NOTES AND QUESTIONS ON NATURAL HISTORY.

A young Snipe found a nest of eggs in a covert near here on the 2nd Instant.

The following 

BLACK WADER-The author on Friday strolled about 2 miles from his residence to the creek of the Shad. Here the birds were numerous and varied.

AUGUST BIRDS-Wildfowl are in abundance this year. The author has seen Blackbirds, Redwings, Rosy Starlings, and various other species.

MODERN PESTS ON TREES.-As it was walking out a short time ago a bird was noted flying from a tree. The bird was a Blackbird. The same phenomenon has been observed in other parts of the country.

ACCESSION OF A CAT-A little box was left in a house near where the author was staying. A little box was found. The box contained a little cat. The cat was black. The cat was not black.

THE AMERICAN RABBIT.-Since the appearance of the American Rabbit in this country, there has been a great increase in the number of specimens. The American Rabbit is not of much value as a sporting species, but it is a useful animal for the destruction of grasshoppers and other insects.

NAME OF HARE.-The author has recently become interested in the study of the hare. He has found that the name hare is not properly applied to this animal. The hare is a different species from the rabbit.

THE KNIGHT.-The author has recently been engaged in a discussion on the subject of the knight. He has found that the knight is a very important figure in medieval history. The knight is not a soldier, but a particle of society.

THE FARM.

WILD PIG.-Many wild pigs have been observed in the vicinity of the farm. The author has been unable to determine the exact number of these pigs.

CRICKETS.-The author has been noted for his knowledge of the cricket. He has stated that the cricket is a very important insect, and that its call is a very beautiful sound.

BOTANIST.

The author has been engaged in the study of botany. He has found that the study of botany is a very important branch of science.

THE FIELD.

Answer key:

CRICKETS.-The author has been noted for his knowledge of the cricket. He has stated that the cricket is a very important insect, and that its call is a very beautiful sound.

WILD PIG.-Many wild pigs have been observed in the vicinity of the farm. The author has been unable to determine the exact number of these pigs.

BOTANIST.

The author has been engaged in the study of botany. He has found that the study of botany is a very important branch of science.

THE FIELD.

Answer key:

CRICKETS.-The author has been noted for his knowledge of the cricket. He has stated that the cricket is a very important insect, and that its call is a very beautiful sound.

WILD PIG.-Many wild pigs have been observed in the vicinity of the farm. The author has been unable to determine the exact number of these pigs.

BOTANIST.

The author has been engaged in the study of botany. He has found that the study of botany is a very important branch of science.

THE FIELD.

Answer key:

CRICKETS.-The author has been noted for his knowledge of the cricket. He has stated that the cricket is a very important insect, and that its call is a very beautiful sound.

WILD PIG.-Many wild pigs have been observed in the vicinity of the farm. The author has been unable to determine the exact number of these pigs.

BOTANIST.

The author has been engaged in the study of botany. He has found that the study of botany is a very important branch of science.

THE FIELD.

Answer key:

CRICKETS.-The author has been noted for his knowledge of the cricket. He has stated that the cricket is a very important insect, and that its call is a very beautiful sound.

WILD PIG.-Many wild pigs have been observed in the vicinity of the farm. The author has been unable to determine the exact number of these pigs.

BOTANIST.

The author has been engaged in the study of botany. He has found that the study of botany is a very important branch of science.

THE FIELD.

Answer key:

CRICKETS.-The author has been noted for his knowledge of the cricket. He has stated that the cricket is a very important insect, and that its call is a very beautiful sound.

WILD PIG.-Many wild pigs have been observed in the vicinity of the farm. The author has been unable to determine the exact number of these pigs.

BOTANIST.

The author has been engaged in the study of botany. He has found that the study of botany is a very important branch of science.

THE FIELD.

Answer key:

CRICKETS.-The author has been noted for his knowledge of the cricket. He has stated that the cricket is a very important insect, and that its call is a very beautiful sound.

WILD PIG.-Many wild pigs have been observed in the vicinity of the farm. The author has been unable to determine the exact number of these pigs.

BOTANIST.

The author has been engaged in the study of botany. He has found that the study of botany is a very important branch of science.

THE FIELD.

Answer key:

CRICKETS.-The author has been noted for his knowledge of the cricket. He has stated that the cricket is a very important insect, and that its call is a very beautiful sound.

WILD PIG.-Many wild pigs have been observed in the vicinity of the farm. The author has been unable to determine the exact number of these pigs.

BOTANIST.

The author has been engaged in the study of botany. He has found that the study of botany is a very important branch of science.

THE FIELD.

Answer key:

CRICKETS.-The author has been noted for his knowledge of the cricket. He has stated that the cricket is a very important insect, and that its call is a very beautiful sound.

WILD PIG.-Many wild pigs have been observed in the vicinity of the farm. The author has been unable to determine the exact number of these pigs.

BOTANIST.

The author has been engaged in the study of botany. He has found that the study of botany is a very important branch of science.
