers either purpose equally well; it is thus constructed: a large pit is sunk considerably below the bottom of the drain, and in this pit, about half its depth down, is placed a slate or stone in a perpendicular position; the bottom being well cemented holds water, and the slate is thus immersed in it. The rat is thus stopped in his journey up or down the drain, and finds himself in deep water quickly, and with a barrier before him which is impassable. I have never found any to dive under the slate and rise on the other side, neither do I think it probable they ever do so; some few rats that happened to be in the drain during the time occupied in making the traps speedily found their way through the mould of the garden again; these we quickly disposed of by nux vomica, mixed with fish, of which they are exceedingly fond. If I am not sufficiently understood in the formation of the trap, the annexed section will perhaps render me intelligible. The slate of course stops the drain entirely, except the space immediately under it.

A.—Pit always filled with water, being below the bottom of the drain.—*Devoniensis.*

Swallows.—In reply to your correspondent at p. 721, I can confidently state that swallows may be prevented building under the eaves of houses by common twine netting, which is easily removed at the period of migration.—*N. S. H., Bury St. Edmund's.*

Dahlias.—If "A Subscriber" will state the names of the Dahlias with which he succeeded last season, and the names of those that have failed this year,—together with the locality, some of your correspondents might be enabled to offer such observations as may possibly give him the information he desires. Without this information any remarks would be speculative.—*T. C. W.*

Weeds in Ponds.—I beg to inform "Aliquis" that I have a pond of 1 r. 13 p., which has been for the greater part of the summer covered nearly all over with weeds, and had so unpleasant an appearance that I determined to fill it up. I had four ducks about my grounds, and occasionally on the pond; about a month ago they attacked the weeds; in about a fortnight they had cleared them all from the surface of the water, and will now probably keep them out of sight. I must not conceal that my ducks have been very troublesome. I purchased them under the belief that they would benefit my garden by eating caterpillars, grubs, and snails; but I do not perceive that they have rendered me much assistance in that way, whilst they have sadly injured my Potatoes. I see by the *Chronicle* that swans clear weeds from water at Brooklands: there was a pair of those birds here, but they were very savage and unpleasant, and did not clear the pond better than the ducks.—*A Villager.*

Pine-Apples.—There have been cut and weighed at Bicton-gardens within the last three weeks, four Queen Pine-Apples, the united weight of which was 22lbs. 2 oz.; the crowns were from 2 to 3 inches high, and the stalks 3 inches in length. These were well swelled and very handsome fruit, one weighed 6 lbs. 2 oz.—*W. Dawson.*

PROCEEDINGS OF SOCIETIES.

THE TAMWORTH FARMERS' CLUB.

We hasten to lay before our readers extracts from a speech delivered by Sir Robert Peel, on the occasion of a public dinner, celebrating the institution of this club. Our extracts are from a report in the *Times*—

GENTLEMEN.—We are a farmers' club. We are not a society for the protection of agriculture; we have nothing to do with any of the questions relating to agriculture which agitate the public mind and divide public opinion—we are a club for the promotion of the science of agriculture. What we want is to learn how, in the shortest time, at the least expense, to produce the greatest quantity of food, either animal or vegetable, for the consumption of man, without permanent injury to the land. (Cheers.) That is the single object for the promotion of which this club has been formed; and the more we bear it in mind during all our meetings and discussions, the more shall we conduct the intentions of its original founders, and the more shall we insure its future prosperity. Gentlemen, I know not how skill in agriculture can be attained except in three ways:—first, by practical experience as agriculturists, by having followed the profession of a farmer; secondly, by acute and extended observation, or by reading the treatises which have been written on agriculture; or, thirdly, by communication, by conversation, by asking questions, by having doubts solved, by comparing experiments, by receiving information. I shall be the last man to undervalue practical experience. If practical experience is founded upon very extended observation, it is of the utmost value; but depend upon it the British farmer is exposed to competition which will make the mere reliance upon limited personal experience a very imperfect resource. If a man's experience is confined to his own district, if he have had no opportunity of comparing the methods of agriculture adopted there with the methods pursued in other districts of the country, if he takes for granted that because for 40 or 50 years he has been employed as a farmer, if he pursues the method which his father before him pursued, he will prosper, and that his personal experience will insure success, depend upon it he will be greatly disappointed. It is impossible to travel for ten miles through this country, it is impossible to go through this parish, without seeing that mere reliance on personal experience as a farmer will not insure success. You see the different degrees of fertility in land of equal natural strength—you see where the land is cultivated by farmers having the advantage of personal experience, the greatest difference in the results, if one brings to bear the advantage of chemical and geological science, and the other merely relies upon the benefits of his own personal observation. (Cheers.) Then, gentlemen, another mode by which the farmers may acquire information is by having access to books—by the opportunities of reading. These opportunities are afforded within this district. In this town a library has been established to which every farmer can have access by paying the moderate contribution of 1s. quarterly, and that library contains more than 100 volumes of treatises of various kinds connected with agriculture; and I have no hesitation in saying, on the part of the conductors of that institution, that if any farmers think that an addition can be made to the library, there will be every disposition to make that addition, and thus to increase the facilities for acquiring agricultural knowledge by the perusal of books. (Cheers.) Gentlemen, another mode by which agricultural knowledge may be promoted and extended, and I very much doubt whether this will not be found the most effectual mode, is by meeting in societies of this kind, not for the purpose of listening to eloquent speeches, but on the part of farmers for the purpose of conducting discussions upon practical points, for the purpose of putting questions, and having doubts solved, rubbing each his own mind against the other, and thus communicating and receiving knowledge. This meeting is composed chiefly of landlords and of tenants. I see around me here many landlords, possessors of extensive estates; at least, there are many belonging to this club who unite with the character of owners of the soil that of good practical farmers, who derive profit from the cultivation of the soil. As an example, I may give the name of my valued and respected friend, Sir F. Lawley, the President of the club. I unfortunately do not unite those two capacities. I am a landlord, but I cannot say I am a practical farmer, deriving much profit from the cultivation of land; still I hold land, and it becomes me, and it becomes other landlords who have not the means of affording information to their tenants from their own successful pursuit of agriculture—it becomes us to consider in what way we can contribute to the advancement of agriculture. Now, although we may know very little practically about agriculture, yet, living in this agricultural district, and coming constantly in communication with you, my opinion is that landlords without having such practical knowledge, may greatly contribute to the improvement and advancement of agriculture. I take for instance the breeding of stock—the improvement of stock within this district, I speak for myself—improvement begins at home; the relation of landlord and tenant is definite and well understood. I speak, therefore, chiefly with respect to my own tenants. Of course, naturally I wish to see a whole district prosperous; but I have an increased interest in my own tenants prospering, and in watching the advance of improvement on my own estate. Now, I say here, in presence of many of my tenants, that I am willing to do everything I can to contribute to the improvement of their stock. (Cheers.) If they, or a committee of the most intelligent of them, will first go to Birmingham, the great metropolis of this part of the country, and ascertain there for what description of stock there is the greatest demand—if they will determine what description of stock derives the greatest improvement in respect to fattening, or gives the greatest quantity of milk by being fed on the pastures of this district, I will, regardless of the price of the animal, introduce here the best I can find—the best bull for instance, and will give to my tenants, for the purpose of improving the breed on my estate, I will give to them and their cows free access to that animal. That, gentlemen, is one mode in which I, a landlord, little conversant with agriculture, but deeply interested in promoting its prosperity, can contribute to its advancement within that particular district for whose prosperity I have the chief concern. Then, again, with respect to experiments in agriculture, I have not the slightest doubt nothing is more bewildering to a practical farmer than reading the results of experiments in agriculture of new or patent manure, for instance, natural or artificial. He does not know whether or not it would be safe to make experiments with that manure, because he frequently reads entirely conflicting results from the same series of experiments. He is not certain whether that manure, although partially and temporarily successful, may not have owed its success to the exhaustion of the soil; he does not know whether the experiment had been fairly made; whether those who made the experiment had not a prejudice in favour of the new manure, and gave it some advantage in the trial which it was not entitled to. Landlords, then, have this means of benefiting their tenants—namely, of making experiments and exhibiting the results to those who may be practically interested in them. To take the article of artificial manure, let tenants doubting on the subject state to their landlords that they cannot place entire confidence in the result, but if the landlord will go to the expense of devoting part of his farm to experiments with a particular manure, they will have a confidence that it shall be fairly applied, and when the results

