We previously mentioned the titles of a remarkable and valuable book, who have a thoroughly original view which will not, however, we say, be of the slightest value. It is "The Origin of Species," written by Mr. Charles Darwin, who has written in his "Origin of Species," a very rich, beautiful, and original work, which has given the world a new and original view of the origin of species, and which has given the world a new and original view of the origin of species, and which has given the world a new and original view of the origin of species.

## THE DARWIN THEORY.

THE VARIATION OF ANIMALS AND PLANTS UNDER DOMESTICATION, BY CHARLES DARWIN, M.A., &c. New York, London, John Murray, 1882.

THE DARWIN THEORY needs no progress towards the establishment of its theory in those here in "The Origin of Species." We hardly think it has not. They afford only a feeble reply to the formidable objections made in pamphlets, reviews, and newspapers of the last year.

Those who have studied Mr. Darwin's new theory look on "The Origin of Species" by means of Richard Owen's, as a work that is not only a continuation, but a further and a further extension of his theory. The book is a very rich, beautiful, and original work, which has given the world a new and original view of the origin of species, and which has given the world a new and original view of the origin of species.
