I then multum made in study (too old + tent drill rather old)

at 3° 16' - I then bent from stem, so that tent drill

to the heavy can is about 1/2 in. In the stem in new position, I touched

end of tent drill, which would up, + as I tried course by which

bring the top + small body, trial spoiled, but as far as I

could make out there was no multum for 1° 32' + further with

3° 40' had elapsed; + then to T, ^{key} ~~side~~ ^{was} ~~very~~ ^{near} ~~close~~ ^{to} ~~horizontal~~

at all sure the side to come.

Nov. 2nd Insect (Diagram 3) between 8° 30' + 10° 45' - length 0.2^{cm} was

been captured in about 2° 30'. Then bent from end of throat with

fresh tent drill so it was almost perpendicular from + tried experiment

North, as I find much of frost this to come.
Therefore the fact of the C. probably is with the
day after the heavy snow, I've not
desire to return of my observations —
