**FIRST**  
ADDITIONAL SUPPLEMENT  
TO  
LOUDON'S ENCYCLOPÆDIA OF PLANTS;  
COMPRISING  
THE SPECIFIC CHARACTER, DESCRIPTION,  
CULTURE, HISTORY, APPLICATION IN THE ARTS,  
AND EVERY OTHER DESIRABLE PARTICULAR RESPECTING  
ALL THE PLANTS  
ORIGINATED IN, OR INTRODUCED INTO,  
BRITAIN,  
BETWEEN THE FIRST PUBLICATION OF THE WORK IN 1829,  
AND  
**JANUARY, 1840;**  
WITH  
A NEW GENERAL INDEX TO THE WHOLE WORK.

---

PREPARED BY W. H. BAXTER, JUN., UNDER THE DIRECTION OF J. C. LOUDON;  
AND REVISED BY GEORGE DON, F.L.S.

---

FIRST  
ADDITIONAL SUPPLEMENT  
TO  
THE ENCYCLOPÆDIA OF PLANTS;  
BRINGING DOWN THE WORK TO MARCH, 1839.

Prepared by WILLIAM H. BAXTER, under the Direction of J. C. LOUDON;  
and finally revised by GEORGE DON, F.L.S.

---

N.B. A † prefixed to genera or species indicates that such genera or species have been already registered, but are here repeated with more perfect details.

---

Page 8. CLASS II. — DIANDRIA. 2 STAMENS.

Order I. MONOGYNIA. 2 Stamens. 1 Style.

2502. 47a. *Belopérone*. Calyx 5-parted. Upper lip of corolla concave, lower one trifold. Stigma subulate. Capsule compressed from the base to the middle and empty; but swollen, and containing 4 seeds at top.  
2501 64a. *Streptocarpus*. Cal. 5-cleft. Cor. tubularly funnel-shaped; Limb 5-lobed, nearly equal, oblique. Stam. 4: 2 front ones fertile; the other 2 tubercle-formed and sterile. Valves of capsule twisted. Stigma 2-lobed. Seed minute, naked.
- 

Page 30. CLASS III. — TRIANDRIA. 3 STAMENS.

Order I. MONOGYNIA. 3 Stamens. 1 Style.

2502. 80a. *Bétkia*. Cal. 1-toothed, deciduous. Cor. funnel-shaped, 5-lobed. Caps. 1-celled, 1-seeded.  
2503. 94a. *Streptanthèra*. Perianth 6-parted; tube very short. Anthers twisted round each other. Ovar. 6-angled, also a little twisted. Ovula kidney-shaped.  
2504. 107a. *Anisánthus*. Spathe 2-valved, subringent. Perianth unilabiate; limb equal, 6-parted; upper segment long, cochleariform. Stigmas 3, dilated, entire. Capsule triangular, 3-valved. Seeds cumulated, winged.  
2505. 114a. *Dietes*. Flower 6-parted, equal, spreading. Stigmas petal-like, bifid.  
2506. 114b. *Leucocóryne*. Perianth salver-shaped, 6-parted, 3 fertile combined, and the 3 sterile on the limb, fleshy, and sometimes antheriferous. Style terete. Stigma simple.  
2507. 114c. *Triteleia*. Perianth funnel-shaped, 6-cleft. Stamens 6; upper ones opposite the petals. Stigma 3-lobed. Ovarium many-seeded.  
2508. 117a. *Sisyrinchium*. Spathe 2-lyd. Calyx 0. Petals 6. Filaments connate. Style 1. Caps. 3-celled, inferior.  
2509. 117b. *Remédmia*. Perianth 6-parted. Filaments connate or distinct. Stigmas 3, involute, filiform, acute. Capsule obovate. Seeds angular.
- 

Page 76. CLASS IV. — TETRANDRIA. 4 STAMENS.

Order I. MONOGYNIA. 4 Stamens. 1 Style.

2510. 237a. *Conospermum*. Cal. ringent; Upper lip 2-lobed. Nut pappose, inversely cone-shaped.  
2511. 237b. *Botryceras*. Cal. 4-parted. Cor. 4-petaled. Style arcuate. Nut subulate.  
2512. 238a. *Anadèmia*. Calyx nearly regular. Gland 0. Follicle 1-seeded.  
2513. 238b. *Agdistachys*. Calyx regular. Filaments distinct. Stigma lateral. Ovary 1-seeded.  
2514. 295a. *Lipóstoma*. Limb of cal. 4-parted. Cor. tubular at base, and ventricose at throat, bearded inside. Stam. inserted in throat. Style capillary. Stigm. 2, subulate, hispid. Caps. globose, 2-celled, opercul., many-seeded, often 1-celled. Seeds small, angular, scabrous.  
2515. 306a. *Beruhâmia*. Flowers disposed in heads. Invol. of 4 petal-like parts. Cal. 4-toothed. Petals 4, flesher Fruit constituted of many pomes grown together. Endocarp 2-celled. Seeds solit. and pendul. in each cell.

## CLASS I. — MONANDRIA.

## MONOGYNIA.

## Essential specific Character.

- 16713 Lvs. discol. Inf. petals emargin. Flws. didymous peduncul. Brac. cuneate convol. Inner limb of cor. trifid  
 16714 Probably not distinct from *C. flaccida*. The lvs. are shorter, less glauc. Inner pet. distinctly cuspid. and unequal  
 16715 Lvs. oblong-ovate abrupt acumin. Flws. mostly in pairs on short pedun. Brac. broad-ellip. concave rounded  
 16716 Stemless, Lvs. elliptic blotched above, beneath purplish  
 16717 Leaves oblong costately veined glaucous beneath, Heads sessile many-flowered  
 16718 Leaves distich. spread. horizont. oblong apicul. lucid little undul. short. th. petioles, Heads termin. obl. Brac. obtuse undul. loose short. th. flws.  
 16719 Leaves oblong-lanceolate acuminate, Scape erect rigid terete  
 16720 Leaves acuminate 2-in. broad, Bracteas ciliated 1-flowered  
 16721 Leaves few oblong-acute, Spike capitata, Bracteas of a fine deep rose-red colour margined with a white line

- 16722 Stemless, Lvs. suborbicul. acute varieg. above, Flws. few radic. fascic. erect sess. Outer limb shorter, Inner  
 16723 Lvs. oblong dimidiato-cordate petiolate, Spike termin. Outer bract or spathe elegantly nerved transv. striped  
 16725  
 16727  
 16728

and Miscellaneous Particulars.

public a figure and description, however imperfect, of one of the noblest plants that has graced the pages of the *Bot. Mag.*"

## CLASS II. — DIANDRIA.

## MONOGYNIA.

- 16724 Leaves elliptic-oblong tapering to base taper-pointed with serrated edges  
 16725 Lvs. oblong approach. ovate coriac. glossy waved acumin. Panic. term. Cal. with 4 minute imbric. bract. at  
 16726 Lvs. ellipt.-lanceol. attenuated both extrem. white and veined below wrinkled, Branches very slightly wart.  
 16727 Lvs. altern. pinnate, Leaf. 7 ovato-lanceo. or oblong acumin. Pedun. elongate. 1-fwd. Segm. of cor. 5-6  
 16728 Pedic. erect, Tube of cor. much longer than cal. Lower lip middle segm. bicornute lateral linear, Upper lip  
 16729 Tube of cor. equal in length to cal. Lat. segm. equal in length to the middle which is bifid, Upper lip ov.-acum.  
 16730 Lateral segm. of lower lip shorter than middle one which is sagittate, Upper segm. rhomboid-oblong retuse  
 16731 Spikes terminal, Bract. rounded convex entire veined, Tube of cor. a little swollen upwards  
 16732 Pedun. axill. & term. often prolif. sometimes wanting, Bract. constituting dbl. invol. Tube of cor. very long curved remark. twisted

History, Use, Propagation, Culture,

51. *Calceolaria*. The varieties and hybrids of this genus, which have been raised in different parts of the country, are almost innumerable, and some of them are of very great beauty. They are all of the easiest culture, and require very little heat. Most of them continue flowering several weeks, and some of them the greater part of the summer.

- 16733 Bran. swoll. at joints, Lvs ovate.-acum. obsc. serr. Flws. in short axil. 2-3-fwd. racem. erect, Bract. 4-5 base each fl. lin.-fil. [Brac. and cal. segms. subul. short. th. cor.]
- 16734 Stem joints short tumid in middle, Lvs. obl.-lan. very acumin. wavy minutely downy, Panic. termin. crowded
- 16735 Lvs. on long pet. ovate-atten. at base sharply acumin. retic. Bract. numer. outer ovate-lanceol. inner lia. Cor. very long. Up lip erect ent. low. revol. 3-toothed.
- 16736 Lvs. obl. atten. both extrem. acute subcrenul. Racemes term. Flws. fascic. Cal. & brac. lin. thd., Cor. sptd.
- 16737 Lvs. ovate acumin. crenat. Panic. large termin. Flws. remotely fascicul. subsess. disposed in slender elongated racemes
- 16738 Spikes axill. Brac. bracteol. and leaves lanceolate, Anthers calcarate at base
- 16739 Lvs. subsess. obl.-lan. acumin. very entire, Brac. small, Cal. segms. obt. Tube bent, Spike termin. subsimp.
- 16740 Lvs. larger & broader than those of *C. integrifolia*. The whole plant clothed with viscid pubescence
- 16741 Leaves lanceolate-acumin. caescent beneath, Corymbs panicled, Pedicels elongated
- 16742 Leaves ovate petiolate denticulate pubesc. lower ones acute at base, Corymbs umbellate few-flowered
- 16743 A hybrid between *C. corymbosa* and *C. arachnoidea*, with ochraceous and dirty-purple flowers [ovate bluntish
- 16744 Lvs. obl.-ovate blunthsh much veined & rugose, hispidly hairy, Stem erect, very hairy, Segm. of cal. broadly
- 16745 Lvs. rather obtuse atten. at base velvety above beneath clothed with long hairs and small scale-lk. brist. serr. Cal. peltate deeply 4-clcft
- 16746 Stem lvs. cordate decuss. upper ones smaller entire with few long scat. hairs on their surfaces, Calyx downy [bellate
- 16747 Lvs. linear atten. at both ends lined distinct. serr. Teeth reflexed, 2-in. long 2 lines broad, Pedun. comp. um-
- 16748 Whole plant clothed with white wool, Lvs. ovate or oblong, Flws. corymbose, Calyxes 3-nerved
- 16749 Lvs. ovate acute wavy nerved, Lower ones atten. at base and connate, Upper ones nearly cord. sessile, Pan. spreading
- 16750 Herb clothed with white cobwebbed-wool, Lvs. ligulately-oblong little toothed petioles 5-in. long, Peduncles terminal twin
- 16751 Stemless, Lvs. radical ovate rhomboid rosulate serrated nerved, Scapes generally 2-3-fwd. pilose
- 16752 Leaves ovate biserrated, Branches dependent bluntly tetragonal of a rusty purple colour
- 16753 Lvs. ovate-lanceol. sharply serr. pubesc. Pedun. collected into term. panic. generally 4-fwd. shorter than lvs.
- 16754 Stem pilose, Lower lvs. ovate-oblong obtuse petiolate, Upper ones sessile, Lower lip of cor. very large [sess. Infl. cymose many-fd.
- 16755 Stem cal. & bract. beset with glandul. hairs, Stem lvs. oblong-lanceol. undul. thd.: upper ones ent. ov. acum.
- 16756 Radical lvs. many: stem lvs. few: 2 lower ones subpet.: upper ones sess. Pedic. racem. 1-fwd. Caps papery. [fulvous
- 16757 Rad. lvs. obov. rather spatul. obtuse uneq. thd. Stem lvs. ov. pointed alm. ent. Corymbs forked 10-30-fd. Ped.
- 16758 Radical lvs. ovate somewhat obtuse, Corymbs few-flowered [filif. cithd. gland. pubes.
- [Revol. obsol. 3-thd.
- 16759 Lvs. ovate-acumin. rounded at base: lower ones serr.: upper quite ent. Lower lip much wider than upper
- 16760 Lvs. obl.-lanceol. narrowed at base sharply & remotely toothed, Bract. ciliated often purplish or yellowish [gland. & viscid
- 16761 Lvs. ovate-cord. 2-3-in long glabrous obtuse rather wavy, Flws. erect oppos. subsecond, Bract. ovate acute
- 16762 Lvs. cord.-ovate acumin. toothed, Whorls 6-fwd. Bract. decid. very large broadly ovate, nerved red
- 16763 Lvs. oval obtuse rounded or cuneated at base irreg. crenated in middle nearly glabrous, Whorls 2-fwd. Cal.
- 16764 Lvs. cord.-ovate crenated hoary beneath, Bract. decid. Galea villose [usually eld.
- 16765 An undescribed species, introduced by Lagasca.
- 16766 Racemes branched, Flowers fewer & smaller than those of *S. phlomisoides*
- 16767 Lvs. ovate acum. crenate-sinuate: upperm. ent. Fls. in dist. about 6-fwd. whorls each wh. supported by 2 ov.-acum. awned concave streaked bracts
- 16768 Lvs. petiol. broadly ov. acute subcord. at base, Rac. loose verticill. few-fwd. Upper lip of cor. entire toothed: Lower acute

16769 The only species

and Miscellaneous Particulars.

2501. *Streptocarpus*. This plant is very readily increased by seed, or by division of the root, and thrives best in a light rich soil. It is a very ornamental stove herbaceous plant, and well deserving of cultivation.

History, Use, Propagation, Culture.

2502. *Betckia*. Plants with the habit of *Valerianella* and requiring the same treatment. The seeds may be sown in May, in the open ground, in a sheltered situation.

93. *Crocus*. The numerous varieties of *C. vérnus* and *C. versicolor* were, a few years ago, all in cultivation in

- 16770 Invol. 4-lvd. Leaf. ovate-oblong. Cor. pubescent, Leaves oblong lanceolate veined [within  
 16771 Invol. 2-4-lvd. shorter than flws. Lvs. small lanceol. acute at each end sess. Segm. of limb oblong obt. smooth  
 16772 Invol. 4-lvd. Leaf. roundish-ovate, Lvs. obl. lanceol. & linear, Head before expand. subglobose apiculated  
 16773 Invol. 4-lvd. Leaf. ovate with membran. margin about equal in length to the head, Cor. hairy, Lvs. lanceolate  
 16774 No distinct invol. Lvs. linear-lanceol. hairy 3-nerved, Flws. in globose heads, Perianth extern. hairy, Tube  
 very long and slender  
 16775 Invol. 6-7-lvd. Lvs. lanceol. acute dotted above, Tube of cor. long slender glabrous slightly dilated upwards  
 16776 Leaves lanceol. acute smooth on both sides, Heads many-flwd. termin. Perianth smooth, Tube infundib.  
 16777 Leaves oblong-obtuse, Floral lvs. oval, Calyx silky, Stem erect simple  
 16778 Leaves subrotund obtuse revolute beneath as well as the calyx clothed with hoary tomentum  
 16779 Lvs. decussate ovate acute nearly sess. horiz. or reflex. slightly downy above densely silky beneath, Per. ext.  
 silky, Tube contracted upw.  
 16780 Invol. 8-lvd. 4 innerm. often smaller, Lvs. distant on very short thick pet. ellipt.-obl. oft. narrower acute very  
 smth. Flws. numer. polygam.

CLASS III. — TRIANDRIA.  
 MONOGYNIA.

- 16781 Radic. leaves obov. or spatul. Stem lvs. broadly ovate sess. subdent. Flor. ones lin. oblong. Flws. mucous, Whorls cymose 2-parted: male flws. largest.  
 16782 Radic. leaves ovate acute, Stem leaves linear-lanceolate

16799

History, Use, Propagation, Culture.

105. *Gladiolus*. Some valuable additions have been lately made to this beautiful genus, of which the most splendid is unquestionably *G. natalensis*, which is also very hardy, and of as easy propagation and culture as the *G. communis*.

- 16790 Lvs. 3-nerved, Scape few-flwd. Segments of cor. ringent even somewhat transparent  
 16791 Lvs. very narrow, Scape 2-flwd. Tube equal to the spathe, Segments lanceolate obtuse  
 16792 Lvs. linear ensif. ribbed slightly glaucous, Tube scarcely equal to the spathe [hollow  
 16793 Lvs. narrowly linear elong. straight rigid promin. 2-nerved, Lower segm. of fl. obovately ovate spoon-shaped  
 16794 Lvs. broadly ensif. acumin. ribbed, Spike distich. about 10-flwd. Tube shorter than outer spathe, Segm. ovate-oblong recurved and wavy  
 16795 Leaves ensif. bicostate obscured nerved, Spikes term. 10-12-flwd. Sheath dbl. convolute, Tube  $\frac{1}{4}$  length of fl. campan. spreading  
 16796 Lvs. 8-9 green nerved acute twisted
- 16797 Nearly allied to *A. Juncæa*, but differs in having longer tube to flower, greater irregularity of limb and form of spots at base of 3 anterior segments
- 16798 Scape simple erect, Lvs. ensif. linear acute smooth nerved, Flowers distichous
- 16799 Lvs. equal linear ensif. Scape round branch at top  
 16800 Lvs. distichous ensif. spirally twisted, Scape branched compressed leafy many-flowered
- 16801 Lvs. linear glaucous, Limb lacinate lanceolate, Stamens sterile subulate obtuse
- 16802 Lvs. ovate-lanceolate, Limb linear-lanceolate  
 16803 Lvs. linear glaucous, Scape longer, Involucrum with pedicels twice as snort, Umbel many-flwd.  
 16804 Lvs. linear, Involucrum sheathed: at top bifid, Peduncle filiform shorter
- 16805 Crested, Scape 2-flowered, Leaves falcate shorter, Spathe 2-leaved
- 16806 Scape nearly round ltl. flatt. twist. about 3-flwd. Spathe 3-bracts: outer nearly 1 ft. long very narr. atten. Germ. [12 furrows and 12 obtuse angles  
 16807 Sheath radical long surrounding the leaves, Lvs. very long thick quadrangular striated very glaucous  
 16808 Lvs. in tufts rigid erect linear-ensif. tough, Stem angul. leafy, Ovar. on long stalks not enclosed in flor. leaves somewh. 3-cornered, Stigm. 2-lbd. short  
 16809 Stem 3-4-flwd. Lvs. linear-ensif. striat. acumin. slightly falcate, Peduncle shorter than foliaceous spathe
- 16810 Lvs. linear-ensif. striat. Peduncs. 4-5 in. long, Pedic.  $1\frac{1}{4}$  in. long also very slender, [mucron. Caps. pear-sh. pubes.  
 16811 Foliage minutely hairy, Scape erect longer than lvs. somet. divided bearing mostly 3 fascicles of flws. Flws. with little heart-sh. spot at base  
 16812 Pedun. solit. or 2-4, Spathe diplyl. Bract. scariose convolute, Col. of fl. long densely covered with longish gland. yellow hairs [sever. very frag. nodding  
 16813 Lvs. very narrow glauc. subul. at apex, Spath. consist. of bract. membran. at margin lowerm. sharpest, Flws.  
 16814 Stem remarkably compressed, Spathe lanceol. condupl. green with broad white membr. margin. Germ. glandr.  
 16815 Bulb ovate, Lvs. mostly radic. dply. striat. sheathing, Spathe 2 unequal lvs. about 2-flwd. Pedun. 1-in. long curved, Ov. oblong glabrous  
 16816 Stem terete simple, Lvs. lanceol. veined, Spathe gener. 3-flwd. Segm. of cor. spatulate, Root bulbous

16817 Lvs. oval-oblong pointed smooth on both sides, Flowers in long racemes

and Miscellaneous Particulars.

16815. *Sisyrinchium speciosum* is a lovely species, found about Valparaiso, on sandy hills; to be brought to perfection, it requires to be planted in dry light soil, and placed in a warm sunny situation in the green-house.

History, Use, Propagation, Culture.

2514. *Lipostoma*. The species of this genus thrive in any kind of light soil, and cuttings root readily in the same, under a hand-glass, in a little heat.

2515. *Benthamia*. A very desirable, nearly hardy shrub, which, perhaps, might be rendered hardier by grafting it

## CLASS IV. — TETRANDRIA.

## MONOGYNIA.

- 16818 Lvs. linear-lingulate: upperm. quite entire: lower ones sub-3-fid. Calyx silky, Stigma smooth  
 16819 Lvs. hard stiff glandul. on both sides: upper 1 or 2-trifid cune. & 1 or 2ce. twisted at base, Heads of flws. crowd.  
 16820 Lvs. coriaceous lanc.-lingul. or subspatul. faintly 3-nerved, Branches & perianth smooth
- 16821 Lvs. subulat.-filif. imbricated, Spikes shorter than the axillary peduncle  
 16822 Lvs. lanceol.-linear acute mucron. slightly pubescent somewhat obliquely twisted
- 16823 Leaves lanceolate coriaceous serrated, Panicle corymbose
- 16824 Lvs. pinnatifid slightly hairy, Lobes cuneiform, Follicle viscid
- 16825 The only species
- 16826 Bran. hoary slightly angul. Lvs. lin. revol. at edge with small mucro somet. 2 or 3-fid at point densely hairy  
 ben. Cal. extern. silky
- 16827 Lvs. spatulato-oblong mucronate pubes. on both sides, Racemes corymb. Pedicels and calyx smooth  
 16828 Lvs. oblong-obovate obtuse mucron.: above pubescent: beneath very downy pale grey, Racemes recurved  
 16829 Lvs. pinn. segm. altern. lin.-obl. obt.: above downy with patent ferrug. hairs: below silky with adpressed hairs  
 16830 Lvs. pinnatif. segm. acute smooth and veiny above hoary beneath, Racemes panic. Peria. & pistil very smooth
- 16831 Cespitose bearing many rooting stems, Lvs. spatul. rather hairy, Peduncle termin. 1-fwd. elongated
- 16832 Procumbent, Lvs. 8-9 in a whorl & are as well as stems hispid, Style clavate much exerted bifid at apex
- 16833 Lvs. sessile rhomb.-ovate acute very entire imbricated or spreading, Bract. few naked.
- 16834 Lvs. petiol. ovate-lanceol. taper. into petioles firm much acuminate rather revol., Stip. white glandul. downy  
 setosely jagged, Panic. loose at ends of bran.
- 16835 Plant hairy, Lvs. roundish undulated spreading
- 16836 Lvs. cordate-acumin. shining on both sides, Bract. connate, Pedun. axill. 1-fwd. Tube clavato-funn.-shaped
- 16837 Petiol. numer. filiform dichot. sparingly hairy more abund. at swollen joints, Petals flat  
 16838 Lvs. tritern. leaf. cord.-ovate petiol. hairy, Rac. many-fwd. Sep. lin. obt. Petals ov.-lanc. inner ones spurred  
 twice long. th. outer ones  
 16839 Lvs. tritern. leaf. ovate-oblong petiol. smooth
- 16840 The only species

and Miscellaneous Particulars.

on *Cornus sanguinea*. It is readily propagated, either by seeds or by cuttings. The fruit, when ripe, somewhat resembles that of the arbutus, but is much larger. The flesh is yellowish white, rather inspid, but not unpleasant, although a little bitter; and, as Mr. Royle informs us, it is eaten by the inhabitants of the hills in the Himalayas.

Page 108. CLASS V. — PENTANDRIA. 5 STAMENS.

Order 1. MONOGYNIA. 5 Stamens. 1 Style.

2516. 349a. *Douglasia*. Caps. cartilaginous, 1-celled, 5-valved. Cor. infundibuliform; tube ventricose; limb flat, 5-parted. Stigma a minute depressed cup. Seeds 2, peltate oblong, convex on outside, concave on inside.
2517. 369a. *Collomia*. Cal. campanulate, 5-cleft. Cor. salver-sh., tube slender, Stam. inserted towards middle of tube. Cells of caps. 1-2-seeded.
2518. 373a. *Etioca*. Cor. deciduous. Ovar. pilose. Placentas linear, 4, or many, ovulate. Caps. half 2-celled.
2519. 381a. *Nierenbergia*. Cor. with long slender tube and equal dilated limb. Stam. exserted; filamen. combined at base. Stigm. transverse or peltate.
2520. 381b. *Pediñia*. Cor. with short tube and dilated rather uneq.-limb. Stam. unequal, enclosed.
2521. 384a. *Pharbitis*. Ovarium 3-celled; cells 3-seeded.
2522. 388a. *Gilia*. Cal. campanul., 5-cleft. Cor. funnel-sh. or subcampan. Stamens inserted in throat. Cells of caps. many-seeded.
2523. 388b. *Egöchloa*. Cal. tubularly campanulate, 5-cleft. Cor. somewhat salver-shaped. Stams. inserted in the upper part of tube. Cells of caps. many-seeded.
2524. 388c. *Linanthus*. Cal. tubular, with 5 strong green nerves, terminating in subul. recurv. teeth at apex. Cor. funnel-sh. Anthers filiform, hardly sagittate at base.
2525. 388d. *Hugéña*. Cal. tubul. campanul. Cor. funnel-sh. Tube rhort, exserted. Stam. inserted at throat Anthers linear sagittate.
2526. 388e. *Leptosiphon*. Cal. tubul. campan.; lobes linear, subulate. Cor. funnel-sh.; tube very long, slender; limb campanul., 5-cleft, with oval very entire lobes. Stams. inserted at throat. Cells of caps. many-seeded.
2527. 388f. *Fenzlia*. Cal. tubul. campanul., deeply 5-cleft, with membranous sinuses and linear acutish erect segms. Cor. somewhat funnel-sh.; tube short; limb 5-parted. Anthers ovate-sagittate, a little exserted.
2528. 394a. *Mlichru*. Cal. many-bracteate. Cor. rotate or urceolate, furnished with 5 fascicles of glands near the base inside; segments half-bearded.
2529. 399a. *Sphaëtotoma*. Cal. bibracteate. Cor. salver-sh. with slender tube, coracate throat, and blunt beardless limb. Stam. epipetalous. Hypogynous scales 5. Placent. hanging from top of central column.
2530. 399b. *Trochocarpa*. Cal. bibracteate. Cor. campanul.; limb spreading, bearded. Stam. exserted. Ovarium 10-celled. Drupe baccate.
2531. 400a. *Ponceléña*. Cal. foliaceous. Cor. short, campanul., 5-cleft, beardless. Stam. hypogynous. Anther peltate below middle, with marginate dissepiment. Hypogynous scales 0. Placentas adnate to central column.
2532. 400b. *Cosmélia*. Cal. foliaceous. Cor. tubular. Stam. epipetalous, adnate to ciliated tops of filaments. Hypogynous scales 5. Placentas adnate to central column.
2533. 413a. *Pachypodium*. Stam. enclosed. Anthers nearly sess., adhering. ? Hypogynous scales 0. Cor. salver-sh., with equal, obtuse segments. Follicles ovate.
2534. 424a. *Nyciersilton*. Cal. and cor. 5-parted. Stam. 5, all fertile. Ovarium 5-celled; cells 1-seeded. Stigma obtuse, almost entire. Seeds bony, albuminous.
2535. 462a. *Wahlenbergia*. Cor 3-5-lobed at apex, rarely divided to middle. Stam. 3-5, free; filaments rather broadest at base. Style enclosed, pilose, most so towards upper part. Stigmas 2-5. Ovar. combined with tube of cal. Caps. 2-5-celled, each opening by so many valves at apex, which bear each a dissepiment in middle. Seeds very numer. minute.
2536. 464z. *Prätia*. Limb of cal. 5-toothed. Cor. cleft on back, even to base; limb 5-parted, unilabiate. Stam. combined above. Anthers cohering; two lower ones mucronate. Stigma 2-lobed. Caps. baccate, crowned.
2537. 464y. *Tüpa*. Cal. spherical, 5-parted. Cor. cleft on back almost to base; limb divided into 5 segms., which are all united at their tips. Stams. combined almost to base; anthers cohering, bearded. Stigma 2-lobed, protruding. Caps. 2-celled, many-seeded.

2538. 464z. *Siphocampylus*. Limb of cal. 5-parted. Tube of cor. curved, undivided, ventricose in middle; limb 5-parted, bilabiate. Stams. and anthers combined; anth. bearded. Caps. 2-celled, 2-valved, dehiscent.
2539. 467a. *Leckenautilia*. Calyx superior. Cor. with tube on upper side. Anth. at first cohering. Stigma obsolete, bilabiate in bottom of indusium. Caps. prismatic, 2-celled, 4-valved. Seed cubical or nucamentaceous.
2540. 470a. *Brundnia*. Heads involucreate. Cal. 5-fid, 4-bracted. Cor. monopetalous, infundibuliform; limb 5-parted. Stam. 5, hypogynous. Anth. connate. Ovar. 1-seeded. Seed exalbuminous.
2541. 478a. *Lycycteria*. Cal. with an ovate tube, and 5-parted irregular limb, ciliated with glands. Cor. funnel-sh., tube gibbous at base, limb 5-parted and campanulate. Stigma capitate. Berry roundish, 5-celled, crowned by calyx; cells many-seeded.
2542. 491a. *Luculia*. Calyx 5-parted, segms. foliaceous. Cor. tubular; limb 5-lobed, imbricate in aestivation. Stigma bipartite. Caps. 2-celled. Seed samaroid, surrounded by jagged membranous margin.
2543. 496a. *Uncaria*. Cal. tubularly urceolate, 5-cleft. Caps. pedicellate. clavate, attenuate at base. Flws. less crowded than in *Nautclia*.
2544. 509a. *Collètia*. Calyx campanulate, coloured. Petals 0. Anth. 1-2-celled, reniform or ovate. Disk cup-sh. Style simple, elongated. Fruit dehiscent, containing 3 nuts.
2545. 509b. *Retanilla*. Calyx urceolate, 5-cleft. Petals cucullate, sessile. Stam. enclosed. Anth. reniform, 1-celled. Disk covering bottom of calyx. Style simple. Fruit containing a 3-celled nut.
2546. 509c. *Trevda*. Cal. turbinate, 5-cleft. Petals cucullate. Stamens enclosed. Anthers 1-celled, reniform. Disk almost wanting. Style long, hairy. Caps. membranous, 2-valved, 1-seeded.
2547. 518a. *Coleonema*. Cal. 5-parted. Disk adnate to base of cal. with 5-lobed margin. Petals 5, with spreading border. Anth. terminated by minute sessile gland. Caps. of 5 horned carpels.
2548. 529a. *Escallonia*. Tube of the calyx semiglobose, adnate to ovarium; limb 5-toothed or 5-lobed. Petals 5, arising from calyx. Stam. 5. Anthers ovate-oblong. Stigma peltate. Style filiform, permanent. Caps. baccate. Seeds numerous.
2549. 540a. *Eription*. In every respect the same as *Viola*, but the sepals are hardly drawn out at base, and the lower petal is not drawn out into a spur; but furnished with a small gibbosity. Anth. without appendages.
2550. 241a. *Hymenanthera*. Sepals imbricate. Petals at length reflexed. Structure of stams. as in *Viola*, but joined at base into monadelphous disk, with a scale at back of each. Caps. rather baccate, 2-celled; cells 1-seeded.
2551. 569a. *Oplotheca*. Cal. semi-5-fid, bibracteate. Cor. 0. Nectar. tubular. 5-toothed. Anth. 5, sessile at mouth of tube of nectarium, and alternate with its teeth. Utriculus 1-seeded. Style undivided. Stigma capitate.

## Order 2. DIGYNIA. 5 Stamens. 2 Styles.

2552. 578a. *Harrisönia*. Cor. urceolate, 5-toothed, throat naked. Crown of stam. of 5 pieces, each with a fleshy process or tooth.
2553. 578b. *Tuedäia*. Calyx 5-parted. Corolla campanulate. Corona simple of 5 retuse exerted pieces opposite the petals. Pollen masses ventricose. Stigma acuminated bipartite. Gynostegium none.
2554. 579a. *Philibertia*. Corona double; outer one annular, entire, fleshy, undulated; inner one inserted on the top of the gynostegium of 5 entire fleshy segments. Cor. urceolate, sinuately 5-lobed, furnished with small teeth between the segments.
2555. 590a. *Physianthus*. Cor. tubular. Tube inflato-ventricose; limb 5-fid, connivent.
2556. 592a. *Tylophora*. Corona simple, 5-lvd.; leaflets depressed, fleshy, toothless inside, pressed to the gynostegium. Pollen masses transverse or ascending. Cor. rotate.

## Order 3. TRIGYNIA. 5 Stamens. 3 Styles.

2557. 684a. *Stackhoüsia*. Calyx 5-parted. Petals 5, joined by the claws. Stamens unequal, alternating with the petals. Stigma acute, simple. Capsule trilococcus.

History, Use, Propagation, Culture,

369. *Phlox.* All the phloxes are elegant plants; the lower-growing sorts are most ornamental on rockwork, and the taller kinds in beds or borders. Of the latter by far the most splendid is *P. Drummondii*, which, with *Ferhena chamedrifolia*, ought to be in every flower-garden.

- 16848 Lvs. ovate acuminate pubescent crowded on the stem  
 16849 Lvs. ovate acuminate with a mucro at the point slightly pubescent and silvery
- [nearly to base persist.  
 16850 Lvs. crowded ovate-lanceol. acute keeled on upper side ciliat. Scape villous, Umbel many-flwd. Cal. 5-cleft  
 16851 Lvs. oblong acuminate smooth above and slight downy beneath, Capsule large  
 16852 Lvs. linear mucron. slightly pubescent underneath
- 16853 Lvs. lin. obtuse subamplex. closely hairy, Bran. rigid hoary subverticil., Flws. subumbell. on long pedunc.
- 16854 Lvs. oblong acute serrat. powdery beneath, Flws. verticill., Invol. leafy, Tube of cor. very long, Segms. entire  
 16855 Lvs. lanceolate smooth  
 16856 Lvs. ovate oblong  
 16857 Lvs. ovato-lanceolate  
 16858 Lvs. oblong-lanceol. acute rigid cartilaginous margin beneath glaucous, Umbel few-flowered, Calyx acum. thd.
- [than cal.  
 16859 Lvs. spatul. obl. rugose slightly hairy above densely woolly below, Umbel many-flwd. Tube scarcely longer  
 16860 Lvs. oval-subrotund petiol. very ent. or obtusely cren. Umbel few-flwd. loose nodding, Invol. 4-ldv. Leaf. spurred at base  
 16861 Lvs. obl. obovate undul. smooth repando-dentic. Flws. umbellate nodding, Cal. tubular 5-fid
- 16862 Lvs. oblong entire
- 16863 Lvs. cordate minutely toothed, Segm. of cor. oblong obtuse  
 16864 Lvs. variable either ivy-sh. hastate heart-sh. arrow-sh. or irreg. coriac. alw. plaited middle lobe somet. much extend. Cal. segs. reflex short sharp  $\frac{1}{2}$  twist  
 16865 Stem ascending branched slightly winged, Lvs. sessile cordate-ovate scabrous at the margins
- 16866 Differs from *A. Monálf* in the cor. being of brilliant blue-purple above paler and redder ben. the eye or centre yellow minutely and irregul. crenat.
- 16867 Stems downy scabr. spot. Lvs. refl. glabr. shining above; lower narr. lanceol.; upper cordate acute, Teeth of cal. lanceol. mucron. spread.  
 16868 Lvs. oblong-cordate acumin. edges scabrous, Pedic. and cal. downy, Segms. long awned  
 16869 Stem clothed with long pat. hairs, Lvs. lower oppos. oblong-spath. : upper altern. oblong acute arist. Segms. of cor. very acumin. reflexed [Cal. teeth subul. lin. Tube much long. th. cal.
- 16870 Stem rather downy, Upper lvs. broadly lanceo. oppos. and altern. lower ovate, Bran. downy few-flwd. compact,  
 16871 Procumbent, Panic. loose fastigiate, Pedic. generally twin. Cal. teeth very long subulate  
 16872 Bran. clthd. with hair-lk. down as well as pedun. and cal. Lvs. lan. acute atten. at base smoothish ciliat. Tube hairy erect twice long. than cal.  
 16873 Shrubby, Lvs. lin. acumin. pungent dilated somewh. ciliat. at base edges callous. Branches of corymb. 3-flwd.  
 16874 Stem roughish obscur. spot. Lvs. lanc.-acumin. glabr. both sides shining: upper ones broadest, Tube of cor. 3 times longer than cal.
- [corymb form thyrsoid raceme  
 16875 Lvs. lower linear: middle obl.-lan.; upper cord.-ovate, Teeth of cal. ovate shortly acumin. erect, Bran. of  
 16876 Stem glabr. at bottom downy at top, Lvs. obl.-lan. acute scabr. above undul. scabr. edges, Panic. loose, Cal. teeth subul. straight
- [crowded shorter than invol.  
 16877 Prostrate, Lower lvs. pinnatif. and cut; upper cuneate pinnatif. or cut, Invol. lvs. oblong acute entire, Flws.

## and Miscellaneous Particulars.

2517. *Collomia*. A genus of annual plants of the easiest culture, requiring only to be sown in the open ground in spring. Some of the species are pretty, and deserving of cultivation.

History, Use, Propagation, Culture,

2518. *Eutoca*. A genus of showy hardy annuals. They succeed best on rockwork, in dry, sandy, or gravelly soil.

2519. *Nierembergia*. All the species are exceedingly elegant when in blossom. In the open border they succeed well from May to Sep., and in large patches have a very pleasing appearance. In the autumn it is necessary to pot a

- 16878 Lvs. lanceol. linear ; upper one ovate lanceol. entire or deeply 2-4-toothed at apex
- 16879 Lvs. obl. lanceol. entire shining ciliat. with glands, Cal. villous glandul. Cor. ventricose
- 16880 Lvs. ovate-lanceol. quite entire opaque uniform, upper ones downy beneath
- 16881 Lvs. pinnate, Leaf. linear entire, Cal. deeply 5-cleft, Stamens enclosed
- 16882 Procumb., Lvs. deeply pinnatif. almost pinnate, Segms. oblong linear entire or slightly cut, Cal. nearly 5-part.
- 16883 Lvs. lanceol.-oblong obtuse, Cal. clothed with black glands, Segments long, subulate
- 16884 Lvs. pinnate, Leaf. ovate-roundish mucronulate, Segms. of corolla obtuse crenulated
- 16885 Lvs. pinnate, Leaf. ovate-obtuse glabrous, Segments of corolla ovate acutish
- [lateral and term. Rac. corymb.
- 16886 Lvs. pinnate, Leaf. altern. very uneq. obl.-ovate some sess. others petiol. pinnatif. lobed & cut pubes.
- 16887 Lvs. bipinnatifid, Leaf. oblong dentately pinnatifid, Cal. segments oblong-linear hispid
- 16888 Stem slender branching, Calyx linear 5-cleft, Corolla spreading 5 ovate obtuse lobes
- 16889 Lvs. pinnatifid or bipinnatifid, Ovula 20 or more to each placenta
- 16890 Lvs. linear or lanceol. quite entire sometimes trifid or bipinnatif. Placenta 20 or many ovulate
- [several abortive
- 16891 Lvs. silky on both sides pinnatif. : upper leaves linear entire, Stam. 3 times as long as cor. Plac. many-ovul.
- 16892 Stem dichotomously divaricate, Leaves all ovate undivided, Placent. 12-20-ovulate
- 16893 Lvs. ovate acute quite entire, Cor. about twice as long as calyx, Placenta 8-10-ovulate
- 16894 Herb clothed with clammy pill, Lvs. cordate ovate rather angul. serrat. Racemes elongated forked and simple
- 16895 Lvs. sinuately lobed sub-tomentose as well as petiol. and bran. Points of corolla elongated, Calyx 2-3-lobed
- [of pedun. Cal. dply. 5-partite
- 16896 Glabr. & glauc. Lvs. oppos. & connate ovate or ov.-obl. 3-5-nrvd. very acute passing into subul. bracts. at base
- [segms. obov. 3-nerved
- 16897 Herb clothed with glandul. pubesc. Lvs. oppos. & altern. roundish-obov. petiol. Cal. large campan. foliaceous
- 16898 Herb downy, Lvs. linear subspathul. obtuse, Cal. segms. linear bluntish much short. than tube of corolla
- 16899 Herb glabrous erect filiform, Lvs. lin.-lanceol. acute or obtuse, Tube of cor. glandul. as are the filaments
- 16900 Herb smoothish, Lvs. linear acumin., Cal. segms. acumin. much shorter than tube of cor.
- [times long. than cal.
- 16901 Lower lvs. altern. ovate-oblong obt. pubesc. attenuated, Floral lvs. sess. cord.-ovate oppos. Tube of cor. 3-4
- 16902 Lvs. linear obt. Cor. funnel-sh. tube scarcely longer than cal. Segms. emarginate, Style clavate
- 16903 Lvs. ovate on short petioles acute, Cor. ventricose, Segms. ovate acute, Flws. axillary solitary pedunculate
- [twice as long as cal.
- 16904 A hybrid between *P. nyctaginiflora* & *P. intermedia*, with ovate acutish lvs. Cal. segms. ligulate, & tube of cor.
- [cup-shaped
- 16905 Arboreous, Lvs. uneq. cord.-ovate naked on long petiol. Tube of cor. slightly curv. mouth contract. limb small
- 16906 Lvs. stem-clasping cord.-lanc. acumin. Tube of cor. long filif. 5 times longer than foliac. cal. Lobes of cor-ovate-lanc. acute
- [Seg. ov. obt. emar. somew. uneq.
- 16907 Root lvs. obl. spathul. stem lvs. sess. half-stem-clasp. acumin. hardly repand. Cor. salver-sh. Tube long clav.
- 16908 Lvs. broad-lanc. acumin. undul. on longish petiol. Panic. few-flwd. Tube of cor. elong. Segms. roundish obt.
- 16909 Lvs. fleshy ov.-lan., lower petiol. Flws. axill. solit. Cal. many parted, Caps. many-celled, Segms. of cor. obt. deeply veined
- [thickened
- 16910 Lvs. cord. roundish 3-lbd. Lobes acute, Pedun. many-flwd. longer than petioles, Cor. campanulate, Tube
- 16911 Lvs. quinately digit. leaf. lanc. quite ent. margins undulat. Pedun. as long as petiol. Infer. cymose, Sep. imbric. obt. eq. Cor. funnel-sh. [to petiol. Pedun. axil. 3-4-flowered somewh. racem
- 16912 Lvs. altern. membran. truly cord. deep broad sinus at base sharply acumin. wavy on surf. much veined ab. eq.
- 16913 Lvs. cord. petiol. with very dp. sinus at base 3-5-lbd. in palmated manner, lobes very uneq. Petiol. much short. th. lvs. Pedun. axill. solit. 5-7-flwd.
- 16914 Tuberos, Lvs. trilob. lower lobe rounded at base imbricated, Pedun. axill. many-flwd. Petiol. short. Cor. infundib. limb crispate

16915 Lvs. cord.-acumin. pubesc. ent. & 3-lobed auricul. divergent, Pedun. leafy subbif. Sepals ovato-lanceol. acu'e

and Miscellaneous Particulars.

few plants of each species, and preserve them in the green-house through the winter. They seldom ripen their seeds but are all readily propagated by cuttings, and thrive best in light rich soil.

2520. *Pentdria*. Culture, propagation, &c., same as that of *Nierembergia*.

2521. *Pharbitis*. A genus of very showy, tender, twining annuals. They thrive best in light rich soil, or a mixture of loam and decayed leaves.

History, Use, Propagation, Culture,

2522. Gylia. Elegant hardy annuals of the easiest culture, the seeds requiring only to be sown in the open border in spring. The larger the quantity of each grown together, the more showy their appearance.

2523. Egochloa. A genus of singular, but by no means showy, plants, requiring the same treatment as those of Gylia.

2524. Linanthus. Culture, propagation, &c., the same as those of Gylia.

16916 Lvs. pinnatif. lobes few broad little-toothed, Cor. scarcely longer than calyx, Placentas 2-ovulate  
 †2294 Nearly related to *N. parviflora*, but differs in flws. being twice the size & calycine append. being larger & longer  
 16917 Petioles auriculately dilat. at base, Cor. twice as long as cal. Lvs. while oppos. connate at base  
 16918 Lvs. 3-4-lbd. on each side entire or cut, Petiol. without append. Cor. twice as long as cal. Placent. 10-12-ovul.  
 16919 Lvs. oppos. pinnatif. lobes 5-9 alm. ent. Cor. rotate very pilose bottom & obov. segms. Placent. about 10-ovul.  
 Seed strophiolate smooth

16920 Corolla 3 times longer than the calyx  
 16921 Corolla twice longer than cal. Flws. one half smaller than those of *G. finiflora*  
 16922 Corolla hardly exceeding the calyx, Habit of *Arenaria tenuifolia*

†2300 Lvs. pectin.-pinn. Leaf. linear acumin. Tube of cor. 5 times longer than cal. Limb spread. Segms. acute obl. [or ovate flat  
 †2300 Lvs. pectin.-pinn. clthd. cobwebbed villi as are bract., Leaf. or segms. lin. mucron. Segms. of limb ov.-lanc. [acumin. channelled

16924 Lvs. glabr. bipinn. Flws. usually solit. Corymbs loose on long pedunc. Cor. 4 times longer than calyx  
 16925 Lvs. pinnatif. Lobes ovate, Flws. somewhat glomer. Cor. 3 times longer than the cal.  
 16926 Lvs. pinnatif. rather woolly at length glabr. Segm. oblong lanc. ent. or cut, Flws. nearly solit. divaric. panic.  
 Cor. twice long. than cal.

†2301 Lvs. pinnatif. lower ones bipinnate, Segms. linear, Flws. solit. term. panic. Cor. about twice length of calyx

16927 Lvs. bipinnate, Leaf. or segms. linear subul. Corymbs 3-6-flwd. virgately panic. Corolla about 3 times longer  
 than calyx.

16928 Lvs. pinnatif. Segms. narrow obl. sinuat., Pedun. axill. solit. 1-3-flwd. Cor. tubular hardly long. than cal. [Cal. segms. subul.  
 16929 Lvs. somewh. bipinnate smoothish, Segms. linear, Corymbs 3-10-flwd. Pedun. very long, Cor. hardly twice  
 longer than cal. [than cor.

16930 Lvs. 2 or 3-pinn. Segms. or leaf. linear subul. Cal. rather woolly, Cor. twice longer than cal. Stam. shorter  
 16931 Lvs. bipinnatif. Segms. linear cut, Flws. sess. dispersed in dense heads, Cor. longer than cal. Stam. shorter  
 than cor.

16932 Lvs. pinnate, Leaf. ent. or cut lobes lanc. lin. very acute spinose, Cal. segms. lanceol. Flws. glomerate termin.

16933 Lvs. opposite sessile palmate, with 3 to 5 linear-subulate segments

16934 Lvs. numerous nearly all pinnatif. glabr. Tube of cor. longer than cal. Stam. about equal in length to cor.

16935 Lvs. short simple or furnished with 1-2-segm. on each side toment. Tube of cor. exerted, Stam. exceeding cor.

16936 Lvs. elongated simple or pinnatif. clothed with loose white wool, Tube of cor. longer than cal. Stam shorter  
 than cor.

16937 Lvs. lower elongated simple glabr. upper short pinnatif. woolly, Tube of cor. shorter than cal. Stam equal  
 to cor.

16938 Lvs. 7-11-cleft, Segms. subul. straight margins revolute, Tube of cor. hardly twice longer than limb, Filam.  
 very short

16939 Lvs. 5-7-cleft, Segms. oblong-linear, Tube of cor. 2 or 3 times longer than limb, Stam. 3 times shorter than limb  
 of cor.

16940 Lvs. ditto, Tube of cor. about 4 times longer than limb, Style scarcely equal to corolla

16941 Lvs. ditto, Tube of cor. 4 times longer than limb, Stams. hardly  $\frac{1}{2}$  shorter than limb of cor. Style little exerted

16942 Lvs. 9-11-cleft, Segms. subul. erect margins revolute, Tube of corolla shorter than limb

16943 Herb nearly simple glabr. or downy, Lvs. oppos. lin. ent. Flws. 1-3 together pedunculate, Cor. nearly 1 in. long

and Miscellaneous Particulars.

2525. *Hugbilla*. Culture, propagation, &c., the same as those of *Gilia*.  
 2526. *Leptosiphon*. All the species of this genus are very pretty showy plants, and are well worth cultivating in  
 every garden. Culture, &c., of *Gilia*.  
 2527. *Fenzlilla*. Culture and propagation the same as those of *Leptosiphon*.

390. *HOPZIA mexicana* Lam.; syn. No. 2302. In p. 142., *Loeselia coccinea* G. Don, *Cántua Hoitzia* W., *C. coccinea* Poir.

History, Use, Propagation, Culture,

2528. *Melichros*. Fine shrubs, bearing elegant flowers, and therefore desirable plants for all collections. They thrive best in an equal mixture of sand, loam, and peat; cuttings of the young wood root readily in sand under a bell-glass.

2529. *Sphenotoma*. Culture, &c., the same as those of *E'pacriss*.

2530. *Trochocarpa*. Culture and propagation as for *Andersonia*.

2531. *Ponceletia*. Culture and propagation the same as for *E'pacriss*.

- 16944 Lvs. ovate reflexed, Flowers axill. whole forming spike, Cor. 2-3 times longer than cal. campanulate  
 16945 Lvs. lanc. nearly sess. atten. at apex mucron. Pedun. 3 times shorter than cal. Tube of cor. <sup>long. than ciliat. cal.</sup>prismatic twice  
 16946 Lvs. ovate sessile tapering to apex, Corolla 3 or 4 times longer than calyx  
 16947 Lvs. ovate-lanceol. very spreading, Flws. spicate axill. solit. secund, Tube of cor. campan. much long. than  
 segms. of calyx  
 16948 Lvs. lanceol. very spreading, Flws. spreading axill. solit. secund, Tube of cor. ovate segms. of cal. acute ciliated

 brownish pubescent beneath

and Miscellaneous Particulars.

2532. *Cosmètia*. Culture and propagation resembling those of *E'pactic*.  
 2533. *Pachypodium*. Very pretty succulent shrubs. They succeed best in a mixture of lime-rubbish, sand, and loam. Cuttings root readily in sand under a hand-glass. The plants should be kept moderately dry, when in a dormant state.  
 2534. *Nycteristion*. Propagation and culture same as those of *Chrysophyllum*.

History, Use, Propagation, Culture,

2535. *Wahlenbergia*. The seeds of the annual sp. of this genus require to be raised on a hot-bed; and, when sufficiently strong, planted into the open border, in a sheltered situation. The perennial sp. grow freely in loam, peat, and sand, and strike root readily under a hand-glass.

2536. *Pratia*. Plants of this genus are readily increased by division of the root, or by seed; and thrive best in a mixture of loam, peat, and sand.

2537. *Tupa*. The species of this genus are deserving cultivation in every collection, on account of the beauty and singularity of their flowers. They are generally raised from imported seeds; and, when the plants are sufficiently strong, may be planted in the border under a south wall, but require to be potted in the autumn, and placed in the green-house during winter. *T. Feuillèi* yields a dangerous poison in Chile.

- 16975 Lvs. ovate-lanc. short-acumin. scabrous on both surfaces rounded at base, Cal. segms. linear villous
- 16976 Lvs. scarcely petiolate ovate or subcordate scabrous above and on the nerves beneath, Corymbs terminal
- 16977 Stem creeping
- 16978 Stems diffused, Lvs. reniform-cordate deeply serrated, Peduncle usually 2-flwd. Segms. of calyx toothed, [Cor. rotate
- 16979 Glabrous, Stems branched, lower lvs. roundish ; upper ones linear spatulate deeply serrated, Pedunc. corym.
- 16980 Stems filif. creeping hairy, Lvs. roundish-cord. serr. petiol. hairy both surfs. oblique at base, Pedic. solit. Cal. segms. lin. subul.
- 16981 Lvs. lanceolate cuspidate, doubly serrated, decurrent at the base, Bracts convolute, Calyx toothed subulate, Anthers glabrous
- 16982 Stem erect thick suffrut. at base simple leafy, Lvs. ov.-lanc. sess. decurrent clothed sof. whitish down, Raceme term. spicate
- 16983 Glabrous, Lvs. lanceolate serrulated, Flowers racemose, Calyx spherical 5-toothed
- 16984 Stem suffrut. simple glabr. Lvs. lin.-lanc. serrul. quite glabr. both surfs. Pedic. axill. shorter than lvs.
- 16985 Stem villous, Lvs. sess. ovate-oblong serrul. mucron. downy glauc. Raceme short leafy, Cor. downy
- 16986 Lvs. ov.-lan. mucron. sharply serrat. quite glabr. Racemes term. leafy, Tube of cor. little long. than cal. 2 lower anth. beard.
- 16987 Lvs. lan. acumin. unequally serrated attenuated at base, Flowers axillary solitary pedunculate
- 16988 Lvs obovate-lanceol. acumin. coarsely toothed glabrous shining, Rac. termin. simple secund
- 16989 Glabrous, Lvs. lanceol. acumin. erosely toothed, Raceme leafy, Peduncles naked, Segms. of cal. linear subulate
- 16990 Stem short decumb. at base densely leafy, Lvs. lanc. dentately pinnatif. downy atten. at base, Pedun. term. very long. Segms. of cor. long. th. lvs. [subul. little toothed spread.
- 16991 Lvs. sess. lanceol. decur. sharply serrat. glabr. Pedic. axill. solit. long. th. lvs. Rac. termin. leafy, Cal. segms. 16992 Lvs. 5-6 in. long lanceol. much acumin. closely and acutely serrated
- 16993 Flws. axill. solit. bractless droop. Cor. bilabiate glabr. upper lip of cor. rounded ent. : lower tripart. segms. 16994 Flws. axill. and term. bractless somewh. droop. Cor. bilab. downy outside : upper lip 2-lobed ; lower tripart. Segms. obovate
- 16995 Lvs. undivided villous beneath as are scapes hairy spread. Cal. segms. longitud. feathered apex somewhat acute

- 16996 Whorls capit. Lvs. oval acute both ends petiol. glabr. ciliat. toment. on outside upper ones connate
- 16997 Lvs. large ovate-ellipt. waved rath. acute on short petiol. upper sess. lower connate-perfol. downy glauc. ben. ciliat. on margin [beneath
- 16998 Flws. in verticill. heads, Cor. glabr. with elongated gibbous tube, Lvs. oval almost sess. glabr. ciliat. glauc.
- 16999 Spikes approx. vertic. heads of nearly sess. flws. Tube of cor. hairy ventric. in middle, Lvs. coriac. retic. ov. on short ped. glauc. ben. ciliat.
- 17000 Glabrous, Lvs. petiol. obl.-lanc. shining above pale ben. Pedun. short 2-flwd. Tube of cor. very long filiform
- 17001 Hispid-pilose, Umbels pedunculate, Lvs. petiolate cordate ovate obtuse underneath glaucous

17002 The only species

and Miscellaneous Particulars.

2538. *Siphocampylus*. The sp. of this genus have all large, showy, scarlet, or red flowers, and well deserve a place in every stove. They are of easy culture. A mixture of loam, sand, and peat soil suits them best ; in which cuttings strike readily under a hand-glass in heat.

2539. *Lechenaultia*. Elegant plants when in blossom. A mixture of turfy loam, peat, and sand suits them best ; and cuttings of the young wood root freely in the same kind of soil under a hand-glass.

2540. *Brundia*. Culture and propagation as for *Scævola* in p. 169.

2541. *Lycestertia*. This is a beautiful shrub when in a flowering state, from the contrast between the deep green hue of its stem and lvs. and the reddish purple of its large bracteas and berries. It is easily propagated by cuttings, or by seeds, which it produces in abundance.

History, Use, Propagation, Culture,

2542. *Luculia gratissima*. It is impossible to conceive any thing more beautiful than this tree, when covered with its numerous cymes of fragrant flowers. A good rich light soil suits it best; and cuttings may, though with great difficulty, be rooted in sand, under a hand-glass.

2543 *Uncaria Gambier*. Gambier is the Malay name of an extract prepared from the leaves of this plant, and one of the drugs, if not the only one, formerly called *Terra Japonica* in Europe. It is chewed by the natives, mingled with opet leaf and areca, after the manner in which the cutch is used on the continent of India. (*Don's Mill.*)

2544. *Colletia*. A mixture of loam and peat appears to suit the plants of this genus best; and cuttings of the young wood will root freely in sand, under a hand-glass.

2545. *Retanilla*. Propagation, culture, &c., as for *Colletia*.

