PHYSICS DEPARTMENT

REPORT OF THE PHYSICS DEPARTMENT

FOR THE YEAR 1881

BY THE PHYSICIAN

AND THE FACULTY

CHICAGO, ILL.

PREFACE TO THE INDEX.

THE compilation of the following Index, chiefly meant to facilitate reference to the transactions of our learned Societies, the contributions bearing on physical research being given in alphabetical order, under the double arrangement of the titles of the papers and the names of the authors, was commenced in 1849. It was intended to have been appended to the Manual then projected by the Bombay Geographical Society, and before the publication which has since appeared under the auspices of Her Majesty's Lords of the Admiralty was known to have been in contemplation; and it was meant to relate mainly to such writings as a young geographer in India would desire to consult. As the Manual itself has become more bulky than was expected, and is likely to be mainly desired by travellers, it is intended to print off an impression of the Index, in a separate form, for the convenience of the general reader, and the plan has been accordingly made somewhat more comprehensive, and less definite than was at first contemplated. Although it was not expected that more than a skeleton would be within any reasonable time produced, a skeleton was looked for, possessed at the outset of considerable symmetry, such as might be filled up and completed by degrees after it was laid before the world. A long succession of attacks of sickness, followed by a very large addition of professional duty, has interfered with its completion on the original plan, and compelled me to call in assistance, which, without affording the aid I expected from it, has materially marred the uniformity of the whole, while the time required,

under the altered state of circumstances, to bring the Index into the condition at first contemplated, threatened so greatly to delay the issue of the Manual, that I thought it better to give it as it is than to defer it any longer. Those for whose accommodation it was intended will, I feel confident, prefer accepting it in its present most imperfect form, to waiting till it may have assumed a shape more nearly resembling that which was originally proposed to have been bestowed upon it, which it would probably not be able to receive for some years to come.

Should it afford the young geographer in the East the assistance intended, it may probably by-and-bye be considered worthy of being reprinted in our almanacs here, and at the other Presidencies,—successive supplements being added to, or incorporated with it, as circumstances may require.

One of the first difficulties encountered by a young man arriving in India, and desirous of improving the opportunities presented for observation, is to find out what has been done by others beforehand; and hundreds of occasions are every year lost by those who might otherwise have taken advantage of them failing to do so, from the apprehension that what seems new to them may be perfectly familiar to the world at large; or that they may be taking upon themselves a load of superfluous labour in examining, and incurring a risk besides of exposing their own ignorance in attempting to describe, things that have been already carefully examined and fully described by others.

At home, the information collected within the year is condensed from its primary form, and embodied in some general handbook almost as soon as it appears, and is reproduced in a hundred separate shapes in the numberless manuals or compendiums continually passing from the press, so that it is never far to seek for, or difficult to be come by: in India, on the other hand, it lies secluded for an infinite length of time in the various receptacles and depositories to which it was originally sent, the depositories themselves, in a majority of cases,

being in all likelihood inaccessible to those most desirous of consulting them. The private libraries amongst us are few in number, and very indifferently supplied. Public libraries are to be met with only at the Presidencies, and are of a limited extent, and most imperfectly provided with supplies, compared with kindred establishments at home. They are subjected to the double disadvantage of not probably possessing the information sought for, or of not being provided with a key by which it may be discovered.

In our Bombay libraries there are very few sets of serials complete, and the study of those we possess is constantly broken in upon by the volumes desired to be consulted being in the hands of, or being demanded by, other readers: our catalogues are so execrable as to render consultation troublesome in the extreme. These, and many other matters which might be enumerated, indicate the difficulties the general reader has to encounter, and may go some way to excuse the imperfections of the present Index.

The Indices of the best conducted of our Indian Journals possess no resemblance to what usually bear the name—they are nothing more than lists of the papers, given in the most imperfect form, in alphabetical order. The entire works must be carefully read through to be able to give a genuine Index to their contents, and those referred to amount to some 200 closely printed volumes. With the European publications this source of perplexity disappears.

The following short sketch will indicate the principal sources of reference that have been resorted to, but so full are these, as found in our libraries, of imperfections, that I am by no means certain that the sketch itself is accurate. The errors into which I have fallen will not, it is hoped, be found to occasion so much inconvenience as not to be counterbalanced by the accommodation the Index itself will afford.