are exhibited to the tenantry at the proper season, they will be better able to determine hereafter whether they will go to the expense in purchasing it, and they will have greater confidence in the expectations they have founded upon that trial. You remember, gentlemen, I set out by stating that practical observations are much more valuable at meetings of this kind than any elaborate eloquent commonplaces about the importance of agriculture. I therefore directed a friend of mine, who I knew had carefully made an experiment with respect to the merits of a new manure, the name of which I have no doubt is quite familiar to you—guano—I directed him to make an experiment with the greatest care and fairness, and communicate to me the result. Gentlemen, he has done so, and I am quite sure you will excuse me if I state to you the particulars of that experiment. My friend took a field of two acres, and planted it with Potatoes. The ridges in which the Potatoes were grown were of the same length, and the Potatoes were of the same quality, and the produce of the several ridges having been taken up and measured, the average result of the produce—(the soil being the same, the Potatoes the same in quality, the manure being applied with perfect fairness, and exactly in the same manner)—the average result of the produce was this:—The stable manure gave a proportionate return of 9 bushels of Potatoes, Potter's manure 11 bushels, and guano 15 bushels. I asked for further details, in order that the information might be more complete, and here they are—The guano and Potter's manure (so called from the name of the person in London who prepares and sells it) were each mixed with wood-ashes and fine mould, in the proportion of one bushel of guano or Potter's manure to six bushels of ashes and mould. A bushel of guano weighs about 85 lbs.; three bushels of guano and three of Potter's manure, making 510 lbs. in weight, were put on the ridges at two different times, being at the rate of 3 cwt. per acre, each of these manures costing 14s. a cwt.; half of each was put into the ridges when the Potatoes were planted, and the other half when the Potatoes were appearing about one inch out of the ground, covering in the guano and Potter by hoeing and raising the ridges. The Potatoes were planted on the 4th of April and taken up early in October. The produce exceeded 600 bushels, the field having been previously exhausted and in very bad order. The total expense, including every charge, was 10½, and calculating the value of the Potatoes at 1s. the bushel, the profit on the two acres was 14½; the value of the land being about 1½ per acre, if let. Such was the result of that experiment, and it was made with perfect fairness. At the same time I cannot expect you, when you probably read some other account where stable manure was applied to the same advantage with guano here, to go to great expense in adopting guano. I am perfectly prepared to go to that expense, and I will devote a portion of that land which I occupy for the purpose of making these experiments as fairly as I can, under the superintendence of a committee of intelligent tenantry, and then at the proper period of the year we will have the produce taken up and test the result of the measure. So with respect to other classes of manure—by applying, on different parts of the estate, say six half-acres, for the purpose of meeting these experiments in the manner pointed out by his tenants, and then exhibiting the result to their actual inspection, a landlord not himself practically acquainted with agriculture, without presuming to teach you the best method of farming, may, in co-operation with his tenants, do much for the improvement of agriculture. There is another matter to which I think it right to advert, where the landlord, although he may know nothing of agriculture, has the opportunity of benefiting the occupying tenant.—I allude to game. (Cheers.) Gentlemen, there are few more eager sportsmen than I am; but, seeing the competition to which the farmer of this country is exposed, and to which he must look forward, I consider it to be the duty of every landlord to make some sacrifice of his personal pleasures for the benefit of the tenant-farmer. (Cheers.) I believe that the damage done by the abundance of game is chiefly by hares and rabbits. I do not believe that the occupier of the land sustains much injury from the abundance either of partridges or pheasants. The chief damage is done by the superabundance of rabbits and hares. Now, I have no hesitation in saying that I shall be pleased that there is not one single rabbit on the whole of my property. (Cheers.) I will do everything I can for their destruction, and with respect to hares also, I will willingly forego any gratification of mere sport, so that if any tenant of mine will inform me that the hares on his farm exist in such a quantity that they are doing him serious damage, I shall be perfectly ready to give orders for their immediate destruction (cheers) or their reduction to such an extent as shall satisfy him that no danger whatever can be sustained by him. (Cheers.) You perceive, gentlemen, that I am adhering to the advice I gave, that instead of general vague observations we should attend to practical matters, and I do hope that those gentlemen whom I see around me, and who have more experience than I have—if they have any observations to offer more valuable than those I can make, because founded upon their successful application of time and capital to agriculture, I hope they will give to this meeting the benefit of those observations; and that you who are more immediately concerned in the cultivation of the soil—the occupying tenants, will not consider these meetings as reserved merely for the speeches of gentlemen, but that you will freely communicate your opinion on any matters that may suggest themselves to your own minds as most important for the promotion of agriculture. (Cheers.) Gentlemen, I earnestly hope that those who are here present holding the situation of occupying tenants, and that those of this district who may not be within these walls, will seriously consider whether or no advantage may not be derived from becoming members of this institution. (Cheers.) Let us all, landlords and tenants, meet together within this district, for the purpose of promoting that one object—the improvement of agriculture; it is a noble pursuit, and we shall be amply repaid by our success in the cultivation of the soil. (Cheers.)

NOTICES OF NEW PLANTS WHICH ARE EITHER USEFUL OR ORNAMENTAL.

ELÆAGNUS PARVIFOLIA. Small-leaved Oleaster. (*Hardy Evergreen Shrub*.) Elæagnaceæ. Tetrandra Monogynia.—Making allowance for the effects of climate, we may identify this plant with the *Elæagnus parvifolia* of Wallich and Royle, a shrub from the north of India, of which abundant specimens were distributed by the former botanist. They are more grey, indeed, and their silvery scales are more abundant, but this is a mere difference in degree. Indeed, the Sirmose specimens, from the collections of Webb and Gerard, are as green as our own. The Kamoon specimens are more loaded with flowers, which appear moreover in short dense corymbs, and not singly in the axils of short lateral branches, but this seems owing to nothing more than the abortion of the leaves on their branches, possibly by reason of the crowding of flowers that appear in old specimens. It is probably the same as the *Elæagnus reflexa* of the Continent, a name for which we find no warrant. The flowers, although small and whitish, and therefore inconspicuous, are deliciously sweet. It is a hardy evergreen shrub or small tree, succeeding well in any good loamy soil. It flowers freely in June and July, and is only increased by seeds or by suckers, which are sometimes produced when the plants become old. It was raised in the garden of the Horticultural Society from seeds received from Dr. Royle.—*Botanical Register.*

