

DARWIN ONLINE

Charles Darwin has been called the most important scientist of the modern era, although too many people are unfamiliar with his contributions.

Certainly, his books and essays can be tough to chew, which is one reason the University of Cambridge launched *The Complete Works of Charles Darwin Online*.

Considered the most complete collection of works ever compiled on the famed English naturalist, the site offers major texts, scientific papers, journal entries, illustrations, audio clips and esoterica. It averages about 100,000 hits a week. Go to www.darwin-online.org.uk.