It is somewhat curious, that the three most distinguished Societies we possess in India have all been brought into exist-

ence, and organized by the presiding Judges of Her Majesty's Courts of Justice. Sir William Jones, by far the most illustrious amongst those referred to, whose name still stands unsurpassed among Orientalists in India, was the father of the earliest and most renowned of them all,—the Bengal Asiatic Society,—which, under its founder, and first president, at once obtained a degree of celebrity that has never since been surpassed; and it is by one or other of the Judges of the Supreme Court that it has for many years past for the most part been presided over. It is to Sir James Mackintosh that Bombay owes the foundation of its Literary Society, brought into existence in 1806, and in 1828 adopted as a Branch by the Royal Asiatic Society of London. It is at present, under its new designation, presided over by Chief Justice Sir Erskine Perry, a ripe Orientalist, and general scholar. The Madras Literary Society was founded by Sir John Newbold, too soon removed from the charge of the Institution he established, but who left in his son, the late Captain Newbold, one of the most distinguished contributors to its Transactions, and one of the most indefatigable of our geologists and Oriental scholars.

The Bengal Asiatic Society was founded in 1784, the Governor General and Members of Council having expressed the warmest interest in its objects, and the greatest anxiety to promote them. Mr. Warren Hastings, the Governor General, declined to become its president, on the score of his dislike to occupy the first place in the Society, in which his position as a scholar must be second to many of those over whom it would be his duty to preside, and with whom he was unwilling to be placed in a state of comparison from which he could not fail to suffer, and Sir William Jones was accordingly elected. The address of this illustrious man, prefaced to the first of a series of volumes to which Europe owes so much of the knowledge she possesses of the East, is still pointed to as a model of excellence.

The Transactions of the Bengal Asiatic Society were printed at Calcutta in quarto, under the title of "Asiatic Researches."

The 1st volume appears to have issued from the press in 1788, and for the next twelve years, a volume of the Researches, containing from four to five hundred pages quarto, was annually presented to the world.

They continued to be issued in this shape till 1836, when the twentieth volume was published, and when they were first provided with a general alphabetical Index—a mere list of names, a key most unworthy to the noble work whose treasures it was intended to unlock. So highly valued was the information contained in the Asiatic Researches, that by the year 1806 four editions had been published in London of the earlier volumes: these were printed in an octavo form.

In 1832 the Bengal Asiatic Society passed a resolution, that the monthly journal hitherto issued under the name of “Gleanings in Science” should be permitted to assume that of the Journal of the Society, and be published under the charge of the Secretaries, and in this form it has continued to be printed ever since: the Researches were continued contemporaneously with the Journal till 1836: since then the former has been the only work the Bengal Asiatic Society has produced. The Journals and Researches together consist of forty large volumes, and extend over a period of sixty-three years.

The Transactions of the Agricultural Society of Bengal is the only other serial that I am aware of provided by any Calcutta Society, and to this, from its nature, I have but rarely applied.

The Calcutta Journal of Natural History was commenced in 1840 by Dr. Clelland. I have only seen the first three volumes: they are full of matter of interest, and have been repeatedly quoted in the Index.

The Indian Journal of Medical and Physical Science, published betwixt the year 1834 and 1844, and the India Review and Journal of Foreign Science and Art, commenced and closed some two years later, each extending to some eight or

ten volumes, were edited by Dr. Corbyn. They are chiefly made up of selected matter, but contain some original papers of merit. They possess excellent alphabetical Indices, and are both works of considerable value, though of uncouth aspect. Their contents are in the last degree miscellaneous.

The Madras Literary Society was established in 1818, under the auspices of Sir John Newbold, Chief Justice, afterwards its President: their meetings appear to have been frequent, and their discussions interesting. Outlines of their proceedings appear in the newspapers of the day. I have not been able to discover where the earlier of their papers were published. In 1827 they commenced the publication of a Journal; the first number is in quarto, printed in London; the subsequent numbers are in octavo—two parts, of 200 pages each, published half-yearly, in numbers, constituting a volume for the year. Tables of contents and alphabetical Indices are prefixed or appended to each. The papers themselves are of great interest and value. They now, I believe, occupy about twenty volumes, although I have only seen the first ten, and a few stray papers or casual numbers: they do not seem to exchange with the other Societies, and rarely reply to letters when written to.