ACACIA SPECTABILIS. Showy Acacia. (*Greenhouse Shrub*.) Leguminosæ. Polygamia Monœcia.—Among 340 species of Acacia enumerated by Mr. Benth this is one of the finest; and it certainly is the very handsomest we have seen from New South Wales, beautiful as many of them are. Unfortunately our means of publication render it impossible to represent the softness and delicacy of surface which are among its principal characteristics. The leaves and branches are covered with the most delicate bloom, and the flowers, produced in large masses at the end of

the shoots, are of the clearest and softest yellow. It is a native of Wellington Valley, and other places on the east coast of New Holland, where it was found by the late Mr. Allan Cunningham and by Mr. Frazer. For its introduction to this country we are indebted to H. B. Lott, Esq., who presented it to Messrs. Lucombe, Pince, & Co., of Exeter, from whom we received a flowering specimen last April. It belongs to the same section of the genus as *A. discolor* and *dealbata*, but is probably more decidedly a greenhouse plant than they are, for it comes from the country to the north of Sidney, and therefore naturally inhabits warmer latitudes. From both it is known by its broad, smooth, glaucous leaflets, and by the gland found in these species, in connexion with the petiole.—*Botanical Register.*

SCILLA PERUVIANA; var. *discolor*. Dinky-flowered Peruvian Squill. (*Hardy Perennial*.) Liliacæ. *Alexandria Monogynia*.—This plant was sent from Algiers to the Hon. and Very Rev. the Dean of Manchester, and therefore agrees in its native country with *S. peruviana*. At first sight, however, it seems so different that it cannot be regarded as the same species. We must, however, confess our inability, after a careful examination, to discover any other distinction between them than that of the colour of the flowers, which are neither white nor bright blue, as in the previously known states of *S. peruviana*, but a dirty pale fawn-colour. The seed-vessels have exactly the mucronate form ascribed to *S. peruviana*. It is no doubt as hardy as the Peruvian Squill, and although not so handsome, still worth a place in a bulb garden.—*Botanical Register.*

GLOXINIA DIGITALIFLORA. Fox-glove-flowered Gloxinia. (*Stove Herbaceous Perennial*.) Gesneraceæ. *Didymia Angiospermia*.—This beautiful and distinct species is of very recent introduction, and has flowered in several of the London nurseries. It is no doubt of Mexican or South American origin, though we have no information as to its exact native locality. It belongs to the caulescent part of the genus, producing stems from six to nine inches in height, with the flowers so closely arranged as almost to cluster at the top of them. From other allied species it is easily known by its short, somewhat roundish, and very thick, leathery, yet firm and rigid foliage, which is borne in opposite pairs, with scarcely any stalk; and by its particularly long and small-tubed flowers. The latter, too, have an unusually regular limb, which is of a rich purplish crimson hue, resembling greatly the colour of the flowers of *Achimenes grandiflora*. Like the rest of the genus, it requires a peculiarly moist heat while it is growing, and remains dormant in winter, when it should be kept very dry. One of the great points in the cultivation of this plant, and the whole of the tribe, is to give them a highly-enriched and open soil, such as a good light loam, with a large proportion of decayed manure or leaf-soil mixed with it; and, in addition to this, to furnish them at once, after they have fairly started into growth, with a pretty roomy pot. With these aids, and a moist bottom heat, such as is obtained from a dung hot-bed, or in a pit filled with fermenting bark or leaves, they will flourish so luxuriantly as to have quite a different aspect from that which they would present if grown in the ordinary conditions.—*Paxton's Magazine of Botany.*

MISCELLANEOUS.

Iodine in Nasturtium aquaticum. By Dr. Muller. —From the remarkable smell of the fresh herb I was induced to submit it to chemical examination. Several ounces of the fresh herb were burnt to ash, which were well extracted with distilled water; sulphuric acid was added to the solution, but not sufficient to destroy entirely its alkaline reaction; the mixture was then evaporated nearly to dryness, the residue mixed with alcohol, in order to separate the sulphate of potash which had formed, and the filtered solution evaporated to dryness. The residue, treated with nitric acid and starch, afforded the characteristic blue colour of iodide of starch, and mixed with phosphate of soda and oxide of copper imparted to the flame of the blowpipe the well-known green colour of iodine, and at the same time the blue one of chlorine.—*Ann. der Pharm.* for July, as quoted in the *Chemical Gazette*.—[It is a great pity that chemists are not more exact in their language when they travel out of their own branch of science. Here is a very curious fact rendered useless by a neglect of Botanical accuracy. There is no such plant as *Nasturtium aquaticum*. Does the learned author mean the common Watercress, *Nasturtium officinale*?]

Gigantic Hollyhock.—As something has been said of late as to the gigantic height of two Hollyhocks, a correspondent informs us that the Rev. F. V. Lockwood, Vicar of Minster, in Thanet, had a Hollyhock cut down the other day (which may still be seen) measuring the extraordinary length of 17 feet from the surface to the top. Such a one has not, we believe, been heard of before in the island.—*Kentish Observer.*

Fossil Infusoria in Salt.—A curious discovery has recently been made as to the cause of the red colour of the rock-salt received from the Punjab, supposed to be occasioned by oxide of iron. This turns out to be in reality caused by the remains of fossil infusoria, which, though now in a pretty pickle, have all at one time been alive. The red matter seems to be siliceous, and is not acted upon by nitric or muriatic acids. This fact has for some time been familiar to naturalists in reference to much of the rock-salt found in various parts of Europe—it was suspected and now is verified in that of the Seikh country.—*Bombay Times.*

Swan River Vegetation.—**EPACRIDÆ.**—Dr. Lindley describes two species of a new Swan River genus of this order, which he calls *Conostephium pendulum*, and *C. minus*, which he says are both rather pretty shrubs, with one-sided spikes of flowers, whose pallid calyx strikingly contrasts with their conical corollas. These plants are both common near or in the town of Perth, flowering in autumn. The beautiful *Lissanthe verticillata*, with broad leaves in distant whorls, grows among the hills by the side of the York road, and is sometimes called the native Currant. A charming plant of this family is the *Cosmelia rubra*, found in swamps near Albany, King George's Sound. Several of this family bear fruits that may be eaten when nothing better is to be had. I have added many species since Dr. Lindley wrote his Botany of the Swan River colony; among others, a very beautiful *Sprengelia*, met with in the journey to Mount William.—*Drummond, in the Inquirer.*

GARDEN MEMORANDA.

Broughton Hall, Oct. 19.—I have just seen through the gardens at Broughton-hall, the residence of the Rev. John Clowes, to view the Orchidaceous plants of that establishment. On entering the house that is set apart for that purpose, the first thing that

arrested my attention was a noble specimen of *Cattleya Perronii*, with eight spikes of blossom; this gorgeous beauty, I was told, retains its magnificence for a few days only. Not far from the latter object was the inimitable *Odontoglossum grande*; it had only two scapes of five and six flowers each, yet the magnitude of the blossom, and the richness of colour developing itself throughout the whole, rendered the object indeed lovely. Amidst the various plants in bloom was *Miltonia candida*, which had upon it 18 flowering spikes, upon which were expanded 78 blossoms, and was truly a novel beauty. I was informed had the weather been less severe, that it was the intention of the Rev. gentleman to have sent these plants to the Horticultural Rooms, Regent-street, on the 17th inst. *Cattleya labiata* was in fine splendour, and others of the same family giving evidence of following the example; the finest scarlet I ever saw was the *Companettia coccinea* and others of that genus were fast hastening to bloom; the *Oncidium bicallosum* had open on it five large flowers; *Phalenopsis*, I judge, was at home, from the lucid dark green of its ponderous leaves, and the two lusty flower-stems it is now sending forth, more than two feet long; with some 70 or 80 other genera and species, the names of which I had no time to collect. Gentlemen who wish perfection of arrangement would do well to see this house; I have never witnessed anything like it before.—S. T. H.

