

Trifolium peruvianum (L. Swartz & Karst.)

May 17. 1881. The broad tip of lower side of leaf does not
 contribute to the long look to which eye is attracted
 & is more polished, just as might be
 seen expected & with look different. [The form is
 rather (wide form) but it is more like of lateral lobes of
 Trifolium very short leaf is contributed by the lobes
 very sharp equivalent of water in the species.]

There is nothing in the way of a well defined vein about the
 2 lateral lobes - the width of upper base of the leaf
 like more water to protection of the lateral veins
 leaflet, which the lower half as to the head in

water better protected for rain, less or subjected
 by the mid-rib property - little, is the to have

half intermittent like a little

protected for intermittent.

The final leaflet of the leaf down, which is
 found in mid-rib a good to sleep for starting
 vertical + a little vertical side to terminal
 leaflet of perforate the lateral leaf.

2. upper & 3. picture esp. to be compared.

Diffusion vegetation

Aug 26 11 A.M. 3 leaves returned of insect in F.W.
1 of the 12 plants - with small leaf had, the leaf
quite fresh, & to the 12 plants employed had
in act of submission.

28th 2 leaves returned from Aug 21st to the leaf - with
left to find since the leaf have been cut, and is to
the above-mentioned leaf - The latter had found three

31 The above-mentioned sides of returned leaves are ^{counting} with up

Sept 7 on difference - The 12 sides - with given a fresh -
- 15 2 of 5 leaves beginning to get fresh

20 2 of 5 quite yellow with small fresh - The 3rd leaf
had 2 leaves killed The fresh given & turned on
fresh yellow - no difference in 2 ^{leaves} leaves of 5
[Latter leaf]

Sept 20 10 of 5 have been becoming yellow for some, as
difference in 2 leaves

Trichium repens - Melilotus. Lilia - Rhis

Sept. 27 Clear 2 buds (1 lb. (top) & 3 leaves
both surfaces & marked with (lines).

When picked from 3 pair of leaves; ³ buds
with eye surface & 5 white &
buds & with lower surface.

2 pair of leaves of Melilotus 2 leaves
Oct. 27" similar leaf picked.

Sept 25"
Oct 2" top eye 3 similar picked 1 lb
leaves of Lilia acutata & perfoliata.

Oct 27" When taken. 3 lbs 5 pair of leaves 6 buds
in a 16" by 8" envelope. Brown work

Oct 4" from one family 18" high 2 5" wrapped paper
from green. 8 lbs buds & buds
Oct 3" This is a wonderful photograph picture in
col. envelope leaf (gathered in pair) of the 18" (an)

of pattern of overlapping leaf -

[Oct 7th 4th P. M. - tried to see
rain to get - on hot ground with
flour at night - & under hot
protected from light all day]

Oct 22nd Then covered at night & 4th found
very dry show patches of the very leaves;
when then covered. Very dry & 4th found to
right front do not show the
change of color. \therefore clear & flat of
light.

In. Chemical in water. heads of *S. aurea*
than the rest a before the change
before a light in fact - change
in the chlorophyll
