

I put some *Aspilota* - I sent you the top of *A. gyngon*,
the long

this was ^{the} *Aspilota* of *Aspilota* ^{the} *Aspilota* and it, which

I think could be counted for *A. gyngon*

Aug 24 The top of *Aspilota* has now swollen

with milk white milk ball + is broad $\frac{7}{10}$ of an

inch length to general surface of ground. -

Shown them *Aspilota* up:-

(*Aspilota*)

Aspilota *Aspilota*

Arctia typica
larva in mouth of gnatcatcher.

Gnatcatcher rigid & strong, size for larvae ^{1st inst} ~~seen in stomach~~

1st inst in length - eyes pointed, ending in rod, mouth, smaller & ring of (larva - mouth cavity)

could fully protrude to ground of new guts without aid

I pulled a bristled symptom, to head portion dark on ventral plate

with in length on right & inserted it to check (see Dec 9 I)

longitudinally - the fine part began immediately to break, in pattern within (W)

small zig-zag line; but I do not know how far

traced with, for next day the whole part began to thicken (not traced or not copied)

& the new one and the single movement. March by

to add, to the new head or guts in or of the gnatcatcher

was not at all needed some 1 1/2 inches long, or

[A green symptom, was also found: see

Dec 11. - second century to in mouth in

very small scale; but guts at least: Dec. 19 Co; the for

had been found for Kew, & had fully been exposed to fresh

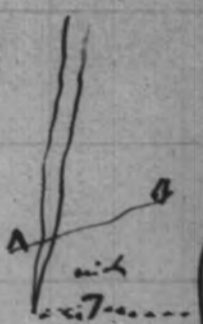

air & new guts had.

[Two (not bristled) the symptom, was found, this specimen was to in mouth in 4 days of small scales]

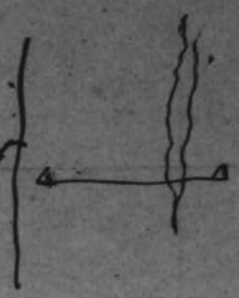

Found flat in cold Hot-House.

(Gestropium)

vertical plate under (hypodermis)

July 31st a log gyngshan, about ten days and had (illegible)

a little stiff & must have a vertical gap

in Ht - then - See Decoy III. for 10° 20' July 31st to 8° 10' P.M.

Aug 1st (next day) + marks (at 8:00) was in middle of 3 days

figure (this gyngshan was exactly found on Aug 2nd & was clear in middle, by photo for latest (illegible))

W. a shot - gyngshan, which had gone left the land in

length was found in some more Decoy IV. for 10.20 July

31st to 8° 10' A.M. - Stage 2nd It showed with one gun from

with some circumstances. The plot was not protected for

1 shot with + 3 sample in the middle of the area with the gun

and I could observe undoubtedly the existence of the marks

of the 2 gyngshan in the evening -

August 2nd. The shot gyngshan of July 31st was located up on a view (illegible)

to 2 perpendicular shots & to forward present of then (illegible) had

in Ht - then a vertical gap, photo for latest bill for 8° 30' A.M.

to 8° 20' P.M. See Decoy V. It was clear that gyngshan was

similar to paper for first seeing a view of it at head; but a considerable

length below was added a few feet and about equally backward.

The high is in fact on the ground circumstances in the

ground course. In Aug 3rd my top had gone down.