2546 *Trevoa*. For propagation, culture, &c., see *Colletia*.

17003 The only species.

17004 Lvs. ov-obl. acute on short pet. smooth both surfs. Stips. ovate, Pedun. axill. solit. oppos., Bracteol. in middle: lower sterile convert. int. hooked spines

17005 Branches smooth, Lvs. obliq. cord. or ellipt. 3-nerved shining, Wing of fruit entire

17006 Bran. terete smooth, Lvs. obov.-obl. obt. acutely serrat. tapering and ent. at base, Pedun. slender flatten. about  
17007 Bran. smooth terete, Lvs. lanceol. finely serrat. Pedun. dichotom. 6-fwd. Flws. tetrandrous, Petals 4-lanceol. cordate

17008 Spines strong awl-sh., Fascicles scattered, Cal. oblong-cylindrical, Anth. nearly sess.

17009 Lvs. obcord. quite entire 3-nrvd. Flws. sess. spiked rising from axillæ of scales

17010 Lvs. 3-nerved

17011 Lvs. ovate roundish hairy

17012 Branchlets pubesc. Lvs. lin. obl. obtuse, Peduncle 1-fwd. glabrous, Petals straight bluntish

17013 Branchlets glabrous, Lvs. ovato-lanc. lower ones serrated upper ones quite entire, Cymes opposite the leaves

17014 Bran. twiggy pendent, Lvs. filif. acumin. flat above ben. semiterete, Flws. axill. solit. on short pedun. with several subul. imbric. bracts

17015 Branchl. rath. pubesc. Lvs. cuneif.-lanc. somewh. crenul. quite ent. middle nerve hairy, Panic. termin. many-  
17016 Lvs. obl. cuneate at base acutish finely serrat. full of resin. dots ben. Panic. term. many-fwd. crowded  
intermixed with foliac. bract. Petals obov.-obl. [term. spike-formed erect, Petals obovate

17017 Hairy, Bran. somewh. trigon. Lvs. ellipt. obtuse on short petioles serrul. rather clammy above when young, Rac.  
17018 Lvs. oblong hairy viscid

17019 Lvs. oval acuminate smooth on both sides

17020 Lvs. obov.-lanceol. acute doubly serrat. glandul. at the base tapering at petiole, Pedun. simple or branched,  
17021 Lvs. oblong-lanceolate serrulate clammy varnished, Corymbs 3-fwd. racemose, Corol. cylind. Limb spreading

17022 Stem simple erect, Lvs. ovato-obl. petiol. entire hairy, Caps. pubesc. Stip. lanceolate ent. Pedun. about twice  
17023 Distinguished from *V. odorata* by its paler green herb. larger and paler flws. upper petals longer and narrower  
and lower broader and more distinctly emargin. Stip. also narrower

17024 Stem woody somew. angul. much bran. Lvs. cord. coriac. smooth even, Stip. and brac. fringed, Sepals lanceol

17025 Lvs. ovate acum. lbd. smth. above and slightly hairy beneath. [Pedun. erect. Caps. short. and round th. *V. canina*

17026 Lvs. crowded renif. repandy toothed punct. Stips. lin.-awl.-sh. acumin. Petals reflex. 2 lateral ones bearded on upper side

17027 Lvs. oblong denticulated

and Miscellaneous Particulars.

2547. *Colônema pulchrum*. A beautiful little shrub, which thrives in a mixture of peat and sand, with a little loam. The tops of the young shoots, made into cuttings, and planted in sand under a bell-glass, root readily without heat.

2548. *Escallonia*. The species are fine evergreen half-hardy shrubs, and thrive best in a mixture of peat, sand, and loam. Cuttings strike readily in the same kind of soil, or in sand under a hand-glass.

2549. *Erythron*. Elegant little plants, that deserve to be cultivated in every garden. They are well adapted for rockwork, and are easily increased by separating their runners. They require the protection of a frame during winter.

2550. *Hymenanthera*. A mixture of loam and peat suits the species of this genus best, and cuttings root readily in sand under a bell-glass.

†550. *RI'BES* L. (*Ribes* of the Arabian physicians, found to be the *Rhëum Ribes*.) *Grossulacæe*. Sp.41—41.

I. GROSSULA'RIE. — *Gooseberries*.

 3109 Infra-axill. prickles 1-2, Lvs. 3-4-lbd. softly pubesc. Pedun. 2-3-flwd. Petals small much short. th. stigm. and  
 Stam. Berry prickly [glabr. Pedun. 3-flwd. Style and Stam. exser.  
 17050 Bran. divaric. bristly at length naked, Spines 1-3 togeth. axil. deflex. large, Lvs. roundish 3-lbd. dply. thd. nrvd.  
 17031 Prickl. axill. ternary, Lvs. cord. somewh. 5-lbd. thd. ciliat. pilose both surf. nrvd. Pedun. 3-flwd. glandul. Cal.  
 segms. equal to tube  
 3110 Spines infra-axill. Branch. spngly. hisp. with short hairs, Lvs. small: cleft. 4 down into 3 dent. lbs. Ped. 1-flwd.  
 3111 Infra-axill. spine very short, Lvs. on slend. stalks pub. on. bth. sides: lbs. acute cut and toothed, Pedun. slend.  
 upright. about 2-flwd. [middle. Berries bractless  
 17032 Very prickly, Prickles stip. 3-5-parted, Lvs. rath. pub. nrly. orbic. 3-5-lbd. Pedun. usually 1-flwd. bracteel. in  
 3112 Prickles 2-3 under each bud, Bran. otherwh. smth. spread. or erect, Pedic. 1-2-flwd. Lvs. 3-5-lbd. rath. vill.  
 Bract. close togeth. Style downy

ii. — *Flowers red.*

- 17033 Infra-axill. prickl. triple, Bran. hisp. Pedun. longer than lvs. 1-3-flwd. Cal. cylind. 4-parted, Pets. eq. to and  
 Stams. twice long. than cal. [Bract. long. than fws.  
 3113 Rather prickly, Lvs. 3-5-lbd. somew. renif. orbic. cut hairy; lbs. rath. deep obtuse, Racemes erectish few-flwd.  
 17034 Prickles scat. Lvs. roundish-cuneif. bluntly 3-lbd. Racemes erect, Bract. shorter th. pedic. Cal. flat. scabr. Sep.  
 small, Petals spatul. [Ovate or globose  
 3114 Stipul. prickl. twin, Lvs. wedge-sh. glabr. parted into 3 dent. lobes, Racemes erect, Brac. length of fws. Berry  
 3115 Infra-axill. prickl. manifold, Stem hisp. with minute prickl. Lvs. lbd. beyond middle glabr. ben. rath. pilose ab.  
 Pedun. 2-3-flwd.

i. — *Flowers greenish or greenish yellow, or reddish; and fruit, in a wild state, red.*

- 3116 Lvs. cord. bluntly 3-5-lbd. pubes. ben. wh. young usually rath. toment. glabr. ab. Racemes droop. Petals obovrd.  
 Fruit. quite glabr.  
 3117 Lvs. with 3-5-obl. lbs. hairy ab. shining ben. Racemes grouped, Brac. lanceol. infat. sparingly glandul. mostly  
 larger than flowers [Racemes pendul. Brac. short than pedic.  
 3118 Lvs. acumin. 3-5-lbd. rath. cord. dply. serrat. on long. pet. pilose ab. Racemes erect crowd. pubes. Fruit.  
 3119 Lvs. roundish-cord. 3-5-lbd. hairy above toment. ben. Racemes erect, Flws. more or less pedicel. Brac. obt.  
 toment. much short, than pedic. [Petals flattish smaller than calyx  
 17035 Stem erect, Lvs. 5-lbd. cord. Racemes pendul. pubesc. as are calyxes, Petals flattish smaller than calyx  
 3120 Lvs. 5-lbd. cord. toment. beneath, Racemes very long pendul. Brac. short. than fws. Petiol. length. of lvs.  
 Petals wedge-sh. [rising from cal.  
 3121 Lvs. bluntly lobed, Lobes serrat. lateral ones little cut, Racemes erect, Pedunc. long setaceous, Anther hardly  
 3122 Lvs. dply. cord. 5-7-lbd. glabr. Lobes acutely cut. dply. serr. naked both surf. Cal. rotate, Pedic. germ. and  
 berries beset with glandul. bristles.  
 3123 Glandul. hairy, Lvs. 3-5-lbd. roundish, Rac. erect, Cal. flattish, Petals bluntly rhomb. Brac. lin. long. th. pedic.  
 [Petals spatul. round at apex  
 3124 Lvs. smooth moderately lbd. Rac. loose many-flwd. pubesc. Cal. segms. rath. trifid, Berries hairy, Rac. weak,  
 17036 Lvs. short petiol. dply. & acutely lbd. smoothish with white nerves, Rac. recurved, Flws. small, Ber. glabr.  
 17037 Lvs. 3-lbd. serrat. beset with resin. glands ben. as are bracteas, Rac. long. than lvs. droop. or erect, Berries  
 oblong hairy red & dotted  
 17038 Lvs. cord. bluntly 3-lbd. dply. serrat. rugged, Racemes short, Calyx glandular pubescent

ii. — *Flowers greenish yellow, sometimes with the tip of the sepals and petals red. Fruit black.*

- 3125 Lvs. dotted from glands beneath, 3-5-lbd. Rac. loose, Brac. minute subul. or obt. much short. th. pedic. Petals  
 obl. Cal. segms. reflexed. [flattish, Petals revolute, Root creeping  
 17039 Lvs. 5-lbd. Bran. simple twiggy bearing lvs. & fws. at apex, Rac. pendul. both when in flw. & fruit. Cor.

History, Use, Propagation, Culture,

2557. *Stackhousia*. An interesting plant, as forming the type of a very small natural order bearing its name. See Lindl. *Nat. Sys.* ed. 2 p. 118.

Page 236. CLASS VI. — HEXANDRIA. 6 STAMENS.

Order I. MONOGYNIA. 6 Stamens. 1 Style.

- 2558. *Ismene*. Perianth 6-parted. Corona staminiferous, tube curved, cylindrical. Filaments short. Seeds fleshy, round. Scape solid.
- 2559. *Chordis*. Perianth with a nearly straight cylindrical tube, and a spreading limb. Corona spreading. Filaments converging. Anthers versatile.
- 2560. *Coburghia*. Perianth drooping, with a long curved cylindrical tube, and a short half-spreading equal limb. Filaments equal. Stamens equal, connected by tubular membrane. Stigma blunt. Ovarium 3-sulcate. Scape solid.
- 2561. *Stenomisson*. Flowers drooping. Perianth with a nearly straight tube, constricted in the middle, and ventricose at the apex. Limb short, regular. Corona short. Stamens straight. Capsule ovate, 3-furrowed.
- 2562. *Barbacenia*. Perianth funnel-shaped, 6-cleft, adnate to the ovarium. Filaments bifid. Anthers fixed to the back of the filaments in the division. Ovarium furnished with 6 rows of tubercles. Capsule 3-celled, many-seeded.
- 2563. *Pourrètia*. Calyx 3-parted, inferior. Corolla 3-parted, naked at base. Capsule 3-celled. Seeds naked.
- 2564. *Dyckia*. Calyx 3-parted. Segments concave. Corolla urceolately campanulate. Petals erect, fleshy at the base. Stamens monadelphous at the base. Ovarium tripartite. Cells many-seeded. Stigmas fringed.
- 2565. *Billbergia*. Calyx 3-parted, unibracteate. Petals 3, convolute, with scales at the base. Stigmas 3, convolute. Capsule 3-celled, many-seeded.
- 2566. *Acia*. Perianth drooping, campanulate, 6-parted. Stigma obsoletely 3-lobed. Capsule 3-celled. Seeds fleshy angular. Spathe 2-valved.
- 2567. *Chloea*. Perianth tubular, 6-parted, deciduous. Segments imbricate; outer shorter than inner. Stam. equal inserted in orifice of tube. Anth. versatile. Ovarium inferior, 3-celled, many-seeded. Fruit berried indehiscent, 1-seeded from abortion. Seeds very smooth, transparent.
- 2568. *Pyrolitron*. Flowers sessile, funnel-shaped, erect. Segments equal, recurved at ends. Spathe bifid, equal. Stamens spreading in the throat. Ovarium 3-celled. Segments of stigma dilated. Scape 1-flowered, hollow.
- 2569. *Hippodistram*. Perianth declinate, 6-parted; tube short, stamens declinate. Capsule 3-valved, 3-celled. Scape hollow, many-flowered.
- 2570. *Sceptránthes*. Perianth funnel-shaped, with a long cylindrical tube, 6-parted spreading limb. Capsule 3-gonal, seeds in two rows.

8 péndula *A.B.* A. b. pl. 239.; syn. *U.* 9 fastigiata *Hort. Exeter*; syn. *U. ex-* 10 crispa *A.B.*

 17065 Stem rough from strigæ, Lvs. dply. lbd. serrat. acute scabrous above; pubes. beneath, Umbels of 40 rays, In- [volucr. lvs. setaceous  
 17066 Stem lvs. ternate, Leaf. somewh. palmately pinnatif. toothed, Segms. acute, Umbels many-rayed, Involucra 1- [2-lvd. Involucels short coriac. few-lvd.  
 17067 Stem lvs. ternate, Leaf. pinnatifid deeply toothed, Umbels many-rayed, Stem from 10 to 12 feet high

## TRIGYNIA.

17068 Lvs. roundish oval quite ent. clthd. with stellate tomentum both surfs. grey ben. as well as bran. Corymbs term. [woolly  
 17069 Lvs. 3-lbd. acumin. coarsely & bluntly dent. Petiol. glandless glabr. Corymbs termin. not radiant, Fruit obl. compressed

17070 Lvs. linear-lanceolate, Spike cylindrical elongated at top acutely conical, Segments acute, Stamens unequal

## PENTAGYNIA.

17071 Glabr. erect, Lvs. lanceol. acute 3-nrvd. Flws. corymbose, Cal. lvs. ov.-lanceol. acute keeled, Styles connate [longer than ovarium  
 17072 Lvs. oblong lanceolate slightly hairy [racem. Brac. & sepals lanceol.-acumin.  
 17073 Bran. angul. Lvs. scat. linear  $\frac{3}{4}$  in. in length mucron. glabr. quite ent. slightly glauc. Flws. subcorymb. Fruit [Cal.-ribs termin. about base of 5 blunt membran. segms.  
 17074 Lvs. spatul. 3-5-nrvd. below: coarsely reticul. above, Panic. bran.: bran. angul. in front rounded behind

17067 *Heracleum giganteum*, when growing on deep loamy soil, and liberally supplied with water when it is sending up its flower stalk will attain the height of 12 to 15 feet.

2571. *Haylbeckia*. Perianth cylindrical, with a widened throat and a half-spreading limb. Stamens conniving. Stigmas 3, recurved at ends. Capsule 3-gonal.  
 2572. *Cunningia*. Perianth campanulate, 6-cleft, deciduous, alternate. Segments ciliated. Anthers emarginate at the base, conniving. Stigma pruinose dot. Capsule 3-celled, few-seeded.  
 2573. *Funkia*. Perianth funnel-shaped, deciduous. Stamens and styles declinate. Stigma clavate, 3-gonal. Capsule 3-celled, many seeded. Seeds disposed in two rows in each cell, winged at end.  
 2574. *Cyclobotrys*. Flowers drooping. Sepals glabrous, petals bearded, with a nectary, hollow in the middle. Capsule 3-winged. Seeds in single rows.  
 2575. *Rhinopetalum*. Perianth 6-leaved, deciduous; each leaf furnished with a naked nectariferous hollow at the base, upper one horned on the back. Filaments bearded. Ovarium 3-gonal, 3-celled, many-seeded.  
 2576. *Charlwoodia*. Perianth 3-parted. Filaments thickened in the middle. Stigma 3-cleft. Ovarium 3-celled.  
 2577. *Calliprora*. Perianth campanulate, 6-parted. Filaments petaloid, 2-lobed. Anthers sessile between the lobes. Ovarium stipitate, 3-celled, many-seeded. Stigma 3-lobed. Capsule 3-winged.  
 2578. *Laxmannia*. Corolla 6-parted, persistent. Filaments subulate, smooth, inserted in the base of corolla. Anther peltate. Capsule 3-celled. Seeds sub-solitary, peltate.  
 2579. *Barnardia*. Perianth 6-parted, spreading, persistent. Stamens dilated at base. Ovarium 3-celled, 3-seeded. Stigma simple.  
 2580. *Daubénysa*. Inflorescence umbellate, sessile. Perianth tubular. Limb bilabiate. Upper lip short, 3-dentate, lower one tripartite. Ovarium 3-celled.  
 2581. *Camassia*. Perianth spreading, 6-lvd. upper leaf ascending, lower one deflexed. Stamens equal ascending. Ovarium 3-celled, many seeded. Stigma 3-toothed. Seed 6 in each cell.  
 2582. *Trichopetalum*. Calyx recurved. Petals bearded along the margins. Stamens equal. Stigma 3-angular. Capsule 3-celled, many-seeded. Seeds reniform.  
 2583. *Stypandra*. Perianth 6-parted, spreading, deciduous. Filaments curved, bearded, and swollen at top. Stigma simple. Capsule 3-celled, few-seeded.  
 2584. *Tricoryne*. Perianth 6-parted, spreading, deciduous. Stamens bearded. Ovarium tripartite; lobes 2-seeded. Stigma simple. Pericarpis 3, clavate, 1-seeded.  
 2585. *Herreria*. Sepals 6, recurved. Style trigonal. Stigma sessile, 3-lobed, papillose. Capsule 3-winged, 3-celled, many-seeded. Seeds winged.

2586. *Geitonopeltium*. Perianth 6-parted, spreading, deciduous. Filaments curved at apex. Anthers sagittate, conniving, longer than the filaments. Style 3-sulcate. Stigma simple. Berry few-seeded. Seeds nearly globose.  
 2587. *Mahonia*. Sepals 6, guarded on the outside by 3 scales. Petals 6, without glands on the inside. Stamens furnished with a tooth on each side at top of the filament. Berries 3-9-seeded.  
 2588. *Schraddera*. Cal. with ovate tube, and short truncate or sub-denticulated limb. Cor. funnel-sh., tube terete. Anth. 5-8 sess. lin. inserted into throat of cor., hardly exserted. Style short, bifid. Berries pea-sh., 3-4-sided. 2-4-celled. Cells many-seeded. Seeds minute.

History, Use, Propagation, Culture,

17088. *Anigozanthus Manglesi* is a singularly beautiful plant, for which, and for a number of other plants of rarity and beauty, the public is indebted to Robert Mangles, Esq., of Whitmore Lodge, Berks.

2590. *Stephania*. Cal. 2-lobed. Petals 4. Torus small. Ovarium stipitate, oblong.

Order 3. TRIGYNIA. 6 Stamens. 3 Styles.

2590. *Calochortus*. Calyx 3-lvd. Petals 3, bearded inside. Stigmas petaloid. Capsule 3-valved, 3-gonal. Seeds flat, inserted by single rows.

2591. *Merendéra*. Perianth funnel-shaped, of 6 sepals. Petals on very long claws. Stamens inserted in the petals above the claws.

2592. *Livistonia*. Perianth double, both tripartite. Ovaria 3. Styles 3, combined. Stigma undivided. Berry 1-seeded.

### MONOGYNIA.

17075 Perian. petal-lk. tube bluntly tetragon. thick, Segms. spreadg. like star quite distinct at base, cuneat.-obov. mucronate somewhat reflexed twice as long as the cup-shaped truncate yel. corona. [cron. tapering very much to base

17076 Scape slender 4-fwd. Segms. perian. obov. mucronate somewhat reflexed twice as long as the cup-shaped truncate yel. corona.

17077 Corona plicate repand longer than the segms. Style longer than the corona, Leafs erect, Scape compressed.

17078 Lvs. lorately linear channelled on upper side keeled at back, Crown cylindr. curled 6-lobd. Lbs. round entire, Segms. of perian. obliq. ovate

17079 Segms. perian. ovate spreading, Corona funnel-shaped length of segms. Limb spreading deeply crenated

17080 Lvs. 9-10 in. long erect little spreadg. glauc. striat. and keeled at back upper side somewh. concave margin thickened, Segs. of perian. ov. or obov.-lanceol. cup  $2\frac{1}{2}$  in. long

17081 Lvs. expanded into a wing above the base, Wing plaited

17082 Lvs. 8 or 10 linear-oblong striated, Scape 2-edged 10-12-fwd. longer than lvs. Spathe lanceolate Segms of perian. [linear-lanceol. 6, Corona spreading rotate closely toothed

17083 Perian. yellowish marked with green, Tube slender, Limb and Style exceeding the Corona, Ovarium pedicellate

17084 Glauous, Scape 3-fwd. Tube long green, Limb white, Corona white rotate with a jagged border

17085 Lvs. glaucous acutish, Scape compressed green, Stamens enclosed

17086 Lvs. oblong-cord. Umbel 6-fwd. Segms. of perianth obl.-lanceol. Lateral teeth of filament very much elongat. and sometimes 2-lb. [into cylind.-campan. limb

17087 Scape terete bearing umbel of about 7 fws. Spathe of 2 membranac. lvs. Perian. cylindric gradually widening

17088 Stem erect clthd. with short thick crimson persistent velvety down, Flws. in short termin. spiked raceme, Stigma capit. project. beyond tube

17089 Deep green, Flws. paniced, Perianth swelling towards the summit hairy, Segms. a little reflexed

17090 Lvs. linear keeled with spiny serratures, Ovarium elongated tuberculated

17091 Lvs. lanceol. very ent. acumin. glauc. and wooly ben. Pedic. shorter th. brac. quite smooth as is cal. Petals [straight 1-sided long. th. stom.

17092 Lvs. lin.-lanceol. very entire smooth acumin.  $\frac{1}{4}$  in. broad, Stem simple, Segms. of cor. revol. white, Stigma 3-fid. white [and rachis pubes. Brac. much long. th. pedic.

17093 Raceme many-fwd. elongat. Petals oblong-lanceol. obtuse twisted to one side concave with galeat. spur, Cal.

17094 Lvs. lanceol.-linear elongated ciliato-spinulose furfuraceous beneath, Racemes paniced villous

17095 The only species

17096 Lvs. lin.-ligul. ent. invol. at base, towards extrem. plane recurved acute, Spike simple, Rachis zigzag, Flws. [remote, Brac. ab. eq. to flws.

17097 Lvs. oblongo-lanceol. acuminate undulated recurved, Flowers aggregate sessile

17098 Lvs. ligulate acumin. furfuraceous, Spike ovate solitary scarcely higher th. lvs. Brac. ovate concave bright pink

and Miscellaneous Particulars.

2864. *Dyckia*. "The dry stove seems to suit it, for there it produces its rich orange flowers in great perfection, and retains them in all their freshness and beauty for several weeks." (*Bot. Reg.*)

History, Use, Propagation, Culture,

772. Tulipa. It appears to us highly probable that the greater number, and indeed perhaps the whole, of the above names, are only varieties.

17127 Lvs. spatul. about 7-nerved central rib hardly promin. behind in upper half reflect. at point and sides glauco. [pruinose ent. Pedun. 2-flwd.  
 17128 Erect, Lvs. lin.-lanceol. twisted margins ciliated. Pedunc. bran. umbellate, Perianth 6-lvd. 3 outer ones ovato-  
 17129 Stem erect, Lvs. lanceol. obtuse obsolete denticulated, Umbels many-flwd. Pedunc. angular [lanceol. serrated

17130 Limb of the perian. longer than tube with 3 blk. spots in the centre

[Sheaths ciliat. on margins  
 17131 Stem erect simple or bran. rounded glabr. jointed, Lvs. lin.-acuminated glabr. striated sheathing at base,  
 17132 Stem dichotom. bran. and jointed: lower part glabr. upper densely hairy, Lvs. scarcely sheath. lanceol. wavy  
 striat. : lower downy, upper densely hairy

[wider in proportion  
 17133 Lvs. all radic. ov. acumin. striat. Bractees lanceol. lower ones longer th. flws. upper one gradually smaller and  
 17134 Lvs. lanceol. nerved, Corolla campanulate [flwd. Brac. ov. twice as long as pedic.  
 17135 Lvs. all radic. petiol. ov.-lanceol. very acute elegantly margined with white, Petiol. longer th. lvs. Rac. 12-14

17136 Stem glabrous, Leaves scattered lanceolate 3-nerved attenuated at both ends, Corolla tubularly campanulate

[volute papilloso bearded  
 17137 Stem erect smooth, Lvs. scattered ovato-obl. nerved petiol. Bran. 1-flwd. Flws. drooping reflexed, Cor. re-

17138 Lvs. very narrow linear scattered, Perianth smooth revolute, Capsule turbinate

[Lifts. ov. flat acute  
 17139 Stem leafy 1-flwd. Lower lvs. obl.-lanceol. channeled acumin. undul. glauc. Upper ones lin. flat, Perian. oval.  
 17140 Stem 1-flwd. glabrous, Flws. erect, Petals ovate lanceol. acuminated bearded at the apex, Lvs. ovate lanceol.  
 ciliate, Bulbs woolly

17141 Stem pubescent 1-flwd. 3 outer petals acute 3 inner ones obtuse and mucronate, Lvs. obl. lanceolate pubescent  
 17142 Stem pubescent longer than that on lvs. Perianth campanulately spread. Segms. ellipt.-lanceol. acute bearded  
 at apex margin involute [Filam. subulate

17143 Lvs. lin.-lanceol. subconvolute glauc. Petals lanceol. obtuse very spreading 3 outer ones longest, Stam. equal  
 17144 Scape pubescent scabrous, Lvs. flaccid, Segms. of perian. acumin. Stem 1-flwd.

[acute glab. inner ones blunt ciliated  
 17145 Glauous, Stem few-flwd. Lvs. channeled acuminated upper ones dilated at the base, Outer segms. of perianth  
 17146 Stem 3-flowered one-leaved, Inner petals woolly

[ovate-lanceol. acumin.  
 17147 Umbel 2-3-flwd. Pedun. shorter than bract. Petals ovate obtuse serrulato-fimbriate, Flws. globose, Sepals  
 17148 Umbel 2-3-flwd. Pedun. shorter than bract. Petals ovate very obtuse margin naked, Sepals ovate-lanceol. half  
 length of petals

17149 Lvs. lanceol. subconvolute, Flws. terminal solitary

17150 Stem upright simple densely leafy, Lvs. lin.-lanceol. cuspid. recurv. patent ent. Rac. terminal many-flwd.

17151 Stem arborescent, Lvs. attenuated at both ends, Branches of panicle divaricate, Flws. nearly sessile

[3-parted  
 17152 Lvs. obl.-lanceol. subcomplic. obtuse, Segms. of perian. ovate-lanceol. acumin. reflex. nearly from base, Stigma  
 17153 Lvs. obl. or lanceol. Scape irregularly bran. 5-flwd. Segms. of perian. acumin. reflex. from middle, Stigma  
 3-lobed

17154 Habit of *Allium*

17155 The only species

17156 Lvs. broad linear longer than the scape, Bractees equal in length to pedicels, Flowers disposed in a large sub-  
 conical corymb. Perian. spreading persistent [few-flwd. Caps. rotate

17157 Lvs. lanceol. flat very smooth and densely ciliated (edged with broken cartilaginous margin *Lindl.*), Corymbs

17158 Scape 5-angled, Racemes 3-flwd. Pedunc. drooping, Cor. campanulate-patent, Bractees very short

17159 Lvs. lanceolate sparingly villous, Racemes corymbose 5-7-flwd. Bractees lanceol. equal to peduncles

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

2581. *Camassia* 17162 *esculénta*. "This plant is known by the natives under the name of *Quamash*; and the bulbs are carefully collected by them, and baked between hot stones, when they assume the appearance of baked pears, and are of an agreeable sweet taste. They form a great part of their winter stores. Though an agreeable food to Governor Lewis's party, they occasioned bowel complaints if eaten in any quantity. It is perfectly hardy, requiring to be planted in a peat border, and may be propagated either by seeds or bulbs. (*Pursh.*)

2585. *Herreria*. A singular, but desirable, hot-nouse climber, growing freely in any good soil.

2587. *Mahonia*. "The species are elegant evergreen shrubs, with yellow flowers and pinnate leaves. The latter

- [Segms. obl.-concave narrowed at base

and Miscellaneous Particulars.

resemble pretty much those of the ash, and hence, doubtless, the name of Ash-berberry. Natives of the N. W. coast of Amer., and also of Nepal, and perhaps Japan. Though some botanists think that the characters ascribed to this genus, and those ascribed to *Berberis*, are not sufficient to keep them separate as genera; yet the habits of the species of one, as to the mode of growth, foliage, and inflorescence, are so distinct from those of the other, as to induce us to adopt *Mahônia*. The species in British gardens are all of comparatively slow growth, and admit of but slow multiplication by layers, and scarcely at all by cuttings. Some of them, however, seed freely, and are readily propagated in that way." (*Arb. Brit.* vol. ii. p. 309.)

TRIGYNIA.

History, Use, Propagation, Culture,

2590. *Calochórtus*. A genus of very handsome bulbous plants, which may be planted in a warm border in the open air during the summer, but should be taken up as soon as the leaves are withered, and kept dry till they begin to shoot, when they may be potted and kept in the green-house till the spring frosts are over.

Page 300. CLASS VIII. — OCTANDRIA. 8 STAMENS.

Order 1. MONOGYNIA. 8 Stamens. 1 Style.

2594. *Chymocárpus*. Calyx persistent, valved in aestivation. Petals 2. Fruit baccate, composed of 3 1-seeded carpels.  
 2595. *Arthrostemma*. Cal. turbinate or campanulate, usually beset with bristles or scales on outside, 4-lobed. Petals 4. Stigmas 8, glabrous. Anthers oblong; having their connectives rather long, and bluntly bicariculate at base. Ovarium bristly at apex. Capsule 4-celled.

TRIGYNIA.

- 17185 Stem 3-5-lvd. 2-flwd. Petals beautifully bearded at base, Capsule erect linear-oblong
- 17186 Stem 3-5-flwd. Sepals revol. Petals with wart-like tuft of very short firm hairs
- 17187 Stem few-lvd. sub-2-flwd. Sepals erect, Petals with oblong tuft of rather loose hairs a short distance above base
- 17188 Stem sub-3-flwd. Lvs. convolute shorter th. pedun. Petals cuneate rounded at apex transv. bearded about middle

17189 Anthers versatile, Lvs. lanceol.-linear spreading, Flowers rising at the leaves

17190 Leaves fan-shaped, Spathe divided, Flowers paniced

17191 Segments of fronds connected by threads, Stipes unarmed

---

CLASS VII. — HEPTANDRIA.

MONOGYNIA.

†5058 Leaf. 5 ellipt.-obl. tapering at both ends smooth as is pet. axils of nvs. hairy on under surf. of lvs. Petals 4 longer than stams.

†5060 Leaf. 5-7 pubesc. beneath and above upon nerves, Petioles pubescent flattish towards the tip

†5059 Whole plant including young wood covered with pubescence, Flws. large and snowy

17192 Lvs. with rufous down on veins on upper side smooth beneath : rather plicate [petals less spreading]

17193 Lvs. large smooth on upper surface and shining, Flws. nearly as large as those of *Æsculus Hippocastanum* but

17194 Stamens much longer than corolla, Racemes very long, Root stoloniferous

and Miscellaneous Particulars.

2593. *Pavia*. Middle-sized deciduous trees or shrubs, distinguishable from the horsechestnuts by the smoothness of their fruit, and the comparative smallness of their flowers, which have their petals erect and narrower. The leaves, also, are generally smaller and smoother. (*Arb. Brit.* p. 469.) Budding and grafting are the most usual modes of propagation, though they are frequently increased from seed.

---

2596. *Godénia*. Limb of calyx reflexed. Capsule opening at angles. Placenta persistent. Stamens all alike. Chalaza of the seed crowned round the margin by a fringe.

2597. *Clarkia*. Limb of calyx 4-parted. Petals 4, tripartite. Caps. 4-celled. Seeds not pappous.

2598. *Eucharidium*. Tube of calyx above the ovarium, elongated, filiform, with a 4-parted deciduous limb. Petals 4, clawed, trifid. Capsule 4-celled, 4-valved, dehiscent. Seeds numerous.

2599. *Francoëa*. Calyx 4-parted. Petals 4. Stamens distinct, 16, 8 of which are fertile. Anthers 2-celled. Capsule 4-gonal, 4-celled.

History, Use, Propagation, Culture,

875. *Tropæolum* 17199 *tuberosum*. This species may be considered about as hardy as the potato, and, like it, produces eatable and agreeably flavoured tubers. Mr. Lambert was the first, we believe, who grew these tubers in England, and presented them as table. When boiled, the tubers are of a soft pulpy substance, and, Mr. Cameron says, in flavour resemble sea-kale, mixed with the hot taste of garden cress. The council of the Caledon. Hort. Soc. considers the tubers to be of a very delicate flavour, resembling the richest asparagus. Mr. Young of Epsom found the

## MONOGYNIA.

- [quite entire  
 17196 Leaflets 5-10 obl. or obovate little-toothed cuneated at base, Petals unguicul. rather longer than cal obtuse  
 17196 Leaflets 7 obovate lanceolate, Segments of calyx blunt  
 17197 Tuberos, Stem slender climbing branched, Lvs. peltately divided, Segms. 6-7 obov. ent. cuspid. Petioles cirrhose  
 17198 Lvs. peltate, Segms. 6-7 oblong-obov. ent. sess. Petals cuneif. Cal. segms. obtuse, Spur very short and very blunt  
 17199 Lvs. peltate nerved 5-lobed transversely truncate at base smooth, Petals almost length of calyx

17200 Leaflets 5 ovate or ov.-lanceol. ent. stalked, Petals 2 sessile acute quite ent. shorter than calyx

- 17201 Lvs. linear, Peduncles axillary 1-flwd. Stamens much exerted, Ectasis [Crests of anths. plumose  
 17202 Lvs. 5 in whorl reflexed woolly, Flws. termin. Bract. remote from cal. Tube of cor. cylind. inflated ribbed,  
 17203 Lvs. 3-4 in whorl linear glabr. Flws. termin. racemose, Cal. bracteate, Cor. with inflated tube and short limb  
 17204 Lvs. linear 5 in a whorl pubescent, Branchlets pilose, Corolla cylindrical fascicles constricted at apex, Syringodea  
 17205 Glabr. Lvs. 4 in whorl linear spread. Flws. termin. pedicellate, Cor. ventricose tubular, Border blunt, Bract.  
 remote from cal. [Stam. and pist. enclosed aristate  
 17206 Lvs. glabrous, Flws. termin. Bract. remote from and close to cal. Cal. large inflated, Tube of cor. obl. inflated,  
 17207 Lvs. acerose, Corolla cylindrical, Limb short spreading [white limb  
 17208 Glabrous, Lvs. lin. 4 in whorl, Flws. termin. crowded, Cor. with elongate ventricose tube dark neck and  
 17209 Lvs. 4 in whorl lin. glabr. Flws. termin. Bract. remote from cal. Cor. ov.-globose with large open segments  
 17210 Lvs. 4 in whorl linear glabrous, Flws. axillary racemose, Stam. and pist. enclosed  
 17211 Branch. villose, Lvs. in threes very narrow, Cor. campanulate, Style exerted, Stigma simple

- 17212 Lvs. 4 in whorl as well as bran. scabr. Flws. termin. erectish, Cor. ovate, Bract. remote from cal. Anth. crested  
 17213 Hairy, Lvs. acicular ciliated with long hairs, Flws. in racemose terminal fascicles, Cor. campanulate  
 17214 Lvs. 6 in whorl lin. flexuous recurved, Flws. termin. nearly sess. drooping capit. Bract. sess. Cor. curved ov.-  
 obl. Anth. mutic [little exerted  
 17215 Lvs. 4 in whorl lin. glabr. Flws. termin. and axill. Bract. distant from cal. Cor. tubular drooping  
 17216 Lvs. 6 in whorl crowded lanceol. each termin. by a hair, Flws. nrly. termin. drooping, Cor. cylindric contract.  
 at neck [white limb  
 17217 Glabrous, Lvs. lin. 5-6 in whorl, Flws. axill. and termin. drooping, Pedic. many-bracted, Cor. campanul. Style  
 17218 Glabrous, Lvs. 3 in whorl, Flws. terminal, Cor. campanulate, Style exerted  
 17219 Lvs. linear obtuse Corymbs 4-flwd. Cor. tubularly ventricose, Limb spreading, Stamens enclosed, Callista  
 17220 Lvs. short blunt, Branchlets 3-4-flwd. Cor. ovate, Stamens enclosed, Erica [urceol. globose  
 17221 Lvs. 4 in whorl hispidly ciliated lin. spread. obt. Flws. termin. racemose pendul. Bract. remote from cal. Cor.  
 17222 Lvs. obtuse, Flws. terminal, Pedicels about 3 together, Cal. reflexed, Cor. ovate ventricose  
 17223 Lvs. short obtuse, Branchlets 3-4-flwd. Cor. tubular inflated towards the top Stamens enclosed, Syringodea  
 17224 Lvs. 4 ? in a whorl lin. obt. Flws. lateral verticillate, Cor. with ventricose tube and spreading limb  
 17225 Lvs. linear 3 in a whorl, Flws. early, Cor. tubular ventricose constricted at the mouth, Anthers enclosed

- [axill. 3-flwd. longer than pet.  
 17226 Shrubby erect 4-gonally winged as are bran. Lvs. ov. acute serrul. glabr. on both surfs. shining above, Pedum.  
 17227 Suffrutic pilose, Lvs. petiol. ov. serrul. 5-nrvd. discoloured beneath, Flws. termin. solit. Lobes of cal. 4 serrated  
 at apex

- 17228 Lvs. oblong-lanceol. acute nrly. ent. rath. pilose thickish, Stem tall simple angul. Caps. oblong tetragonal  
 17229 Stem branched pubesc. Lvs. obl. linear serrulated mucronate pubesc. beneath, Flws. sessile, Calyx angular,  
 Petals entire [somet. obl. somet. ov. rath. cord. all obt.  
 17230 Lvs. glauc. pubesc. of several shapes, lower spatulate on long pet. distant : upper close together. somewh. sess.  
 17231 Lvs. obl. ellipt. somewh. obtuse slightly sinuately toothed atten. at base, Stem bran. succulent soft with down  
 as is fol. [of stigma blunt spread.  
 17232 Stems ascend. bran. pubesc. Lvs. lanceol. acute dentic. glabr. atten. at base, Petals wrinkled or plaited, Segms.

- [Caps. 4-winged  
 17233 Stem simple downy decumb. Lvs. lanceol. tapering at both ends margin. and slightly ciliat. Petals broad oboverd.

and Miscellaneous Particulars.

tubers, when boiled, superior in flavour to any potato, though disposed to be watery and not boiling firm. (Gard. Mag. xiv. p. 254.)

2594. *Chymocarpus*. For culture, &c., see *Tropæolum*.

2595. *Arthrostemma*. Propagation, &c., the same as recommended for *Melastoma*.

History, Use, Propagation, Culture,

2596. *Godetia*. A genus of highly ornamental plants, separated by Spach from the genus *Ænothëra*. It contains all the species with purple flowers, which Dr. Lindley informs us will not mix with the yellow-flowered kinds, so as to form hybrids; neither do they close their petals in the sunshine, and thus forfeit all title to the name of Evening Primrose. Culture, &c., same as recommended for *Ænothëra*.

2597. *Clarkia*. A genus of very ornamental annuals, requiring the same treatment as that of the annual *Ænothëra*.

- 17234 Procumb. Lvs. pubes. altern. interruptedly pinnatif. sinuately toothed ent. at apex, Tube of cor. very long, Petals large obov. ent. 5-nrvd.
- 17235 Tomentose, Lvs. linear lanceol. toothed, Ovarium cylindrical, Petals 2-lobed, Stamens 4 fertile 4 sterile
- 17236 Glabrous, Stems decum. Lvs. linear lanceol. toothed, Capsules linear twisted, Root creeping
- †4540 Lvs. lanceol. atten. at both ends bluntish, Tube of cal. short, Caps. ovate triquetrous sess. angul. pilose
- 17237 Lvs. lanceol.-obl. mucron. tapering into petioles, Caps. obl.-cylindric. somewh. tetragonal pilose
- 17238 Lvs. glauc. quite ent. pubesc. lower ones broadly ov. : upper ov.-lanceol. Caps. bluntly 4-gonal tapering from base villous
- 17239 Lvs. lanceol. bluntish slightly toothed glauc. Stem round, Caps. cylindrically tetragonal [villous
- 17240 Lvs. linear-lanceol. somewh. denticul. puberulous, Stem bran. weak puberulous, Caps. 4-gonal atten. at apex
- 17241 Lvs. linear-lanceol. quite entire glabr. Stem ascending diffuse bran. Caps. round elongat. acute larger th. lvs.
- †4563 Lvs. linear spatulate, Stem bran. erect, Caps. furrowed cylindric. curved downy longer than bracteas
- 17242 Lvs. lanceol. glauc. ent. Caps. cylindric. atten. furrowed pubescent, Bran. long slender rod-like
- 17243 Lvs. linear-lanceol. slightly toothed, Anthers fiery red yellow at apex, Caps. linear sess. truncated
- 17244 Lvs. ovate-lanceol. ent. Caps. sess. ovate-oblong hairy
- 17245 Lvs. linear-oblong subdentated glabrous, Anthers crimson yellowish at summit
- 17246 Leaves linear, Petals deeply 3-lobed
- 17247 Leaves ovate dentated & entire, Petals rhomboid undivided
- β Has the flowers of a pale brick-red rather than rose colour
- γ Has the flowers semidouble
- 17248 Leaves lanceolate, Petals rhomboid entire
- 17249 Pubescent, Lvs. petiolate ovate entire, Flws. axillary solitary [spreading petals, Stigma 4-lobed
- 17250 Bran. glabr. Lvs. 3 in whorl ov. acute denticul. on short petioles, Lobes of cal. oblong acute exceeding obov.
- α
- β Lvs. 3-4 in whorl, Flws. pendul. solit. Petals equal to cal. Tube of cor. conical, Stigma ovate
- γ Lvs. in threes ovate toothed smooth as are bran. Calyx glob. half length of pendul. smooth filif. red pedun.
- δ Lvs. oppos. glabr. on long petioles remotely denticul. Pedic. axill. nodding puberul. length of cal. Cal. lobes obl. acute exceeding pets. Stigm. ent.
- 17251 Lvs. oppos. small ellipt.-obl. acutish dent. glabr. little ciliat. Pedic. axill. shorter th. flws. Cal. funnel-sh. lbs. ov. acumin. Stigm. 4-lbd.
- 17252 Bran. erect slender rod-like, Lvs. pale green thin, Cal. segms. very narrow & subulate
- 17253 Bran. smoothish, Lvs. scatter. & oppos. petiol. ov.-cord. or oval quite ent. glauc. & glabr. Pedic. sub-aggreg. [short th. flws. Stig. undiv. Cal. lbs. reflexed, Stig. thick 4-lbd.
- 17254 Bran. puberul. Lvs. about oppos. small ov. or roundish ov. obt. almost ent. hairy above glabr. ben. Pedic. axill.
- 17255 Glabr. Lvs. 3 in a whorl ov.-obl. acumin. at both ends petiol. quite ent. Panic. trichotom. nrly. naked, Cal. lbs.
- 17256 Diccious, Lvs. obovate, Calyx cylindrical, Petals roundish apiculated, Anthers enclosed [ov. acute reflexed
- 17257 Lvs. oppos. petiol. ov.-cord. acute denticul. glabr. Pedic. axill. short. th. flws. : upper ones racemose, Cal. lbs. ov.-lanceol. acute exceeds petals
- 17258 Lvs. oblong, Spikes short axillary & terminal, Cal. pubescent, Petals obovate obtuse, Stamens long
- 17259 Lvs. obl. obtuse, Panic. terminal branched hairy, Cal. pubescent, Bract. very short, Flws. pedicellate
- 17260 Lvs. ellipt. acute acumin. puberul. above : clothed with yellowish tomentum ben. Spks. simple, Pedun. short, Petals lanceol. acute hairy

## TETRAGYNIA.

- 17261 Stemless, Lvs. petiolate, Racemes loose secund, Calycine segments lanceolate acute
- 17262 Caulescent, Lvs. sess. Rac. loose nodding, Cal. segms. dilated, Petals with involute margins
- 17263 Caulescent, Lvs. petiolate, Rac. spirate erect, Cal. segms. lanceol. obtuse nerveless

and Miscellaneous Particulars.

2598. *Eucharidium*. A pretty and very neat little plant, seeds of which may be sown at any period of the spring or summer, as they will generally flower in about six weeks after sowing.

2599. *Francoa*. A genus of ornamental perennials, which are, however, found to be most useful if treated as half-hardy annuals, because, as perennials, they are too tender to endure the winter in the open air without protection, Besides this, they can only be propagated by seeds.

Page 338. CLASS X. — DECANDRIA. 10 STAMENS.

Order 1. MONOGYNIA. 10 Stamens. 1 Style.

2601. *Castanospèrnum*. Calyx somewhat bilabiate, with short tube; upper lip bifid, lower one 3-fid. Petals 5, papilionaceous, with wings and keel nearly equal in length. Legume stipitate, large, oblong-cylindrical, 2-valved, usually 4-seeded. Valves coriaceous, spongy inside.  
 2602. *Reichardtia*. Sepals 5, joined into campanulate crenulated calyx. Petals 6-10, somewhat papilionaceous. Stam. declinate, distinct, cohering together beneath middle by beard. Style filiform. Stigma dilated. Legume samaroid, ending in oblong wing.  
 2603. *Eriostemon*. Calyx 5-parted. Petals 5, marcescent. Stamens unequal, free, fringed, tapering into a thread which bears the anthers. Fruit of 5, rarely 1-2, carpels.  
 2604. *Phebdium*. Calyx 5-cleft. Petals 5. Stamens unequal, smooth. Style and stigma 5-furrowed. Fruit of 5 capsular, 2-valved, 1-seeded carpels, girded by calyx.  
 2605. *Pieris*. Calyx 5-parted. Corolla tubular or ovate, with a contracted, 5-toothed, revolute mouth. Filaments dilated, furnished with two bristles at the tip. Anthers with short incumbent cells that open lengthwise. Style 5-cornered. Stigma truncate. Leaves coriaceous. Flowers drooping, terminal, racemose.  
 2606. *Pernettia*. Corolla globose, with a revolute limb. Anthers with the 2-cells 2-lobed at the tip; the lobes bifid. Hypogynous scales 10, 3-lobed, surrounding the ovary. Berry with 5 cells, the dehiscence loculicidal.  
 2607. *Limnanthes*. Calyx 5-parted. Petals 5. Stamens 10. Nucule 5.  
 2608. *Chaetogàstra*. Calyx turbinate, pilose or scaly, 5-lobed. Petals 5. Filam. 10, glabrous. Anthers oblong, having connectives drawn out into simple or bifid spur, and sometimes only into 2 blunt tubercles. Ovarium bristly at apex. Capsules 5-celled.  
 2609. *Ceratopetalum*. Limb of calyx 5-parted, permanent. Petals 5, linearly multifid, permanent or wanting. Anthers beaked. Capsule 1-seeded from abortion, dehiscing at apex. Leaves simple or ternate.  
 2610. *Darwinia*. Tube of calyx drawn out into membranous deciduous limb, throat dilated. Lobes roundish, cordate. Stamens free. Ovarium 1-celled, 1-ovulate.

History, Use, Propagation, Culture,

1737. *Eriogonum*. A hardy herbaceous plant, which thrives in any common soil kept damp, and somewhat shaded. It is readily increased by cuttings of the well ripened shoots, planted in sand and peat, and covered with a bell-glass.

## CLASS IX. — ENNEANDRIA.

## MONOGYNIA.

17264 Lvs. obovate obl. glabrous above : pilose beneath as well as petioles & branches, Involucre 4-lvd. tomentose

17265 Lvs. approximate at the base of the stem ovate rounded or cordate at the base clhd. with white wool beneath, [Peduncle scapiform, Involucre many-flwd.

## Order 2. DIGYNIA. 10 Stamens. 2 Styles.

2611. *Pachynema*. Stamens 7 or 10, free. Filaments broad and thick at base. Ovaries 2. Styles awl-shaped. Sepals and petals 5, but the petals soon fall off.

2612. *Adánia*. Limb of calyx with 5 short teeth. Petals 5. Styles ending in rather club-sh. 2-lobed stigmas. Berry crowned by teeth of calyx, somewhat 5-celled, many-seeded.

2613. *Tillima*. Free part of calyx inflated, 5-toothed, the adhering part conical. Petals 5, jagged. Styles 2-3, distinct. Capsule 1-celled, 2-valved at apex.

## Order 3. TRIGYNIA. 10 Stamens. 3 Styles.

2614. *Stigmaphilum*. Calyx 5-parted, 4 of the segments biglandular at the base. Petals unequal. Stamens unequal. Styles floraceous at apex. Samar. usually 3, one-seeded, winged at end.

2615. *Thryállis*. Petals roundish, unguiculate. Stamens awl-shaped. Caps. triquetrous, separable into 3 parts ; cells opening by outer angles.

2616. *Galphimia*. Calyx glandless. Petals unguiculate. Stamens nearly free. Drupe containing 3 1-seeded nuts, which open on the back.

2617. *Deutzia*. Calyx 5-cleft. Petals 5. Filaments flattened, tridentate at apex, middle tooth bearing the anther. Capsule 3-4-celled.

## Order 5. PENTAGYNIA. 10 Stamens. 5 Styles.

2618. *Echevèria*. Cal. 5-parted. Sepals erect, referable to leaves, united at very base, erect, thick, stiffish, thickest at middle nerve, and nearly 3-gonal at base, acute. Stamens shorter than petals, adnate to them at base. Carpels 5, ending each in subulate style.

2619. *Babísia*. Calyx 5-leaved, involucred by 10 lineal bracteas. Petals spreading, obtuse. Stigma 5-lobed, sessile. Capsule 5-lobed, many-seeded. Seeds compressed.

2620. *Viscària*. Calyx cylindrical, 5-toothed, naked. Petals 5, unguiculate, scales in the throat. Capsule 5-celled.

## MONOGYNIA.

17266 Lvs. 13-19 elliptic obl. obtuse silky beneath, Upper petal length of the lateral ones, Legume 2-jointed wingless

17267 Lvs. subhastate pinnatifidly spinous, Pedicels with bracteas at base

17268 Stems weak ascending, Lvs. ovate acute, Peduncles long terminal naked 3-flwd

17269 Plant hoary, Lvs. acicular, Flowers axillary

17270 Lvs. sessile cordate obtuse spiny-toothed, Flowers racemose drooping, Calyx pubescent

17271 Leaves opposite trifid, Lobes about equal entire spiny at apex, Ovary smooth

17272 Leaves opposite oblong-elliptic quite entire mucronate, Ovary villous

and Miscellaneous Particulars.

949. *Chortzema*. All the species are small shrubs, profusely covered with beautiful flowers ; one of the handsomest is *C. Henchmännii*, which grows freely in sandy peat.

History, Use, Propagation, Culture,

2601. *Castanospermum*. The seeds are eaten by the natives about Moreton Bay on all occasions, and, when roasted, have somewhat the flavour of Spanish chestnuts; and even Europeans, who have subsisted on them for three or three days together, have found no bad effects from them when roasted. For culture and propagation, see *Ceratonia*.

977. *Poinciana régia* is a magnificent tree, no less remarkable for its extreme beauty than for its rarity, having been found only in Madagascar, near Foul Point, where it is known by the name of *Tanahou*.

1781. *Gillièsii*. The flowers of this species have a disagreeable smell, and are considered by the common people of Chile to be injurious to the sight; hence the vernacular name *mat de ojos*. The shrub will not grow unless in irrigated places. (*Don's Mûl.* v. 2. p. 453.)

2602. *Reichardia*. Culture and propagation the same as for *Poinciana*.

2603. *Eriostemon*. A genus of beautiful shrubs with pink flowers, which deserve a place in every collection of green-house shrubs. They require the same treatment as *Phebalium*.

2604. *Phebalium*. An equal mixture of loam and peat suits this genus of plants, but care must be taken not to overwater them, or crowd them amongst other plants. Cuttings root freely in sand under a bell-glass, without heat.

1014. *Rhododéndron*. "Under this genus, Professor D. Don has included the *Azalea*, which, however technically correct, appears to us injudicious in a practical point of view; and though we have followed his arrangement in this article, yet we have indicated two sections, containing the Indian or tender, and the Asiatic and American, or hardy, *azaleas*, which those who cultivate extensive collections of these shrubs may, if they choose, consider as constituting the genus *Azalea* as heretofore. Such persons, therefore, may view the genus *Azalea* as remaining exactly as it is in

- 17273 Leaves simple very crowded linear subulate with revolute margins smooth as are branches
- 17274 Heads many-flwd. Bract. shorter th. cal. Lvs. linear mucron. with revolute margins pubescent beneath
- 17275 Lvs. cordate ovate acute mucronate glabrous, Stipules scarious, Heads terminal
- 17276 Bran. cimer. pilose, Lvs. linear obtuse smooth both sides, Heads termin. subumbell. many-flwd. Brac. very short setaceous feathered
- 17277 Leaves linear acutish with revolute quite entire margins, Spikes interrupted terminal leafy
- 17278 Pubescent, Lvs. alternate ovate lanceolate, Flws. axillary twin
- 17279 The only species
- 17280 Unarmed, Lvs. abruptly bipinnate 11-18 pairs of pinnae which are 4 in. long horizontally patent, Petals orbicul. [crenate at marg. involute at base
- 17281 Unarmed, Lvs. bipinnate, Leaflets oblong, Petals glandular denticul. ciliat at apex, Legume acnacf. glandul. 1-seeded dry
- 17282 Cor. 6-petaled, Lvs. abruptly bipinnate prickly as are stems
- 17283 Lvs. linear lanceol ent. smth. Bran. triquetrous, Flws. axill. almost sess. solit. Cal. & pels. hoary on outside, [Filam. hispida
- 17284 Lvs. obl.-lanceol. acute glauc. ending in hooked mucro, Racemes umbellate 4-5-flwd. axillary or terminal
- 17285 Lvs. linear lanceol acute scaly beneath, Flws. terminal umbellate, Stamens exerted

5923 Lvs. oblong-lanceol. glabr. both surfs. wide lanceol. streak on upper side, Segms. of cor. ovate, acute, or lanc. <sup>[obtusely]</sup>

β Leaves subcordate coriaceous obtuse

γ Leaves small

δ Leaves lanceol. clothed with white tomentum beneath, Corymbs many-flwd. Ovarium tomentose 10-celled

ε Ocorolla white marked by a few dull scarlet spots

and Miscellaneous Particulars.

our *Hortus Britannicus*." (*Arb. Brit.* vol. ii. p. 1130.) "Of all the genera in existence," G. Don observes, "Rhododendron" (under which he includes the Azalea) "comprises the most handsome, elegant, and showy shrubs for adorning shrubberies or planting singly on lawns." Though in Britain these plants are solely cultivated as ornamental, yet, in their native countries, they are not without their other uses. "The Rhododraea," Mr. Royle observes, abound in stimulant, and even deleterious, properties. Thus *Rhododendron ponticum*, *R. maximum*, *R. ferrugineum*, and *R. chrysanthum*, are poisonous to cattle which feed on them; and yet, in moderate doses, are used in medicine, for the cure of rheumatism, &c. *Azalea procumbens* L. and *Ledum palustre* are accounted diuretic; and *L. latifolia*, being more stimulant, is used as a tea, under the name of Labrador tea, but determines to the head. *Kalmia latifolia* is accounted poisonous, and honey collected by bees from its flowers is of a deleterious nature, as is that of *Azalea pontica*, which was so injurious to the soldiers in the retreat of the Ten Thousand. In the Himalayan species, *R. arboreum* is more remarkable for its use as a timber tree than the other species. The flowers are eaten by the hill people, and formed into a jelly by European visitors. The leaves of *R. campanulatum*, being used as a snuff by the natives of India, are imported from Cashmere, under the names of *hookah-kashmeree* (Cashmere snuff) and *burg-i-tibbut* (Thibet leaf), though easily procurable within the British territories. It is remarkable that De Candolle mentions the employment in the United States, for a similar purpose, of the brown dust which adheres to the petals of kalmias and rhododendrons. The leaves of *R. lepidotum* (a species not yet introduced into Europe) are highly fragrant, and of a stimulant nature." (*Royle III.* 219.) Culture, propagation, and other particulars, see p. 144, and p. 358, 360.

