

May 26<sup>th</sup> - 1878.

Asplenium carolinense MONOICIA

Gestropia

I think <sup>mean</sup> buds??

Plant from trail on ground - in sterile organic flower in thick

found in bed over a bed buried about 70' in a deep

OB was steep the road is about 24°

in loose sand. was laid up on with stone ground & then

went on each side to rock - gls tilted, tipped

tracing on floor, with mark below, & trace on

Horizontal gls - illustrated full of fr above. - 26

beds when this <sup>horizontal</sup> ~~bed~~ instead of primary perpendicular

Am low stone below 20°, 30' below horizon - Distance

~~of bed of rocky way for mark below. 57' of rock (if~~

~~the distance above with that Gestropia is early - Pelonch~~

is thick & flower(?) to indicate want to gestropia.

by. Saw most of ~~the~~ ~~bed~~ for 90' in a 26° to 90' sd

in 22. See May. March indicated - that a Pelonch first

found found & the upward with 4 little lateral marks. after

90' 30' in a 27° to 90' in a 28° the bed very little with the

shale to clay - Perhaps my study too cold. - I

have suggested to me to drill gls tilted at head of 2

then, & the same same buds: if then to my plan <sup>in water</sup>

it must be exposed shale for I could not find it, though

the same way buds. -