I am not aware of any other Scientific Society which publishes Transactions at Madras. The Engineers print their reports for private circulation; but, though full of matter of interest, which ought to be generally known, the work can only be referred to by those belonging to the Corps, and on the special condition of its not being promulgated. The Medical Board at Madras has long been distinguished for the admirable Reports on Medical Topography prepared under its supervision; and if these have seldom been referred to, it is because of the nature of the subjects of which they treat. The reports of the Madras Astronomical Observatory, commenced in the time of Sir Thomas Munro, were prepared by Mr. Goldingham in three volumes folio. They treat of a considerable variety of matters, and are of much interest to the meteorologist as well as to the astronomer. The Magnetic and Meteo-

rological Reports by Mr. Taylor have been published from 1841 to 1846, and the publication continues in progress under the present eminent astronomer, Major Jacob.

The Bombay Literary Society was brought into existence in 1806, chiefly through the exertions of Sir James Mackintosh. We have scarcely any record of its earlier proceedings. It had till many years after this not been the custom here to publish the reports of our Societies, or of more indeed than a selection from the papers forwarded them, deemed worthy of their Transactions. The Transactions of the Bombay Literary Society were printed in London, in quarto form, in the years 1814, 1816, and 1819 respectively. The publication was discontinued on the issue of the third volume, on the score, it is presumed, of the expense. They have long been out of print, and, being full of matter of the greatest value, are about to be re-issued in octavo form. From this date, Bombay Orientalists seem to have forwarded their contributions to Calcutta, or to the Royal Asiatic Society of London, in whose Transactions they appear. The Literary Society was in 1828 re-organized, and became a Branch of the Royal Asiatic Society of London. In 1841 it commenced publishing a Journal in octavo form, which has now reached the fourth volume, and contains many papers of value; each volume has an alphabetical Index at the end.

The Bombay Geographical Society came into existence in 1832, when a vigorous system of survey was in operation, and a noble spirit of inquiry abroad. At this time arrangements were in progress for the opening up of the route by the Mediterranean, either by the Red Sea or the Persian Gulf, betwixt India and Europe—the paths in either case requiring most careful examination. The geography of the little known countries betwixt the British frontier and the Sutlej, and betwixt this again and the Indus, and of the vast plateau of Central Asia betwixt the Chinese frontier and the Caspian, was being explored, and some local organization was requisite for assisting travellers in their labours, and placing their researches before the world. The Bombay association was at

the outset a branch of the Royal Geographical Society of London, and its papers appeared in the *home Transactions*, a local publication at the first having been considered unnecessary. The Society proposed devoting its energies to the establishment of a library and museum, and it intended to keep a supply of instruments on hand, to be lent out to those who might desire to make use of them—a plan more liberal than practicable, the instruments in general never being returned at all, or being sent back unserviceable. Their object was to devote themselves to the pursuit of geography in the widest sense of the term, and to inquire into the climate, geology, hydrography, botany, and population of countries, as well as into their position, form, and boundaries. Its purpose seemed to have been to become a working corporation, prepared to plan and superintend the carrying out of investigations, rather than a mere receptacle for papers that might be sent to it for publication. In 1835 it was resolved to commence the publication of a series of *Transactions* of his own, abundant material for these having been procured by the officers engaged in public surveys then in progress—and the profusion of matter of a purely geographical nature at their command caused their researches into other sub-divisions of the science to be for a time laid aside, to be resumed in a somewhat more extended form afterwards, when hydrographical matter began to fail. The earlier numbers of the *Transactions* having fallen out of print, were reprinted in 1842; up to the present time nine volumes have been published, of 350 pages each.

The *Transactions* of the Bombay Medical and Physical Society commenced in 1838, and amount to ten numbers, or volumes: they were provided with a good separate Index in 1852. They afford but a moderate number of papers capable of being taken advantage of, and the same is the case with the *Transactions* of the Agricultural Societies both of Bombay and Calcutta.

The various London Societies, the *Transactions* of which I have quoted, are too well known to require to be more than alluded to.

The following are the periodical publications that have been chiefly consulted, with the contractions made use of in quoting them: the titles of many of them so closely resemble each other, that care must be taken in referring to the contractions resorted to, (to save space and printing,) otherwise confusion will be apt to arise. I have in the abbreviations called the Journals of all the learned Societies by the name of *Trans.* (Transactions), for the sake of uniformity; they being all in reality works of exactly the same general character, though sometimes assuming the one title, sometimes the other, so as to distinguish them from works called Journals which are not in reality records of the proceedings of learned bodies at all.