History, Use, Propagation, Culture,

2608. *Chaetogastra*. The species require a mixture of loam, peat, and sand; and young cuttings root readily in heat, under a hand-glass.  
 2609. *Ceratopetalum*. A mixture of peat and loam suits this plant, and ripened cuttings root readily in sand, under a hand-glass.  
 2610. *Darwinia*. Singular plants, requiring to be grown in a mixture of loam, peat, and sand; and young cuttings root readily in sand, under a hand-glass.  
 2611. *Pachynema*. This shrub thrives well in a mixture of loam and peat, and cuttings root freely in sand, under a hand-glass.  
 2612. *Adamia*. This shrub requires a mixture of loam, peat, and sand, and cuttings root readily in the same kind of soil, under a hand-glass. It is called *Bansook* by the natives.

- 17300 Stem somewhat 4-gonal clothed with adpressed villi, Lvs. petiol. broad lanceol. acumin. serrulately ciliated 5-  
 17301 Erect nearly simple, Stem 4-gonally terete villous, Lvs. almost sess. lanceol.-lin. acute quite enf. 3-5-nrvd.  
 villous, Pedic. axill. 1-flwd.  
 17302 Leaves ternate, Flowers with petals  
 17303 Leaves acerose, Receptacle chaffy, Style 3 times length of flowers, Calyx red

*DIGYNIA.*

- 17304 A little leafless shrub with the habit of *E'phedra*. The only species  
 17305 The only species  
 17306 Lvs. cordate lobed dentately serrated, Racemes elongated, Petals oblong-linear pinnatifidly jagged  
 17307 Lvs. ovate acute serrat. pilose, Racemes termin. tomentose rather compound at the base, Flws. usually trigynous  
 17308 Stem erect dichotom. branched, Lvs. obovate spatulate nrvly. smth. ciliat. on margins, Flws. axill. solitary  
 17309 Flws. aggreg. sess. Cal. scales broad mucronate with membranaceous margins longer than tube, Lvs. lanceol.  
 many-nerved [lin. very long comate at base  
 17310 Flws. numerous sess. in hemispherical heads leafy bracts at base, Cal. scales ov. acumin. pressed to cal. Lvs.  
 17311 Stem erect, Flws. rather aggregate, Calycine scales 6 acuminate divaricating shorter than tube, Petals mul-  
 tifold bearded, Lvs. lanceol.

*TRIGYNIA.*

- 17312 Lvs. glabr. sagittately hastate angular acute, Hind lobes truncate margined horned, Petiole biglandular at apex  
 17313 Lvs. ovate lanceol. glauc. green above white ben. Racemes short paniced, Petioles biglandul. at apex  
 17314 Lvs. ovate obtuse smooth glaucous beneath 1 tooth on each side at base, Petioles without glands  
 17315 Lvs. ovate acute sharply serrated pilose, Rac. terminal tomentose, Flowers usually trigynous

*PENTAGYNIA.*

- 17316 Lvs. orbicularly cuneated, Petiole thick, Flws. in spicate panicles  
 17317 Lvs. flat cuneiform acutely mucron. crowded at tops of branches, Pedic. spreadg. Flws. on short pedic. along  
 bran. of panicle  
 [compound, Petals lanceol. acute little long. th. stams.  
 17318 Lvs. oppos. obsolete denticul. adnate: inferior ones broadly ellipt. superior sess. cord. Corymbs termin.  
 17319 Lvs. opposite orbiculate denticulate  
 17320 Stem flat on ground at base ascending, Lvs. obl. altern. obt. loosened at base, Cymes bifid glabrous, Petals 7  
 [obtuse

- 17321 Stem erect leafy, Pedun. umbelliferous 5-6-flwd. longer than lvs. Leaflets obovate, Petals crenated  
 17322 Stem erect branched, Pedun. long, Flws. subumbellate drooping before expansion, Leaflets 3 orbicordate sessile

*and Miscellaneous Particulars.*

2614. *Stigmaphilum*. A handsome climber, propagated by cuttings.  
 2615. *Thryallis*. A mixture of loam and peat will suit this plant, and ripened cuttings will root in sand under a hand-glass, in heat.  
 2616. *Galphimia*. A genus of rather handsome shrubs, requiring the same treatment as *Thryallis*.  
 2617. *Dcutia*. A very showy free-flowering shrub, which deserves a place in every collection. It is readily propagated by cuttings or layers. According to Kempfer, the wood is used by the cabinetmakers in Japan for making their very finest pegs, for which its hardness and toughness render it well adapted.  
 2618. *Echenheria*. Culture, propagation, &c., see *Crassula*, in p. 230.  
 1065. *O'salis* 17321 *crenata*. "The tubers of this plant are produced in considerable plenty, and are often 2 in. long and 1 in. in diameter. When raw, they are slightly subacid, but on being boiled they lose it entirely, and taste

History, Use, Propagation, Culture

very much like the potato, for which they might form occasionally an agreeable substitute at table. It is a native of Peru, and is cultivated abundantly in the gardens about Lima, as a salad, for which purpose its succulent stems, and acid flavour, seem strongly to recommend it. It grows freely in the open border, and is readily increased by cuttings, as well as by the tubers, which require to be taken up and treated as potatoes. (*Sw. Fl. Gar.*, 2. s. 125.)  
 2619. *B*albisia. A showy conservatory plant, which may be increased by cuttings, but is apt to damp off; if kept in health, it is very handsome.

- 17323 Stem erect fleshy leafy, Pedun. bifid corymbosely racem. at apex 4 times longer th. lvs. Lfts. obcord. Petals crenated at apex [very long cal. Styles
- 17324 Stem decumb. bran. Leaflets. lin. sess. acute, Pedun. much higher than lvs. Bract. approaching cal. Styles [middle
- 17325 Hairy nearly stemless, Scape 1-fwd. drooping before expansion, Leaflets 3 orbordate
- 17326 Stem fleshy scaly, Leaflets. lin. obt. pilose beneath, Flws. umbellate, Pedicels and petioles twisted fleshy.
- 17327 Stemless, Scapes 2-3-fwd. Leaflets. 3 orbordate [lvs. with 2 bracts ab. middle
- 17328 Stemless, Lfts. roundish orbord. bright purple and dotted with shining golden dots beneath, Scapes longer th. truncate uneq. cren.
- 17330 Bulb large scaly stemless, Lfts. 4 large orbord. pilose glauc. ben. on short pilose petioles, Umbels many-fwd. 17331 Tuberos, Lfts. 3 roundish-obov. deeply emarginate hairy leprous ben. on margins, Scape many-fwd. Filam. [middle and styles bearded.
- 17332 Stem very short leafy, Lfts. 6 ovate clothed with close-pressed villi, Scapes longer than lvs. with 2 bracts in
- 17333 Stem very short leafy, Flowers pale crimson
- 17334 Stipe fleshy, Leaflets 3 orbordate ciliated pubesc. Scape 3-5-fwd. bifurcate, Calyx ciliated
- 17335 Stemless smooth, Lfts. 3 cuneate 2-lobed, Lobes diverging, Scape many-fwd. Sepals ovate
- 17336 Lvs. usually alternate with linear pilose segms. Peduncles much longer than lvs.
- 17337 Lvs. ovate and lanceolate pubescent, Flowers solitary, Petals cut [lvs. spatul. on long footst. Stem lvs. cord. sess.
- 17338 Stems tufted diffuse, Flws. in dichotom. bundles 1-fwr. in each fork on long peduncles, Lvs. leathery, Radic. [middle
- 17339 Lvs. linear channelled, Stem ones opposite subulate, Petals jagged
- 17340 Stems not clammy, Petals entire, Lvs. lanceol. linear ciliated at base

Order 3. TRIGYNIA. 12 Stamens. 3 Styles.

2622. *Poinsettia*. Involucrum 1-ld, androgynous, 5-celled at base, appendiculate outside, nectariferous. Flowers pedicellate, naked; male ones monandrous, in two rows; female ones solitary. Germen 3-lobed. Lobes 1-seeded.

Order 6. DODECAGYNIA. 12 Stamens. 12 Styles.

2623. *Cephalotus*. Calyx coloured, 6-cleft. Stamens 12. Anthers didymous, glandular on the back. Ovaries 6, distinct. Styles terminal. Chenia 1-seeded.

MONOGYNIA.

- 17341 Stem diffuse bran., Lvs. scattered cylindr. acute with pilose axils, Flws. 3-4-together termin. crown surround. [by whorl of lvs. and crowned hairs.
- 17342 Stem erectish bran. at base, Lvs. obl.-cylindr. rather compressed obtuse dotted axillary fascic. of hairs erect adpressed, Flws. termin. usually solit.
- 17343 Glaucous, Lvs. fleshy rhomboid acute petiolate, Raceme simple loose, Calyx spotted, Petals orbordate.
- 17344 Glabrous diffuse, Lvs. spatul. acute elongat. at base, Flws. racemose, Pedicels and bractees very short
- 17345 Lvs. fleshy obovate-obtuse elongat. into petiole somew. d scoured ben., Rac. bending, the pedicel drooping after the falling of the petals [bose, Pedic. little long. th. brac.
- 17346 Glauc., Stems numer. prostrate leafy, Lvs. linear, Common pedunc. termin. naked simple or bran., Rac. corym.

and Miscellaneous Particulars.

2620. *Viscaria*. Culture as in the common catchfly.

2621. *Calandrinia*. A genus of ornamental succulent plants, generally treated as annuals, although properly they are not so, as they may be preserved in the green-house through the winter, and in time, so treated, *C. grandiflora* will become shrubby. They require to be planted in hot dry exposed places.

P. 408. CLASS XII. — ICOSANDRIA. STAMENS many, perigynous, or inserted into the Calyx.

Order 1. MONOGYNIA. Many perigynous Stamens. 1 Style.

2624. *Melocactus.* Tube of calyx adhering to ovarium. Lobes 5-6, petaloid, crowning the young fruit. Petals 5-6, united into a long tube along with the sepals. Stamens disposed in many series. Stigma 5-rayed. Fruit smooth.
2625. *Echinocactus.* Sepals numerous, imbricate, adhering to the ovarium; outer ones in the form of an involucrem; inner ones petaloid. Style multifid at the apex, very scaly from the remains of the sepals.
2626. *Mammillaria.* Tube of calyx adhering to the ovarium. Lobes 5-6, coloured, crowning the young fruit. Petals 5-6, hardly distinguishable from the sepals. Stamens disposed in many series. Stigmas 5-7-cleft, very smooth.
2627. *Cereus.* Sepals numerous, imbricate, adhering to the base of the ovarium, united into an elevated tube. Outer sepals like a calyx; middle ones longer and coloured; innermost ones petaloid. Style multifid at the apex. Berry areolate, tubercular, or scaly.
2628. *Epiphyllum.* Tube of calyx long, furnished with remote scale. Limb of cor. multifid, rosaceous, or ringent.
2629. *Opuntia.* Sepals numerous, foliaceous, adnate to the ovarium; upper ones flat and short; inner ones petaloid. Stigmas numerous, erect. Berry oval, umbilicate, tubercled, or spiny

History, Use, Propagation, Culture,

2622. *Poinsettia.* "Nothing can be more ornamental in the stove. The rose-like whorls of bractæ which terminate the branches have been seen on the large plants cultivated at Philadelphia as much as 20 in. across, and equal in colour to the finest tints of *Hibiscus Rosa sinensis.*" (*Bot. Mag.*) A mixture of sand and loam suits this plant, and cuttings root readily in sand under a bell-glass in heat.

TRIGYNIA.

- 17347 Much bran. cithd. with numer. long and strong straight spines, [scarlet roundish united and concave at base  
 17349 Stem obtusely and irregul. angul. smth. pale gray-ld., Lvs. coriac. on short petioles obov.-obl. retuse with  
 mucro each lf. situat. betw. 2 strong spines, Brac. brick scarlet  
 17349 Glabrous, Lvs. lanceol acum. entire uppermost ones reddish, Peduncles axillary racemose few flowered  
 17350 Stems diffuse, Lvs. stiff obov. acute glaucous, Umbel multifid, Bracteas roundish cordate, Segms. of involucre  
 biglandular  
 17351 The only species

HEXAGYNIA.

- 17352 The only species

2630. *Pereskia*. Sepals numerous, foliaceous, adnate to the ovarium. Cor. rotate. Stigmas aggregate, spiral. Berry globose or ovate.

2631. *Purshia*. Lobes of calyx obovate, obtuse. Petals and stamens arising from the calyx. Stamens about 20. Carpels 1-2, ovate-oblong, tapered into a short style, pubescent; each includes 1 ovule inserted into its base, and opens by a longitudinal cleft.

2632. *Coumbia*. Cal. 5-cleft. Petals 5. Ovaries 5-14. Ovule erect. Styles terminal, continuous. Achenia awned with the plumose persistent styles. Embryo erect.

Order 2. DI-PENTAGYNIA. Many perigynous Stamens. 2 to 5 Styles.

2633. *Stranva'sia*. Cal. 5-toothed. Petals 5, concave, sessile, spreading, villous at base. Stamens 20, spreading, Ovary villous, superior, 5-celled. Cells containing 2 ovules. Fruit spherical, enclosed by the calyx, containing the superior, 5-valved, hard, brittle, dehiscent capsule. Seeds oblong, compressed. Testa cartilaginous. Radicle exserted. Leaves simple. Flowers corymbose.

2634. *Kagenéckia*. Cal. saucer-shaped, furnished with a ring a little elevated on the inside, girding the ovaries. Petals wanting? Stamens 15, 5 of which alternate with the lobes of the calyx, the rest by pairs opposite the lobes.

MONGYNIA.

- 17353 Subglobose umbilicate, Ribs 13 continuous somewhat undulated, Tubercles woolly bearing many short stiff  
 straight spines, Petals acute  
 17354 Roundish cylindrical, Mammillae lrgc. conical rather angular disposed along 16 rather spiral ribs, Spines slender  
 [spreading  
 17355 Obovate, Mammillae lrgc. conical depressed disposed along 16-17 ribs, Spikes 8-10 long slender spreading  
 17356 Nearly globose glaucescent, Ribs 14 acute, Spines unequal spreading, Flowers very long  
 17357 Nearly globose umbilicate, Ribs 9-10 undulated, Spines 5-6 straight black, Petals acuminate

- 17358 Oblong cylindrical, Spines 6-7 upper ones largest brown  
 17359 Cylindrical proliferous, Axils naked, Spines 20 equal spreading [Petals nearly equal  
 17360 Simple oval cylindrical, Mammillae large conical obtuse, Spines 8-10 stiffish straight nearly equal spreading,

and Miscellaneous Particulars.

2623. *Cephalotus*. This plant grows best in turfy peat soil, and should be kept rather damp. If moss is allowed to grow on the surface of the soil it helps the growth and health of the plant. It is increased by seed.  
 1111. *Cactus* to 2630. *Pereskia*. For propagation, culture, and other particulars relating to *Cactee*, see p. 410-415.; also, for some excellent remarks on the general treatment of *Cactee*, see *Gard. Mag.*, vol. xv. p. 83.

History, Use, Propagation, Culture,

2631. Purshia. A dry light soil suits this plant, and cuttings of the young wood will root in sand under a hand-glass.

- 17361 Globose subcylindrical, Mammillæ lrg. conical obtuse, Spines 14—16 strong straight nearly equal, Petals very unequal  
 17362 Oblong subcylindrical, Mammillæ lrg. subtetragonal, Spines 7—8 straight slender one longer than rest, Petals [acuminate

17363 Branches diffuse creeping triangular, Spines 4—5 stiff spreading.

- 17364 Hybrid between *C. speciosissimus* and *C. labellifórmis* [linear obtuse  
 17365 Stems creeping triangular, Spines numerous bristle-shaped, Flowers solitary from the centre of the bristles, Petals

17366 Branches deeply serrated naked, Tube of flower very long slender, Segms. of cor. lin. lanceol.

17367 Stem serrated repand, Tube of cor. short scaly unarmed

- 17368 Branches seldom with any spines except when young, Cor. large ringent nearly four times longer than tube, [Petals keeled  
 17369 Branches cuneate oblong undulated, Margins appearing curled from large crenatures

6884 Proliferous loose, Joints ovate, Spines setaceous

17370 Joints ovate oblong blunt at both ends, Spines setaceous length of the wool

6904 Lvs. ellipt. Prickles solitary in axils of lvs. fascicled on stems, Flowers paniced, Fruit globose

17371 Lvs. ellipt. acute tapering into short footstalks, Spines fascicled, Upper axils bearing thick rounded fleshy  
 3-5-flwd. pedunc., Petals obov. retuse soon reflected

17372 Stem with white shining epidermis, Lvs. sinuately toothed, Capsule naked 3-valved, Seed broadly marginate.  
 Flws. in leafy panic.

17373 Stem branched hispid, Lvs. ovate lanceol. pinnatifid, Bract. pinnatifid, Petals 5 obovate cuspidate

17374 Lvs. ov. acumin. serrately denticul. rounded at the base 3-nerved, Flws. fewer and larger than in *P. vulgáris*  
 and scentless [minute

17375 Bark whitish, Lvs. broad-ovate acumin. toothed about 5-nrvd. hairy ben. Infor. racemose, Lobes of cal. acu-

17376 Lvs. ovate-oval with long acuminate tip serrat. toothed 3-nrvd. hairy ben. Infor. subracemose, Flws. 5-7 showy  
 slightly scented [level with stamens

17377 Lvs. oval-ovate with long acuminate tip toothed pubes. ben. Flws. solitary or 2-3 together, Stigmas about

17378 Lvs. ovate acuminated denticulated toment. ben. Racemes termin., Pedicels oppos. Lobes of cal. ovate acute

17379 Peduncles angular short usually solitary, Lvs. ovate lanceol. acum. Calyx hairy 4-cleft, Petals hairy outside

17380 Subdecumbent, Lvs. grouped wedge-sh. ending in 2-3 teeth villose ab. toment. ben. Buds scaly, Stipules none,  
 or minute

17381 Leaves wedge-shaped oblong pinnatifid plaited, Ovaries 14

and Miscellaneous Particulars.

2632. *Cowánia*. A handsome evergreen hardy shrub, with large showy blossoms resembling a small rose.

DI-PENTAGYNIA.

†1132. *CRATÆGUS*. *L.* (*Kratos*, strength; hardness and strength of wood.) *Rosicæ* † *Pèmeæ*. Sp. 27—27.

- 17429 Prickles numer. scat. hooked, Lfts. simply serrat. hairy on both surfs. Sepals pinnate decid. Pedun. aggreg.
- 17430 Calyx tube globose, Prickles hooked, Lfts. simply serrat. downy beneath, Bractæas overlapping the fruit
- 17431 Prickles hooked, Lfts. ovate dbly. serrat. smooth glandul. Pedun. aggreg. smth. or minutely bristly, Sepals pinnate decid. Fruit broad-ellipt. [nate decid. Fruit ellipt.
- 17432 Prickles hooked uniform, Lfts. ellipt. somewh. dbly. serrat. glauc. hairy ben. glandless, Sepals distantly pin-
- 17433 Prickles hooked, Lfts. ovate dbly. serrat. hairy glandless, Sepals pinnate often dbly. pinnate decid. Flw. stalks aggregate hairy
- ♂ Stem firm as well as bran. prickly, Stips. nrly. ent. Flws. paniced very numer. semidouble, Styles exerted
- ζ Has the flowers in a kind of panicle, and the leaflets large and thin [ther drooping
- η Stem & bran. prickly, Lfts. ovate red ben. Stips so finely denticul. as to appear fringed or panose, Flws. ra-
- ♂ Differs from var. η principally in having the stems & branches almost unarmed & the stipules almost entire
- ι Has double pink flowers
- x Has double bluish, changing to white, sweet-scented flowers, and is of rapid growth
- λ Has large cream-coloured flowers, deepening almost into yellow in the centre
- μ Has fine double crimson flowers with a yellowish tinge
- ν Has very double pale yellow flowers
- ξ Very beautiful white-flowered variety
- 7515
- β Is a very strong-growing variety, quite deciduous, with blush flowers
- γ Is an elegant variety with deep red flowers
- δ Germens ovate, Pedunc. hispíd with glanded hairs, Stems & pet. prickly violaceous, Lfts. ovate-lanceol.
- 7516
- β Is a beautiful variety, with much larger & more double flowers than those of the species, Stipules fringed
- γ A vigorous-growing climber
- δ A remarkable variety from its petals having a reticulated appearance
- 17434 Decumb. clthd. with silky villi, Lvs. tern. petiol. Lfts. obov. dply. serrated toment. ben. Stip. ov. lanceol, [ent. or bifid
- 17435 Hybrid between *P. pedata* and *P. atrosanguinea*
- 17436 Hybrid between *P. nemoralis* and *P. formosa*
- 17437 Villous, Stems ascend. bran. Lvs. flaccid radic. ones quinate, Lfts. obl.-cuneat. coarsely and bluntly toothed, Stem lvs. ternate few-toothed [rather silky ben., Stip. adnate ov. lanceol. acumin.
- 17438 Villous, Stems bran. diffuse, Radic. lvs. petiol. 3-4-5-nate, Lfts. ov. or obov. obt. dply. serrat. feather-nrvd.
- 17439 Villous, Stems ascend. Lower lvs. 5-6 lfts. upper ones ternate, Lfts. obl.-cuneif. coarsely thd. hairy on both surfs. Cal. segms. ov.-acumin. [Panicles dichotomous few flow.
- 17440 Stems erect covered with glandular hairs, Radic. lvs. pinnate upper ones sessile ternate, Stp. round membran.

17441 Stem erect hairy corymbosely panic. at apex, Lvs quinate lower ones petiolate upper alm. sess. Lfts. lanceol, [dply. serrat. toment. ben

7629 The only species  
β The only form known in British gardens previously to about 1834.

Page 456. CLASS XIII. -- POLYANDRIA. STAMENS many, hypogynous, or inserted under the Ovary.

Order 1. MONOGYNIA. Stamens many, hypogynous. Style 1.

- 2635. *Ryðnea*. Flowers hermaphrodite, apetalous, with petaloid urceolus between the stamens and pistil. Fruit baccate, indehiscent.
- 2636. *Achlys*. Sepals 0. Petals 0. Flowers naked, disposed in a dense spike. Stamens numerous. Stigma dilated, hence concave. Ovary ovate, smooth, 1-celled, 1 ovule fixed to bottom of cell.
- 2637. *Hunnemània*. Petals 4. Stamens indefinite. Stigma peltate, 4-furrowed, slightly 4-lobed. Capsule siliquiformed, rather compressed, 10-ribbed, 1-celled, 2-valved.
- 2638. *Ludia*. Calyx permanent, 5-7-parted; lobes oval. Petals 0. Stamens numerous, inserted in the disk. Anthers roundish. Ovary 1, ovate. Style filiform. Stigma 3-fid, rarely 4-fid. Berry dry, globose, pointed by the style, 6-8-seeded.
- 2639. *Azara*. Calyx 4-5-parted. Petals 0. Style awl-shaped. Stigma obtuse. Berry many-seeded.
- 2640. *Lætia*. Calyx 5-parted, marcescent. Petals 5, or wanting. Stamens indefinite, hypogynous. Anthers roundish. Capsule fleshy, 3-5-valved, small, globose, acuminate with the style.
- 2641. *Godofya*. Calyx of many deciduous sepals. Petals 5. Stamens numerous, disposed in many rows, or collected into five bundles. Anthers long, biparose. Style simple. Capsule 3-5-valved, 3-5-celled, with the edges of the valves bent inwards, forming the dissepiments, many-seeded. Seeds winged.
- 2642. *Dendromècon*. Sepals 2, caducous. Petals 4. Stamens numerous, filif. Anthers linear. Stigmas 2, sessile, short. Capsule siliquiformed, 1-celled, 2-valved. Placentæ marginal, filif. Seeds many, pear-shaped, smooth.

History, Use, Propagation, Culture,

2635. *Ryðnea* 17442 *speciosa* is a beautiful and singular plant, deserving a place in every stove. Ripened cuttings root freely in sand, under a bell-glass, in heat. The plant thrives in vegetable mould with a little sand.  
 2636. *Achlys* 17443 *triphylia*. This plant succeeds well in common garden soil, and is increased by division of the root.  
 2637. *Hunnemania*. For culture, &c., see *Fachschtöltzia*, p. 1218.

2643. *Platystemon*. Sepals 3, caducous. Petals 6. Stamens numerous. Filaments dilat. Membrane cordate. Anthers linear. Ovaria numerous, linear, each terminated by a linear sessile stigma. Capsules distinct, torulose, articulated, indehiscent, transversely many-celled, hispid. Seeds pendulous, solitary in the cells.

2644. *Platystigma*. Sepals 3, ovate, deciduous, hairy. Petals 4-5. Stamens numerous. Filaments thread-like. Anthers linear, 2-celled, opening sideways. Stig. 3, ovate, acute, erect, divergent. Caps. oblong, attenuated at base, 1-celled. 3-furrowed, 3-valved, opening from top to base. Seeds numerous, minute, egg-shaped, black, smooth, shining.

2645. *Cálythris*. Calyx drawn out into a cylindrical tube; lobes ending in a long bristle each. Stamens 10-30, free. Fruit dry, indehiscent, 1-celled.

Order 2. DI-TRIGYNIA. Stamens many, hypogynous. Styles 2-3.

2646. *Pleurán dra*. Stamens 5-20, all leaning to one side, and fertile. Ovaries 2. Styles filiform. Sepals and petals 5.

Order 3. TETRAGYNIA. Stamens many, hypogynous. Styles four.

2647. *Eschschóltzia*. Stamens indefinite. Stigmas 4, 2 short and 2 long. Caps. elongated, silique-formed, 2-valved, 1-celled. Cal. calyprate. Recept. expanded.

Order 5. POLYGYNIA. Stamens many, hypogynous. Styles many.

2648. *Talaúma*. Carpels disposed in spikes, 1-2-seeded, joined together into a strobile-like fruit opening valvately and irregularly on the outside. Calyx of 3 sepals.

MONOGYNIA.

17442 Under surface of the leaves stellately hairy on the ribs, Peduncles 1-fwd.

17443 Lifts. with very unequal sides upper side or front coarsely sinuate-toothed or lobed, Lobes blunt finely rayed with nerves

17444 Caps. hispid oval, Sepals hairy, Lvs. pinnatif. hairy lacinated part often terminating in bristles, Stems bran. and leafy [Lbs. cut, Lobules termin. by a bristle

17445 Caps. hispid obov.-obl. Sepals bristly. Pedun. rad. very long covered with adpressed hairs, Lvs. pinnately lbd. 17446 Caps. smooth ellipt. Sepals hairy, Stem few-fwd. covered with stiff bristles, Lvs. somew. stem-clasp. glauc. sinuately pinnatif. [terminated by a bristle

17447 Caps. smooth obov. Sepals rather setose, Stem smooth few-fwd. Lvs. stem-clasp. glauc. toothed each tooth 17448 Lvs. smooth obov.-obl. Sepals hairy, Stem covered with numer. bristly hairs, Lvs. sess. hispid sinuately pinnatif. Lbs. ov. and distant

17449 Lvs. profoundly sinuat. or pinnatif. glaucescent, Nrvs. with prickly bristles, Flws. solit. Caps. oblong dply. 5-6-furrowed covered with smoothish reflex. prickles

17450 Lvs. sinuated smooth spiny-toothed, Nrvs. unarmed, Flws. panic. polyandr. Caps. bluntly quadrangul. almost unarmed

17451 Lvs. petiol. roundish-ov. obtuse 7-nrvd. central one remarkably swollen below, Petioles terete, Pedunc. elongat. 1-fwd. Petals twice length of cal. Pistils 6

17452 Leaves decomposit triternate glaucous, Lifts. linear bluntisn

17453 Lvs. obov. shining velvny those of the young plants small and spinosely-toothed those of adult ones larger and quite entire

17454 Leaves in pairs toothed larger one elliptical smaller one roundish, Flws. umbellate

17455 Lvs. in pairs quite entire larger one obovate smaller one roundish, Flws. in drooping spikes

17456 Flws. apetalous, Pedun. axill. many-fwd. sub-divided, Lvs. oblong acute somewhat crenated shining

and Miscellaneous Particulars.

2638. *Lúdia*. Shrubs with lateral, almost sessile, flowers, which thrive in a mixture of loam, sand, and peat; and ripened cuttings root freely in sand, under a hand-glass, in heat. The native name of *L. heterophýlla* is *Bois sans écorce*.

2639. *Azára*. For propagation and culture see *Lúdia*.

2640. *Læ'tia*. Propagation and culture as recommended for *Lúdia*.

History, Use, Propagation, Culture,

2641. *Godoya* is a genus of elegant trees worth cultivating. A mixture of sandy loam and peat suits them, and ripened cuttings root freely in sand, under a hand-glass, in heat.  
 2642. *Dendromecon*. Requires some care to keep it through the winter,  
 2643. *Platystemon*. Remarkable for the peculiar pale yellowish white colour of its flowers.

- 17457 Lvs. oblong bluntish obsolete serrul. Racemes axill. or termin. compound elongated, Cal. of 10 sepals, Stamens about 40
- 17458 The only species
- 17459 Whole plant hairy spreading, Lvs. lanceolate in threes, Scape solit. Carpels hairy
- 17460 Carpels smooth
- 17461 Stems very short and densely covered with leaves, Lvs. linear ent. amplexic. 1-nrvd. Pedunc. 1-fwd. slightly hairy erect.
- 17462 Lvs. on short petioles scattered lax patent (less so and more crowd. in young bran.) tereti-filif. acute dotted, Tube of cal. elongat. very narrow upwards
- 17463 Petals obov. mucronately acumin. longer th. cal. Stam. 30-35, Lvs. and flws. nearly sessile
- 17464 Petals oval mucronately cuspidate much longer than cal. Stamens 30-40, Flowers and leaves stipitate
- 17465 Lvs. somew. 3-nrvd. linear margins revolute canes. ben. Cal. 3-5-sepaled pilose, Sepals ovate acute, Capsules [5-celled
- 17466 Erect. Bran. hispid vill. Lvs. on short footstalks obt.-lanceol. obl. pubes. and waved at margins veins ben. Pedunc. cymose [acute
- 17467 Lvs. alm. sess. ovate-lanceol. acute 3-nrvd. wrinkled smthish. ciliat. netted with veins ben. Nrvs. and veins [rough, Flowers cymose
- 17468 Lvs. on short footstalks obl.-lanceol. 3-nrvd. acute undulat. somewhat denticul. and ciliat. rather hairy, Petals broad cuneat. Imbric. [broad cord. villose
- 17469 Lvs. broadly cord. acute, Margins waved denticul. ciliat. Pedun. bracteate somewhat cymose pilose, Sepals [acute
- 17470 Lvs. narrow-lanceol. wrinkled reticul. ben. almost sess. Peduncles villose generally 3-fwd.
- 17471 Lvs. broad-ovate twisted at top acutish wrinkled and hoary ben. Footst. dilat. at base somewhat sheathing, Cymes 5 or 10-flowered [acute
- 17472 Lvs. alm. sess. tapering to base ov-obl. obt. wrinkled clthd. with starry pubes. Outer sepals broadly cordate [acute
- 17473 Lvs. stalked cord.-ov. 3-nrvd. reticul. veined scabr. ab. clthd. with fasciated hairs ben. Margin fringed, Pedun. pilose 2-3-flowered [acute
- β Lvs. pubescent on both surfaces, Branches twiggy diffuse and rather prostrate

- 17474 Bran. rath. hairy clthd. with leprous toment. scabr. brownish grey, Lvs. sess. tapering to base obov-obl. rath. [oblique hoary ben.
- 17475 Young bran. vill. toment. hoary, Lvs. toment. hoary obl.-lanc. tapering to base, Ped. very short 2-fwd. Cal. 5-sep. [acute
- 17476 Bran. leprously white, Lvs. obov.-lanceol. white on both surfs. tapering to base pilose ab. scabr. from papillae [acute
- ben. Sepals 3 or 5 acute [Racemes axill. or termin. many-flowered
- 17477 Somewhat dichotom. bran. Bran. rather tomentosely cinereous, Lvs. lanceol.-obl. tapering to base hoary ben. [Racemes axill. or termin. many-flowered
- 17478 Bran. lts. simple hairy, Lvs. ovate-obl. acute sess. hairy, Pedun. and cal. hairy caescent, Pedun. solit. 1-fwd inner sepals ovate acumin. [caescent nrvd. ben. furrowed ben.
- 17479 Stem 4-gonal, Bark rough scaly, Bran. hispidly hairy, Lvs. ov.-obl. ending in petiole 3-nrvd. hispidly hairy [caescent nrvd. ben. furrowed ben.
- 17480 Bran. twiggy, Lvs. altern. lin.-obl. hairy alm. sess. Pedun. solit. 1-fwd. almost oppos. the lvs. rameal or termin. Cal. hairy [slender few-flowered
- 17481 Bran. dichotom. smthish. Lvs. minute ovate acute glabr. margins revolute on short footstalks, Racemes [Hairs cinereous
- 17482 Bran. clthd. with hoary toment. Lvs. roundish or ovate obt. green and beset with hisp. hairs ab. and hoary toment. ben. Rac. simple, Cal. pilose [Hairs cinereous
- 17483 Procumb. Bran. pilosely hairy, Lvs. green on both surfs. obl. ellipt. rather glabrous or with hairs in fascicles, [Hairs cinereous
- 17484 Procumb. Bran. ascend. pilosely toment. caescent. Lvs. ov.-obl. green and strigosely pilose ab. hoary toment. [Rac. long hairy bearded many-flwd.
- ben., Rac. simple few-flowered [Rac. long hairy bearded many-flwd.
- 17485 Bran. clothed with fasciated hairs, Lvs. hairy green both surfs. lower ones roundish-ovate upper ones ellipt. [Rac. long hairy bearded many-flwd.
- 17486 Bran. procumb. rather toment. Lvs. flat ov.-obl. acutish smth. ab. densely toment. ben. pale cinereous, Stips. rath. pilose about eq. to petioles [Stips. awl-sh. pilose and bristly at tip
- 17487 Procumb. Bran. rath. toment. and hoary, Lvs. obl. revolute margins hoary toment. ben. greenish glauc. ab. [Stips. awl-sh. lin. longer than pets.
- 17488 Bran. rath. toment. Lvs. flat or hardly revolute at margins toment. hoary ben. greenish glauc. ab. lower lvs. [Stips. awl-sh. lin. longer than pets.
- ov.-obl. obt. upper lanceol. acute [Stips. awl-sh. lin. longer than pets.
- 17489 Bran. hoary toment. at apex, Lvs. lanceol. acute margins revolute green and smthish ab. hoary toment. ben. [at top somewh. longer than lvs.
- 17490 Bran. toment. rath. hoary, Lvs. lanceol. acute flattish hoary toment. ben. green and rath. scabr. ab. Stips. lin. ciliat. longer than pets. Cal. clthd. with violac. toment. [at top somewh. longer than lvs.
- 17491 Lvs. oblong flat or concave above hoary-toment. beneath green and glabr. above, Stips. obl.-lin. ciliat. bristly [at top somewh. longer than lvs.
- 17492 Bran. hairy-tomentose, Lower lvs. oval upper ones oblong-lanceol. green on both surfs. flat hairy, Cal. hairy, Petals Imbricate

and Miscellaneous Particulars.

2644. *Platystigma*. A pretty little hardy annual, and requiring the usual treatment of such.
2645. *Cúythrís*. A genus of singular plants, requiring the same treatment as that recommended for *Lúdia*,

History, Use, Propagation, Culture,

2646 *Pleura'ndra*. A genus of pretty small green-house shrubs. A mixture of loam, peat, and sand suits them. Cuttings root readily under a hand-glass.

- α Has flowers saffron-ld., with more or less of a ferruginous tint, and may represent the species
- β Has flowers of a reddish copper colour
- γ Has double flowers of a reddish copper colour [Stips. lanceol. acute ciliat. bristly at apex
- 17493 Bran. rath. toment. adult ones glabr. Lvs. obl.-lanceol. channelled green and hairy ab. hoary toment. ben.
- 17494 Bran. glabr. warted somewh. toment. at apex, Lvs. obl.-lanceol. acute flat or hardly revolute marg. hoary toment. ben. green and shining ab. [Cal. hairy
- 17495 Bran. hoary-toment. Leaves oblong bluntish flat green on both surf. hairy, Stips. falcate longer than petioles,
- 17496 Bran. rath. toment. Lvs. stalked green hairy ab. hoary tomentose ben. lower ones oval or obl. obt. flat upper lin. lanceol. ciliat. 3-4 times longer than pet. [hairs, Cal. clthd with woolly hairs
- 17497 Stems hoary at apex, Lvs. lanceol. acute margins somewh. revolute green on both surf. and beset with starry

DIGYNIA.

- 17498 Lvs. obl. smthish mucronulate, Bracteas crowded about the sess. flws. which are villous on the outside Ovaries very hairy
- 7812
  - α albidaplena (double-white)
  - λ variegata (white and purple) Sw. fl.gar.2.s.238
  - μ lacera (bright rose-red-ld-flwd) Bot. reg. 1771
  - ν punicea (carmine-coloured) Sw. fl. gar. 2. s. 297
  - ξ pedicba (showy pink-flowered)
- 7813
  - ι Pöttsii (crimson-flowered) Bot. reg. 1436
  - κ Reeveäsi (pink-flowered)
- 7816
  - α Bäxteri (crimson)
  - λ variegata (variegated-leaved)
- 7821
- 17499 Carpels hairy. Segments of leaves elliptical entire hardly puberulous beneath
- 17500 Lvs. bitern. Lfts. lanceol. acumin. densely clthd. with soft pubescence ben. Ovaries toment. each crowned with somewh. orbic. stigma [somew. bitern. upper ternate, Lfts. pinn.
- 17501 Carpels densely toment. erect but somewh. incurv. at apex, Lvs. villous pubes. and whitish glauc. ben. lower
- 17502 Carpels 5 quite smooth erect, Lvs. smooth on both surf. Lfts. ternately divid. or pinnatif. jagged, Segments obl. those of upper lvs. very blunt

TRIGYNIA.

- 17503 Petioles hardly dilated at base, Lvs. 5-parted with entire linear lobes, Brac. trifid, Root grumose
- 17504 Stem erect bran. from base, Lvs. smooth lower ones 3-fid. with toothed lbs. those of bran. and flws. ent. and acute, Rac. loose [Caps. smooth
- 17505 Stem smooth a little bran. Bran. hardly diverging, Flws. few loosely racemose, Pedicels length of bracteas,

- δ cærulëscens Bot. reg. 1984
- ε ranunculifolium
- ζ laxum
- 17506 Petioles not dilat. Lvs. cordate 5-7-cleft upper ones 3-lobed, Racemes branched
- 17507 Petioles dilat. at base, Lvs. many-parted linear lobes, Racemes elevated, Spur straight longer than flower
- 17508 Petioles dilat. and sheathing at base, Lvs. 5-parted multifid with lin. lbs. Rac. lax clthd. with soft down as are the stems, Spur curved, lower brac. long. th. flws. [Pet. shorter than cal.
- 17509 Pet. ditto, Lower leaves 5-lobed, lobes cut and bluntish at apex upper ones 5-parted many cleft into linear lbs.
- 17510 Pet. hardly dilat. at base, Lvs. smth. 5-parted with 3-5-cleft lobes and linear lanceol. ac. lobules, Rac. lax few-flwd. Spur curved short. th. sepals [th. cal. Spur straight
- 17511 Pet. ditto, Lvs. pubes. ben. 5-part. with lanceol. pinnatif. lbs. and linear acute lobules, Rac. bran. Petals shorter
- 17512 Petioles not dilated at base, Lvs. ciliat. 5-cleft somewh. truncate at base lbs. cut at apex upper lvs. of 3 ent. 3-fid lbs. Brac. caps. and cal. smooth
- 17513 Petioles not dilat. at base, Lvs. pubes. 5-lb. Lbs. wedge-sh. at base but 3-fid and cut at apex, Rac. simple, Brac. cal. and caps. pubesc. Spur bent inwards [as long as brac. Spur straight
- 17514 Pet. ditto, Lvs. pubes. 5-lb. Lbs. lanceol. somewh. trifid dply. toothed at apex, Rac. simple pubes. Pedic. thrice

and Miscellaneous Particulars.

*Pedonia* Moÿtan. The varieties of this species have lately been greatly increased, in consequence of plants having ripened seeds in various parts of France; and also as the result of cross-fecundation with the herbaceous peony, both on the Continent and in England.

History, Use, Propagation, Culture,

2647. *Eschscholtzia*. The generic name *Chrysis* has been applied to this genus by Dr. Lindley, under the supposition that the name *Eschscholtz* was the same as that of *Elsholtz*, after whom another genus had been named. It has, however, since been proved that the names are quite distinct, therefore we retain that of *Eschscholtzia*. Showy flowers, which, though they will occasionally last several years as perennials, are grown as annuals, and are desirable for the flower-garden.

- 17515 Pet. ditto, Lvs. pubes. 5-lbd. lbs. dply. serrat. Brac. lanceol. villous clammy, Spur curved, Capsule smooth  
 17516 Pet. ditto, Lvs. 3-5-parted, Lbs. narrow somew. pinnatif. acute upper lvs. 3-parted with entire lobes, Rac. lax, Caps. pubes. [long. th. pedicel.  
 17517 Pet. dilat. and sheathing at base, Lvs. many-parted, Lbs. linear, Rac. elongat. crowded, Spur straight blunt rather  
 17518 Stem erect slender a little bran. and rather pubes. at apex, Pedic. much longer than the awl-sh. bracteas  
 17519 Lvs. petiolate tripartite segms. lin.-cuneate ent. or dply. and uneq. bifid, upper ones narrowest, Rac. lax elongat. Rachis and pedicels downy

TETRAGYNIA.

- 17520 Stigmas 4 two longer than the others, Seeds globose almost black  
 17521 Stem branching and leafy, Segms. of lvs. linear, Peduncle with funnel-shpd. appendage, Limb much dilated, Cal. long and acum. [large nearly flat  
 17522 Stem dwarf densely bran. Segms. of lvs. linear wedge-sh. tridentate at apex, Cup of pedunc. funnel-sh. Limb

PENTAGYNIA.

- ♂ stellata (starred double blue & white flwd) ♀ dégener (degenerate double blue & white flwd)  
 17523 Spur incurved, Caps. very smooth, Stem 1-2-flwd. almost naked smooth, Sepals very blunt  
 17524 Hybrid between *A. sibirica* and *A. vulgaris*  
 17525 Spur straight equal in length to petals, Stamens equal in length to petals, Styles protruding  
 17526 Spur straight very short equal in length to pet. Petals thrice as long as cal. Pedun. radic. 1-flwd. almost naked  
 17527 Spur straight length of limb, Sepals oval, Stem few-flowered, Lvs. deeply divided [longer than petals  
 17528 Spur straight much longer than petals and very short stamens, Styles not protruding, Sepals lanceol. much

POLYGYNIA.

- ♂ Differs from var. ♀ in having rather broader leaves and larger flws., and forms a broader and more compact  
 ♀ Lvs. oblong-elliptical generally rusty beneath, Flws. somewhat contracted [tree or bush  
 ζ Has roundish leaves  
 η Lvs. oval-oblong, Flws. fully expanded  
 θ Lvs. lanceol. pointed at both extremities wavy  
 β Is a supposed hybrid between *M. glauca* and *M. tripétala*  
 γ Lvs. ellipt. acute at both ends resembling those of *M. tripétala* but thicker smaller and glaucous beneath  
 β Hardly distinguishable from *M. conspicua* except by the flws. which resemble in form those of *M. purpurea*  
 γ Closely resembling var. β from which it differs in flowering somewhat earlier [var. gracilis  
 δ A hybrid scarcely differing from var. γ  
 β Leaves ovate oblong acute, Flws. greenish  
 γ Leaves much larger than those of the species

- 17529 Lvs. ovate roundish somew. cuneated at base, Petals 12 thick oblong obtuse  
 17530 Lvs. oblong acum. at both ends, Flws. 9-12 petaled outer ones short, Pedun. 1-flwd. rather droopg. cithd. as are petioles of young lvs. with ruf. vill.  
 17531 Lvs. cuneate-obov. obt. under surf. as well as bran. cithd. with brown pubes. Flws. sess. Outer petals obov. much larger than cal. [ab. bluntly cord. 5-lbd. 3-lvd.  
 17532 Lvs. large cord. 5-lbd. woolly ben. Lbs. broad ov. cut and cren. those of involucr. stalked woolly ben. smth.  
 17533 Lvs. bitern. those of involucr. on very short stalks, Lbs. elongat. acum. Pedic. 2 pubescens, Sepals 5 elliptical

2648. *Talauma* is a genus of magnificent trees and shrubs, resembling magnolias. A mixture of loam, peat, and sand suits them. They may be increased by layers or inarching on *Magnolia obovata*, and ripened cuttings will root in sand, under a hand-glass, in heat.

Page 490. CLASS XIV. — DIDYNAMIA. 4 STAMENS, of which two are shorter than the others.

Order 1. GYMNOSPERMIA. Pericarpium divided into four lobes resembling naked seeds.

- 2649. *Lophanthus*. Calyx equal, or oblique, or sublimate, usually 15-nerved; superior teeth the largest. Corolla bilabiate. Stamens ascending, or diverging.
- 2650. *Aphanochilus*. Corolla tubular. Limb short, bilabiate. Anthers versatile. Cells divaricate. Lobes of gynophore shorter than ovarium.
- 2651. *Dysophylla*. Anthers terminal, also the younger ones confluent 1-celled. Stamens somewhat declinate. Corolla almost regular.
- 2652. *Pycnostachys*. Lower segment of corolla elongated, concave. Teeth of fructiferous calyx subulately spinose. Whorls of flowers spicate.
- 2653. *Sphæcele*. Calyx reticulately veined, 5-toothed, limb not dilated, teeth nearly equal. Tube of corolla ample. Cells of anthers linear, diverging.
- 2654. *Peridonia*. Achenia membranously winged. Segments of corolla flattish. Gynophore elongated, incurved, oblique at apex. Lips of calyx entire.
- 2655. *Roglea*. Calyx tubular at base, 10-nerved. Segment 5, equal, oblong, membranous.
- 2656. *Micromeria*. Tube of corolla rarely exserted. Calyx nearly equal. Superior stamens antheriferous.
- 2657. *Gardoquia*. Calyx tubular, somewhat incurved, with an equal or sub-bilabiate mouth. Tube of corolla much exserted. Stamens 1-3, now and then sterile.
- 2658. *Physotegia*. Calyx obscurely veined, inflated after inflorescence. Corolla much exserted, with an ample throat.
- 2659. *Cbleus*. Fructiferous calyx toothed, not spiny, with an open mouth. Filaments monadelphous. Lower segment of corolla elongated, concave.
- 2660. *Chiodia*. Upper lip of calyx entire, tube short, 13-nerved, lower one bifid. Anthers mutic, 2-celled.

Order 2. ANGIOSPERMIA. Seeds several, enclosed in an undivided pericarpium.

- 2661. *Pentaraphia*. Calyx adnate to the ovarium. Corolla superior. Ring of glands hardly present. Anthers connected by pairs.
- 2662. *Rytidophyllum*. Calyx adnate to the ovarium. Corolla superior. Epigynous ring thick and sinuated. Leaves stipulate.
- 2663. *Sinningia*. Corolla oblique, ringent, with only one gibbosity at base. Calyx adnate to the ovarium, angularly winged.
- 2664. *Amphicome*. Calyx tubular, 5-toothed. Corolla tubular, ventricose near base. Limb 5-lobed, ciliated. Stamens 4, didynamous, with rudiment of a fifth. Stigma bilamellate. Capsule silique-formed. Seeds winged at both ends, and bearded.

17534 Leaves of involucrem 3-5 cleft on short stalks with deeply toothed segments, Sepals 4-5 oval [umbellate  
 17535 Radic. lvs. 3-5-parted segms. trifid very entire densely villous at margins those of involucre. undivided, Flws.

γ Is a very beautiful var. The sepals are cream-coloured, suffused with violet spots, Lvs. and bran. more hairy than those of the sp. [spreading at apex wavy

17536 Pedunc. 1-flwd. somewhat long, than lvs. Lvs. biternately decompose, Lfts. ent. or 3-lobed, Sepals half-  
 17537 Pedunc. 1-flwd. Flws. campanulate tomentose, Sepals oblong, Lvs. pinnate, Leaflets ovate serrated pilose

17538 Pedunc. 3 1-flwd. Lvs. ternate smooth leaflets ovate entire flws. drooping  
 17539 Flowers axillary panicled, Leaves subternate villous, Leaflets cordate acuminate serrated 3-lobed, Sepals obtuse. [naceous margin distend.

17540 Lvs. spreading hairy ternate, Segms. ovate acute ent. Pedunc. 1-flwd. Sepals 6-8 obl. lanceol. acute membra-  
 17541 Pedunc. 1-flwd. not bractd. several togeth. Lvs. ternately parted, Segms. ovate-obl. acumin. incisedly toothed, Sep. ellipt.-obl. mucronul. spreading

2665. *Filidzia*. Calyx 5-parted, enclosed in spathe-formed bractea, which is cleft on one side. Corolla tubularly ventricose. Limb equal, 5-lobed, sub-bilabiate. Stamens 5; 4 fertile exerted, sterile one enclosed. Stigma bilamellate. Berry spongy, longer than calyx.

2666 *Tecoma*. Calyx 5-toothed. Corolla with short tube and campanulate throat. Limb 5-lobed, sub-bilabiate. Lobes of anthers divaricate. Capsule silique-formed; dissepiment contrary. Seeds disposed in 2 rows, imbricate, winged, transverse.

2667. *Salpiglossis*. Calyx 5-angled, 5-cleft. Corolla funnel-shaped, 5-lobed. Lobes 2-lobed. Stamens didynamous, with rudiment of a fifth between the 2 longer ones. Style tongue-shaped at apex. Stigma truncate, transverse.

2668. *Calispermis*. Calyx semi-5-cleft. Corolla with tubular base, ventricose throat, and a contracted 5-lobed limb. Stamens 4, didynamous, without any rudiment of a fifth. Lobes of anthers obtuse, divaricate, distinct at apex. Wings of seeds repandly sinuated, emarginate at base.

2669. *Eccremocarpus*. Calyx membranous, 5-cleft, coloured. Corolla tubular, with an equal throat, and a 5-lobed equal limb. Stamens 4, didynamous, with the rudiment of a fifth. Anthers versatile. Cells parallel, combined. Wings of seeds repandly sinuated, nerved.

2670. *Strobilanthes*. Calyx 5-parted. Corolla funnel-shaped. Anthers erect, with parallel cells. Capsule 4-seeded in the middle. Seeds small.

2671. *Goldfussia*. Calyx 5-parted. Corolla funnel-shaped. Limb nearly equal. Anthers erect, 2-celled. Stigma subulate, crenulate on one side. Capsule 6-angled, 2-valved. Cells 2-seeded at bottom. Seeds discoid.

2672. *Calophanes*. Calyx 5-parted, equal. Corolla funnel-shaped. Throat ventricose. Limb bilobed, nearly equal. Stamens enclosed. Cells of anthers parallel, spurred at the base. Stigmas simple. Cells of ovarium 2-seeded. Capsules sessile, almost cylindrical.

2673. *Amasônia*. Calyx 5-cleft, bracteate. Bractea coloured. Corolla tubular, 5-cleft, equal. Style bifid. Drupe 2-4-seeded.

2674. *Geisoméria*. Calyx 5-parted. Sepals glumaceous, equal. Corolla tubular, clavate. Limb nearly equal, lower segment bearded. Cells of anthers parallel, hairy at apex. Ovarium 2-celled. Cells 2-seeded. Stigma funnel-shaped.

2675. *Chloanthus*. Calyx 5-cleft. Corolla tubular; upper lip bifid, lower one tripartite. Stamens exerted. Stigma bifid. Drupe containing 3 nuts.

2676. *Lophospermum*. Corolla bilabiate. Tube wide, gibbous at base. Capsule dehiscing irregularly under the apex.

2677. *Seyméria*. Calyx deeply 5-cleft. Corolla with a short tube, and a subrotate spreading limb. Stamens a little longer than the corolla. Cells of anthers nearly equal.

2678. *Diplacus*. Calyx prismatic, 5-cleft. Corolla ringent, 5-cleft. Lobes emarginate. Stigma bilamellate. Capsule 2-celled. Placenta broad. Seeds subulate at both ends.

2679. *Torenia*. Calyx plicate, obliquely 5-toothed. Two lower filaments appendiculate, or gibbous at base.

2680. *Collinsia*. Corolla gibbous above the base. Limb very irregular. Capsule 2-valved. Valves bipartite.

2681. *Franciscoa*. Calyx 5-toothed. Corolla salver-shaped. Stigma 2-lobed. Capsule 2-celled; dissepiment parallel with the valves, separating from the parietes at the base.

GYMNOSPERMIA.

17542 Diffuse without stolones, Branches pilose, Lvs. ovate sinuately-toothed or entire villous, Upper whorls of flowers [spike  
 17543 Lvs. narrow-obl. narrowed at base quite ent. or sinuat. rather vill. Lower whorls of flws. remote upper subspic. Teeth of cal. short

History, Use, Propagation, Culture,

2649. *Lophanthus*. Plants which prefer a light dry soil, and may be increased by division of the root, or by seed.  
 2650. *Aphanochilus*. Plants of easy culture, and will grow in any light rich soil.  
 2651. *Dysophylla*. The species grow well in the open air in summer, if planted in a cistern or pond, but require the protection of a green-house or stove during winter. Readily increased by division.  
 2652. *Pycnostachys*. Plants of easy culture and propagation, thriving in a light rich soil.  
 2653. *Sphacele*. Free growers and flowerers. Any light rich soil will suit them, and cuttings root freely under a hand-glass.  
 2654. *Perilomia*. Any light rich soil suits this genus, and cuttings of the young wood root readily under a hand-glass.  
 2655. *Royalea*. For propagation and culture see *Sphacele*, above.

- 17544 *Glabrous, Lvs. ov. or ov.-lanceol. acute crenate, Spikes cylindric. Interrupt. at base, Cal. segms. lanceol.-acute, Stamens exerted*

17558  
and Miscellaneous Particulars.

2656. *Micromeria* is a genus of plants which thrive, during the summer, on rockwork, but require the protection of a frame in winter.

2657. *Gardoquia*. The species are well deserving of cultivation; they thrive in a mixture of sand, loam, and peat, and cuttings root readily in sand, under a hand-glass.

2658. *Physostegia*. Elegant plants of easy culture, well adapted to the flower border. They may be readily increased by division of the root, and will thrive in common garden soil.

2659. *Coleus*. A mixture of peat and loam suits this plant, and cuttings root readily in sand, in a gentle heat.

2660. *Chilodía*. For propagation and culture see *Coleus*, above.

1290. *Gésnera*. Very showy plants while in flower. A light rich soil, or a mixture of loam, peat, and sand, suits them. Most of the species increase readily by cuttings, and by tubers of the root. While dormant, they require to be kept dry.