Fairbairn's Nursery, Clapham.—The houses here are chiefly filled with Heaths. These, notwithstanding the unpropitious season for this tribe, on account of sudden transitions of temperature, have made excellent growths. They were turned out of the houses in the month of May, placed in pits which faced the south, and, except for a few hours in the middle of the day, have been fully exposed to the influence of the sun. This has had the effect of thoroughly ripening the wood, and will no doubt better enable them to stand the winter, and preserve them more effectually from the attacks of mildew. Among these we observed in bloom *Erica Bowleana* and *perolata*, densely covered with pretty white flowers with brown stamens, *mammosa pallida* and *gracilis*, the latter of which, with small pink blossoms, makes a fine mass of bloom, and gives the Heath-house a gay lively appearance at this season of the year, when flowers are scarce. In the same collection were also *Templeana* blooming freely, *Ewerana superba*, with very glutinous light pink flowers, curved, tipped with green, and having pretty black stamens, which contrast well with the light coloured corolla. There were likewise in bloom *E. incarnata*, *pyramidalis*, which flowers abundantly at this season, an excellent specimen of *acuminata longiflora*, with rosy pink blossoms, blooming freely; also *Lamberti rosea*, a pretty flesh-coloured variety, of a darker tint than the old *E. Lamberti*; good plants of *E. princeps* and *mutabilis*, the latter remarkable for the length of time the flowers continue to expand in succession; *verticillata*, with numerous whorls of brilliant scarlet flowers, and *cafra*, with small white fragrant blossoms. The stock of Heaths in the pits was also in excellent condition, and some of them were finely in flower. In a house near the Heath House were some excellent small plants of *Crowea saligna*, blooming freely. The collection of *Epacris* comprises some of the best kinds: these have made good growths, are covered with flower-buds, and will make a fine display when in bloom. Although Heaths and *Epacris* form the majority of this collection, yet there were excellent plants of *Azalea* and *Boronia*; the foliage of the latter, in particular, although shy-growing plants, was of that dark green which is characteristic of good health. Among the Heaths were also a few good plants of *Lechenaultia formosa*, with its brilliant scarlet flowers. Around a cistern in front of the houses were some plants of *Fuchsias* about 3½ feet high, and nearly the same in diameter, these flowered beautifully until they were destroyed by frost. They are cut down to within 2 inches of the ground, and their roots are protected from frost during winter by a covering of old tan bark or ashes.

Beil, near Dunbar, East Lothian.—In the gardens here is a double scarlet variety of the *Pomegranate* in full flower; it is growing in a south aspect, close to a terrace wall, which is built with stone and is 14 feet high. The latitude is 55° 55', and the altitude about 160 feet. The plant is full 30 years old, and 8 feet high. I suppose these rarely flower in this part of the country: I never, before Oct. 15, saw its flowers fully expand in the open border. It is compared by some to a fine double scarlet *Ranunculus*. The Chinese Privet is flowering luxuriantly near the above; it also flowered freely last year, and survived the severe winter of 1837, &c., it is now a strong bushy plant, 9 feet high, and has six distinct separate bunches or racemes of flowers. There is also a seedling *Grewia occidentalis*, which I planted under the same wall in the spring of 1842; it flowered freely during the summer and autumn. In winter I covered it with a doubled mat, which preserved it well, and it has been finely in flower for several weeks, and has made new shoots a foot in length. *Lycesteria formosa* has survived during the last four or five years in the open border as a standard bush; it is now full 5 feet high, and has flowered freely for a long time. It produced seeds in abundance last year: these I sowed in a pot last February, and they produced many healthy plants, which have been exposed in the open air until 19th of Oct. *Lobelia pyramidalis* has also endured the two last winters in the open border here; it grows fully 5 feet high, and is now a fine specimen, having three main or leading stalks, together with side shoots, furnished with flowers from near the base to the top. Its flowers are much more brilliant than those of *L. speciosa*, which is growing and flowering near by. This is likewise full 3 feet high; and *L. fulgens* is about the same height, and is in full bloom. They all endure the milder winters planted out in the open borders here. These, along with other tender roots, I every winter cover with rather sandy leaf-mould, which certainly proves of positive advantage, and, if neatly applied, has by no means an unsightly appearance.—J. Street, Oct. 20.

THE NATURALIST'S CORNER.—No. XVI.

(Continued from page 559.)

59. "There is one striking peculiarity in the works of the Great Creator," observes Wilson, the historian of the birds of the United States, "which becomes more amazing the more we reflect on it, namely, that He has formed no species of animals so minute or obscure, that are not invested with certain powers and peculiarities, both of outward conformation and internal faculties, exactly suited to their pursuits, sufficient to distinguish them from all others; and forming for them a character solely and exclusively their own. This is particularly so among the feathered race. If there be any case where these characteristic features are not evident, it is owing to our want of observation—to our little intercourse with that particular tribe—or to that contempt for inferior animals, and all their habitudes, which is but too general, and which bespeaks a morose, unfeeling, and unreflecting mind. These peculiarities are often surprising, always instructive when understood, and at least amusing and deserving of further investigation."

60. The appellation *John Dory*—given by the fishermen to the Zeus fider, Dory, or Dorée—has no connexion with the name John any more than Anchovy has with that of Ann; though every one must be aware of the punning allusion to eating Dory with Anchovy sauce, as being the legitimate marriage of John Dory and Ann Chevy. The Greeks have left evidence of the estimation

in which they held this fish, by having named it after Zeus, or Jupiter, the father of the gods. Our common name of John Dory is clearly nothing more than a corrupt pronunciation of the French term for the colour of the lighter parts of the fish, which is yellow with metallic reflections when it is alive, and therefore styled *jaune dorée*, or gold and yellow.

61. It is a fact worthy of attention, that the eggs of land-birds are, generally speaking, much more numerous than those of sea-birds; while the sea-birds themselves are much more numerous than land-birds. Sea-birds, indeed, though they have at all times considerable labour in finding their food, have, nevertheless, plenty of it at all seasons; and besides, they are exempted from many of the casualties which land-birds have to suffer; not the least of which are the attacks of beasts and birds of prey. From both of these sea-birds are comparatively free, and perhaps they owe some part of their safety to the unpalatableness of their flesh; for many of them are so rank, that it is doubtful whether even a starved raven—the least dainty, perhaps, of animals—would condescend to make a meal of any of them; and as for the sea-eagles, ospreys, &c., and larger sea-birds, they almost exclusively feed on fish.

CALENDAR OF OPERATIONS for the ensuing week.

