

Feb 5 - 29

Notes taken to Book

The entire day of
the leaves of Dioscorea is not in circumference, (though in D leaf
the stems (i.e. leaves from circumference are white), ~~but~~ by

stems and microscope, got 40 points center to 1st center of

stems center as begin to work in in 23" of

stem but has not been traced by any means -

The pit depth
A full year leaf from not in circumference, got, was center to end of center leaf to

close. - When you infer your not - in circumference announced
on the leaf center leaf, which was not center to center of

which year to year was not in circumference, got the announced

operator was moving of the center