 Hyp. glands 4-5  
 17568 Stem simple pilose, Lvs. 3 in whorl petiol. lanceol.-obl. acumin. crenat. pilose ab. toment. ben. Whorls 10-flwd.  
 17569 Stem usually 3-gonal, Lvs. villosus nry. sess. 3 in whorl or, oppos. or scattered lin.-oblong or spatul. obtuse crenat. Limb equal, Hyp. gl. 2 behind [out, Hyp. gl. 2 behind  
 17570 Villosus, Lvs. oppos. obl.-lanceol. acutish at both ends coarsely crenat. Pedunc. axill. Upper lip of cor. drawn  
 17571 Pubesc. rather scabrous, Lvs. pet. ovate obl. cren. Rac. terminal compound, Limb of cor. oblique upper lip largest  
 17572 Bran. subtrigonal and pilose, Lvs. oppos. ov.-acute obliquely cord. at base crenat. blistered ab. pubes. ben. [twin, Hypog. gl. hairy  
 Ovarium girded by yellow ring  
 17573 Bran. very hairy, Lvs. oppos. obl.-ov. acumin. rounded at base pilose ab. toment. ben. Pedun. axill. 1-flwd.  
 17574 Stem terete toment. Lvs. ov.-cord. crenat. toment. Pedun. axill. solit. 1-flwd. Upper lip of cor. oblong undu-  
 lated lower small revolute [bifid erect lower one small and reflexed  
 17575 Pubescently tomentose, Lvs. oppos. cord.-ovate crenate-serrate, Panicle termin. Upper lip of cor. very long  
 17576 Lvs. petiolate roundish ovate cord. crenate hairy axillary, Flws. solitary terminal ones twin stem-clasping, Upper lip of corolla obl. concave  
 17577 Lvs. ellipt. acuminat. glabr. Pedun. usually 4-flwd. Cal. segms. subul. elongat. Cor. cylindric. incurved  
 17578 Lvs. broadly lanceol. somewhat obliquely falcate crenate-serrate sessile auricul. at base very wrinkled and bullate ab. beautifully reticul. ben.  
 17579 Lvs. glabrous cordate-ovate serrated ciliated, Cal. turbinate twice as long as ovarium [as ovarium  
 17580 Lvs. obl.-lanceol. atten. at base pubes. lucid serrat. Cor. spotted, Cal. cylindrically campanul. 3 times as long  
 17581 Leaves oblong subcordate velvety, Cal. cylindrically-campanul. 3 times as long as ovarium  
 17582 Stem and leaves villosus, Cal. 5-parted length of ovarium, Flowers aggregate  
 $\delta$  pallida máxima  $\zeta$  Menzièssi  $z$  violacea  
 17583 Lvs. ov. crenat. obt. toment. edges revolute, Pedun. axill. elongat. Cor. downy, Segms. nry. equal middle one cord.-ov. all undul.  
 17584 Stemless very hairy, Lvs. ov.-roundish wrinkled hispid rath. cord. at base, Scapes and pedunc. aggreg. 1-flwd. Cor. funnel-sh.  
 17585 Lfts. oppos. on short pets. 3-4 pairs lanceol. acumin. unequal at base dentately serrated  
 17586 The only species  
 17587 Glabr. Bran. terete, Lfts. 9 ovate serrat. bearded in axils of veins ben. Rac. termin. on long pedunc. Limb of cor. 4-parted  
 17588 Clthd. with glandul. hairs, Lower lvs. petiol. ellipt. obl. sinuat. upper sess. lanceol.-lin. ent. Bran. dichotom. Filam. glandul. pilose  
 $\beta$  Corolla elegantly variegated with yellow and bluish purple  
 $\gamma$  Corolla cream-coloured veined with blue  
 $\delta$  Corolla striped with brown and yellow  
 17589 Lvs. 2 pairs of pinnae, Lfts. altern. obliquely cord. ovate serrat. or ent. Stems angul. clthd. with short stiff pellucid hairs when young, Cor. hairy

2667. *Salpiglossis*. A genus of very showy handsome plants, which succeed well if sown in the open border early in spring, or they may be sown in autumn, if preserved in the green-house or frame during winter, where they will require a free admission of air and light.

2668. *Calampelis* 17589 *scabra* is a beautiful climber, generally raised from seeds in spring, on a hot-bed. The plants succeed well if trained in a conservatory, or in the open ground against a wall or house with a south exposure.

History, Use, Propagation, Culture.

2669. *Eckremocarpus*. See Calámpelis for propagation and culture.  
 2670. *Strobilanthes Sabina* is a very handsome plant, easily propagated by cuttings.  
 2671. *Goldfussia*. A pretty stove plant, easily propagated by cuttings in any rich moist soil.

- 17590 Lvs. abruptly tripartite, Lfts. oval entire rarely bifid or trifid sess. Stem furrowed, Pedun. pendulous 3-4-fwd. [both ends upper ov. acumin. stem-clasp.]  
 17591 Stem rath. flexuous shining glandul. pili at top, Lvs. sess. sharply serrul. glabr. lower ones lanceol. atten.  
 17592 Stem pubes. Lvs. sess. ovate-lanceol. serrul. glabr. Pedun. 1-2-fwd. Corolla rather pliose glandless
- 17593 Lvs. sess. glabr. ov.-lanceol. sharply serrulat. acumin. upper lvs. broader, Pedunc. usually 3-fwd. Cor. rath. hairy, Lower lip bearded [lip densely bearded at base]  
 17594 Stem and lvs. glabr. Lvs. linear sharply serrul. spreadingly recurv. Pedun. 1-2-fwd. hairy, Cor. downy, Lower  
 17595 Plant clthd. with glandul. pubes. Rad. lvs. ovate coarsely toothed, Stem lvs. stem-clasp. acute nrly. ent. Cal. segs. ov. Cor. ventricose  
 17596 Lvs. sess. ov.-lanceol. acumin. denticul. glabr. Pedun. many-fwd. Cal. glabr. Cor. ventricose ciliated  
 17597 Lvs. sess. pinnatif. Pedun. few-fwd. Cal. clthd. with glandul. pubes. segms. ovate-acute, Cor. ventric. Ster. filam. with few hairs at apex [woolly]  
 17598 Lvs. obov.-lanceol. serrul. upper lvs. quite ent. Pedun. 1-fwd. racemose, Cal. downy segms. acumin. Anthers  
 17599 Glauc. glabr. Lvs. quite ent. rad. ones spatul. caul. ones lanceol. sub-undulat. sess. Flws. verticillately panicled, Ster. fil. quite glabr. [stem-clasp. Cor. with funnel-sh. tube]
- 17600 Glabr. and very glauc. Rad. lvs. ov.-obl. on long pets. ent. rath. coriac. Caul. lvs. and brac. cord. acumin. sess.  
 17601 Clthd. with glandul. pubes. Lvs. sharply serrul. shining, Rad. lvs. lanceol. petiol. Stem lvs. ov. ultim. ones sub-plex. Throat of cor. inflat. naked [campanul.]  
 17602 Glabr. Caul. lvs. lanceol. acumin. repandly denticul. Cal. clammy segms. acumin. reflexed, Cor. large sub-  
 17603 Flws. stems and pedun. glandul. hairy, Lvs. ov.-cord. amplex. glabr. coarsely toothed, Upper lvs. on long pets. Pedun. axill. subcorymb. Cor. tubular [lately spicate, Whorls. diat.]
- 17604 Stem erect nrly. simple, Lvs. lanceol. quite ent. lower ones petiol. upper sess. subconnate, Flws. verticil-  
 17605 Lvs. quite ent. glabr. rad. ones spatul. acumin. on long pets. upper sess. ov. acumin. Upper flor. lvs. reduced to jagged serrat. bracteas [sess. amplex. Panic. thyrsoid]  
 17606 Stem smthsh. Lvs. all glabr. rad. ones lanceol. petiol. quite ent. or denticul. Stem lvs. and brac. ov.-lanceol.  
 17607 Stem alm. simple glabr. Lvs. dply. toothed rad. ones ov.-obl. those near them spatul. Stem lvs. obl. acute segs. upper ones alm. quite ent. [cal. and cor. downy]
- 17608 Stem erect pliose at top, Rad. lvs. ellipt. acute petiol. upper ovate-obl. amplex. all quite glabr. and ent. Panic.  
 17609 Stem bran. Lvs. ov.-obl. glabr. uneq. serrat. Pedun. axill. many-fwd. forming termin. panic. Cal. turbinate with jagged segms. [Pedun. 2-3-fwd. cobwebbed]
- 17610 Humble, Lvs. 3-4 in whorl glabr. bluntly cut lower ones obl. Flor. lvs. ent. lin.-lanceol. usually ternate,  
 17611 Stem smth. and slend. Lvs. smth. lin. acute sub-plex. sharply serrul. Panic. simple few-fwd. Cor. smth. inside, Cal. segs. lin.-obl. [very glabrous, Tube sub-cylindr.]
- 17612 Lvs. very glauc. quite ent. obl. lower lvs. spatul. upper lvs. or brac. connato-perfoliate, Flws. racemose, Cor.  
 17613 Glabrous, Lvs. obovate lanceol. entire rac. terminal few-fwd. secund, Anthers very villous
- 17614 Bran. glabr. Lvs. ov. acumin. serrat. upper ones amplexic. cord. Pedun. 3-fwd. downy, Cal. segms. and brac. subul. downy as is cor. [subul. pendul. glabr.]  
 17615 Glabr. glauc. Lvs. ov.-lanceol. quite ent. cordately stem-clasp. at base, Pedun. axill. many-fwd. panicul. Cor.
- 17616 Stem bran. clthd. with glandul. down, Lvs. oppos. cord.-orbicul. toothed clthd. with gland. down, Beaks much long. th. pericarp.
- 17617 Lvs. lanceol. quite entire, Spines simple spreading, Spikes ovate, Bracteas ovate concave imbricated
- 17618 Lvs. ovate ellipt. Flws. sessile solitary axil. Segms. of cor. undulated  
 17619 Lvs. petiol. ovate uneq. serrated more or less hairy, Panic. termin. leafless. Cal. long and narr. pubescent glandul. Segms. subul. uneq. Limb spreading [ben. Spikes axill. and termin.]
- 17620 Bran. erect glabr. younger one quadrangul. Lvs. oppos. uneq. oval acumin. obliq. obscurely cren.-serrat. purple
- 17621 Lvs. obl. cordato-acuminate dark green with prominent nerves above paier ben. with sunken nerves oppos. or abortive leaf very small
- 17622 Lvs. spatulate, Tube of cor.  $\frac{1}{4}$  longer than calyx
- 17623 Stem erect, Flowers yellow
- 17624 The only species

and Miscellaneous Particulars.

2672. *Calophanes*. A very beautiful plant, increased by cuttings or division of the root.  
 2673. *Amasonia*. See *Ruellia* for propagation and culture.  
 2674. *Geissomeria*. A splendid free-flowering stove plant, easily propagated by cuttings. Requires a rich moist soil.

2675. *Chloanthes*. For propagation, culture, &c., see *Verbena*.  
 2676. *Lophospermum*. For propagation, culture, &c., see *Calampelis*.

- 17625 Lvs. cord. triangular sinuately toothed five-nerved, Petioles winged  
 17626 Lvs. cord. triangular entire five-nerved, Petioles wingless  
 17627 Lvs. cord. entire, Flowers scarlet  
 17628 Lvs. cord. entire coriaceous, Flowers purple

β Has beautiful heads of changeable-coloured flowers which open yellow, outer ones gradually becoming pink, the whole dying off of a delicate rose-colour [Involucr. cord. smaller th. heads

- 17629 Lvs. subsess. or petiol. oppos. ovate somewh. acute crenate-serrate. pubes. on both sides, Heads subglobose,

- 17630 Lvs. oblong acute serrate rough, Flowers white

- 17631 Stem erect, Flowers greenish yellow

[strigose, Spikes crowded paniced

- 17632 Stem erect branched glabrous, Branches tetragonal winged when young hispid, Lvs. lanceol. sessile 8-nerved  
 17633 Stem erect, Whole plant scabrous  
 17634 Stem erect, Spike branched  
 17635 Stem erect, branched, Flowers blue  
 17636 Stem trailing  
 17637 Stem erect hairy  
 17638 Lvs. trifid, Flowers purple

- 17639 Ascend. branched, Branches hairy, Lvs. 3-partite pinnatifid, Corymbs terminal, Calyx elongated

- 17640 Ascend. hispid, Lvs. obl. acute serrated upper ones almost entire, Corymbs terminal, Calyx elongated, Segms. of cor. cun. emarg. [cun. emarg.

- 17641 Erect pubesc. Lvs. ovate lanceol. acumin. coarsely serrated, Corymbs spiked, Calyx elongated, Segms. of cor. cun. bifid  
 17642 Erect pubesc. Lvs. cord. obl. pinnatifid upper ones lanceol. Corymbs terminal, Calyx elongated, Segms. of cor. cun. bifid

- 17643 Erect hairy, Lvs. cord. obl. serrated, Spikes dense short, Cor. hairy, Segms. cun. emarginate  
 17644 Erect branched, Lvs. pinnatifid scabrous, Spikes filif. paniced, Pedunc. and calyx covered with glandul. hairs

- 17645 Prostrate hairy, Lvs. multifid, Segms. narrow ciliated, Spikes capitate, Flws. tetrand. Cor. pubesc. Segms. emarg.  
 17646 Erect hispid, Stem acutely tetragonal, Lvs. obl. lanceol. sessile subcordate coarsely serrated, Spikes paniced

- 17647 Erect branched pilose, Lvs. obl. or lanceol. sessile deeply cut, Spikes elevated, Calyx elevated

- 17648 Lvs. opposite alternate ovate acute entire or serrated, Corymbs terminal. Tube of cor. slender, Calyx 5-toothed  
 17649 Pubesc. Lvs. obl. lanceol. acumin. entire, Pedun. axil. 3-fid, Tube of cor. short, Calyx 5-toothed

- 17650 Covered with glandular pili, Lvs. ovate lanceol. Raceme dense leafy, Lobes of calyx lin. lanceol. unequal

- 17651 Erect nearly glabrous, Lvs. ovate serrated lower ones petiolate upper ones nearly sessile, Spur bluntish equal in length to lower lip of cor. [for deeply serrat. Pedic. vill. bractless

- 17652 Bran. clthd. with articul. short viscid hairs, Lvs. cord. more or less distinctly 5-lobd. downy, Lvs. mucron. crenat.  
 17653 Lvs. cordate acuminat dply. serrated hairy 5-nrvd. Pedunc. bractless, Stem herbaceous, Flws. pendulous  
 17654 Lvs. cordate acuminat coarsely and dentately serrated, Cal. semiquinquefid spreading, Cor. tubular, Filam. simple

- 17655 Lvs. cordate acuminat young ones somewhat hastate, Cal. segms. lin.-lanceol. very acute clthd. with glandular hairs

- 17656 Downy, Lvs. pinnatifid with linear obtuse rather cut segments, Capsule downy obtuse

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

2678. *Diplacus*. See *Mimulus* for propagation and culture.  
 2679. *Torënia*. The species require a moist soil. They are readily increased by division.  
 2680. *Collinsia*. All the species are very desirable showy annual plants, and have a good appearance if sown in large patches

- 17657 Plant downy, Lvs. sess. obl.-lanceol. acute nrvd. mucron. denticul. Flws. few termin. on very long pedics. Cal. acuminate
- 17658 Villous, Lvs. amplexic. ovate with erose toothed margins, Pedunc. long th. lvs. Cal. large inflately tubul. hardly plicate with ov.-acute teeth
- 17659 Pubescent, Lvs. amplexic. obl. little-toothed 5-nerved, Pedunc. shorter th. lvs. Cal. large subinfl. tubul. with ov.-acute nrly. eq. teeth  
 $\beta$  Cauliscent many-flowered  
 $\gamma$  Flowers yellow spotted with purple  
 $\delta$  Decumbent, deep yellow, Segms. of limb with a large blood-coloured spot on each  
 $\epsilon$  Stem erect, Corolla pale yellow, each segment stained with a large purple spot
- 17660 Clothed with glandular pubesc. Stems decumb. round, Lvs. ovate toothed upper ones sessile, Peduncles axil.
- 17661 Hybrid, *M. variegatus* and *M. luteus rivularis* [lary 1-flwd. shorter than lvs.
- 17662 Hybrid between *M. roseus* and *M. cardinalis*
- 17663 Diffuse clthd. with woolly villi, Lvs. petiol. ovate or ov.-lanceol. little-toothed rounded at base rath. pilose and clammy, Cal. teeth uneq. lanceol. [very short acute
- 17664 Diffuse loosely pilose clammy, Lvs. petiol. broad-ovate little-toothed truncate at base or rounded, Cal. teeth
- 17665 Clammy glabrous, Lvs. lanceol. serrul. rather connate at base, Segms. of cal. unequal
- 17666 Lvs. lanceol.-ovate serrated scabrous, Stem erect pubescent, Calyx 5-toothed equal
- 17667 Lvs. ovate-cord. Pedunc. axill. subsalsced or solitary, Cor. about twice length of cal. which is ovate and rounded at base
- 17668 Branches tetragonal erect rushy, Lvs. small ovate, Peduncles filif. generally 2-flwd.
- 17669 Lvs. lanceol. Pedicels axill. solit. much long. th. flws. Cal. downy about equal in length to corolla
- 17670 Lvs. ov.-obl. nrly. ent. downy, Pedic axill. solit. much long th. flws. Segms. of cor. acutish entire, Cal. downy
- 17671 Diffuse, Lvs. all oppos. Flws. solitary, Pedicels little longer than calyx, Capsule globose [about eq. to cor.
- 17672 Lower lvs. spatulate, upper ones oblong-linear, Pedic. verticill. shorter than flws. Cor. segms. dilated retuse, Cal. glabr.  $\frac{1}{2}$  length of cor.
- 17673 Erect downy, Lvs. glabr. ov.-lanceol. subcordate at base, Pedicels verticillate racemose
- 17674 Lower lvs. 3-lobed upper ones ov. Cal. clth. with glandular pubesc. Segms. of cor. crenated at apex
- 17675 Bran. diffuse spreading, Lvs. ellipt. acute, Bract. lanceol. glabrous as are calyxes, Flws. solitary

2683. *Schivereckia*. Silicle ovate; valves convex, somewhat depressed lengthwise in the middle. Seeds numerous Calyx equal at base. Petals entire. Larger stamens toothed.

- 17676 Lvs. elliptic very obtuse dply. 2-lobed at base amplexicaul, Petals obov. on long and at length twisted claws, Filam. short subul. [abortive linear anther
- 17677 Lvs. oblong-linear acumin. Petals linear with reflex. limb, Filam. combined forked at apex bearing each an
- 17678 Pedicels shorter than the calyx, Lvs. oblong entire or toothed hispid with stellate down
- 17679 The only species

and Miscellaneous Particulars.

2681. *Franciscea*. For cultivation, &c., see *Brunfelsia*, in p. 534.
2682. *Streptanthus*. This genus requires the usual treatment of other hardy annuals.
2683. *Schivereckia* 17679 *podolica* is a very pretty little rock plant, and thrives well if grown in a small pot in light sandy soil.

Page 560. CLASS XVI. — MONADELPHIA.

Order 1. TRIANDRIA. Stamens 3.

2684. *Orthrosánthes*. Spathe many-flowered, 2-valved. Perianth 6-parted, equal, with a short triangular tube. Stamens 3, combined at the base. Stigmas 3, fringed at top. Capsule oblong, trigonal, many-seeded.
2685. *Cypélla*. Spathe 2-leaved. Perianth 6-parted, concave at the base; outer segments large, spreading; inner ones small, convolute, reflexed at apex. Stamens 3, monadelphous. Style slender. Stigma 3-lobed, the lobes 3-fid and appendiculate. Capsule oblong, 3-celled, 3-valved, many-seeded. Seeds angular.
2686. *Herbérria*. Perianth 6-parted, tube very short, 3 outer segments much smaller than the inner ones. Stamens 3, monadelphous. Anthers linear. Stigmas 3, bifid. Capsule oblong, 3-celled, many-seeded. Seeds angular.
2687. *Spatalánthus*. Spathe rigid, 2-valved, 1-flowered. Perianth spreading, with a very short tube, and a 6-parted regular limb. Stamens 3, short, monadelphous. Anthers oblong, sagittate. Ovarium warty at apex. Stigmas 3, bifurcate.
2688. *Homéria*. Perianth 6-parted, alternate segments smaller, tube very short. Stamens 3, monadelphous. Stigmas 3-fid, the segments bifid and fringed.

Order 2. PENTANDRIA. Stamens 5.

2689. *Mahérnia*. Cal. naked, campanulate, 5-cleft. Petals 5, with an obovate limb, spirally twisted, and straightish claws. Filaments monadelphous at base, dilated into a cordate tubercle, or a cup-formed process in the middle. Styles 5, sometimes joined into 1. Capsule 5-celled, 5-valved, many-seeded.
2690. *Máeshérbia*. Cal. tubular, membranous, inflated, 5-lobed. Filaments filiform, distinct, or connected with the stipe of the ovarium. Anthers versatile. Ovarium superior, stipitate, 1-celled, with the placentas at the base, from which the ovules arise by the intervention of umbilical cords. Styles 3, filiform. Stigmas clavate. Fruit capsular, 1-celled, 3-valved. Testa crustaceous, brittle, with a fleshy crest and no arillus. Embryo round, in the centre of fleshy albumen, with the radicle next the hilum.
2691. *Clinidmia*. Limb of cal. 5-cleft. Cor. bilabiate, with hardly any tube. Anthers cohering; 2 superior ones bearded. Capsule siliqua-formed, triangular, dehiscing by 3 loriform valves, many-seeded. Seeds attached to two parietal placentas.

Order 6. DODECANDRIA. Stamens 12.

2692. *Philothéca*. Cal. 5-parted. Petals 5, unguiculate. Stamens 10, unequal, connate at base, with tube smooth and free, part of the filaments hairy. Fruit of 5 1 seeded carpels. Leaves alternate, linear.

History, Use, Propagation, Culture,

1424. *Ergsimum* 17081 *Perowskianum*. A very splendid annual, of the easiest culture.

- 17680 Pubescent, Lvs. wedge-sh. obtusely dent. Pods corymbose acutely 2-lbd. margins gnawed crenat. Seeds winged, Stem strictly branched  
 17681 Lvs. lanceol. toothed, Petals obov. Stigmas globose, Fruit silique 4-sided  
 17682 Velvety-pubescent somewhat clammy, Lfts. 7 with 20 veins on each side of each leaflet  
 17683 Unarmed, Lfts. 5-7 lanceol. acuminate pilose, Brac. ovate, Petals length of pedicels, Pedicel of fruit long

2693. *Omphalidium*. Cal. 5-parted. Petals 5, imbricate in aestivation. Stamens monadelphous, or somewhat polyadelphous at base. Carpels 5, each bearing a style. Capsules 1-5, legume-formed, 2-valved, dehiscent. Seeds twin, or solitary, exalbuminous. Leaves trifoliate, or impari-pinnate.  
 2694. *Párkia*. Flowers hermaphrodite. Calyx tubular, bilabiate, imbricate in aestivation. Legume compressed, many-seeded. Seeds covered with farinaceous substance.  
 2695. *Sarcocaulon*. Sepals 5, equal. Petals 4, equal. Stamens 15, monadelphous at base.  
 2696. *Montezúma*. Calyx hemispherical, truncate, sinuately toothed. Stamens numerous, twisted around the style, monadelphous, with 5 distinct furrows. Capsules globose, 4-5-celled. Cells many-seeded. Leaves entire.  
 2697. *Assônia*. Calyx girded by a 3-crenate 1-leaved involucl. Antheriferous filaments 15; 3 fertile between each sterile one. Styles 5, very short. Carpels 5, 2-seeded, closely connected into a single capsule. Seeds rather triquetrous, not winged.  
 2698. *Flagánthus*. Calyx 5-cleft. Petals 5, 2 of which are approximate, remote from the rest. Stigma clavate.  
 2699. *Nutidáa*. Cal. naked, 5-cleft. Anth. numerous. Stig. numerous, filiform. Carp. numerous, disposed into a ring, or whorl; 1-seeded, not opening spontaneously.  
 2700. *Lebretonia*. Cal. 5-parted, girded by a shorter 5-parted involucl. Petals 5, exerted in part, twisted in aestivation, with a spreading limb. Styles 10. Carp. 5, or only 4 from abortion, 1-seeded, indehiscent.  
 2701. *Abútilon*. Cal. naked, 5-cleft, usually angular. Styles multifid at apex. Carp. capsular, 5-30, many-seeded, usually bladderly, disposed into a whorl around the axis, so closely connected with each other as to form a many-celled capsule.  
 2702. *Erioleína*. Cal. tomentose, girded by a 5-leaved involucl. Leaflets jagged, 3 inner ones largest, all shorter than the calyx. Petals unguiculate. Stam. disposed in many series, monadelphous, outer ones shortest, all fertile. Style solitary, villous, crowned by numerous aggregate small stigmas.  
 2703. *Reevésia*. Flowers hermaphrodite. Stam. monadelphous. Anth. 15, sessile on the top of the tube. Caps. stipitate, 5-celled, 5-valved. Cells 2-seeded. Seeds winged at base.  
 2704. *Stravádium*. Limb of calyx 4-parted. Ovarium semilocular. Cells 2-ovulate. Otherwise agreeing with *Barringtonia*, in p. 561.  
 2705. *Morisónia*. Cal. obovate, bifid. Petals 4. Stams. 20, somewhat monadelphous at base? Berry stipitate,  $\zeta$  globose.

TRIANDRIA.

- 17684 The only species  
 17685 Stem erect-branched many-flwd. Lvs. distich. ensiform obtuse keeled on both sides

## DECANDRIA.

- 17711 Stem diffuse geniculately bran. elongat. Lvs. oppos. cord. 5-lob. pilose both surfs. Lbs. cuneif. cut bluntly [toothed, Pedun. 3-flwd.]
- 17712 Stem erect almost simple naked below, Lvs. 5-7-lob. deeply serrated, Peduncles short, Calyx villous, Petals entire, Filaments villous
- 17713 Stem flaccid simple, Lvs. renif. 7-lob. Lbs. trifid, Lobules 3-toothed, Pedun. elongat. hispid as are cals. Carpels crested
- 17714 Leaves very numerous linear somewhat imbricate convex beneath, Pedicels axillary

and Miscellaneous Particulars.

2690. *Malesherbia* is a genus of singular and ornamental plants, at present somewhat rare in collections, but nevertheless well deserving cultivation.

2691. *Clintonia* is a genus of tender annuals, and requires the treatment of such. The flowers are elegant; but the plants are very thinly clothed with foliage.

2692. *Phlœtheca*. The soil most suitable to this genus is a mixture of sandy loam and peat, and the plants require to be placed in an airy situation, and not crowded amongst other plants. Cuttings root freely in sand, under a bell-glass.

History, Use, Propagation, Culture,

2693. *Omphalobium.* For soil and propagation, see *Philotheca*, above.  
 2694. *Parkia.* The species of this genus may be increased by cuttings of the young wood, planted in sand under a bell-glass, in heat. "In Soudan the seeds of *P. africana* are roasted as we roast coffee, then bruised, and allowed to ferment in water; when they begin to become putrid they are well washed and pounded, the powder made into cakes somewhat in the manner of our chocolate. They form an excellent sauce for all kinds of food. The farinaceous matter surrounding the seeds is made into a kind of sweetmeat." (*Don's Mill.*, 2. 396.)  
 2695. *Sarcocaulon* is a genus of curious spiny shrubs, which bear beautiful large flowers. They may be increased by cuttings and slips of the roots, in good soil, under a bell-glass.  
 2696. *Montezuma* 17718 *speciosissima* is a very showy tree, thriving in a mixture of loam and peat. Full-grown cuttings (not too old) will root freely in sand, under a bell-glass, in a moist heat.  
 2697. *Assonia.* A light rich soil, or a mixture of loam and peat, suits this genus; and young cuttings root freely, under a hand glass, in heat.

- 17715 Lfts. 3 oval acuminate smooth on both surfs. somewh. membran. and feather-nrvd. Flws. panicled, Carpels solit. stipitate

and Miscellaneous Particulars.

2698. *Plagiánthus*. A shrub which, if planted in a warm sheltered situation, will stand our winters; and cuttings of young wood root freely in sand under a hand-glass.

2699. *Nuttálla* is a genus of very elegant plants when in blossom, well deserving a place in every collection. Peat with a little sand suits them best. They may be increased by division or by seed.

1477. *Urëna* 17726 *speciosa*. "This is a very elegant plant, with large pink flowers, which are disposed in a kind of terminal racemose panicle. It differs so much in habit from all the other species of this genus, that we doubt its being a genuine species of *Urëna*." (*Don's Mill.*, 1. 47.)

2700. *Lebretómia*. The species of this genus deserve to be cultivated in every collection, on account of their showy scarlet blossoms. A mixture of loam and peat suits them best. Cuttings taken off close to the stem of the plant root readily in sand under a hand-glass. None of the leaves should be taken off, or shortened above the sand.

2701. *Abtíon*. Some of the species of this genus are rather ornamental when in flower. They thrive in any light rich soil, and are readily increased by cuttings, which should be placed in a gentle heat.

Page 598. CLASS XVII. — DIADELPHIA. STAMENS united in two separate parcels.

Order 3. OCTANDRIA. Stamens 8.

2706. *Monnina*. Flws. resupinate. Sepals 5, deciduous, 2 inner ones wing-formed, 3 outer ovate, 2 of these usually united. Petals 3-5, connate at base, middle one concave, 3-toothed. Stams. 8, rather pilose, united into a tube at base, which is cleft on one side. Drupe or capsule 2-celled, 2-seeded, or 1-celled, 1-seeded, girded by a membranous wing, or without. Seed hanging from the top of the cell. Albumen sparing.

Order 4. DECANDRIA. Stamens 10.

2707. *Ambérstia*. Cal. tubular, 5-toothed, with the stamens inserted in it near the apex, bibracteate at base, valvate in æstivation. Petals unequal; upper one large, unguiculate, obcordate; lateral ones wedge-shaped; 2 lower ones awl-shaped. Stams. 10, 9 joined and 1 free, adhering to the pedicel of the ovary. Anth. versatile. Legume stalked, flat, oblong, few-seeded.

2708. *Rudóphia*. Cal. tubular, bilabiate; upper segment obtuse, lower one acute, 2 lateral ones very short. Vexillum oblong-linear, very long. Wings shorter than calyx, very narrow. Legume compressed, many-seeded.

2709. *Láloge*. Calyx bracteate, bilabiate; upper lip bifid, lower one tripartite. Vexillum flat, round, emarginate. Keel obtuse. Stamens all connected.

History, Use, Propagation, Culture,

2702. *Eriolæ'na*. Any light rich soil, or a mixture of loam, peat, and sand, suits this genus; and cuttings of the young wood, not deprived of their leaves, root readily in the same soil, if placed under a hand-glass, in heat.

2703. *Reevesia*. Ripened cuttings, not deprived of their leaves, root readily in sand, under a hand-glass, in a moist heat. Soil as for *Eriolæ'na*, above.

History, Use, Propagation, Culture,

2706. *Monnina*. A genus of plants not worth cultivation for ornament. A mixture of loam and peat suits them; and cuttings of the young wood root readily in sand, under a hand-glass, in heat.  
 2707. *Amherstia* 17746 *nobilis* is a native of the Burman empire, in the garden of a decayed kioun, a sort of monastery, 2 miles from the right bank of the Salven river, and 27 miles from the town of Martaban, but its native place of growth is still unknown, as the trees found in the garden have undoubtedly been planted there. The flowers are large, of a fine vermilion colour, diversified with yellow spots. This tree, when in foliage and blossom, is the most superb object that can possibly be imagined, and not surpassed by any plant in the world. The Burmese name of the tree is *Thoka*.

17745 Lvs. oblong obtuse cuneate at base obsolete veined rather leathery glabrous as are branchlets, Rac. solitary

DECANDRIA.

17746 The only species

17747 Stem suffrutic. bran. Bran. glabr. rather prickly, Lfts. petiol. obl. acumin. Petioles rath. prickly glandul. Cal. truncate unident.

17758 Flws. altern. pedicell. bracteol. Upper lip of cal. bipartite lower trifid, Stip. ov. lanceol. Lfts. 5-6 obov.-obl. vil. on both surfs. [as are stems and pets. Leg. very hairy

17759 Flws. altern. without bracteoles, Upper lip of cal. bipart. lower ent. Lfts. 5-7 lin.-ellipt. glabr. ab. hairy ben.

17760 Clthd. with silky pil. Lfts. 5-7 lin. spatulate, Flws. few verticill. Upper lip of cal. bifid lower elongat. and ent. Wings longer than vexillum [6-seeded transversely furrowed

17761 Flws. somewh. verticill. bracteol. sess. Upper lip of cal. bifid lower ent. Lfts. 5-7 lin. spatulate ciliat. Leg. 17762 Flws. rath. verticill. without bracteoles pedicill. Lfts. 11-15 lanceol. hairy ben. Both lips of cal. quite entire, Stems pilose [Vexillum sessile

17763 Silky, Leaflets 7 pubes. beneath, Racemes verticillate, Cal. bractless, Lips entire upper one gibbous at the base, 17764 Hairy leaflets 12-15 lanceol. acute, Whorls many-fwd. contiguous, Cal. bractless, Lips entire, lower one lanceol. acute

17765 Pilose, Flws. altern. without bracteol. Upper lip of cal. ent. saccate at base lower longer ov. and acumin. Keel beardless, Lfts. 7-9 lin.-lanceol. [lanceol. silky on both surfs.

17766 Flws. altern. pedicell. without bracteol. Cal. villous upper lip bipart. lower acumin. and elongat. Lfts. 5-7

17767 Flws. verticill. appendicul. Upper lip of cal. bifid, lower ent. elongat. Lfts. 7-12 lin.-lanceol. clthd. with silvery silky down, Leg. 4-5-seeded [slender racemes

17768 Stem and lvs. clthd. with silvery silky down, Lfts. obovato-oblong narrowed at base, Flws. verticill. in long 17769 Flws. verticill. pedic. without brac. Lips of cal. ent. Lfts. 5-7 lin. spatulate silky both surfs. Leg. 10-12-seeded transversely furrowed [Stipules subulate

17770 Very hairy, Flws. verticill. pedicell. bracteol. Upper lip of cal. bifid lower ent. Lfts. 5-9 lin.-lanceol. villous, 17771 Very villous, Flws. altern. on short pedic. bracteol. Upper lip of cal. bifid lower ent. Lfts. 5-7 lanceol. silky, Leg. glabr. 3-5-seeded

and Miscellaneous Particulars.

Handfuls of flowers were presented as offerings in the cave before the images of Buddha. Along with this tree were found some trees of *Mesua ferruga* and *Jonesia Asoca*. It is not a little remarkable, that the priests of these parts should have manifested so good a taste as to select three sorts of trees, as ornaments to their objects of worship, which can hardly be surpassed in beauty. A light loamy soil suits this tree; and large cuttings root in sand, under a hand-glass, in heat.

2709. *Lalago* 17751 *ornata* is a very gay flowering shrub, which requires to be kept in a well-aired green-house, in peat soil, and may be multiplied by cuttings.

History, Use, Propagation, Culture,

2710. *Vilmorinia*. A mixture of peat, loam, and sand suits this genus; and cuttings will root in sand, under a bell-glass, in heat; but the most ready mode of increasing it is by seed.

2711. *Barbieria*. For soil and propagation see *Vilmorinia*, above.

- 17772 Very villous, Flws. altern. pedicell. bracteol. Upper lip of cal. bifid lower ent. Lfts. 7-9 obl.-lanceol. Stipules subul. woolly
- 17773 Flws. somewh. verticill. without bracteoles, Rac. many-fwd. Cal. villous, Upper lip ov. and acute lower boat-sh. Lfts 7-12 lan.-acumin.
- 17774 Flws. rath. verticill. without bracteoles, Upper lip of cal. cut lower ent. Lfts. 7-8 lanceol. acute silky both
- 17775 Flws. altern. without brac. Upper lip of cal. obtuse lower ent. Lfts. 5-7 lin. lanceol. acute glabr. ab. clthd. silky silvery down. ben. [lanceol.-acute, Stipules setaceous]
- 17776 Clthd. with soft pill, Rac. elongat. peduncul. Flws. somewh. verticill. Lower lip of cal. acute and ent. Lfts. 17777 Flws. altern. pedicell. bracteol. Upper lip of cal. bifid lower one ent. acute, Lfts. 7-13 obov.-obl. silky on both surfs. Leg. 3-4-seeded [villi]
- 17778 Flws. altern. almost sess. bracteol. Upper lip of cal. bifid lower tridentate, Lfts. lanceol. covered with silky
- 17779 Silky, Lvs. digit. Lfts. about 9 lin.-lanceol. carin. below ent. very acute, Pedic. scatt. over rachis or within a little way of base, Brac. small subul. adpress. inconspic. [Upper lip of cal. bifid lower keeled acute ent.]
- 17780 Bran. spreadg. glauc. glabr. Lfts. 7-9 glauces. rath. pubes. ben. lanceol. blunthsh, Flws. somewh. verticill.
- 17781 Clthd. with silky toment. Flws. altern. pedicell. bracteol. Cal. appendicul. Upper lip bifid lower ent. and acumin. Lfts. 8-9 lin. canalicul. obt. [caducous sprdg. silky ciliat. long. th. silky cal.]
- 17782 Bran. and lvs. pubes. Lfts. 7-9 lanceol.-spatul. blunthsh somewh. mucron. smthsh. ab. pubes. ben. Bract. 17783 Bran. erect clthd. with silky pubes. Lfts. 5-7 obl.-lanceol. acute mucron. pubes. ben. Stip setaceous, Rac. peduncul. Flws. verticill. Brac. caducous and setaceous
- 17784 Bran. angul. clthd. adpress. pubes. Lfts. 9 lin. acute few silky hairs on both surfs. Stip. foliac. lin. Flws. in lax peduncul. racemes somewh. verticill. Lips of cal. ent.
- 17785 Sarmentose and hoary, Flws. somewh. verticill. tern. pedicel. bracteolate. Vexillum bicalous at base
- 17786 Clthd. with silky toment. Flws. verticill. pedicell. bracteol. Both lips of cal. ent. Lfts. 8-10 obl. blunthsh mucronul. tapering to base, Ovary very hairy [lanceol. acute, Brac. long and alend. extending beyond flws.]
- 17787 Clthd. with soft woolly and silky hairs, Lower lvs. of 9-14 lfts. upper ones 8-5 lfts. varying from ellipt. to
- 17788 Pilose, Stipules setaceous, Lfts. 7-9 obl. obtuse, Raceme long. many-fwd. Bractees setaceous plumose, Keel 17789 Lvs. of 7-9 oblongo-spatul. lfts. Whorls 6-10-flowered, Legume villous 2-seeded [beardless]
- 17790 Glabr. Lfts. 5-7 obov. narrowed at base, Whorls few-fwd. Cal. bractless silky, Lips nearly entire
- 17791 Stem downy, Lvs. on long ptes. of five obov.-lanceol. singularly thick and alm. fleshy retuse lfts. Lfts. of lower lvs. shortest and broadest glabr. ab. somewh. silky ben.
- 17792 Lvs. of 5 lanceol. acute lfts. very smooth ab. silky ben. Stip. subulate, Lower lip of cal. always entire [straight, Vexill. remarkably retrofracted]
- 17793 Lvs. broadly ov. almost cord. at base retuse at apex sometimes tern. Flws. erect secund racemose, Keel nearly
- 17794 Villous, Leaflets 3 obl. obtuse undulate, Stipules and bractees cord. Pedunc. 4-fwd.
- 17795 Leaflets 3 roundish ov. mucron. almost glabr. Petioles and stems pilose, Stipules ovate acute, Bractees nearly
- 17796 Leaflets 3 ovate obl. retuse mucron. Stip. setaceous, Racemes many-fwd. [fascicles or whorled, Pedun. 2-fwd.]
- 17797 Stem erect glabr. Lvs. pinnate with 5 or 6 pairs of ovate lfts. which are pubes. beneath, Racemes shorter than leaves
- 17798 The only spectes
- 17799 Branches petioles peduncles and leaves pubescent, Lfts. ovate, Legume 4 times longer than calyx
- 17800 Stem erect shrubby, Lvs. sess. trifoliolate, Lfts. obl. obt. and somewh. mucron. pubes. as are brans. Flws. 2-3 on very short peduncles
- 17801 Twining, Lfts. linear obtuse rather strigose on both surfaces, Calyx covered with hispid pill
- 17802 Stem tetragonal alm. simple, Lfts. lin. blunthsh mucronul. rather silky ben. Stip. lin. acute little-toothed auricle at base, Flws. secund, Leg. 6-7-seeded [axill. about 2-fwd. Leg. lanceol. glabr]
- 17803 Quite smooth, Lfts. ovate mucronul. Stip. small semisagitt. acute denticul. with diverging nrvs. Pedunc.
- 17804 Stem striat. or angul. Lvs. with 3 pairs of lin. acute lfts. Stip. semisagitt. very narrow awned, Pedun many-fwd. Leg. compressed somewh. ellipt. [axill. and termin. few-fwd.]
- 17805 Stem erect angul. bran. ab. Lvs. with 2-3 pairs of lin. attenuat. very long lfts. Stip. large semisagitt. Pedun.
- 17806 Leaflets 6 linear, Stipules broad sagitt. Pedun. 2-4-fwd. [tate, Tendrils 3-fid, Pedunc. 3-7-fwd.]
- 17807 Glabrous glaucous, Stems branch. 4-gonal, Lvs. with one pair of ovate obl. leaflets, Stipules broad cordate sagit-
- 10371 Pedunc. many-f. Tendrils 2-ldv. Leaflets roundish, Joints membranous

and Miscellaneous Particulars.

2712. *Dumasia*. Soil and propagation as recommended for *Vilmorinia*, above.
2713. *Neurocarpum*. Propagation, &c., the same as that of *Vilmorinia*.
2714. *Cologania* requires the same treatment as that recommended for *Vilmorinia*.

History, Use, Propagation, Culture.

2715. *Clíanthus* 17812 *punicus* is a splendid half-hardy shrub, which well deserves a place in every collection. It is very readily increased by cuttings and by seed, and thrives in peat or any light rich soil. In New Zealand it is called *kouain-gutukaka*, or the parrot's bill; and it is said to grow there to the size of a large tree.

2716. *Adesmia* is a genus of South American plants, some of which are shrubby; the appearance of several of them resembles that of *Genista*, and may be increased in the same manner.

- 17808 Glabr. or pubes. Lvs. with 4-6 pairs of ellipt. rarely ov. or obl. lfts. Stip. small semisagitt. lanceol. with lobe deflexed and about eq. in length to stips. [acute angularly toothed at base, Leg. convex narrow  
 17809 Stem flexuous winged, Wings ciliate pubes. Lvs. with 3-4 pairs of ov. obt. glauces. lfts. Stip. semisagitt. ov.  
 17810 Stem 4-gonal glabr. Lvs. glauc. with 4-5 pairs of ov.-obl. glabr. mucronul. lfts. Stip. semisagitt. about size of lfts. Leg. obl. rather falcate inflated
- 17811 Bran. round hoary as are lvs. Lvs. trifoliate, Lfts. oval toment. on margin, Flws. tern. alm. bractless, Cal. membran. pubes. Leg. glabr.
- 17812 Minutely pubes. Lfts. altern. obl. retuse coriaceous, Flws. racemose, Calyx 5-toothed smooth
- 17813 Lfts. roundish ellipt. retuse, Rac. droopg. few-flwd. Callosities of vexillum papilliform, Leg. rather coriaceous pubescent  
 [3-jointed covered with long plumose bristles
- 17814 Much bran. Bran. striat. pubes. divaric. spinose, Lvs. 6-pairs of small orbicul. lfts. on short pets. pubes. Leg. 17815 Stem diffuse hardly pubes. Lvs. 7-9 pairs of oval-obl. ent. pubes. lfts. Rac. elongat. Leg. pendul. with 7-8 rather hispid joints
- 17816 Silky erect much branched very leafy, Lfts. 3-pairs lin. lanceol. Pedunc. axillary solit. Cal. 5-cleft, Legumes 3-jointed [lfts. Pod of 4 to 6 1-seeded joints
- 17817 Unarmed clammy with numer. tubercul. shining glands, Lvs. of 9-14 pairs of cuneat.-obl. cren. coriac. nrly. sess.  
 17818 Spiny, Leaflets 5 pairs oval obtuse glabrous, Teeth of calyx semiovate acute reflexed, Legumes bristly 2 or 3 joints [Leg. straight compressed mucron. pendul. 8-10-seeded
- 17819 Lvs. pinnate with 5 7 or 10 pairs of oval retuse mucronul. lfts. rather undul. on margins, Rac. axill. slender,  
 17820 Lvs. pinnate with 5 pairs of obovato-ellipt. flat slightly pubes. lfts. Rac. axill. longer th. lvs. Leg. subcylind. glabr. 6-10-seeded
- 17821 Stem erect flexuose a little branch. villous, Lvs. of 5 ellip. hairy lfts. Pedunc. axill. elong. Racemes obl. spicate. Flowers erect [lvs. Spikes cylindric. hairy as are rachis and bract.
- 17822 Lvs. pinnately trifol. pubes. Lfts. ovate mucron. Petioles scabr. from glands, Pedun. axill. 4 times longer than  
 17823 Covered with down intermixed with glands, Leaflets round. oval heads con. Pedunc. very long axill. Bracteaes obl. concave, very hairy, Stem creeping
- 17824 Glabrous, Flws. umbel. 6-10 in each umbel bractless, Leaves with 7-9 leaflets

2720. *Blumenbäckia*. Tube of cal. spirally twisted. Limb 5-parted. Petals 10; 5 outer ones cucullate, and the 5 inner ones scale-formed, each scale enclosing 2 sterile filaments. Fertile stams. disposed in 5 bundles. Fruit dividing into 10 parts at base.

2721. *Scyphanthus*. Cal. deeply 5-parted, permanent, equal. Petals 5. Stams. numerous, perigynous; 10 outer ones destitute of anthers, and placed by twos opposite the scales, and longer than the rest, which are disposed in 5 fascicles opposite the petals. Caps. prismatic, silique-formed, crowned by tube of calyx, 3-valved at apex. Seeds oval, wrinkled.

### POLYANDRIA.

17825 Lvs. altern. lin.-subul. compress. reflexo-patent slightly atten. at base acumin. with mucro at point, Flws. in subglob. spike terminated by 2 or 3 annotinous shoots

17826 Leaves oppos. decussate many-nerved keeled on the back ovate or oval glaucous

17827 The only species

and *Miscellaneous Particulars.*

2717. *Hosackia*. The species of *Hosackia* are rather showy, and well adapted for ornamenting flower-borders and rockwork. They will grow in any common garden soil, and are easily increased by seeds, or by division of the root.

2718. *Eudessmia*. For culture and propagation see *Melaleuca*, in p. 652.

History, Use, Propagation, Culture,

2719. *Candollea*. Requires the same treatment as that recommended for *Melaleuca*, in p. 652.  
 2720. *Blumenbachia* is a genus of ornamental annuals, and requires the usual treatment of such.

Page 660. CLASS XIX. — SYNGENESIA. STAMENS 5. ANTHERS united by their edges.

Order 1. ÆQUALIS. Florets of the disk and ray all hermaphrodite.

2722. *Craspedia*. Heads 5-flwd. homogamous, girded by bracteas seated on a cylindrical woolly rachis, receptacle narrow. Paleæ entire. Scales of involucre membranous. Corollas tubular, 5-toothed. Anthers setiferous at the base. Achænia oblong, villous. Pappus in one series, composed of filiform plumose bristles.
2723. *Erythrolæna*. Involuc. conical; inner lvs. imbricated, outer ones reflexed, spiny-toothed. Receptacle convex, pilose. Flowers hermaphrodite, tubular, with a 5-parted limb and a 5-angled tube. Filaments glandular. Anthers bisetose at the base. Stigma bifid. Pappus sessile, plumose.
2724. *Admia*. Heads many-flwd. Involucrum campanulate, imbricate. Scales narrow, acute. Receptacle naked, convex. Tube of corolla slender, glabrous. Anthers terminated by obtuse appendages. Lobes of style elongated. Achænia 5-angled, naked at top.
2725. *Osothamnus*. Head 3-20-flowered, homogamous. Receptacle alveolate, usually naked. Involucrum imbricate. Scale scarious, obtuse. Corolla 3-toothed. Anthers bisetose at the base. Achænia obovate. Pappus in one series, composed of filiform scabrous bristles.

Order 2. SUPERFLUA. Florets of the disk hermaphrodite, of the ray female.

2726. *Leptostilma*. Involuc. equal, hemispherical. Receptacle paleaceous. Flowers of the ray ligulate, female; those of the disk hermaphrodite, tubular, 5-toothed. Pappus capillary.
2727. *Adenotrichia*. Involucrum double, many-lvd.; outer lvs. squarrose, subulate, glandular. Flowers of the ray ligulate, almost entire, female; those of the disk tubular, filiform, hermaphrodite. Receptacle naked. Pappus pilose.
2728. *Diplopappus*. Ray flowers in 1 series, female; those of the disk hermaphrodite, tubular. Pappus in 2 series. Corollas of the disk regular. Achænia beakless.
2729. *Brachyglottis*. Heads 9-10-flowered, heterogamous. Ray flowers in 1 series, female, ligulate, shorter than the disk; disk flowers tubular, 5-toothed, hermaphrodite. Receptacle naked. Involucrum oblong, surrounded by 1 row of linear scales. Achænia oblong. Pappus in 1 series, composed of dense scabrous bristles, which are combined at the base.
2730. *Rhodanthe*. Heads many-flwd. Flowers hermaphrodite. Pappus in 1 series, hair-formed, plumose. Achænia beakless, woolly. Receptacle naked.
2731. *Diplocoma*. Involucrum many-lvd. imbricated. Flowers of the ray female, ligulate; those of the disk hermaphrodite, tubular. Achænia of the rays bald at the top; those of the disk pappose. Pappus double, unequal.
2732. *Néja*. Involucrum many-lvd. imbricated. Receptacle pitted. Flowers of the ray female, ligulate; those of the disk hermaphrodite, tubular, 5-toothed. Achænia uniform. Pappus double; outer paleaceous, inner pilose.
2733. *Mutisia*. Involucrum many-lvd. imbricated. Receptacle naked. Flowers of the ray ligulate, female; those of the disk hermaphrodite, bilabiate. Filaments papillose. Anthers bisetose at the base. Achænia a little beaked. Pappus in many series, plumose.
2734. *Chaetachæna*. Heads many-flwd. heterogamous, ray-formed. Involucrum hemispherical, imbricate, with linear flat scales. Receptacle pilose or fringed. Ray flowers bilabiate; outer lip large, 3-toothed; inner one small, bipartite. Corollas of the disk tubular, 5-cleft, glabrous. Anthers bisetose at the base. Achænia beakless, somewhat compressed. Pappus in two series, setaceous, scabrous.
2735. *Lasihenia*. Head many-flowered, homogamous. Flowers of the ray female, tubular, obliquely truncate. Receptacle conical, papillose. Scales of involuc. in one series, combined into a toothed ciliated cup. Corolla short, with an inflated throat and a 5-toothed limb. Achænia compressed, pubescent. Pappus composed of 5-10-toothed paleæ.

17828 Leaves smooth obovately cuneated blunt at the top entire, Branches cinereous rough

17829 Lvs. altern. bipinnatifid, Lobes bluntish, Pedic. extra-axill. Lbs. of cal. lanceol.-linear acute shorter than petals

17830 Clthd. with harsh barbed white hairs and a few stinging ones intersp. Lvs. scatter. petiol. spread. ov. acute

17831 Canescent. Lvs. oppos. palmate toothed, Cal. segms. long and linear, Outer appendages hatchet-formed awned

17832 Climbing. Lvs. cord. palmate lobed, Petals sessile keeled, Append. 3-lbd. truncate each furnished inside with 2 bristles, Caps. spiral ribbed

17833 Lower lvs. generally 7- but sometimes 5-lobed; upper ones deeply bipinnatifid

17834 Leaves palmate with bipinnatifid lobes, Flowers bifurcateated, Petals hispid

17835 Stem dichotomous, Segments of leaves obtuse ciliated

and Miscellaneous Particulars.

2721. *Scyphanthus* is a twining annual, with somewhat curious inflorescence. It is said to have been lost soon after its introduction in 1827

2736. *Baëria*. Head many-flowered, heterogamous, radiate. Scales of involucre about 10, flat, in 2 rows. Receptacle conical, naked. Flowers of the disk hermaphrodite, 5-toothed; those of the ray female, ligulate, fertile, in 1 series. Achænia fusiform, somewhat tetragonal, glabrous.

2737. *Eriophyllum*. Head many-flowered, radiate. Flowers of the ray female, ligulate. Flowers of the disk hermaphrodite, 5-toothed, glandular. Involucre ovate, with 1-2 series of adpressed scales. Receptacle naked, or a little fringed. Achænia turbinate or linear, tetragonal, glabrous. Palæ of pappus 4-8, oval or oblong, membranous.

2738. *Lagenophora*. Head many-flowered, heterogamous. Flowers of the ray ligulate, female, in 1 series; those of disk tubular, 5-toothed, hermaphrodite, male. Receptacle flat, naked. Scales of involucre in 2 series, acute, adpressed. Achænia of the rays compressed, oblong, beakless; those of the disk abortive.

2739. *Oxyura*. Head many-flowered, radiate. Flowers of the ray 10-12, in 1 series, ligulate, female; those of the disk tubular, 5-toothed, hermaphrodite. Scales of involucre in 1 series, convolute, each drawn out into leafy appendage at top. Receptacle paleaceous. Branches of the styles of the disk flowers drawn out each into a hispid appendage. Achænia compressed, glabrous.

2740. *Cladanthus*. Heads many-flowered, heterogamous. Flowers of the ray ligulate, neuter; those of the disk tubular, hermaphrodite, 5-toothed. Receptacle conical, paleaceous, intermixed with threads. Scales of involucre in 1 series, scarious at top. Achænia compressed, glabrous.

2741. *Eriocomma*. Involucre few-lyd. Receptacle paleaceous. Palæ cucul. mucronate. Flowers of the ray 4-10-ligulate, neuter; those of the disk hermaphrodite, 5-toothed. Achænia cuneated, glabrous at top, enclosed by the persistent palæ.

2742. *Viguiera*. Heads many-flowered, heterogamous. Flowers of the ray neuter, ligulate; those of the disk hermaphrodite, 5-toothed. Involucre semiglobose, scales nearly equal, each drawn out into leafy appendage at top. Receptacle paleaceous. Achænia compressed, obovate, pubescent, crowned by four lamellæ and two awns from the angles.

2743. *Calliopsis*. Heads many-flowered, heterogamous. Flowers of the ray neuter, in 1 series, ligulate, 3-5-toothed; those of the disk hermaphrodite, tubular, 5-toothed. Involucre in 2-series, outer scales short, squarrose, inner ones large, erect, combined. Receptacle flat, paleaceous. Achænia compressed, glabrous, incurved, truncate, with a minute epigynous disk.

2744. *Plectocéphalus*. Involucre globose, imbricate. Appendages to scales cartilaginous, pectinated. Receptacle clothed with setaceous palæ. Flowers of the ray neuter, funnel-shaped, radiate; those of the disk hermaphrodite, tubular, quinquefid. Pappus uniform, pilose, scabrous, caducous.

#### Order 4. NECESSARIA. Florets of the ray female, of the disk male.

2745. *Moscària*. Involucre 5-lyd. Receptacle paleaceous. Palæ of two forms; outer palæ cucul. gibbous at the base, and truncated at apex. Flowers all hermaphrodite, bilabiate, equal. Pappus paleaceous, very short.

2746. *Centrocclinium*. Involucre subglobose or cylindrical, imbricate. Flowers of the disk tubular, 5-toothed, deeply-cleft on one side; those of the ray 7-12 in number; bilabiate, inner lip very minute, bipartite; outer lip very long, 3-fid. Anthers blaristate, stigma entire. Pappus unequal, scabrous. Receptacle hispid.

History, Use, Propagation, Culture,

2722. *Craspedia* is a genus of ornamental herbaceous plants, increased by division of the root and by seed, and thrives in good light loam.  
 2723. *Erythrolæna* 17837 *conspicua* is an ornamental biennial, and delights in a warm sheltered situation, planted in rich garden soil.  
 2724. *Alomia*. A mixture of sand and loam suits this genus, and cuttings root readily in sand under a bell-glass.