Soon after I recommended the use of shallow tanks I was told of a singular adventure by a Suffolk gentleman, which, it was said, would be a practical illustration in favour of my views, but I thought the picture too highly coloured for my purpose. I have since, however, seen the said gentleman, and had the facts of the case from his own lips. They are these: there is a Vinery attached to his house, with a large tank of water at one end, about two feet deep, and heated by the pipes which heat the house passing through it; the lower one is within three inches of the bottom. The pipes, tank, and water were perfectly clean, and it was reasonable enough to suppose that this tank might be used for a warm bath occasionally. The first attempt of this sort was made last winter by the gentleman himself; and I question if the annals of baths and bathing could furnish a parallel case, from the time of the costly baths of the Roman Emperors down to the hovel baths of the Russian boors of the present day. The heat of the water was supposed to be from 90° to 100° when he made a plunge into the tank, and in the next instant he was immersed up to the chin. "You may imagine my horror," he says, "when I found that I was both scalded and nearly lost the use of my limbs at once, so that I had great difficulty in getting rid of my bath," &c. The truth is, however, he had a double bath; the surface of the tank formed a tepid bath, while the bottom was a *frigidarium*, and instead of being scalded, his limbs were contracted by the cold water at the bottom! All this is literally correct, and is moreover an apt illustration of the disadvantage of deep tanks, as applied for bottom-heat. Now, a tank heated by circulation has a great disadvantage over the above tank, in so far as a thin layer of water only moves on the surface, and this layer glides along without communicating heat to the next layer below it, as water, being a powerful non-conductor, cannot thus be heated by contact; you might as well try to mix oil with it. Water is, however, a very powerful radiator, and consequently a bad retainer of heat. A slate covering is, on the other hand, a good conductor, and so, also, is a layer of moist sand over the slate; on this pots may be placed. Then a powerful radiating surface is presented to a good conducting surface of equal extent—an excellent arrangement; and we all know that bottom-heat is sufficient for our purpose if it is from 80° to 100°; it therefore remains only for calculation to know what heat in the water is necessary to give through the slate a bottom-heat of, say 100°; would not 120° be sufficient heat for the water for this purpose?—but, for argument's sake, let us say that a heat of 130°, or even 140°, will be necessary: and I firmly maintain that this is too high for pot-culture, unless the covering and plunging materials are badly arranged. Here, then, the question admits of the precision of a geometrical problem. When the surface of a body of water is heated to 140° by the common circulation, at what depth does the same body of water indicate 100°? that being the highest degree required for bottom-heat. Any experiments to answer this question have not yet been published, but I will advert to it soon. Meantime I am very anxious to have the point settled, as I was the first who led people astray respecting the depth of gutters, when I published and recommended the gutter system. Instead, therefore, of finding any fault with Mr. Rendle for the depth he recommends, I have rather to apologise to him and others for leading them, though indirectly, into error. The other great desideratum, of supplying moisture along with heat for raising the temperature of masses of earth, has been altogether overlooked by former writers, and among them are some of the best gardeners in the country. Indeed many of the plans that have been proposed for the last ten years for this purpose are a great deal worse than useless. Mr. Rendle might well appeal, and say to gardeners that any slight defect in his apparatus, which is very simply remedied, owed its existence to their own writings. Mr. Ainger, whose long papers on radiant heat, &c., two years ago, removed mountains of prejudices on that subject, is the only writer that I am aware of who took a right view of heating beds or borders of earth from below, and that, too, contrary to the views of a host of gardeners and scientific men, so called. See vol. i., page 580.

I.—KITCHEN-GARDEN AND ORCHARD.

In-door Department.

PINERY.—November is the dulllest month of all the year, and the most trying to all plants in confinement, and Pines among the rest. A drier atmosphere, less watering, and a steady bottom-heat of about 80° or 85°, are about the right points to be attended to, and also that no drips get into any of the pots. The practice of growing Pines in peat is, I find, becoming prevalent. Mr. Mills, of Gunnersbury, has proved, long ago, that Cucumbers of the finest description may be reared in peat alone. I believe an excellent plan for growing Pines out of pots will soon be given in the *Chronicle*; very fine plants are now growing on this plan, and next year we may probably hear of Providence Pines weighing from 10 to 12 lbs. regularly, and Queens from 5 to 6 lbs. Those of inferior quality from the West Indies will not pay for gathering if we attain this excellence at home.

VINERY.—If the house is free from drips, late Grapes are less exposed to dangers now than formerly, notwithstanding the season being more dull, as by this time all parts of the house are thoroughly dried, and the weaker bunches and worst berries have already been removed, so that what remains now may be supposed to be in good condition for holding out for a long time.

CUCUMBERS.—I have introduced this heading to-day to answer a query or two respecting the new Suffolk varieties, and giving air in winter. Where they are grown with strong linings air must be admitted regularly, as recommended by Mr. Mills; but we grow them here over hot-water, and we often give them no air for a week together, except what is admitted by the door when we go in and out. Out of seven sorts we tried this season, by way of experiment, Stewart's Ringleader was the best bearer; it is also very handsome: but this variety is excelled by Mr. Latter's Victory of England; this we have not yet tried; but as it is well known I put no stress whatever on the shape or size of a Cucumber, if it is a good bearer: this is not the right quarter to apply for answers on technical points.

FRAMES.—Where Cauliflower, Lettuce, and Endive plants are protected in frames, the grand point to be attended to is to have the lights drawn off whenever the weather is fine, and to let in no rain all the winter; wet or damp is more injurious to these and other half-hardy plants than cold winds and even a slight frost. Stir the surface of the mould between them occasionally.

Out-door Department.

One of the best gardeners in Perthshire was, I believe, the first

who recommended (in the Caledonian Hort. Soc. Memoirs) to plant out Shallots and Garlic in October or beginning of November, as a preventive against maggots. This was some 30 years since, and the suggestion has been more or less acted on ever since. Some writers have maintained that the absence of all animal manures is the great secret, and that you can safely plant them in February or March, if you choose a light rich border for them which had not been manured for a year or two. Now these seem very trifling matters; granted,—but the question involved is of the utmost importance in other branches of gardening, and one, too, on which a great deal of popular error prevails. When these bulbs are planted in the autumn they begin to form roots immediately, which extend widely before the tops begin to grow in the spring; there is then a powerful command of nourishment provided for the leaves as soon as they are ready to receive it, and here is a grand point to be attended to in the cultivation of all bulbs whatever; let them, if possible, make a large portion of their roots before their leaves are excited. Again, when Shallots are planted out in the spring, their roots and tops begin to grow simultaneously, and it often happens that some weeks of favourable weather is then experienced, and the leaves in that case grow faster than the roots, and exhaust the resources of the bulbs faster than the roots can make up the deficiency, and as a matter of course the bulbs are in a measure so far exhausted. Thus it is with other bulbs; they are potted and placed in a forcing-house at once; and before there is time for the emission of roots the leaves are in full growth, feeding on the store of the parent bulb, which has little or no supply from the roots. The plant grows vigorously and flowers well, nevertheless; because there was ample store laid up for that purpose at the last growth, but by this mismanagement there is no time to store for the next growth, and the bulb dwindles away and often dies.

CROPS.—All crops for winter storing should now be out of the ground, and carefully packed up in sheds, outhouses, and cellars; they will require to be looked over from time to time, to see that no dampness gets among them. Onions are apt to rot about this time, if put up too close together; indeed all these little matters, though simple enough, require some attention and forethought. When the ground gets a little dry on the surface, see that it is stirred among young crops of Winter Spinach, Onions, Lettuces, Endive, &c., and cut off any decayed leaves. If you are in the habit of mulching your Artichoke-beds, see that you are not doing more harm than good by covering the ground when it is too wet. Any time between this and Christmas will do, when the ground is quite dry; and when you can get it in this state you may give a good earthing-up to the Celery-trenches—it will help to keep the frost from the plants.

ORCHARD.—I need scarcely repeat that all trees may be pruned and planted now, and the sooner the better. Root-pruning is also best done in the autumn, but it requires judgment; only those roots that strike downwards ought to be cut, at least until you see what effect that will produce; after all, I would rather take up an over-luxuriant tree at once, cut away a few of the stronger roots, and then replant it; but when other work is pressing, root-pruning takes less time, and will have a good effect so far.

