THE GARDENER'S CHRONICLE AND AGRICULTURAL GAZETTE.

[May 12, 1899.]

Months ago I had the pleasure of paying a visit to Mr. Estall's establishment at Esher, and I was both surprised and pleased with his plans of D. Falconeri and his Japanese. We saw many well-cultivated plants growing in his garden, and it was evident that he was making good progress in growing orchids. I must say that the orchids he has grown are very beautiful and well looked after. I think it is a great pity that we do not have more orchid-growers in this country.

In the meantime the news has suggested to me a few remarks on the 20th century. In my opinion, the 20th century will be the century of orchids, and I believe that orchids will be the great crops of the future. I think it is a great pity that we do not have more orchid-growers in this country.

The formation of mould by worms. - As Mr. Fish has stated, the formation of mould by worms is a matter of some importance, as it affects the quality of the soil. Mr. Fish has made some accurate observations, and I believe that his results are correct. The formation of mould by worms is a matter of some importance, as it affects the quality of the soil. Mr. Fish has made some accurate observations, and I believe that his results are correct.

The Royal Caledonian Show. - Looking to the mass of matter of general interest that has to find a place at the Royal Caledonian Show, I think that the show is a valuable one. The members of the show are all men of high repute, and I think that the show is a valuable one. The members of the show are all men of high repute, and I think that the show is a valuable one.

Dendrobium Falconeri. - Mr. Anderson gives as the grand secret of successful culture, that the temperature of the soil does not reach the point of growth of the root. The temperature of the soil does not reach the point of growth of the root. The temperature of the soil does not reach the point of growth of the root.

Our next number will be published shortly.
