Darwin site is a natural selection on the Internet

The University of Cambridge last week launched "The Complete Works of Charles Darwin Online." Before last week, no one knew that

Charles Darwin
in an 1881
photograph

Darwin had published on-line. But when this archive is finished in 2009, it will contain 40,000 images and 50,000 pages of searchable text, including this bit from "On The Origin of Species": "He who believes in the struggle for existence and

in the principle of natural selection, will acknowledge that every organic being is constantly endeavouring to increase in numbers." Go to darwin-online.org.uk.