II.—FLOWER-GARDEN AND SHRUBBERY.

In-door Department.

STOVE.—Last year I increased a large number of *Æschynanthus grandiflorus*, and to get large specimens of them early, I planted 12 or 15 of them in one large pot, placing them round the sides of the pots. There was plenty of drainage, and some rough pieces of wood in the centre of the pots, from the drainage up to near the surface; the rest was filled with lumps of peat mixed with rough leaf-mould; the shoots were allowed to hang down over the pots all round, and they have grown from two to three feet this summer. About the end of August I turned them into a cool, dry Vinery, to stop their growth, and allowed them very little water; still they kept growing on, until within the last fortnight, and I suppose it will be near Christmas before they will bloom. About the same time (August) I turned out a quantity of *Cyrtopodiums*, after they had made a strong growth in bottom-heat: these were planted in strong soil, similar to that in which Pines are usually grown; they have been now two months without a drop of water, and are placed in a dry Vinery, and their leaves are only just beginning to discolour. I shall leave them as they are until their leaves are all dead, and then store them up in a dry room until next February. Every one of the *Orchideae* which cast their leaves in the autumn, and have stout stems, or large pseudo bulbs, ought, in my opinion, to be treated exactly like these *Cyrtopodiums*, that is, when their full growth is finished. It is the continual stimulus kept up in the houses which prevents these charming plants from flowering after they attain their full size.

GREENHOUSE.—We must suppose the greenhouse now filled with all kinds of plants suited to nearly the same mode of culture. These ought to have as much air as the house and the state of the weather will admit. The inside should be kept as dry as possible; and for this end the watering should be done early in the day; no plant should receive more water than is absolutely necessary, and the whole ought to be tidy, orderly, and free from dead leaves and insects, &c.

CONSERVATORY.—The *Chrysanthemums* will have a superiority here for some time, and well do they deserve it. How glad we all are to hear of Mr. Fortune's success in the East, whence we first received these fine plants, but which we have so manufactured that the Chinese would scarcely know them! The climbers must now be gradually pruned as they get out of flower, but this must be done very gradually, so as not to make any part too naked at once; and if the work is finished in six weeks hence it will be time enough. Keep the house rather close and dry for the rest of the season, and from 40° to 45° by artificial means, but give a little air every fine day, to have it sweet.

PITS AND FRAMES crammed with half-hardy plants require now the common routine of keeping them clean, sweet, and dry; even the night-dews had better be kept from them after this time, but have the lights off all day when it does not rain. "If the subject proves interesting to the readers of the *Chronicle*," says Mr. Errington, relating to winter-flowering plants. What can be more interesting than this subject? He must not be allowed to put off his remarks on the culture and management of the plants included in his list until the "long winter nights." Let us have them as soon as possible.

FLOWER-GARDEN.—It occurred to me the other day, on seeing the men pulling up some *Heliotropes* with thick long roots, that if bundles of these roots were cut off and placed in pots among moist sand, leaving an inch or so of the thick ends out of the pot, they might easily be kept over winter, under the stage of the greenhouse, &c.; if so, there is little doubt they would push away, and make strong plants next spring; and a No. 12 pot could hold 600 roots, which might be cut into twice or three times the number as soon as they began growing in the spring; thus one large pot would hold more *Heliotrope* plants in embryo, as it were, than would be necessary for furnishing the largest establishment in the country for one season, and the trouble of keeping young plants of these over the winter would thus be obviated. I may be too sanguine on the point, but I see no reason why the thing should not answer well enough, not only with *Heliotropes* but with *Pelargoniums* for hedging out, and no doubt many other plants for furnishing the flower-garden. Here, then, is a happy idea at this dull season, which will cost little time or trouble to prove, and which, if it answers, will be of great use. I have begun the experiment, by storing a few pots of the roots of different plants, and I wish others to make the same trial. Our farming friends all over the country will best understand how this experiment is to answer when they learn that the roots of these tender plants are studded all over with latent eyes, like the roots of docks and thistles, and of other weeds which are so difficult to eradicate; and when these tender roots are preserved in a moderately moist state, in a dry room or cellar, from the winter's frost, and from damp, they are supposed to grow away freely in the spring, by the natural warmth of the season, or by being forced. Some of the more delicate *Pelargoniums* I have taken with an inch or so of the stems attached to the roots, to afford them greater nourishment, and these I shall divide in spring according to the number of roots, or rather according as I may want plants. These sort of roots are more easily kept than *Dahlia* roots, as they have eyes all over their

surface, and if one part fails another may succeed; whereas if you lose the part with the eye of Dahlia-roots all is lost, and so with the Salvia patens, Commelinas, and such-like plants. But I presume I have said enough to induce persons to join in solving this question. —D. Beaton, *Shrubland Park Garden, Ipswich.*

State of the Weather near London for the week ending Oct. 26, 1843, as observed at the Horticultural Garden, Chiswick.

Oct.		Bar. & Wind.		Thermometer.		Wind.	Rain.
		Max.	Min.	Max.	Min.		
Friday	20	50.2	30.104	57	37	S.W.	.25

Thursday	26	50.614	29.479	54	28	W.	
Average		50.012	29.750	57	39	4.9	.71

Oct. 20. Slight haze; fine; cloudy; rain at night.
21. Cloudy and damp; fine; slight showers clear with sharp frost.
22. Fine, clear, and fine; stormy and wet at night.
23. Cloudy and fine; clear.
24. Flying clouds; densely clouded and rather boisterous; overcast; heavy rain at night.
25. Dense hazy clouds; cloudy and fine; clear and frosty.
26. Frosty; very fine; clear, with a few white clouds; frosty at night.
Mean temperature of the week 25° below the average.

State of the Weather at Chiswick during the last 17 years, for the ensuing Week ending November 4, 1843.

The highest temperature during the above period, occurred on the 20th, in 1833—thermom. 67°; and the lowest on the 30th, 1836, and 29th, 1842—thermom. 23°.

REPORT ON COVENT-GARDEN MARKET, For the Week ending Oct. 27, 1843.

LITTLE variation has taken place in the prices of most articles during the past week; but the Market still continues to be rather dull. Fruit has been plentifully supplied during the week, and has, generally speaking, rather improved in quality. Pines, season, are nevertheless good and sufficient to meet the demand. Grapes principally consist of Black Hamburgh; these are selling at from 2s. to 4s. per lb. Among Plums we noticed the Imperatrice. Damsons still continue plentiful, and are of good quality. A few Peaches are still to be met with in the Market, but are not sufficiently good to be quoted. Figs are also nearly over for this season. Among Apples we noticed some good specimens of Royal Russet; these are selling at 4s. 6d. per bushel; also a few good Nonpareils. Pears chiefly consist of Cansel's Bergamot, Chaumontel, Beurré Diel, Brown Bourré, and Marie Louise; these good kinds are, however, scarcely sufficient to meet the demand. A few good Melons are still brought to the Market; Spanish ones are selling at from 1s. 6d. to 3s. each. Cucumbers are rather scarce, and are of inferior quality. Vegetables of almost every kind have been abundantly supplied. The frosty weather has greatly injured Tomatoes and entirely destroyed Vegetable Marrows and Sweet Basil. Cabbages and Turnips are very good and plentiful, and Carrots are sufficient to meet the demand. There has been some excellent Cape Broccoli brought to the market during the week; this is selling at from 1s. to 2s. per bundle. Endive is sufficient to meet the demand, and Shallots are good and plentiful. A few green Peas have made their appearance during the week. Cut Flowers chiefly consist of Erica gracilis, caffra, a rather fragrant variety, and acuminata longiflora, Amaryllis guttata and belladonna, Lechenaultia formosa, Combretum purpureum, Gardenia radicans, Primula sinensis, Neapolitan Violets, Fuchsias, Pelargoniums, Camellias, Calceolarias, Verbenas, China and Perpetual Roses.

