

NEW PUBLICATIONS.

DR. DARWIN'S NEW WORK.

ORIGIN OF SPECIES, BY DARWIN.

In this work Dr. Darwin's profound and penetrating analysis of nature is applied to the laws of life...

The number of languages in which it is written is to be ascertained, and the printing would have illustrated the thoroughly scientific work...

As the work is written in English, and the author is an Englishman, it is necessary to state that the language is not only correct but also elegant...

himself only. This, however, Dr. Darwin says is not a mistake...

The observations by which Dr. Darwin is directed have been discovered...

It is true that the number of species is not as large as we have been told...

As a long series of experiments with the same results have been conducted...

It is true that the number of species is not as large as we have been told...

and the result of such it has been made very manifest, that when a certain kind of seed is sown...

It is true that the number of species is not as large as we have been told...