## ÆQUALIS.

- 17836 Lvs. oblong altern. gradually smaller upwards lower and root lvs. longest and broader upw. so as to be spatul. clthd. with appress. rather silky hairs
- 17837 The only species
- 17838 Lvs. opposite rhomb. lanceol. deeply serrat. upper ones sessile, Infloresc. fastigate
- 17839 The only species
- 17840 Bran. downy erect slender virgate leafy, Lvs. lin.-lanceol. lowerm. 1½ to 2 in. long acute passing into small scales clthd. with white toment. ben. Scales of involucre numer.
- 17841 Lvs. linear obtuse revolute on the margins clth. with cinereous cobwebbed tomentum, Corymb. panicled, Involucr. hemispher. woolly
- 17842 Lvs. linear mucron. with revolute margins cobwebbed and muricate above and tomentose beneath, Corymb terminal, Involucr. cobwebbed and rusty

## SUPERFLUA.

- 17843 Stolones procumbent, Flower stems simple, Lvs. spatulate, Upper ones lin. tomentose on both surfaces but almost glabrous in an adult state, Corymbs terminal simple
- 17844 Lvs. lin. lanceol. acumin. obtuse at the base roughly ciliated upper ones subulate, Stem glabrous branch. Bract. of involucre acute
- 17845 Receptacle conical pilose, Flowers of the disk bearded in the limb, Stems diffuse
- 17846 Stem erect corymbose many-flwd. glabrous Lvs. ciliat. acute quite entire rad. ones spatulate, Stem ones ovate lanceol. somewhat stem-clasping
- 17847 The only species
- 17848 Lvs. obl. obt. semiamplexic. at base thick and fleshy entire rad. lvs. spatul. Panic corymbose, Invol. cylindr. [of many closely placed linear scales
- 17849 Lvs. cord. stalked angular sharply toothed white and woolly ben. upper ones amplexic. Capitula numerous in corymbose panicle
- 17850 The only species
- 17851 Erect pilose, Lvs. ovate acute serrated tapering at the petioles, Infloresc. paniculate corymbose
- 17852 Lvs. lin. obt. hoary half stem-clasp. Stem corymbose, Bran. 1-flwd. Lfts. of involucre squarrose glandular
- 17853 Lvs. ovate repandly sinuate, Panicle compound divaricate
- 17854 Glabrous erect, Lower lvs. petiol. lyrate downy beneath, Terminal lobe reniform toothed, Upper lvs. sessile amplexic. lanceol. and little toothed uppermost ones quite entire, Pedunc. 1-headed
- 17855 Stem simple rather woolly, Rad. lvs. ellip. repandly toothed, Stem lvs. lanceol. entire, Infloresc. corymbose [leafless, Achania glabrous
- 17856 Smoothish, Stem simple furrowed, Radical lvs. ellip. toothed cauline one amplexic. Panicle elong. crowded

and Miscellaneous Particulars.

2725. *Ozothamnus*. A mixture of peat and loam suits this genus, and the species may be increased by cuttings.
2726. *Leptostélma*. This genus may be increased by division of the root, and will thrive in good garden soil.
2727. *Adenotrichia*. Culture, &c., see *Leptostélma*, above.
2728. *Diplopáppus*. This genus may be increased by cuttings, and the plants thrive in a sandy loam.
2729. *Brachyglóttis*. For soil and propagation see *Diplopáppus*, above.

History, Use, Propagation, Culture,

2730. *Rhodanthe* is a very elegant little tender annual, and highly deserving a place in every greenhouse, and it requires to be grown in a good light soil.  
 1747. *Podolepis* 17860 *gracilis* is a very pretty annual, deserving a place in every flower border.  
 2731. *Diplocoma*. A handsome but rather tender herbaceous plant, requiring a light soil, with slight protection in severe weather.  
 2732. *Neja* may be readily increased by cuttings, and will thrive in a good light soil.  
 2733. *Mutisia* is an exceedingly interesting genus of shrubby climbers, with leaves terminating in tendrils, by the prehension of which the stems are supported. *M. latifolia* represents a family of climbers so very different from every other hitherto propagated in British gardens, that we cannot but strongly recommend it for trial against every conservative wall. (*Arb. Brit.*)  
 2734. *Chætachlæna*. A very pretty herbaceous plant, of easy culture.

- 17857 Glabrous, Stem 1-4-headed, Lvs. spatulate toothed, Lower ones renif. Upper ones somewhat rhomb. Petioles naked woolly at base, Achænia glabrous
- 17858 Lvs. sessile thickish lin. pinnatifidly toothed wrinkled glabrous, Heads solitary, Involucr. clammy, Outer scales spreading
- 17859 The only species
- 17860 Glabrous branch. Scales of involucr. glandular along the spike obtuse, Cauline lvs. adnate by the auricles to the stem.
- 17861 The only species
- 17862 The only species
- 17863 Scandent, Lvs. pinnate, Lfts. 6-7 ov.-lanceol. very acute sess. cobwebbed ben. terminat. by large branching tendril, Stip. ellipt. Flws. solit. Lower scales acute and reflexed [equal truncate
- 17864 Stem winged, Lvs. cord. obl. dentately spinose woolly beneath, Scales of involucr. appendiculate, Rays of pappus
- 17865 Glabrous, Stem terete, Lvs. amplexicaul. cord. oval spinosely toothed reticulated
- 17866 Lvs. sessile obl. lanceol. attenuated at the base, Outer scales of involucr. ending each in a long flexuose bristle
- 17867 Quite glabr. Involucr. 15-toothed, Pappus wanting, Achænia mucron. at apex
- 17868 Branchl. and pedicels pubesc. Involucr. 15-toothed, Pappus of 5 paleæ
- 17869 The only species

- 17874 Stem erect branch. Lvs. lanceol. sharply serrated the lower serratures awned, Ligulæ usually 3
- 17875 Stem and branches erect angular, Lvs. opposite and altern. pinnate, Lfts. 6-8 pairs nar. serrat. dotted, the serrats. of the upper lvs. awned, Peduncles corymbose 1-headed
- 17876 The only species
- 17877 The whole plant caescent

and Miscellaneous Particulars.

2735. *Lasthènia* is a genus of ornamental annuals, which may be sown in the open border; and as the plants, under ordinary circumstances, flower in about 6 weeks after the seeds are sown, it will be found necessary to have several sowings to keep up a good appearance.

2736. *Bæria*. An elegant annual, requiring the same management as *Lasthènia*.

2737. *Eriophyllum* is a desirable and showy herbaceous perennial, is readily increased by division, and thrives in any good garden soil.

2738. *Lagenophora* is a showy perennial, easily increased by division.

2739. *Oxyūra* 17876 *chrysanthemoides* is an ornamental annual. It may be sown in the open border, where it is intended to remain.

2740. *Cladanthus*. A genus of very ornamental annuals, may be sown the open border.

SEGREGATA.

History, Use, Propagation, Culture,

2741. Eriocoma. A handsome fragrant annual.  
 2742. Viguiera. An ornamental stove plant.  
 2743. Calliopsis. A very showy genus of annuals, of very easy culture, and deserving a place in every garden.

## FRUSTRANEA.

- 17878 Stem hispid, Lvs. altern. petiol. ov. 3-nerved serrate, Heads large drooping, Scale of invol. expanded scabr. on the back, Paleæ 3-fid, Achænia biaristate [subul. or lin.-lanceol. slightly downy ciliat.
- 17879 Lvs. oppos. sess. subamplexic. ov.-lanceol. crenato-serrate very hairy ab. scabr. to touch, Scale of invol. imbric.
- 17880 Leaves cordate entire and 3-lbd. Pedun. swollen upwards, Involucrum foliaceous, Paleæ very acute
- 17881 Lvs. cord. obl. toothed tomentose acute, Corymbs compound, Throat of corolla campanulate about equal to the length of the tube
- 17882 Annual rather downy, Lvs. narrow undivided rather ent. Scales of invol. ciliated at the base with a very short glabrous subulate appendage
- 17883 Perennial, Invol. very hairy at the base with lin.-lanceol. scales, Cors. of the disk very hairy
- 17884 Stem erect branch. furrow. glabr. Lvs. oppos. sess. ciliated at base, lower ones biternate, upper ones ternate or 3-partite, Ligulæ acutely 5-toothed [bipin. Segms. alm. filiform rath. fleshy furrowed above
- 17885 Stem erect slender bran. especially upwards striat. and glabr. as is every part of plant, Lvs. oppos. pinnatif. and
- 17886 Lvs. generally glabr. petiolat. obovato-spathul. and undivided ternate pinnate and even bipinnate, Lifts. obov. or oval and very obt. those of lowermost lvs. most orbicular
- 17887 Stem erect but weak and flex. Lvs. oppos. and connate, lower ones ent. rest more or less pinnatif. or bipinnatif. Segms. lin.-lanceol. flaccid glabr. Pedun. elongated
- 17888 Stem ditto, Lvs. oppos. in remote pairs spatul. tapering at base undivided or cut in pinnated manner, Pedun. elongat. Achæn. obl. ov. bearing 2-3 white chaffy scales
- 17889 Stem glabr. Lvs. altern. ov. acumin. quite entire 3-nerved scabrous above and pilose beneath, Petioles ciliated, Receptacle conical hollow [obl. minutely tubercled on both sides
- †12488 Glabr. Radical lvs. pinnate or bipinnatifid, Outer scales of involucrum very short acute, Ligulæ trifid, Achænia
- 17890 Radical lvs. bipinnatifid cauline ones pinnate, Outer scales of invol. lin. obl. Ligulæ 3-toothed, Achænia smooth
- 17891 Pilose, Upper lvs. ternate, Segms. ovate, Achænia ventricose tuberculated [margined with a short wing

17892 Lvs. obl. membran. undiv. Pedunc. ventric. at top, Outer scales of involuc. 3 times as short as their appendages

## NECESSARIA.

17893 The only species

17894 Lvs. lanceol. waved nrly. ent. white and cottony ben. Pedunc. naked, Invol. cylindr. fimbriat. with many close-pressed subulate scales

## SEGREGATA.

17895 Lvs. oval lanceol. cuneate at the base and acumin. at apex coarsely serrated in the middle

and Miscellaneous Particulars.

2744. *Plectocéphalus*. A very curious and striking annual.
2745. *Gastrocérpha*. A handsome strong-growing annual.
2746. *Centrocénium*. A showy plant, requiring rather a moist high temperature.

## Page 748. CLASS XX. — GYNANDRIA.

**ORCHIDACEÆ.** — “The uses to which the plants of this family are applied, are few, but in several instances highly romantic. In Demerara, that most deadly of all poisons, the ‘Wourali,’ is thickened by the juice of the *Catasetum*; and in Amboyna the true ‘Elixir of Love’ is prepared from the minute farina-like seeds of *Grammatophyllum speciosum*. In Mexico, where the ‘language of flowers’ is understood by all, the *Orchidaceæ* seem to compose nearly the entire alphabet. Not an infant is baptised, not a marriage is celebrated, not a funeral obsequy is performed, at which the aid of these flowers is not called in by the sentimental natives, to assist the expression of their feelings; they are offered by the devotee at the shrine of his favourite saint, by the lover at the feet of his mistress, and by the sorrowing survivor at the grave of his friend: whether, in short, on fast days or feast days, on occasion of rejoicing or in moments of distress, these flowers are sought for with an avidity which would seem to say that there was ‘no sympathy like theirs,’ — thus, ‘Flor de los Santos,’ ‘Flor de Corpus,’ ‘Flor de los Muertos,’ ‘Flor de Maio,’ ‘No me olvidés’ (or ‘Forget me not’), are but a few names out of the many that might be cited, to prove the consideration in which our favourites are held in the New World. Nor are these the only honours that are paid to them: for Hernandez assures us that in Mexico the Indian chiefs set the very highest value on their blossoms, for the sake of their great beauty, strange figure, and delightful perfume; while in the East Indies, if Rumphius is to be credited, the flowers themselves positively refuse to be worn, except by princesses or ladies of high degree. In Honduras, again, the large hollow cylindrical stalks of a fine species of *Epidendrum* [*E. tibicinum*] are made into trumpets by the little boys and girls of the country; and the pseudo-bulbs of several of the more succulent species are used instead of resin for the strings of their guitars. The following are, however, almost the only known instances in which the tribe do any direct service to mankind. The bulbs of *Maxillaria bicolor* contain a large quantity of an insipid watery fluid, which is greedily sucked by the poor natives of Peru in the dry season; a fluid of a similar nature is obtained from what is probably *Zelia* in Mexico, and is administered as a cooling draught in fevers; from the roots of some of the orchises, the nutritive substance called ‘Salep’ is obtained; in New Zealand certain species are of considerable importance as esculents; and in Guiana, the soles of the shoemaker are as much indebted to the viscid matter obtained from the *Catasetum* and *Cyrtopodiums*, as are the poisoned arrows of the Indians.” (*Bate. Orch.*, p. 2.)

Mr. Bateman, speaking of the fragrance of many of this order, says: “We question whether ‘Araby the blest’ can boast of any perfumes that can at all compete in sweetness with those exhaled by such plants as *Angræcum odoratissimum* Lindl. *MSS.*, ‘*Tetrapeltis fragrans*, *Aerides odoratum*, and *Epidendrum aromaticum*. Other species emit odours which remind the recipient of the smell of a druggist’s shop, of the milk of the cocoa-nut, of fresh hay, of wallflowers, violets, pomatum, aniseed, and angelica, of noyau, cinnamon, allspice, citron, musk, and honey. Some of these yield no fragrance, except in the daytime; but there are others which, like *Epidendrum nocturnum* and *Brassavola nodosa*, are aromatic only by night; and there are none, we believe, which are positively offensive at any hour, either of the night or day.” (*Id.*, p. 4.)

The attention and curiosity are excited no more by the beauty and delicacy of the blossoms of many of this tribe, than by the very close resemblances they bear to objects of the animal kingdom. In our native species we find the bee, fly, spider, lizard, man, &c., surprisingly imitated; and in those of warmer climates, swans, eagles, doves, pelicans, &c. &c.

The cultivation of *Orchidaceæ* may be mentioned under two heads, namely, that of terrestrial and that of epiphytal *Orchidaceæ*.

**Terrestrial *Orchidaceæ*** should never have a great volume of external air admitted at once, however fine the weather may be. To prevent the house (which should have a southern aspect) from becoming too hot, a thick canvas shading should be drawn over it during summer sunshine. During the growing season, *Orchidaceæ* require a moderately moist heat, varying from 65° to 85°; in the dormant season, from 60° to 75° is quite sufficient; in the season of rest the house should be kept dry. *Orchidaceæ* in pots should be sparingly watered in the growing season; in the dormant state, little or no water should be given. The secret of growing these plants is to take care never to kill the old roots: when too much water is given, while the plants are in a growing state, almost all the old roots invariably perish. (*Paxton* in part.)

**Epiphytal *Orchidaceæ*** may be grown in the same house with, and receive nearly the same treatment as, terrestrial *Orchidaceæ*, except that they require to be grown on, instead of in, the soil, attached to blocks of wood, or in baskets, or any rustic construction in the basket way, and suspended from the roof, or by any other suitable means. In the outset, before the plants are established on the soil, or wood, where they are intended to be grown, it is very necessary to secure firmly the plant, and such roots as may be already formed, to the wood or soil, by means of bast or pegs, as judgment shall direct. The best kind of soil for growing epiphytal *Orchidaceæ* on is found to be good surface peat, cut into pieces of 1 in. to 2 in. square; this should be placed over a considerable quantity of drainage, in order to carry off superfluous water, and at the same time, if they are plunged in a tan-bed, will allow the heat to rise more freely than if the pots were entirely filled with soil.

“It is of the greatest importance to preserve and encourage the roots; and, as they are generally protruded near the surface of the soil, it should be raised several inches above the level of the pot, in a pyramidal form, in order that they may have full room to push out.” (*Bot. Reg.*)

Syringing the plants moderately, when in a growing state, till the flowers are nearly expanded, helps their growth much.

For some other particulars respecting this order, see p. 748. to 767.

## Order 1. MONANDRIA. Stamen 1.

1. MALAXIDÆÆ. — Pollen cohering in masses of a fine waxy texture, without any of the cellular substance by which the grains are connected, remaining under the form of a distinct gland lying upon the stigma, or of a transparent caudicula between the pollen masses and the gland.

§ 1. *Pleurothallææ*. Column erect, drawn out a little at the base.

- +1894 *Pleurothallis*, page 749.
- +1913. *Octombria*, page 749.
- 2747 *Lepanthes*. Sepals spreading, connate at the base. Petals 2, free and short. Labellum 2-lobed at apex, and combined with the column. Column elongated, cylindrical, 2-winged. Pollen masses 2.
- 2748. *Specklinia*. Sepals conniving, equal, distinct; lateral ones saccate at the base, gibbous outside. Petals conforming to the sepals, but much smaller. Labellum free, saccate at base. Column short, free, membranaceously winged. Anther 1-celled. Pollen masses 2. (No species given.)
- +1924 *Stelis*, page 750.
- 2749. *Oberonia*. Sepals spreading or reflexed, usually equal, free. Petals smaller than the sepals. Labellum ascending, of various forms, usually elongated, always more or less 4-lobed. Column small, free. Stigma elevated. Anther 2-celled. Pollen masses 2, pear-shaped, solid. (No species given.)
- +1927. *Microstylis*, page 750.
- +1925. *Malaxis*, page 750.
- +1882. *Covallorhiza*, page 749.
- 3750. *Apiktrum*. Petals equal, connivent. Labellum unguiculate, not drawn out at the base. Column free. Anther seated below the summit of the column. Pollen masses 4, oblique, lenticular.
- 2751. *Acianthus*. Sepals subringent, acuminate, free. Petals smaller, acuminate. Labellum free, entire, bicallous at base, with a naked disk. Column semiterete, clavate. Anther term., recumbent, 2-celled. Stigma ovate, transverse. Pollen masses 8.
- +1928 *Liparis*, page 751.
- 2752. *Cælia*. Sepals distinct, equal, spreading. Petals nearly equal, but a little smaller than sepals. Labellum

quite entire, unguiculate, continuous with the base of the column. Column short, continuous with ovarium, drawn out a little at base. Anther 2-celled. Pollen masses 4, by pairs.

- †1904. *Pholadota*, page 749.  
†1897. *Celogyne*, page 749.

§ 2. *Dendrobium*. Column recumbent, drawn out much at the base.

2753. *Megacanthium*. Sepals erect, unequal; lateral ones the smallest, combined with the column. Petals short. Labellum short, quite entire, articulate with the base of the column. Column short, marginate, disk-formed. Anther obsoletely 2-celled. Pollen masses 4, cohering by pairs.

2754. *Bolbophyllum*. Sepals erect, acumin., nearly equal; lateral ones combined, or connate with the base of the column, and oblique at the base. Petals short. Labellum articulated with the foot of the column, unguiculate, usually entire. Column short, bidentate or 2-horned in front. Anther 2-celled. Pollen masses 4, free, very unequal, sometimes combined in one, and sometimes cohering by pairs.

2755. *Cirrhopetalum*. Sepals ringent; lateral ones acumin., drawn out at the base, adnate to the column, much longer than upper one. Petals short, apiculate. Labellum entire, articulated with base of column. Column small, drawn out at base, and furnished with 2 petaloid horns at top. Anther 2-celled. Pollen masses 4, 2 inner ones smaller.

2756. *Triss*. Sepals equal, ovate, spreading, connate at the base. Petals small, erect. Labellum small, undivided. Column short, semiterete, emarginate, free. Anther 2-celled, drawn out into a petaloid, cuneated, emarginated membrane at the apex. Pollen masses 4, 2 inner ones smaller.

2757. *Brydium*. Flowers villous. Sepals conniving, lateral ones equal at the base. Petals narrower and shorter than the sepals, reflexed between them. Labellum undivided, unapiculate, constricted at the base. Column short. Pollen as in *Eria*.

- †1912. *Eria*, page 749.

2758. *Aporum*. Sepals fleshy, erect; lateral ones larger, oblique, connate with the column. Petals smaller than upper sepal. Labellum articulated with foot of the column, undivided, or 3-lobed. Limb crested, callous, or naked. Column semiterete, drawn out at base. Anther sess., 2-celled, sometimes membran. at apex. Pollen masses 4, colateral by pairs.

- †1908. *Pogonochyia*, page 749.

- †1900. *Dendrobium*, page 749.

2759. *Pastönia*. Sepals 6, spreading, equal. Labellum conforming to the petals. Column erect, terete, subclavate, a little shorter than the petals. Anther termin., opercular, deciduous. Pollen masses 8, narrow, clavate, cohering at tops.

II. EPIDENDRÆ. — Pollen cohering in masses of a fine waxy texture, with cellular substance. Caudiculæ not transparent, and connected with the stigma by means of a gland, as in *Panda*; but powdery, and very often turned back on the face of the pollen masses. Anther terminal, opercular.

- †1907. *Epidendrum*, page 749.

2760. *Dinema*. Sepals and petals nearly equal, spreading. Labellum large, membranous, undivided, unguiculate, combined with the base of the column. Column short, bicornute. Anther 2-celled. Pollen masses 4, adnate by pairs to 2 replicate caudiculae.

2761. *Encyclia*. Sepals and petals nearly equal, connivent. Labellum cuculate, involving the columns, 3-lobed at apex, callous at base. Column free, semiterete, clavate, parallel with the labellum. Anther 4-celled, with marginate dissepiments. Pollen masses 4. Collateral caudiculæ 4, revolute.

2762. *Chysis*. Sepals a little connate, spreading. Petals conforming to the sepals. Labellum 3-lobed, spreading; Column marginate, channeled, rustic. Anthers roundish, glabrous. Pollen masses 8; the four outer ones thin, and the four inner ones thicker, beak convex.

2763. *Phynga*. Sepals membranous, equal, connate at the base. Petals small, obliquely adnate to the base of the sepals. Labellum fleshy, tubercular, undivided, connate with the base of the column, and furnished with a bladder-formed sac at the base. Column fleshy, short, 2-lobed, antheriferous at the base. Pollen masses 4, adnate to 2 twin powdery threads.

- †1903. *Isochilus*, page 749.

2764. *Hartwegia*. Perianth spreading, coloured. Lateral sepals drawn out at the base, adnate to the labellum. Labellum connate with the column, gibbous at base, ovate. Anther 4-celled. Pollen masses 4. Caudiculæ replicate.

- †1914. *Brasavola*, page 749.

2765. *Lælia*. Sepals flat, lanceol., equal. Petals larger than sepals, fleshy, flat. Labellum 3-parted, lamellate, twisted round the column. Column wingless, fleshy, channeled in front. Pollen masses 8, with 4 elastic caudiculae.

2766. *Schomburgkia*. Sepals and petals similar, spreading, all free and equal at the base. Labellum difform, membranous, 2-3-lobed, cuculate, connate at the base, with the margin of the column tumid above the base with lamellate veins. Column marginate. Pollen masses 8.

- †1906. *Cattleya*, page 749.

- †1905. *Broughtonia*, page 749.

2767. *Leptodes*. Sepals and petals linear, nearly equal, spreading. Labellum 3-lobed, parallel with the column. Lateral segms. short, convolute around the column, middle segm. obl. with reflexed margins. Column short, thick, semiterete. Pollen masses 6, incumbent; 2 upper ones pear-shaped, oblique, compressed; 4 lower ones unequal and thinner.

- †1911. *Blètia*, page 749.

2768. *Crybe*. Sepals and petals similar, lanceol. conniving, lateral ones oblique at the base. Labellum large, membran., cuculate, never expanded, half-connate with the clavate marginate column.

2769. *Pesomèria*. Sepals nearly equal, free, deciduous. Petals conform, adnate to the base of the column, persistent. Labellum connate with the base of the column, gibbous at the base, with an undivided convolute limb. Column clavate, semiterete. Pollen masses 4, cuneate.

- †2770. *Phæus*.

Sepals and petals nearly equal, spreading, free. Labellum usually cucul., adnate with the base of the column, spurred, entire, or 3-lobed, usually keeled, lamellose or crested above. Column erect, continuous with the ovarium, semiterete, marginate, elongated. Anther 8-celled. Pollen masses 8, nearly equal.

III. VA'NDRÆ. — Pollen cohering in masses of a fine waxy texture. Caudiculæ separating along with the gland of the stigma, and forming a strict adhesion with the pollen masses. Anther terminal, rarely dorsal, opercular.

2771. *Nandæes*. Perianth ringent. Upper sepal arched, lateral ones connate to the labellum at the base. Petals conforming to the lateral sepals, free. Labellum fleshy, undivided, connate with the column. Column winged. Anther 2-celled, beaked. Pollen masses 4, collateral, sessile.

2772. *Aspasia*. Perianth spreading, equal; lateral sepals free, the upper one connate with the petals at the base. Labellum oblong, concave, spurless, obsoletely 4-lobed, half-connate with column. Column parallel with the labellum, semiterete, marginate. Pollen masses 2, pear-shaped, furrowed behind. Caudiculæ flat, cuneated.

- †1902. *Ornithidium*, page 749.

2773. *Sophonitis*. Perianth spreading. Sepals nearly equal, imbricated, free. Labellum entire, cucul., connate with the base of the column, with a simple transverse crest in the middle. Column free, winged on both sides at the apex. Anther 8-celled. Pollen masses 8.

- †1890. *Trischia*, page 749.

- †1902. *Ornithocéphalus*, page 749.

2774. *Cirrhæa*. Perianth spreading. Sepals free, equal. Petals linear, flexuose. Labellum unguiculate, continuous with the column, tripartite. Column erect, clavate, terete, with a nearly square horizontal stigma, and a

- tandril beak. Anther dorsal, membranous, subunilocular. Pollen masses 2, parallel, oblong, compressed, with a short-horned caudicula, and an incurved gland.
2775. *Sarcoclitus*. Perianth spreading. Lateral sepals connate with the claw of the labellum beneath. Petals conform to the sepals. Labellum spurless, continuous with the claw of the labellum, slipper-shaped; middle lobe fleshy, solid. Pollen masses 2, sessile on a deltoid gland.
- †1892. *Maxillaria*, page 749.
- †1891. *Xylobium*, page 749.
2776. *Bifrenaria*. Sepals spreading, free, nearly equal. Lateral one adnate to the produced base at the column. Petals about half the size of the sepals. Labellum articulated to the mucronate base of the column, cucullate, 3-lobed, callous in the middle. Column short, semiterete, mutic. Anther mutic, somewhat crested. Pollen masses 4, incumbent, with two distinct caudiculae.
2777. *Trigonidium*. Sepals equal, cohering into the form of a trigonal cup, spreading at the top. Petals about half the size of the sepals, veiny. Labellum short, 3-lobed, articulated with the column, fleshy in the middle. Column short, free, semiterete. Anther 1-celled. Pollen masses 4, cohering. (No species given.)
2778. *Trichopilia*. Sepals and petals equal, spreading, narrow. Labellum large, petaloid, convolute, parallel with the column, 3-lobed. Column terete, clavate. Anther 1-celled, compressed, convex in front. Pollen masses 2, adhering to a slender cuneate caudicula. Gland small.
2779. *Dicryphia*. Sepals free, erect, equal. Petals conform to the sepals, but smaller. Labellum 3-lobed, fleshy, articulated with the column. Column continuous with the ovary, semiterete, clavate in front at the base. Anther obsoletely bilocular. Pollen masses 4, flattened, incumbent, with short linear caudicula, and a binate gland.
2780. *Govenia*. Perianth bilabiate. Lateral sepals falcate. Petals conniving under the upper sepal. Labellum quite entire, spurless, concave, articulated with the column, sessile. Column terete, margined on both sides at the apex, drawn out a little at the base. Anther hood-formed, 1-celled. Pollen masses 4, solid, incumbent, with a short caudicula, and a small triangular gland.
2781. *Batemannia*. Flower ringent. Sepals spreading, lateral ones unguiculate. Petals broader than sepals, oblique at base, adnate to the produced base of the column. Labellum articulate to the column, 3-lobed, cucullate. Column semiterete. Anthers small, 2-celled, membranous. Pollen masses 2, 2-lobed behind, with a triangular gland and no caudicula.
2782. *Cycnolches*. Perianth spreading. Lateral sepals lanceolate, upper one narrow. Petals broader than sepals, falcate. Labellum free, spurless, lanceolate, quite entire, continuous with the column, with an abrupt callous claw. Column elongated, arched, clavate at apex, fringed with two falcate auricles. Anther 2-celled. Pollen masses 2, furrowed, with a linear caudicula and a thick gland.
2783. *Myanthus*. Perianth flattened. Sepals free, equal, similar to the petals, but narrower. Labellum flat, obovate, tridentate, shorter than the sepals. Column erect, terete, bicirrhose at the base. Anther and pollen masses as in *Catasium*.
- †1889. *Catasium*, page 749.
2784. *Monachanthus*. Perianth flattened. Sepals and petals equal, turned backwards. Labellum fleshy, undivided, ventricose, much larger than the sepals. Column short, thick, mutic. Anther and pollen masses as in *Catasium*.
2785. *Mormodes*. Upper sepal a little arched, narrow, lateral ones reflexed. Petals broader than the sepals, erect. Labellum ascending, 3-lobed, cuneate, apiculate, articulated with the column. Column semiterete, mutic. Pollen masses 4, connate by pairs, fixed to thick caudicula, and adhering to thick fleshy gland.
2786. *Stanhopea*. Perianth membranous, spreading, or reflexed. Sepals free, subundulate. Petals narrower than sepals. Labellum free, spurless, fleshy, and horned on both sides. Column very long, marginate. Anther 2-celled. Pollen masses 2, elongated, cleft, caudicula shorter than the 2-lobed gland.
2787. *Gongora*. Perianth flattened. Lateral sepals free, upper one connate to the back of the column. Petals smaller, adnate to the middle of the column. Labellum continuous with the base of the column, free, unguiculate. Column very long, arched, clavate, marginate. Anthers subbilocular. Pollen masses 2, linear, sessile on a cuneate caudicula.
2788. *Coryanthes*. Perianth spreading. Sepals dilated, flexuose, conduplicate. Petals erect, much smaller than the sepals. Labellum large, unguiculate, galeate, continuous with the base of the column, 3-dentate. Column terete, 2-horned at the base, elongated, recurved at apex, 2-winged. Anther 2-celled. Pollen masses 2, compressed, sulcate behind, with a linear arched caudicula and a lunate gland.
2789. *Angulda*. Perianth globose. Sepals and petals free, concave, nearly equal. Labellum unguiculate, cucullate, 2-lobed, with an intermediate reflexed segment. Column semiterete, clavate, 2-horned at apex. Anther beaked. Pollen masses 2, with a lanceolate caudicula and small ovate gland. (No species given.)
2790. *Ferisτέρα*. Perianth globose. Sepals somewhat connate with the base of the labellum. Petals smaller than the sepals. Labellum erect, articulated in the middle. Column erect, semiterete, dilated at the base. Anther crestless, 2-celled. Pollen masses 2, cleft behind. Gland sessile, naked, involving the beak.
- †1885. *Cymbidium*, page 749.
- †1901. *Camaridium*, page 749.
2791. *Gröbya*. Perianth flattened, bilabiate. Lateral sepals connate at the base. Upper sepal erect, shorter. Petals dilated, erect, connivent, much larger than the sepals. Labellum 3-lobed, naked, articulated with the base of the column, smaller than the sepals. Column erect, semiterete, arched, thickened at the base. Pollen masses 2-lobed behind, adnate to two short caudiculae. Gland oval.
2792. *Acropora*. Sepals spreading, upper one galeate, lateral ones divaricated. Petals short, oblique, truncate at apex. Labellum unguiculate, articulate at the base of the column, 3-lobed; the middle lobe smaller and saccate. Column erect, marginate, saccate at the base. Pollen masses 2, linear, convolute, with a linear subulate caudicula and a minute gland. Beak subulate.
2793. *Grammatophyllum*. Perianth flattened, spreading. Sepals and petals nearly equal. Labellum articulate with the column, short, 3-lobed, cucullate. Column arched, erect, semiterete, callous at the base. Anthers subbilocular. Pollen masses 2, globose, sulcate at the base, sessile upon the extremity of an arched gland.
- †1898. *Geodorum*, page 749.
2794. *Sobraña*. Perianth large, rather fleshy, flattened, spreading. Sepals and petals nearly equal. Labellum cucullate, involving the column, narrowed at the base, 2-lobed. Column erect, elongated, marginate, clavate, winged on both sides at the apex. Anther 2-celled. Pollen masses 2, with a linear caudicula.
2795. *Acanthophippium*. Perianth ventricose. Sepals agglutinate. Lateral sepals adnate to the claw of the column. Labellum unguiculate, articulate with the base of the column, 3-lobed, complicate, with a lamellate disk. Anther fleshy, 2-celled. Pollen masses 8, unequal, sessile.
- †1929. *Calypso*, page 750.
- †1921. *Eulophia*, page 759.
2796. *Dipodium*. Perianth spreading. Petals and sepals equal. Labellum auricled on both sides beneath the middle, bearded in the disk, saccate at the base, and connate with the column. Column erect, marginate, semiterete. Anther membranous, 2-celled. Pollen masses 2, obliquely 2-lobed, fixed to two caudiculae.
2797. *Galeandra*. Perianth spreading or connivent. Sepals and petals ascending, free. Labellum funnel-shaped, spurred, undivided, sessile, sometimes fringed on the margin. Column erect, winged. Anther helmet-shaped, with a recurved crest. Pollen masses 2, excavated behind, with a short caudicula and elongated gland.
2798. *Zygopetalum*. Perianth flattened. Sepals and petals ascending, nearly equal, connate with the claw of column. Labellum mutic, undivided, spreading, with an ascending claw and large transverse fleshy crest. Column short, arched, semiterete. Anther subbilocular. Pollen masses 2, almost sessile on a transverse gland.
2799. *Huntleya*. Perianth flattened, nearly equal. Lateral sepals involute at the base in front. Labellum flat, unguiculate, spreading, rhomboid, fringed at the base, articulated with the base of the column. Column clavate, cucullate at apex, winged in the margin. Anther 2-celled, mutic. Pollen masses 4.
2800. *Stenia*. Perianth flattened, nearly equal. Lateral sepals oblique at the base. Labellum continuous with

- the base of the column, concave, appendiculated in the disk. Column semiterete, drawn out at the base, rounded at the apex, mutic. Anther 2-celled. Pollen masses 4, linear, twin; dorsal one small. Caudicula nearly square, acute.
- +1896. *Cyrtopodium*, page 749.
2801. *Cyrtopera*. Perianth flattened. Sepals and petals ascending, nearly equal, connate with the claw of the column. Labellum spurless, concave, 3-lobed, with callous crested or tubercled veins. Column semiterete, marginate. Anther 1-2-celled. Pollen masses 2, 4-lobed behind, with a subulate unguiculate caudicula.
- +1887. *Lissochilus*, page 749.
- +1893. *Notyfia*, page 749.
2802. *Masdevallia*. Perianth closed. Sepals acuminate, or awned, connate into a campanulate tube. Petals short. Labellum short, oblong, concave, entire, articulated with the column. Column erect, linear, channelled. Pollen masses 2, with a short caudicula.
2803. *Cryptochilus*. Perianth tubular, contracted at the throat, gibbous in front at the base. Sepals connate, except at the apex. Petals free, rather smaller than the sepal. Labellum undivided, free, continuous to the base of the column. Column semiterete. Anther 2-celled. Pollen masses 8, adhering by pairs to common glands.
- +1919. *Ionopsis*, page 751.
2804. *Quekettia*. Perianth cylindrical. Sepals linear, equal, gibbous at the base; lateral ones connate. Petals linear, of equal length. Labellum oblong, entire, mutic, parallel with the column, excavated at the base, bicallose. Column semiterete, erect, arched on both sides at the apex. Anther 1-celled. Pollen masses 2, excavated behind; with a linear caudicula and a minute gland.
- +1883. *Rodriguezia*, page 749.
- +1884. *Gomœna*, page 749.
2805. *Burlinghama*. Perianth membranous, convolute, oblique. Sepals unguiculate, shorter than the labellum; lateral ones concave at the base, connate. Petals unguiculate, parallel with the labellum. Labellum 2-lobed, parallel with the column, with a channelled lamellate claw. Column terete, clavate. Stigma horned on both sides. Anther 1-celled. Pollen masses 2, excavated behind, adnate to a subulate elastic caudicula.
2806. *Comparétia*. Perianth ringent. Middle sepal and petal short, free, somewhat galeate; lateral ones connate, one-spurred. Labellum free, flattened, orbiculate, unguiculate, furnished with 2 spurs, which are hidden within the spur of the sepals. Column free, erect, mutic. Pollen masses 2, adnate to beaked cuneated caudicula.
- +1898. *Macradenia*, page 749.
- +1909. *Cryptarrhena*, page 749.
- +1895. *Oncidium*, page 749.
2807. *Fernandezia*. Perianth spreading. Sepals free. Petals conniving under the upper sepal. Labellum spurless, free, 3-lobed, tubercled on the disk. Column short, eared on both sides. Anther 2-celled. Pollen masses 2, obovate.
2808. *Scaphyphyllois*. Sepals connivent. Lateral ones drawn out at the base, a little connate with the foot of the column, upper one linear, convex. Petals a little shorter than the sepals. Labellum oblong, channelled, continuous with the column, with a repand margin. Column marginate. Pollen masses 4, sessile on a cuneated gland.
2809. *Pachyphyllois*. Perianth connivent. Sepals and petals free, equally acute. Labellum free, undivided, sessile, furnished with one tubercle at the base, and two at the apex. Column petaloid. Pollen masses 2. (No species given.)
2810. *Dicheia*. Perianth connivent. Sepals and petals free, acute, equal. Labellum unguiculate, naked, spurless, deltoid, articulated with the column. Column erect, terete, wingless. Anther 2-celled. Pollen masses 4, by pairs, collateral, with a cuneate caudicula and a minute gland.
2811. *Mitoma*. Perianth flattened. Petals revolute, and lateral sepals connate at the base, sessile. Labellum large, dilated, undivided, sessile, connate with the column, lamellate at the base. Column short, semiterete, eared at the apex. Pollen masses 2, adnate to an oblong caudicula.
2812. *Cyrtochilum*. Perianth flattened. Sepals free, lateral ones unguiculate. Petals a little smaller than sepals. Labellum free, undivided, continuous to the base of the column with a tuberculated claw. Column short winged. Anther 2-celled. Pollen masses 2, with a filiform caudicula and a minute gland.
- +1886. *Brassia*, page 749.
2813. *Tetrapeltis*. Perianth somewhat spreading. Sepals free, equal. Petals very narrow, of equal length. Labellum free, sessile, saccate, geniculate, 3-lobed. Column erect, length of petals semiterete, clavate. Rostellum straight. Pollen masses 4, globose, pitted behind, adhering by pairs to two narrow caudiculae connected by a common gland.
2814. *Phalenopsis*. Perianth flattened, spreading. Sepals free. Petals larger than the sepals, dilated. Labellum connate with the column, free, 3-lobed, callous at the base; middle lobe narrower, bicirrhous. Column lying upon the ovarium, semiterete. Rostellum gladiate. Anther 2-celled. Pollen masses 2, nearly globose, with a flat spatulate caudicula and a large caudate gland.
- +1916. *Vanda*, page 750.
2815. *Camarotis*. Perianth flattened. Lateral sepals connate with the back of the labellum, free at apex. Petals a little smaller than the sepals, free. Labellum obovate, channelled, appendiculate at apex. Column erect, terete, free, beaked. Anther dorsal, apiculate, subbilobular. Pollen masses 2, with a very long subulate caudicula and a forked rostellum.
- +1918. *Renanthera*, page 750.
2816. *Mioropera*. Perianth equal, spreading. Lateral sepals adnate to the base of the labellum. Labellum continuous with the base of the column, slipper-shaped, 3-lobed; middle lobe very small. Column short, with a large inflexed rostellum. Pollen masses 2, with a subulate caudicula.
2817. *Saccolabium*. Perianth flattened, spreading. Sepals equal to the petals, lateral ones usually largest. Labellum undivided, spurred, connate with the base of the column. Column erect, semiterete, with subulate rostellum. Anther semibilobular. Pollen masses 2, nearly globose, with an elongated caudicula and a minute gland.
2818. *Cleisostoma*. Sepals and petals spreading, linear, nearly equal. Labellum spurred, connate with the base of the column, 3-dentate. Column semiterete. Anther semibilobular. Pollen masses 2, 2-lobed, nearly globose, with a filiform caudicula and a hooked minute gland. (No species given.)
- +1915. *Sarcanthus*, page 750.
2819. *Ecceclades*. Perianth spreading, rtingent, or connivent, nearly equal, free. Labellum free, sessile, articulate with the column, spurred, naked, or bilamellate at the base. Column elongated, semiterete. Anther 2-celled. Pollen masses 2, furrowed behind, with a narrow caudicula and a minute gland.
- +1917. *Aerides*, page 750.
- +1922. *Aeránthes*, page 750.
- +1921. *Angresium*, page 750.
2820. *Trichocentrum*. Perianth spreading, free, equal. Labellum sessile, spurred, flat, 2-lobed, lamellöse at the base, connate with the base of the column. Column short, semiterete, thick, winged on both sides. Anther 2-celled, mutic. Pollen masses 2, complicate, with a cuneated caudicula and a minute gland.
- +1923. *Calánthe*, page 750.
- IV. ОРНУ'ДЕЖ. — Pollen cohering in innumerable waxy masses, collected on a cobwebbed elastic axis, fixed to the glands of the stigma. Anther terminal, erect, or resupinate, persistent, with complete cells.
- +1859. *O'rchis*, page 748.
- +1864. *Anacamptis*, page 748.
- +1858. *Gymnadenia*, page 748.
- +1860. *Nigritélla*, page 748.
- +1865. *Aceras*, page 748.
- +1857. *Platanthera*, page 748.
- +1868. *Hermannium*, page 748.
- +1867. *Chamórchis*, page 748.
- +1861. *Habenaria*, page 748.

2821. *Bonatea*. Perianth and anther of Habenaria. Upper lip of stigma free, cucullated, or complicated; process of the stigma sometimes long and sometimes short.
2822. *Cynorchis*. Sepals equal, connivent. Petals fixed under the upper sepal. Labellum connate with the column, spurred, usually 4-parted. Sepals larger than the petals, and of a different texture. Column short. Anther horizontal or resupinate, with distinct elongated cells. Rostellum flat, 3-partite. Pollen glands naked. Lobes of stigma 2, fleshy.
- †1862. *Bartholina*, page 748.
- †1856. *Satfirium*, page 748.
- †1855. *Disa*, page 748.
- †1863. *Serapias*, page 748.
2823. *Pterygodium*. Perianth subringent. Lateral sepals exterior, horizontal, concave. Labellum inserted in the middle of the column, between the remote cells of the anther.
2824. *Corycium*. Perianth ringent. Petals equal at the base, erect; lateral ones connate. Petals free, concave. Labellum unguiculate, connate with the face of the column, appendiculate in front. Anther dorsal, resupinate. Glands naked.
- †1866. *Ophrys*, page 748.
2825. *Disperis*. Perianth ringent, of 4-5 sepals. Lateral sepals exterior, horizontal, somewhat spurred. Labellum erect from the base of the column, and connected with it. Anther revolute, drawn out in two segments, which are bent in front.

- V. GASTRODIE'Æ. — Anther terminal, opercular. Pollen masses cohering in granules, which finally become waxy, and are indefinite in number.
2826. *Gastrodia*. Perianth tubular, 5-lobed. Lobes secund. Labellum closed, free, unguiculate, lying on the column. Column long, hollow at top. Anther deciduous, with approximate cells. Pollen masses large, composed of numerous angular particles.

- VI. ARETHU'SEÆ. — Anther terminal, opercular. Pollen masses as in tribe Neottiæ.
- †1881. *Calceana*, page 749.
2827. *Corysanthes*. Perianth ringent. Helmet large. Lower lip 4-parted, short, hidden by the labellum. Labellum large, cucullate, or tubular. Anther 1-celled, 2-valved, persistent. Pollen masses 4, powdery.
2828. *Pterostylis*. Perianth ringent, 4-leaved, inner leaflet bifid. Labellum unguiculate, almost enclosed, appendiculate, or gibbous at the base. Column connate with the base of the galea, winged at apex. Anther persistent, with approximate cells. Pollen masses 2 in each, all compressed, powdery.
- †1877. *Arethusa*, page 749.
- †1879. *Pogonia*, page 749.
- †1878. *Calopogon*, page 749.
2829. *Glossodia*. Perianth of 5 equal spreading sepals. Labellum dissimilar, short, undivided, glandless. Appendage between the column and the labellum. Anther terminating the membranous dilated column, with approximate cells. Pollen masses 2 in each cell, compressed, powdery.
2830. *Chloroclea*. Perianth membranous. Outer sepals nearly equal; lateral ones deflexed; upper one, along with the inner ones, conniving into a galea. Labellum sessile, cucullate, entire or 3-lobed, with a crested disk. Column elongated, semiterete, marginate. Anther 2-celled. Stigma lying on the top of the column. Pollen masses 2, bipartite, cohering behind.

- †1880 *Epidactis*, page 749.  
 2831. *Caladéna*. Perianth bilabiate, glandular outside. Upper lip flattish. Labellum unguiculate, cucullate, somewhat 3-lobed, or narrowed at the apex, ornamented with rows of glands in the disk. Column membranaceously dilated. Anther persistent, with approximate cells. Pollen masses 2 in each cell, compressed, half 2-lobed, powdery.  
 2832. *Eriochilus*. Perianth bilabiate. Outer lateral sepals unguiculate; inner ones erect, smaller. Labellum unguiculate, inappendiculate, with a pubescent glandless disk. Column semiterete, simple at top. Anther persistent, mutic, with approximate cells. Pollen masses 4 in each cell.  
 2833. *Chilolöttis*. Perianth bilabiate. Outer lateral sepals channelled, and terete at the apex. Labellum unguiculate, glandular in the disk, and furnished with a tongue-shaped appendage at the base. Column bifid at apex. Anther persistent, with proximate cells. Pollen masses 2 in each cell, compressed, powdery.  
 2834. *Cytostigis*. Perianth bilabiate. Sepals mutic, 4 lateral ones nearly equal, spreading. Labellum dissimilar, stretched out, flat, obtuse, undivided, bicallose at the base. Column semiterete, dilated at apex. Anther persistent, with approximate cells. Pollen masses as in *Chilolöttis*.  
 2835. *Microtis*. Perianth ringent. Outer lateral sepals sessile; inner ones almost similar, ascending. Labellum dissimilar, oblong, obtuse, callous at the base. Column funnel-shaped. Anther furnished with a membranous auricle on both sides. Pollen masses 2 in each cell, powdery, fixed by the base.

VII. NEOTTIÆ. — Anther parallel with the stigma, and erect. Pollen masses simple, or consisting of granules in a loose state of cohesion.

History, Use, Propagation, Culture,

2842. *Ceratola* 18036 *ericoides* is a small heath-like evergreen shrub, grown in British gardens in peat soil, and may be propagated by cuttings.

18024 The only species

18025 The only species

18026 Lvs. ovate or oval acute discoloured, Spike generally 4-fwd. Outer sepals pubescent, Labelum multifid towards the base, Sack of labelum subdidymous

18027 Root fasciated filiform tomentose, Radical lvs. spatulate ovate, Cauline ones sheathing, Flowers spreading, Labellum dotted inside

18028 Labellum a little longer than the perianth furnished with a semilanceol. acum. point, Column 2-gland. at the base, Spike 4-8-fwd.

18029 Ovaria obovate 3 times longer than bractea, Sepals acumin. hind ones cohering at the base

HEXANDRIA.

- [Lip. cord. cuspid. the cusp twisted filiform  
 18030 Lower lvs. renif. 6-angular 3-lobed, Upper lvs. 3-partite, Cal. cylind. ventricose and 6-spurred at the base,  
 18331 Lvs. renif. emarg. undul. pubesc. beneath, Limb of cal. ventric. at base obl. oblique emarg. on both sides  
 peduncul. 1-fwd. bractless pubesc. [one longer inflated with a broad emarg. undul. lamina  
 18032 Glabrous, Lvs. cord. renif. Flws. solit. Tube obov. Limb cylind. bilabiate, Upper lip. lanceol. acute, Lower  
 18033 Glabrous, Stems furrow. Lvs. 3-lobed, Cal. cylind. incurv. Lip. cord. cusp. Appendage 6-parted reflexed  
 [more silky ben. th. above, Flws. forming large pouch, Throat circular vertical  
 18034 Lvs. 12 to 15 in. long and 4 in. broad scatt. ovato-cord. atten. at apex slightly waved and sinuat. ent. edges  
 18035 Glabrous, Lvs. cord. renif. Peduncul. 1-fwd, Tube of perianth obliquely ventric. at base stretched out from  
 the mid. to the apex cylindrical, Limb orbicul. ciliated.

Order 7. POLYANDRIA. Stamens more than 6.

2844. *Pterocarya*. Male flws. in spikes. Stams. in a flower many. Female flws. in long pendulous spikes, and distant, sessile, and without bractea. Cal. connate with the ovary, except in a terminal portion, which is cleft into ? 3-5 unequal lobes. Ovary, and the part of the cal. that is connate with it, taken together, flaggon-sh., bearing 2 wings above the base. Cell 1. Ovule 1, erect. Fruit subdrupaceous, angled, not opening, containing a bony nut. Embryo without albumen.

Order 8. MONADELPHIA. Stamens united into a single body.

2845. *Picea*. Differs from *Pinus* and *Abies* in having the cones erect. The strobile is cylindrical, and has its carpels not thickened at the tip. Both carpels and bractea separate from the axis of the strobile; and the leaves are obviously 2-ranked in direction.

DIANDRIA.

18036 Flws. in axils of upper lvs. solitary except a small abortive one by the side of the principal flower

TETRANDRIA.

18037 The only species

POLYANDRIA.

18038 Stems several from crown of root, Lvs. subpelt. uneq.-cordate acumin. [both surfs. green ab. blood-red ben. leathery succulent glabr. and shining on

and Miscellaneous Particulars.

2843. *Sarcobacca*. The stigmas of this plant are so like those of the common box, that, in the absence of fruit, there would be little apparent reason to suspect a difference from *Buxus*, to which genus the narrow-leaved variety bears a great resemblance.

History, Use, Propagation, Culture

2844. *Pterocarya* 18054 *caucásica*. This tree is "sufficiently hardy to be classed among ornamental trees of the third rank. It is readily propagated by layers. For small gardens and diminutive arboretums this tree may serve very well to exemplify the *Juglandaceæ*. Care should be taken to train it to a single stem, and not to plant it in soil so rich and moist as to prevent it from ripening its wood. Perhaps something might be gained, in point of hardness by grafting it upon the common walnut." (*Arb. Brit.*, vol. iii. p. 1452.)

- 18039 Very smooth, Lvs. ov.-rotund. obt. at base rarely little cord. uneq. apicul. Marg. minutely serrat. subciliat. Largest wing of cap. trian. projecting

18053

18054

- 18055 Lvs. 2-5 in. long seldom and but little twisted when young erect when older standing out and curved towards twig, Points prickly [slightly tuberculate ending in very small prickles  
 18056 Lvs. in pairs very long erect rigid channeled, Sheaths very short, Cone ovate-oblong often recurved, Scales 18057 Lvs. long in tufts at extremities of shoots, Brans. dispersed naked scaly when young, Conical smooth little recurved, Seeds hard [of lvs. Scales dilated in middle unarmed  
 13513 Bark red, Lvs. in pairs 4 in. to 5 in. long, Cones reddish brown ovate-conical rounded at base and half length

- 13508 Lvs. in pairs rigid very long, Cones conical in whorls [short. than lvs. 4 in. to 6 in. long and 1½ in. to 2¼ in. wide of 3 4 or even as many as 8 together rarely solit. much  
 7 chinensis 9 novus holländicus, syn. P. 10 st. helénicus  
 8 nepalensis nova-zeländica Ait. 11 Massoniana

- 13502 Lvs. in pairs, Cones ov. obt. nrly. as long as lvs. Scales with recurv. deciduous points, Seeds bony with very short wings;

- 13511 Lvs. in pairs very slender, Cones pyramidal rounded at base turned downwards smooth solitary or in [pairs stalked

- 18058 Lvs. in pairs very long slender wavy, Cones sess. crowded ovate smooth, Scales truncate at apex flattish umbilicate

*\* Cones hardly so long as the leaves ; the scales with prickles.*

- 13515 Lvs. in threes elongated, Cones often in pairs short. th. lvs. obl. pyramidal rather truncate at apex, Scales with sharp prickles turned inwards [Male cats. elongat. Crest of anth. dilat. and roundish  
 13518 Lvs. in threes, Cones ov.-obl. in threes or fours much short. th. lvs. Scales terminat. by rough thorny point,  
 13517 Lvs. in threes very long. Male cats. erect incumbent, Cones ovate, Scales having very small mucros, Seed very small, Wing ½ in. to ¾ in. in length

- 18059 Lvs. in threes much long. than cones flexible tortuous with short sheaths, Cones ov. reflex. Apices of scales [termin. in conic. minute recurv. spine

*\*\* Cones having the scales hooked.*

- 18060 Lvs. in threes very long, Cones ovate echinate very large, Scales long awl-shaped incurved and spiny at apex.  
 18061 Lvs. ditto and compressed, Sheaths ragged, Cones obl. solit. very large, Scales wedge-sh. apex elongat. thickened lanceol. mucron. compress. hooked [thick recurved  
 13521 Lvs. in threes very long and slender pendul. Sheaths long, Cones ovate-oblong, Scales elevated at apex very

- 18062 Lvs. in threes short, Sheaths deciduous, Cones ovate-obl. 8 in. long and about 5 in. broad, Scales thick blunt recurved at apex

- 13512 Lvs. in threes very long, Male cats. long cylindric. of a tawny blue divergent, Cones very long tessellated with tumid tubercles ending in very small mucros

- 13520 Lvs. in threes and spreading rough, Crest of anthers round entire, Cones oblong tuberculate

- 18063 Lvs. in threes sometimes twos very slender, Male cats. short, Cones ovate, Scales truncate at apex without any [point  
 18064 Lvs. 3 sometimes 4 in a sheath much twisted varying greatly in length longer than cones grass green, Cones ovate pointed. Scales tuberculate. [dilat. at apex somewh. trapezoid  
 18065 Lvs. in threes compressed flexuous scabrous, Sheaths about ½ in. long, Cones ovate smoothish drooping, Scales 18066 Lvs. in threes very slender 2-channeled spreading, Sheaths about 1 in. long, Cones ovate-oblong polished

- 18067 Lvs. short narrow triquetrous slightly twisted glauc. generally in threes often in twos sometimes in fours, Cones conic. pointed, Scales slightly tubercled without prickles

- 18068 Lvs. in fives slender, Sheaths persistent, Cones conical half length of lvs. Scales thickened at apex with very [small mucros

- 18069 Lvs. in fives erect triquetrous, Sheaths about 1 in. long persistent, Cones oblong about 9 in. long tuberculate

- 18070 Lvs. in fives long. erect triquetrous, Sheaths short persistent, Cones ovate 4-5 in. long, Scales tubercled 4-angular

History Use, Propagation, Culture,

2845. *Picea*. "Some confusion exists in the works of modern authors respecting the silver fir and the spruce ; partly, as it would appear, from the circumstance of Linnæus having made an erroneous application of the names given to these trees by Pliny. The tree which Theophrastus calls *Elate*, Pliny calls *Abies*, and Linnæus *Pinus Picea* ; while the tree that Pliny calls *Picea*, and which is our spruce fir, is named by Linnæus *Pinus Abies*. The silver fir was esteemed by the Romans for its use in carpentry, and for the construction of vessels. . . . The wood of the silver fir is elastic, and the colour is whitish. The grain is irregular, as the fibres which compose it are partly white and tender, and partly yellow or fawn-coloured, and hard. The narrower the white lines are, the more beautiful and solid is the grain of the wood. In the Vosges, it is said that the external layers are more compact than the internal ones, which may arise from the practice of barking the trees there before they are cut down. The weight of this wood varies exceedingly, according to the age of the tree, the place where it grew, and even the part of the trunk from which it was taken. According to Hartig, the wood of a tree 80 years old weighs 66 lbs. 14 oz. per cubic foot green, and 41 lbs. 5 oz. when dry ; while that of a tree 40 years old weighs only 37 lbs. 9 oz. when dry. It shrinks considerably in drying, like all white woods. It is used for planks, and carpentry of all kinds, for the masts of small vessels, for joists and rafters, and for building the boats for navigating rivers. It is said to endure a long time when used as piles, and to be much employed in Holland for that purpose. In the Vosges it is used in every department of agriculture, carpentry, joinery, and even cabinet-making and sculpture. In England, the wood of the silver fir has been chiefly used for flooring ; and, according to Arthur Young, and also to Mitchell, boards sawn out of full-grown trees

- 18071 Lvs. in fives very slender, Sheaths deciduous, Cones ovate stalked, Scales depressed truncate brown scarious white and torn on the margin
- 13523 Lvs. in fives, Sheaths deciduous, Cones ov. erect ab. length of lvs. Scales when young pubes. Wings of seed obliterated, Crest of anth. kidney-sh.
- 13522 Lvs. slender without sheaths, Male cats. small, Cones cylindrical long and pendulous, Cotyledons 6 to 10 [smooth pendulous long. than lvs.]
- 13516 Lvs. in fives very long and slender loose, Crest of anthers roundish truncate simple lacerated, Cones cylindric.
- 18072 Lvs. in fives rigid roughish, Sheaths very short, Cones thick very (14 in. to 16 in.) long cylindric, Scales loose roundish
- 18073 Lvs. in fives short smoothish obtuse, Cones cylindrical and smooth about 7 in. long, Scales loose and pointed
- 18074 Leaves in twos and threes, Cones much longer than the leaves, Sheaths short black

1. *Leaves tetragonal, awl-shaped, scattered in insertion.*

- 13530 Lvs. scattered quadrangular, Cones cylindric. 5 in to 7 in. long and from 1½ in. to 2 in. broad termin. pendent, Scales naked truncate at summit flat

- 13531 Lvs. somewhat glauc. scattered round the brans. erect quadrangular, Cones obl.-cylind. pendul. lax. Scales with entire margins
- 13533 Lvs. solit. regularly disposed all round the brans. erect very short somewh. quadrang. Cones ov. pendul. Scales somewh. undulat. crenulat. or divided at apex
- 13532 Lvs. solit. awl-sh. acuminate, Cones obl. blunt, Scales round somewhat 2-lobed entire [on margin]
- 18075 Lvs. compress. 4-gonal straight awl-sh. sharp-pointed, Cones ov.-obl. Scales obov.-roundish coriac. rigid smooth
- 13528 Leaves solitary tetragonal, Cones ovate-cylindrical, Scales rhomboid
11. *Leaves flat, generally glaucous beneath, imperfectly 2-ranked.*
- 18076 Lvs. flat blunt entire pectinate silvery ben. Cones ovate-obl. Bractees elongated linear 3-pointed, Cones about 4 in. long
- 18077 Lvs. acute flat silvery ben. turned in every direction, Cones cylindric, Scales scarious gnawed on the margin
- 13527 Lvs. solit. flat slightly denticulate obtuse 2-ranked, Cones oval termin. pendent naked scarcely longer than the leaves
- 18078 Lvs. subulate flat dark green above silvery ben. terminat. in sharp spine, Petioles very short dilated lengthwise at point of attachment to brans.

