

Jan 10<sup>th</sup> 74

*Chrysalis* red iron green blue

I examined under the microscope with all the flowers

at that locality in (7 spots) 5:16<sup>th</sup> -

Several flowers at 15' to fully open 4/5

opened & set out that in 3' but was much

that of the 25' - [11' 3' set 3 flowers with smaller heights  
at 25']

& opened for that lot, at that in 25' - opened again, 1/2 from 5'

several opening on flowers slightly closed, & 30' releasing the

3 flowers that, probably for quantity of 4. 1000. - all the year to

with long of year. - probably there will appear there some

that is was, - but with open; set 3' but ultimately that with for

with, a new party for quantity

*Helianthus*  
(170)

In 10'

Helianthemum (wild yellow)

It tends not with a little steam (yellow) groups  
for part, & I am afraid that present  
cannot be from 1 specimen of water.  
It is the 2 flowers again & certainly there comes to  
11.000 & 10.000.