TITLES OF WORKS REFERRED TO.

BENGAL.—Asiatic Researches, from 1788 to 1836, 20 vols. quarto, Calcutta Edition.—*As. Res.*

The Journal of the Bengal Asiatic Society, from 1831 to 1851, 19 vols. 8vo.—*Bl. As. Trans.*

Prinsep's *Gleanings in Science*, 3 vols. 8vo.—in full.

The Transactions of the Bengal Agricultural Society.—*Bl. Agri. Trans.*

The Calcutta Journal of Natural History, 3 vols. 8vo. 1842 to 1845.—*Cal. Jl. Nat. Hist.*

Corbyn's India Review—in full.

Corbyn's Medical Journal—in full.

The *India Journal of Medical and Physical Science*, edited from 1843 to 1845 by Dr. Eveleigh—from 1845 by Dr. Finch—in full.

The Quarterly Medical and Surgical Journal N. W. P. from 1844—in full.

Bengal Sporting Review.—*Bl. Sptg. Rev.*

Calcutta Review, vols. i.—xviii., from 1844 to 1851.—*Cal. Rev.*

MADRAS.—Journal of the Madras Literary Society from 1827 to 1851. I have not seen the last ten volumes.—*Mad. Lit. Trans.*

BOMBAY.—Transactions of the Bombay Literary Society, from 1806 to 1819, 3 vols. 4to.—*Bom. Lit. Trans.*

Transactions of the Bombay Geographical Society, from 1835 to 1852, 10 vols. 8vo.—*Bom. Geo. Trans.*

The Journal of the Bombay Branch of the Royal Asiatic Society, 5 vols. 8vo., from 1841 to 1852.—*Bom. As. Trans.*

Transactions of the Bombay Medical and Physical Society, from 1838 to 1851, 5 vols. 8vo.—*Bom. Med. and Phys. Trans.*

Transactions of the Royal Society of London.—*Phil. Trans.*

Transactions of the Royal Geographical Society of London.
Lond. Geo. Trans.

Transactions of the Royal Asiatic Society of London.—
Lond. As. Trans.

Transactions of the Geological Society of London.—*Lond. Geol. Trans.*

Reports of the British Association from 1832 to 1850, 17 vols. 8vo.—*Rep. Brit. Ass.*

The Asiatic Journal from 1816 to 1844, 69 vols. ; old series, to 1829, 27 vols. 8vo. ; new series, to 1842, 38 vols. ; third series, 1842 to 1844, 4 vols. 8vo.—*As. Jl.*

The titles of all the other periodicals and of all the books referred to are given in full.

The Governments of the North West Provinces, of Bengal, and Bombay, have of late years published a series of very valuable papers—Selections from the Public Records: these have been freely drawn upon, and quoted under their proper titles. They are full of most valuable information.

Transactions of the London Geographical Society, 1800 to 1808 in two vols. - New York, 1808.

The Journal of the Board of Health of the Royal Academy of Medicine, 1800 to 1808 in two vols. - New York, 1808.

Transactions of the Board of Health of the Royal Academy of Medicine, 1800 to 1808 in two vols. - New York, 1808.

- Account of, in 1508, by Lewes Uertomenes, a learned gentleman of Rome. *As. Jl.* 1824, vol. xviii. “In this region is also a mountain where the onyx stone, commonly called the cornelian, is found; and, not far from this, another, where chalcedony and diamond are found.” Captain Hamilton, who visited Cambay in 1681, says:—“The cornelian and agate stones are found in this river, and nowhere else in the world. Of cornelian they make stones for signets, and of the agates cabinets entire, except the lids. I have seen some 14 or 15 inches long, and 8 or 9 inches deep, valued at £40. They also make bowls of some kinds of agate, and spoons, and handles of swords, daggers and knives, and buttons, and stone seats, and snuff-boxes, of great value.” Hamilton’s new *Account of the East Indies.* *Lond.* 1744.