PRICES, SATURDAY, October 28, 1843.—FRUITS.		Vegetables.	
Pine Apple, per lb., 3d to 7s	Onions, per 100, 6s to 10s	Broccoli, per bundle, 1s to 2s	Onions, Spring p. doz. each, 1s 6d to 3s
Grapes, hothouse, per lb., 2s to 4s	Cucumbers, per brace, 4d to 8d	Brussels' Sprouts, per lb. sv., 1s to 2s	— Large, per bushel, 2s to 3s
Portugal, per lb. sv. to 6d	Gherkins, per 100, 5s to 7s	Cabbages, per doz., 6d to 1s	— Spanish, per doz., 1s 6d to 5s
Melons, each, 1s 6d to 4s	Green Capsicums, per 100, 1s to 2s	Greens, per doz., 1s 6d to 2s 6d	— pickling, p. hf. sv., 2s 6d to 4s 6d
— Dutch, each, 1s to 2s 6d	Red — — — — — 4s to 8s	Cauliflowers, per dozen, 1s 6d to 2s	Shallots, per lb., 6d to 9d
— Spanish, each, 1s 6d to 3s	Almonds, per peck, 6s	Beans, kidney, per hf. sv., 4s to 6s	Chillis, per 100, 1s to 2s

— Imperatrice, per pun., 1s to 2s	Nuts, per bushel, — — — — — 4s to 8s	Oranges, per 100, 10s to 30s	Cos, per score, 1d to 1s
Damsons, per sv., 4s to 4s 4d	— Brazil, 1s 6d to 2s	Lemons, per doz., 6d to 2s	Celery, per bunch, 6d to 2s
Apples, dessert, p. bush., 2s to 6s	— Hazel, 2s to 4s		Mushrooms, per pottle, 1s 6d to 2s
Apples, Kitchen, p. bush., 2s 6d to 6s	— Barcelona, 2s to 2s 4d		Wallnuts, per bushel, shelled, 16s to 20s
Pears, per half-sieve, 3s to 6s	— Col 12s		Small Salads, per punnet, 2d to 8d
— per half-sieve, 3s to 6s			Watercress, per doz. sm. l. un. 3d to 4d
Oranges, per 100, 10s to 30s	Pilberts, English, p. 100lbs, 5s to 6s		Parsley, per doz. bunches, 1s 6d to 2s
	Marberries, per 100, 3s to 4s		Tarragon, per bunch, 2d to 3d
	Tomatoes, per 100, 3s to 5s		Endive, per score, 1s to 1s 6d

NOTICES TO CORRESPONDENTS.

MR. PAXTON'S COTTAGER'S CALENDAR.—At the earnest solicitation of many of our Subscribers, we have determined on again reprinting Mr. Paxton's "Cottager's Calendar," in the form of a small volume, for general distribution, price 3d. each copy. It may be ordered of all booksellers. Gentlemen wishing to distribute copies among their cottage tenantry, may have them delivered in any part of London, by remitting a post-office order to this office, at the rate of 5s. for every 25 copies.

COMMUNICATIONS from the following CORRESPONDENTS are in type, and are only waiting till room can be found for them:—T. G. Clithero, G. Fleming, J. L. Newhurst, W. Paul, B. Maud, A. Practical Man, Facile, M. Saul, J. Wighton, J. F. McElroy, Atlas, A Friend to Truth, and A. B.

MANURE.—A practical Farmer.—When bones are digested in sulphuric acid the result is superphosphate of lime, and they are converted into a soluble form from an insoluble state.—N. F.—Tobacco contains a very large quantity of saltpetre, and therefore its ashes will be excellent manure, applied as woodashes usually are.

ORCHIDACEAE.—Orchis.—As the larger part of the Dendrobiums are pendulous and the species are very numerous, you had better ask the nurseryman with whom you deal for such as are of that description. Among the best known are D. Picardi, macrostachyum, cucullatum, moschatum, chrysanthum, Cambridgeanum, and Devonianum.

CAPE IRIDACEAE.—A Subscriber.—Too little is known respecting the habits of Cape Iridaceae to enable us to answer your question positively. We would think, however, that the manure which suits Vines will not hurt them.

SALVIA PATENS, &c.—A Lady.—The roots of Salvia patens may be taken up this season, and preserved in sand during winter. Onothera macrocarpa may be propagated by cuttings put in about the middle of August or beginning of September.

AZALEAS.—An Old Subscriber.—These may be struck from cuttings of the less than half-ripe wood, if you have skill in the art of striking.

DAHLIAS.—A. B. C.—We recommend you Phenomenon, Beauty of the Plain, Beauty of Sussex, and Bridesmaid.*

CARNATIONS.—W.—Scarlet Bizarres: Twitchett's Don John, Martin's Splendid, Headley's William Cobbett. Crimson Bizarres: Puxley's Prince Albert, Cartwright's Rainbow, Ely's Lord Milton. Pink and Purple Bizarres: Strong's Linnæus, Sealey's Princess Royal, Hogg's Epaminondas. Purple Flakes: Pollard's First-rate, Mansley's Beauty of Woodhouse, Hogg's Colonel of the Blues. Scarlet Flakes: Jones' Brilliant, Chadwick's Brilliant, Weldon's Earl of Lichfield. Rose Flakes: Brook's Flora's Garland, Ely's Lady Ely, Wilson's Harriet.*

FUCHSIAS.—E. R. R.—Smith's Queen Victoria, Exoniensis, and Standish's Colossus. Müller's Constellation is the same in habit as F. fulgens, flowering in bunches at the ends of the branches, and in this respect differs from the others.*

FUCHSIA CORYMBIFLORA.—G. S. M.—Your plant is Fuchsia corymbiflora; it is a robust grower, and often shoots up with a single stem, which generally attains to the height of 5 or 6 feet. A good way to render it dwarf and bushy is to bend it down, and train it for some time horizontally; this will cause it to throw out laterals, and produce a more general diffusion of the sap, which will in some measure check luxuriance and throw it earlier into bloom.

MAGNOLIA SEED.—H. L.—Take the seed out of the cones and sow it at once in a mixture of loam, coarse peat, and sand. In the spring start it in a little bottom-heat.

INSECTS.—A Scot.—The insects sent are the chrysalides of two of the "White Cabbage Butterflies" (Papilio Brassicae and P. Rapae), and if he will refer to the 3d Vol. of the Royal Agricultural Society's Journal, he will find at p. 36 their histories fully detailed, with engravings illustrating their economy. The Caterpillars destroying the foliage of the Gooseberry-bushes are now buried in the earth; the best mode of destroying them is to scrape away the earth from the stems, and turn it up in trenches between the bushes, so that the frost and wet may destroy them, and a good dose of lime would no doubt assist in killing them. R.—F. W. H. will find the queries answered under his former signature of an "Original Subscriber." R.