†13525 Lvs. solit. flat obtuse 2-ranked points turned up, Cones axill. cylindric. erect, Scales with long dorsal bractea, Anth. with short crest with 2-teeth

and Miscellaneous Particulars.

may be laid down at once, without any risk of their shrinking. As fuel, the wood of the silver fir is to that of the beech as 1079 is to 1540, and that of the spruce as 1079 is to 1211. The charcoal is to that of the beech as 1127 is to 1600. Though the charcoal is much inferior to that of the beech, yet it is preferred for heating iron that is to be forged, as producing the heat more slowly, in consequence of which the iron is more pliant to work. The bark may be employed for tanning leather, and is used generally in some parts of Switzerland. A resinous sap flows from the trunk and branches, called *larmes de sapin*. This sap is bitter, acrid, and viscous, and its smell approaches to that of the citron; it is healing, balsamic, and antiseptic. The resinous fluid is found in small tumours or blisters, under the epidermis of the bark, and in the green cones, from the latter of which it is collected about midsummer. From the resin of this tree are manufactured Strasburg turpentine (so called from a large forest of silver firs, the Hockwald, near Strasburg), colophony, and white pitch. The quantity of potash furnished by the bark and wood is in proportion of 2 lbs. of potash to 1000 lbs. of wood and bark, which places the silver fir in the rank of 21 in a series of 73 ligneous plants. In some parts of Europe, the young cones, reduced by boiling to a pulp, and preserved with sugar, are eaten as a sweetmeat. This conserve is put into tea, to which it is said to communicate an agreeable odour. The leaves serve for litter; and, in Switzerland, according to Kasthoffer, are given to sheep and goats: but they are said to give the milk a peculiar taste.

"The silver fir, like all the other *Abietinæ*, will attain a large size on soils of a very opposite description; but a loam, rather rich and deep than otherwise, appears to suit it best." (*Arb. Brit.*, vol. iv.)

History, Use, Propagation, Culture.

2846. *Garrya* 18088 *elliptica* is an evergreen hardy shrub, with thick coriaceous leaves, like some species of evergreen viburnum. " This is probably the greatest botanical curiosity sent home by Douglas; for it appears to represent a natural order altogether distinct from any previously known, and connecting certain well-known natural orders in an unexpected and satisfactory manner. In its amentaceous inflorescence, imperfect flowers, superior calyx, and mode of germination, *Garrya* is very similar to *Cupulifera*, from which it differs most essentially in its wood without concentric circles or dotted vessels, its opposite exstipulate leaves, simple fruit, and minute embryo lying in a great mass of albumen. The latter characters bring it near *Piperacæ* and their allies, especially *Chloranthæ*, with which its zoneless wood (for *Chloranthus* has no annual zones), simple fruit, and opposite leaves, also agree; but the stipules

and Miscellaneous Particulars.

of *Chloranthæ*, together with its achlamydeous bisexual flowers and articulated stems, distinctly separate that order." (*Bot. Reg.*) "Only the male plant of *G. elliptica* is in the country. When in flower (which it is from December til. April), the plant has a most striking graceful appearance, from its slender pendulous catkins, many of which are 8 in. to 1 ft. in length. It was at first grown in peat, but appears to prefer a loamy soil. It is readily increased by layers, and by cuttings in sand under a hand-glass." (*Arb. Brit.* iv. 2031.)

2847. *Rhodola* 18088 *rdæa* is a plant with the habit of *Sedum Telephium*. It is found on wet rocks, on the mountains of the north of England and Ireland, and in the north-west of Scotland, abundant; likewise on cliffs by the sea-shore. It is the badge of the Highland clan *Gunn*.

History, Use, Propagation, Culture,

2848. *Ampelocycos* 18092 scåndens. "The fruit" of this plant "is 3 ft. long, and 8 or 10 inches in diameter, full of seeds as large as chestnuts (264 in one fruit), which are as excellent as almonds, and have a very agreeable flavour; and, when pressed, they yield an abundance of oil, equal to that of the finest olives. It is a perennial plant, and grows at the margins of the forest, enveloping the trees with its branches, while its trunk is frequently seen with a circumference of 18 in." (*Bot. Mag.*) The name of this plant among the Indians of Zanzibar is *Koumè*.  
 2849. *Galactodendron* 18107 ðtile. "M. de Humboldt was the first to bring the Cow Tree of Caraccas into notice. 'We returned,' he says, in his valuable *Rélation Historique*, vol. ii. p. 106., 'from Porto Cabello to the Valley of Araguas, stopping at the plantation of Barbula, through which the new road to Valencia is to pass. For many weeks, we had heard a great deal of a tree whose juice is a nourishing milk. The tree itself is called the Cow Tree, and we were

- 18090 Decandrous, Lvs of young tree vertically compressed spinuloso-mucron. straight, of full-grown tree lanceol. acute imbric. Cones ovate, Scales with membranac. wings on margin
- 18091 Lvs. linear 2-ranked crowded revolute, Male flowers globose always solitary
- 18092 Lvs. altern. pedate of five obl.-ov. lfts. with waved and distinctly toothed margins pointed at both ends, Seeds orbic. compress. reticul. veined

2850. *Senecãrpus*. Flowers polygamo-deciduous. Cal. 5-cleft. Petals 5, oblong. Ovary 1, sessile, 1-celled. Stams. 5, all fertile. Styles 3. Nut compressed, heart-shaped, seated on a thick depressed torus. Leaves simple.

2851. *Melanorrhœa*. Flowers hermaphrodite. Sepals 5, caducous, cohering valvately. Petals 5, rarely 6, imbricate in æstivation. Stam. numerous, inserted in the torus. Style 1. Fruit indehiscent, depressedly kidney-shaped, stalked. Leaves simple.

## DICEIA.

18107 The only species

and Miscellaneous Particulars.

assured that the negroes on the farm, who are in the habit of drinking large quantities of this vegetable milk, consider it as highly nutritive; an assertion which startled us the more, as almost all lactescent vegetable fluids are acrid, bitter, and more or less poisonous. Experience, however, proved to us, during our residence at Barbula, that the virtues of the Cow Tree, or *Palo de Vaca*, have not been exaggerated. This fine tree bears the general aspect of the Star-apple Tree (*Chrysophyllum Cambo*); its oblong, pointed, coriaceous, and alternate leaves are about 10 in. long, and marked with lateral nerves, that are parallel, and project beneath. The flower we had no opportunity of seeing; the fruit is somewhat fleshy, and contains one or two kernels. Incisions made in the trunk of the tree are followed by a profuse flow of gluey and thickish milk, destitute of acidity, and exhaling a very agreeable balsamic odour. It was offered to us in calabashes; and, though we drank large quantities of it, both at night before going to bed, and again early in

History, Use, Propagation, Culture,

the morning, we experienced no uncomfortable effects. The viscosity of this milk alone renders it rather unpleasant to those who are unaccustomed to it. The negroes and free people, who work in the plantations, use it by soaking bread in it made from Maize, Manioc, Aropa, and Cassava. Slaves become visibly fatter during the season when the *Palo de Vaca* yields most milk. When exposed to the air, this fluid displays on its surface, probably by the absorption of the atmospheric oxygen, membranes of highly animal nature, yellowish and thready, like those of cheese; which, when separated from the more watery liquid, are nearly as elastic as those of caoutchouc, but in process of time exhibit the same tendency to putrefaction as gelatine. The people give the name of cheese to the curd which thus separates when brought into contact with the air, and say that a space of 5 or 6 days suffices to turn it sour, as I found to be the case in some small quantities that I brought to New Valencia. The milk itself, kept in a corked bottle, had deposited a small portion of coagulum, and, far from becoming fetid, continued to exhale a balsamic scent. When mingled with cold water, the fresh fluid is coagulated with difficulty; but contact with nitric acid produced the separation of the viscid membranes.

"This wonderful tree appears peculiar to the cordillera of the shore, especially from Barbula to the Lake of Maracaybo. Some individual Cow Trees are also said to exist near the village of San Mateo, and likewise in the Valley of Caucagua, three days' journey to the east of Caraccas.

"At Caucagua, the natives call the tree which yields this nutritive fluid, Milk Tree (*Arbol de leche*)."

"The wood forming the body of the trunk is white, very close-grained, and hard, resembling the boxwood of Europe. The soil which these trees inhabit is dark and rich, and must be damp or very wet all the year round." (*Bot. Mag.*)

2851. *Semecárpus* 18108 *Anacárdium* is a lofty tree with spreading branches. Leaves about 18 in. long, and about 4 or 5 broad. Flowers small, of a greenish yellow colour. Receptacle of the fruit when ripe yellow, about the size of the nut, which is black; the cover or shell is composed of 2 laminae, the inner hard, the outer less so and leathery; between them are cells which contain the black, corrosive, resinous juice, for which this nut has been long known; the juice is of a pale milk-colour till perfectly ripe, when it becomes black. The wood of this tree is reckoned of no use, not only on account of its softness, but also because it contains much acrid juice, which renders it dangerous to cut down and work upon. The fleshy receptacles on which the seeds rest are roasted in the ashes, and eaten by the natives; their taste is very like that of roasted apples: unroasted, they taste astringent and acrid, leaving a painful sensation on the tongue for some time. The kernels are rarely eaten. The green fruit, well pounded into a pulp, makes good birdlime. The pure, black, acrid juice of the shell is employed by the natives externally to remove rheumatic pains, aches, and sprains: in tender constitutions it often produces inflammation and swelling; but where it has not these effects it is an efficacious remedy. It is employed by the Telinga physicians in the cure of almost every kind of venereal complaint. It is in general use for marking cotton cloths; the colour is improved and prevented from running by a little mixture of quicklime and water. This juice is not soluble in water, and is only

18108 Lvs. oblong bluntish glauc. ben. more or less covered on the nerves beneath with scabr. down, Panicle terminal tomentose

and Miscellaneous Particulars.

diffusible in spirits of wine, for it soon falls to the bottom, unless the menstruum be previously alkalisied. The solution is then pretty complete, and of a deep black colour. It sinks in expressed oils, but unites perfectly with them; alkaline lixivium acts upon it with no better success than plain water. (*Don's Mill.*, ii. 63.) Culture, &c., see *Melanorrhoea*'s below.

2851. *Melanorrhoea* 18109 *usitata*. This tree is a native of Hindostan, in a large valley called Kadbbu, in the kingdom of Manipur, Silhet, and Tipperah, as well as in the Burmese empire, on the banks of the Irrawadi, where it is called *Theet-tee* or *Zit-si*. This is identical with the majestic *Kheu* or varnish tree of Manipur, on the north-east frontier districts of Silhet and Tipperah. Mr. M. R. Smith, who has resided a long time in Silhet, considers this the same as the varnish tree of the Chinese, in the eastern and north-eastern provinces. It is procurable in great quantities from Manipur, where it is used for painting river craft, and for varnishing vessels destined to contain liquid. The drug is conveyed to Silhet for sale by the merchants. On being handled it occasions extensive erysipelatous swellings, attended with pain and fever, but never of long duration. In the neighbourhood of Prome a considerable quantity of varnish is extracted from the tree, but very little at Martaban, owing, it is supposed, to the poorness of the soil, and partly also to there being none of the people in that part whose business is to perform the process, although it is very simple. Short joints of a thin sort of bamboo, sharpened at one end, and shut up at the other, are inserted in a slanting direction into holes made in the trunk and principal branches, and left there for 24 or 48 hours; after which they are removed, and their contents emptied into a basket previously varnished over. Sometimes a hundred bamboos may be seen sticking into the tree at once during the collecting season, which last as long as the tree is destitute of leaves, namely, from January until April, and they are renewed as long as the juice will flow. In its pure state it is sold at Prome at the rate of 1 tical, or 2s. 6d., the viss; and at Martaban, 2 Madras rupees the viss, although of an inferior quality to that sold at Prome, being usually mixed with oil of sesamum. A tree is reckoned to produce 2 to 3 or 4 viss annually, a viss being equal to 3 lb. Every article of household furniture destined to contain solid or liquid food is lacquered over with it. The article to be varnished with it must be prepared with calcined bones, after which the varnish is laid on thinly, either in its pure state, or variously coloured. The process of drying is the most difficult part, being effected in a very slow and gradual manner, by the articles thus varnished being placed in subterraneous vaults for many months. The drug is also used as a size gite in the process of gilding; nothing more being required than to besmear the surface of the article to be gilded with it, and immediately to apply the gold leaf. If it is considered how very extensively that art is practised by the Burman nation, it being among their most frequent acts of devotion and piety to contribute to the gilding of their numerous religious edifices and idols, it will be evident that a great quantity of the drug must be consumed for that purpose alone. Finally, the beautiful Pall writing of the religious order of the Burmas, on ivory, palm leaves, or metal, is entirely done with this varnish in its native and pure state. (*Don's Mill.*, ii. 67.) A mixture of loam and peat will suit this tree; and ripened cuttings will root in sand, under a hand-glass, in heat.

## ALPHABETICAL LIST,

## COMPREHENDING

SUCH GENERIC NAMES AS ARE NOT TO BE FOUND IN THE BODY  
OF THIS WORK,

*Which Names are either synonymous with some of those already given, or not sufficiently popular to be included in detail in this Supplement.*

To this are added their derivations, authorities, and natural orders, the number of the genus to which each should be annexed in the arrangement, and also the numbers of the species with which they are synonymous.

- 2852 \*121a ABILDGAA'RDIA Vahl. (*Prof. Abildgaard*, of Copenhagen.) monostácha Vahl. Cyperácea. A curious perennial bog plant, a native of New Holland, and introduced in 1819.
- 2853 \*2100a ABU'TA Aub. (*Abutua*, its name in Gulana.) rufescens Aub. Menisperm. A stove climber, attaining the height of 10 ft. It produces yellowish-green flowers, and was introduced from Guiana in 1820.
- 2854 68 ACÉ'NA L. (*Akaina*, a thorn; the berries.) . . . . . Sanguisorb. Syn. Nos. 475. to 482. in p. 26.
- 2855 \*1082a ACERATIUM Dec. (*A. priv.*, *keras*, a horn; anthers without.) oppositifolium Dec. Eleocarpacea. A stove shrub, a native of Amboyna, whence it was introduced in 1818. It produces white flowers, and thrives in a mixture of peat and loam.
- 2856 \*1565a ACHYRONIA W. (*Achyron*, chaff; branches and leaves chaffy.) villosa W. Leg. Pap. Lot. Gen. A New Holland shrub, producing its yellow flowers in July and August. Introduced in 1819.
- 2857 1650a ACHYRONOPHORUS D. Don. (*Achyron*, chaff, *phoreo*, to bear; receptacle.) maculatus D. Don. Comp. Cich. No 11316, also 11315. and 11320.
- 2858 1029f ACOTIS D. Don. (*Akis*, a point, *ous*, an ear; petals.) . . . . . Melastomácea. Nos. 6016. and 5434.
- 2859 \*517a ACUMADENIA B. & W. (*Alme*, a point, *aden*, a gland; anthers.) tetragona Hill. Rutácea. Adenandra tetragona Swt. A Cape shrub, producing white flowers from April to July. Introduced in 1798.
- 2860 1117b ACUMENA Dec. (*Acmena*, a nymph of Venus's.) floribunda Dec. Myrtácea. No. 6936. in p. 416.
- 2861 1281b ACROCEPHALUS Benth. (*Akron*, summit, *kephale*, head; flowers.) capitatus Benth. Labiácea. No. 8472. in p. 510.
- 2862 1985e ACROCOMIA Mart. (*Akros*, top, *kome*, tuft; leaves.) . . . . . Palmácea. Nos. 13321. and 13322.
- 2863 \*1975a ACROGLOCHIN Schr. (*Akros*, summit, *glochis*, spear point.) chenopodioides Schr. Amarantácea. Amaranthus Acroglochis Spr. An interesting annual, a native of Nepal, producing its green flowers in July and August. Introduced in 1824.
- 2864 \*399c ACROTRICHA R. Br. (*Akros*, a point, *thrix*, hair; corolla.) cordata R. Br. Epacridácea. A genus of white-flowered New Holland shrubs, which may be increased by cuttings, and grown in a sandy peat soil.
- 2865 1804b ACTINOMERIS Nut. (*Aktin*, a ray, *meris*, part.) squarrosa Nut. Comp. Hel. No. 12411., also Nos. 12494. and 12495.
- 2866 \*237a ADENANTHOS Lab. (*Aden*, a gland, *anthos*, a flower.) obovata Lab. Proteácea. A shrub producing red flowers. Introduced from New Holland in 1826.
- 2867 1464b ADENOCAEPUS Dec. (*Aden*, a gland, *karpos*, fruit.) . . . . . Leg. Pap. Lot. Gen. No. 10439. in p. 624.
- 2868 462a ADENOPHORA Fis. (*Aden*, a gland, *phoreo*, to bear) . . . . . Campanulácea. Nos. 2646. 2649. and 2650. in p. 164.
- 2869 \*211a AEGOPOGON Ham. (*Aix*, a goat, *pogon*, a beard.) pusillus Beauv. Graminácea. A curious little annual grass, a native of South America. Introduced in 1822.
- 2870 \*1328a ÆOLLANTHUS Mart. (*Atollo*, to vary, *anthos*, flower.) suaveolens Mart. Verbenácea. A tender annual, producing its white flowers in July and August. It is a native of Brazil, and was introduced in 1825.
- 2871 1635b ÆTHONIA D. Don. (*Æthon*, one of Phebus's horses.) fruticosa D. Don. Comp. Cich. No. 11245. also 11281.
- 2872 \*677a AGASYLLIS Spr. (Greek name of the gum ammoniac plant.) caucásica Spr. Umbellifera. Siler caucasicum Spr. An uninteresting white-flowered biennial, introduced from Caucasus in 1818.
- 2873 1741a AGATHÆA Cas. (*Agathos*, excellent; flowers beautiful.) celestis Cas. Comp. Jacob. No. 12144. also No. 12140.
- 2874 1627a AGATHYRSUS D. Don. (*Agathos*, pretty, *thyrsus*, a thyrsé.) sibiricus D. Don. Comp. Cich. No. 11116. also 11109, 11110, 11111, 11112, and 11117.
- 2875 1581a AGATY Rin. (*Agaty*, its name in the Sanscrit language.) grandiflora Desv. Leg. Pap. Lot. Gal. No. 10521. in p. 630.
- 2876 \*244a AGNOSTUS Cun. (*Agnostos*, unknown; provisional name.) sinuata Cun. ? Proteácea. An ornamental evergreen green-house tree, attaining the height of 15 ft. A native of Moreton Bay. Introduced in 1830.
- 2877 206a AGROPYRUM Beauv. (*Agros*, a field, *pyros*, wheat.) . . . . . Graminácea. Nos. 1238, 1239, 1240. 1242. 1245. p. 70.
- 156 AGROSTIS L. (The Greek name for all grasses. *Agros*, a field.) spica vénti W. Graminácea. Anemagróatis spica vénti Trin. Apèra spica vénti Beauv.
- 2878 \*2034b AGYNEVA L. (*A. priv.*, *gyne*, woman; neither style nor stigma.) impubes L. Euphorbiácea. An uninteresting annual, producing its green flowers in July and August. Introduced from China in 1820.
- 2879 711b AYA Haw. (A poetic name; a warrior in siege of Troy.) . . . . . Amaryllácea. Nos. 4051. 4050. 4049. 4041. 4036. 4037. 4040. 4038. 4048. 4045. 4047. and 4046.
- 265 ALCHEMILLA L. (*Alkemtych*, its Arabic name.) arvensis Sm. Rosácea. A'phanes arvensis L. No. 1519.

- 2880 \*702b ALDROVA'NDA L. (*Ulysses Aldrovandus*, an Italian nat.) vesiculosa L. Droseraceæ. A curious little bog plant, produces white flowers, is a native of Italy, and was introduced in 1823.
- 2881 1586a ALBICA'RA Thou. (Arabic name of the plant.) Maurdrum Thou. Leg. Pap. Hed. Euh. No. 10550. in p. 630.
- 2882 \*309a ALLIO'NIA L. (*Charles Allioni*, prof. bot. at Turin.) . . . . . Nyctaginaceæ. A genus of ornamental annuals of which two species were introduced from Cumana in 1820; *A. violacea* and *A. incarnata*.
- 2883 \*541c ALSODE'A Thou. (*Alsodes*, leafy.) pauciflora Thou. Violaceæ. A genus of white-flowered shrubs, natives of Madagascar, may be increased by cuttings, and grown in a mixture of peat and loam.
- 2884 \*411a ALSTONIA R. Br. (*Dr. C. Alston*, prof. of med. at Edinb.) scholaris R. Br. Apocynaceæ. *Nerium tinctorium Hort.* The species are natives of the East Indies. For other particulars see *Alsodæa*, above.
- 2885 2112a ALY'NGIA Nor. (*Alting*, some obscure German bot.) excelsa Nor. Coniaceæ. No. 14048. in p. 846.
- 2886 1586b ALYSICA'RPUS Nees. (*Alysis*, chain, *karpos*, fruit.) . . . . . Leg. Pap. Hed. Euh. Nos. 10551, 10552, 10553, and 10557.
- 1401 ALY'SSUM L. (*A. priv.*, *lyssa*, canine madness, sup. med. qual.) maritimum Lam. Crucifacæ. *Glyce maritima Lindl.*
- 2887 \*411c ALY'XIA R. Br. (*Alyxis*, anxiety; gloomy appearance.) daphnoides Cum. Apocynaceæ. A shrub producing white fragrant flowers. It is a native of the Norfolk Islands, whence it was introduced in 1831. A mixture of peat and loam suits the plant.
- 2888 \*507a ALZA'TEA R. & P. (*J. A. de Alzate*, a Span. naturalist.) verticillata R. & P. Celastraceæ. A tree, a native of Peru. Introduced in 1824.
- 2889 \*1464m AMI'CIA H. & B. (*J. B. Amici*, a celebrated physician.) zygomeris Dec. Leg. Pap. Hed. Euh. A stove climber, introduced from Mexico in 1824.
- 2890 1552a AMI'CA'RA Ell. (*Amphi*, on both sides, *karpos*, fruit; and above and under ground.) . . . . . Leg. Pap. Phas. Nos. 10296, 10297, and 10300.
- 2891 1294c AMPHIBIUM Kth. (*Amphi*, around, *lobos*, a pod.) paniculata Kth. Bignoniaceæ. No. 8535. in p. 314.
- 2892 \*139a AMPHIPO'GON R. Br. (*Amphi*, around, *pogon*, a beard.) strictus R. Br. Graminaceæ. A perennial grass, a native of New Holland. Introduced in 1823.
- 2893 \*1547a A'MPHODUS Lindl. (*Amphi*, on both sides; *odous*, a tooth.) ovatus, Lindl. Leg. Pap. Phas. A curious perennial stove twiner, produces its purple flowers in July and August, and was introduced from Trinidad in 1820.
- 2894 726a ANANA'SSA Thun. (*Nanas*, the name in Guiana.) sativa B. R. Bromeliaceæ. No. 4108., also Nos. 4110, and 4119. in p. 246.
- 2895 \*586a ANA'NTHRIX Nut. (*A*, without, *antherix*, an awn.) viridis Nut. Asclepiaceæ. *Asclæpias viridis Wall.* A curious little herbaceous plant, producing yellowish green flowers. A native of North America. Introduced in 1812.
- 2896 2129b ANATHE'RUM Beauv. (*A*, priv., *ather*, awn; valves of calyx awnless.) muticum R. & S. Graminaceæ. No. 14212. in p. 860.
- 2897 \*241c ANCHIE'TEA Hil. (*P. Anchieta*, a Brazilian writer on plants.) pyrifolia G. Don. Violaceæ. *Calyptrion pyrifolium Mart.* An ornamental stove climber, growing to the height of about 3 ft., and producing white flowers in July and August. Introduced from Brazil in 1822.
- 2898 1516b ANDI'RA Lam. (Its name in Brazil.) inermis H. & B. Leg. Cæs. Geoff. No. 10029. in p. 604.
- 2899 \*1421a ANDRO'SKIA Dec. (*Ant. Andrzejewski*, a Russian botanist.) integrifolia Dec. Crucifacæ. *Sisymbrium integrifolium L.* A genus of uninteresting annuals and biennials, natives of Siberia.
- 2900 1499a ANDRO'SMUM All. (*Aner*, a man, *hatma*, blood; colour of juice.) officinale AU. Hypericaceæ. No. 10040. in p. 556.
- 2901 1843a ANGIANTHUS Wall. (*Aggos*, a vessel, *anthos*, flower.) adreus Wal. Comp. Echln. No. 12772. in p. 744.
- 2902 1117a ANGO'PHORA Cav. (*Aggos*, a vessel, *phoreo*, to bear; form of fruit.) . . . . . Myrtaceæ. Nos. 6935 and 6937. in p. 416.
- 2903 \*845a ANGUILLA'RIA R. Br. (*Anguilla*, an eel; twisted seeds.) indica R. Br. Melanthaceæ. A little half-hardy dark-purple-flowered herbaceous plant, a native of Tranquebar, may be increased by division, and grown in a sandy peat soil. Introduced in 1810.
- 2904 \*254a ANISACA'NTHA R. Br. (*Anisos*, unequal, *akantha*, a spine.) divaricata R. Br. Chenopodiaceæ. A curious New Holland shrub, introduced in 1824; may be increased by cuttings, and grown in a mixture of peat and loam.
- 2905 107a ANISANTHUS Swt. (*Anisos*, unequal, *anthos*, a flower.) . . . . . Iridaceæ. Nos. 704. and 706. in p. 42.
- 2906 1282b ANISOCHI'LUS Wall. (*Anisos*, unequal, *cheilos*, lip.) carnosæ Benth. Labiaceæ. No. 8199. in p. 498.
- 2907 \*380a ANISODUS Lk. (*Anisos*, unequal, *odous*, a tooth; cal.) stramonifolius G. Don. Solanaceæ. *Whitlæya stramonifolia Swt.* An ornamental perennial with yellowish green flowers. A native of Nepal, introduced in 1823.
- 2908 1401c ANODO'NTA Dec. (*A*, destitute, *odontos*, of a tooth; stamens.) . . . . . Crucifacæ. Nos. 9068, 9070, 9071, and 9072.
- 2909 212b ANTHE'PHORA Schreb. (*Anthos*, a flower, *phoreo*, to bear.) elegans Schreb. Graminaceæ. No. 13179. in p. 780.
- 2910 \*2129g ANTHISTEMIA W. (*Anthistemi*, to resist; harshness of stubble.) ciliata Retz. Graminaceæ. *Andropogon quadrivialis L.*
- 2911 \*420a ANTHOLEI'STA Afx. (*Anthos*, a flower, *kleistos*, shut up.) macrophylla G. Don. Apocynaceæ. An evergreen stove tree, attaining the height of 20 ft., and producing white flowers. It is a native of Sierra Leone, was introduced in 1820, and thrives in a mixture of peat and loam.
- 2912\* 83b ANTHONON R. & P. (*Anthos*, a flower, *odon*, a tooth.) paniculatum Mart. Hippocrateæ. A stove shrub producing yellowish green flowers. Introduced from Rio Janeiro in 1818, and thrives in a mixture of peat and loam.
- 2913 \*1163a ANTHOLOMA Lab. (*Anthos*, a flower, *loma*, a fringe.) montana Lab. Marcegraviaceæ. A New Holland shrub, introduced in 1810; may be increased by cuttings, and grown in sandy loam.
- 2914 261a ANOTIS Dec. (*A*, priv., *ous*, *otos*, an ear; teeth of cal.) ciliolata G. Don. Rubiaceæ. *Hedyotis ciliolata Hook.*
- 2915 1730c APHELES'XIS D. Don. (*Aphelus*, simple, *exis*, habit; plants.) . . . . . Comp. Vern. Nos. 11798, 11807, 11808, and 11810.
- 2916 769g APIC'RA W. (*Apikros*, not bitter; unlike bitter aloes.) . . . . . Ajoineæ. Nos. 4388, 4405, to 4412. in p. 262.
- 2917 1553c A'PIOS Boer. (*Aptos*, a pear; form of roots.) tuberosa Moem. Leg. Pap. Phas. No. 10313. in p. 618.
- 2918 998a APOPHY'LLUM J. (*Haploos*, simple, *phyllon*, leaf; lvs. simple.) patavinum J. Rutaceæ. No. 8893. also 5891. and 5892.
- 2919 \*2129c APLU'DA L. (*Apluda* aff; involucre.) aristata L. Graminaceæ. *Andropogon involucreatus Kion.*
- 2920 \*272a AQUA'RTIA Jac. (*B. Aquart*, Jacquin's comp. in Amer.) tomentosa Jac. Solanaceæ. A South American shrub producing white flowers. It was introduced in 1819, and requires to be grown in a sandy loam.
- 2921 \*1034b AQUILA'RIA L. (*Aquila*, an eagle; called Bois d'Aigle by French colonists.) malaccensis Lam. Samy-daceæ. *A. ovata Cav.* An ornamental stove shrub introduced in 1823. It produces greenish yellow flowers, and thrives in a mixture of loam and peat.
- 2922 664a ARCHANGE'LICA Hoffm. (Supposed *archangelic* virtues.) officinalis Hoffm. Umbellaceæ. No. 3677. also 3681. in p. 220.

- 2923 1019a *ARCTOSTA'PHYLOS* *Adan.* Bear's Grape. (*Arktos*, bear, *staphyle*, a grape.) . . . . *Ericacæe*. Nos. 5966, and 5967.
- 2924 920a *AREMO'NIA* *Dec.* (Changed from *Agrimonia*.) *agrimoniloides* *Dec.* *Rosacæe*. No. 6657, in p. 398.
- 2925 425a *ARGA'NIA* *R. & S.* (*Argam*, its aboriginal name.) *Sideroxyylon R. & S.* *Sapotacæe*. No. 2938. in p. 180.
- 2926 2006a *ARISA'RUM* *Tou.* (Adopted from the Greeks.) vulgare *Kth.* *Aracæe*. No. 13477, in p. 900.
- 2927 \*150a *ARISTI'DA* *L.* (*Arista*, an ear of corn.) stipuloides *R. Br.* *Graminacæe*. A native of New Holland, and was introduced in 1826.
- 2928 1128b *ARMENI'ACA* *Tou.* (Originally from Armenia.) vulgâris *Lam.* *Rosacæe*. No. 7056. also Nos. 7057, 7058, and 7044.
- 2929 \*649a *ARACACA'IA* *Bancroft.* (Euphonised from *Arracacha*, its name in Santa Fè.) *esculentâ* *Dec.* *Umbellacæe*. *Codium Arracacha* *Hook.*
- 2930 2132a *ARRHENATHE'RUM* *Beauv.* (*Arrhen*, male, *ather*, point; male spikes awned.) . . . *Graminacæe*. Nos. 14227, and 14228, p. 860.
- 2931 \*1353a *ARTANE'MA* *D. Don.* (*Artao*, to append, *nema*, filament; fil. toothed.) fimbriatûm *D. Don.* *Scrophulariacæe*. *Torëntia scabra* ? *Grah.* An ornamental green-house perennial, producing pale blue flowers from June till August. Introduced from Moreton Bay in 1830.
- 1721 *ARTEMI'SIA* *L.* (*Artemis*, one of the names of Diana.) *campëstris* *L.* *Comp. Anthem.* *Oligosporus campëstris* *Cass.*
- 2932 \*1578a *ARTHROLO'BIVM* *Desv.* Joint-Vetch. (*Arthron*, a joint, *lobos*, a pod; jointed seed-vessel.) *ebracteatum* *Desv.* *Leg. Hed.* Found on "sandy ground near Grand Havre, Guernsey, but rare." — *Hook*
- 2933 \* *ASAGRE'IA* *Lindl.* (*Dr. Asa Gray*, one of the auths. of Fl. of N. Amer.) *officialis* *Schl.* *Melanthacæe*. *Helonias officinalis* *D. Don* is the *Veratrum officinale* of Schlecht. It is a half-hardy, bulbous-rooted, white-flowered perennial. Introduced from Mexico in 1839.
- 2934 1680a *ASCARIC'DA* *Cass.* (*Ascaris*, an intestinal worm, *caedo*, to kill.) *antelmintica* *Swt.* *Comp. Vern.* No. 11504, in p. 688.
- 2935 711d *ASSA'NACUS* *Haw.* (*Assaracus*, a Trojan prince.) . . . . *Amaryllacæe*. No. 4027, in p. 240.
- 2936 \*610a *ASTARTE'A* *Dec.* (*Astarte*, the Syrian Venus.) *fasciculâris* *Dec.* *Myrtacæe*. *Melaleuca fasciculâris* *Lab.*
- 2937 \*578c *ASTE'PHANUS* *R. Br.* (*A*, without, *stephanos*, crown; stamens.) triflorus *R. Br.* *Asclepiadacæe*. A genus of Cape twiners, two species of which were introduced in 1816; they bear white flowers, and require to be grown in a mixture of peat and loam.
- 2938 264a *ASTEROCE'PHALUS* *Vail.* (*Aster*, star, *kephale*, head; seeds.) . . . . *Dipsacæe*. No. 1569, to 1594, in p. 69.
- 2939 1043a *ASTY'LBÆ* *Ham.* (*A*, intensive, *stilbe*, brightness.) *decandra* *D. Don.* *Saxifragacæe*. No. 6109, in p. 38.
- 2940 \*1985g *ASTROCA'RYVM* *Mey.* (*Astron*, star, *karyon*, nut.) *Murumura* *Mart.* *Palmacæe*. A palm attaining the height of 40 ft. Introduced from Brazil in 1825.
- 2941 1578a *ASTROLO'BIVM* *Desv.* (*Astron*, star, *lobos*, pod; disposition.) . . . . *Leg. Pap. Hed. Cor.* Nos. 10611, 10513, and 10514.
- 2942 1002c *ATALA'NTIA* *Corr.* (*Atalanta*, the daughter of Schœneus.) *monophylla* *Dec.* *Aurantiacæe*. No. 5902, in p. 356.
- 2943 1627b *ATALA'NTHUS* *D. Don.* (*Atalos*, soft, *anthos*, a flower.) *pinnatus* *D. Don.* *Comp. Cich.* No. 11151, also 11149, and 11152.
- 2944 2130a *ATHEROPO'GON* *Mhl.* (*Ather*, awn, *pogon*, beard; awns bearded.) *apludoides* *W.* *Graminacæe*. No. 14218, in p. 860.
- 2945 \*1985f *ATHEROSPE'RNA* *Lab.* (*Ather*, awn, *sperma*, seed.) *moschata* *Lab.* *Calycanthacæe*? A New Holland tree growing to the height of 30 ft., and producing its white flowers in May and June. Introduced in 1824.
- 2946 1226a *ATRA'GENE* *L.* (A name given by Theophrastus to a species of *Clématis*.) *Ranunculacæe*. Nos. 7963, 7964, and 7965, in p. 482.
- 2947 \*2007d *ATTA'LIA* *Hum.* (*Attalus*, magnificent; trees.) *excelsa* *Mart.* *Palmacæe*. A genus of Brazilian palms, the species varying from 10 ft. to 70 ft. in height.
- 2948 \*62a *AUDIBERTIA* *Benth.* (*M. Audibert*, of Tarascon, a nurseryman.) *incana* *Benth.* *Labiacæe*. *Sálvia carnosa* *Her. Dou.*
- 2949 533d *AUDOUINIA* *Brong.* (*A. Audouin*, an entomol. and friend of Brongniart.) *capitata* *Brong.* *Bruniacæe*. No. 2949, in p. 180.
- 2950 537a *BALSAMINA* *Riv.* (*Balsamine*, a name used by Dioscorides.) *hortensis* *Desp.* *Balsaminacæe*. No. 3016, also 3017, in p. 134.
- 2951 \*889a *BALSAMODENDRON* *Kth.* (*Balsamon*, balsam, *dendron*, tree.) *zeylanicum* *Kth.* *Terebinthacæe*. *Amÿris zeylanica* *Retz.* A tree attaining the height of 30 ft., a native of Ceylon; may be increased by cuttings, and grown in a mixture of peat and loam.
- 2952 \*984c *BA'PHIA* *Afr.* (*Baphe*, a dye; use.) *nitida* *Lod.* *Leg. Swartzieæ*. A tree growing to the height of about 30 ft., and producing white flowers from June to November. It is a native of Sierra Leone, and was introduced in 1793.
- 2953 \*412a *BEAUMONTIA* *Wal.* (*Diana*, the lady of Col. T. Beaumont.) *grandiflora* *Wall.* *Apocynacæe*. An elegant white-flowered stove twiner, a native of the East Indies. Introduced in 1820.
- 2954 803a *BELLEVALIA* *Lap.* (*P. R. Belleval*, a French botanist.) *operculata* *Lap.* *Asphodèleæ*. No. 4774, in p. 278.
- 2955 1749a *BELLIDIASTRUM* *Cas.* (*Bellis*, daisy, *astrum*, an affix signifying like.) *Michëlii* *Cas.* *Comp. Vern.* No. 12186, in p. 716.
- 2956 2136a *BENINCASA* *Savi.* (*Count Benincasa*, an Italian nobleman.) *cerifera* *Savi.* *Cucurbitacæe*. *Cucurbita cerifera* *Fis.*
- 2957 533c *BERA'RDIA* *Brong.* (*Berard*, prof. of Chemistry at Montpellier.) . . . . *Bruniacæe*. Nos. 2994, and 3006.
- 2958 503a *BERCHE'MIA* *Neck.* (*M. Berchem*, a French botanist.) . . . . *Rhamnacæe*. Nos. 2894, and 2895, in p. 176.
- 2959 \*1002d *BERGERA* *Kon.* (*C. J. Berger*, prof. of bot. at Kiel.) *Konigii* *Rox.* *Aurantiacæe*. A curious East Indian shrub, producing its white flowers in June and July. It may be increased by layers, and grown in a mixture of peat and loam.
- 2960 \*1070a *BERGIA* *L.* (*P. J. Bergius*, M.D., prof. nat. hist. Stockholm.) *verticillata* *W.* *Caryophylleæ*. A curious little reddish-white-flowered annual, a native of Egypt. Introduced in 1820.
- 2961 1266a *BENINGERIA* *Neck.* (*Beringer*, probably a man's name.) . . . . *Labiacæe*. Nos. 8339, 8342, 8343, 8344, 8346, 8347, and 8348.
- 2962 \*1178a *BERRYA* *Rox.* (*Dr. Berry*, who first introd. it to Calcutta bot. gar.) *Aromilla* *Rox.* *Thiicæe*. A tree, a native of the East Indies, whence it was introduced in 1818. It thrives in a mixture of peat and loam.
- 2963 \*1196a *BERTHOLETIA* *H. & B.* Brazil Nut. (*L. C. Bertholet*, a celebrated chemist.) *excelsa* *H. & B.* *Lecythacæe*. A stove tree attaining the height of 100 ft. It is a native of Para, may be increased by cuttings, and grown in a mixture of peat, loam, and sand.
- 2964 533a *BERZELIA* *Brong.* (*Berzelius*, a celebrated chemist.) . . . . *Bruniacæe*. Nos. 2995, and 3001.
- 2965 \* *BERBERA* *Schultes* *fl.* (*Dr. Besser*, prof. of botany at Brody.) *elegans* *Lindl.* *Liliacæe*. An ornamental bulbous-rooted plant, producing its crimson-coloured flowers from June till October. Introduced from Mexico in 1839.

- 2966 618a *BI'FORIS* Spr. (*Bis*, double, *foris*, a flap; fruit.) testiculatus *Bieb.* Umbellacæe. No. 3477. in p. 208.  
 2967 270c *BIGELO'VIA* Spr. (*Prof. Bigelow*, of N. Amer.) . . . . . Rubiacæe. Nos. 1649. and 1652. in p. 94.  
 2968 \*1613a *BILLO'VIA* Coll. (*Mad. Tecopilla Bilali*, of Turin.) acerôsa *Coll.* Myrtacæe. A New Holland shrub, producing its red flowers from July till September. Introduced in 1816.  
 2969 \*1428a *BIVONA'IA* Dec. (*Ant. Bivoni Bernardi*, an Ital. botan.) lutea *Dec.* Cruciacæe. *Thlâspi luteum Biv.* An uninteresting little yellow-flowered annual. Introduced from Italy in 1824.  
 2970 \*1301a *BLE'PHARIS* J. (*Blepharis*, the eyelashes; bractæas of cal.) capensis *Pers.* Acanthacæe. A biennial, introduced in 1818, and producing its blue flowers in July and August.  
 2971 60a *BLEPHI'LIA* Raf. (*Blepharis*, eyelash; sepals fringed?) . . . . . Labiacæe. Nos. 365. and 366. in p. 22.  
 2972 123a *BLY'SMUS* Panz. (*Blasmos*, a source or spring; locality.) compressus *Panz.* Cyperacæe. No. 849. in p. 48.  
 2973 117b *BOBA'RTIA* L. (*Jacob Bobart*, prof. of bot. at Oxford, 1669.) . . . . . Iridacæe. Nos. 826. and 831. in p. 43.  
 2974 \*81b *BOLD'IA* Lag. (*D. Boldo*, a Spanish botanist.) purpurascens *Cav.* Nyctaginacæe. An herbaceous stove plant, a native of Cuba, whence it was introduced in 1820.  
 2975 \*1437a *BO'LEUM* Desv. (*Bolos*, a ball; round pods.) âsperum *Desv.* Cruciacæe. *Vella âspera Pers.* A pretty half-hardy undershrub. Introduced from Spain in 1820, and producing its cream-coloured flowers from May to July.  
 2976 \*39a *BOLIVAR'IA* Schleg. (In honour of the great *Bolívar*.) trifida *Schleg.* Jasminacæe. An ornamental green-house shrub, producing its yellow flowers in July. A native of Chile. Introduced in 1828.  
 2977 \*825a *BONGA'RDIA* Mey. (*H. G. Bongard*, a French botanist.) Rauwolfii *Mey.* Berberacæe. *Leontice Chrysoگونون L.* A yellow-flowered tuberous-rooted perennial. Introduced from Persia in 1836.  
 2978 43a *BONNA'YA* Lk. (*Bonny*, a German botanist.) *veronicaefolia Spr.* Scrophulariacæe. No. 269. in p. 16.  
 2979 \*1190a *BONNET'IA* Schreb. (*Charles Bonnet*, a Genevese naturalist.) palustris *Vahl.* Guttacæe. A stove tree, producing red flowers. A native of Trinidad. Introduced in 1819.  
 2980 \*1086b *BO'NCIA* Lam. (*L. Bosc*, Direct. of Roy. Bot. Gard. at Paris.) senegalensis *Lam.* Capparidacæe. *Podôria senegalensis Pers.* A stove shrub introduced in 1824, may be increased by cuttings, and grown in light rich soil.  
 2981 \*1010a *BOSWEL'ITA* Rox. Olibanum Tree. (*Dr. John Boswell*, of Edinburgh.) serrata *Stack.* Terebinthacæe. A medicinal tree, a native of the East Indies, introduced in 1820. It produces pale yellow flowers, and may be grown in a mixture of loam and peat.  
 2982 \*693a *BOUSSINGAU'LTIA* H. B. & K. (*J. B. Boussingault*, a celeb. naturalist.) baselloides *Hum.* Chenopodiacæe. A whitish-flowered tuberous-rooted green-house plant, a native of South America. Introduced in 1838.  
 2983 \*769d *BOWIE'IA* Haw. (*J. Bowie*, a collect. of plants for Kew gar.) myriacantha *Haw.* Hemerocallidæe. A curious little creeper with yellowish-green flowers, a native of Monte Video. Introduced in 1827.  
 2984 \*658a *BOWLES'IA* R. & S. (*W. Bowles*, an Irish botanist.) tenera *Spr.* Umbellacæe.  
 2985 1731a *BRACHYLE'NA* R. Br. (*Brachys*, short, *lana*, cloak; calyx.) nereifolia *Swt.* Comp. Vern. No. 11820. in p. 702.  
 185 *BRACHYPO'DIUM* Beauv. (*Brachys*, short, *pous*, foot.) loliacum *R. & S.* Graminacæe. *Catapodium loliacum Lk.*  
 2986 \*2032a *BRADLE'YA* Gae. (*Rich. Bradley*, first prof. of bot. Cambridge.) sinica *Gae.* Euphorbiacæe. A curious stove shrub. Introduced from China in 1816.  
 2987 \*1586c *BREMONTIE'RA* Dec. Sand Wood. (*M. Bremontier*, an agriculturist.) Ammoxylon *Dec.* Leg. Pap. Hed. Euth. A stove shrub, a native of the Mauritius. Introduced in 1826.  
 2988 646b *BRIGNO'LIA* Bert. (*J. L. Brignoli*, a prof. at Verona.) panicifolia *Brig.* Umbellacæe. No. 3601. in p. 210.  
 2989 \*1516c *BRONNIA'RTIA* H. & B. (*M. Adolphe Brongniart*, a Fr. bot.) podalyrioides *Kth.* Leg. Geof. A half-hardy undershrub, producing flesh-coloured flowers from September to November. A native of New Spain. Introduced in 1827.  
 2990 \*1175e *BROWNLO'VIA* Rox. (The late *Lady Brownlow*, daughter of Sir A. Hume.) elata *Rox.* Tilliacæe. A tree growing to the height of 60 ft., a native of the East Indies, produces yellow flowers, is increased by cuttings, and thrives in sandy loam. Introduced in 1820.  
 2991 \*617a *BRUNO'NIA* Sm. (*Robt. Brown*, Esq., a learned syst. botan.) australis *R. Br.* Goodeniæe. An ornamental blue-flowered New Holland perennial. Introduced in 1834.  
 2992 1464r *BRY'IA* Br. (*Bryo*, to sprout, seeds germin. before falling.) E'benus *Dec.* Leg. Pap. Dalb. No. 10034. in p. 604.  
 2993 \*1059a *BUCHANA'NIA* Rox. (*T. Buchanan*, now Hamilton, M.D.) angustifolia *Rox.* Terebinthacæe. *Mangifera axillaris Lam.* A genus of East Indian trees, producing white flowers, of which two species were introduced in 1820.  
 2994 \*864a *BUGINVILLE'IA* Com. (*Bougainville*, a Fr. navigator.) spectabilis *J.* Nyctaginacæe. An ornamental stove climber, growing to the height of 15 ft. and producing pink flowers. Introduced from South America in 1829.  
 2995 \*320a *BULLIA'RTIA* Dec. (*M. Bulliard*, a Fr. botanist.) Vaillanti *Dec.* Crassulacæe. A curious little aquatic annual, with white flowers, a native of the South of Europe. Introduced in 1825.  
 2996 1007a *BUNCHO'SIA* J. (*Bunchos*, coffee, *Arab*; similar seeds.) . . . . . Malpighiacæe. Nos. 6371. to 6375. and also 6379.  
 2997 \*786a *BURCHARD'IA* R. Br. (*H. Burchard*, M.D., a bot. author.) umbellata *R. Br.* Melanthacæe. A New Holland white-flowered herbaceous plant. Introduced in 1820.  
 2998 \*702a *BY'BLIS* Sal. (*Zyblis*, the daughter of Miletus.) iniflora *Sal.* Droseracæe. A curious little bog plant, producing blue flowers. A native of New Holland, whence it was introduced in 1800.  
 2999 1054a *BYRSO'NIMA* Rich. (*Byrsa*, a hide; used for tanning.) . . . . . Malpighiacæe. No. 6380. to 6384. in p. 380.  
 3000 1548h *CAJANUS* Dec. Pigeon Pea. (*Cajang*, its name in Malabar.) flavus *Dec.* Leg. Pap. Phas. No. 10443. in p. 624.  
 3001 175a *CALAMAGRO'STIS* Adam. (*Kalamos*, a reed, *agrostis*, grass.) . . . . . Graminacæe. Nos. 999. 1068. 1069. 1070.  
 3002 ?1819a *KALLOS'PHALUS* Mey. (*Kallos*, beauty, *kephale*, head; flws.) nitens *Mey.* Comp. Cynar. *Centaurea nitens Bieb.* No. 12691. in p. 738.  
 3003 1635a *CALIOPE'IA* D. Don. (*Calliope*, one of the Muses.) âurea *D. Don.* Comp. Cich. No. 11186. in p. 672.  
 3004 \*795a *CALIPRO'RA* Lindl. (*Kale*, pretty, *prora*, front; its beauty.) lutea *Lindl.* Asphodelæe. An ornamental bulbous-rooted plant, producing its yellow flowers in July. Introduced from New California in 1831?  
 3005 \*662a *CALLI'SACE* Fis. (*Kallos*, beauty, *sakos*, a buckler; seeds.) dahurica *Fis.* Umbellacæe. An uninteresting green-flowered perennial, a native of Siberia. Introduced in 1816.  
 3006 892i *CALLI'STA* D. Don. (*Kallistos*, most beautiful; flws.) Walkeri *D. Don.* Ericacæe. Type. No. 5217. in p. 308.  
 3007 1739a *CALLISTE'MMA* Cas. China Aster. (*Kallistos*, prettiest, *stemma*, crown; flws.) hortense *Cas.* Comp. Vern. No. 12032. in p. 710.  
 3008 1117a *CALLISTE'MON* R. Br. (*Kallistos*, most beautiful, *stemon*, stamen.) . . . . . Myrtacæe. Nos. 6941. to 6950. (6947. excepted.)  
 3009 \*2018a *CAL'LITRIS* Ven. (*Kallos*, beauty; appearance.) quadrivalvis *Ven.* Conacæe. A tree attaining the

- height of from 15 ft. to 20 ft. A native of Barbary. Introduced in 1815, and flowering from February to May.
- 3010 892<sup>r</sup> CALLUNA *Sal.* (*Kalluno*, to adorn; *flwa.*) vulgaris *Sal.* Ericaceæ. Type, No. 5268. in p. 310.
- 3011 1569<sup>e</sup> CALOPHACA *Fis.* (*Kalos*, beautiful, *phake*, lentil.) wolgárica *Fis.* Leg. Pap. Lot. Gal. No. 10442 in p. 624.
- 3012 \*541<sup>b</sup> CALYPTRIUM *Ging.* (*Kalypra*, a veil, *ion*, a violet.) Aubletii *Ging.* Violaceæ. *Viola Hybánchez Aub.* A climber, a native of Guiana. Introduced in 1823. It produces cream-coloured flowers.
- 3013 \*1126<sup>a</sup> CALYTRIX *Lab.* (*Kalyz*, a calyx, *trizos*, triple.) glabra *R. Br.* Myrtaceæ. A genus of New Holland shrubs which produce white flowers, are increased by cuttings, and grown in sandy peat.
- 3014 \*809<sup>a</sup> CAMASSIA *Lindl.* (*Quamash* or *Cumas*, its name in North-West America.) esculenta *Lindl.* Asphodelæ. *Quamásia esculenta Raf.* A dark-purple-flowered, hardy, bulbous-rooted plant. Introduced from Columbia in 1827.
- 3015 765<sup>a</sup> CAMPELIA *Rich.* (*Kampe*, a bending, *helios*, the sun.) Zemônia *Rich.* Commelinaceæ. No. 4372. in p. 260.
- 3016 \*49<sup>a</sup> CAMPYLANTHUS *Roth.* (*Kampylos*, a curve, *anthos*, a flower.) salsoloides *Roth.* Primulacæ. An evergreen green-house shrub, with purplish blue flowers, introduced from Tenerife in 1825, and requiring to be grown in a sandy peat soil.
- 3017 1464<sup>g</sup> CANAVALLIA *Dec.* (*Canavali*, its Malabar name.) ensiformis *W.* Leg. Pap. Phas. No. 10288. in p. 616.
- 3018 649<sup>a</sup> CARNOBYLLUM *Gac.* (*Kapnos*, smoke, *phylon*, a leaf.) africanum *Gac.* Umbellacæ. No. 3610. *Rúmia capensis Lk.*
- 3019 729<sup>b</sup> CARAGUATA *Plu.* (Its name in South America.) lingulata *Lindl.* Bromeliacæ. No. 4138. in p. 248.

- 3136 \*1569b *DIPHYSA Jac.* (*Dis*, double, *physa*, bladder; inflated append. to pod.) *carthagenensis Jac.* Leg. Pap. Lot. Gal. An ornamental yellow-flowered stove shrub. Introduced in 1827.
- 3137 \*136a *DIPLAZIA Rich.* (*Diplazo*, to double; the glumes.) *karatifolia Rich.* Cyperacæe. An uninteresting stove plant, a native of Guiana. Introduced in 1825.