- Clive's Itinerary for Western India. *Calcutta*, 1826, 1 vol.
- Coal, and minerals. Report on, by committee, 1838. *Calcutta*, folio; reprinted *Bl. As. Trans.* 1808, vol. vii.; *Mad. Lit. Trans.* vol. viii.; *Corbyn's India Review*, &c. *Friend of India*, 1838, 97, 113. First noticed in India as having been discovered in 1774, by Mr. Heatley, in the district of Beerbhoom; it was left neglected for forty years. The Burdwan coal was discovered in 1804: in 1809 the Military Board were called upon to report on it. In 1816 it began to be largely worked by Mr. Jones, of the Albion Mills, and by 1823 the coal excavations had formed a large establishment. In 1813, Sylhet coal was discovered at Cherrapoonj. Soon after, coal was discovered at Cuttack. Coal from eighty different places in India had been analysed at *Calcutta* betwixt 1837 and 1840.

- Piddington's memoirs on the following storms published in the Bengal Asiatic Transactions from 1842 to 1852 :—
- 1780, July 17. In China Seas. One ship alone said to have been saved. Loss of life amongst Chinese estimated at 100,000.
- 1797, June 19. In China Seas, near Macao.
- 1803, September 22 and 23. China fleet experienced a tremendous hurricane off the China Seas.
- 1837, June 17. Bombay centre. Courier newspaper, and Asiatic Journal.
- 1839, June 2 and 6. Mouths of Ganges. Bl. As. Trans. vols. viii. xxii.
- September 21. Ibid, vol. ix. 397.
- November 16 and 22. Off Coringa, Coromandel Coast.
- 1840, April 27 to May 1. Bay of Bengal and Cuttack.
- September 22 and 24. In China Seas. *Golconda*, with troops and all on board, lost.
- 1842, June 2 and 3. Calcutta: centre passed over the city.
- October 22 and November 1. Madras and Arabian Sea.
- October 2 and 3. Pooree and Cuttack.
- October 5 and 6. Gya and Patna.
- 1843, May 21 and 23. Madras and Masulipatam.
- November 26, December 2. Bay of Bengal, and Southern Indian Ocean.
- 1844, November 9 and 13. Andaman Sea, and Bay of Bengal.
- 1845, February 22-27. Off the Mauritius. *Charles Heddle's* storm.
- 1846, March. Southern Indian Ocean.
- 1847, April 19. *Cleopatra's* hurricane, Arabian Sea. (See Thom and Carless.) Bom. Geo. Trans. vol. vii.
- 1848, January 13 and 15, April 20 and 21. *Jumna's* hurricane.
- October 12 to 14. Bay of Bengal.
- 1850, April 23-28. Bay of Bengal.
- 1851, April 30, May 6. Bay of Bengal—H. M.'s Ship *Fox*.
- Tracks usually pursued by, in Bay of Bengal, from 1800 to 1846. Bl. As. Trans. 1847, vol. xvi. 847, with map. Mr. Piddington mentions that all the Cyclones in the Bay of Bengal seem to emanate from near the centres of volcanic action, and to stretch north-westerly. Their distance, and the rate at which they approach, may be calculated from the barometer. (See Piddington.)
- Capt. R. Methven on *Blenheim's* hurricane, 1851. Narratives written by sea commanders, No. i.; Lond. Pamphlet, 1851.