BOOKS.—A. P. Z.—We do not know Monsieur Etienne Denisse's "Flore d'Amerique;" we never, indeed, heard of it or its author before; but this we know, that if the flowers of the Genipa-tree are represented blue, M. Denisse is not to be trusted—for they are certainly white.—L. L.—You must excuse us, if book-sellers will not advertise their books they must be contented with not selling them. We will not do it for them, either directly or indirectly.

BOTANY.—S. W.—Haloagrace must stand close by Onagraceae, whatever the position of the latter may be. It is of little real moment whether we consider Haloagrace a distinct order, or what some Botanists term a degradation of Onagraceae, analogous to Sanguisorbeae in the relation of that group to Rosaceae proper.

CONSERVATORIES.—M. A. M.—There is no reason why your Conservatory should not be stocked at once, provided the plants are not exposed to frost on their way to it. Oranges and Camellias and all such plants will do very well notwithstanding the advanced period of the season. We would not, however, plant soft-wooded things, such as Passion-flowers and the like, till the spring. In the meanwhile they may be kept in pots.

ARTER-MATH HAY.—J. S. S.—Latter-Math Hay when well got up is nearly as nutritious food for cows and sheep as the first crop. It is not good for horses. M.

LAWNS.—F. Yates.—If you water your lawn with gas-water and water, mixed, in the proportion of one of gas-water to five of water, it will destroy the Moss without injuring the Grass. You may sow Grass-seeds in two days after the gas water has been applied.

BOWLING-GREEN.—J. S. Dill.—At an expense of little consequence in forming a bowling-green, we would advise you to water the ground well, before beginning to prepare it, with undiluted gas-water, which will effectually drive away worms and slugs. Except a person were on the spot it is impossible to give precise directions; but in a green 30 yards by 12 we think it will be advisable to fill up the ditch at the sides, and retain the one at the top and bottom only, and slope in the sides in the way you mention. When the old turf has been removed, the ground may be dug over as equally as possible about six inches deep, and then raked perfectly level. In this way it may remain for a week or two, until it has got a good heavy shower, and become somewhat subsided, when it should be again raked, made quite level, and the new turf laid down. Where the surface is required to be particularly neat and level, as in a bowling-green, the turves should be all of an equal size and thickness; and in order to obtain this, a wooden box may be made of a convenient size and about one inch deep. Into this the turves may be put and beaten to the proper size, previous to laying them down.

HANDLIGHTS.—Mops.—The best material is copper; the next, iron; then zinc, and last lead. The form is quite a matter of fancy, only it is useful that the top should be movable. With regard to boilers, we really cannot say which is the best; all the modern ones are good in their way; perhaps, for ordinary purposes, those made in the form of a truncated cone are most convenient, because they insure the dropping of the fuel as it consumes.

MISCELLANEOUS.—An Old Subscriber.—We are not aware that there is any better sort of lime-kiln than that figured in a previous No. We cannot judge of the cause of your Currant-leaves falling off, possibly, they have too dry a bottom.—J. R. J.—The Lady Fern, Asplenium Filix femina.—Campanula.—Neither C. stricta nor grandis, but some species near C. cespitosa, C. Atlas.—We have not before seen a Scotch Pine variegated like yours; but in other Conifers the loss of colour is not uncommon. It always, however, appears connected with a diseased state of the plant, for the appearance wears out when the plant is transferred into richer or better soil. The male and female Hop on the same plant is, to us, new.—Donkum.—We are unacquainted with your plant, which seems a fine thing. Send us its leaves, and we will endeavour to ascertain its name.—Probus.—Your plant is Asclepias curassavica, and requires a stove. There is a chance whatever of its thriving in the open air, even in Cornwall.—J. Sauter.—Ceanothus americanus.—J. P. M.—Your Pears are noticed under the initials "S. P. M."—J. M. S.—No flower is double in which some of the petals are not transformed into petals; a mere proportional addition to the number of parts does not constitute a double flower. When the parts of a flower stand in their simple ratio to each other, their number is exactly the same, and not two stamens to each petal, as you imagine.—Y. E.—Abutilon striatum flowers very freely if exposed sufficiently to light, and kept warm enough. When a plant which in general flowers abundantly, fails to do so, the cause can hardly be guessed at without inspection. We suspect cold to be your enemy.—Chenach.—Physalis Alkekengi, a common hardy annual. Whoever told you that it was Onothera Lindleyana knows nothing of the names of plants.—Z.—Sow Camellia seed as soon as ripe in a gentle bottom-heat. Sow Dahlie Lanicola seed in the spring, keeping it in sand in the meanwhile, after it ripens. Leaves moistened with gas-water are rotten and fit for use in three months. Sand will answer the same purpose as road-dust for Asphalte walks, provided it is river-sand, and perfectly dry. We cannot recognise your Bignonia by the drawing; if intended for Bignonia jasminoides we cannot compliment the artist on his skill. That is figured in the "Botanical Register," t. 2002. We have no skill in killing fleas on parlour dogs; if any correspondent has he will no doubt oblige a good many besides yourself by communicating his plan. The ladies especially would be infinitely indebted to him. Other questions next week.—Paul Jones.—Dahlia roots should be taken up when the leaves have become

blackened by frost. —G. P.—There is no improvement upon the old Bass mats that we know of. —J. W.—Your Phacelia caracalla is an old plant, well known, but we scarcely ever saw a better specimen. —J. M. K.—The best information respecting Grass seeds will be found in Lawson's pamphlet on the Cultivated Grasses, &c. —G. Knight No. 1, Common Lemon, 2, a small Madras Citron; 3, Bergamot Orange, 4, Marie Louise; 5, probably Beurré Rance; 6, Louise Bonne of Jersey. No. 7 seems to be some Cunoniaceae plant, but it cannot be determined in the absence of flowers. —A. B.—If your seedling Pelargonium has not been noticed it has not been received. —C. A., Yorkshire.—The rust on your C. rapes has been occasioned by wet lodging too long on the berries, before the bloom, which serves as a protection, has been secreted. —W. M.—1, Linum catharticum; 2, Linaria spuria; 3, Mercurialis perennis; 4, Gnaphalium uliginosum; 5, C. sylvaticum; 6, Genista Anglica; 7, Trifolium arvense; 8, Arenaria rubra; 9, Veronica scutellata; 10, Galeopsis Ladanum; 11, Erythraea centaurium; 12, Euphrasia officinalis. —T. W. Galeopsis Ladanum. Baxter's work contains descriptions of all the genera of the British flowering plants. —Holcus.—Crataegus coccinea. You will find a list of Conservatory climbers given at p. 607 of the year. —E. T.—Ipomoea quamoclit. The leaf is infected with red-spider and green-fly. —R. G.—Sorghastris grandiflora and a Beta unknown to us. —Scrutator.—Mr. John Wilmot, Isleworth. You are too late for this week.

SEEDLING FLORISTS' FLOWERS.

FUCHSIAS.—M. Todd.—Your seedling is a very pretty variety, but it is not sufficiently distinct from other sorts we have seen to send out, unless the habit is particularly fine.* As usual, a host of letters has arrived too late for answers this week.

ERRATA.—In the account of the Grey Wagtail, at p. 737, col. c, line 14 from bottom, for "elders" read "elder;"—at p. 738, col. a, line 17 from top, for "tail-coverts" read "tail-coverts;"—at p. 737, col. c, line 35 from bottom, for "No. V. for June," read "No. VI. for June;"—and at p. 737, col. b, in the account of the Lytham Agricultural Association, at line 13 from beginning, instead of "in the county of Lanark" read "in Lancashire."

NEWS OF THE WEEK.