- 3138 \* **DIPLOLÆNA** Desf. (*Diploos*, double, *lena*, cloak; double involucre.) *Dampieri* Desf. Rutaceæ. A curious green-house shrub, growing to the height of about 4 ft. Introduced from the Swan River in 1837.
- 3139 \*580a **DIPLOLEPIS** R. Br. (*Diploos*, double, *lepis*, a scale.) . . . . . Asclepiaceæ. A genus of uninteresting twiners, with green flowers, natives of China.
- 3140 \* **DIPLOPLETIS** Endl. (*Diploos*, double, *pletis*, a shield; bilamellate disc.) *Huglii* Endl. Sapindaceæ. A white-flowered under-shrub. Introduced from the Swan River in 1837.
- 3141 \*40a **DIPLOPHYLLUM** Leh. (*Diploos*, double, *phyllon*, a leaf.) *veronicaeforme* Leh. Scrophular. *Veronica Crista-Galli* Stev. A curious trailing annual with blue flowers, a native of Caucasus. Introduced in 1813.
- 3142 \*2007a **DIPLOTHEMIUM** Mart. (*Diploos*, double, *thema*, spathe.) *maritima* Mart. Palmaceæ. A palm growing about 10 ft. high. Introduced from Brazil in 1823.
- 3143 1459b **DISYMMMA** Lab. (*Dis*, double, *stemma*, a crown; crown double.) *Herbertiana* Dec. Passifloraceæ. Nos. 9426. and 9427.
- 3144 \*420b **DISSOLÆNA** Lou. (*Dis*, double, *solen*, a tube; tube of corolla.) *verticillata* Lou. Apocynaceæ. *Cébera chinensis* Spr. An ornamental green-house shrub, a native of China. Introduced in 1812.
- 3145 \*1191b **DOLIOCARPUS** Rol. (*Dolios*, deceitful, *karpos*, fruit; poisonous.) *Calinda* Gm. Dilleniaceæ. *Calinda scandens* Aub. A stove climber, producing yellow flowers. It is a native of Guiana, and was introduced in 1822.
- 3146 \*399a **DRACOPHYLLUM** R. Br. (*Drakon*, a dragon, *phyllon*, a leaf.) *secundum* R. Br. Epacridaceæ. A genus of New Holland shrubs with white flowers, and requiring to be grown in sandy peat.
- 3147 1514a **DREPANOCARPUS** Mey. (*Drepanon*, sickle, *karpos*, fruit.) *lunatus* Mey. Leg. Pap. Dalb. No. 10026. in p. 604.
- 3148 646c **DREPANOPHYLLUM** Hofm. (*Drepanon*, scythe, *phyllon*, leaf; form.) *agreste* Hofm. Umbellaceæ. No. 3600. in p. 216.
- 3149 \*1205b **DRIMYS** Forst. (*Drimys*, acid; bark acid and aromatic.) *Winteri* Forst. Magnoliaceæ. *Wintera aromatica* Mur. A medicinal tree, a native of Magellan. Introduced in 1827.
- 3150 \*606a **DRUMMONDIA** Dec. (*Mr. Drummond*, botanical collector.) *mitelloides* Dec. Saxifragaceæ. *Mitella pentandra* Hook. A curious hardy perennial, producing its yellowish flowers in June. It is a native of the Rocky Mountains.
- 3151 \*659a **DROUSA** Dec. (*M. Le Dru*, a botanist.) *oppositifolia* Dec. Umbellaceæ. An uninteresting little white-flowered creeper. Introduced from Tenerife in 1824.
- 3152 688a **DRYMARIA** W. (*Drymos*, a forest; habitation.) *cordata* W. Caryophyllaceæ. No. 1291. in p. 74.
- 3153 1373a **DRYMONIA** Mart. (*Drymonia*, woodland; inhabits forests.) *bicolor* Mart. Gesneriaceæ. No. 8923. in p. 534.
- 3154 \*2056a **DRYPETES** Vahl. (*Drypto*, to lacerate; spiny.) *crœca* Poit. Rhannaceæ. *Schœfferia lateriflora* Sw. A West Indian shrub, introduced in 1820.
- 3155 \*119c **DULACIUM** Pers. (Name of the island where found.) *spathaceum* Pers. Cyperaceæ. A curious hardy bog-plant, a native of North America. Introduced in 1818.
- 3156 \*1608a **DURIO** L. (*Durio*, a thorn, *Malay*; spinous fruit.) *zebethinus* L. Malvaceæ. A stove tree, attaining the height of 60 ft. Introduced from the East Indies in 1825.
- 3157 594g **DUVALIA** Haw. (*M. Duval*, a French botanist.) . . . . . Asclepiaceæ. Nos. 3333. to 3337. in p. 202.
- 3158 1985b **DUVAUA** Kth. [cl. xxi ord. 17.] (*M. Duvaux*, a French botanist.) . . . . . Terebinthaceæ. No. 13985. and 13986.
- 3159 1464a **DYBENUS** L. (*Abnous*, ebony, *Arabic*.) . . . . . Leg. Pap. Hed. Euh. Nos. 10214. and 10219. p. 614.
- 3160 1060c **ECHENIUS** Dec. (*Echeveri*, a botanical draughtsman.) . . . . . Crassulaceæ. Nos. 6410. and 6414. in p. 382.
- 3161 1800c **ECHINOCRA** Moen. (*Echinus*, a hedgehog; receptacle.) . . . . . Comp. Hel. Nos. 12469. and 12470.
- 3162 \*153a **ECHINOPOGON** Beauv. (*Echinus*, prickly, *pogon*, a beard.) *ovatus* Beauv. Graminaceæ. *Agrôstis ovatus* Lab. A New Holland grass. Introduced in 1820.
- 3163 892b **ECTASIS** D. Don. (*Ektasis*, extension; stamens prominent.) *Plukenetii* D. Don. Ericaceæ. Type, No. 5114. in p. 304.
- 3164 \*904b **ELAPHRIUM** Jac. (*Elaphros*, contemptible; wood.) *glabrum* Jac. Rutaceæ. *Fagâra Elaphrium* W. A stove tree, a native of Carthage. Introduced in 1818.
- 3165 \*2023a **ELATERIUM** L. (*Elater*, an impeller; elastic seed-vessel.) *carthaginense* L. Cucurbitaceæ. A twining annual, grows to the height of about 5 ft., and produces its yellow flowers in June and July. Introduced in 1823.
- 3166 \*1588b **ELEIOTIS** Dec. (*Eleios*, dormouse, *ous*, ear; leaves.) *sordida* Dec. Leg. Pap. Hed. Euh. *Hedysarum sordium* L. *Hállia sordida* W. *Onobrychis sordida* Desf. An uninteresting tender biennial, with red flowers. Introduced from the East Indies in 1817.
- 3167 \*893a **ELLIORTIA** Mhl. (*Stephen Elliot*, a N. Amer. botan.) *racemosa* Mhl. Ericaceæ. A half-hardy white-flowering shrub, a native of Georgia, may be increased by layers and grown in a sandy peat soil.
- 3168 \*228b **ELODEA** Mx. (*Elodes*, growing in marshy places.) *gulanensis* Mx. Fluvialeæ. A tender annual aquatic, producing white flowers. Introduced in 1820.
- 3169 \*124a **ELYNA** Schr. (*Elyo*, to cover.) *spicata* Schr. Cyperaceæ. A small European bog plant. Introduced in 1819.
- 3170 \*435a **EMBELLA** Brm. (*Embilla*, its name in Ceylon.) *robusta* Rox. Myrsinaceæ. An East Indian tree, producing greenish white flowers. Introduced in 1823.
- 3171 \*246c **EMBOTHRUM** Forst. (*En*, in, *bathrion*, a little pit; anthers.) *strobilinum* Lab. Proteaceæ. An ornamental New Holland shrub, producing yellowish green flowers in April. Introduced in 1824.
- 3172 2027b **EMBLICA** Gae. (Its name in the Moluccas.) *officialis* Gae. Euphorbiaceæ. No. 13616. also 13613.
- 3173 856a **EMEX** Neck. (Probably without meaning.) *spinosa* Camp. Polygonaceæ. No. 5028. in p. 294.
- 3174 \*1443b **ENARTHOCARPUS** Lab. (*Ennea*, nine, *arthron*, joint, *karpos*, fruit.) *pteroëarpus* Dec. Cruciferae. *Raphanus pteroëarpus* Pers. An uninteresting yellow-flowered annual, a native of Egypt. Introduced in 1823.
- 3175 2127a **ENTADA** Adan. (Its name in Malabar.) *monostachya* Dec. Leg. Mim. *Mimosa Eutilla* W., also No. 14110. in p. 854.
- 3176 170c **ERIANCHNE** R. Br. (*Erion*, wool, *achne*, a glume.) *obtusa* R. Br. Graminaceæ. No. 1044. in p. 58.
- 3177 \*215a **ERIANTRIS** Mx. (*Erion*, wool, anθος, a flower.) *saccharoides* Mx. Graminaceæ. *Saccharum giganteum* Pers. A North American grass, in appearance resembling the sugar-cane. Introduced in 1826.
- 223 **ERIOCAULON** L. (*Erion*, wool, *kaulos*, a stem.) *septangulare* E. B. Eriocauloneæ. *Nasmythia articulata* Huds.
- 3178 1492a **ERIODENDRON** Dec. (*Erion*, wool, *dendron*, tree; wool in pods.) *leianthum* Dec. No. 9942. in p. 592; *anfractuosum* Dec., No. 9943. Bombaceæ.
- 3179 892p **ERIODYSMIA** D. Don. (*Erion*, wool, *desme*, a little bundle.) *capitata* D. Don. Ericaceæ. Type, No. 5298. in p. 310.
- 3180 \*20b **ERISMA** Rud. (*Erisma*, contest; genus long disputed.) *floribundum* Rud. Vochyaceæ. A blue-flowered stove tree, a native of Guiana. Introduced in 1825.
- 3181 \*984b **ERYTHROPHILE** Vm Afr. Red Water Tree. (*Erythros*, red, *phleas*, a water plant.) *guineensis* G. Don. Leg. Mim. *Azêlia grandis* Hort. A poisonous tree, a native of Sierra Leone. It grows to the height of 100 ft., and produces pale yellow flowers. Introduced in 1793.
- 3182 \*1056a **ERYTHROXYLON** L. (*Erythros*, red, *xylon*, wood.) *laurifolium* Lam. Erythroxyleæ. A genus of timber trees, natives of the Mauritius. They produce greenish yellow flowers, and may be grown in sandy loam.

- 1313 1337a EUCHROMA Nut. (*Eu*, well, *chroma*, colour; bracteas.) coccinea Nut. Scrophulariæcæ. No. 8748. in p. 524.
- 1314 \*1428b EUNOMIA Dec. (*Eu*, well, *nome*, fodder; used for fodder.) oppositifolia Dec. Crucifæcæ. Lepidium oppositifolium Lab., Iberis oppositifolia Pers., Thlâspi oppositifolia Poir., Lepia oppositifolia Desv. A half-hardy herbaceous plant, producing its white flowers in June and July. Introduced from Syria in 1827.
- 1315 882b EUPHORIA Com. (*Euphoros*, fertile; fruit.) . . . . . Sapindæcæ. Nos. 5101. and 5102. p. 302.
- 1316 \*1161a EUPOMATIA R. Br. (*Eu*, well, *pomazo*, to close with a lid; flower bud.) laurina R. Br. Anonacæcæ. A New Holland shrub, growing to the height of about 4 ft., and thriving in a mixture of sand, loam, and peat. Introduced in 1824.
- 1317 1739a EURYBIA Cass. (*Eurybica*, wide-spreading; its creeping offsets.) corymbosa Cass. Comp. No. 12062. in p. 710.
- 1318 892c EURYLEPIS D. Don. (*Eurys*, broad, *lepis*, a scale; calyx scales dilated.) Halicacaba D. Don. Ericacæcæ. Type, No. 5190. in p. 308.
- 1319 892k EURYLOMA D. Don. (*Eurys*, broad, *loma*, margin; limb of corolla dilated.) Aitoní D. Don. Ericacæcæ. Type, No. 5219. in p. 308.
- 1319 892f EURYSTEGIA D. Don. (*Eurys*, broad, *stega*, a cover; calyx large.) glauca D. Don. Ericacæcæ. Type, No. 5269. in p. 310.
- 1319 \*579a EUSTEGIA R. Br. (*Eu*, good, *stega*, a covering.) hastata E. Br. Asclepiacæcæ. Apocynum hastatum Thun. A white-flowered trailer, a native of the Cape, whence it was introduced in 1816.
- 1319 2130b EUSTACHYS Desv. (*Eu*, well, *stachys*, a spike; large.) petrea Desv. Graminæcæ. No. 14214. in p. 860.
- 1319 1985c EUTRYPA Gac. (*Euterpes*, pleasing; habit of tree.) caribæa Spr. Palmacæcæ. No. 13496. in p. 800.
- 1319 1705b EUTHYMIA Nut. (*Eu*, well, *thames*, crowded; flowers.) graminifolia Nut. Comp. Vern. No. 12092., also 12093.
- 1319 \*301e EVOZIA Forst. (*Euo*dia, a sweet smell.) triphylla Dec. Rutacæcæ. Fagaria triphylla Lam. An East Indian shrub, producing white flowers. Introduced in 1821.
- 1319 994a FABA'GO Led. (*Faba*, a bean; lvs. resemble those of the bean.) major D. Don. Zygophyllacæcæ. No. 5872. in p. 352.
- 1319 1553b FAGELLA Neck. (Not explained.) bituminosa Neck. Leg. Pap. Phas. No. 10306. in p. 618.
- 1319 \*437a FAGREA Thun. (*J. T. Fagraeus*, M.D., a friend of Thunberg.) zelânica Thun. Apocynacæcæ. Willughbeia zelânica Spr. A white-flowered evergreen tree. Introduced in 1816. It requires to be grown in a mixture of sandy peat and loam.
- 1319 \*292a FERNE'LIA J. (*J. Fernel*, physician to Henry II. of France, died in 1558.) obovata Lam. Rubiacæcæ. A genus of evergreen shrubs, natives of the Isle of France, of which two species were introduced in 1816.
- 1320 668a FERULA'GO Koch. (*Ferula*, to strike; used as rods.) nodiflora Koch. Umbellacæcæ. No. 3701. in p. 220.
- 1320 1838 FILAGO L. (*Filum*, a thread; covered with.) germanica L., Gifolia vulgaris Cass.; gallica L., Lúgna subulata Cass. Comp. Vern.
- 1320 \*998b FLINDERSIA R. Br. (*Capt. M. Flinders*, a celeb. voyager.) australis R. Br. Meliacæcæ. A New Holland timber tree, attaining the height of 60 ft. Introduced in 1823.
- 1320 \*1126b FORTYDIA Com. (*Fortius*, fetid; odour of wood.) mauritiana Lam. . . . . A stove tree, growing to the height of 25 ft., and producing white flowers. Introduced in 1825.
- 1320 \*1082c FRIE'RIA Dec. (*Elias Fries*, of the Univ. of Lund.) peduncularis Dec. Elæocarpaceæcæ. Elæocarpus pedunculatus Lab. A green-house shrub, a native of Van Diemen's Land. Introduced in 1818. It produces white flowers, and thrives in a mixture of peat and loam.
- 1320 \*1175c FRIEZIERIA Swz. (*A. F. Frazier*, a traveller in Peru and Chile.) theaeoides Swz. Ternstroemiæcæ. A shrub, a native of Jamaica, whence it was introduced in 1818. It may be increased by cuttings, and thrives in sandy loam.
- 1320 \*1662a FROLOVIA Led. (*Frolou*, a Russian botanist.) lyrata Led. Comp. Cynar. Saussurea Frolodvii Led. A sulphur-coloured-flowered perennial, a native of Altaia. Introduced in 1834.
- 1320 \*134a FUIRE'NA Rth. (*G. Fuirén*, a Danish bot.) umbellata Rth. Cyperacæcæ. A curious perennial bog plant, a native of the West Indies. Introduced in 1825.
- 1320 \*984c GAGNEB'NA Neck. (Of no meaning.) axillaris Dec. Leg. Mim. Mimosa pterocarpa Lam. An evergreen shrub, a native of the Mauritius, whence it was introduced in 1824.
- 1320 1739e GALATHE'LLA Cass. (Meaning not given.) punctata Ness. Comp. Vern. No. 12008. in p. 708.
- 1320 711f GANYMEDES Haw. (A son of Tros, and cup-bearer to Jupiter.) . . . . . Amariyllacæcæ. Nos. 4025. 4021. and 4023.
- 1321 769e GASTREA Haw. (*Gaster*, a belly; base of flowers.) . . . . . Hemerocallidæcæ. Nos. 4427. to 4439. in p. 262.
- 1321 \*8a GASTROCHYLUS Wall. (*Gaster*, a belly, *cheilos*, lip; bellied lip.) pulcherrimus Wall. Scitamineæcæ. An ornamental stove perennial, producing yellow and pink flowers in August. Introduced from Rangoon in 1828.
- 1321 786a GASTRONEMA Herb. (*Gaster*, a belly, *nema*, a filament.) clavatum Herb. Amariyllacæcæ. No. 4209. in p. 250.
- 1321 \*571a GAUDICHAU'DIA H. & B. (*C. Gaudichaud*, accomp. Freycinet.) cynanchoides H. & B. Malpighiacæcæ. An ornamental stove twiner, growing to the height of about 10 ft. Introduced from Mexico in 1824.
- 1321 \*2080a GEO'NOMA W. (*Geonomos*, skilled in agriculture; propagation.) pinnatifrons W. Palmacæcæ. An ornamental palm, growing to the height of 15 ft. Introduced from Caraccas in 1821.
- 1321 497a GEO'PHILA D. Don. (*Ge*, the earth, *phileo*, to love.) reniformis D. Don. Rubiacæcæ. No. 2814. in p. 172.
- 1321 \*1460a GILLIE'SIA Lindl. (*Dr. Gillies*, of Concepcion, in Chile.) graminea Lindl. Gilliesiacæcæ. A curious half-hardy bulbous-rooted plant, producing its green flowers in June and September. Introduced from Chile in 1825.
- 1321 699b GLOBULEA Haw. (*Globulus*, a globule; stems.) . . . . . Crassulacæcæ. Nos. 3874. 3876. 3880. 3885. 3890. in p. 230.
- 1321 \*1581b GLOTTIDIUM Desv. (*Glottis*, superior opening of larynx; legume.) floridanum Desv. Leg. Pap. Lot. Gal. Sesbania dispersa Ph., Sesbania vesicaria Spr., S. platycarpa Pers., Phaca floridana W., Æschynomene platycarpa Mx. A tender annual, producing its yellow flowers in July and August. A native of Florida, whence it was introduced in 1816.
- 1322 \*2040a GNE'TUM L. (From *gnemon*, its name in the Island of Ternate.) Gndmon L. Urticacæcæ. An East Indian tree, introduced in 1815. It may be increased by cuttings, and the plants thrive in a mixture of peat and loam.
- 1322 \*1431b GOLDBACHIA Dec. (*C. L. Goldbach*, of Petersburg, botanist.) lævigata Dec. Crucifæcæ. Râphanus lævigatus Bieb. An ornamental annual, producing its pale blue flowers from May to July. A native of Astracan. Introduced in 1827.
- 1322 \*2007b GOMUTUS Rum. (Its name in Malabar?) saccharifer Spr. Palmacæcæ. A palm, growing to the height of 40 ft. Introduced from the Moluccas in 1820.
- 1322 \*321a GONOCARPUS Thun. (*Gonia*, an angle, *karpos*, fruit; seeds.) micranthus Thun. Salicacæcæ. A curious white-flowered annual. A native of China. Introduced in 1806.
- 1322 594b GONOSTEMON Haw. (*Gonia*, an angle, *stemon*, a stamen.) . . . . . Asclepiacæcæ. No. 3307. in p. 200.
- 1322 \*91a GOUFFE'IA Robil. (*Gouffé* of la Cour, a botanist of Marseilles.) holostoides G. & M. Caryophyllacæcæ. A simple white-flowered annual. Introduced from Russia in 1836.
- 1322 †1605 GUAZUMA Plu. (Its name in Mexico.) ulmifolia Lam. Bytneriacæcæ. No. 10935. in p. 650.

- 3227 \*1594a *GULDENSTEDTIA* Fls. (*J. A. Guldenstaedt*, naturalist.) pauciflora *Fls.* Leg. Pap. Lot. Astr. *Actrágalus pauciflorus* *Pall.*
- 3228 \*252b *GYMNOSTACHYS* R. *Br.* (*Gymnos*, naked, *stachys*, spike.) ánceps *R. Br.* Arácææ. An ornamental New Holland plant. Introduced in 1820. It requires to be grown in a mixture of peat and loam, and may be increased by suckers.
- 3229 1448b *GYNANDROPSIS* Dec. (*Gynandros*, hermaphrodite, *opsis*, appearance.) pentaphylla *Dec.* Capparacææ. No. 8326. in p. 558.
- 3230 892a *GYPSOCA'LLIS* *Sat.* (*Gypsos*, lime, *kallistos*, most beautiful.) vågans *Sat.* Ericacææ. Type, No. 5370. in p. 314.
- 3231 \*2146a *GYROCARPUS* *Jac.* (*Gyro*, to turn round, *carpos*, fruit; in air.) americanus *Jac.* Laur. affines. *Jacquin* *Gay.* A West Indian tree. Introduced in 1816.
- 3232 \*1241a *GYROSTEMON* Desf. (*Gyros*, circle, *stemon*, stamen; concentric arrangement.) attenuatus *Hook.* Tilliacææ. Codonocarpus australis *Cun.* A curious green-house tree, growing to the height of 25 ft. Introduced from Moreton Bay in 1830.
- 3233 \*558a *HABLUZZIA* Bieb. (*M. C. von Háblitz*, auth. of Travels in Crimea.) tannóid a *Bieb.* Chenopodiacææ. A deciduous perennial climber, producing its white flowers from July to October. A native of Caucasus. Introduced in 1828.
- 3234 414a *HÆMADICTYON* *Lindl.* (*Haima*, blood, *dictyon*, a net; leaves.) venosum *Lindl.* Apocynacææ. No. 2364. in p. 146.
- 3235 1569a *HALIMODENDRON* *Fis.* Salt Tree. (*Halimos*, maritime, *dendron*, tree.) argenteum *Fis.* Leg. Pap. Lot. Gal. No. 10473.

- 3237 1553a *HARDENBERGIA* Benth. (*Frances Countess Hardenberg*, sister of Baron Hügel.) monophylla *Benth.* Leg. Pap. Phas. No. 10319. in p. 618.
- 3238 \*986b *HARDWICKIA* *Rox.* (*Major-Gen. Hardwick*, E. I. C. Artillery.) binata *Rox.* Leg. Cas. Cass. A genus of East Indian trees, which grow to the height of about 40 ft., and produce yellow flowers.
- 3239 \*1617a *HARONGA* *Thou.* (Its name in Madagascar.) madagascariensis *Chot.* Hypericacææ. *H. paniculata* *Lo. C.* A yellow-flowered stove shrub. Introduced in 1825.
- 3240 1630a *HARPALYCE* *D. Don* (*Harpalyce*, daughter of Lycurgus.) álba *D. Don.* Comp. Cich. No. 11146., also 11147, and 11148.
- 3241 769f *HAWORTHIA* *Duval.* (*A. H. Haworth*, F.L.S., a distinguished botanist.) Hemerocallidææ. Nos. 4385, to 4387, 4389, to 440., 4413, 4414, 4416, 4418, to 4426, and 4440.
- 3242 1739c *HAYTONIA* *Caley.* (*John Hayton*, gardener attached to Macartney's embassy to China.) argophylla *Caley.* Comp. Vern. No. 11961., also 11957, in p. 706.
- 3243 \*889b *HEDWIGIA* *Swz.* (*John Hedwig*, a cryptogamist, died 1799.) balsamifera *Swz.* Terebinthacææ. A West Indian tree, growing to the height of 40 ft. Introduced in 1820. It may be increased by cuttings, and grown in a mixture of loam and peat.
- 3244 295a *HEDYOTIS* *W.* Indian Madder. (*Hedys*, sweet, *ous*, an ear; leaves like ears.) . . . Rubiacææ. Nos. 1760, and 1761.
- 3245 \*1002c *HEISTERIA* *L.* Bois Perdrix. (*Laurence Heister*, prof. bot. Halstadt, died 1758.) coccinea *Jac.* Olacacææ. An ornamental West Indian tree, producing scarlet flowers. Introduced in 1822.
- 3246 711p *HELENA* *Haw.* (The daughter of Leda and Jupiter, most beautiful woman of her time.) . . .
- 3247 646a *HELOSCLADIUM* *Koch.* (*Helos*, marsh, *skiadion*, umbel.) nodiflorum *Koch.* Umbellacææ. No. 3596., also 3597, and 3604.
- 3248 \*248a *HEMELCYNIA* *R. Br.* (*Hemius*, half, *kleio*, to shut up?) Básteri *R. Br.* Proteacææ. *Dryandra falcata* *R. Br.* A green-house shrub, producing its yellow flowers in June. A native of Lucky Bay.
- 3249 \*42a *HEMIMERIS* *L.* (*Hema*, half, *meris*, a part; a half flower.) montana *L.* Scrophulariacææ. An ornamental herbaceous green-house plant, a native of the Cape. Introduced in 1816.
- 3250 1674b *HERACANTHA* *Lk.* (*Heros*, noble, *akantha*, thorn; flws.) . . . Comp. Card. Nos. 11480, and 11481. p. 686.
- 3251 711o *HERMIONE* *Haw.* (The daughter of Menelaus and Helena.) . . . Amaryllacææ. Nos. 4015, 4014, 4016, 4013, 4004, 4003, 4008, 4007, 4006, 4005, 4012, 4011, and 4020.
- 3252 799a *HESPEROSCOPIDUM* *Lindl.* (*Hesperos*, evening, *skordon*, garlic; smell.) hyacinthinum *Lindl.* Aspl. odéææ. No. 4609. in p. 272.
- 3253 \*109a *HETERANTHERA* *Beauv.* (*Heteros*, variable, *aner*, anther.) . . . Pontederacææ. No. 736. in p. 44.
- 3254 2129a *HETEROPOGON* *Beauv.* (*Heteros*, variable, *pogon*, beard; awns.) contortus *Beauv.* Graminacææ. No. 14209. in p. 860.
- 3255 1055c *HETEROPTERIS* *H. & B.* (*Heteros*, various, *pteron*, wing; capsule.) . . . Malpighiacææ. Nos. 6388, 6389, 6391, and 6395.
- 3256 \*1072a *HETEROPTROPA* *Morr.* (*Heteros*, variable, *trope*, change; plant variable.) asaroides *Morr.* Asaracææ. A curious green-house perennial, producing its purple flowers in April and May. Introduced from Japan in 1836.
- 3257 \*1464c *HEYLANDIA* *Dec.* (*M. Heyland*, artist employed by Decandolle.) hebecarpa *Dec.* Leg. Pap. Lot. Gen. Hallia monophylla *Desv.*
- 3258 \*153b *HIEROCHLOA* *Gm.* (*Hieros*, holy, *chloe*, grass.) borealis *R. & S.* Graminacææ. No. 14229. in p. 860. *Hólcus borealis* *Schr.*, *H. odoratus* *L.* It was discovered by the late Mr. G. Don, in a narrow mountain valley called Kella, in Angushire.
- 3259 367b *HIPPION* *Spr.* (*Hippos*, a horse, *ion*, a violet.) viscidum *Spr.* Gentianacææ. No. 1726. in p. 98.
- 3260 \*417a *HOLARRHENA* *R. Br.* (*Holos*, entire, *arrhen*, a male; anthers.) villosa *At.* Apocynacææ. An East Indian shrub. Introduced in 1820.
- 3261 \*2164c *HOLIGARNA* *Rox.* (Its name in Karnata.) longifolia *Rox.* Terebinthacææ. An East Indian tree, growing to the height of 60 ft. Introduced in 1828.
- 3262 \*1203a *HOMALIUM* *Jac.* (*Homalos*, equal; stamens.) racemosum *Jac.* Homalinacææ. A West Indian shrub, producing its white flowers from May to July. Introduced in 1816.
- 210 *HORADNUM* *L.* (According to Bodeus à Stapel, *horadus*, heavy.) distichon *L.* Graminacææ. Zeebriciton distichum *G. Bauh.*
- 3263 \*1034c *HORRELLIA* *Cham.* (*John Horke*, prof. of Physiol. at Berlin.) congesta *Don.* Rosacææ. A curious white-flowered hardy perennial, a native of North America, whence it was introduced in 1825.
- 3264 \*228c *HOUTTUYNIA* *Thun.* (*Dr. Houttuyn*, a virtuoso of Amsterdam.) cordata *Thun.* Arácææ. A curious little herbaceous stove plant, producing yellowish green flowers. A native of Japan, and was introduced in 1820.
- 3265 \*1463b *HUGONIA* *L.* (*Dr. A. J. Hugo*, a friend of Haller's) mystax *L.* Chenelacæi affines. A stove shrub, a native of Ceylon, producing its yellow flowers in June and July. Introduced in 1818.
- 3266 199a *HYDROCHLOA* *Hav.* (*Hydros*, water, *chloa*, grass.) . . . Graminacææ. Nos. 1173, 1195, and 1201.
- 3267 1304a *HYDROPHILA* *R.* (*Hydros*, moist, *phileo*, to love; habitat.) ringens *R. Br.* Acanthacææ. No. 8606. in p. 518.
- 3268 \*458a *HYMENODICTYON* *Wall.* (*Hymen*, a membrane, *dictyon*, a net.) thyriflorum *Wall.* Rubiacææ. Cinchona thyriflora *Rox.* An East Indian tree, introduced in 1819. It produces yellowish green flowers, and thrives on a mixture of loam and peat.
- 3269 \* *HYMENOPYRAMIS* *Wall.* (*Hymen*, membrane, *pyramis*, pyramid.) brachiata *Wall.* Verbenacææ. An East Indian shrub, introduced in 1832.

- 3270 \*2078a *HYPHÆNE* *Gac.* (*Hypphaino*, to entwine; fibres of fruit.) coriacea *Gac.* Palmacæe. Cucifera thebæica *Del.* A palm, growing to the height of 20 ft. A native of Egypt. Introduced in 1824.
- 3271 1464a *HYPOCALYPTUS* *Thun.* (*Hypso*, under, *kalypto*, to veil.) obcordatus *Thun.* Leg. Pap. Lot. Gen. No. 10110. in p. 608.
- 3272 \*128a *HYPOLYTRUM* *Rich.* (*Hypso*, under, *elytron*, covering; bract under glume.) argenteum *Vahl.* Cyperacæe. A native of the East Indies, whence it was introduced in 1824.
- 3273 \*2046a *HYPOLÆNA* *R. Br.* (*Hypso*, under, *chlaina*, cloak; base of fruit.) fastigiata *R. Br.* Restiicæe.
- 3274 \*134b *HYPOLYTRUM* *Vahl.* (*Hypso*, under, *elytron*, involucrum.) senegalense *Rich.* Cyperacæe. A bog plant introduced from Senegal in 1824.
- 3275 \*1010b *YCICA* *Aub.* (Its name in Guiana.) heterophylla *Dec.* Terebinthacæe. *Amÿris heterophylla* *W.* A genus of stove trees, bearing white flowers. A mixture of loam and peat suits them.
- 3276 711c *YULU* *Haw.* (Son of Tros and Callirhoe; from whom Troy had its name Ilium.) . . . . . Amari-  
llicæe. No. 4026. in p. 240.
- 1744 *YNULA* *L.* (Corrupted from *Helonium*.) crithmifolia *L.* Comp. Card. Vern. Limbardiâ tricipis *Cass.*
- 3277 \*148a *ISA'CHNE* *R. Br.* (*Isos*, equal, *achne*, a glume.) australis *R. Br.* Graminacæe. A New Holland bog plant. Introduced in 1820.
- 3278 1246a *ISA'NTHUS* *Mx.* (*Isos*, equal, *anthos*, flower; regular corolla.) cæruleus *Mx.* Labiicæe. No. 8485. in p. 512.
- 3279 833b *ISE'RTIA* *Schreb.* (*P. E. Isert*, a Danish surgeon on coast of Guinea.) coccinea *Vahl.* Rubiicæe. No. 13315. in p. 788.
- 3280 \*1770a *ISMÆLIA* *Cass.* (Meaning unknown.) maderensis *D. Don.* Com. Anth. A half-hardy shrub introduced in 1834.  
122 *ISOLEPIS* *R. Br.* (*Isos*, equal, *lepis*, a scale; flower of equal scales.) fluitans *R. Br.* Cyperacæe. Helicogeton fluitans *Link.*
- 3281 \*447a *JABOROSA* *J.* (*Jaborosa*, Arabic name for mandrake; affinity.) runcinata *Lam.* Solanacæe. A pretty herbaceous green-house plant. Introduced from Plata in 1831.
- 3282 1119a *JAMBOS* *SA* *Bum.* (*Jambos*, aboriginal name.) vulgaris *Dec.* Myrtacæe. No. 6959. also 6958. and 6951.
- 3283 2033a *JANIPHA* *Kth.* (*Janipaba*, its name in Brazil.) *Mânihot* *Kth.* Euphorbiacæe. No. 13649. in p. 814.
- 3284 \*83c *JO'HNIA* *Rox.* (*Rev. Dr. John*, of Tranquebar.) salacioides *Rox.* Hippocrateæe. A stove shrub with yellowish-green flowers, a native of the East Indies. Introduced in 1822.
- 3285 711m *JONQUILLA* *Haw.* (*Jonquille*, Fr., dim. of *juncus*, Lat., a rush.) . . . . . Amari-  
llicæe. No. 4017. in p. 240.
- 3286 \*1118a *JOSSYNIA* *Com.* (Not known.) orbiculata *Dec.* Myrtacæe.  
1927 *KALANCHE* *E. Adan.* (Chinese name.) . . . . . Sempervivacæe. Nos. 5629, 5630, and 5631.
- 3289 698a *KALOSA'NTHUS* *Haw.* (*Kalos*, beautiful, *anthos*, a flower.) . . . . . Crassulacæe. Nos. 3865. to 3870. and 3884. p. 230.
- 3289 1674a *KENTROPHYLLUM* *Neck.* (*Kentron*, spine, *phyllon*, leaf.) arborescens *Hook.* Comp. Card. No. 11485. in p. 686.
- 3290 \*2034c *KIRGANELLA* *J.* (*Kirganelli*, its Malabar name.) elegans *J.* Euphorbiacæe. *Phyllanthus Kirganella* *W.* An ornamental stove shrub. Introduced from the Mauritius in 1820.  
142 *KNA'PPIA* *E. B. (Mr. M. Knapp, who wrote on British grasses.)* agrostidea *E. B.* Graminacæe. Chame-  
grostis minima *Schr.*, *Mibora* verna *Beauv.*, *Stürmia* minima *Beauv.*
- 3291 \*270b *KNOXIA* *L.* (*Robert Knox*, an English traveller in 1681.) zeylanica *L.* Rubiicæe.
- 3292 1401b *KONIGIA* *R. Br.* (*Charles König*, F.R.S., British Museum.) maritima *R. Br.* Cruciacæe. No. 9069. *Adyssetum maritimum* *Lk.*
- 3293 \*1685a *KUHNIA* *L.* (*Adam Kuhn*, of Pennsylvania, pupil of Linnæus.) Critonia *W.* Comp. Eup. *Critonia Kuhnia* *Gac.* A genus of somewhat ornamental white-flowered perennials, natives of South America.
- 3294 \*1985i *KU'NTHIA* *Hum.* (*C. S. Kunth*, an acute French botanist.) montana *Hum.* Palmacæe. An ornamental palm growing to the height of about 10 ft. Introduced from New Grenada in 1820.
- 3295 \* *LABI'CHEA* *Benth.* (*M. Labiche*, a French naval officer.) lanceolata *Benth.* Labiicæe. A green-house shrub, a native of the Swan River. Introduced in 1837.
- 3296 1548b *L'ABLAB* *Adan.* (*Lablab*, the Arabic name of the convolvulus.) vulgaris *Savi.* Leg. Pap. Phas. No. 10270., also No. 10285. p. 606. genus *Lablavia* *D. Don.*
- 3297 113a *LACHNA'NTHUS* *Ell.* (*Lachne*, wool, *anthos*, a flower.) . . . . . Hæmodoracæe. No. 751. in p. 44.
- 3298 \*1179b *LÆ'TIA* *L.* (*J. de Laet*, of Antwerp, author of a History of America.) Thámnia *Suz.* Bixicæe. A West Indian shrub, introduced in 1834. It produces its white flowers from June to August.
- 3299 2019a *LAGENA'RIA* *Spp.* Bottle Gourd. (*Lagena*, a bottle; form of fruit.) vulgaris *Ser.* Cucurbitacæe. No. 13561.
- 3300 \*984a *LAGON'CHUM* *Bieb.* (*Lagos*, a hare, *onychion*, a little nail.) Stephanidium *Bieb.* Leg. Mim. Mimosa micrantha *Vahl.* A half-hardy deciduous shrub, producing its yellow flowers in July and August.
- 3301 566a *LAHAYE* *R. & S.* (*M. Lahaye*, a botanical gardener.) . . . . . Paronychiacæe. Nos. 3181. and 3182. in p. 194.
- 3302 892b *LAMP'ROTES* *D. Don.* (*Lamprote*, splendour; calyx glistening.) calycina *D. Don.* Ericacæe. Type, No. 5237. in p. 308.
- 3303 \*996a *LARREA* *Cav.* (*J. A. H. de Larrea*, a Spanish bot.) nitida *Cav.* Zygophyllacæe. An ornamental under-shrub, a native of South America, whence it was introduced in 1823. It produces its yellow flowers in June and July.
- 3304 1714a *LASIOSPERMUM* *Lag.* (*Lasios*, woolly, *sperma*, seed.) pedunculare *Lag.* Comp. Anthem. No. 11656., also 11657. and 11658.
- 3305 \*539a *LAVRA'RIA* *Dec.* (*Vandelli*, *Marquis de Lavradio*.) montana *Mart.* Violacæe. A pretty Brazilian under-shrub, producing purple flowers. Introduced in 1826.
- 3306 \*1195a *LE'CYTHIS* *L.* (*Lekythos*, an oil jar; seed-vessel.) grandiflora *Aub.* Lecythacæe. A genus of stove trees and shrubs, which produce whitish yellow flowers, may be increased by cutting sand grown in sandy loam.
- 3307 2128a *LEIMANTHIUM* *Mx.* (*Lemon*, meadow, *anthos*, flower.) virginicum *W.* Melanthacæe. No. 14205. in p. 860.
- 3308 \*1985a *LEOPOLDINA* *Mart.* (The late Empress of Brazil.) pilchra *Mart.* Palmacæe. A palm, attaining the height of 60 ft. A native of Brazil. Introduced in 1825.
- 3309 1256b *LEPECHINIA* *W.* (*John Lepechin*, a Russian botanist.) spicata *W.* Labiicæe. No. 8265.
- 3310 \*1301b *LEPIDA'GATHIS* *W.* (*Lepis*, a scale, *agathis*, a ball.) cristata *W.* Acanthacæe. An East Indian perennial, introduced in 1820, and thrives in sandy loam.
- 3311 \*119b *LEPIDOSPERMA* *Lab.* (*Lepis*, a scale, *sperma*, a seed.) gladiata *R. Br.* Cyperacæe. A curious green-house perennial bog plant. Introduced from New Holland in 1819.
- 3312 \*1424a *LEPTA'LEUM* *Dec.* (*Leptaicos*, slender; leaves.) filifolium *Dec.* Cruciacæe. *Sisymbrium filifolium* *W.* A curious little yellow-flowered annual. Introduced from Siberia in 1820.
- 3313 39a *LEPTANDRA* *Nut.* (*Leptos*, slender, *aner*, anther.) . . . . . Scrophulariacæe. Nos. 182. and 183. in p. 14.
- 3314 \*2047a *LEPTOCARPUS* *R. Br.* (*Leptos*, slender, *karpos*, fruit.) tenax *R. Br.* Restiicæe. *Schenbodium tenax* *Lab.*
- 3315 \*569b *LEPTOMERIA* *R. Br.* (*Leptos*, slender, *meris*, a part; habit.) Billardièri *R. Br.* Santalacæe. *Thesium drupaceum* *Lab.* A genus of curious little white-flowered New Holland shrubs, two species of which were introduced in 1823.
- 3316 \*2046b *LEPYRODIA* *R. Br.* (*Lepyrodes*, scaly; bractæas within scales of spikes.) gracilis *R. Br.* Restiicæe.
- 3317 1738a *LE'RIA* *Dec.* (*Leri*, a friend of Decandolle's.) nitans *Dec.* Comp. Labiat. No. 11882. in p. 704.
- 3318 \*1175d *LETTSMIA* *R. & P.* (*J. Cockley Lettson*, an English naturalist.) tomentosa *R. & P.* Ternstroemiacæe.

- A shrub growing to the height of about 4 ft. Introduced from Peru in 1823. and thrives in sandy loam.
- 3319 114b LEUCOCOBYNE Lindl. (*Leukos*, white, *koryne*, club; sterile anthers.) *xioides* Lindl. Asphodelaceae. No. 752. in p. 44.
- 3320 1730a LEUCOSTEREMMA D. Don. (*Leukos*, white, *stemma*, a crown; flowers.) *vestitum* D. Don. Comp. Vern. No. 11795. in p. 700.
- 3321 1016c LEUCOTHOË D. Don. (*Leucothoe*, a beautiful nymph beloved by Apollo.) . . . . . Ericaceae. Nos. 5948, 5954, 5955, 5957, and 5958.
- 3322 665b LEVISTICUM Koch. (*Lewo*, to assuage; relieves flatulency.) *officinale* Koch. Umbellaceae. No. 3683. in p. 220.
- 3323 \*1173a LEWISIA Ph. (*Capt. M. Lewis*, who accompanied Clarke to Rocky Mountains.) *rediviva* Ph. Crassulaceae. A fusiform-rooted white-flowered perennial, a native of North America. Introduced in 1826.
- 3324 \*604a LINCOLA L. (Probably a man's name.) *rhytidifolia* Swz. Bruniaceae. *Diosma dentata* Thun. A genus of white-flowered Cape shrubs, which may be increased by cuttings, and grown in a mixture of peat and loam.
- 3325 725a LITTEA Brig. (*Duke of Lytta*, near Milan.) *geminiflora* Brig. Bromeliaceae. No. 4102. in p. 244. *Bonapartea juncea* Hav. & Hort.
- 3326 \*2108a LODOCEA Com. (*Laodice*, the daughter of Priam and Hecuba.) *sechellarum* Lab. Palmaceae. *Cocos maldivica* Gm. An ornamental palm, attaining the height of 80 ft. A native of Seychelles.
- 3327 1717a LONAS Adan. (Probably without meaning.) *inodora* Gae. Comp. Anthem. No. 11663. in p. 696.
- 3328 1512a LONCHOCARPUS H. & B. (*Logche*, lance, *karpos*, fruit.) *latifolius* H. & B. Leg. Pap. Lot. Gal. No. 10033. in p. 604.
- 3329 892g LOPHONDA D. Don. (*Lophos*, crest, *aner andros*, a man or stamen.) *pyramidalis* D. Don. Ericaceae. Type, No. 5376. in p. 314.
- 3330 1130a LOPHIRA Banks. African Scrubby Oak. (*Lophos*, a crest; bract. of flower.) *africana* Banks. Lophireae.
- 3331 \*1492a LOPHIMIA Mart. (*Lopimos*, easy of decortication.) *mala-cophylla* Mart. Malvaceae. *Sida mala-cophylla* Lk. An evergreen stony shrub, producing its red flowers from July to September. A native of Bahla. Introduced in 1823.
- 3332 1580a LOUREA Neck. (Not explained.) *vespertilidnis* Desv. Leg. Pap. Hed. Euh. No. 10559. in p. 630.
- 3333 1148a LOWEA Lindl. (*Rev. Mr. Lowe*, travelling bachelor of the University of Cambridge.) *berberifolia* Lindl. Rosaceae. No. 7463. in p. 442.
- 3334 427a LUCUMA J. (Its Peruvian name.) *mammosa* J. Sapotaceae. No. 2409. in p. 150.
- 3335 \*1619c LUMEA W. (*Charles Vander Luhe*, a German botanist.) *paniculata* Mart. Tiliaceae. A stove climber producing rose-coloured flowers. A native of Brazil. Introduced in 1823.
- 3336 \*450a LYCOSERIS R. & S. (*Lycium* and *serissa*; *serissa*-like lictum.) *capensis* R. & S. Solanaceae. An uninteresting Cape shrub, producing green flowers. Introduced in 1820.
- 3337 450b LYCOPELISICUM Thou. (*Lychos*, wolf, *persikon*, peach; aphrodisiac.) *esculentum* Dun. Solanaceae. No. 2517., also 2516, 2518, 2519, 2520. p. 156.
- 3338 1016d LYONIA Nut. (*J. Lyon*, an American collector of plants.) . . . . . Ericaceae. Nos. 5939, 5940, 5941, 5946, 5947, 5951, 5952, 5953, and 5956.
- 3339 \*415a LYONSIA R. Br. (*J. Lyons*, an English botanist.) *straminea* R. Br. Apocynaceae. Has straw-coloured flowers. A native of New Holland. Introduced in 1820.
- 3340 1073a MACLEAYA R. Br. (*A. MacLeay*, secretary to Liu. Soc.) *cordata* R. Br. Papaveraceae. No. 6583. in p. 392.
- 3341 \*519a MACROSTYLIS B. & W. (*Makros*, long, *stylis*, a style.) *barbata* Hill. Rutaceae. *Agathosma barbata* Spr.
- 3342 943a MACROTROPIS Dec. (*Makros*, long, *tropis*, a keel; flower.) *foetida* Dec. Leg. Pap. Soph. No. 5673. in p. 343.
- 3343 \*1164a MACROTYUS Raf. (*Makros*, long, *ous*, ear; capsule.) *racemosa* Raf. Ranunculaceae. *Actaea racemosa* L. A North American deciduous perennial, and produces its white flowers from April to June.
- 3344 442a MAESA J. (*Maas*, its Arabian name.) *indica* Wall. Myrsinaceae. No. 2457. in p. 154.
- 3345 1495a MALACHODENDRON Cav. (*Malachos*, soft, *dendron*, tree.) *ovatum* Cav. Ternstroemiaceae. No. 9950. in p. 592.
- 3346 †1479 MALVAESCUS Dil. (*Malva*, mallow, *viscus*, glue.) *arbreus* Cav. Malvaceae. No. 9804. also Nos. 9805. and 9806.
- 3347 \*2007c MANICARIA Gae. Wine Palm. (*Manica*, a glove; *spathe*.) *sacifera* Gae. Palmaceae. Attains the height of 30 ft. A native of the East Indies. Introduced in 1823.
- 3348 \*212c MANSURUS L. (*Mansia*, scaly lizard, *ovata*, tail; spikes.) *granularis* Swz. Graminaceae. A curious East Indian perennial grass. Introduced in 1821.
- 3349 \*68a MARGYRICARPUS R. & P. (*Margaran*, pearl, *karpos*, fruit; resemblance.) *setosus* R. & P. Rosaceae. A curious green-flowered stove shrub. Introduced from Peru in 1829.
- 3350 \*908a MARLEA Rox. (*Mariya*, its Bengal name.) *begoniaefolia* Rox. . . . . A yellow-flowered green-house shrub, a native of China.
- 3351 \*2153b MAXIMILIANA Mart. (*Maximilian*, Prince Weid-Neuwied.) *regia* Mart. Palmaceae. A palm growing to the height of 60 ft. A native of Brazil, whence it was introduced in 1825.
- 3352 \*1413a MEGACARPA Dec. (*Megas*, great, *karpos*, fruit.) *laciniata* Dec. Cruciferae. *Biscutella megacarpa* Fis. A yellow-flowered biennial. Introduced from Siberia in 1818.
- 3353 663a MELANOSELINUM Hoffm. (*Melas*, black, *selinum*, parsley; appearance.) *deciplens* Hoffm. Umbellaceae. No. 3676. in p. 220.
- 3354 \*1118b MELANOPSEIDUM Col. (*Melas*, black, *psidium*, guava.) *nigrum* Col. Rubiaceae. A stove tree, producing cream-coloured flowers. Introduced in 1823.
- 3355 \*904c MELICOPE Forst. (*Meli*, honey, *kope*, incision; nectary of notched glands.) *ternata* Forst. Rutaceae. A New Zealand shrub introduced in 1822. It may be increased by cuttings, and grown in a mixture of peat and loam.
- 3356 \*752a MELOCANNA Trin. (*Melon*, apple, *kanna*, a reed.) *bambusoides* Trin. Gramineae. *Bambusa bac-cifera* Rox. A native of the East Indies, attaining the height of 20 ft. and requiring to be grown in loam.
- 3357 \*1940b MELOTHRIA L. (*Melothron*, supposed to be bryony; similarity.) *foetida* Desv. Cucurbitaceae. *Trichosan-ctoidissima* L. A genus of uninteresting trailing annuals, which produce yellow flowers from June to September.
- 3358 \*1401a MENOCTES Desv. (*Mene*, the moon, *okkos*, eye; seeds?) *unifolium* Desv. Cruciferae. *Alyssum unifolium* Step. An ornamental little annual, a native of Caucasus, whence it was introduced in 1817. It produces its yellow flowers in June and July.
- 3359 \* MENONVILLEA Dec. (*M. Thierry de Menonville*, a French naturalist.) *filifolia* Fisch. Cruciferae. An elegant greenish-white-flowered annual. Introduced from Chile in 1836.
- 3360 \*1029g MERIANA Swz. (*M. S. Merian*, an entomological authoress.) *leucantha* Swz. Melastomaceae. A genus of ornamental shrubs, natives of Jamaica. Three species are introduced, *M. leucantha*, *M. purpurea*, and *M. coccinea*.
- 3361 \*2413a MERTENSIA Kth. (*Professor F. C. Mertens*, of Bremen.) *laevigata* Kth. Urticaceae.
- 3362 346a MESSERSCHMIDIA L. (*D. Messerschmid*, a German botanist.) . . . . . Boraginaceae. No. 2004. and 2005. in p. 124.
- 3363 \*581a METASTELMA R. Br. (*Meta*, instead of, *stelma*, crown; append.) *parviflorum* R. Br. Asclepiaceae. A curious whitish-green-flowered West Indian twiner.

- 3364 1029a *Miconia* R. & P. (*Dr. D. Micon*, a Spanish botanist.) . . . . Melastomaceæ. Nos. 6001. 6003. 6005. 6008. and 6015. in p. 364.
- 3365 \*40b *MICRANTHEMUM* *Mr.* (*Mikros*, small, *anthos*, flower.) orbiculatum *Mr.* Primulaceæ. A pretty white-flowered perennial trailer. A native of Carolina. Introduced in 1826.
- 3366 \*1546b *MICRANTHEMUM* *Poir.* (*Mikros*, small, *anthos*, flower.) cochini-chinensis *Lou.* Leg. Pap. Phas. A deciduous stove twiner, producing its white flowers from June to August.
- 3367: 280b *MICROCALYX* *Lk.* (*Mikros*, small, *kalos*, pretty.) filiforme *Lk.* Gentianeæ. No. 1728. in p. 98.
- 3368 \*313a *MICROCALYX* *Beauv.* (*Mikros*, small, *lenos*, wool; flower-stalk.) stipoides *Beauv.* Graminaceæ. *Ehrharta stipoides* *Lab.* A curious grass, a native of New Holland, introduced in 1822.
- 3369 \*603b *MICROTE* *A. Swz.* (*Microtes*, smallness; of parts of fructification.) mayupurensis *G. Don.* Phytolaceæ. *Andriocarpus mayupurensis* *Kth.* A genus of curious little white-flowered tender annuals.
- 3370 \*817a *MILLETA* *Cav.* (*Judice* *Milla*, chief gardener at royal gardens, Madrid.) biflora *Cav.* Asphodelææ. A white-flowered bulbous-rooted plant, a native of Mexico, whence it was introduced in 1826.
- 3371 \*353a *MILLINGTONIA* *Rok.* (*Sir T. Millington*, Sav. Prof. Oxford.) simplicifolia *Rok.* Oleaceæ. An ornamental stove tree, producing yellow flowers. A native of the East Indies. Introduced in 1828.
- 3372 \*281a *MITRASACME* *R. Br.* (*Mitra*, a mitre, *akme*, a point.) . . . . Gentianeæ. A genus of rather pretty New Holland herbaceous plants, producing white flowers, and requiring to be grown in sandy loam.
- 3373 \*28a *MNIA* *Rum Forst.* (*Mniarum*, mossy.) biflorum *Forst.* Chenopodiaceæ.
- 3374 \*552b *MOGYPHANES* *Mart.* (Not explained.) virgata *Schr.* Amarantaceæ. A curious loose-growing biennial or perennial. Introduced from Russia in 1836.
- 3375 \*751a *MORINIA* *Coll.* (*Ignatio Morinero*, director of Turin bot. gar.) pilcata *Coll.* Hypoxidaceæ. A scarlet and yellow flowered herbaceous stove plant. A native of Java. Introduced in 1820.
- 3376 665a *MOLOPOSPERMUM* *Koch.* (*Molops*, a wheel, *sperma*, a seed.) peloponnesiacum *Koch.* Umbellaceæ. No. 3685. in p. 220.
- 3377 \*147a *MONACHNE* *Beauv.* (*Monos*, one, *achne*, a glume.) unilateralis *Beauv.* Graminaceæ. *Milium villosum* *Lk.* An uninteresting tender annual, a native of the West Indies. Introduced in 1819.
- 3378 1110a *MONANTHES* *Haw.* (*Monos*, one, *anthos*, a flower.) polyphylla *Haw.* Cruciferae. No. 6338. in p. 408.
- 3379 \*1220a *MONODORA* *Dunal.* (*Monos*, one, *doron*, gift; fruit solitary.) Myristica *Dunal.* Anonaceæ. *Anoda Myristica* *Gae.* An ornamental shrub, a native of Jamaica. It may be increased by cuttings, and grown in a mixture of peat and loam.
- 3380 464a *MONOPSIS* *Sal.* (*Monos*, one, *opsis*, a face.) conspicua *Sal.* Lobeliaceæ. No. 2742. in p. 168.
- 3381 \* *MONOTANIS* *Brong.* (*Monos*, one, *taxis*, series; male and female flowers.) simplex *Brong.* Euphorbiaceæ. A New Holland shrub, which may readily be increased by cuttings, and grown in a mixture of peat and loam.
- 3382 \*182a *MONTANOYA* *Lal.* (*Montano*, a Mexican patriot.) grandiflora *Lal.* Comp. Helian. A genus of uninteresting yellow-flowered Mexican shrubs. They are readily increased by cuttings, and thrive in good common earth.
- 3383 \*387a *MORENOYA* *Lal.* (*P. Moreno*, a Mexican botanist.) patula *Lal.* Convolvulaceæ. A genus of scarlet-flowered Mexican twiners. A mixture of peat and loam suits the species.
- 3384 979a *MORINGA* *Dec.* (Its Malabar name.) pterygosperma *Dec.* Leg. Cæs. Cass. No. 5852. in p. 350.
- 3385 \* *MORISIA* ? *D. Don.* (*Prof. Moris*, the discoverer.) hypogæa ? *D. Don.* Cruciferae. A curious and pretty half-hardy perennial, producing its yellow flowers in April. It is a native of Sardinia. Introduced in 1833. A light sandy loam suits the plant.
- 3386 \* *MORNA* *Lindl.* (*Morna*, a heroine of the Northern romances.) nitida *Lindl.* Compositæ. An elegant green-house under-shrub. Introduced from Sardinia in 1826.
- 3387 \* *MORREYA* *Lindl.* (*Professor Charles Morrey* of Liège.) odorata *Lindl.* Asclepiaceæ. A native of Buenos Ayres, produces fragrant green flowers, may be increased by cuttings, and grown in a light rich soil.
- 3388 1281a *MOSCHOSMA* *Rehb.* (*Moschos*, musk, *osme*, smell; odour.) ocyroides *Benth.* Labiaceæ. Nos. 8469. and 8475. in p. 510.
- 3389 +1030 *MOURVIA* *J.* (*Mourira*, its name in Guiana.) myrtilloides *Aub.* Memecylaceæ. No. 6022. in p. 364.
- 3390 1548g *MUCUNA* *A. Adan. & Dec.* Cow Itch. (*Mucuna-Guaca*, name in Brazil.) . . . . Leg. Pap. Phas. Nos. 10293, 10294, and 10295, also Nos. 10268, and 10269.
- 3391 \*1440a *MURICARIA* *Desv.* (*Muricatus*, full of prickles.) prostrata *Desv.* Cruciferae. *Bunias prostrata* *Desf.* An uninteresting trailing annual, producing its white flowers in June and July. Introduced from the South of Europe in 1821.
- 3392 1459a *MURUCU* *La J.* (*Murucuja*, its name in Brazil.) ocellata *Pers.* Passifloraceæ. No. 9400., also 9401. 183 *MYGALURUS* *Lk.* (*Mygale*, a field mouse; *oura*, a tail.) . . . . Graminaceæ. *Vulpia* species. Nos. 1118, 1119, and 1122.
- 3393 1121a *MYRCIA* *Dec.* (A surname of Venus.) æris *Dec.* Myrtaceæ. No. 6978. and 6980.
- 3394 1577c *MYRIADENUS* *Desv.* (*Myrios*, innumerable, *aden*, gland.) tetraphyllus *Desv.* Leg. Pap. Hed. Euh. *Ornithopus tetraphyllus*.
- 3395 685a *MYRICARIA* *Desv.* (*Myrike*, Greek name of tamarisk.) germanica. Tamaricaceæ. No. 3926. in p. 228.
- 3396 \*940a *MYROSPERMUM* *H. & B.* (*Myros*, balsam, *sperma*, a seed.) toluiferum *Mr.* Leg. Pap. Soph. A medicinal tree, a native of South America. It may be readily increased by cuttings, and thrives in a mixture of peat and loam.
- 3397 \*1978a *NAJAS* *W.* (*Najas*, a water nymph; habitat.) major *All.* Fluviaceæ. *N. monosperma* *W.* A curious annual aquatic, a native of Europe. Introduced to England in 1816.
- 3398 \*752b *NASTUS* *J.* (*Nastos*, the Greek name for a kind of reed.) latifolia *Spr.* Graminaceæ. *Bambusa latifolia* *H. & B.* A native of Cuzana, whence it was introduced in 1818. It grows to the height of 20 ft.
- 3399 \*1796a *NECTAROSCORDUM* *Lindl.* (*Nektar*, honey, *skorodon*, garlic.) sciculum *Uc.* Asphodelææ. *Allium sciculum* *Uc.*
- 3400 2075a *NEGUNDO* *Moe.* (Meaning unknown.) fraxinifolium *Nut.* Aceraceæ. No. 14294. in p. 869.
- 3401 \*1118a *NEGLITRIS* *Gae.* (*Ne*, priv., *elytron*, seed-case; berry unpartitioned.) *Jambosella* *Gae.* Myrtaceæ. *Psidium decaspermum* *L. fil.* A white-flowered stove shrub, growing to the height of 10 ft. Introduced from the Society Isles in 1810.
- 3402 \*48a *NELSONIA* *R. Br.* (*Dr. Nelson*, a botanist who accompanied Capt. Cook.) hirsuta *R. Br.* Acanthaceæ. An uninteresting red-flowered East Indian plant. Introduced in 1818.
- 3403 \*2075b *NEPENTHES* *Raf.* (*Nepos*, grove, *ops*, eye, *anthos*, flower.) canadensis *Dec.* Celastraceæ. *fascicularis Raf.* *Flex canadensis Mr.*
- 3404 1394a *NEUROLOMA* *Dec.* (*Neuron*, a nerve, *loma*, a fringe.) arabidiflorum *Dec.* Cruciferae. No. 9164. in p. 548.
- 3405 \*2023c *NEUROSPERMA* *Raf.* (*Neuron*, a nerve, *sperma*, seed.) cuspidata *Raf.* Cucurbitaceæ. A trailing annual, producing its yellow flowers from June to September. Introduced from Kentucky in 1827.
- 3406 1580c *NICOLSONIA* *Dec.* (*M. Nicolson*, wrote on nat. hist. of St. Domingo.) barbata *Dec.* Leg. Pap. Hed. Euh. *Hedysarum barbatum* *L.*
- 3407 \*1162b *NIEBUHRIA* *Dec.* (*Carslen Niebuhr*, a traveller in Arabia.) caffra *Dec.* Capparidaceæ. *Cratæva caffra* *Burc.* A New Holland shrub, introduced in 1818. It thrives in a sandy peat soil, and produces white flowers.
- 3408 1699a *NOCCA* *Cav.* (*Dominic Nocca*, a professor at Ticin.) rubra *Swz.* Comp. Vern. No. 11600. in p. 692.