William, Bombay Army ; Statistical Reporter for the Deccan from 1821 to 1834 ; From 1840 one of the Directors of the East Company ; a distinguished zoologist, meteorologist, geologist, antiquary and statist. He has written so much on each of so many subjects, that his papers are classed below :—
- Meteorology.*—Mean temperature of India at various elevations. Rep. Brit. Ass. 1834, vol. iii. 567.—On the measurement of heights by the thermometer. Ibid, 1835, vol. iii. 25 ; Lond. Geo. Trans. ; Bom. Geo. Trans. 1839 ; Jackson's What to Observe ; &c.—On the remarkable difference betwixt the fall of rain at Mahableswar, and that at Bombay and at Poona. Ibid, 1839, vol. vi. 16.—On the meteorology of the province of Coorg, in the Western Ghauts. Ibid, 1842, vol. xi. 22.—On the fall of rain on the Coast of Travancore and table-land of Utree. Ibid, 1846.—On the fall of rain on the table-land of Utree Mullee, Travancore, 1846 ; Ibid, 1848, 39.—On a remarkable storm at Bombay, 6th April 1847. Ibid.—On Indian hailstorms. Ibid, 1850, 43.—On the atmospheric tides in the Deccan. Phil. Trans. 1840.—On the meteorological observations in India. Phil. Trans. 1850.
- Zoology.*—Geographical range of certain birds common to various parts of the world, chiefly to India. Rep. Brit. Ass. 1835, vol. iii. 69.—Fishes of the Deccan. Trans. Lond. Zoological Soc. 1838.—Catalogue of the mammalia of the Deccan. Zool. Trans. 1831 ; republished Bl. As. Trans. 1832, vol. i.—Birds of the Deccan. Zool. Trans. 1832 ; republished Bl. As. Trans. 1834, vol. iii.—Quails and hemipoda of India. Lond. 1 vol. 4to.
- Statistics.*—Wages of labourers in the Deccan. Rep. Brit. Ass. 1835, vol. iii. 118.—Special report on the statistics of the Deccan : extent, and physical circumstances ; geology ; ghauts ; torrents ; escarpments ; climate ; botany ; zoology ; antiquities ; population ; education ; irrigation ; mountains, &c. (See Deccan.) Rep. Brit. Ass. 1837, vol. vi.—On the mortality of Calcutta. Ibid, 1844, vol. xiii. 88.—On the statistics of hospitals for the insane in Bengal. Ibid, 89.—Statistics of civil justice in India for four years, from 1841 to 1844. Ibid, 1846, 94.—Of charitable dispensaries in. Ibid, 96.—Statistics of the Agra Government, or N. W. Provinces. Ibid, 1847.—Statistics of civil justice in Bengal, to which Government is a party. Ibid, 1848, 116.—Contributions to the statistics of sugar produced in India. Ibid, 1849, 108.—Statistics of civil and criminal justice under the Bengal Government for the years 1844, 1847, 1849. Rep. Brit. Ass. 1836, vol. v.—Statistics of the educational institutions of India. 1848, 8vo. On the fruits of the Deccan ; twenty-one kinds of ordinary wild fruits ; importance of communication for the introduction of plants of India. (Rudiments of Indian exhibition

of 1853; Bombay economic museum. Sir A. Johnstone on. Lond. As. Trans.; Dr. Buist on. Bom. Geo. Trans. 1848.)—On the Dutch possessions of the East Indies. Rep. Brit. Ass. 1848, 112.—Prices of cerealia and other edibles in England and India compared. Rep. Brit. Ass. 1847. Mortality in the jails of the 24-pergunnas, Calcutta. Rep. Stat. Survey of India, 1848.—Catalogue of Chinese Buddhist works. Lond. As. Trans.—On the land tenures of the Deccan. Ibid, 1834, vol. ii. 205—233; 1836, vol. iii. 350—376.—On the state of India before the Mahomedan invasion, founded on the travels of Fa Hian. Ibid, 1836, vol. vi. 248.—On the proprietary right of the soil vested in the subject, not the sovereign, in India. Ibid, 1836, vol. vi. 246. Same subject as land tenures of the Deccan.—Mortality and chief diseases of troops under the Madras Government in 1851 compared with that in 1842, 1846, and 1849. JI. of Lond. Stat. Soc. 1851.—On expenditure of the Government of India on public works. Ibid, 1850. *Geology* of a portion of the Deccan. Lond. Geol. Trans. vol. iv. second series 4to.—On a fossil fish from the table-land of the Deccan. Lond. Geol. Trans. 1851, vol. vii.

T

- Tabashir, a siliceous secretion in the joints of the female bamboo. Sir D. Brewster on. Phil. Trans. ——— Sometimes found liquid, sometimes gelatinous. Gleanings in Science, 1833, vol. iii. ——— Silica 70, potash 30; Natives consider it a tonic or astringent. O'Shaughnessy. Bengal Dispensatory, 694.
- Tabriz. Establishment of a printing press at, by Abbas Mirza, Prince Royal of Persia. Lond. As. Trans. 1834, vol. i. 323.
- Tadjorra. A petty seaport at the entrance to the Red Sea, on the N. W. Coast of Africa. Gulf of, a singular recess, probably of volcanic origin. Hot springs close by. Capt. Barker's account of. Zoology. (See Blyth, Hodgson, Sykes, &c.)

Zoroaster, or Zerdusht, the founder of the Parsee religion: supposed to have flourished about six centuries before Christ—the Persians make him cotemporary with king Gushtasp, the Darius Hystaspes of the Greeks; his religious system contained in a work called the Zendavesta, a compendium of which is the Sadder—both regarded among the Parsees as sacred. Major Rawlinson's account of. Notes from Tabriz through Persian Kurdistan, in 1838. Lond. Geo. Trans. vol. x. 69, 84. (See Wilson, J.)