- 3409 \*541a NOISETTIA H. & B. (*L. C. Noisette*, nurseryman at Paris.) longifolia H. & B. Violaceae. An ornamental shrub, producing cream-coloured flowers. A native of Cayenne, whence it was introduced in 1824.
- 3410 \*483a NONATELLA Aub. (Its name in Guiana.) officinalis Aub. Rubiaceae. Psychotria involucrata Swz. A native of Guiana, introduced in 1827. It is a green-flowered evergreen shrub.
- 3411 \*1163b NORANTEA Aub. (*Gonoro-Antegri*, its name in Guiana.) guianensis Aub. Marograaviaceae. *A'scyrum violaceum Aub.* A shrub, producing pale violet-coloured flowers. Introduced in 1818.
- 3412 1350a NYCTERINIA D. Don. (*Nyctieris*, nocturnal; expansion of flowers.) . . . . Scrophulariaceae. Nos. 8927 and 8928. p. 528.
- 3413 594f OBEUSIA Haw. (*Obeus*, fat; flowers.) . . . . Asclepiaceae. Nos. 3331, 3332, in p. 200.
- 3414 \*420a OCHROSA J. (*Ochros*, pale; wood.) horbónica J. Apocynaceae. Cérbera horbónica Spr. A stove shrub, introduced from Bourbon in 1823, requiring to be grown in a mixture of peat and loam.
- 3415 892g OCTOPERA D. Don. (*Okto*, eight, *pera*, a sack; capsule 8-celled.) Bergiana D. Don. Ericaceae. Type, No. 5395. in p. 316.
- 3416 \* ODONTARRHENA Mey. (*Odous*, a tooth, *arrhen*, a male; filaments.) microphylla Led. Cruciferae. A pretty little perennial trailer, introduced in 1832, and thrives in a mixture of loam and peat.
- 3417 \*1985b OENOCARPUS Mart. (*Oinos*, wine, *karpos*, fruit.) *Batavia* Mart. Palmaceae. A palm, attaining the height of 40 ft. A native of South America, whence it was introduced in 1820.
- 3418 711c OILEUS Haw. (A king of the Locrians, and father of Ajax.) obcissus Haw. Amaryllidaceae. *Narcissus obcissus Haw.*
- 3419 \*83d O'LAZ L. (*Olaz*, a furrow; the flower.) scandens Rox. Olacaceae. A white-flowered East Indian climber. Introduced in 1820.
- 3420 \*2026a OMALANTHES Grab. (*Homalos*, smooth, *anthos*, flower.) populifolia Grab. Euphorbiaceae. A New Holland shrub, producing its white flowers from July to September. Introduced in 1825.
- 3421 \*969a OMPHALOBUM Jac. (*Omphalos*, the navel, *lobos*, a pod.) Schottia Jac. Legum. Cass. Schottia latifolia Jac. A Cape shrub, producing pale purple flowers from May to July. Introduced in 1820.
- 3422 \* ONCORHYNCHUS F. & M. (*Onkos*, tumour, *rhyngchos*, beak; lip.) tenellus F. & M. Rhinanthaceae. A delicate biennial. Introduced in 1837.
- 3423 1588a ONOBRYCHIS Tou. (*Onos*, ass, *brycho*, to gnaw.) sativa Lam. Leg. Pap. Hed. Euh. No. 10597, also Nos. 10584, 10598, 10599, 10603, and 10604.
- 3424 671a OPO'PANAX Koch. (*Opos*, juice, *panax*, the plant yielding it.) Chironicum Koch. Umbellaceae. No. 3725. in p. 222.
- 3425 1632a OPORINIA D. Don. (*Oporinos*, autumnal; time of flowering.) autumnalis D. Don. Comp. Cich. No. 1167. in p. 670.
- 3426 594e O'RBEA Haw. (*Orbis*, an orb; flower.) . . . . Asclepiaceae. Nos. 3314 & 3330. in p. 200.
- 3427 626a ORLA'YA Hofm. (*Orlay*, probably the name of some botanist.) . . . . Umbellaceae. Nos. 3523 and 3528. in p. 210.
- 3428 1377d ORMOCA'REUM Beauv. (*Ormos*, necklace, *karpos*, fruit.) senoides Dec. Leg. Pap. Hed. Euh. No. 10587 in p. 682.
- 3429 845b ORNITHOGLOSSUM Sal. Bird's Tongue. (*Ornis*, bird, *glossa*, tongue; petals.) viride Sal. Melanthaceae. No. 4921.
- 3430 \*664b OSTE'RICUM Hofm. (*Osteon*, a bone; seeds.) pratense Hofm. Umbellaceae. *Angelica pratensis Spr.*
- 3431 \*85b OUVREA Aub. (A Caribbe name.) bijuga Dec. Leguminaceae. An East Indian shrub. Introduced in 1823.
- 3432 \*989c OXALIA Cun. (*John Oxley*, late surveyor-general of N. S. W.) xanthoxylon Cun. Meliaceae. A New Holland timber tree, attaining the height of 100 ft. Introduced in 1828.
- 3433 814 OXY'BAPHUS R. & P. (*Oxys*, acid, *baphe*, dyer's colour.) . . . . Nyctaginaceae. Nos. 569, 570, 571. in p. 36.
- 3434 \*578b OXYPH'TALUM R. Br. (*Oxys*, sharp, *petalon*, a petal.) appendiculatum Mart. Apocynaceae. A stove twiner. Introduced from Brazil in 1823.
- 3435 4857 OXY'RIA Hill. (*Oxys*, acid.) reniformis Sm. Polygonaceae. No. 5034. in p. 294.
- 3436 769c PACHIDE'NDRON W. (*Pachys*, thick, *dendron*, a tree.) . . . . Hemerocallidaceae. Nos. 4472, 4447, 4448, 4454, and 4455. in p. 262.
- 3437 1548c PACHYRHIZUS Rich. (*Pachys*, thick, *rhiza*, root; tuberous.) angulatus Rich. Leg. Pap. Phas. No. 10284. in p. 616.
- 3438 892b PAC'CEA D. Don. (*Pachys*, thick; substance of corolla.) ardens D. Don. Ericaceae. Type, No. 5280. in p. 310.
- 3439 \*50a PADEROTA L. (Ancient name of a sp. of *Acanthus*.) Bonarota L. Scrophulariaceae. A little annual rock plant, producing blue flowers. A native of Austria, whence it was introduced in 1818.
- 3440 \*483b PALICOURIA Aub. (*Le Palticour*, of Guiana.) crœcea R. & S. Rubiaceae. Psychotria crœcea Swz. A West Indian shrub. Introduced in 1823. It may be increased by cuttings, and thrives in sandy loam.
- 3441 \* PANÆTIA Cass. (Not explained.) filva Lindl. Com. Helich. A pretty annual, producing its red and golden-coloured flowers in May. Introduced from the Swan River in 1837.
- 3442 \*205a PAPPOPHORUM Schreb. (*Pappos*, down, *phoreo*, to carry.) nigricans R. Br. Graminaceae. An uninteresting New Holland grass. Introduced in 1822.
- 3443 \*2007e PARIANA Aub. (Its name in Guiana.) campestris Aub. Graminaceae. A curious stove undershrub, introduced from Cayenne in 1803.
- 3444 \*1548d PAROCHETUS Ham. (*Para*, nigh, *ochetos*, a brook.) communis Hum. Leg. Pap. Phas. A purple-flowered half-hardy creeper. Introduced from Nepal in 1820.
- 3445 \*413b PARSONSIA R. Br. (*Dr. Parsons*, a Scotch botanist.) corymbosa R. Br. Apocynaceae. *Echites corymbosa Jac.* A South American twiner. Introduced in 1820.
- 3446 429a PATAGONULA L. (*Patagonia*, its native country.) americana L. Boraginaceae. No. 2420. in p. 150.
- 3447 594i PECTINARIA Haw. (*Pecten*, a comb.) articulata Haw. Asclepiaceae. No. 3299. in p. 200.
- 3448 \*2147a PENTACRYPTA Leh. (*Pente*, five, *krypte*, a vault.) atropurpurea Leh. Umbellaceae. An uninteresting purple-flowered stove perennial. A native of Mexico. Introduced in 1829.
- 3449 \*1616a PENTADE'SMA R. Br. Butter and Tallow Tree. (*Pente*, five, *desme*, bundle; stamens.) butyræa R. Br. Guttiaceae. A stove tree, growing to the height of 30 ft. Introduced from Sierra Leone in 1822.
- 3450 77a PEPERO'MIA R. & P. (Analogous to *Piper*.) . . . . Piperaceae. Nos. 500, 503, and 520. to 543. in p. 28.
- 3451 160a PERIBALIA Trin. (*Periballo*, to encompass.) hispánica Trin. Graminaceae. No. 1008. in p. 56.
- 3452 \*1448a PERITOMA Dec. (*Peritome*, a cutting round about; base of cal.) serrulata Dec. Capparidaceae. *Cledome serrulata Ph.* An ornamental annual, producing its purple flowers from June to August. A native of Missouri. Introduced in 1823.
- 3453 934b PE'RSSIA Gac. Alligator Pear. (Used by Theophrastus for an Egyptian tree.) gratissima Gac. Lauraceae. No. 5651.
- 3454 1128a PE'RSSICA Tou. (Originally from *Persia*.) vulgaris Lam., No. 7020.; levis Dec., No. 7020.  $\beta$ . Rosaceae.
- 3455 465a PETROMA'RULA Pers. (*Petra*, a rock, *maron*, an herb.) pinnata Pers. Campanulaceae. No. 2760. in p. 168.
- 3456 673a PETROSELI'NUM Hofm. (*Petra*, a rock, *selinon*, parsley; habitat.) sativum Hofm. Umbellaceae. No. 3617., also 3603, and 3690.
- 3457 \*1093a PHACOSP'ERMA Haw. (*Phakos*, a lentil, *sperma*, a seed.) peruviana Haw. Ficoidaceae. A perennial stove plant, producing its purple flowers in June and July. Introduced in 1820.
- 3458 808b PHALANGIUM Hs. (*Phalang*, a venomous spider; cures bite.) . . . . Asphodelaceae. Nos. 4804. and 4824. in p. 290.

- 3459 \* PHA'RUM *Herb.* (*Pharos*, a veil; ovarium in membranous cup.) fistulosum *Herb.* Asphodelææ. A purple-and-white-flowered bulbous-rooted plant. A native of Mexico. Introduced in 1831.
- 3460 \* PHILODENDRON *Lindl.* (*Phileo*, to love, *dendron*, a tree; habit.) crassivernum *Lindl.* Aracææ. A curious greenish-white flowered Brazilian climber, growing to the height of about 20 ft. Introduced in 1835.
- 3461 711 PHILO'GYNE *Haw.* (*Phileo*, to love, *gync*, a female; and anthers conniving over the stigma.) . . . . . Amaryllidææ. Nos. 4022, and 4021.
- 3462 1730b PHENO'COMA *D. Don.* (*Phoinos*, bloody, *kome*, hair; involucre.) prolifera *D. Don.* Comp. Vern. No. 11803, in p. 702.
- 3463 212a PHOLI'RUS *Trin.* (*Pholis*, a scale, *oura*, a tail.) pannonicus *Trin.* Graminææ. No. 1280, in p. 72.
- 3464 174b PHRAGM'ITES *Trin.* (*Phragmos*, a hedge; forming hedges.) communis *Trin.* Graminææ. No. 1072, in p. 60.
- 3465 739a PHYC'TILA *Lindl.* (Dim. of *phykos*, red alkanet; colour.) . . . . . Amaryllidææ. No. 4243, and 4244, p. 252.
- 3466 \*2016b PHYLLO'CLADUS *Rich.* (*Phyllon*, a leaf, *klados*, a branch.) rhomboidalis *Rich.* Conacææ. Podocarpus asplenifolia *Lab.* A tree attaining the height of 20 ft. A native of Van Diemen's Land, whence it was introduced in 1825.
- 3467 1016g PHYLLO'DOCE *Sal.* (One of Cyrene's attendant nymphs.) taxifolia *Sal.* Ericacææ. No. 5413, in p. 316.
- 3468 \*1464a PHYLLO'LOBUM *Fis.* (*Phyllon*, a leaf, *lobos*, a pod.) zanzibarënsë *Boj.* Leg. Phyllol. An uninteresting herbaceous stove plant. Introduced in 1826.
- 3469 665a PHYSSOP'FERUM *Cus.* (*Physsa*, to inflate, *sperma*, seed.) commutatum *Spr.* Umbellacææ. No. 3687, in p. 220.
- 3470 \*2108b PHYTHALPHAS *R. & P.* (*Phyton*, plant, *elephas*, ivory.) macrocarpa *R. & P.* Pandanacææ. An ornamental stove shrub, introduced from Peru in 1832.
- 3471 \*1577c PICTE'TIA *Dec.* (*Pictet*, a celeb. physician.) squamata *Dec.* Leg. Pap. Hed. Euh. Robinia squamata *Vahl.*
- 3472 \*904a PIERA'RDIS *Rox.* (*Mr. Pierard*, of Kew Green.) sapida *Rox.* Sapindacææ. A stove tree, growing to the height of 20 ft., and producing yellow flowers. A native of Sumatra. Introduced in 1820.
- 3473 1016f PI'ERIS *D. Don.* (A general appellation of the muses, Pierides,) japonica *D. Don.* Ericacææ. No. 5945, in p. 360.
- 3474 943a PIPTA'NTHUS *Swt.* (*Pipto*, to fall, *anthos*, flower; soon falling off.) nepalënsis *Swt.* Leg. Pap. Soph. No. 5680, in p. 342.
- 3475 141b PIPTATHE'RUM *Beauv.* (*Pipto*, to fall, *ather*, an awn.) . . . . . Graminææ. Nos. 931, 932, and 933, in p. 52.
- 3476 1060b PISTON'IA *Dec.* (*Pistron*, a cup; affinity to Cotyledon.) hispânica *Dec.* Crassulacææ. No. 6416, in p. 382.
- 3477 \*280c PLAD'DERA *Rox.* (*Pladaros*, abounding in juice.) virgata *Rox.* Gentianacææ. An East Indian biennial, producing red flowers. Introduced in 1820.
- 3478 \*1565g PLAGIO'LOBUM *Swt.* (*Plagios*, transverse, *lobos*, a pod.) siliifolium *Swt.* Leg. Pap. Lot. Gen. *Hovea siliifolia Cun.* A genus of ornamental blue-flowered New Holland shrubs; may be increased by cuttings, and grown in sandy peat.
- 3479 \*1294g PLATYCA'RFUM *Kth.* (*Platys*, broad, *karpos*, seed-pod.) orinocënsë *Kth.* Bignoniacææ. A tree, attaining the height of 20 ft., and producing pale rose-coloured flowers. Introduced in 1813.
- 3480 \*1464a PLATYCHILUM *Delav.* (*Platys*, broad, *cheilos*, lip; corolla.) . . . . . Celsidnum *Her. am. Leg. Pap. Lot. Gen.* Gompholobium Celsidnum *Hort.* A yellow-flowered New Holland shrub, which thrives in a mixture of sandy loam and peat. Introduced in 1820.
- 3481 462c PLATYCO'DON *A. Dec.* (*Platys*, broad, *kodon*, a bell.) grandiflora *A. Dec.* Campanulacææ. No. 2647, in p. 164.
- 3482 673d PLATYSP'ERUM *Hofm.* (*Platys*, broad, *sperma*, seed.) pulcherrimum *Koch.* Umbellacææ. No. 3527, also No. 3521.
- 3483 1557a PLATYSTYLIS *Swt.* (*Platys*, broad, *stylis*, style.) sessilifolia *Swt.* Leg. Pap. Vic. No. 10335, in p. 618.
- 3484 \*938a PLE'EA *Mz.* (*Pleias*, the seven stars; flowers.) tenuifolia *Mz.* Juncacææ. A curious little brown-flowered bog plant. Introduced from Carolina in 1824.
- 3485 1029d PLERO'MA *D. Don.* (*Plevroma*, fulness; cells of capsule.) . . . . . Melastomacææ. Nos. 6018, and 6019, in p. 364, also Nos. 5430, 5434, and 5436, in p. 318.
- 3486 665b PLEUROSP'ERUM *Hofm.* (*Pleurom*, a rib, *sperma*, seed.) austriacum *Hofm.* Umbellacææ. No. 3686, in p. 220.
- 3487 1603a POCO'CKIA *Ser.* (*Rd. Poccocke*, a traveller in the Levant.) critica *Ser.* Leg. Pap. Lot. Trif. No. 10776, in p. 640.
- 3488 594c PODO'NTHE'S *Haw.* (*Pous*, a foot, *anthes*, a flower.) . . . . . (Asclepiacææ.) Nos. 3308, to 3314, in p. 200.
- 3489 \*856b PODO'PTERUS *Kth.* (*Pous*, a foot, *pteria*, a wing.) mexicanus *Kth.* Polygonacææ. An ornamental greenhouse undershrub. Introduced in 1825.
- 3490 \* PODOTHE'CA *Cass.* (*Pous*, foot, *theca*, sheath; stalks of achenia.) angustifolia *Cass.* Comp. Sencæ. Podosperma angustifolia *Lab.* A curious yellow-flowered annual. Introduced in 1837.
- 3491 \*1282a POGOSTE'MON *Desf.* (*Pogon*, a beard, *stemon*, a stamen.) plectranthoides *Desf.* Labiacææ. A little white-flowered half-hardy undershrub. It may readily be increased by cuttings, and grown in sandy peat.
- 3492 \*1464n POIRE'RIA *Ven.* (*J. L. M. Poiret*, editor of *Encyc. Botanique.*) scandens *Ven.* Leg. Pap. Hed. Euh. *Turpinia punctata Pers.* Glycine punctata *W.* A stove climber. Introduced from Caraccas in 1823.
- 3493 1030a POI'VREA *Com.* (*N. Poivre*, intendant of the Mauritius in 1766.) cocinea *Dec.* Combretacææ. Nos. 5562, and 5563.

- 3564 \*1002b SIMABA Hil. (Its name in Gulana.) gulanensis Aub. Simarubaceæ. Zingera amara W. A white-flowered stove shrub. Introduced in 1826.
- 3565 1002a SIMARUBA Aub. (*Simarouba*, its name in Gulana.) officinalis Dec. Simarubaceæ. No. 5901. in p. 354.
- 3566 \*237b SIMSIA R. Br. (*John Sims*, M. D., an English botanist.) anethifolia R. Br. Proteaceæ. A small shrub, growing about 1½ ft. high. A native of New Holland, whence it was introduced in 1825.
- 3567 \*2034a SIPHONIA Rich. (*Siphon*, a pipe; use of exudation, Indian rubber.) Cakichu Rich. Euphorbiaceæ. *Hensia* gulanensis Aub. *S. elastica* Pers. *Jatropha elastica* L. A stove shrub. Introduced from Gulana in 1823.
- 3568 \*1215a SMEATHMANIA Sol. (*Smeathman*, an African traveller.) levigata Sol. Passifloraceæ. A shrub, a native of Sierra Leone, producing its white flowers in February and March. Introduced in 1822.
- 3569 \*1431a SOBOLÉWSKIA Bieb. (*G. Sobolewski*, a Russian bot.) lithóphila Bieb. Cruciacæ. Crámbe macrocarpa Bieb. An uninteresting white-flowered biennial. Introduced from Iberia in 1824.
- 3570 1547b SOJA Moen. (*Sofa*, its name in Japan.) hispida Moen. Leg. Pap. Vic. No. 10289. in p. 616.
- 3571 540b SOLA Ging. (*W. Sole*, author of an essay on genus *Méntha*.) cóncolor Ging. Violaceæ. No. 3055. in p. 186.
- 3572 \*2159b SORINDEIA Thou. (Meaning unknown.) madagascariensis Thou. Terebinthaceæ. A purple-flowered stove shrub, growing to the height of 8 ft.; may be increased by cuttings, and thrives in a mixture of peat and loam.
- 3573 542b SOULANGE Brong. (*Soulange-Bodin*, a nurseryman, near Paris.) . . . . . Rhamnaceæ. Nos. 3080. 3084, 3085, and 3387.
- 3574 \*1332a SPARTOTHAMNUS Cun. (*Spartos*, broom, *thamnos*, a shrub; habit.) jánceus Cun. Myoporaceæ. An ornamental shrub, producing its white flowers in August and September. It is a native of New Holland, whence it was introduced in 1819.
- 3575 1294d SPATHODEA Beauv. (*Spathe*, sheath; flower sheathed at base.) uncata Spr. Bignoniaceæ. Nos. 8537. 8552, and 8553.
- 3576 463b SPECULARIA F. & M. (From the ancient name *Speculum Veneris*.) . . . . . Campanulaceæ. Nos. 2695, 2696, 2697, and 2698.
- 3577 \*1056c SPERGULA'STRUM Mx. (From similarity to *Spergula*.) lanuginosum Mx. Caryophyllaceæ. Micropétalon lanuginosum Pers. A curious little perennial, producing its purplish-white flowers in June and July. Introduced from North America in 1821.
- 3578 \*83c SPERMATXYRON Lab. (*Sperma*, a seed, *zyron*, acute.) strictum Dec. Olacaceæ. A New Holland shrub. Introduced in 1820.
- 3579 1472b SPHERALCEA Hil. (*Sphaira*, a globe, *alcea*, marsh-mallow.) . . . . . Malvaceæ. Nos. 9758, 9759, 9760, and 9761.
- 3580 \*1573a SPHEROSPHYSA Dec. (*Sphaira*, sphere, *physa*, bladder; pods.) cáspica Dec. Leg. Pap. Lot. Gal. *Phaca salsula* Bieb., *Colutea cáspica* Bieb. An ornamental perennial, producing its red flowers in July and August. Introduced from Siberia in 1818.
- 3581 \*1620a SPHEROSTEMA Blume (*Sphaira*, globe, *stema*, stigma.) propinquum Blume. Anonaceæ. An ornamental yellow-flowered stove twiner. Introduced from Nepal in 1828.
- 3582 \* SPHEROSTYGMA F. & M. (*Sphaira*, a globe, *stigma*, a stigma.) hirta F. & M. Onagraceæ. A curious ? biennial. Introduced from Russia in 1836, and produces its yellow flowers in August and September.
- 3583 \*421a SPHENODESME Jack. (*Sphenos*, to wedge up, *desme*, fascicle; flws. by bracteas.) pentándra Jack. Verbenaceæ. An ornamental East Indian climber. Introduced in 1823.
- 3584 1722a SPIRALÉPIS D. Don. (*Spira*, a spire, *lepis*, a scale; twisted.) . . . . . Comp. Vern. Nos. 11774. 11776, and 11777.
- 3585 \*520a SPIRANTHEA St. Hil. (*Spira*, spiral, *anthera*, an anther.) odoratissima St. Hil. Rutaceæ. *Terpananthus jasminodorus* Nees. Reddish white flowers. A native of Brazil, and was introduced in 1823.
- 3586 533c STAA'VIA Thuu. (*Martin Staaf*, a correspondent of Linnaeus's) ciliata Brong. Brunellaceæ. No. 3004. in p. 184.
- 3587 \*904d STADMANNIA Lam. (*M. Stadmann*, a botanical traveller.) australis R. Br. Sapindaceæ. A tree, attaining the height of 30 ft. A native of New Holland. Introduced in 1823, and thrives in a mixture of sandy loam and peat.
- 3588 \*1424b STANLEYA Nut. (*Edw. Ld. Stanley*, F.R.S., V. P. of Lin. Soc.) pinnatifida Nut. Cruciacæ. *Cleome pinnata* Ph. An ornamental half-hardy perennial, producing its yellow flowers in June and July. It is a native of Louisiana, and was introduced in 1816.
- 3589 \*1464g STAUROCANTHUS Lk. (*Stauros*, cross, *akantha*, spine.) aphyllus Lk. Leg. Pap. Lot. Gen. *Ulex* mitis Host, *U. genistoides* Brot. A hardy yellow-flowered evergreen shrub. Introduced from Spain in 1823.
- 3590 \*1431c STERIGMA Dec. (*Sterigma*, a support; stamens joined at base.) tomentosum Dec. Cruciacæ. *Cheiranthus tomentosus* W. A genus of curious yellow-flowered biennials.
- 3591 \*1386a STEVENIA Adams (*C. Steven*, a Russian botanist.) alyssoides Fie. Cruciacæ. An uninteresting little annual, producing white flowers from May to July. A native of Siberia, whence it was introduced in 1824.
- 3592 1320a STREPTIUM Rox. (*Streptos*, twisted; spiral tube of corolla.) ásperrum Rox. Verbenaceæ. No. 8676. in p. 520.
- †1495 STUARTIA Cav. (*John Stuart*, Marquess of Bute, a distinguished botanist.) virgínicá Dec. Ternstroemiaceæ. No. 9949. in p. 592.
- 3593 \*588a STYLANDRA Nut. (*Stylos*, a column, *aner*, a man; anthers.) púmila Nut. Asclepiaceæ. *Podostigma pubescens* Spr.

- 3594 261b *SUCCI'SA* Vahl. (*Succisus*, lopped; appearance of roots.) *pratensis* Moen. Dipsacæ. No. 1563., and also Nos. 1549. and 1558.
- 3595 \*1198a *SWA'ERTZIA* W. (*Olof Swartz*, a celebrated botanist.) *pinnata* W. Leg. Swartziæ. A white-flowered stove shrub. Introduced from Trinidad in 1820.
- 3596 \*1546a *SWEE'TIA* Dec. (*Robert Sweet*, F.L.S., author of several botanical periodicals.) *longifolia* Dec. Leg. Pap. Phas. Galega *longifolia* Jac. A genus of ornamental purple-flowered stove twiners. They may be increased by cuttings, and grown in sandy peat.
- 3597 \*1985a *SY'AGRUS* Mart. (The first who wrote the Trojan war in verse.) *cocoides* Mart. Palmæcæ. A palm attaining the height of 20 ft. Introduced from Brazil in 1824.
- 3598 \*463a *SYMPHIA'NDRA* A. Dec. (*Symphyo*, to grow together, *aner*, anther.) *péndula* A. Dec. Campanulæcæ. *Campanula péndula* Bieb.
- 3599 \*284a *SYMPHYZA* Lich. (*Sympiesco*, to press together.) *capitulata* Lich. Ericæcæ. *Blæ'ria bracteata* Wall.
- 3600 252a *SYMPLOCAR'PUS* Nut. (*Symploke*, connexion, *karpos*, fruit.) *foetidus* Nut. Aracæcæ. No. 1504. in p. 88.
- 3601 892m *SYRINGO'DEA* D. Don. (*Syrizx*, a reed or pipe; corolla long tubular.) *vestita* D. Don. Ericæcæ. Type, No. 5184. in p. 366.
- 3602 1122a *SYZY'GIUM* Gæe. (*Zuzygium*, its aboriginal name.) *caryophyllifolium* Dec. Myrtæcæ. No. 6984, also 6968. and 6982.
- 3603 \*986a *TACHY'GALIA* Aub. (*Tachygali*, its name in Guiana.) *bijuga* Dec- Leg. Cæs. Cas. A Brazilian tree, growing about 20 ft. high. Introduced in 1822.
- 3604 1459c *TACO'NIA* J. (*Tacco*, its name in Peru.) *peduncularis* Pers. Passifloræcæ. No. 9428. in p. 366.
- 3605 762a *TALIE'RA* Mart. (Its aboriginal name.) *bengalensis* Spr. Palmæcæ. No. 4358. in p. 258.
- 3606 \*896a *TALIE'SIA* Aub. (*Touichti*, its name in Guiana.) *guianensis* Aub. Sapindæcæ. An ornamental red-flowered shrub, introduced in 1824, and thrives in a mixture of peat and loam.
- 3607 1328b *TAMO'NIA* Aub. (*Tamone*, its name in Guiana.) *curassavica* Suz. Verbenæcæ. No. 472. in p. 26.
- 3608 \*1336a *TANÆ'CIUM* Suz. (*Tanækes*, stretched out; stem.) *pinnatum* W. Solanæcæ. A genus of little white-flowered annuals, natives of Siberia.
- 3609 \*1430a *TAUSCHERIA* Fis. (*Sign. F. Tausch*, prof. at Prague.) *lasiocarpa* Fis. Crucifæcæ.
- 3610 1580f *TAVERNIÈ'RA* Dec. (*J. B. Tavernier*, an Eastern traveller.) *nummularia* Dec. Leg. Pap. Hed. Euh. *Hedysarum nummularifolium* Dec.
- 3611 1797b *TELE'KIA* Baum. (Not explained.) *speciosa* Baum. Comp. Helian. No. 12433. in p. 630.
- 3612 657a *TENO'RIA* Spr. (*M. Tenore*, professor of botany at Naples.) . . . . Umbellæcæ. Nos. 3650. to 3655. in p. 218.
- 3613 \*1175a *TENSTRA'EMIA* L. (*M. Tenstræm*, a Swedish naturalist.) *brévipès* Dec. Ternstroemiæcæ. A genus of stove shrubs, growing about 6 ft. high, are increased by cuttings, and thrive in a good sandy loam.
- 3614 \*2061a *TETRA'DIUM* Lou. (*Tetradion*, a quaternion; fructification.) *trichotomum* Lou. Terebinthæcæ. *Ericæa trichotoma* Spr. A tree growing to the height of 20 ft. Introduced from China in 1820, and thrives in a mixture of peat and loam.
- 3615 288a *TETRAMER'IUM* Gæe. (*Tetra*, four, *merion*, subdivision; fruit.) *odoratissimum* Gæe. Rubiæcæ. No. 2805. in p. 170.
- 3616 \*209a *TETRAPO'GON* Desf. (*Tetra*, four, *pogon*, a beard.) *villösus* Desf. Graminæcæ. A curious annual grass. Introduced from Barbary in 1818.
- 3617 \* *TETRAPO'MA* Taurez. (*Tetra*, four, *poma*, a cover; capsule 4-valved.) *barbareæfolium* Taurez. Crucifæcæ. An uninteresting yellow-flowered biennial. Introduced in 1834.
- 3618 \*1055b *TETRA'ERIS* Cav. (*Tetra*, four, *pierson*, a wing; capsule.) *bukifolia* Cav. Malpighiæcæ. *Tripteris bukifolia* W. A stove shrub, native of St. Domingo. It produces yellow flowers, may be increased by cuttings, and grown in a mixture of peat and loam. Introduced in 1823.
- 3619 2046c *THAMNOCHOR'TUS* Berg. (*Thamnos*, shrub, *chorios*, grass; habit.) *dichotomus* R. Br. Restiæcæ. No. 18826. in p. 828.
- 3620 1495c *THE'RA* L. (*Thea*, the Chinese name for tea.) . . . . Camelliæcæ. Nos. 9951. and 9952. in p. 594.
- 3621 \*411d *THE'NAR'DIA* Kth. (*M. Thénard*, a distinguished French chemist.) *floribunda* Kth. Apocynæcæ. A blue-flowered stove twiner, introduced from Mexico in 1823, may be increased by cuttings, and requires to be grown in a mixture of peat and loam.
- 3622 1480a *THESPÉ'SIA* Corr. (*Thespestios*, divine; planted about tropical churches.) *popúinea* Corr. Malvæcæ. No. 9812. in p. 586.
- 3623 \*886b *THOU'NIA* Poit. (*And. Thouin*, of the Jardin des Plantes, Paris.) *pinnata* Turp. Sapindæcæ. A white-flowered shrub, a native of New Spain. Introduced in 1823.
- 3624 662b *THYSSÉL'NUM* Hoffm. (*Thyo*, to burn, *selinon*, parsley; acid.) *palustre* Hoffm. Umbellæcæ. No. 3669. in p. 220.
- 3625 \*2085b *TILLACO'RA* Col. (*Thiakora*, its name in Bengal.) *racemosa* Cal. Menispermæcæ. *Menispermum polycarpon* Rox. A stove climber, attaining the height of 20 ft. A native of the East Indies. Introduced in 1800.
- 3626 \*1352a *TITTMANNIA* Rchb. (*Tittmann*, a man's name.) *ovata* Rchb. Scrophulariæcæ. *Hornemánnia ovata* Lk. A pretty little red-flowered trailing annual, a native of the Society Isles, whence it was introduced in 1816.
- 3627 \*1029e *TOCO'CA* Aub. (*Tococo*, its name in Guiana.) *Aublétii* D. Don. Melastomæcæ. *Melastoma physophora* Vahl. A genus separated by Prof. Don from *Melastoma*. T. *Aublétii* has pale red flowers, and was introduced from Guiana in 1826.
- 3628 \*485a *TOCOYE'NA* Aub. (Its name in Guiana.) *longiflora* Aub. Rubiæcæ. *Meriána speciosa* W. An ornamental yellow-flowered shrub, a native of Guiana. Introduced in 1826.
- 3629 \*83a *TONSÉ'LLA* Vahl. (*Ravoua-tonnelle*, a Caribbe name.) *scândens* Vahl. Hippocéræcæ. A green-flowered stove climber, introduced from Guiana in 1824.
- 3630 \*659b *TRACHYME'NE* Rud. (*Trachys*, rough, *hymen*, membrane; involucre.) *linearis* Spr. Umbellæcæ. A genus of curious shrubs, natives of New Holland. They may be increased by cuttings, and grown in a sandy peat soil.
- 3631 635a *TRAGI'UM* Spr. (*Tragos*, a goat; odour.) *Antsum* L. Umbellæcæ. No. 3562. in p. 212.
- 3632 921a *TRAGOP'YRUM* Bieb. Goat's Wheat. (*Tragos*, a goat, *pyros*, wheat.) . . . . Polygonæcæ. Nos. 5579. and 5583.
- 3633 \*2108c *TRÉ'WIA* L. (*G. J. Trevis*, of Nuremberg, botanical author.) *nudiflora* L. Euphorbiæcæ. T. *macrophylla* Roth. A stove shrub growing to the height of 6 ft. Introduced from the East Indies in 1796.
- 3634 172a *TRICHÆ'TA* Beauv. (*Treis*, three, *chaete*, a bristle.) *ovata* Beauv. Graminæcæ. *Bromus ovatus* Cav. *Trisetum ovatum* Pers. It is, besides the synonymes given above, the *Avèna ovata* of Spr. It was introduced from the South of Europe in 1824.
- 3635 \* *TRICH'NIUM* R. Br. (*Trichinos*, composed of hairs; flowers shaggy.) *alopecurifolium* Lindl. Amarantæcæ. A curious half-hardy annual, producing purple and blue flowers from March to October. Introduced from New Holland in 1836.
- 3636 \*2041a *TRICHO'CLADUS* Pers. (*Trichion*, hairy, *klados*, branch.) *crintus* Pers. . . . . A Cape shrub, introduced in 1823, is readily increased by cuttings, and thrives in a mixture of sandy-peat and loam.
- 3637 156a *TRICHO'CHLOA* Dec. (*Thriz*, hair, *chloa*, grass.) . . . . Graminæcæ. No. 1009. in p. 56.
- 157 *TRICHO'DIUM* Schrdd. (*Thriz*, hair, *eidos*, like; inflorescence.) *caninum* Schrdd. Graminæcæ. *Astragalus caninus* Beauv. No. 157.
- 3638 \*215b *TRICHO'ENA* R. & S. (*Thriz*, hair, *lena*, a cassock.) *micrantha* R. & S. Graminæcæ. *Sæcharum Teneriffæ* L. *Panicum Teneriffæ* of Sprengel. A pretty perennial tender grass. Introduced from Teneriffe in 1825.

- 3639 \*1755a TRICHOPHYLLUM Nut. (*Thrix*, a hair, *phyllon*, a leaf.) oppositifolium Nut. Comp. Hellanth. An ornamental yellow-flowered perennial, a native of the Missouri.
- 3640 591a TRIDEN'TEA Haw. (*Tridens*, a trident; flowers.) . . . . . Asclepiaceæ. Nos. 3300, 3301, 3302, 3303. 3305. in p. 200.
- 3641 \*1459d TRIGONIA Aub. (*Treis*, three, *goma*, an angle; fruit.) villosa Aub. Hippocrateæ. A stove shrub, a native of Cayenne, whence it was introduced in 1820.
- 3642 \*1055a TRIOPTERIS L. (*Treis*, three, *pteron*, a wing; capsule.) jamaicensis L. Malpighiaceæ. A yellow-flowered climber. Introduced in 1822.
- 3643 \*605c TROCHISANTHES Koch. (*Trochiskos*, a small wheel, *anthos*, flower.) nodiflora Koch. Umbellaceæ. Ligisticum nodiflorum Vii.
- 3644 594d TROMA'TRICHES Haw. (*Tromos*, fear, *thrix*, hair.) . . . . . Asclepiaceæ. Nos. 3515, 3316, and 3317. in p. 200.
- 3645 711b TRO'S HAW. (Son of Erichthonius, third king of Dardania.) pucilliformis Haw. Amaryllaceæ. No. 4028, also 4029.
- 3646 626b TURGE'NIA Hofm. (*Turgeo*, to swell; seeds.) latifolia Hofm. Umbellaceæ. No. 3525. in p. 210.
- 3647 699a TURGO'SIA Haw. (Etr. for Pyrgosia: *pyrgos*, tower; inflorescence.) . . . . . Crassulaceæ. Nos. 3897, 3898, 3907, and 3908.
- 3648 \*988b TURRÆ'G L. (*G. Turraea*, prof. of bot. at Padua.) virens L. Meliaceæ. A white-flowered East Indian tree, growing to the height of 20 ft. Introduced in 1820.
- 3649 \*442a ULLO'G Pers. (*Antonio Ulloa*, a Spanish naturalist.) parastitica Pers. Solanaceæ. Juanulloa parastitica R. & P. An ornamental red-flowered stove plant, a native of Peru. Introduced in 1824. It may be increased by cuttings, and grown in a stiff rich soil.
- 3650 1060a UMBILICUS Dec. (*Umbilicus*, the navel; hollow-leaved.) serratus Dec. Crassulaceæ. No. 6415, also 6418, 6419, and 6436.
- 3651 \*1219a UNO'NA L. (*Uno*, to unite; stamens with germens.) Nardum Duval. Anonaceæ. A brown-flowered stove climber. Introduced from Malabar in 1820.
- 3652 1580b URA'RIA Desv. (Not explained.) . . . . . Leg. Pap. Hed. Euh. Nos. 10565, 10584, and 10605.
- 3653 \*924a URVILLE'G Kth. (*D. d'Urville*, a French navigator and botanist.) ferruginea R. Br. Sapindaceæ. A white-flowered Brazilian climber, growing to the height of about 25 ft. It may be increased by cuttings, and thrives in sandy peat. Introduced in 1823.
- 3654 \*413a VALLA'RIS R. Br. (*Vallo*, to enclose; used for fences in Java.) pergulans Brm. Apocynaceæ. Pergularia glabra W. A white-flowered stove twiner. Introduced from the East Indies in 1818.
- 3655 \*2044a VALISNERIA L. (*Antonio Vallisneri*, an Italian botanist.) spiralis L. Hydrocharaceæ. A very curious, brown-flowered, half-hardy, perennial aquatic. Introduced from the South of Europe in 1818.
- 3656 1464b VASCO'G Dec. (*Vasco de Gama*, a celebrated Portuguese circumnavigator.) perfoliata Dec. Leg. Pap. Lot. Gen. No. 10085. in p. 608.
- 3657 699d VATA'NTHES Haw. (*Vau*, the letter V, *anthos*, a flower.) chloræiflora Haw. Crassulaceæ. No. 3904. in p. 230.
- 3658 1464e VIBO'RGIA Spr. (*Eric Viborg*, an acute Danish botanist.) orbicordata Thun. Leg. Pap. Lot. Gen. No. 10083. in p. 608.
- 3659 117c VIUSSU'XIA Lar. (*M. Viussucx*, a physician of Geneva.) . . . . . Iridaceæ. Nos. 808, 809, 811, 812, 813, 822, and 828.
- 3660 1548a VIGNA Savi. (*Dominic Vigna*, commentator on Theophrastus.) glabra Savi. Leg. Pap. Phas. No. 10272. in p. 616.
- 3661 \*1617b VISME'A Van. (*De Visme*, a Lisbon merchant.) guianensis Pers. Hypericaceæ. Hypericum guianense Aub. The Guiana wax-tree is a stove shrub, producing its yellow flowers from July to October. Introduced in 1824.
- 3662 \*886c VITMA'NNSIA Vahl. (*F. Vitmann*, prof. at Milan, 1792.) elliptica Vahl. Malpighiaceæ. A tree, growing to the height of about 20 ft., a native of Ceylon, whence it was introduced in 1817.
- 3663 \*1516a VOANDZ'ELIA Thou. (*Voaandzou*, its name in Madagascar.) subterranea Thou. Legum. Cæsalp. Geoff. Glycine subterranea L.
- 3664 \*20a VOCHY'SIA Poir. (Its Caribe name.) excelsa Lam. Vochyaceæ. A yellow-flowered evergreen stove tree, a native of Trinidad, introduced in 1825, is readily propagated by cuttings, and thrives in sandy peat.
- 3665 \*367a VOYIRIA Lam. (*Voyria*, name of the Caripons.) odsea Aubl. Gentianaceæ. A red-flowered stove plant, a native of Guiana, whence it was introduced in 1822. It thrives in a mixture of loam and peat.
- 3666 \*85a VOYRIPA Aub. (A Caribe name.) bifolia Aub. Leguminaceæ. A stove shrub, introduced from Guiana in 1823, and thrives in sandy loam.
- 3667 \*569d WALKER'IA Schreb. (*H. Walker*, founder of Cambridge bot. gar.) serrata W. Ochnaceæ. A yellow-flowered stove tree, growing to the height of about 12 ft. A native of Malabar. Introduced in 1824.
- 3668 \*1985d WALLI'CHIA Rox. (*Dr. Nath. Wallich*, superintendant of Calcutta botanic garden.) caryotoides Rox. Palmaceæ. A palm, growing to the height of about 25 ft. Introduced in 1825 from the East Indies.
- 3669 \*631a WALLRO'THIA Spr. (*Dr. F. Wallroth*, a German botanist.) tuberosa Spr. Umbellaceæ. Banium alpinum Kit., Ligisticum alpinum Spr. A little uninteresting plant, introduced from Hungary in 1823.
- 3670 \*992a WALLSU'RA Rox. (*Wallarsi*, its Telinga name.) robusta Rox. Meliaceæ. A stove tree, growing to the height of 20 ft. A native of the East Indies, whence it was introduced in 1827.
- 3671 204a WANGENHEIMIA Trin. (*F. A. J. Wangenheim*, a German botanist.) Lima Trm. Graminaceæ. No. 1228. in p. 68.
- 3672 \*1737a WERNE'RIA Kth. (*A. G. Werner*, a celebrated mineralogist.) rigida Kth. Comp. Jac. Dordanicum peruvianum Lam. A pretty little herbaceous perennial green-house plant. Introduced from Quito in 1828.
- 3673 \* WIGA'NDIA H. & B. (*John Wigand*, a bishop of Lithuania.) caracasana H. B. & K. Hydroleaceæ. An ornamental stove undershrub. Introduced in 1836.
- 3674 510b WILLEME'RIA Brong. (*P. R. Willemet*, author of Herbarium Mauritianum.) africana Brong. Rhamnaceæ. No. 2923. in p. 178.
- 3675 \*420c WILLUGHBEIA Sco. (*F. Willughby*, a distinguished English naturalist.) edulis Rox. Apocynaceæ. A low East Indian tree, growing about 10 ft. high. Introduced in 1818. A mixture of peat and loam suits it.
- 3676 1552a WISTA'RIA Nut. (*Caspar Wistar*, a prof. in Pennsylvania.) Consequana Loudon. Leg. Pap. Phas.
- 3677 \*1212a WO'RMIIA Rib. (*Olaus Wormius*, a Danish physician and botanist.) dentata Dec. Dilleniaceæ. Dillenia dentata Thun. A stove tree, attaining the height of 20 ft., and producing yellow flowers. A native of Ceylon, whence it was introduced in 1818.
- 3678 \* XANTHOSIA Dec. (*Xanthos*, yellow; tomentum in some species.) rotundifolia Dec. Umbellaceæ. A white-and-red-flowered green-house undershrub. Introduced from Port Jackson in 1836.
- 3679 2027a XYLOPHY'LLA L. (*Xylon*, wood, *phyllon*, leaf; rigidity of foliage.) . . . . . Euphorbiaceæ. Nos. 13618, and 18519.
- 3680 1016c ZENO'WIG D. Don. (A queen of Palmyra, distinguished for virtue and learning.) speciosa D. Don, Ericaceæ. No. 5943. in p. 358.
- 3681 \*1821a ZEXME'NIA Lal. (An anagram of Ximenesia.) tagetiflora D. Don. Com. Hel. A half-hardy yellow-flowered perennial. Introduced from Mexico in 1829.
- 3682 1553b ZI'CHYA Hug. (*Countess Molly Zich*, a botanist at Vienna.) coccinea Hug. Leg. Pap. Phas. No. 10316. in p. 618.
- 3683 783a ZIGADENUS Mx. (*Zygos*, a yoke, *aden*, a gland; two in sepals.) . . . . . Melanthaceæ. Nos. 4987, and 4988. in p. 292.
- 3684 650a ZIZIA Koch. (*J. B. Zizit*, a German botanist.) atrea Koch. Umbellaceæ. No. 3615. in p. 216.

## SUPPLEMENTARY LIST.

2701. *ABUTILON*.  
 18110 - - striatum *Dick.* 縐 □ or 4 all sea. O. c. Brazil 1837. C r. lt. l. Botanist, 144  
 A green-house shrub of great beauty, producing at all seasons, on long slender stalks, its bell-shaped orange-coloured flowers, which are strongly veined with crimson.
357. *ANAGALLIS*.  
 There are many seedling varieties of *Anagallis* in cultivation, all of which contribute greatly to the ornament of the flower-garden. The varieties at present in most general cultivation are *A. Phillipsii*, *bicolor*, *speciosa*, *elegans*, &c. Mr. Joseph Plant, of Cheadle, Staffordshire, has produced many desirable varieties, as have also other nurserymen and amateurs.
1208. *AQUILEGIA*.  
 18111 - - glauca *Lindl.* glaucous 3 △ or 2 my. ju Pa. Y Himal. 1839. D co Bot. reg. 1840, 46  
 18112 - - fragrans *Benth.* fragrant 3 △ or 2 my Pa. Y Himal. 1839. D co Botanist, 181  
 This species differs from *A. glauca* in having the spurs of the petals hooked inwards, and the leaves not being glaucous. The flowers are also larger and handsomer.
515. *BILLARDIERA*.  
 18113 17013a linearis *Lindl.* linear-lvd 2 □ or 5 s. n B Swan Riv. 1839. C l. s. p. Bot. reg. 1840, 3  
 syn. *Sollya linearis Lindl.*  
 The intense blue, large size, and great abundance of its flowers, render this species, for ornamental purposes, preferable even to the well-known *S. heterophylla*.
287. *BOUVARDIA* 1740 triphylla  
 β splendens *Grah.* splendid 2 □ or 2 ap. n S? Mexico 1838. D co Bot. mag. 3781  
 γ angustifolia *Hort.* narrow-lvd 2 □ or 2 au. s S Mexico 1838. C s. l. Pax. mag. vii. 100
3036. *CE'DRUS*.  
 18114 - - *Deodara Rox.* Deodara ↑ tm 90 my Ap Nepal 1822. S s. l. Lamb. p. 2. 8. 4  
 This is the most celebrated coniferous plant of the Himalayas, according to Dr. Royle. It is called by the Hindoos *Devadara*, or the tree of God, and is regarded as sacred by them. "In England, the specimens of it are at present small; but the feathery lightness of its spreading branches, and the beautiful glaucous hue of its leaves, render it, even when young, one of the most ornamental of the coniferous trees." (*Arb. Brit.*)
1741. *CINERARIA* 12143 lanata *L'Her.* syn. *Senecio Heritièri Dec.*  
 β cyanophthalmus *Hook.* blue-eyed 2 □ or 2 ... W. B. hybrid ... C lt. R. Bot. mag. 3827  
 A very elegant hybrid, remarkable for the intense blue of its disk and whiteness of its ray.
537. *CLAYTONIA* 3014 alsinoides *Ph.* syn. *Limnia alsinoides Haw.*  
 This species, of which a figure is given in p. 185., was, in 1837, observed by Mr. Joseph Paxton, "in an elevated part of a large plantation bordering Chatsworth Park, unquestionably wild; . . . as its situation is such as not to offer any probability of either seeds or plants being conveyed there by any other means than by nature." (*Baxter's British Phanogamous Botany*, vol. iv. pl. 253.)
890. *CORREA*.  
 18115 5094a *Harrisii Paxt.* *Mr. Harris's* 2 □ or 2 ap. ju C hybrid 1837. C s. p. l. Paxt. mag. vii. 79  
 A splendid hybrid, between *C. pulchella* and *C. speciosa*, raised by Mr. Beaton, gardener to T. Harris, Esq., of Kingsbury. Its flowers are of a brilliant crimson.
310. *CUSCUTA* epilinum.  
 A species new to the British Flora, found on the *Linum usitatissimum*, by J. E. Bowman, Esq., at Ellesmere. T. B. Flower, Esq., found the same species on flax, on the road side between West Harptree and Cheddar, July 31, 1840; and it has this year (1840) made its appearance on a small bed of flax in the experimental compartment of the Oxford Botanic Garden.
3685. 592a. *CYRTOCERAS Bennet.* *CYRTOCERAS.* (*Kurtos*, curved, *keras*, horn; segments of crown.) *Ascle-*  
 18116 - - reflexum *Bennet* reflexed 2 □ or ... au W. Y Manilla 1838. C lt. l. Bot. reg. 1839, 18

*Justicia curviflora* Wal.  
It is a handsome stove shrub, producing large thyrs-like racemes of flowers and leaves about a foot in length.
369. *PHLOX*.  
18121 - *Coldryana* Hort. *Coldry's*  $\frac{1}{2}$   $\Delta$  or 2 su Psh hybrid '... D r. l Pax. mag. 197  
This very ornamental phlox was raised by Mr. Coldry, late foreman of the Bristol Nursery.
16869. *Drummondii* var. *formosa* Hort.  
A very splendid variety, producing its flowers, which are of a rich carmine colour, from early in the season till nipped by the frost. It is readily propagated by cuttings, and requires the same treatment as the species.
1091. *PORTULACA*.  
18122 - *Thellusonii* Lindl. *Mr. Thelluson's*  $\square$  spl 1 su S S. Europe 1839. S p. s. l Bot. reg. 1840, 31  
syn. *P. grandiflora rutila* Bot. Reg. 1839.
62. *SALVIA*.  
18123 - *pätens* Cav. *spreading-flwd*  $\frac{1}{2}$   $\square$  spl 3 all sea B S. Amer. 1838. C r. l. l Botanist, 109.  
This very splendid half-hardy salvia should find a place in every flower-garden. It is of the easiest culture; either by cuttings, which will root freely in a warm border under a hand-glass, if put in early in the season; or by seed, which, however, is but sparingly ripened in this country.
44. *SCHIZANTHUS*.  
In the body of the work this genus has been inserted at p. 16. in the class *Diándria*, and also at p. 534. in class *Didynámia*, it will be necessary therefore to cancel it from p. 534.  
A very distinct and desirable variety, from the great dissimilarity in the colour of its flowers to those of any other, being white with bright yellow lower lip, was raised by Mr. Priest of Reading, in 1833, and is now become pretty general in flower-gardens, under the name of *S. Friestii*. It is figured in Mrs. Loudon's Ladies' Flower-Garden of Ornamental Annuals, pl. 42. f. 5.
1141. *SPIRÆA*.  
18124 7146a *barbata* Wal. bearded  $\frac{1}{2}$   $\Delta$  or 2 in W Nepal 1835? D co Bot. reg. 2011  
This is synonymous with the *Hoteia japonica* of *Mor. and Decaisne*.
3689. 739a. *SPREKELIA*  
A new name given by Mr. Herbert to a portion of the genus *Amarfills*, of which *A. formosissima* is the type.
1322. *VERBENA*.  
The great beauty of the flowers of several species of this genus, and their peculiar adaptation to summer and autumn ornament, have caused them of late to be carefully attended to by the trade and by amateurs, and consequently many and very elegant varieties have been produced. The following, not enumerated in the Supplement, are in most general cultivation: *V. Meléndres* *superba*, *spléndens*, *Tweediana* *superba*, *Arrandiana*, *Neillii*, *Eyeriana*, *Hyländii* (nearly allied to *Aublétia*), shrubby pink, &c.

# ALPHABETICAL LIST

OF

ALL THE GENERA GIVEN IN THE BODY OF THIS WORK

WHICH HAVE UNDERGONE ANY CHANGE IN THEIR NOMENCLATURE SINCE THE PUBLICATION OF THE SAME,

TOGETHER WITH THE NAMES OF GENERA DIVIDED FROM THEM.

# GENERAL INDEX,

COMPREHENDING

THE SYSTEMATIC AND ENGLISH GENERIC NAMES, AND THE ENGLISH AND SYSTEMATIC SYNONYMES IN COMMON USE.

In this Index, the systematic names are distinguished as classical, i. e. names applied to plants by the ancients, by the first letter being in *Italic*, as *A'bies*; as commemorative, by the terminating letter or letters being in *Italic*, as *Banksia*; and as aboriginal, or of uncertain derivation, by the whole word being in *Italic*, as *E'ruca*. All the other names are formed, in almost every case, from the Greek, but sometimes from the Greek and Latin. Where *n.* is added after the name, it refers to the note: *s.* indicates a synonyme.
